JOHN I. THORNYCROFT AND COMPANY.—The report of this company for 1906 shows that the profits amount to £25,329, including about £3,000 brought forward. Motor-car sales are improving, and reference is made to the show-room opened in Albemarle Street, W. Unfortunately, however, the action of the London police authorities has occasioned some concern to the directors in connection with the motor-omnibus branch of the business.

NEW COMPANIES REGISTERED.

HALLEYS MOTORS, MANCHESTER, LTD.—This company has just been registered with a capital of £10,000 to adopt an agreement with Halleys Industrial Motors, Ltd., and Mr. R. Gale relating to the appointment of this company as selling agents for Lancashire and Yorkshire (except Middlesbrough), to manufacture, cause to be manufactured, let on hire, and deal in motor vehicles and their accessories, &c. The number of directors is not to be less than three nor more than five. The first are Messrs. G. H. Halley, R. Gale, A. A. Jackson, T. B. Blyton, and E. J. Walthew (chairman). Registered office, 88, Mosley Street, Manchester.

MACKLIN'S SECTIONAL TYRE SYNDICATE.—£1,000. To acquire certain inventions relating to wheel rims and pneumatic tyres, and to adopt an agreement with Messrs. A. N. Campell Macklin and R. D. Hodgson.

SCOTT-STIRLING MOTOR COMPANY.—£70,000. To acquire the business of manufacturers of and builders of motor-omnibuses, commercial motor vehicles, and motor-boats carried on by Scott, Stirling and Co., Ltd., at Twickenham. First directors: Messrs. J. Scott (chairman), J. Stirling, and L. Miles. Strawberry Vale, Twickenham.

ARGYLL MOTORS (SOUTH AFRICA).—£10,000. Agreement with Mr. J. W. Courtis. First directors: Messrs. J. W. Courtis, C. A. Sexton, and H. S. Rogers. Registered office: King's House, King Street, Cheapside, E.C.

THE RENARD ROAD AND RAIL TRANSPORT CORPORATION, LTD., have just issued their prospectus in connection with an issue of 125,000 £1 preferred shares. Lord Ribblesdale is chairman of the company, with Major-General Sir John Ardagh as deputy chairman, the board also including the Hon. Claude Hav, M.P., Capt. C. Longridge, Mr. Philip Dawson, M. Laurent and M. Surcouf. Col. Crompton and Mr. B. H. Thwaite are the consulting engineers.

MOTOR LAUNCHES ON THE THAMES.

AT Brentford, on the prosecution of the Thames Conservators, Gordon Jardine, of Trinity Street, Cambridge, has been fined £2 and costs for recklessly navigating a motor-launch on the Thames off Twickenham. Mr. Glenshaw, for the Conservators, said there was a yawl drawing 3 ft. of water, and with a free board of 2 ft. 6 in., moored off the bank near Milman's Yard at Twickenham. The occupants of the yawl saw the motor-launch driven by the defendant coming from the direction of Eel Pie Island at a high speed, throwing up a large stern wave. On the motor passing the yawl the wave was so high that the freeboard of the latter was submerged and the moorings were in danger of being carried away.

ROAD REPORTS.

BUCKS.—In the quarterly report of the Highways Committee of the Bucks County Council it is stated that complaints respecting the nuisance arising from the dust raised by motor-cars have been received from various parts of the county, with urgent requests that the County Council should lay down some dust-preventing material to obviate the nuisance. Complaints of this kind have been sent by residents at Salt Hill, Slough, Beaconsfield, Eton Wick, Little Missenden, Princess Risborough, Chesham, Winslow, and other places. The committee consider the case of Salt Hill to be the most serious of all, and have instructed the county surveyor to lay down tarmac on the worst portion of the road there.

KELVEDON.—Two motor danger signals have been erected at the main approaches to the town, one at the foot of Ferring Hill over the bridge, and the other on the Witham side of the dangerous bend into High Street, and about a hundred yards above the crossing from Church Street into Maldon Road. It is thought by many of the parishioners that a third post is much needed near the White Hart Hotel, which is immediately below the bend and crossing, there being no caution whatever at the top of the High Street, converging, as it does, into this two-fold danger.

DALKEITH.—The borough surveyor has drawn the attention of the Town Council to the damage done to the roads and streets by the motor-buses plying between Edinburgh and the surrounding district. It has been resolved to purchase 50 tons of patching metal and to regulate the places for the buses stopping at Eskbank.

CHESHIRE.—A series of important recommendations in regard to the motor dust nuisance have been adopted by the Cheshire County Council. The Main Roads Committee recommended the Council to treat about ninety miles of main roads with calcium chloride, and in

The above illustration depicts Mr. E. H. Atchley's latest Daimler Car, of which he has recently taken delivery.

It is of 30-35 h.p., with a 10½ ft. wheelbase, and the coachwork is of the Canley type, painted white, with red upholstery. This is the third Daimler car which Mr. Atchley has purchased.

addition offered to the urban authorities one-third of the cost of treating forty miles of main roads passing through their districts. Mr. Pedley, vice-chairman of the committee, said that this proposal was an organised attempt to deal with the dust nuisance. The cheapest remedy they had discovered was a solution of calcium chloride, the cost of which would average £16 a mile per annum on rural roads and £30 on urban roads. Roughly speaking, these dust-laying experiments would cost £3,600, of which £1,200 would be found by the county and £2,400 by the districts in which the work was to be carried out.

BRIGHTON.—On the recommendation of the Works Committee, the Brighton Town Council have resolved that during the coming summer Akonia and calcium chloride in about equal quantities are to be used upon the King's Road, and that portions of the Marine Parade, Freshfield Road, Palace Place, Prince's Place, and Rose Hill Terrace be tar treated. The tarring of Madeira Road will be done as soon as weather permits.

THOROUGH braking efficiency is indispensable on all cars, large or small, no matter what may be their power and weight, and anyone who may feel at all dubious as to whether he is properly equipped in this respect should see that matters are set right without delay. Improvements to existing brakes, likely to be lasting and effective, may be difficult and costly, but a remedy may be found in fitting additional brakes to the front wheels. As these are also the steering wheel, it might be imagined that such a brake fitting would be difficult, but the problem has long since been solved by the E. M. Bowden's Patents Syndicate, Ltd., with the aid of their wire mechanism.

FORTHCOMING EVENTS.

MAY.

SATURDAY, 25TH.

Last day for practising on the Isle of Man course.
Aero Club race for the Harbord Cup at Ranelagh.
Mr. F. A. Bolton receives the Derby, Leicester, Mid-Staffs and Notts A.C. at Oakamoor.
Reliability trial of the Ipswich and East Suffolk A.C.
South Devon A.C. hill climb at Tavistock.
Meet of the Liverpool A.C. at Hooton Hall, Chester.
Meet of the West Surrey A.C.
Touring Car Competition of the Kent A.C.

SUNDAY, 26TH.

South Herts A.C. run to Clacton-on-Sea.
Run of the Kensington A.C. to Cambridge.

TUESDAY, 28TH.

Auto Cycle Club Tourist Race.
Tourist Trophy cars to be within the Club enclosure at Douglas.

THURSDAY, 30TH.

R.A.C. Tourist Trophy and Heavy Touring Car Races.
The Great Yarmouth M.C.C. 75 miles Penalty run under Auto Cycle Club's rules. Entrance forms from the secretary, Mr. F. Worts, Somerton, Yarmouth.

FRIDAY, 31ST.

R.A.C. Graphic Tourist Race.

JUNE.

SATURDAY, 1ST.

Entries close for Henry Edmunds Challenge Trophy.
Cleveland Branch of Yorks A.C. run to Rokeby.
Motor Cycling Club's hill climb at Sharpenhoe.
West Essex A.C. run to Blackmore.
Reliability run of the North-East Lancashire A.C. to Carlisle.

SUNDAY, 2ND.

Meet of the Motor Cycling Club at Frensham Ponds.

WEDNESDAY, 5TH.

Start of Herkomer Touring Trophy Competition from Dresden.

SATURDAY, 8TH.

R.A.C. Henry Edmunds Hill Climb.

SUNDAY, 9TH.

The Motor Cycling Club will meet at the "Cock," Epping, at 11 a.m., for a trip to Maldon.

FRIDAY, 14TH.

Race for the Kaiser's Prize on the Taunus Course, Germany.

SATURDAY, 22ND.

Southern Motor Club's open hill climb on Captain Kydd's Hill, East Grinstead.

TUESDAY, 25TH.

Scottish A.C. Reliability Trial.

JULY.

2ND.—A.C.F. Grand Prix Race on the Seine Inferieure Circuit, near Dieppe.

6TH.—Inaugural races on the Brooklands Track.

10TH.—R.A.C. South Harting hill climb.

13TH.—Entries for R.A.C. commercial vehicle trials close at ordinary fees.

20TH.—Motor Union meet at Southport.

AUGUST.

20TH.—Open competition for light cars organised by the Essex Motor Club over a 200 miles course.

SEPTEMBER.

9TH.—Industrial Vehicle Trials commence.

PUBLIC MOTOR SERVICES.

A DEPUTATION of motor-omnibus drivers and conductors from the principal Metropolitan omnibus routes has waited on members of the Labour Party in the House of Commons with a view to expressing their objections to the number of hours they work and to the deductions said to be made from their wages. It was also stated that the men's pay was insufficient to permit of 1s. weekly being deducted from drivers and 6d. from conductors to cover accidents, with a further liability to pay one-third share of the cost of accidents up to £10. On the question of double punishments the men asked for some right of appeal, pointing out that, after they had been fined by a magistrate, to suspend or revoke their licences for a long period meant starvation.

A NEW motor-bus is now in service with the Cardiff Tramways Company, Ltd.

A MOTOR SERVICE is being proposed between Fishguard and St. David's.

A ROAD motor service is desired by the St. Martin's (Oswestry) Parish Council, and the Great Western Railway Company is to be petitioned to establish one.

THE Willesden District Council is supporting the petition of the residents of Willesden Lane against the proposal to run a motor-bus service along their road to Kilburn.

THE General Purposes Committee of the Paddington Borough Council are recommending the Council to take proceedings against the promoters of certain motor-bus services running through its area.

LICENCES have been granted to three motor omnibuses to ply between Cardiff and Whitechurch.

THE motor-bus service between Herne Bay and Canterbury which was inaugurated last year is being resumed.

THE Mersey Railway Company have started a motor-bus service between Rock Ferry and Port Sunlight.

SOLDIERS AS CHAUFFEURS.

AN unusual motor-car prosecution was heard at Newcastle on Saturday. Colour-Sergt. H. Scott, of the Northumberland Fusiliers, was the defendant, and it was alleged that he drove a motor-car at Gosforth on to a footpath and into a wall, knocking down a boy named Lamb. Scott acknowledged the offence, and said he was learning to drive a motor-car in pursuance of the Army Council scheme. The day of the accident was the first on which he had been out with a car, and he was accompanied by a competent instructor. On a quiet stretch of road he took the car over, and the accident happened when he was trying to turn a corner. He took it too wide, and the instructor seizing the handle, wrenched it the other way, the accident being thus caused. James Elsey, the instructor, giving evidence, attributed the accident solely to Scott's error of judgment. His own action did not contribute to it in any way. In answer to the Bench, Scott said he had several years' service yet to run. If a conviction were recorded against him it would have the same unfortunate result as a conviction by a district court martial. On hearing this the Bench decided to dismiss the case on defendant paying costs.

BUSINESS NEWS.

DEMONSTRATIONS of the Harvey Frost vulcanising system will shortly be given at 27, Charing Cross Road, London, W.C.

BELSIZE MOTORS, LTD., Manchester, have recently shipped six 20-30-h.p. four-cylinder cars to India; they have also despatched a number of cars to Australia, and in the course of a few weeks will be sending a full consignment to New Zealand.

THE Electric Vehicles Development Company, Ltd., have recently opened new premises at Eaton Garage, Elizabeth Street, S.W., where accommodation for about twenty cars is provided. Six charging boards have been installed, and a separate battery room and workshops arranged.

GOOD progress is being made with the erection of the additional factory which Messrs. Hans Renold, Ltd., are building at Heaton Mersey, near Manchester, and it is expected that the machinery will be started within the next two months. The new establishment will be almost double the size of the present large works in Brook Street, Manchester, being 742 feet long by 222 feet broad, with a floor space of no less than 170,000 square feet.

MR. A. M. MILLS, an American motorist who is at present making a tour in England, has written a letter to Messrs. Sternberg and Eason, in which he states that "When I first decided to go in for motoring, I made careful inquiries as to what was the best car to buy, and was strongly advised to go in for a Buick, with the consequence that I bought one of the two-cylinder type. I can assure you I have never regretted my choice, for I have travelled 7,000 miles on my car, and have never had a mechanical hitch of any description. My repair bill has been practically nil with the exception of £8, that I paid for the vehicle to be overlooked previous to my bringing it to London."

MESSRS. HUMBER have received the following letter from Messrs. H. G. Norton and Co., of Cheltenham:—"We informed you in 1906 that a client of ours had completed 10,000 miles on his Coventry Humber, since July, without a hitch, and we are more than pleased to let you know that he has now completed over 25,000 miles, and car has not yet been overhauled."

THE Stepney Spare Wheel has obtained such a vogue that the most sanguine expectations of the company have been exceeded. Some of the contracts placed by leading motor-car concerns are sufficient in themselves to return the original shareholders a very handsome dividend.

It is noteworthy that English manufacturers are competing in racing events on the Continent this year to a far larger extent than before. Only recently the Daimler Company sent three of their newest type of cars to the Targa Florio race in Sicily. The Wolseley Company are now sending two cars to the Herkomer competition, and the Rover Company competed with a 6-h.p. Rover car in the small car trials in Germany, which have just concluded. The Daimler Company are now despatching three Daimler cars to the Kaiser's Prize race, and it is interesting to note that all these cars are fitted with Continental steel-armoured non-skid tyres.

THE Motor-Car Journal.

VOL. IX.]

LONDON, SATURDAY, JUNE 1, 1907.

COMMENTS.

EVEN for such important gatherings as the provincial meets of the Motor Union there is often a difficulty in finding adequate interesting entertainment in the sporting section of the meeting. The assemblies of purely county clubs often create more interest owing to the personal note which usually runs through such events. Hence the man who can suggest some variant for the gymkhanas that now serve for the amusement of others will deserve well of the organisers of such events. In this connection we would commend the main feature of the joint meet of the Derby, Nottingham, Leicester, and Mid-Staffs Automobile Clubs to the attention of other organisations which arrange for their members to commingle in social intercourse. In the hill climb at Oakmoor the four visiting clubs were each at liberty to enter four cars. Each car having made the ascent against the watch, the sixteen were then drawn in pairs and handicapped according to their trial times, the eight winners going into the second round. In this the handicap was made on the shortest time made by the first round winners, and so the event was run through, the third round handicap again being taken on the best time made by the winners of the previous round, and so with the final heat. Each driver was honourably bound to do his best in the trial run, and although the majority of the cars did faster times on their subsequent trips, it was probably due to the fact that the drivers had become more familiar with the peculiarities of the hill. The close finishes that marked the proceedings fully justified this novel method of arranging a competition.

Public Trials on Public Roads.

MR. CATHCART WASON has returned to the campaign which he wages so persistently against the motor-car, and on Monday was to the front at Westminster with questions addressed both to the President of the Local Government Board and the Home Secretary. It appears that Mr. Wason had heard that there was recently a hill-climbing competition at Frome's Hill, and, according to the information which he seems to have received, some vehicles obtained a higher rate of speed than that with which he is familiar. Putting these two facts together he was able to propound a question with the added suggestion that in future competitions on public highways some regard should be paid to the provisions of the existing law. The reply of Mr. Burns should be reassuring to Mr. Wason, and at the same time satisfy motoring organisations which do not organise such events without first acquainting the local police and generally obtaining the co-operation of the district authorities. As the President of the Local Government Board stated, the administration in such matters is practically in the hands of the local authorities, and from his own information he knew that the police were present at Frome's Hill, and "that they took precaution to safeguard from danger the spectators, who were, moreover, aware that a competition was taking place." Mr. Burns declared that he was not in a position to take action in cases of that kind, although personally of opinion that except in very special con-

ditions, and early in the morning, no speed or other trials should take place on a public thoroughfare. Here again cold water was thrown on Mr. Wason, who wanted these events stopped altogether, the official view being that the police of each locality can very well safeguard the lives of those within their area without the intervention of Whitehall. Mr. Burns might have gone further to testify to the ability of the police to look after property within their districts, if they were not so generally occupied in trapping innocent motorists merely using the roads in an ordinary way without any suggestion of exceeding the legal limit.

Modern Motoring.

COMFORTABLY resting in a Florentia motor carriage we rode out to Ascot on Friday last by way of Hampton, Sunbury and Virginia Water. Comparisons may be as "odorous" as Mrs. Malaprop declared they were; but they are natural, and we could not forbear a mental glance to the early days when the motor-car was regarded solely as an open-air vehicle and the covered body was an unanticipated luxury. In showery weather the latter has its use, and it is becoming almost universal. At the Lincoln Meet of the Motor Union, for instance, the cars were drawn up in the formation of a square, and presented a very stolid array. But when the lawny glades of Canwick Hall were swept by east winds and accompanying rains, hoods and brougham tops went up, the gymkhana ground was not unlike a tented field. Now that the reliability of the car has been established the body builder is having a fine chance of distinction, and the modern motor-carriage has become almost a Road-Pullman. This can be enjoyed without detracting from the view—and what a view is now presented by the delightful highways of Berkshire, with their pathways carpeted with the fallen red and white May and their natural walls of horse chestnut, lilac and laburnum. Mr. Ballin Hinde, the treasurer of the Motor Union, who was of our party on the run to Ascot, has just returned from the glare of the eastern sky, and could, perhaps more than the rest of us, relish the greenery of an English landscape or the cool prospect of Virginia Water.

Technical Instruction in India.

WITH a view to the development of the motor industry in the Presidency of Bombay the Governor has proposed the formation of a class of motor instruction at the Victoria Technical Institute at Bombay. A special grant has been placed at the disposal of the Director of Public Instruction, and this will be spent in the purchase of automobiles and the erection of the necessary shed in which to house them. The scheme has been well received, not only by private motorists, but also by the leading firms engaged in the motor trade of Bombay. The difficulty of obtaining intelligent drivers has hitherto retarded, to some extent, the sale of vehicles, and the new project of the Governor will probably induce a better class of men to come forward for motor driving. It is expected that, at first, there will be some difficulty in persuading the men to stay sufficiently long to be well qualified, so great is the demand—but this, of course, is a matter which will right itself in time. The fact that the Indian authorities are recognising the importance of having efficient

R

drivers is certainly of interest, and may perhaps stimulate those responsible for technical education in Britain.

Cars in the Parks.

LONDON motorists have long experienced exclusion from the parks, and, despite the recent protestations on behalf of the petrol car, it would seem that they will have to keep outside the gates for some time to come. Now the idea is extending to the provinces, and we understand that the Parks Committee of the Bradford Corporation have decided to recommend the City Council to adopt the following bye-law:—"That no motor-car, motor carriage, motor-bicycle or tricycle, or other similar mechanically-driven vehicle, shall be allowed at any time to enter or pass through any of the parks in the city." Of course, local considerations must always govern these extradition orders; but they are sufficiently important to suggest that no authority should permit such an order to be made until the motorists' organisations have given the matter serious consideration. Otherwise much inconvenience may result in the future.

His Majesty King Edward entering his Daimler Car at Sorrento, Bay of Naples, during his recent visit to Italy.

In the Air.

It was an unusual sight that was witnessed at the Ranelagh Club Grounds on Saturday afternoon, when the Aero Club organised the great race for the Harbord Cup. The idea was that the aeronauts were to attempt the descent at a point indicated by the committee just prior to the ascent, and those coming to earth nearest the point were to be adjudged the winners. Goring railway station proved to be the designed meeting place, and about four o'clock the balloons, ranging in size from the Lotus and the Padsop No. 3, each with a capacity of 35,000 cubic feet, to the Aero Club No. IV., Enchantress and Diamond, each of 50,000 cubic feet capacity, set forth. Interest was keen—so was the wind, which rendered futile the efforts of some of the less practised airsmen. In the result Mr. F. H. Butler landed only 100 yards from the winning-post, with Col. J. E. Capper not far away, and the Hon. C. S. Rolls three-quarters of a mile off. While this event was in progress another incident of interest was taking place at the Wandsworth Gasworks, from whence a party of fifteen ascended in the "Mammoth"—the largest balloon ever sent up. It has a capacity of 108,000 cubic feet, and after an easy voyage descended gracefully near Basingstoke.

Haywards Heath.

WHEN in want of a motto to go around the Court House of Haywards Heath, the magistrates might well apply to motorists for the suggested lettering. Nothing could be more appropriate than the wording, "All hope abandon, ye who enter here." We do not recollect any case of a motorist summoned before the Petty Sessions there who has escaped conviction. If there be any such, we shall be glad to hear, and extend a meed of publicity to a *rara avis*. Last week's proceedings, when a batch of eight motorists were hauled before the Bench and all convicted, is very similar to scores of previous sittings. Sergeant Waghorn was the leading police witness in every instance last week, he having been in charge of the measured furlongs at New Timber and Friar's Oak, Clayton. Despite the declarations from defendants on oath and the evidence of their speedometers, Waghorn gave opposite testimony, and although some of the motorists were able to show that the time occupied by their journeys was well under the legal limit, the Haywards Heath magistrates accepted the police testimony and rejected any other. In the course of the evidence it transpired that one of the police was in cyclist's attire when engaged in the wretched business of setting traps, and altogether the whole farce was of a kind calculated to bring the English law into ridicule and disrespect. Cannot something be done to prevent travesties like this occurring in this particular county?

The Need of Unity.

"ALL your strength is in union," was the sage remark of a philosopher. It is very applicable to the motor movement, especially in view of impending legislation of a permanent character which cannot be long delayed. Hence we welcome the generous spirit in which Mr. C. D. Rose, M.P., referred to the courtesy of the Automobile Association in helping such of the members of the Motor Union as were going to the Meet at Lincoln from the south. There was, he observed, no question of friction; and it is to be sincerely hoped that the leaders of the various organisations will all work together for the common good. Here and there, it may happen, activities of one society may seem to imitate the energies of another. Let anything of that kind be called flattery; and regarded as complimentary rather than predatory. There are enough enemies outside the movement ever ready to pounce upon anything likely to fan the prejudice of the public; we do not want friction within, and the excellent tone of the speech of Mr. Rose should be appreciated and followed by all loyal motorists.

Police Traps.

FROM pigstye to church tower is a distinct elevation; and we should be glad to think that the notions of the police who have thus advanced in altitude had been similarly raised. In the early days the residential pen of porkers was a favourite hiding-place for policemen in charge of traps; then they came from their undignified positions and lurked behind hedges; and, latest move of all, a sergeant in Warwickshire has gone aloft to the church tower of Shipston-on-Stour, from whence to announce by signals to policemen below the approach of automobiles. We remember that, at Yarmouth, it was once the custom to scour the land by field-glass in order to scent the motorist on the road. Probably this invasion of ecclesiastical property would have proved remunerative to the county funds; but there are greater powers than the police in English villages, and the rector called upon the policeman to descend to earth and conduct his trapping exploits from the level ground. Really it would seem that the presumption of the police is on the ascending scale; but for the sense of fairness which leads others to secure the discomfort of the trappists. Meanwhile, the best way to circumvent this un-English attitude of the police is to acquaint our readers with the traps established

throughout the country, and that, with the help of loyal friends, we are able to do from week to week.

Dublin.

LAST week the Reliability Trials organised by the Irish Automobile Club were held, and many motorists from this side of the strip of water that divides the two islands renewed acquaintance with the roads of the Emerald Island.

In many places distinct improvement compared with the experiences during the Irish fortnight following the Gordon Bennett race of 1901 was observed, as far as the roads are concerned. This is all to the advantage of the country from a touring point of view. From Messrs. Methuen and Co. comes a reminder of another interesting aspect of Ireland, in the form of a new guide to Dublin, written by Mr. S. A. Fitzpatrick, whose encyclopædic knowledge has resulted in one of the best accounts of the ancient city on the Liffey that we have

clivities of the Royal Irish Constabulary again led to their encouragement of the competitors. Two or three distinctive points of organisation deserve merit, and the innovation of holding a class for amateurs as well as one for the trade appealed to a large circle of motorists who entered cars and went well through the Trial.

Notice of Prosecution.

ON Wednesday last week, at the Petty Sessional Court at Highgate, Mr. Sidney Smith was summoned by the police for driving a motor-car at the rate of thirty-five miles an hour. The police stated that defendant proceeded along the highway at the rate of thirty-five miles an hour, and that when a constable stepped into the road to stop defendant he went on and did not stop; that a constable called upon defendant a few days after and warned him of the prosecution. The defence was a denial that any constable stepped into the road or that the speed

The Irish Reliability Trials.—The Competitors at Abbeylisc.

seen. In fact, it gives an insight into the historical records of Ireland, as well as serves as a guide to the topographical features of Dublin. The volume should be read and studied before acquaintance is made with the city itself. Few places are so favourably situated from a motoring point of view as the "Dear, dirty Dublin" of Lady Morgan, for within a few miles are Kingstown, Dalkey and Bray, the bold cliffs of Howth, the beautiful coast scenery around Killiney and the wild defiles of the Wicklow mountains.

The Irish Trials.

IN 1906 the Irish Reliability Trials suffered from the fact that they were held on the same dates as the more trying event in Scotland. This year they have had the field all to themselves, with the result that success has attended the enterprise of the Irish A.C., which is to be heartily congratulated on the splendid result of their endeavours to promote a really enjoyable trial. For there were few misadventures to mar the pleasure of the journey to anyone, while the sporting pro-

alleged was accurate. It was further stated by Messrs. Kenneth Brown and Co. that Section 9 of the Motor Car Act provided that a warning of the intended prosecution must be given at the time the offence is committed, or sent to the owner of the car within twenty-one days. In this case no notice was given at the time, and the verbal warning by the police two days afterwards was ineffective, as the notice could only then be in writing. Further, that in point of fact the notice of the intended prosecution was served after the summons had been issued and served upon defendant, in that the summons was served in the afternoon and the notice in the evening. The Bench, after consideration with their clerk and the police, dismissed the summons, and we would advise motorists to take note of the case for reference should they ever find themselves in a similar difficulty.

AMONG the borough surveyors of the South of England, few have given such attention to the subject of dust prevention as Mr. W. H. Maxwell, A.M.I.C.E., of Tunbridge Wells, who does not regard the tar palliative, as it stands to-day, as a complete and final solution of the dust problem.

LAYING THE DUST.

At the Bucklow Council meeting, Mr. Egerton referred to the use of the roads by motor-cars, and said the Cheshire County Council were going to give the main roads a dressing of calcium chloride, which would involve an expenditure of about £3,000. This, he understood, would be met by the county paying one-third and the districts two-thirds. Were they justified in making the roads better for the motorists? It was absurd for them to widen roads and pay for the extra upkeep for the sole benefit of the owners of motor-cars. He proposed that they do not undertake to do it—a suggestion with which the Council concurred.

THIS report has come under our notice during the last few days. It represents a school of thought that now seeks to influence the road question in this country, the Bucklow Council accepting the horse-drawn traffic as the permanent condition of things; while the proceedings of a sensible body would have shown a desire for progressive development and an acceptance of no form of locomotion as final.

While each of these two views are finding sturdy advocates on local bodies, motorists themselves are doing something not

Friday.—Three miles of gravel road between Virginia Water and Reading at Ascot.

On the first day of the trials the King drove over the road that was being experimented with, and on Friday last quite a large concourse of experts watched the proceedings, while representatives of several Government departments were also present. The weather was hardly of an ideal character so far as the dust was concerned, but the judges were fairly well satisfied as to the conditions. The competitors were as follows:—

Aitken's patent pneumatic tar sprayer, which has hitherto been exclusively used in the county of Fife, and which discharges the tar from the spraying nozzles in a highly diffused state securing equal distribution and penetration of the surface.

Emulsifix, which has been at work in Lancashire and which spreads tar oils in a sub-divided state by means of emulsifying the same mechanically with water.

Johnston's Lassailly patent tar road binder, which employs two machines, a heater and a spreader, working simultaneously. This machine has treated seventy miles of road in connection with the Grand Prix race of the A.C.F.

Tarmaciser, the feature of which is the heating of the tar

The Tar-Spreading Trials near Staines.—One of the Machines at work.

only on their own behalf, but also in the interests of the country. On three days of last week, under the auspices of the Roads Improvement Association, and financed by the R.A.C. and the M.U.—initials intelligible enough to every loyal motorist—some experiments were conducted which may have an important bearing on what has become known in current conversation as the dust problem.

Starting from the basis that tarring is the best available palliative for laying dust, the Association has endeavoured to discover a machine which shall apply the tar in such a way that the surface of the road shall be welded together so as to prevent the disintegration often associated with traffic. In previous issues we have detailed the rules governing the trials which took place over three classes of road on three successive days, viz.:—

Wednesday.—Four miles of the Hounslow and Staines macadam road between Baber Bridge and the Staines boundary.

Thursday.—Two miles of the flint road between Twickenham and Kempton Park.

whilst it is being distributed, before being brushed into the interstices of the road.

Tarspra is the title of a tar-spraying machine drawn by a motor-vehicle. The tar is forced through pipes to the atomising nozzles at the rear of the appliance, where it is discharged in the form of a fine spray. This vehicle was entered in three sizes, of 200 gallon, 700 gallon, and 1,000 gallon capacity respectively.

The Thwaite anti-road dust system had a distinctive feature in raising the temperature of the tar to a degree to ensure that it will set like enamel on the materials of the road. The complete sequence of the Thwaite patented apparatus is intended to spray the tar in combination with the mechanical spreading of the sand.

Considerable interest was taken in the method of applying the various machines, and also in laying the dozen preparations submitted to the test. Some time will elapse before really effective judging can be given; but meanwhile the experiences of readers travelling by car over any stretches of the roads upon which the experiments were carried out will be useful reading.

THE LATE MR. A. GOVAN.

IT is with feelings of great regret that we have to chronicle the death of one of the leaders of the British motor trade—a talented pioneer of the movement, and one of its most capable administrators. Mr. Alexander Govan, whose death, while still on the right side of forty, thus removes one of the most respected motorists from our midst, was a man of sterling worth and sound judgment, and the British automobile industry has lost one of its great forces in our deceased friend.

Mr. Govan's name will always be associated with the development of the great works at Alexandria, of which he was the managing director. He was a native of Glasgow, and learned practical mechanics in Bridgeton, gaining the theory in the Technical College. Originally interested in the cycle business, he, with Mr. W. A. Smith, acquired bicycle works in Glasgow late in 1899, and commenced there the Hozier Engineering Company in 1900. With keen prescience they recognised the future of the motor-car, and Mr. Govan produced his first Argyll car in 1901—a 3½-h.p. vehicle that, even at that date, gave promise of greater things. These came when the Automobile Club trials took place in that year in connection with the Glasgow Exhibition, and the Argyll won distinction and attained a reputation which it has not only maintained but increased under Mr. Govan's guiding hand.

So well did the business prosper that the turnover in the succeeding five years rose in the proportion of 100 to 1,751, and even that was nearly doubled in the following twelvemonth. Tangible embodiment of the success attained was evidenced in the erection of the great works at Alexandria, which were formally opened in June of last year, although they had been in partial operation some time before.

All through the removal of the factory from Glasgow to the town under the shadow of Ben Lomond Mr. Govan had borne the heat of the day, and his decease when in the prime of life, and when beginning to enjoy the harvest of the strenuous labours of the last decade, is almost a tragedy of human hopes and aspirations. He was in his usual state of health a few days ago, but while lunching was attacked with ptomaine poisoning and died, after ten days' illness, in the early hours of Monday last. The event not only cast a gloom over the town of Helensburgh, where he resided, but a deep shadow over Alexandria, which owed so much to his enthusiasm and energy.

Mr. Govan had the quality of tenacity, as well as of tact, and though success came to him at a comparatively early age, it never spoiled the frank nature and cordiality of the man. Unobtrusive with regard to his work, he associated little with motoring organisations, although ever ready to encourage the formation of societies of every kind among the workpeople. Esteemed by all, his memory will ever be recalled with admiration and regard—and this knowledge of the universal esteem in which Alec Govan was held will assuredly be a thought of consolation to his widow, to whom we tender our respectful sympathy.

WHILE we naturally are most anxious that the dust nuisance shall be allayed, if it cannot be prevented altogether, we would advise those responsible for the conduct of experiments to ascertain the influence of the road dressing upon tyres and other substances that come into contact with the surface of the highway. The "Lancet" has been drawing attention to the dangers that lurk in the use of certain compounds in this connection, and while the objections to preparations which practically act as acids do not obtain with last week's trials, the subject has proved sufficiently important to warrant the notice of the "Lancet." Our contemporary trusts that the ultimate dust preventer on the roads may not prove to be a remedy worse than the disease—a wish that motorists will express with equal heartiness.

THE TOURIST TROPHY RACE.

DOUGLAS, Wednesday.

LOCAL feelings, coupled with the mishaps that have occurred, have led to many reflections among the visiting motorists; and the view has been expressed that the Tourist Trophy is almost spent, and that we shall see few more such events in the Isle of Man. The outcry that arose last year with regard to the way in which local feelings were disregarded in some respects led to the enforcement of very severe rules on the present occasion; and scarcely had the motorists been rehabilitated in the good opinion of the natives than a string of accidents occurred that has led some local public men to hope there will be no further permissions for the race to take place. But just now everyone is talking of the event that is to take place to-morrow, and the result of which will be known throughout the country by Friday morning.

One of the principal conditions with regard to the Tourist Trophy race is that the vehicles are required to run at least twenty-five miles per gallon of petrol, the spirit furnished having a specific gravity of from .715 to .725, as against .695 to .705 last year. The distance to be covered has been raised from 161 miles to 241 miles 5 furlongs 140 yards, or six laps of the course, but on the present occasion no limit has been placed on the chassis weight. The driving-wheels have not to be less than 32 in. in diameter, the wheel track not less than 4 ft. 6 in., the distance from the dashboard to the front edge of the back tyres

One of the Rover Tourist Trophy Cars.

not less than 5 ft. 3 in., the platform behind the dashboard not less than 7 ft. 6 in. long, and the body covering the whole area. The total load to be carried by the chassis is this year 1,400 lbs. as compared with 1,125 lbs. in the 1906 event, so that the task, in view of the petrol allowance being unchanged, is a more difficult one. The cars must be capable of being driven half-a-mile at a speed of 12 m.p.h., or less, on the level on the top gear without the manipulation of the clutch, and also capable of being stopped and re-started on a hill of about one in six. As will be seen from the table, which gives a full specification of the competing vehicles, the contest has this year attracted only thirty-one entries, as against forty-nine in the 1906 race, while the withdrawals that have taken place have reduced the probable starters to twenty-three.

The Heavy Touring Car Race is an entirely new event intended for the development of ideal touring cars, such as are usually fitted with covered bodies. The horse-power, and consequently the speed of the competing cars, is limited by fixing a definite allowance of fuel for a given distance, viz., sixteen miles to the gallon, the petrol having a specific gravity of between .715 and .725 deg. F. As in the T.T. race, a minimum road wheel diameter is fixed, being in this case 36 in. The minimum distance from the dashboard to the front edge of back tyres has to be 5 ft. 9 in., and the platform behind the dash 8 ft. 6 in., the body to cover this area. The minimum total load to be carried by the chassis, including body, driver, mechanic, ballast, spare parts,

spare tyres, tools, luggage, and provisions, but not fuel, water, or oil, is 1 ton. Four speeds forward and a reverse are allowed, and each car must be capable of being driven half-a-mile at 12 miles per hour or less on level ground on the top forward gear without manipulating the clutch, and of stopping and restarting on a hill of about 1 in 6. A feature of the H.T. vehicles is the provision of a wind screen behind the front seats, as representing in some measure the resistance offered by the covered bodies usually

One of the 18-h.p. Star Tourist Trophy cars. The vehicles are built on the Star Co.'s standard lines, the only variation being that it is fitted with wire instead of wood wheels, shod with Dunlop tyres. They are fitted with handsome Roi des Belges side-entrance bodies, upholstered in best leather, and painted a rich dark red lined with black and yellow.

The way in which the rule with regard to punctuality was enforced last year had evidently been appreciated by the competitors, and only one was not in by the specified time—viz., Mr. Goodenough's Leader, which was three minutes late in arriving on the enclosure in Alexandra Drive, and consequently was disqualified.

The Arrol-Johnston Tourist Trophy Car.

The engine, which is rated at 25-h.p., comprises four vertical cylinders, $4\frac{1}{2}$ in. bore by 5 in. stroke. Both high-tension battery and magneto ignition are fitted. The change-speed gear gives four forward speeds and a reverse, with direct drive on the top. The car has a wheel-base of 9 ft. $\frac{1}{2}$ in.

provided in this class of vehicle. The top of the screen has to be at least 8 ft. high from the ground and 5 ft. 3 in. wide. Sixteen entries were received for the Heavy Car race, but of these only nine are expected to start. The distance to be covered in this case was originally 200 yards short of 282 miles, or seven rounds of the course, but on Monday evening a meeting of the Competitions Committee was summoned, when a joint communication from the nine competitors was read, pointing out that, owing to the severity of the course and the excessive

It had been decided on the previous evening that the Slow Test should be from Braddan Bridge to Quarter Bridge, and that the test hill for the Hill Climb should be up the Alexandra Drive. Very few of the islanders were aware of these arrangements, with the result that the tests were carried through with only a few spectators. There is really nothing to

The Tourist Trophy Race.—The Vulcan Car at Bray Hill Corner.

weight carried, it would be impossible to complete the rounds in the time allowed by the Highway Board. Agreeing with this view, the Committee decided that there should be only five circuits, or about 201 miles.

Yesterday was a very busy day here, and although the weather has been fitful, we are hoping for a fine day to-morrow.

say about these preliminary events, as all the cars successfully passed both tests, and were driven into the enclosure, where the afternoon was spent in the official examination.

The Motor Cycle Trophy race aroused far more interest, and the event gave a capital beginning to the races of the week, although the cold, biting air was not agreeable

either to riders or observers. No fewer than twenty-five competitors faced the starter for the distance of 150 miles, and in the end the winner of the single-cylinder class proved to be C. R. Collier, on a 3½ Matchless, with J.A.P. engine. J. Marshall was second, and F. Hulbert third, both on 3½ Triumphs. In the twin-cylinder class R. Fowler was first on a Norton motor-cycle with 5-h.p. Peugeot engine, W. H. Wells second on a Vindco Special with 5-h.p. Peugeot engine, and W. M. Heaton third on a 5-h.p. Rex.

The Continental Tyre and Rubber Company will present a cup value 250 guineas to the winner of the Isle of Man Tourist Trophy Race, and another of the same value to the winner of the Heavy Car Race, if fitted with their tyres. It will be remembered that the first trophy was won by Mr. Napier on Continentals, which are fitted this year to two Berliets, two Arics, West, and Straker-Squire cars in the Tourist Trophy race, and to the 35-h.p. Daimlers, two Berliets, and others in the "Graphic" race.

THE IRISH RELIABILITY TRIALS.

A GAIN have the Irish people shown themselves the sportsmen they proved to be during the famous Irish Fortnight of 1903. While the attitude of the hospitable residents of the Emerald Isle has remained the same, the manners of the motor-car may be said to have improved. Such a fact received demonstration in the Reliability Trials held from Wednesday to Saturday of last week, with Dublin as the pivot and the Irish Automobile Club as the controlling power.

Looking at the event from the chronological point of view, the Club adopted a proposal that has been urged in these columns more than once in connection with the Tourist Trophy event, viz., that the late comers, instead of being barred from the contest altogether, should be allowed to run on payment of a further fee. Thus accidental delays would not necessarily lead to disqualification; while the expense would deter entrants from unpunctuality. Although 3 p.m. on the 21st ult. was the fixed

from the mistake of losing the way indulged in by many of the drivers. Between 4 and 6 p.m. all the sixty-eight cars had finished the journey, fifty-seven of them making non-stop runs.

On the second day we lost one competitor before the start from Portrush, Mr. R. M. Inglis, who had driven a 12-14-h.p. Adams, not feeling well. The journey was a trying one of 170 miles, and, although there was not much rain above, the roads were very damp all the way back to Dublin, where the night was spent. Some variety was given to the day's experience by a speed trial being arranged on Magillan Strand, where the Ariel car made extremely fast time.

On the Friday the run to Waterford from Dublin was not so long as the second day's journey, but seeing that the route ran over the hills of Wicklow, the first part, at least, was severe enough. Despite this, however, forty-two of the fifty-nine that started in the morning reached the southern city by the evening, and a dozen others had only minor difficulties to contend with. The scenery was charming enough to satisfy the traveller, while

The Irish Reliability Trials.—The Cars at Newry.

[Chancellor and Son.

time for the arrival of competing cars at the official enclosure, a little grace was allowed on payment of a fee of £1, and this saved four cars from having to stand out altogether.

The start of one Trial is very much like the other, and the crowds very similar, whether in Glasgow or Dublin. There were seventy-one entrants for the event, three of which were non-starters, so that the actual number leaving the Irish capital on the 22nd ult. was sixty-eight. They had a fine run of 150 miles in good weather. Lunch was taken at Newry, and a chat among the competitors at Portrush in the evening disclosed only a few minor troubles. Changing a plug cost the 42-h.p. Brasier the loss of five minutes, as it did also a Coventry Humber. Choked fuel feeds affected the Adams-Hewitt, and the Chambers vehicles and a De Dion, a 16-h.p. Rover and the Vulcan each lost a mark or two through late starts after the luncheon hour. Mr. A. W. Inglis on his 9-10-h.p. Adams-Hewitt was the first at Newry, and Mr. T. W. Murphy's 8-h.p. Rover obtained the premier entry into Portrush, local knowledge having saved him

the hill climb towards the Wicklow Gap gave the opportunity of a wait in which to enjoy the scene. Here we had one of those long halts that have become unpleasantly familiar in the Scottish trials, and reflected on the advantage that would have been ours had the large and small cars been divided into two detachments with good intervals of time separating them from each other.

Fortunately the trials ended in sunshine and the weather was the best that had been allotted to the visitors throughout the trip. There was a hill climb at Graiguenamanagh, over a rise as long as its name; and again the cars demonstrated their capacity. Later in the day a reminder of the old Gordon Bennett days occurred as we reached Maryborough and ran across the Curragh—the scene of some memorable flights in 1903.

The first hill-climb took part on the third day, and was over a course of one mile seventy-one yards between Hollywood and Wicklow Gap. The gradient averaged one in fourteen. The second climb took place on the Saturday at Graiguenamanagh, the course being one of 1,718 yards.

At the end of the four days' run it was seen that fifty-nine cars remained in the competition, so that only nine had dropped out of the running—a very good performance having regard to all the circumstances of the event. Briefly summarised the results of the trial so far as they are at present revealed will be found in the following table, the asterisk denoting that the car made a non-stop run on all four days of the Trial.

With reference to the cars that are not credited with four non-stop runs, it is only fair to say that ill-luck was the cause of some of the omissions from this list of perfect running, and that the following had non-stops on three days of the trial, viz., the 7-h.p. Star, 15-h.p. Ford, 12-h.p. Singer, 20-h.p. Belsize, 16-20-h.p. Chenard-Walcker, 15-h.p. De Dion, 22-h.p. Orleans, 18-24-h.p. Austin, 30-h.p. Siddeley, 28-42-h.p. Brasier, 25-30-h.p. Austin, and 30-40-h.p. Ariel-Simplex.

At 3, Rushey Green, Catford, the Austen Motor Company of Lewisham, are about to open a new motor-car garage.

The premises of Messrs. Crabtree and Sons, at Wisbech, are being extended to cope with the requirements of the motor business they have developed during the last few years.

HORSE POWER RATINGS OF PETROL MOTORS.

It is not only in this country that the question of evolving some system with regard to the rating of petrol motors on a uniform basis is attracting attention. The matter has been for some time receiving the consideration of the Mechanical Branch of the American Association of Licensed Automobile Manufacturers. As is well known, the horse-power rating of an engine varies considerably, various formulæ for computing the same being used, no two giving the same results. After having the advisability of a universal rating under consideration for several months, the standards suggested by the above-mentioned society are to be taken from a brake test at the flywheel, in conjunction with a formula suggested by the committee. Two units are to be used, the lower being the actual rating from the brake test, as computed from an indicator at 1,000 feet per minute piston speed, and the higher number to be the maximum horse-power developed from superior workmanship or the results of a better type of motor. For example, in a 20-24-h.p. engine, 20 would be the actual horse-power at a piston speed of 1,000

Mr. E. Borde at the wheel of the 10-14-h.p. Ariel Car which he recently drove from Paris to Madrid in forty-four hours, notwithstanding the stormy weather and bad roads encountered in Spain.

feet per minute, and 24 the horse-power developed when not under normal conditions. Thus the lower of the two figures is to be regarded as the real measure of the motor's power and as a fair one, tending only to encourage the development of the greatest possible power at the normal piston speed designated and at an actual rotative speed suited to the tastes of the designer. However satisfactory the new departure may be, it is to be observed that the mere establishment of a formula without other safeguards cannot serve to guarantee even an "official rating," unless obtained under official supervision, and it has, consequently, been suggested that the Association should itself conduct tests of sample motors at its own laboratory, thus fixing the catalogue figure for each type produced by different makers.

A NEW motor repair shop has been opened at 69, Broad Street, Pendleton, near Manchester, by Mr. W. H. Smith.

A NEW motor company has been formed at Kidderminster, of which Mr. H. Charrington, the secretary of the Mid Staffordshire A.C., is one of the directors.

THE WEIGEL EIGHT-CYLINDER CAR FOR THE A.C.F. GRAND PRIX.

WE are able this week to give a photo of one of the two eight-cylinder racing cars Messrs. Weigel Motors, Ltd., have built for the A.C.F. Grand Prix race. The vehicles are of interest, not only on account of the number of cylinders, but also because of the fact that they will be the only two British machines in the international contest. The side members of the pressed steel frame are of a large depth, and to give additional strength are lined with wood. The great feature of the machines is the eight-cylinder engine, which is nominally rated at 80-h.p. at a speed of 1,000 revolutions per minute; the cylinders, which are built in pairs, are 130 mm. by 140 mm. stroke. The crank shaft has four throws, the two connecting rods of each pair of cylinders working on the same pin. Mr. Weigel claims that this is the first time that an engine has been built on this principle, or that eight cylinders have been erected in a row. The cylinders are fired in the following order—from the forward end of the motor—1-8, 4-5, 3-6,

SUBSTITUTES FOR PETROL.

SOME interesting experiments have recently been carried out, at the instance of Mr. S. F. Edge, to see how Benzol, a coal-tar product, compares with the ordinary petroleum spirit as a fuel for petrol motors. They were carried out with a standard six-cylinder Napier engine, and the results, which are given in the appended table, show clearly that for all practical purposes the b.h.p. of Benzol is as good as petrol, and although the former is very much heavier than the ordinary spirit, the engine appeared to start quite normally and easily.

	Spec. Grav.	Temperature of testing room.	Average of three tests b.h.p.
Ordinary petrol	... 687	... 67.1 Fahr.	... 64.25
" "	... 699	... 69.8 "	... 64.4
" "	... 713	... 65.3 "	... 64.4
" "	... 714	... 60.8 "	... 65.5
" "	... 759	... 67.1 "	... 63.5
Benzol	... 873	... 75.2 "	... 64.1

The tests were made with everything standard, no alter-

Mr. D. M. Weigel and the Eight-Cylinder Racer he will drive in the A.C.F. Grand Prix Contest.

2-7. The mixture is furnished by a single carburettor—the Weigel standard—this being placed in mid position, the inlet pipes being unusually large in diameter and length. The ignition is by low tension magneto, one being provided for each set of four cylinders. Only two forward speeds are provided in addition to the reverse, the drive being through a cardan shaft and bevel gear to a live axle. The car, which is geared to a speed of ninety-five miles per hour, is expected to run ten miles to the gallon of petrol, the regulations of the race stipulating nine and a-half miles per gallon. In the picture artillery wood wheels are shown, but for the race the cars will be fitted with wire wheels having rapidly detachable rims, shod with Dunlop tyres. We may add that the whole of the parts used, with the exception of the gear-box and the specially wide chassis, are the same as are employed on the Weigel 40-h.p. standard touring vehicle. The cars, which are also being entered for the Vanderbilt Cup race, will be driven in the Grand Prix by Mr. D. M. Weigel, who is seen in the foreground in the illustration, and Mr. Pryce Harrison, the reserve man being Mr. R. Laxon.

ation to the jet or carburettor whatever being made. As the latter was set to give the best results with petrol, it is quite conceivable that if it were specially adapted to the Benzol better results would be obtained. The samples tested included both American and Borneo spirit, of varying specific gravity. Mr. Edge, in sending us the particulars of the test, remarks that, "It seems to me that it devolves upon manufacturers who can supply Benzol spirit to tell motor users how and when they can supply it, and at what price, as it would seem desirable that a large number of motorists should try it and that all interested should hear the results of tests from different people."

MR. E. W. JACKSON, J.P., who has an extensive garage in Hallgate, Doncaster, is having a second establishment erected in Frenchgate, in the same town.

THE Aylesbury Motor Car Company are keeping their garage in Kingsbury Square, Aylesbury, open during the night as well as the day. They have excellent accommodation for a score of cars, and every facility for the repair of vehicles.

THERE are about 145 taximeter motor-cabs in operation in London.

VISITING cards with the best motoring route from the city to their residences printed on the reverse side is the latest fad that is said to have been adopted by residents in the suburbs of New York.

THE vice-president of the Swedish Automobile Club, Mr. C. Lyon, is making a tour of England.

H.H. THE MAHARAJAH OF PATNA has recently acquired a 40-h.p. Siddeley car for his personal use in India.

AN exhibition of motor drawings will open at the Ryder Gallery, 47, Albemarle Street, London, W., towards the end of the month.

THE Daimler Company are informed that at the baptism of the son of the Duke of Santonio the Duchess Montellano arrived in her Daimler car.

OWING to the reduction in the Canadian postage, the annual subscription to the *Motor-Car Journal* to Canada has now been reduced to 8s. 8d. post free.

ON his way to Newquay by motor-car Mr. A. J. Balfour lost his way and spent a couple of hours on the Bodmin moors before picking up the correct route.

THE Vulcan Motor Company have recently completed a 20-h.p. motor tower wagon for the Southport Corporation for use in connection with the electricity department.

ONE of Lord Rothschild's motor-cars caught fire while waiting at the entrance to Crewe Railway Station, and was almost destroyed before the fire could be subdued.

AMONG the recent purchasers of 60-h.p. six-cylinder Napier cars are Sir Montague Allan, of the Allan Steamship Line, Montreal; Major P. G. Shewell, of Cheltenham; and M. Henri de Malglaive, of Algiers.

THE body of the car driven by Mrs. Cohen, which took first prize in the appearance competition at the Bexhill meet, was finished in the paint shops of Messrs. E. and H. Hora, Ltd., in Peckham Road, London, S.E.

THE date of the Reading meet of commercial vehicles, of which Mr. Leo Harris, 379, Strand, W.C., is hon. sec., has been advanced by two days, and will take place on Monday, the 17th inst. Capt. H. K. Bagnall-Wild, of the War Office, and Mr. C. Wheeler, of the G.P.O., have been added to the organising committee.

A NEW record run between Monte Carlo and London has just been established by Mr. H. R. Pope, of Itala Motors, Ltd. Leaving the former town at 3.30 a.m. on Sunday last on a 40-h.p. Itala with three passengers and luggage, London was safely reached at 8.46 on Monday morning, the long journey being thus completed in 29 hours 16 min.

AWAKENED by a noise in her bedroom early on Saturday morning, Mrs. Milson, wife of a magistrate at Reading, saw a man standing by the dressing table. She gave the alarm, and the man decamped. Several motor-cars were requisitioned by the police for the pursuit, and the burglar was caught about five miles off. He was taken back by motor-car to Reading in charge of the police.

ALREADY the electric motor-ambulance which has been placed at St. Bartholomew's Hospital, London, has been in requisition. The experience on the first occasion led Dr. Macdonagh, the house surgeon, to express the opinion that it would be the means of saving many lives and preventing much suffering. There was scarcely any vibration, and the patient was inside the hospital in a quarter of the time usually occupied.

LAST week, under the heading "Exploring Africa by Motor-Car," we announced the departure of Mr. B. J. F. Bentley on an 18-h.p. Siddeley car for an overland trip to South Africa. We now learn that Lieutenant Graetz, of the Prussian army, is preparing to make an attempt to cross Africa by motor-car. He will leave Berlin in a few days for Dar-es-Salaam, on the east coast, taking with him a car specially constructed for the hardships and perils of the Dark Continent.

HERE AND THERE.

MITCHELL'S GARAGE, in Wardour Street, W.C., has been appointed as the official garage of the Motor Club.

A NEW garage has been erected at Carrick-on-Shannon by Messrs. Barrett and Co., who

also keep large stocks of accessories for the convenience of motorists in the west of Ireland.

THE Atlas Vacuum Cleaning Company, Ltd., of Leamington Street, Manchester, is making a special feature of the cleaning of the rugs and cushions of motor-cars from dust by their new patent process.

THE Mayfair Motor Company have placed at the disposal of the chairman of the East London Hospital for Children, a 6-h.p. Mayfair car, which is to be raffled for the benefit of the hospital fund. The vehicle will shortly be exhibited in the firm's showrooms at 22, Mortimer Street, London, W.

THE Daimler Company have now received further particulars of the noteworthy hill climb which took place in Spain during the Madrid Exhibition. Mr. E. M. C. Instone, in his 45-h.p. Daimler car, weighing 1,590 kilos unladen, climbed the Guadarrama Mountain in 8 min. 57 sec., and a 30-h.p. Daimler, driven

The Duke of Zaragoza at the wheel of a 45-h.p. Daimler.

by Mr. Graham, mounted it in 12 min. 43 3-5 sec. This last car weighed unladen 1,580 kilos. Although the ascent was officially timed, it appears that some doubt has been expressed, and consequently a further trial was made on the 2nd ult., in which Mr. Instone made the ascent in the remarkable time of 7 min. 20 sec., beating his own record by no less than 1 min. 37 sec. The time was taken by the Duke of Zaragoza, secretary of the Royal Automobile Club of Spain, and was witnessed by the Marquis de Tarazona, the Marquis de Valdaglesias, Count de Berberana, and many other prominent Spanish sportsmen.

A PLEASANT souvenir of the Frome's Hill climb comes to hand from Messrs. Tilley and Son, of Ledbury, who have published a set of eighteen picture postcards of that successful event.

MESSRS. JONES AND LESLIE, LTD., whose works are at 7, Carlisle Street, Dean Street, London, W., are well equipped for the prompt carrying out of repairs to all types of motor-cars, special attention being given to the re-bushing of crank shaft and other bearings.

MESSRS. SMITH AND SONS, LTD., who are well known to motorists in connection with speedometers, &c., are introducing scarf pins and brooches which are exact models of the Daimler cars, and are produced in gold, diamonds and enamel. This jewellery is likely to find favour with Daimler patrons.

MR. P. L. HUSKINSON, who represents the Daimler Company in Nottingham, has his headquarters at 96-98, Derby Road.

ACCORDING to Mr. Gladstone, the Home Secretary, the number of accidents in London reported to have been caused in the streets by motor-cars, motor-cycles, and motor-omnibuses during the six months ended April 30th last was 4,451. Of these accidents personal injury resulted in 1,175 cases, and fatal injury in 41 cases.

We illustrate herewith a somewhat novel and interesting car, which has just been completed by Messrs. Sayers and Co., of Vauxhall, S.W., for the Maharajah of Dhar, for the use of His Highness and the British Resident, Major Dalley. The vehicle has many unique features, it having been specially designed and constructed to withstand the climatic conditions under which it will be employed. As will be seen, the body, which is mounted on a Daimler chassis, takes the form of a large shooting brake, seating twelve persons including the driver; the back part is arranged with two side entrances and one at the back, with side seats, in wagonette style, each individual seat being arranged to fold up separately, thus allowing good space for luggage. Further, if required to carry native servants of two distinct and separate castes, they can be separated by means of removable or sliding divisions. The framework of the body is built of teak, the panels being of mahogany; the whole is highly varnished in

natural wood finish, no paint being used except on the wings and wheels, which are painted a neat brown in keeping with the appearance of the car. The whole of the vehicle is covered with a specially large hood, devised on a new system, to allow it to fold down on the back in the same way as an ordinary double hood. It is fitted with side curtains all round, which completely enclose it, and would adequately protect the occupants of the caravan in the most tropical of rain storms. The upholstery of the car is done in cane seating, each seat being made up on a separate wooden framework with spiral springs, no horsehair being used.

REFERRING to the London to Monte Carlo record, Messrs. Ducros Mercedes, Ltd., stated to the Dunlop Company that the selection of their tyres had been fully justified, as they gave no trouble of any kind, but acted as considerable factors in achieving the excellent performance of beating the previous record by 4 hours 14 minutes.

MESSRS. TIMSON BROS., of Snow Hill, Birmingham, and Duke Street, Liverpool, send a copy of their Motor Catalogue for the season. This extends to fifty-two pages, and is practically comprehensive of everything that the motorist is likely to require in the way of lamps, oils, sparking plugs, horns, jacks, carburettors, lubricators, goggles, &c. Reference may also be made to the electrical accessories and to the high-speed trembler coils illustrated in the catalogue, which will be of considerable use to agents.

VISITORS to Woodhall Spa will be interested in the garage which Messrs. Campbell and Co. have opened at the Beaufort Works in that pleasant resort.

THE Parsons Non-Skid Company, Ltd., are moving to 210, Shaftesbury Avenue, London, W.C. These premises are opposite the Daimler Company's depot.

THE Continental Tyre and Rubber Company, Ltd., have renewed their offer of a cup, value 250 guineas, to the winner of the Tourist Trophy event, if the car is fitted with Continental tyres. A cup of similar value is also offered to the winner of the heavy touring car race, provided the car is fitted with their well-known make.

THE 14-20-h.p. Unic car belonging to Mr. T. H. Nash, of St. Paul's Cray, which took an appearance prize at the Bexhill meet, had a body fitted by Mr. J. C. Beadle, of Dartford and Foot's Cray, Kent. The car was supplied to the owner a year ago, and the way in which the paint and coachwork has stood the test of time is a tribute to British carriage work.

THE Reigate Garage and Motor Depot, of London Road, Reigate, are building a new six-cylinder car which is to be known as the Sweetzer-Baker. The engine, which is rated at 20-30-h.p., has a bore of 80 mm. and a stroke of 90 mm. The vehicle is being fitted with a Bradley multiple disc clutch, and a four-speed change-speed gear controlled by a "gate" lever.

TURNER'S Motor Manufacturing Company, Ltd., of Wolverhampton, have just issued a new catalogue of the Turner-Miesse steam cars. The list has been handsomely produced, the different types of carriage bodies which can be fitted to the chassis being shown by coloured illustrations. Full particulars are given of the various details, while a number of testimonials from users of these cars are also included.

AUTOMOBILISTS who intend to take their cars this season to Germany to attend the various races there, especially the Kaiser's Prize and Herkomer Competition, are invited to communicate with the Tourists Enquiry Department of the Continental Tyre and Rubber Company, Ltd., 102-108, Clerkenwell Road, London, E.C., who are in a position and prepared to furnish any information required with regard to roads, &c. The Handbook for Germany can also be obtained at the same time.

THE Bridgwater Motor Co., Ltd., Eastover, Bridgwater, send their first illustrated catalogue of motor-car accessories—a branch of their business which has developed to a considerable extent during the last few seasons. Here are illustrated the latest types of lamps, horns, pumps, electrical accessories, motor tool outfits, non-skidding devices, &c. Several pages are devoted to motor tyres, and the company are making a feature of re-treading motor covers and repair work generally. The list will be a convenient work of reference to motorists in the west country.

THE fittings of the motor-car of to-day compared with those of a decade ago are a distinct advance in comfort, and, it must sometimes be confessed, luxury. Mr. S. J. Clarke, of 6, Much Park Street, Coventry, is the agent for the Umbra hand screen designed for the convenience of lady motorists. By its use goggles can be dispensed with. The screen is adjustable, so that the height can be varied to suit individual requirements, and is held with the knob of the stick resting on the lap. As an efficient protection against wind, dust, and rain the Umbra screen has undoubted merits.

So far the Hotchkiss six-cylinder car which is undergoing a long distance trial under the auspices of the R.A.C. has done 3,519 miles in the United Kingdom, including the Irish Reliability Trials, and the total mileage of the vehicle up to date, including the 6,200 miles which it covered in France, is 9,719 miles. On its return from Ireland the car is visiting Wales, the south of England, and will then go up to Scotland to take part in the Scottish Reliability Trials. We believe this is the first six-cylinder car to have accomplished so long a trial, and also the first car of any sort to embrace the Irish Reliability Trials and the Scottish Reliability Trials in its programme. Up to the present time the whole distance has been accomplished without any mechanical trouble, the only mishap so far being a sprung carriage spring.

CONTINENTAL NOTES.

Substitutes for Petrol.

On the recommendation of the Marquis de Dion, the Committee of the French Automobile Club have adopted in principle, and have referred to the Technical Commission, the proposition that a competition should be organised of cheap substitutes for petrol while retaining the advantages of the latter, and being capable of use in the same engines. In order to further this movement some very influential support has been forthcoming from the leaders in the French motoring world, the Marquis de Dion having himself promised £200 on behalf of his firm, and further asked the A.C. to vote a sum of £400. The *Chambre Syndicale de l'Automobile* has already voted £200, and a similar sum has been subscribed by Baron Henri de Rothschild, with a proviso that the new carburant shall be put on the market at a fixed price. M. Deutsche de la Meurthe has put his name down for £800. The President of the Committee, in acknowledging the subscriptions, expressed the hope that the competition would be productive of results of supreme importance to the industry.

The Criterium of France.

The Mors Company has entered three cars for the A.C.F. Criterium de France, which is, after the Grand Prix, perhaps the most important event to be held in France this year. The rules provide that the cars will be allowed twenty litres of petrol for every 100 kilometres; the minimum weight will be 1,600 kilogrammes, including the passengers, but not including spares, tyres, and tools. The contest comprises an endurance trial extending over four days, in which the competitors have to cover about 1,600 kilometres. The cars which survive the eliminating trial will be subjected to a 400 kilometre speed trial on the fifth day. No extra petrol will be allowed for this event, the competitors having to take on board before starting the 80 litres allowed for the whole race.

Unofficial Runs.

At the last meeting of the Committee of the Automobile Club of France, a letter from the Royal A.C. was read proposing the disqualification of any manufacturer making records with his cars from town to town or country to country on unguarded roads, on the ground that the making of these records involves a rate of speed in excess of that allowed by law. The Committee of the A.C.F. thereupon passed a resolution disapproving entirely of these attempts at making records and of the publicity ensuing therefrom, and decided that very severe measures should be taken to prevent such attempts in the future.

The Kaiser's Prize Race.

It has been definitely decided to hold the eliminating contest for the Kaiser's Prize Race on the 13th inst. The trial will, however, not be one to eliminate cars, but firms, and it has been resolved that it shall be optional with the successful manufacturers whether they put in the same car and driver in the actual race as competed in the eliminating, or whether they select one of their other cars and drivers. The decision has already brought in further protests, as it is held that the new arrangement gives an advantage to those makers who have entered several cars over the smaller firms which have only built one car, and which, if successful in the eliminating contest, will have little or no time to get their vehicle prepared for the actual race.

A French Reliability Trial of Heavy Vehicles and Town Cars.

Under the auspices of the French Automobile Club a reliability trial of heavy vehicles and covered town cars commenced on Monday of last week, and will continue until the 10th inst. Forty-eight entries were received in the heavy vehicle class, and of these the following forty were duly weighed:—One each Mors, Prudhomme, Cohendet, Turgan, German Daimler, and Gullierme; two each Orion, Latil, and Panhard; three each Delahaye, Aries, and Saurer; four each Peugeot and De Dion; five Brillies, and six Darracq-Serpollets. Out of the six town cars entered only three turned up, viz.,

two De Dions and a Vinot-Deguingand. The heavy vehicles are divided into the following four classes:—(1) Cars capable of carrying up to 500 kilogs.; (2) ditto, from 500 to 2,000 kilogs.; (3) ditto, from 2 to 3 tons; (4) ditto, over 3 tons; and (5) public service vehicles, carrying at least ten persons. The cars in the first four classes will be required to make twenty daily runs averaging 150 kilometres, and the fifth class an equal number of trips extending to 200 kilometres, all starting and finishing in Paris. These will serve as a test of endurance, the vehicles surviving it being subjected for a final classification to a fuel consumption trial. The regulations with regard to the town carriages are the same except that carburetted alcohol must be used as fuel, and that the total weight of the vehicle has to be in proportion to the piston area of the engine.

The Flat Grand Prix Racing Cars.

The Fiat racers for the A.C.F. Grand Prix Contest are, we learn, the same vehicles as were used last year; they have, however, been overhauled and improved in some of the details, specially as regards the carburettor. The engines comprise four cylinders, 180 mm. bore by 160 stroke, the normal rating being 130-h.p. The ignition is by Simms-Bosch low-tension magneto, and the clutch is of the Hele-Shaw multiple disc type. The vehicles will be driven by Lancia, Nazzaro and Wagner.

One of the 22-h.p. Berliet Tourist Trophy cars.

An International Automobile Conference.

As has already been mentioned in the *M.C.J.*, the next meeting of delegates of all the recognised national automobile clubs is to be held at Homburg on the 15th inst., on the occasion of the Taunus race meeting. It is proposed to discuss at the conference not only racing matters, but also questions of international traffic, such as the handling of cars on the frontiers, uniformity in numbering, official examination of types of vehicles, taxation of foreign cars, &c.

Miscellaneous Items.

An international motor-car exhibition is to be held in Ostend from July 10th to 17th.—The Automobile Club du Rhone is organising a series of flying kilometre speed trials for the 23rd inst.—The Kaiser has just placed an order for an Opel 50-h.p. car with limousine body.—The Prefectural Authorities of the Seine, in Paris, are organising a competition of chassis suitable for use as motor ambulances, as well as one for the best form of body to be fitted to the vehicles.—A Motor Volunteer Corps has just been organised in Switzerland.—The first Brasier six-cylinder car in Austria reached Vienna a few days ago.—A Motor Cab Company has just been formed in Lyons.—The municipal councillors of Manchester and Salford, who paid an official visit to Lyons last week, also journeyed to Grenoble, where they were taken for an automobile tour by the members of the Automobile Club du Dauphiné.

CORRESPONDENCE

[Letters to the Editor should be addressed to the offices
27-33, Charing Cross Road, W.C.]

HAS THE TOURIST TROPHY BENEFITTED THE INDUSTRY?—A SUGGESTED SIX DAYS' RACE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—The first part of the heading of this letter can at once be answered by an emphatic negative. The firms who have won the race for the two years it has been established might well assert to the contrary; but, as matters stand at present, the prevailing impression amongst the general motoring community is that the heavy expenditure incurred by the Automobile Club provides only a splendid advertisement for the leading cars in each contest. Whatever may have been the aims of the original promoters, most people have the idea that the Tourist Trophy was meant for the encouragement of the moderate priced car that could average a speed of about legal limit with four persons aboard. Commencing with a fuel limit of 22½ miles to the gallon, this was reduced last year to 25 miles to the gallon, and looking at the results attained by the finishing cars in the last contest it was safe to assume that the petrol consumption would be again cut down for 1907—but the Races Committee thought otherwise—and that the object could be better achieved by increasing the minimum total weight.

The Leader Tourist Trophy Car, to which a special interest attaches in so much that it is the smallest-powered car entered for the contest. The vehicle is one of the standard vehicles of the New Leader Motors, Ltd., with practically no alterations or additions whatever except that the body has been built to comply with the regulations. Unfortunately, it arrived too late at the Club Enclosure. (See page 288.)

Now this carrying of additional weight cannot very seriously affect results, for amongst the vehicles that completed the distance were some whose weight was considerably in excess of the conditions, and the others carried tyres, tools, and spares that were not absolutely essential. Yet we find in one case a competitor finishing at what would have averaged very close to the winner's speed in miles per hour but for sundry mishaps, still with over 1½ gallons of fuel unconsumed. With these experiences behind them, competitors, by shaving just within all the rules as to weight and body dimensions and proportionately cutting down tyres and tools, can be on the starting mark with practically the same total weight as in 1906. The increased height of the tops of the seats from the ground may make a slight difference, but nothing that will be very appreciable.

The question of the genuine touring vehicle versus the so-called freak has been threshed out until it is quite threadbare, and we are still no nearer a recognised definition that would be acceptable to all those who are interested. These are mere surface details when compared with the more important consideration as to whether real and lasting improvements have been involved or incorporated with the stock article vended to the public. It is true that what are euphemistically termed "Tourist Trophy models" can be purchased at fancy prices, yet it is questionable in how many respects these would conform to the vehicles that actually competed. Certain sections of the trade have already arrived at the same conclusion, and, having clamoured with strength, have prevailed upon the Club to institute another race for their especial benefit, and so urgently necessary was the heavy contest required for the improvement of design that the enormous number

of fifteen cars have entered at ordinary fees! Maybe the speed reducer in the form of a wind screen eight feet high from the ground has preyed upon the nerves of some of those who hoped to overshadow the performances of the smaller vehicles in respect to speed and thus surround their own machines with all the kudos and glory attaching.

One point that does not seem to be grasped by those who may be influenced in purchasing a car by a performance in any Tourist Trophy event is the ability of one man to so drive as to attain results impossible of achievement by ninety-nine out of every hundred average drivers. The personal equation is more prominent in this contest than in any other event of the year, and manufacturers have to use just as much judgment in the selection of the driver as they employ in the design and construction of the vehicle placed in his control.

Automatic carburetting devices have hitherto not contributed very much towards the positions of the leading cars, momentary variation by hand of the fuel supply at the spraying jet and the amount of air mixed therewith being the factors that have led to success. Over such a course as that in the Isle of Man, a skilful driver can, comparatively, humour an engine with mere whiffs of petrol for the best part of the course, the seven miles climb from Ramsey to the Bangalow on Snaefell causing the largest drain on the fuel supply. Given a similar machine to the majority that competed in 1906, no ordinary driver can possibly run twenty-five miles to the gallon of fuel, and he can reckon himself pretty smart if he manages seventeen miles for the same quantity. This is, of course, a matter with which we were all fairly conversant before the Trophy was instituted, and it would be futile to suggest that the contests have evolved anything new or startling in petrol saving methods.

We can fairly credit the Tourist Trophy races with having resuscitated tangent-spoked wire wheels, but, although interest has been renewed in these fittings, the experiences of competitors only confirm knowledge gained twenty years ago. Users of the old "ordinary" or high bicycle proved that the lighter the driving wheel could be built the better the machine would travel, and these same conclusions were more than confirmed with the safety pedal bicycle. Fashion plays a larger part in the design of saleable articles, whether they be motor-cars or suites of furniture, than does the actual fitness for a particular object in view, and no better proof of this statement can be adduced than the fact that present-day purchasers of cars do not want wire wheels, and would not have them even by the inducement of lower initial cost. They are infinitely stronger and more suitable in every respect, but it is waste of energy to endeavour to educate the motoring public into such a belief.

Can we learn anything that may tend to improve frame and body construction? The duration of the race is not sufficiently long to provide informative data on either of these points, and at no part of the course is the speed very much higher than is reached by the average touring car on unfrequented stretches of road. A four hours' trip at forty miles per hour over decent surfaces cannot impose any sort of strain on the machine, and is quite a regular performance for light touring cars on the Continent. Perhaps if the race was run for eight hours on six successive days the weaklings would inevitably be eliminated and the survivors could certainly claim to have done something remarkable that would be worth a considerable amount of advertising to blazon forth to an admiring world. This may appear an impossible sort of scheme, but when existing facts are taken into account is worth consideration. The Isle of Man authorities have already consented to close some of their roads for nearly the whole of three days this present May, and the majority of the inhabitants there have the real sporting instinct so ingrained in their character that the establishing of a full racing week might be easily accomplished. Each year that the event has been held much money has in consequence been distributed throughout the island, and where only a few hundred persons are tempted to cross for the sake of witnessing a half-day's racing at present, many thousands would undoubtedly be attracted by the sustained interest, in a six days' event. The Manx people are never averse to turning an honest penny, and they make no secret of their desire to induce visitors to spend as much money as possible. Prove to these wideawake business men that the Tourist Trophy races on the lines here suggested would cause ten times more cash to be expended than the 1906 event brought along, and the combination of good sport and easy money making would successfully overcome any scruples that might otherwise be engendered.

Run in this way, the contest would resolve itself into a racing reliability trial, and we should then be able to discover the practicable touring machine. The popularity of the Scottish reliability trial is sufficient proof that manufacturers are only too eager to enter cars in a competition where, as far as human foresight can provide, the regulations automatically tend to reject the elements of luck. We should still have makers building special engines, but, with the knowledge before them of having to sustain the stress of forty-eight hours' travelling under racing conditions, there would be a greater disposition to test out every possible device to ensure no part being unnecessarily weakened. From the advertising point of view, a reliability race would be of infinitely larger value than the existing half day's scramble, and the cars that could emerge successfully from such a search out of their weak points would be fully entitled to all the patronage that must follow. This is not the place to discuss motoring politics, yet the thought must be expressed that by an extended scheme of the character roughly sketched above the Royal A.C. would retrieve some of the laurels our Scotch friends have secured.—Yours truly

STREATHAM.

THE CONTROL OF MOTOR RACE MEETINGS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—If an example were needed for the necessity of the formation of a strong body to absolutely control every automobile race meeting held in the United Kingdom, such an example has been provided in the Bexhill meeting on Whit Monday, announced as being run by the Crystal Palace Automobile Club. In my opinion, the Royal Automobile Club should immediately take steps to prevent a repetition of such a meeting, and, furthermore, should frame rules and regulations governing all meetings which are run by clubs, or otherwise, in connection with which outside entries from the trade and private users—other than members of the club itself—are solicited. The top speed contest, held by the Crystal Palace Club, a little time ago, had a semblance of being organised for the benefit of a particular firm, but the Bexhill meeting went much farther than this.

The "Sussex Daily News" of the 21st ult. start their report of the meeting by saying that "the first day's race meeting at Bexhill was the worst farce ever conducted in the name of a motor-car race meeting." I personally should have liked to have believed that much of the muddle and confusion which existed at the meeting was due to the incompetency of the officials, but this, I am afraid, would hardly be

ever, that this handicap had been altered, and the Germain actually had to give the smaller car 9 seconds, but this alteration was made after the printing of the programme, as were most of the other events, and of these alterations most of the competitors knew nothing.

I noticed in this competition that a 14-h.p. Spyker with 80 mm. bore by 110 stroke had to give 34 seconds start to the winning car, and as the winning car actually covered the distance from scratch in 46.2-5 sec., it meant that the Spyker car had to cover the half mile—this was apparently the distance of the race—in 122-5 sec. in order to equal the performance of the actual winner; whereas the single-cylinder Sizaire would have to cover the distance in 28.2-5 sec. in order to get home, equivalent to something over sixty miles an hour—rather a hard task for a single-cylinder car. It was announced that the starts had been allotted by the Royal Automobile Club, but at the same time there is not the slightest doubt but that the Club intended the times in question should be added on to the actual running times of the cars, and the way in which this event was carried out by the officials of the Crystal Palace Club was undoubtedly grossly improper.

In any race run under the Royal Automobile Club formula, weight and wind resistance have to be set forth in order to allot the starts. No attempt was made by the promoters of the meeting to have this done, or to check the body dimensions of the cars, or to ascertain the windage

The Irish Reliability Trials.—Graiguenamanagh Hill Climb.

accurate. Perhaps, in order to put the matter more clearly, it would be well to deal with the programme.

The first event announced to take place at 2.30 on the Whit Monday afternoon was a handicap race for touring motor-cycles. This was run off with some little delay, but without special incident. Event No. 2 was a handicap open to cars whose cylinders D.N are under sixty-five inches, and in the programme was set forth a so-called handicap allotted by the Royal Automobile Club. The handicap was set out with the handicap time against each name. Whether the time placed against each name was the time given to each car by way of a start or not was not vouchsafed in the programme, but it was eventually interpreted by the officials to mean that the start in question was the time which each car had to allow to the limit car. Nothing was stated in the programme as to the distance of the race. The results worked out in a ludicrous fashion. For instance, the little 9-h.p. Sizaire with one-cylinder, with 120 mm. bore, weighing 13 cwt., was placed on the same mark as an 18-22-h.p. car with four-cylinders, 85 mm. bore by 120 stroke, and, by some generosity of the handicapper, received 3.3-5 seconds start from a four-cylinder 15-h.p. car with 95 mm. bore and 120 stroke, whilst another single-cylinder car with 125 mm. bore actually received 15.2-5 seconds start from the Sizaire, and the winner of the competition, a car with single-cylinder, having 118 mm. bore, actually received 18 seconds start from the Sizaire cars. The 14-h.p. Germain four-cylinder, 92 mm. bore by 112 stroke, was by the programme set forth as receiving from the little single-cylinder Sizaire 16 seconds start. I was informed afterwards, how-

ever, that this handicap had been altered, and the Germain actually had to give the smaller car 9 seconds, but this alteration was made after the printing of the programme, as were most of the other events, and of these alterations most of the competitors knew nothing.

There is one thing I would like to ask for, however, in connection with this particular meeting, and that is the production of the original entry forms of competitors. These forms were sent in, with the dimensions and weights set out, to the Secretary of the Club, and it would be interesting to know whether any additions to, or alterations thereof, were made in the same, prior to their being laid before the official handicapper. I think in cases where the details in connection with all cars in each handicap are not published, that the entry form should be sent direct to the Royal Automobile Club, otherwise there is nothing to prevent alteration being made in the forms, and the competitor has no knowledge on what basis he has been handicapped against his fellow-competitors, and on what points he has been penalised. It would have been less important had the procedure which was adopted at Frome's Hill and in connection with the Nottingham Club's speed trials at Welbeck been carried out, because there qualified and expert officials were appointed to check the weight of each car and the area of windage, and no competitor was allowed to vary his car after such dimensions had been taken.

Event 3 was the titbit of the afternoon. This was a race in which each competitor had to cover "a quarter of a mile flying start, 110 yards slow speed on top gear, and a half a mile standing start on top gear." The subtlety of this race, arranged for the special benefit of powerful six-cylinder cars, is very clear. The 110 yards slow speed on top gear was evidently inserted with the sole object of preventing very powerful four-cylinder cars taking part, and, as there is practically only one firm making very powerful six-cylinder cars who could possibly enter, the result was certain, even before the race was run. It was amusing, however, to see the failure of the six-cylinder competitors as well as the four-cylinder competitors, in this slow speed farce. It is unnecessary for me to burden with wearisome details, but the fact remains that in the final of this competition cars took part which had hopelessly failed in connection with slow speed contests and had been disqualified. I do not know how it was done, but the fact remains that they were in the final. I heard one discontented competitor enquiring the reason why he was not in the final after apparently having done well in the preliminary heats, and I heard a wonderfully ingenious explanation being given to him, but he did not understand it, and I most certainly did not, and it was obvious that the other bystanders were equally in the dark. The worst of it was that none of the competitors, and most of the officials, did not know what they were doing or what was taking place. One individual on the course appeared to be very clear on every point, and the result was seen in the official results, which were announced on the following day.

Event 4 was interesting, "Scratch race for touring cars, chassis price over £700," as four cars of one make were the only entrants. Two other cars of another make were in the programme, but they were put in—so the entrant informed me—without his authority, the cars in question being actually entered, so I was informed, in Class 7. Therefore, we had the very interesting spectacle of an open race confined to one make of car. What credit the winning of a gold medal or any other medal would be under these circumstances I fail to see. In the dimness of the evening the start for the last race of the day was made, but at 7.30 I retired to the hotel for dinner and have no knowledge of what took place, although I was informed that cars were still endeavouring to eliminate themselves to allow the announced winner to gain the expected and well-earned victory. The second day's proceedings I know nothing of. One day was enough for me, and I curtailed my holiday and returned to town disgusted with the whole proceedings.

Now, Sir, what I do say is, that there is yet a considerable amount of life in the sport of automobilism; but, if life is to be maintained, the holding of meetings by clubs of mushroom growth under their own rules and regulations, for the favouring of their own particular friends, should they so desire, should be immediately stopped. Apparently an important matter in connection with the running of an automobile sales department will be the running of an automobile club to hold meetings for the special benefit of one's own particular cars. I am sure, anyhow, that any further efforts of the Crystal Palace Automobile Club to obtain open entries for any of their gymkhana races will be rewarded with the success they so richly deserve after the display last week. One thing is perfectly clear in my mind, after witnessing the so-called open race meeting at Bexhill, and that is, that unless the Royal Automobile Club—which is the proper body under the circumstances—takes the question of regulations and rules, and classification of cars, under its direct control, every sporting automobilist, including those in the trade interested in automobile racing, will become disgusted and the sport absolutely killed.—Yours truly,

CHARLES JARROTT.

THE R.A.C. AND UNOFFICIAL TRIALS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—You will, no doubt, remember that some considerable time ago the Automobile Club passed a resolution as follows:—"Any owner, manufacturer, dealer, agent, or driver taking part in, or directly connected with any trial or competition, otherwise than under regulations made by the Club, and obtaining extensive advertisement therefrom, shall be deemed to be guilty of a breach of these rules." It is most extraordinary that, with this resolution still unrescinded, manufacturers are still able to take these unofficial runs and have the greatest publicity given to them in the Press.

On February 15th it will be remembered that there was a run from London to Edinburgh, in which three cars took part, two of them under official observation of the Royal Automobile Club and the other not officially observed, and yet the newspapers reported the three in exactly the same way, as if they had all been under the same observation. Although the Royal Automobile Club's attention was drawn to this, nothing has been done so far as one can find out. Again, some recent runs from London to Monte Carlo have been made without Club sanction, or official observation, and still no comment is made by the Club.

It seems to me that if these various records are to be kept clean and above suspicion, the Royal Automobile Club ought, in justice to itself, to make it abundantly clear what records are officially certified by them, and when other uncertified records are claimed, either act in accordance with their rules, or admit at once that they have not the power to carry out the rule they themselves passed; and that all and sundry are free to make records, publish them in the Press, and claim them, and that the Club has no jurisdiction in the matter whatever. The present arrangement is unfair to those firms who are loyal to the

Club, as it goes without saying that unofficial trials, as a whole, must be more successful than official, which have all the details of the results published, whether successful or unsuccessful, the unofficial runs being only published when success is claimed.—Yours truly,

S. F. EDGE.

EFFECT OF WHEEL ALIGNMENT ON TYRES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—From time to time we have noticed in your valuable columns that you have drawn attention to the importance of keeping the front wheels in alignment. Apart from the danger of the steering-gear breaking down owing to the great strain there is thrown upon it, there is also the question of the heavy wear on tyres. This matter has been brought before us prominently of late.

As you are aware, some time back we placed the "Garantire" tyre upon the market, the feature of this tyre being that owing to our having perfected the design and using only the finest material, we are able to give a guaranteed mileage of 4,000 miles.

So far, we have had four tyres returned to us as not being up to the minimum mileage. In the first case, our client wrote stating that his tyre had not only worn unduly, but had burst at 3,000 miles, and under our bond required a new tyre per return.

Another informed us that although he had only run his car a little over 1,000 miles he was already upon the canvas; he likewise wanted a new cover "by return," and so wrote the others, giving varying distances, but all far short of even the guaranteed distance.

In each case we wrote for the covers. As each tyre arrived it needed no expert to discern the trouble. The treads clearly showed that the front wheels were not running in parallel. That being so we wrote our clients to that effect, and the replies we received all disputed the point. Our next step was, therefore, to assure each of our clients that his wheels were out of truth, by making actual tests. In each case we found the front wheels were from 1 in. to 2 in. out of line, so that a constant skidding action was upon the tread.

Our clients were one and all surprised at the turn of events, though not the less pleased at having the fault pointed out.

We think the point is interesting to even those manufacturers who are not in a position to guarantee their goods, for with a non-alignment of the front wheels there must be undue wear of tyres and hard remarks upon the poorness of quality of the material, and, having no further claim upon the maker once the tyre is paid for, a customer is naturally reticent to write and complain. Consequently a maker is blamed for faults for which he is in no wise responsible, and it behoves car-owners to assure themselves by periodical tests that the front wheels of their car are in alignment, as a bad rut in the road, or even a gentle collision with a kerb in approaching it diagonally, may cause a slight distortion, which will play havoc with the front tyres in the course of a few hundred miles.—Yours truly,

THE PROPRIETORS OF THE MOTOR HOUSE,
PERCY EASTON, Director.

A SIMPLE HUB BRAKE AND HOW TO MAKE AND FIT IT.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice with interest Mr. Tom Williams's remarks on the above subject. If mere repetition is proof, a simple hub brake is of no value. On reading his condemnation of it, a paraphrase of a well-known piece of Dryden suggested itself to me.

"And your correspondent may aspire to gain renown,
By writing himself up and pulling others down."

But has this gentleman given proof of what he alleges? In fact, has he brought forward any one argument? No, he merely states it is no good; leave all such things to the makers, and if their production fails, I presume the coroner will have to settle on whom the responsibility rests. The proof of the pudding is in the eating, and I am prepared to hold by a simple hub brake. I therefore suggest that Mr. Williams select a hill and accompanies me in my car, if he will honour and trust me. He can dismount on the hill, and if the brakes do not hold on that hill—of his own choice—in both directions, I am willing to give £5 to any charity he names, providing he will give a tenth of that amount in what I know he must consider an absolute impossibility, namely "the holding of a simple hub brake."—Yours truly,

CHARLES T. W. HIRSCH.

A TRIBUTE TO SLOUGH.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—While the A.A. does not pretend to act as a censor of motor-car manners, and while we are content for our badge to be honoured without flaunting it as indicative of so-called considerate driving, I beg the hospitality of your columns to appeal on behalf of the town of Slough. For the past few months we have had a patrol on special point duty at each end of that town to regulate, and, when necessary, restrain the speed of cars through the streets. This with the cordial co-operation of both the local council and police. Many of the complaints which led to our action were against what are known as red letter cars, i.e., those bearing trade identification marks.

I have discussed the subject with several gentlemen of note in Slough, and hasten to pay tribute to their fair and sportsmanlike attitude towards automobilism. Indeed, it is no breach of confidence to assert that on the open roads of Berkshire one may drive at quite nineteen miles per hour without persecution, if only the villages and towns are treated gently. Surely this is fair. What matter if a gentle amble through Slough does involve an extra five minutes? In those minutes a considerate motorist—badge or no badge—will make ten times five converts to automobilism, and this, after all, is important.

Prevention is better than opposition; the A.A. patrols are obviating the necessity for a special speed limit through Slough, which without any doubt would have been applied for and granted ere this. I ask the friendly aid of motor-car firms, and suggest with all diffidence that managers might more carefully select the routes along which drivers are ordered to "test" cars. Mileage, speed, petrol and consumption are frequently reckoned without sufficient consideration being given to the number of towns through which the men have to pass. I submit with even greater diffidence that it has seldom occurred to the gentlemen to make special allowance for town driving, on the principle of controls in long distance road contests.

The sportsmanlike spirit displayed by Slough administrators cannot be too highly praised. Fair runs and no favour are too few and far between; it may be hoped, therefore, that our patrols' efforts to prevent furious driving through Slough will not be disregarded.—Yours truly,
STENSON COOK.

HEDGE CUTTING.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—It is very necessary, in the interests of the safety of the public, that hedges, at corners and cross-roads, should be cut or trimmed so as to give drivers and others a view of the approaching traffic. The Motor Union appeals, therefore, to local authorities to exercise their powers under Section 65 of the Highway Act, 1835, to cause any tree or hedge that obstructs the view at cross and side roads to be cut or pruned. Members of the public are requested to draw the attention of occupiers and the local authorities to cases where such action is necessary.—Yours truly,

W. REES JEFFREYS.
Sec. Motor Union.

TOP GEAR DRIVING.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—There seems to be a widely-held belief amongst motorists that there is some special virtue in being able to drive continuously on the top gear. Many drivers are so reluctant to use the change-speed lever that they will keep on "top" until practically the last gasp of the motor. I, for one, fail to see where the merit is in remaining upon this gear with the motor knocking and hammering, straining itself and every part of the car by its jerky action. It is, of course, conducive to fuel economy that a car should be operated upon the top gear up to its full load—that is, up to the point at which it begins to slow down noticeably under full throttle; but nothing is gained, not even economy in fuel, by allowing it to slow down to the point at which the revolutions become jerky. Even speed is sacrificed, for the car will frequently make better time if a change is made to the next lower gear. To many it is a matter of pride to say that they have traversed certain hills on the high gear. With such it often happens that "pride goeth before a fall," for a broken crankshaft or badly loosened bearings generally results from an adherence to the practice of "worrying" over hills on the top speed, rather than drop to "third" or even "second."—Yours truly,

CORINTHIAN.

THE MOTOR UNION HANDBOOK.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I am sorry that I cannot commend the Handbook Committee of the Motor Union on its promptness in getting out the annual handbook. Here we are with almost half the year gone and yet no handbook. If it is delayed much longer it might as well be left over and got ready for the 1908 season, so that it might be sent out early in January next. Perhaps Mr. Rees Jeffreys, the secretary, will say when the work may be expected to be issued, as the touring season is now rapidly approaching, when one may have occasion to refer to the book.—Yours truly,

A YORKSHIRE MEMBER.

TRIP TO PENZANCE.—A correspondent who proposes to take a seventeen days' motor trip from Hastings to Penzance on an 8-h.p. car wishes for information as to the hotels, &c., en route, via Portsmouth and Exeter and returning via Bath and Reading.

ON Sunday last, a large quantity of spare parts, tools, &c., fell out of a 40-h.p. Weigel car between London and Brighton. Messrs. Weigel Motors, Ltd., will be obliged if anybody finding same will communicate with them.

CARS FOR SOUTH AMERICA.—One of our South American readers, Senor Mariano Rostey, of E. Matto Grosso, Corumba, Brazil, writes that he is anxious to receive catalogues—in Spanish or French where possible—from motor-car manufacturers.

CLUBS AND ASSOCIATIONS.

R.A.C.

A J.P. and two members of the Metropolitan Police Force have been awarded driving certificates as a result of the examination held at the Clubhouse on the 18th ult.

THE AUTOMOBILE ASSOCIATION.

THE A.A. patrols have been out in force at week-ends since the holidays at Whitsuntide. Practically every main road round London was dealt with in addition to several long stretches in Yorkshire and Huntingdonshire, and one or two outposts in other parts of the country. For the Motor Union Festival at Lincoln and the races at Bexhill the expenses of a special deployment on the roads to both these towns increased the A.A. wages bill by more than £50. General approval was expressed of the practical utility of the yellow badged cyclists, and the kindly reference which Mr. C. D. Rose, M.P., Chairman of the Royal Automobile Club and Motor Union, made in his speech on the Saturday has aroused much appreciation among the supporters of the A.A.

The 25-h.p. Speedwell Car, fitted with landaulet body, just delivered to the Right Hon. Viscount Colville of Culross by the New Speedwell Motor Company, Ltd.

COMMERCIAL MOTOR USERS' ASSOCIATION.

New members of the Commercial Motor Users' Association include leading firms in the iron, brewery, dairy, piano, druggist, milling, furniture, and other industries. In view of the forthcoming trials a large influx of new members is expected.

NORTH EASTERN ASSOCIATION.

THE Year Book of the North Eastern Automobile Association for the current season is extremely comprehensive, and reflects credit on those who have been responsible for its compilation. In addition to the usual information for club members, there is a list of the leading hotels in Northumberland and Durham as well as of the retail dealers of petrol and garages in the two counties. The maps showing the roads out from Newcastle, Sunderland, Durham, Darlington and Stockton are extremely good, indicating the locality of leading garages as well as sharp turns. Following the rules of the North Eastern Automobile Association are those governing the local clubs affiliated thereto, and also a list of members, including a dozen M.P.'s who are honorary members. At the end of the book we notice several ruled pages for memoranda and particulars of motor runs during the season.

ESSEX MOTOR CLUB.

To encourage light car owners and makers, this club is including a class in their 200 miles non-stop reliability trial on June 22nd for cars

selling price of which does not exceed £250. The competition will take place on a quiet course in Essex, having its base at Ongar, and will consist of 100 miles non-stop in the morning and 100 miles non-stop in the afternoon, the cars being under official observation the whole of the time, and no adjustments being allowed during the luncheon interval. Flexibility in the form of a slow speed drive on top gear will be included in the points for finding the winner. Full particulars can be obtained from the assistant honorary secretary, Mr. Ernest Bass, of Ongar.

CARDIFF MOTOR CLUB.

THE reliability run inaugurated by the above club took place on Wednesday, last week. The competitors, numbering about a dozen, started off from Roath Court at 10.30 a.m., the route being to Ross, via Usk, Raglan, Monmouth, and Pendergalt, and with the exception of one car, which lost time owing to punctures, all the entrants arrived within the scheduled times. After lunch the judge (Mr. H. Hall, Ross) restarted the party home, the route being via St. Owen's Cross, Marslow, Whitechurch, Monmouth, to Raglan, where a halt was made and the times checked by Mr. T. Savary (Usk). Tea was here partaken of, after which a start was made for home, which was reached about 8 o'clock, six cars completing the journey without losing a mark. Those who lost marks were chiefly troubled by punctures. Mr. S. Hall (Cardiff) took the times at the home control.

LINCOLNSHIRE MOTOR-CYCLE CLUB.

THERE were twenty-five starters in the Reliability Trial of the Lincolnshire Motor-Cycle Club, and twenty-one finished the difficult course of ninety-five miles, which took in the towns of Sleaford, Boston, Spilsby, Louth, Wragby and Lincoln. The riders started from any town on this circular course, and very considerable interest was taken in the event. Each rider had to make out a schedule of time, and, checked at various points, the rider who did the most meritorious performance, keeping closest to his schedule, was to win the splendid silver challenge cup offered for the event, silver medals being awarded to all riders making non-stop runs.

The brothers E. R. and H. G. Cole, Roxholme, went out together, and, carrying a time-table on their handlebars, only deviated 2½ min. in the whole ride, and that between Sleaford and Boston, eighteen miles, during a very bad storm. They therefore tie for first place, and are to decide whether they will run it off or one withdraw. E. R. Cole rode a 3½-h.p. Brown, and H. G. Cole a 3½-h.p. N.S.U. Alan L. Shaw, Grantham, riding a 3½-h.p. Minerva, came third, his total deviation being only 5 min.; A. D. Bates, Lincoln, four-cylinder F.N., was fourth with a total deviation of 9 mins.; H. Mills, Grimsby, 2½-h.p. De Dion, fifth, with 14 min.; J. W. Porter, Grantham, 2½-h.p. Minerva, was 15 min. outside his schedule time; A. C. Mackenzie, Lincoln, 5-h.p. twin Rex, 21 min.; J. A. Mettham, Grantham, 3½-h.p. Minerva, 21 min.; C. Moore, Lincoln, 5-h.p. twin Rex, 22 min., and J. Kirby, Lincoln, 3½-h.p. Lincoln Elk, 28 min. These all stand for non-stop medals, subject to checking.

BLACKHEATH.

A PAPER chase was held by the Blackheath A.C. on Saturday, and the novelty of the event was much appreciated by the members present. Professor Carlton J. Lambert, M.A., was the hare, and, although not allowed to exceed an average speed of fifteen miles an hour, successfully eluded capture. About forty members and friends arrived to tea at Down. Among those present were:—Messrs. W. F. Butcher, H. Beadle, L. Beadle, H. J. Fisher, O. V. Flather, A. Jackson, Professor C. J. Lambert, Messrs. T. Marshall and W. Whiteway.

MOTOR UNION.

MR. HAROLD BREWER was recently summoned at Raglan for driving a motor-car to the danger of the public, the case being ultimately dismissed. It is interesting to note that Mr. Brewer, who is a member of the Motor Union, was carrying the Motor Union car badge at the time of the occurrence, and instructed Mr. F. C. Shackel, of Cardiff, one of the local solicitors of the Union, to defend him. As the Union are satisfied that Mr. Brewer did not in fact drive to the danger of the public, he is entitled to have one half of his legal expenses refunded, which will be forwarded to him by the Union in due course.

SOUTHERN MOTOR CLUB.

THIS club was fully represented by its delegates at the Motor Union meet at Lincoln. At the gymkhana, Mr. S. W. Phillpott was most successful, taking three prizes in three events. The delegates and members rode direct from Lincoln through to Bexhill, being the official club rendezvous, where thirty other members were met, and the trip was thoroughly enjoyed by everyone.

On the return journey information was received of a police trap on the Dicker road, and, after a careful watch, an electrical timing trap was discovered. The trappists were discovered behind a thick coppice, and it was only by sound that the cars were timed. The members stopped all cars and showed the occupants the spectacle of the gentleman in blue quietly reading novels behind the hedge.

The competition for the Gamage cup will take place to-day (Saturday) on the Bath road; meet at Berceley Arms, Hole, Cranford

Bridge, and not on the 8th, as previously noted. There will be a picnic on Sunday, the 2nd inst., at High Wycombe, meet at Chequers Hotel, Uxbridge, at 11.30 a.m. On the return journey tea will be taken at Marlow.

Entries are now coming in for the climb on the 22nd inst. at Kydd's Hill, East Grinstead, and the event promises to evoke widespread interest, especially in the motor-bus class and that for the lady drivers, some prominent names having been received.

THE MOTOR CLUB.

THE first motor run in connection with the above club will take place on Sunday, June 9th, assembling in Coventry Street, London, W., at 10.30 a.m. The run will be to Brighton, where luncheon will be provided at the Royal York Hotel.

The Motor Club is moving rapidly. Though scarcely seven weeks old, the membership now stands at over eight hundred, and there is a waiting list of one hundred more. The club will hold a gymkhana at Hastings later in the season.

MANCHESTER.

LAST week the Manchester Motor Club had a very interesting reliability trial. The route on the first day (Thursday, 24th ult.), was from Manchester to Aberystwyth, through Stockport, Warrington, Chester and Wrexham. Twenty-one cars started. No mishap occurred on the early part of the journey, but the occupants of two cars took refuge from the rain at Ruabon, and as they stopped their engines they were booked by the judges for an infringement of the rules. Lunch was taken at Bala, and the journey resumed through Dolgelly to Aberystwyth. The following claimed non-stop runs:—J. Higginson (Hollinrake De la buire), P. Bell (Bell), E. Jones (Horbiok), V. New (Siddeley), Butter (Humber), V. Grey (Allday), T. Garner (Singer), T. Garner (Darracq), Cranham (Horbiok), Wright (Humber), M'Neill (Cottareau), J. Newton (Scat), F. C. Hunt (Humber).

The trials were continued on Friday, the destination being Stratford-on-Avon, by way of Builth, Hereford, and Tewkesbury. The last day's programme of the Manchester Motor Club's reliability test was entered upon on Saturday morning from Stratford-on-Avon. It consisted of a speed test on Sunrising Hill, between Stratford and Banbury. The two preceding days had been severe tests of reliability, made more difficult by the rain and the bad state of the roads, and this influenced the committee in deciding to allow all cars to be tuned up before the third day's test. Out of the twenty-one cars which started in the trial seventeen successfully climbed the hill. The official results will be made known in a few days.

MOTOR-CYCLE CLUB OF VICTORIA.

THE Motor Cycle Club of Victoria (Melbourne) held their 100 mile road race on April 22nd, on a twenty-five mile course a few miles outside Melbourne. The course included two very stiff hills to be taken twice, and the race was run for the greater part during some severe showers of blinding rain. Despite this, Mr. H. F. Hall, on a 5-h.p. Peugeot, did the first fifty miles in 1 h. 12 min., and the full 100 in 2 h. 26 min., thereby winning the first trophy, a trophy for fastest time, and the 100 miles road record, equalling 43.3 miles per hour. Mr. J. R. McKenzie, on a 3½-h.p. Peugeot, was second, 2 h. 41 min., and Mr. E. Brown, 3½-h.p. Peugeot, third, 2 h. 49½ min.

There were twenty starters, and, despite the inclement weather, a large number of visitors watched the race and cheered the winner at the finish. A large number of motor-cars and motor-cycles were also on the road. The arrangements were ably carried out under the direction of the hon. secretary, Mr. McArthur.

THE ROAD IMPROVEMENT ASSOCIATION.

IN connection with the trials organised by the Road Improvement Association, and referred to on another page, the numerous company adjourned to lunch, at the invitation of the Berkshire A.C., at the Grand Stand luncheon room, Ascot, on Friday, where Major E. R. Portal, the President of the Berkshire Automobile Club, was supported by Mr. C. D. Rose, M.P., the Hon. Arthur Stanley, M.P., Col. Bosworth, Sir George Livesey, Sir H. Praed, and many of the city and county surveyors of the country. After the loyal toasts had been honoured Dr. Guglielminetti proposed the toast of "The Roads Improvement Association," referring to its work as essentially in keeping with the practical spirit of the English people. He said that in Paris they were organising for Christmas next a great anti-dust congress, from which important results were anticipated. As illustrating the international character of the road question, he went on to say that while we owed good roads all over the world to two Englishmen, Telford and Buchanan, it was to the French that the experiments with regard to tar were pioneered.

Response was made by the Hon. Arthur Stanley, M.P., who referred to the vexed question as to whether the keeping of roads in order should be a matter for the local authorities or for the nation. The experiments which they had seen were necessary, and it was obvious that no Government or county authority could undertake such work; hence the value of such an Association, which, with the help of the R.A.C. and the Motor Union, has been able to carry out experiments that would be for the benefit of all classes of users of the road. It was to the advantage of the movement that these should be undertaken by an

Association which embraced all classes rather than by any organisation definitely devoted to automobilism. It was worthy of note that this question had been removed from the "taint of the motor" and they were then meeting at the headquarters of the equine. It was often said that they could not have all this new traffic on the roads because they were not suited for it; but that was not the position which Telford and his immediate successors had taken up. They saw that better means of communication were necessary and set to work to find them. That was the position which was taken up by the Roads Improvement Association, the toast of which had been so well proposed by D. Guglielminetti.

Mr. C. D. Ross, M.P., Chairman of the R.A.C., proposed "The road authorities of the United Kingdom," and paid a tribute to the good work which was being done by the road surveyors and other experts. He hoped that the experiments they had been able to carry out would give results which would assist these authorities in allaying the dust trouble, from which motorists suffered as well as other people. There were great difficulties in the way of preparing a scheme which would adequately safeguard the local authorities in the matter of the control and maintenance of the roads, but doubtless a solution would be found, and in the meantime they heartily recognised the good work that was being done by the existing authorities.

Response was made by Mr. C. A. Ferard, the chairman of the Highways Committee of the Berkshire County Council, who referred to the revolution which had taken place in the road traffic within the last six years. A new condition of things had been created which was not contemplated by the original builders of the roads, and inequalities had arisen which were particularly hard on counties like Berkshire,

CASES UNDER THE MOTOR CAR ACT.

DISMISSALS.

Col. Chalener Knox has been charged at Dublin with driving a motor-car at an excessive speed. After hearing the evidence the magistrate said he did not think this was a case for a conviction, or even a caution. It was a proper case for the police to bring, and on Colonel Knox paying the police expenses, 17s. 3d., he would dismiss the summons.

At the Uckfield Petty Sessions, Wm. Conlan, Lewes, successfully contended that the accident which was responsible for his appearance in Court was the result of a side-slip, and was not caused by any negligence on his part. In opening, Mr. Lawson Lewis, who appeared for the police, stated that defendant attempted to drive between a cart and a three-horse wagon on the road leading from Sheffield Park Station to the Sheffield Arms, with the result that he collided with a wheel of the former vehicle. This statement was borne out by several witnesses, all of whom expressed the opinion that the car was driven recklessly. Without retiring the Bench decided to dismiss the case.

Charles Andrews, Pemberton Gardens, London, was summoned at Hove County Bench for negligently driving a motor-car on the London Road, Patcham, on April 28th. The magistrates, after hearing the evidence, retired to consider their decision, and, on returning, said they considered the case not proved and dismissed it.

Fines amounting to £51, exclusive of costs, were imposed at Lancaster on eight motorists charged with exceeding the speed limit.

An Argyll climbing Cudham Hill, Kent.

where a rate of 1d. in the pound did not produce more than £4,000. They were far removed from the source of the road materials, and thirty-eight miles of the Bath road ran through their county, which was largely used by motorists who were not licensed within that area.

Mr. Robert Todd, in proposing the toast of "The competitors," said that it spoke well for the future success of the tar treatment of roads when, although the system had only been in use a little time, they had been able to get so many machines to compete, and so many preparations to be tested.

The toast of "The Berkshire Automobile Club" followed, and then the company returned again to the roads, where the experiments were continued.

THE new club rooms of the Western India Motor Union have been opened with a reception, at which opportunity for gauging the enterprise of the organisation was taken advantage of by many leading motorists in the Dependency.

UPON the occasion of his visit to Hatfield on Saturday last, Prince Fushima and suite made use of two Daimler cars placed at their disposal by the Brompton Motor Company.

THE Maudslay Motor Company (1907), Ltd., are removing their London depot from 213, Knightsbridge, S.W., to more commanding premises at 60, Piccadilly, W., where, after the 1st inst., a selection of their latest models will be on view.

The fines on motorists at Haywards Heath on Wednesday of last week amounted to £81 9s. 5d. including costs.

For travelling at a rate exceeding twelve miles an hour a motor-bus driver has been fined £3 and costs at the Lambeth Police Court.

DANGEROUS DRIVING.

The Bingham magistrates have had before them a Newark motor-car driver, summoned for driving a car at a speed and in a manner dangerous to the public at Gamston, on May 5th. The defendant was Arthur J. White, of Portland Street, Newark, and he pleaded not guilty. Police-Constable Hollis deposed that about seven p.m. he saw defendant driving a motor-car towards Nottingham at a dangerous speed. Harry Spencer said the car passed him at a tremendous speed. He estimated it at forty miles an hour, and he reported the matter to the police. William Henry Johnson, of the Milton's Head Hotel, Nottingham, said he hired the car to go to Southwell. He did not consider White drove the car recklessly or at a dangerous pace. It took an hour and three-quarters to come from Southwell via Newark to Parliament Street, Nottingham. A fine of £5 was imposed on the charge of driving at a speed dangerous to the public.

A TRIPLE CHARGE.

At the Thames (London) Police Court, Henry Annett was summoned for unlawfully driving a motor-car without a licence, and further for fraudulently using a driver's licence under the Motor Car Act; and Robert W. Chapman, of Ley Street, Ilford, was also summoned for allowing Annett to use his licence. On behalf of the defendant, counsel said

that Annett was a mechanic, and as a motor-car had broken down at Croydon, Messrs. Webster sent him there on another car driven by Chapman, to repair it. He did so, and on returning found there was heavy traffic in the Mile End Road. Being a more experienced man than Chapman he drove the car, although he had not got a licence. Just as he did so a boy rushed into the car and was killed, but it was proved no blame attached to Annett. When the latter was asked for his licence he produced the one issued to Chapman, his excuse being that his wife was very ill and that he wished to save her worry. On the first summons Annett was fined 10s. and 30s. costs, and 30s. on the second one. Chapman was ordered to pay 30s. and 10s. costs, and his licence was endorsed.

NO LIGHT.

The Aberdeen police are watching the lights of motorists, and in a case just heard the Sheriff said it was a misfortune that the light should have gone out in the particular case before him; but the law compelled the possession of a light, and the delinquent driver was fined £1, with the alternative of three days' imprisonment.

EXCEEDING LEGAL LIMIT.

At the Spittlegate (Grantham) Petty Sessions a motor driver, employed by Mr. Burnside, at Tollerton Hall, Notts, was summoned for driving a motor-car at a dangerous speed at Manthorpe, on the 28th April last. Defendant pleaded guilty. P.C. Aldenby said on the date named he was in Manthorpe, when he saw a car coming from the direction of Grantham. It was travelling at such a furious rate that he was unable to see how many occupants there were in it, or the number in front. He afterwards got the number from the back. A fine of £5, and costs £1, was imposed.

AUTOMOBILE ACCIDENTS.

A CAR with the identification plate L.C. 5,877 was proceeding along Roehampton Lane on Sunday afternoon, when it failed to take the curve at the village end of the road, and crashed into the wall of Manresa House, the Jesuit College. Owing, perhaps, to the fragile character of the obstruction, nobody was injured, but a considerable stretch of the brick partition was demolished.

A MOTOR-CAR crashed into a milk cart at the corner of Uxbridge Road and Bath Road, at Slough. The car, which was owned by Mr. Arthur Lu Cior, of Regent Street, was considerably damaged.

THE Langholm and Carlisle mail gig was approaching Longtown late on Monday when a motor-car dashed into the rear of it. The gig was upset, and the two occupants thrown out and seriously injured.

At the White Horse Inn, Mare Hill, Pulborough, on Saturday afternoon, Mr. F. W. Butler, the West Sussex coroner, held an inquest on the body of Emma Leadbetter, who died on the previous Thursday from injuries received through being knocked down by a motor-car, owned and driven by Mr. James H. Deakin, of Hollingbourne, Kent. After hearing the evidence, the jury returned a verdict of accidental death and exonerated the driver from all blame in the matter.

A REMARKABLE accident occurred on Saturday afternoon at Gordon Road, Camberley. Colonel Ruxton was driving a spirited horse in a dog-cart when he met Major Buckley's motor-car, driven by his chauffeur. The horse became unmanageable, and jumped through the plate glass wind shield of the motor-car. Colonel Ruxton was thrown out into the road, and received an injury to his shoulder. The chauffeur escaped with a few scratches. The horse had its throat cut by the glass, and received several deep cuts on the chest. One of its shoes was also torn off, and it will probably have to be destroyed.

MR. J. T. MILBURN, a Cardiff stockbroker, his wife, two daughters, son, and chauffeur were seriously injured in a motor accident at Coedkernew, near Newport, on Saturday evening. To avoid a horseman, some dogs, and a trap, the car was diverted sharply to the side of the road, and running up a bank it turned right over.

TWO men travelling to Alnwick on a motor-cycle and trailer met with a serious accident at Felton Bridge. The cycle struck the parapet of the bridge, and the rider was thrown over the wall and fell into the river below, a distance of 25 feet. He was got out and taken to a doctor, who found that he was suffering from a fractured knee-cap.

THE London to Brighton postal motor-van met with an unusual accident the other morning. While proceeding through Burgess Hill, the steering apparatus failed to act, and the vehicle crossed to the off side and collided with a street watering post. It then dashed into a brick wall, which was knocked down, and the motor-van came to a stop in a flower bed outside the house occupied by Mr. T. H. Jeffries, who was awakened by the noise. He hastily dressed and procured the assistance of some workmen in the village. After an hour and a half the motor-van was got into the road, and proceeded to Brighton with the mails. The driver and sorter escaped injury.

THE business of Messrs. Docker Bros., who are well known as manufacturers of paints, varnishes, &c., is being converted into a limited liability company with a capital of £150,000. We understand there will be no initial public issue.

ONE of the latest cars delivered by the Wolseley Tool and Motor Car Company is a 45-h.p. six-cylinder Siddeley landaulet. The purchaser is Mr. W. T. Madge, of "The Globe" and "The People," whose satisfactory experience of an 18-24-h.p. Siddeley induced him to order the more powerful and modern vehicle for touring.

A JOINT MEET AND HILL CLIMB.

By the invitation of Mr. F. A. Bolton, J.P., of Moor Court, Oak-amoor, the president of the Derby and District Automobile Club, the members of the Nottinghamshire, Derby and District, Leicestershire, and Mid-Staffordshire Automobile Clubs had a joint meet in the wilds of North Staffordshire on Saturday. From Derby, Ashbourne, and Leek the roads were quite busy with motor traffic, and there were about eighty cars with their passengers present.

The primary object of the gathering was to have a hill-climbing competition, for which each club was permitted to nominate four of its members, the trophy at stake being Mr. Bolton's silver challenge cup. Each of the sixteen competitors had a trial run up the hill, in which he was in honour bound compelled to do his best. The cars were then drawn in pairs, and handicapped according to their trial times, the object being to provide close and exciting finishes. In the subsequent rounds the handicap was reframed. There was one particularly exciting heat in which Mr. Charles Hardy, on his 45-h.p. Daimler, was called upon to give 1 min. 21 sec. to Mr. A. H. C. Wenger, on an 18-22-h.p. Beeston Humber, and the scratch car just caught and passed the other a few yards from the post. The winner of the cup was Mr. J. B. Marsden Smedley, of the Derby and District Club, on a 24-h.p. De Dietrich, Dr. R. G. Hogarth, of the Notts. Club, being the runner-up on a 12-16-h.p. Talbot. The times in the trial spins, on which the handicaps were framed, and the results of the various heats, are appended:—

DERBY AND DISTRICT CLUB.

	M. S.
Mr. Arthur Ford, 30-35-h.p. Daimler	1 31
Mr. J. B. Marsden Smedley, 24-h.p. De Dietrich	2 31
Mr. L. P. Mell, 15-h.p. Darracq	3 27
Mr. George B. Fletcher, 10-12-h.p. Humber	5 10

NOTTINGHAM CLUB.

Mr. C. Hardy, 45-h.p. Daimler	1 19
Mr. H. Bowden, 30-h.p. Darracq	2 22
Dr. R. G. Hogarth, 12-16-h.p. Talbot	3 49
Mr. A. N. Lee, 10-12-h.p. Humber	4 15

LEICESTER CLUB.

Mr. W. Coltman, 12-14-h.p. Fiat	3 32
Mr. J. A. Doran, 24-h.p. Minerva	1 55
Mr. J. A. Harper, 15-h.p. Humber	2 50
Mr. R. Herbert, 14-h.p. Vulcan	2 59

MID-STAFFS. CLUB.

Mr. C. H. Riley, 18-22-h.p. Daimler	2 27
Mr. A. H. C. Wenger, 18-22-h.p. Beeston Humber	2 40
Mr. G. F. Brindley, 12-14-h.p. Clement-Talbot	2 46
Mr. F. W. Podmore, 10-12-h.p. Coventry Humber	3 30

In the first round Mr. F. W. Podmore, beat Mr. Arthur Ford; Mr. J. B. Marsden Smedley beat Mr. L. F. Brindley; Mr. A. N. Lee beat Mr. L. P. Mell; Mr. R. Herbert beat Mr. G. B. Fletcher; Mr. Chas. Hardy beat Mr. A. H. C. Wenger; Mr. W. Coltman beat Mr. H. Bowden; Mr. J. A. Doran (holder) beat Mr. C. H. Riley; Dr. R. G. Hogarth beat Mr. J. A. Harper.

In the second round Mr. A. N. Lee beat Mr. R. Herbert; Dr. R. G. Hogarth beat Mr. W. Coltman; Mr. J. A. Doran beat Mr. F. W. Podmore; Mr. J. B. Marsden Smedley beat Mr. Chas. Hardy.

In the semi-finals, Mr. J. B. Marsden Smedley, 24-h.p. De Dietrich (45 sec. start), beat Mr. J. A. Doran, 24-h.p. Minerva. Time, 2 min. 41 sec., and Dr. R. G. Hogarth, 12-16-h.p. Talbot, beat Mr. A. N. Lee, 10-12-h.p. Humber (40 sec. start). Time, 2 min. 20 sec.

The final resulted: Mr. J. B. Marsden Smedley, 24-h.p. De Dietrich (11 sec. start), beat Dr. Hogarth, 12-16-h.p. Talbot. Time, 2 min. 16 sec.

The officials were:—Judge, Mr. F. A. Bolton; timekeeper, Mr. Charles J. Allin (Derby A.C.); starter, Mr. G. H. Kirk (Notts. A.C.); clerks of the course, Messrs. Alan McAlpin (Leicester A.C.), Booth Granger (Notts. A.C.), and J. Cornes Nevitt (Mid-Staffs. A.C.).

Following the hill-climb the motorists adjourned to Moor Court for tea, and Mr. Bolton handed the cup to Mr. Smedley, who suitably responded.

PUBLIC MOTOR SERVICES.

MR. C. CHAPMAN'S new motor char-a-banc has made its first public journey from Grassington. It is intended for service between Grassington Station and Buckden. The makers of the engine and chassis are Commercial Cars, Ltd., and it was supplied through Messrs. Grace and Sutcliffe, of Keighley. The body was locally built by Mr. W. V. Patrick, of Grassington.

In consequence of a complaint by carriage proprietors that the new motor char-a-bancs were plying for hire without being licensed, the motor vehicles at Llandudno are to load only on private land.

A NEW motor-omnibus service has been inaugurated between Cricklewood and Victoria, London, S.W.

The stringent action of the Metropolitan Police with regard to the motor-buses plying for hire is occasioning much concern among the owners of such vehicles. No fewer than sixty-five of the Vanguard line are in garage undergoing alteration with a view to their quieter running

to meet the objections of the police. At least two other companies have been ordered to take practically all their vehicles off the streets.

A PUBLIC motor service, with cars of 30-40-h.p., has been inaugurated for tours in the Snowdonian districts. The excursions include the loop tour and Snowdon, and one to the famous marble church at Bodelwyddan.

A DAILY motor service has been established between Chatham and Rochester.

A new char-a-banc, by Messrs. Durham, Churchill and Co., is about to be put into service by the Penrith and District Motor Service Company, Ltd.

COMPANY NEWS.

NEW COMPANIES REGISTERED.

FORS ACCUMULATOR COMPANY.—£10,000. To acquire patent No. 17,238 of 1905, for improvements in electrodes for secondary batteries, and to adopt an agreement with Mr. H. F. Joel, A.M.I.C.E. No initial public issue. Table A mainly applies. 110-11, Strand, W.C.

WICK MOTOR ENGINEERING WORKS.—£5,000. To acquire the business of the Wick Motor Engineering Works and Garage, now carried on by Mr. R. T. Gill, at D'Avigor Road, Hove. First directors: Messrs. R. T. Gill, R. W. R. Gill, and R. D. Rason. D'Avigor Road, Hove.

HODGES AND MASON.—£2,000. To take over the business of motor and cycle dealers carried on at High Street, Christchurch, as Hodges and Mason, 31, High Street, Christchurch, Hants.

The 30-h.p. six-seated Beeston-Humber Landulet supplied to Lord Justice Bomer. The car is of the standard type in every respect, and his lordship has expressed approval of its satisfactory running.

THOMPSON-BENNETT, LTD.—This company has just been registered with a capital of £5,000 in £1 shares, to adopt an agreement with Messrs. J. A. Thomson, P. F. Bennett, and J. H. Chambers, and to carry on in England and elsewhere the business of manufacturers of and dealers in all kinds of component parts, accessories, and fittings used in the construction and propulsion of motor vehicles. Mr. P. F. Bennett, who was with the Electric Ignition Company, Ltd., will be the managing director, and Mr. J. H. Chambers will be manager of the works, which are located in Heneage Street, Birmingham.

CLEVELAND CAR COMPANY.—£35,000. Manufacturers of and dealers in motors, motor engines, &c. No initial public issue. First directors: Messrs. C. F. Dixon, O.B. Pease, and C. G. Huntriss. Smithfield Road, Darlington.

PETER LEE AND SONS.—Registered, with a capital of £5,000 in £1 shares, to acquire and carry on the existing businesses of oil refiners and motor spirit merchants. Registered office: 7, High Street, Glasgow.

DEVON AUTOMOBILE AND CARRIAGE COMPANY.—£20,000. To take over the business of motor manufacturers and agents, carriage builders, &c., carried on at Exeter as Standfield and White. First directors: Messrs. S. M. White (managing director), A. B. Bramwell, and A. H. Gibbs. 8, Sidwell Street, Exeter.

BOON AND PORTER.—£9,000. To acquire the business carried on at 161, Castelnau, Barnes, as Boon and Porter, to take on lease or sub-lease certain premises connected therewith, and carry on the business of motor engineers, &c. First directors: Messrs. C. W. Drabble, E. G. Drabble, A. Boon, and J. H. B. Porter. 161, Castelnau, Barnes.

ROAD REPORTS.

ROYSTON.—Following on the recent fatal motor-car accident at the cross-roads at Royston, the Royston Urban Council have determined to apply for an order limiting the speed of motor-cars through the town to eight miles an hour.

WITHINGTON (LANCS.).—Alderman Copeland presided at a meeting of the Withington Special Committee of the Manchester City Council. The excessive speed of motor-cars passing through the district was complained of in a letter from the Chorlton-cum-Hardy Ratepayers' Association, which stated its willingness to support any action of the committee in obtaining through the Local Government Board a fixed speed limit within its own area. This is now being asked for.

BECKENHAM.—Arrangements have been made for the spraying of the Beckenham roads with tar as soon as the weather is convenient. Beckenham was one of the foremost towns to try experiments in overcoming the dust nuisance, and as a result came to the conclusion that of the materials at present available, tar which had undergone a rough process of distillation was the best.

THE THAMES TOWING PATH.—The Local Government Board have fixed June 5 as the date of the public inquiry, at Hampton Wick, in connection with the proposal of the Office of Works to prohibit the driving of motor-cars along the river-side towpath between Hampton Court and Kingston bridges.

SCOTLAND.—Applications for the ten mile speed limit have been made to the Scotch authorities by the Town Councils of Grantown-on-Spey, Forbes and Penicuik.

ASHFORD.—The County Surveyor of Kent has arranged for a warning sign to be put up at Potter's Corner, Ashford, where the road is banked the wrong way for turning, so that a car going more than twelve miles an hour is unable to keep to its proper side of the road.

DERBY.—In connection with the question of signs in the borough of Derby, the Derbyshire Club has decided that a letter should be sent to the Highways Committee of the Derby Town Council, asking if they would support the erection of warning triangles in the town, thus bringing to the notice of strangers passing through the various dangerous and congested places.

WE learn that Mr. George J. Nearing has resigned his position as works manager with Messrs. Huntley Walker and Company. **VAUXHALL MOTORS, LTD.**, have appointed the Glasgow Automobile Company, of 83-85, West George Street, Glasgow, as the sole agents for Scotland for Vauxhall cars.

THE reliability of the "Brown" motors was again proved in the London to Edinburgh run promoted by the Motor Cycling Club, when a Brown 25-30-h.p. car, driven by Mr. R. B. Banks, and two Brown 5-h.p. twin-cylinder motor-bicycles did the whole journey without mechanical troubles of any kind. The Brown was the first car to arrive at Newark, Wetherby, Leavenhall, and Edinburgh.

THE Valor Co. have received an order from the Royal Automobile Club for a dozen of their three-gallon size "New Era" petrol fire extinguishers, for the equipment of the new garage in Brick Street, Piccadilly, W.

FORTHCOMING EVENTS.

MAY.

THURSDAY, 30TH.

R.A.C. Tourist Trophy and Heavy Touring Car Races.
The Great Yarmouth M.C.C. 75 miles Penalty run under Auto Cycle Club's rules. Entrance forms from the secretary, Mr. F. Worts, Somerton, Yarmouth.

FRIDAY, 31ST.

R.A.C. Graphic Tourist Race.

JUNE.

SATURDAY, 1ST.

Entries close for Henry Edmunds Challenge Trophy.
Cleveland Branch of Yorks A.C. run to Rokeby.
Motor Cycling Club's hill climb at Sharpshoe.
West Essex A.C. run to Blackmore.
Reliability run of the North-East Lancashire A.C. to Carlisle.
Derby A.C.'s Gymkhana at Coventry.
Motor Yacht Club races.

SUNDAY, 2ND.

Meet of the Motor Cycling Club at Frensham Ponds.
Southend M.C. run to Colchester.

MONDAY, 3RD.

Motor-boat race at New York for Gordon Bennett Cup.

TUESDAY, 4TH.

The cars in the Herkomer Touring Trophy Competition will be weighed-in at Dresden.

WEDNESDAY, 5TH.

Start of Herkomer Touring Trophy Competition from Dresden.

SATURDAY, 8TH.

R.A.C. Henry Edmunds Hill Climb.
Gymkhana of the Coventry M.C.
Hill climb of the Blackheath A.C.
The Kensington A.C. will hold a Gymkhana in the grounds of Chiswick House, Chiswick.

SUNDAY, 9TH.

The Motor Cycling Club will meet at the "Cock," Epping, at 11 a.m. for a trip to Maldon.

FRIDAY, 14TH.

Race for the Kaiser's Prize on the Taunus Course, Germany.

SATURDAY, 15TH.

Conference of officially recognised automobile clubs at Homburg.
Commercial vehicle meet at Reading. Mr. Leo Harris, hon. sec., 379, Strand, London, W.C.
The children of the Leicester Cripples' Guild will be taken for a drive by the members of the Leicestershire A.C.

SATURDAY, 22ND.

Southern Motor Club's open hill climb on Captain Kydd's Hill, East Grinstead.

TUESDAY, 25TH.

Scottish A.C. Reliability Trial.

WEDNESDAY, 26TH.

Hastings Automobile Meeting. Appearance Competition and Gymkhana, organised by the Automobile Association and the Motor Club.

THURSDAY, 27TH.

Newcastle Motor Club's run to Edinburgh and back.

SATURDAY, 29TH.

Aero Club race for the Hedges Butler challenge cup.

JULY.

2ND.—A.C.F. Grand Prix Race on the Seine Inferieure Circuit, near Dieppe.

6TH.—Inaugural races on the Brooklands Track.

10TH.—R.A.C. South Harting hill climb.

13TH.—Entries for R.A.C. commercial vehicle trials close at ordinary fees.

15TH TO 18TH.—The annual automobile meeting at Ostend.

20TH.—Motor Union meet at Southport.

27TH.—Commercial vehicle meet at Maidstone.

AUGUST.

20TH.—Open competition for light cars organised by the Essex Motor Club over a 200 miles course.

SEPTEMBER.

9TH.—Industrial Vehicle Trials commence.

OCTOBER.

19TH.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

POLICE TRAPS.

THE East Sussex police have been busy with their patent electrical timing apparatus, and three traps have been set for motorists at Newtimber and Clayton, near the South Downs.

THERE is a motor trap in the Kennington Road, London, S.E.

A POLICE trap has been set up on Bromley Common, Kent.

DRIVING from Carlisle to Glasgow, a Cumberland reader has found a new police trap at the village of Kirkpatrick, eleven miles from Carlisle. The trap is being worked by two plain-clothes constables with a third man in uniform, and is in daily operation.

THERE is a police timing arrangement along the London road, leading from Ware to Hoddesdon, a distance of about three miles.

A MEASURED distance is being worked (both ways) seven miles east of Cholesford, on the Cholesford and Newcastle road (Roman road). It is 300 yards long, and is situated just where the Corbridge road turns off.

THE police are watchful at Cublington, and three motorists were fined the other day at Milverton in consequence.

MOTORISTS about Woodford on the last two Saturdays have found police activity very keen, traps having been laid in the High Road and also at Epping New Road. The trap set up at the latter point on the 18th ult. resulted in five victims being summoned at Stratford Police Court on Saturday last.

IN a stretch of four miles on the south side of Lancaster the police have eleven traps for motorists, some of them overlapping.

BUSINESS NEWS.

THE "Garantire" tyre, which has been well placed on the market by the Motor House, 314-316, Euston Road, London, N.W., is guaranteed for 4,000 miles.

AMONGST recent purchasers of Clyde cars through the Century Motor Company, of Holland Gate, W., are Dr. J. T. Tasker-Evans, of Hertford; the Rev. W. Jackson, of Maidstone, and Captain Niblock, of Greenwich.

THE Law Car and General Insurance Corporation, Ltd., 4, St. Paul's Churchyard, London, E.C., have issued a pamphlet of handy notes for employers in connection with the Workmen's Compensation Act.

IN the face of the recent performances of Rover cars in open competitions, they must be admitted to be amongst the least expensive in upkeep of any cars on the market. In the Albert Brown Trophy, on the 11th ult., their petrol consumption was remarkably low, being 41½ for the 6-h.p. vehicle, and 35½ for the 8-h.p., and in the Hertfordshire Club's Consumption Trials the 20-h.p. Rover scored with 30.4 miles to the gallon, the second car only averaging 20½ miles.

THE purchase of a Daimler car by the Duke of Zaragoza is extremely important from the fact that this nobleman is regarded as one of the leading authorities on engineering subjects in Spain; moreover he is a director of the Northern Railway of Spain. In addition to the sales to the Spanish nobility already chronicled, further successes of the Daimler Company in Spain consist in their having been awarded a silver medal at the exhibition for their coach-work, and a bronze medal for stand decoration.

WE learn that the coil used in connection with the ignition on the Siddeley 40-h.p. long distance trial car was one of the Electric Ignition Company's manufacture, and that it gave every satisfaction.

EARL Russell has just taken off the off-side front wheel of his 30-h.p. Daimler, which was fitted with Palmer tyres. The car weighs about two tons with passengers in running order, and has been driven over all sorts of roads, so that the performance of running 12,240 miles without a puncture is remarkable.

SIR KENNETH MATHESON last week ordered a 24-h.p. De Dietrich from Messrs. Jarrold and Letts, Ltd., who also sold a 40-h.p. de Dietrich and a 24-h.p. of the same type to Mr. J. Bliss and Mr. C. Braun respectively. The week's business of the firm included the disposal of a 40-h.p. Crossley car to Mr. A. Barclay Walker.

ARIEL Motors, Ltd., inform us that arrangements have been made for the Ariel-Simplex cars to be manufactured in Coventry, where the manufacturing facilities will be trebled or quadrupled to what they have ever been before, while the business is to be much more vigorously pushed than hitherto. The company has opened a large depot at 101, New Bond Street, London, W., the premises occupying the whole of a five-storey building, where the latest models of the Ariel-Simplex cars can be inspected.

CAPTAIN DEASY has resigned the chairmanship and joint managing directorship of the Deasy Motor Car Manufacturing Company, Ltd., but remains on the board as an ordinary director.

MISS VESTA TILLEY's chauffeur fitted a Dunlop grooved tyre to the rear front wheel of the popular artiste's 24-30-h.p. Panhard car, and which, although run considerably over 6,000 miles (en route Miss Tilley's London and provincial engagements), has never given him a moment's trouble. He examined the tyre the other morning, and was surprised to notice how little of the tread had worn away. The cover looks good enough for another 2,000 miles before it will want re-treading.

THE Motor-Car Journal.

VOL. IX.]

LONDON, SATURDAY, JUNE 8, 1907.

[No. 431.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

BOTH the Rover and the Humber companies, whose cars did so well in the Isle of Man last week, are to be heartily congratulated on the success of their entries. The race was a trial for the drivers as well as the vehicles, and Mr. E. Courtis and Mr. G. P. Mills, who steered

the cars to victory in the Tourist Trophy race and in the Heavy Touring Car race, deserve to be associated with the praise of the cars. Speed was out of the question on such a day as Thursday, when the mountain was hung with mist and the roads made as heavy going as could be imagined. But the consistent running of the winners and some of the other competitors was a feature of the event which should satisfy critical observers as to the touring qualities of the cars. With regard to the races themselves, there seems a consensus of opinion that just as the value of the Gordon Bennett race was lost in the improvement that so rapidly took place in cars, so the Tourist Trophy event has been lessened in value by the development that has taken place in car construction—and, it may be added, the importance of the Scottish Reliability Trial. It will be interesting to watch the next meetings of the Races Committee of the Royal A.C., with a view of discovering the official estimation of the criticisms that have been levelled at the races in Manxland.

Police Uniforms.

To render the Army indistinguishable to the enemy on the veldt soldiers were dressed in khaki for South Africa. A similar idea may, perhaps, underlie the intention of the Standing Joint Committee of the Dorset County Council, which is supplying grey uniforms to the county constabulary. It is, however, officially announced that this change of uniform has been made owing to the clouds of dust which were thrown up on to the blue-black coats of the police; the less sombre hue is calculated to render the police of a less dusty appearance; but they will not be so easily apparent to passing motorists. Fortunately the county of Dorset has not yet shown any desire to compete with Surrey in its detestation of the car and its driver.

The Brooklands Motor Track.

THE issue of the regulations in connection with the Brooklands Motor Course, near Weybridge, reminds us that preparations are well forward, and that the trade and the public will soon have an opportunity of enjoying speed trials under private auspices. With the exception of the days upon which racing is to take place, the course will be open for motor-cars of a maximum axle weight of 2,700 lbs. on week days. The admission of cars will entitle them to drive at any speed on a left-handed course round the oval part of the track. The speed will be recorded for any distance not exceeding five miles, and for this certificates of performance will be given. Racing will only be permitted after the necessary arrangements have been made with the officials, and drivers will be required to drive as close

to the inner edge of the track as the speed at which they are travelling will admit without putting a side-strain on the wheels. Doubtless many makers will avail themselves of the opportunity thus presented of gauging the speed of their vehicles under conditions that will not cause any risk to the public, and which may, at the same time, provide spectators with a new sporting interest.

The Road Conference.

ON Monday and Tuesday next, at the Institution of Civil Engineers, the adjourned conference of road makers and road users will meet, when important resolutions will be submitted, not only by the Roads Improvement Association, but also by some of the county surveyors and others whose practical experience should be exceedingly helpful to the meeting. Mr. E. J. Lovegrove, the borough engineer of Hornsey, will propose the formation of a State Highway Commission or Department to classify roads, and formulate a scheme for the maintenance and improvement of new national arteries. The Roads Improvement Association propose that a committee should be appointed to wait upon the Government to submit the resolutions arrived at, and urge that the State should contribute more largely than heretofore to the cost of construction of main roads. There are important organisations outside the automobile movement which will be represented, and the conference should prove a good basis upon which to build up a movement for the improvement of the main highways of the country.

The Weather and Trade.

ACCORDING to the calendar, Saturday last was June 1st, and summer was upon us. Those who ventured forth on their cars must have felt they were back again in March, or transported forward to October, so cutting was the wind and so heavy the rainfall. Verily, the English climate is maintaining its character of inconsistency and unsettling industry with a vengeance. The prospective motorist delays his trial trip from day to day; the dealer scarcely dare go forth in search of customers, and, it must be confessed, there is a quietness about business that must be disconcerting to all except those who have booked orders far ahead. Firms who showed at the recent Exhibition and secured the inquiries of the visitors to the Agricultural Hall are congratulating themselves on having been saved from some of the anxiety that has been brought upon the trade by the vagaries of the summer—we had almost written winter—of 1907.

A Notable Trio.

THIS is the season for trials. Ireland has just had hers—in an automobile sense; England has transferred her tests to Manxland; and Scotland will have her trial at the end of the month. In connection with the latter event, which seems, by the way, to grow in importance every year, a notable contest will run concurrently with the main test. Only three drivers have driven in each of the two preceding trials without absolute loss of marks. They are Mr. H. Ramois (Germain), Mr. R. Crossley (Belsize), and Mr. F. S. Bennett (Cadillac), thus

R

bringing the cars of Belgium, England and America respectively to the front. This is a distinction both for driver and vehicle, and as the trio has again entered for the Scottish Reliability Trial, their repeated success would be generally popular.

A Trial in India.

FURTHER evidence of the position that automobilism is winning for itself in India comes in a letter from Mr. N. M. Marshall, of 1, Esplanade Road, Bombay, who is inviting the support of British manufacturers for the reliability trials which the Motor Union of Western India intends to hold during the Christmas week of the present year, covering a distance of 600 to 700 miles. He will be pleased to receive entries from home motorists. "I am making a great endeavour to place the Motor Union of Western India in the most prosperous condition," says Mr. Marshall, "and since I have taken its secretaryship we held a gymkhana, the first of its kind in India, and have established club rooms in the finest position in Bombay, as well as forwarding the interests of motoring in this presidency in a manner that has not been previously done." It is also proposed to hold an exhibition in February next.

Mr. F. E. Carter, of Sunderland, on the Swift 10-12-h.p. Car which he drove in the Irish Reliability Trials, and which made a non-stop run throughout.

Motor-Car "Principles."

THE publication of new works on the motor-car would seem to be unnecessary and almost impossible. But Mr. W. Whitman has contrived to write a volume which occupies its own niche in the library of the motorist, and to run on lines dissimilar to any of the many publications that have been devoted to the automobile. The object in view is clearly defined as being "to explain the principles that underlie automobile construction and operation, and to illustrate the movement and mechanical combinations adopted in present day practice." This idea is kept well in view throughout the volume of 250 pages, which is embellished with fifty diagrams, and made easy of reference by a capital index. The description of the "gasolene" engine indicates the author's acquaintance with American practice, and the use of the word "petrol" might be of service. The arrangement is excellent, Mr. Whitman dealing firstly with the four cycle engine, its various parts, the question of carburation—why "carburetor" is thus spelt we know not—ignition, transmission, running gear, &c., are all dealt with, and then follows a chapter on Troubles, followed with another on how to locate the

same. This volume not only explains the principles of the car and the functions of its various parts, but it has a practical aspect in assisting the motorist who may be in difficulties. Mr. Sydney Appleton is the publisher, and the work will be of value to everyone about to take flight into the world of mechanical carriages on common roads.

The Irish Trials.

LAST week we gave the times in the two hill climbs which formed an interesting feature of the Irish reliability trials; now we are able to know the official results of the speed test over a three miles course on the Magilligan sands. In Class A the 6-h.p. Rover was the only entrant, and did the trip in 7 min. 32 2-5 sec.; in Class B the speediest vehicles were the 9-h.p. Adams-Hewitt (5 min. 13 1-5 sec.), the 15-h.p. Ford, jun. (5 min. 25 3-5 sec.), and the 10-12-h.p. Swift (5 min. 33 2-5 sec.). The 10-h.p. Chambers excelled in Class C, and the 16-20-h.p. Calthorpe was the fastest in Class D with 4 min. 11 2-5 sec. to its credit. As has been the case so often this season, the 15-h.p. Clement-Talbot was conspicuous in its class, as was also the 20-h.p. Rover and the 15-20-h.p. Unic. Class F was a very strong class, and again the Clement-Talbot car occupied premier place, followed by the Beeston Humber and the 25-30-h.p. Straker-Squire. In Class G two Ariel Simplex cars tied for first place, and a car of the same type was also first in Class H.

Railway Charges on Motor Bodies.

RECENTLY we referred to the interview between a deputation from the Institute of British Carriage Manufacturers, the Motor Section of the London Chamber of Commerce, the Society of Motor Manufacturers and Traders, and the railway companies at the Railway Clearing House, with reference to the carriage of motor-car bodies. The points raised by the deputation have since received the consideration of the goods managers of the railway companies, and Mr. H. E. Perrin, the secretary of the first-named association, has been informed that the following classification charges are now being adopted:—"Carriage bodies, unfinished, in the white or lead coloured state, without underframes or wheels, minimum weight 5 cwt. per carriage body, Class 4. Motor-car bodies, unfinished, in the white or lead coloured state, as carriage bodies. Minimum, 5 cwt. per consignment." The companies regret that they have not been able to make any alteration in respect to the other points raised by the deputation.

A White Car Performance.

THE 30-h.p. White steam car has been granted the R.A.C. certificate for a 1,871 miles long distance trial. There were no stoppages *en route*, although this included twelve days' run over such trying stretches as have been familiarised in the Scottish Reliability Trials. In addition it may well be noted that the total time spent in adjustments to the vehicle while in the garages during the period was 1 h. 2 min., or at the rate of 5 1/4 min. per day. The car ran 1,511 miles without any overhauling prior to its run of 1,871 miles under Club supervision, while the petrol only worked out at 9.12 miles per gallon or 18.89 ton miles per gallon. We understand the actual distance travelled, as shown by the speedometer, was greater than the route mentioned by the Club to an extent which made the car show about nine and a half miles to the gallon fuel consumption. When we consider the condition of the roads, the character of the route, the fact that Mr. Coleman had steel studded tyres on the back wheels, the weight of the car and the Cape hood, raised some of the time, the result is very satisfactory indeed. The car was loaded down so that it weighed 33 cwt., that being about the weight of one of the standard 30-h.p. White landaulets. Furthermore, luggage and passengers were carried so as to make the total weight of the car 41.4 cwt.

On the completion of the run the car was dismantled for examination, and the Technical Committee of the Club found the parts in generally good order.

Motor-Car Work.

ANCIENT quarrels between workers in various trades have not been wholly quelled, and now and again they threaten to revive in the automobile business. The other day at the Irish Trade Union Congress the representative of the coachbuilders proposed:—"That Congress is of opinion that the coachmaking parts of motor-cars exclusively belongs to members of the coachmaking trade, and would strongly condemn any infringement by the members of other trades; and further, this Congress appeals to the gentry and motor-car agents of Ireland to have their car bodies made, painted, and trimmed at home." The chairman moved the motion out of order, so that the world has not heard the last word on the subject. The motor-car industry has not yet been restricted to

the Bench was that he had no one to leave with the animal while he was absent delivering goods. In reply the magistrate held that it was the duty of the company to provide such a person—a suggestion that might well be made whenever carters or drivers are similarly summoned before the Bench. The dangers of runaway horses were sadly illustrated in several places last week-end, and such instances should convince magistrates of the dire consequences of leaving horses without anyone in charge. The uncertain temper even of the best regulated equines in public is a factor that should be acknowledged by all having dealings with such animals.

Unauthorised Restriction Signs.

WE recently referred to the practice which had unfortunately grown up in one or two Scottish counties, where the central body had declined to grant permission for the restriction of motor-car speed, and where the local surveyors had actually erected signs imposing such limitations entirely contrary

The Fleet of Brown Cars which is at present being used by the Commission on Congestion in Ireland. The photo from which the illustration is reproduced was taken in Dublin Castle Yard, and shows four 20-22-h.p. four-cylinder vehicles and (in the centre) a 40-h.p. six-cylinder.

any narrow limits so far as the overlapping of the various branches is concerned, nor has any insular patriotism restrained, to any such degree as was indicated in the Irish resolution, the business in motor-car bodies. This can only come about when the supply exceeds the demand—and that is not necessarily dependent upon the Irish Congress.

Unattended Horses.

OFTEN have we referred in these columns to the dangers connected with horses being left unattended by their drivers when the latter are looking after business or are otherwise engaged elsewhere. Even when such cases are rightly brought before the police courts, the magistrates have generally shown a leniency that has been wholly lacking when motorists have been in question. Hence we are glad to observe that at length some of the judicial authorities are beginning to recognise that this offence must be punished with greater severity if the nuisance is to be stopped. An employee of a railway company has just been charged at Altrincham with leaving his horse unattended in the street. His explanation to

to the wishes of the Secretary for Scotland. It would appear that the northern part of the kingdom is not alone in this presumption on the part of officials. It will have been noticed that some of our contemporaries have reported that the speed of motor-cars at Milbourne Port (Somerset), had been fixed at six miles per hour. It is true that signs have been erected in the village giving notice to this effect, but they have not had the sanction of the Local Government Board, and we are glad to learn that Mr. Rees Jeffreys is in communication with the Whitehall authorities with a view to securing the removal of these irregular signs. Motorists are under no obligation to pay any attention to such notices or to similar intimations which, we understand, have also been put up in and near the town of Warwick. Local bodies should certainly remember that the Motor Car Act reserves to the central authority the right to impose such limitations, and no local council has any right to erect these signs without such permission.

TOURISTS in the Highlands who are without cars, and who wish to see how the cars perform in the forthcoming Trials, will be interested in the new official guide of the Highland Railway.

THE ARGYLL SCHOOL.

THERE are drivers, and drivers. Some go over objects that come their way; others avoid them. Therein lies a difference that means much, in cash, time and temper, to the person who has occasion to employ such folks. These reflections are true with regard to methods of equine locomotion; they are doubly accurate in matters of mechanical traffic, and are occasioned not only by coroners' remarks but also by judicial dicta as directed at motorists in court of late.

Mechanical knowledge, and a certain quality of nerves, are indispensable to the man or woman who will seek to drive a motor-car. Much of the latter can be attained by practice; all that is necessary of the former can be gleaned in the Argyll Motor School which Mr. Eustace H. Watson has established in Newman Street, London. This has already developed a proficiency in many novices who have found favour with owners of cars in several mansions of the country. Hence the difference between this really practical academy and some other establishments that take the maximum of fees and gives the minimum of instruction. For, as everyone in London knows, the Argyll School has credentials that few other institutions possess. Then, too, its facilities for overhauling cars in the garage and workshop, teaching driving in busy traffic, as well as upon the silent highway, under efficient supervision, are of very high order indeed.

Mr. W. A. Higgs is in charge of the instruction, and his experience in various institutions has enabled him to admirably qualify himself for teaching. Many can theorise; but Mr. Higgs aims at combining practical with academic knowledge, and thoroughly equipping his pupils for any emergency. The schoolroom is equipped with lantern and blackboard for demonstration purposes, and the presence of a chassis, which is dismantled, on the premises is evidence of the thorough character of the mechanical training that is given. The other morning we called at the school and listened to half-an-hour's lucid explanation of the work and details of the carburettor—the scientific "whys and wherefores" being explained in simple language, in which technical terms were gradually introduced, thus familiarising the audience with the necessary vocabulary of their craft.

This was part of a course which is being pursued for about

Pupils Attending the Lectures in the "Argyll Schoolroom."

a month—the morning being spent, in such lectures together, the pupils handling various parts and catechising Mr. Higgs and his assistant. Then in the afternoon the learners are taken into the garage, where habits of orderliness are instilled and precautions for safety duly emphasised. From this they go upon the road in charge of competent instructors who are specially set apart for this duty. This is no fair-weather course, and the students are instructed in all conditions of weather, so that

when they become responsible for the driving of a car greasy roads and heavy traffic are not likely to disconcert them.

It is just a year since the school was started, and an average of forty pupils in attendance testifies to the good work being done. Failures have been rare, owing, we believe, after examination of the actual methods of training, to the care taken by Mr. Higgs, who seeks to give confidence to otherwise nervous people, and encourages his proteges in estimating speed, judging distance, and other necessary factors in the perfect driver.

A Practical Demonstration on the Road.

Instruction is begun on the 10-12-h.p. two-cylinder car, and finished on a four-cylinder vehicle of higher power; and, to meet the convenience of those who wish to become expert drivers, the courses are arranged so that the afternoons and evenings can be selected by private owners for instruction, and the mornings by those who intend to make their living by driving. Special classes are also being provided for ladies, while opportunities can be obtained for individual instruction so far as the technics of the matter are concerned. Varied are the pupils—comprising mechanics and coachmen, the latter with a knowledge of the road but little inkling of mechanical theory, the former *vice versa*. Chauffeurs who have not had the advantage of systematic training go to the Argyll school for "finishing courses," and others begin with the rudimentary instruction.

It is very clear that the Argyll school is doing a useful work, and, more than that, it is doing it in a thoroughly sound way, contributing to the ranks of motorists and chauffeurs men and women who know what they are about, and therefore likely to do much in the conversion of the public to a friendly regard for the car.

THE gold medal in the North-East Lancashire A.C.'s reliability trial has been won by a 30-h.p. Siddeley car.

THE Rover car on which Mr. Courtis won the Tourist Trophy, and the "Matchless" motor-cycle on which Mr. C. R. Collier won the Auto Cycle Tourist Trophy, were both fitted with the Bowden system of control.

THE Secretary of State for the Home Department has made arrangements with the German Consul-General in regard to formalities to be observed by British motorists who intend to use their cars in Germany. The only thing now required is that every motorist should carry a copy of the entry of registration of the car in the register kept by the local authorities, and also of the driver's licence. Each of these documents must be authenticated by the Home Office and also at a German Consulate. As far as the Home Office is concerned, this will be done free of charge. The fulfilment of these formalities does not, however, exempt motorists from any charge imposed under the German Customs or motor tax laws.

The Tourist Trophy Race.

DESPITE the efforts of the Royal Automobile Club, annually renewed and annually less inciting to the motor industry, the Tourist Trophy race has not shown itself of vital importance or even possessed of the elements of permanence. Compared with 1905 the entries, starters, and finishers have all decreased, and the attempt to infuse interest into the event by running a "bigger brother" concurrently with the Tourist Trophy race made for confusion rather than excitement. The decadence of the event, upon which one of our correspondents had a very suggestive article last week, is brought out with greater lucidity by the following figures than any mere words can convey.

	Starters.	Finished.	Winner.	Speed.
1905	42	18	18-h.p. Arrol-Johnston Mr. G. S. Napier	33.9 m.p.h.
1906	29	9	20-h.p. Rolls-Royce Hon. C. S. Rolls	39.5 m.p.h.
1907	22	2	20-h.p. Rover Mr. E. Courtis	28.3 m.p.h.

Mr. E. Courtis at the wheel of the Rover Car on which he won the Tourist Trophy Race.

were to be wider and the load increased to 1,400 lbs. But these were all of minor degree when compared with the change in the weather. Water all around is what is expected on an island; but there is no general desire that it should cover the land as well. Yet that is what the rain did on Thursday last week.

At the start it was noted that many of the cars were provided with non-skids, a wise precaution, the value which was quickly apparent, as other vehicles side-slipped along the course at intervals.

The first car despatched by Messrs. Ebbelwhite and Glazebrook was the No. 2 Darraq,

driven by Mr. A. Lee Guinness, and then the others. Within an hour we got news of the contestants, Mr. J. Reid, who drove in place of Mr. T. C. Pullinger, being second at Ramsey, although he had started eleventh. The best running, however, was made by Mr. L. Coatslen, who ultimately made the fastest round of the day, reaching a speed of 37½ miles per hour. Unfortunately for him a leaky petrol tank was an early

The Tourist Trophy Race.—The Scene at the Starting Point.

Even the weather clerk added to the mystification of competitors, and the good weather of 1905 and 1906 deserted the course. Many alterations had been made with regard to the race, petrol of a higher specific gravity was allowed, two more circuits than last year had to be travelled, the tracks of cars

signal of distress. All the starters managed to complete the lap, the fastest in 1 hr. 4 min. 39 sec., and the slowest in 1 hr. 55 min. 41 sec. At the end of the circuit, Mr. J. E. Hutton on his Berliet abandoned the attempt, owing to the delay occasioned by repairs, consequent on losing an oil plug

out of the differential casing. The undershield had been previously removed and the mud thrown up from the road caused the change-speed control to jam.

In the second round the spectators in the Club enclosure had a little excitement when the Vinot (No. 3), Darracq, Ariel-Simplex (No. 12), in the Heavy Class, and Rover (No. 22), came along in racing style, all having been handicapped, in common with the other cars, by the mist on the mountain road. At the beginning of the lap circumstances seemed to go against Mr. Coatalen, who skidded at Quarter Bridge and damaged a rear-spring, which finally broke on the mountain road, causing him to relinquish the race altogether. Mr. J. Reid on the Beeston Humber again showed up well, taking leading place, closely followed by Mr. J. S. Napier on the Arrol-Johnston, and Mr. O. Cupper on the Metallurgique.

Despite several incidents which were almost of an exciting character, there was only one absentee in the official record of the second round, that was the 18-h.p. Star driven by Mr. S. Prew. On nearing Quarter Bridge, when beginning the lap, the wheels of his car failed to keep to the ground and the vehicle charged the parapet of the bridge with such force that the axle was bent and the car totally unable to continue in the running. At first it

times of some competitors indicated troublous journeys. Mr. Napier lost an hour owing to a choked petrol pipe. The Beeston-Humber was again credited with the fastest run, Mr. Tuck on the Coventry-Humber being second.

Four cars fell out in the fifth round, viz., the Berliet driven by M. Porporato, 24-h.p. Vinot and the 16-20-h.p. Coventry Humber. The former had been much delayed by the change-speed control mechanism becoming jammed. The Humber, which had steadily improved its position on each round, damaged a wheel and was delayed by tyre troubles; and the Vinot unfortunately ran out of petrol. In this round the Metallurgique, which had run very consistently, came bounding to the front and Mr. E. Courtis on his Rover got into the fourth place. He started eighth on the first round.

Excitement rose above the rain as the sixth round was in progress. News came early that Mr. Cupper had been stopped on the Metallurgique for want of petrol, the Clement's supply gave out at Peel, Mr. A. L. Guinness was stranded at Hillberry corner, Mr. J. S. Napier's Arrol-Johnston suffered the same fate, while that driven by Mr. E. J. Roberts had a broken universal joint, necessitating the abandonment of the effort. The Thornycroft was stopped by a broken coil. We

was reported that the mechanic was hurt, but this proved to be an exaggerated statement. The second round was more evenly contested than the first, there being only a difference of less than 40 minutes between the 16-20-h.p. Beeston Humber, which obtained second place, and the 17-20-h.p. Scout of Mr. Percy Scout.

The third round began to tell on the competitors and weeded them down to 15. After doing very well in the first laps Mr. K. Lee Guinness had the misfortune to break a wheel in his differential gear near Ramsey. Mr. R. H. Collier's West Aster overturned in the mist on Snaefell and two wire wheels were fractured after two rounds of consistent timing, and Mr. P. Lamb slid down the mountain side owing to a skid and was in trouble. Mr. L. Coatalen was the other starter who was missing at the end of the third round. As already mentioned, he had had to contend with a leak in his petrol tank, and in the second round had skidded into a bank. Damage repaired after a quarter of an hour's delay, he went forward with a rush and was going gamely when a broken spring compelled his retreat in the third circuit.

The fourth round was maintained by all who had gone safely through the third, and none failed, although the slow

were officially not fit that the Vulcan, Gladiator, Star (No. 14) and Rover (No. 25), had been stopped on the fifth round, and then came the message that the Rover was in sight, and, 8 hrs. 23 min. 27 sec. from the start, Mr. Courtis was acclaimed the winner, Mr. J. Reid following on the Beeston Humber, the time for which being 8 hrs. 48 min. 17 1-5 sec.

HEAVY TOURING CAR RACE.

SHORTLY after the last of the Tourist Trophy cars had been despatched the first of the Heavy contingent went on its way, and it soon became difficult to follow the fortunes of the separate events. Last week we gave full particulars of the cars that were regarded as probable starters, and these were all at the starting line, being despatched in the order given. Below we give the table of times, showing the progress of the event lap by lap, and the way in which the various cars ran through the four laps was really remarkable. There were few incidents in the event. The first was provided by Mr. E. H. Arnott on the Arrol-Johnston, whose front axle was found to be bent near Peel on the first round, and no time was recorded. The two Ariel-Simplex cars ran well together, that driven by Mr. C. Sangster making the quickest.

time. The second lap was the fastest of the day in this competition, and the car driven by Mr. A. E. Harrison proved most speedy, followed by the Berliet and Mr. G. P. Mills, on the 30-h.p. Humber, who, starting last, got into third place on the second circuit. In the next round Mr. Mills got into the second position, with Mr. Sangster first, the latter retaining his lead in the fourth lap, where the other Ariel-Simplex followed him closely. Unhappily, however, for the success of the Ariels, one ran out of petrol before reaching the mountain on the final lap and Mr. Harrison was also brought low from the same cause. Mr. L. Squire ran carefully every round, having regard to his petrol consumption, but was debarred from going on the fifth owing to the expiry of the time limit. Mr. C. H. Cooper on the Beeston-Humber, Mr. W. Watson on the Berliet, and Mr. H. Niblett on the Thornycroft, all failed on account of their petrol supply being exhausted, their times being given in the following table:—

HEAVY TOURING CARS.

The following table sets forth the cumulative running times

and Mr. G. Fenton on the Gladiator being second in 7 hr. 31 min. 35 sec.

As in the Tourist Trophy event both the cars that finished were fitted with Dunlop tyres, that thus secured a notable victory.

THE "GRAPHIC" TROPHY.

This was presented by the proprietors of the "Graphic" and "Daily Graphic" for international contests of tourist cars carrying four passengers (including the driver). It will become the property of anyone winning it three years in succession, but until so won it remains in the custody of the R.A.C. The trophy was won for the first time at Castlewella, Ireland, in July, 1903, by Messrs. Humber, Limited, and for the second time in the Isle of Man, in September, 1906, by Mr. C. A. Glentworth with a 50-h.p. Napier. The race this year started on Friday, the 31st ult., from the foot of Slein Lewaigne Hill, near Ramsey. The length of the hill as from Balline Bridge (electric railway crossing) to the "Rest and be Thankful" public-house is about 2,550 yards, and the gradient between these places is 424 ft. The

The Tourist Trophy Race.—Mr. E. Courtis finishing the Contest on the winning Rover Car.

for four circuits. Mr. G. P. Mills on the 30-h.p. Beeston-Humber won the race, his total time being 7 hr. 11 min., an average speed of 28.1 miles per hour. The 25-h.p. Gladiator driven by Mr. G. Fenton was the only other car finishing the fifth round:—

No.	Car.	1st Lap.	2nd Lap.	3rd Lap.	4th Lap.
		h. m. s.	h. m. s.	h. m. s.	h. m. s.
1	25-30-h.p. Straker-Squire	1 49 19½	3 35 33	5 24 45½	7 23 19
2	40-h.p. Berliet ...	1 22 14½	2 44 11½	4 10 34	5 51 6½
4	30-h.p. Thornycroft ...	1 47 0½	3 28 2½	5 4 44½	6 44 39½
5	25-h.p. Gladiator ...	1 25 39½	3 2 34	4 34 38½	6 4 45
6	30-h.p. Ariel-Simplex ...	1 13 54	2 49 37½	4 1 37½	5 15 31
8	40-h.p. Arrol-Johnston ...	—	—	—	—
10	20-30-h.p. Beeston Humber ...	1 20 5½	2 40 52	4 12 16	—
12	30-h.p. Ariel-Simplex ...	1 14 17½	2 29 44½	4 25 28½	5 42 15
14	30-h.p. Beeston Humber	1 29 32½	2 54 11	4 18 48	5 45 6½

In the fifth round only the Beeston-Humber and the Gladiator remained, the former driven by the old racing cyclist,

steepest part occurs half-a-mile before the public-house is reached, and is 1 in 12.

There were fourteen entries, and at the start Mr. S. F. Edge's 45-h.p. Napier was disqualified. This car was made as light as possible by taking away as much superfluous metal as could be done without, whilst the dashboard was little more than a metal plate. The chassis was built on the girder principle. The car, after examination by the Committee of the Royal Automobile Club, was disqualified, and although the driver lodged an appeal it could not be considered in time to allow him to compete in the race. Another non-starter was Mr. G. S. Barwick's 35-h.p. Daimler, which met with an accident a few days previously, and on Friday morning last only seven cars were present at the start, the result of the race being as follows:—

- 1, 60-h.p. Berliet, Mr. J. E. Hutton, 3 min. 40 2-5 sec.
- 2, 40-h.p. Berliet, Mr. W. Watson, 3 min. 45 3-5 sec.

3, 35-h.p. Daimler, Mr. T. Henshaw, 3 min. 54 3-5 sec.
40-h.p. Junior, Captain W. E. D. Owen, 4 min. 10 sec.; 30-h.p. Ariel-Simplex, Mr. C. Sangster, 4 min. 13 2-5 sec.; 40-h.p. Berliet, M. Porporato, 4 min. 31 4-5 sec.; 20-h.p. Hillman-Coatalen, Mr. L. Coatalen, 4 min. 37 4-5 sec.

The 1st, 2nd, 3rd, 4th, and 6th of the cars in the above list were fitted with Continental tyres, which, altogether, gave a very satisfactory account of themselves in the Island last week. In the Tourist Trophy and in the Heavy Touring Car race Continental tyres established a new record for durability, because none of the cars which were fitted with this make were delayed through tyre troubles.

It is worthy of note that both the Rover cars in the Tourist Trophy race were the same vehicles that were unfortunately shut out from the enclosure last year.

Among interesting points with regard to the cars in the Tourist Trophy race we may mention that the Humbers that won and came second in the H. T. and T. T. race respectively were fitted with the Eisemann magneto, supplied by the United Motor Industries, Ltd.

The Hillman-Coatalen car which made the fastest round in the Tourist Trophy race was fitted with the Castle coil and L.M. sparking plugs.

The Main Assembling Shop at the Perfect Speed Indicator Factory, Watford.

At the end of the Tourist Trophy race the winning Rover had 32 ozs. of petrol and the Beeston-Humber 2½ ozs. In the Heavy Car race the winning Beeston-Humber had 142 ozs. left, and the Gladiator 232 ozs.

THE inquiry into the proposed prohibition of motor-cars on the tow-path from Kingston Bridge to Hampton Road commenced on Wednesday.

UNDER the title "The Care of the Car," Argylls London, Ltd., have just issued a new catalogue, which is amongst the most complete publications of the kind we have so far received. The work opens with a very complete description of the extensive works of the Argyll Company at Alexandria, N.B., this being followed by an equally interesting account of the very complete depot of the London concern in Newman Street, W. Then follows an interesting article on "The Argyll Car: How it is Constructed, Maintained, and Driven," by Mr. Eustace H. Watson, this giving full particulars of the cars as well as very clear illustrations of the more important details. Then follow the specifications and prices of the various Argyll models, with illustrations of the different forms of bodies with which they can be fitted, and a series of testimonials from satisfied users. Altogether the book is one worthy of the Argyll concern, and is one which will be found of interest by all motorists.

A VISIT TO THE "PERFECT" SPEED INDICATOR FACTORY.

NOW that the silent testimony of speed indicators is frequently accepted by magistrates in preference to the uncorroborated evidence of police constables in furious driving cases, the question of the accuracy of these useful instruments is one of paramount importance. With the view of demonstrating the care and attention given to this point in the manufacture of the "Perfect" speed indicators, Messrs. S. Smith and Sons, Ltd., last week invited a number of Press representatives to inspect their factory at Watford. The visit was preceded by an excellent lunch at the Trocadero, after which a fleet of cars, comprising a Daimler, two Florentias, and a number of Renault cabs, conveyed the party by road to the works, which we found to be exceedingly compact and well-arranged; moreover they are pleasantly situated, and, what is of great value to the workers, are well lighted.

Accustomed as we are to the tools employed in motor-car factories, the small and delicate tools necessary for the manufacture of the speed indicators came upon us somewhat as a surprise, and, like many others of the visitors, we spent considerable time in watching the various work in progress in the small parts shop—particularly the making of small worms, return springs, counting wheels, the alternate teeth of which are partly cut away, and small screws, these being threaded and the slot cut in the head at the same time. Other departments which are all well equipped with suitable plant include the automatic machine shop, the pattern making shop, the main assembling room and the examining and calibrating shop. Of interest in the last-named section was the special machine on which the indicators are tested and calibrated. This consists of a large electrically-driven disc, against which a small friction wheel is set at right angles in such a way that its position on the face of the disc and consequently its speed can be varied as desired. To the spindle of the wheel is attached on either side a flexible shaft; one end drives a standardised indicator, while the other operates the instrument under test, the dials being accurately marked off to suit each particular apparatus. The works, which have already been twice extended, being now three times their original size, give employment to over 100 persons, and are capable of turning out about 150 instruments per week—speed indicators, milometers, combined speed indicators, motor-watch and communicators, and the "Perfect" taximeter. The latter is one of Messrs. Smith's latest productions, and comprises a number of improvements, among which are a blank space on the dial until the cab is engaged, and a record of fares for the proprietor, which is accurately kept at the back of the instrument, and which includes the extras. The drive from the road wheel is also by a new method, adding greatly to the durability of the connection. We may add that every part of the various instruments is manufactured in the factory; cases are planed and polished, dials are marked off and painted, all the nickelling is done on the premises; indeed, the whole apparatus from start to finish is completed within the works.

Altogether the visitors had ample evidence afforded them that Messrs. Smith, whose business was established some seventy-five years ago, are leaving no stone unturned to ensure for their indicators and other motor-car accessories an equally world-wide reputation as that obtained by their high-class watches, and we were pleased to learn that so great is the demand both at home and abroad that a factory has recently been established in the United States to supply the American market.

FROM Messrs. Montague Hawnt and Co., of Clerkenwell Road, London, E.C., we have received a copy of their latest catalogue of motor-car accessories. This is a very complete production, extending to close upon 120 pages, and gives particulars, prices, and illustrations of everything that a motorist is likely to require in connection with his car. We might add that Messrs. Hawnt are now keeping a stock of all the leading sizes of Stepney spare wheels, for which they report an increasing demand.

CONTINENTAL NOTES.

A French View of the Tourist Trophy Race.

The success for the third time of a British-built car in the International Tourist Trophy race is attracting rather more than passing notice in France. Writing in the "Auto," M. Faroux says:—"We (France) must admit ourselves beaten, and this in a test the regulations of which are admitted by universal consent to be the best so far devised. We cannot even urge that we were badly represented, for the cars which defended French interests were among the best known. Why was France beaten—by excess of confidence and by treating the matter too lightly. English makers, who have made great progress during the past year, recognised that the conditions required careful study, and that equal care was required in building cars to comply with the same, while we have been content to compete with ordinary stock cars. The English market is such an important one for the French industry that we have no right to compromise our supremacy, especially as it is no secret that hitherto we have profited by the relatively small production of English makers, a

peting cars in Dresden. No less than 189 entries have been received, and while the majority of these are German, the international interest taken in the competition is shown by the fact that several Belgian, Swiss, French, Italian and British cars are competing. This country's representatives included Mr. Robertson Grant on a new four-cylinder Argyll (120 mm. bore by 140 mm. stroke), Miss Dorothy Levitt and Mr. Cecil Edge on six-cylinder Napiers, Mr. Lionel de Rothschild and Mr. V. Ker-Seymer on six-cylinder Siddeleys, and Mr. F. Loeser on a six-cylinder Belsize, but only the first three are actually competing. The majority of the cars entered put in an appearance, and were subjected to close inspection by the officials to see that they complied with the regulations. A large number were disqualified owing mainly to unsatisfactory body work, with the result that the number of actual starters has been reduced to 134 vehicles. The trial comprises six daily runs, a speed trial in the Forstenrieder Park, near Munich, and a hill climb on the Kesselberg. The first day's journey, on Wednesday, was from Dresden to Eisenach, on Thursday from Eisenach to Mannheim and on Friday from Mannheim to Lindau. Fetes and entertain

The Tourist Trophy Race.—M. Porporato starting on the Berliet.

consideration which will next year have lost much of its importance."

The A.C.F. Grand Prix Race.

The start for the Grand Prix race has been fixed for 6 a.m., competitors leaving at minute intervals. In the case of the cars entered for the Coupe de la Commission Sportive event, these will be started at 9 a.m. on the same day at five minute intervals. Altogether about 4,000 foot and 400 mounted soldiers will be engaged in protecting the course on the day of the race, in addition to 700 policemen, 400 of whom will be mounted. The soldiers will be located at intervals of 100 metres (328 yards), while first-aid depots will be established at d'Ancourt, Envermeu, Douvrend, Wanchy, Capval, Londinières, Fresnoy, Folny, Mesnil-Réaume, Eu, Criel, Saint-Martin-en-Campagne, and at the fork near Dieppe.

The Herkomer Touring Trophy Competition.

The annual competition for the Herkomer Touring Trophy, organised by the German Imperial and Bavarian Automobile Clubs, commenced on Tuesday with the reception of the com-

ments for the visitors are being organised at most of the places at which the competitors rest over night.

The Provence Sportive Hill Climb.

A hill-climbing competition organised by the "Provence Sportive" of Marseilles, was held on Sunday last on a 500 metre course on the Platrières hill. The competitors were divided into fifteen classes, the best time of the day being made by M. Cottin on a Cottin-Desgouttes car, who climbed the hill in 44 3-5th sec.

Apparatus to prevent Cars from being Stolen.

The French Association Générale Automobile is organising a competition of apparatus which will prevent motor-cars from being stolen or used after leaving the hands of the owner. The contest is of a practical and useful character, for the stealing of cars when left temporarily in the street unattended is nowadays far from being uncommon, and most automobilists have a strong objection to allowing their cars to be taken surreptitiously out of garages by their mechanics or others, who run risks for which the owner of the car is himself responsible. The Association Automobile has therefore decided upon carrying out a trial

of devices which can be adapted to a car to prevent its being driven unknown to the owner. The awards will be based upon the ease with which the device can be fixed, its price, weight, and dimensions, its invisibility, and quickness of action. No charge is made to enter the competition, but entries should be sent to the Secretariat, Association Générale Automobile, 8, Place de la Concorde, Paris, before the 31st July.

Fig. 1.—The "Auto-Carrier."

A Swiss Heavy Vehicle Trial.

A five days' reliability trial of heavy vehicles has just been held in Switzerland under the auspices of the Swiss Automobile Club. The daily journeys were Zurich-Basle, Basle-Berne, Berne-Thoune, Thoune-Lucerne, and Lucerne-Zurich, the total distance covered being 423 kilometres. The competitors were divided into three categories—(1) cars for loads up to $1\frac{1}{2}$ tons; (2) ditto from $1\frac{1}{2}$ to 3 tons; and (3) ditto over 3 tons; and of the seventeen which started fourteen went through the complete trial. The winner in Class 1 was a Peugeot $1\frac{1}{2}$ ton lorry; in Class 2, a Safir 3-ton lorry made by the Safir Automobilfabrik of Zurich, and in Class 3 a Saurer 4-ton wagon.

The Ostend Automobile Meeting.

It is announced that the annual automobile meeting at Ostend is this year to be held from July 13th to 16th. On the first day there will be an exhibition of the competing cars and a carriage body competition; on the second a reception and banquet; on the third a five-kilometre speed trial for racing and touring vehicles; and on the fourth a series of flying kilometre and standing mile events.

Public Services in Germany.

Arrangements are in hand to establish a motor-bus service between Weissensee and Lichtenberg, near Berlin. A company has also been formed to run a number of motor-buses between Geestemünde and Stotel.

Miscellaneous Items.

The late Professor Poirier, who was one of France's leading physicians, has bequeathed his car to his chauffeur in remembrance of the latter's faithful services.—The first motor-car exhibition in St. Petersburg was opened on Saturday last, and will continue until the 17th inst.—A motor-omnibus service has just been started between Aix-en-Provence and Greoulx-les-Bains.—With a view to abating the dust nuisance, the roadway of the Avenue du Bois de Boulogne, Paris, is to be given a tar coating.—The Geneva section of the Swiss Automobile Club is organising a hill-climbing competition from Gex to the top of the Faucille mountain for the 23rd inst. The distance is $10\frac{1}{2}$ kilometres, and the average gradient one in fourteen.—The Automobile Club of Barcelona, Spain, is organising a hill-climbing competition for the 15th inst., to be held on the San Cugat del Valles road.—It is announced from Lisbon that a co-operative society is being formed to introduce motor-buses into the Portuguese capital.—The Automobile Club Bourguignon held a hill-climbing competition over a 3.8 kilometre course on the Val-Suzon hill, near Dijon, on Sunday last. The best time of the day was made by M. Mottard on a De la Buire car, 3 min. 5 sec.

THE "AUTO-CARRIER."

WE illustrate herewith a three-wheel delivery van, which, in view of its extreme handiness and relatively low cost, should meet the requirements of a very large number of tradespeople. While the general design is that of a tri-car, the construction is on somewhat more substantial lines. The main frame consists of ash members, reinforced by strong side panels of birchwood. The engine is carried by a small tubular frame supported in clips from the ash side-members, which it serves to keep square and rigid. The motive power is supplied by a 5-h.p. single-cylinder engine, fitted with two large external flywheels, which give great flexibility and steady running at low speeds. The flywheels are cast with the spokes in the form of fan blades, for effectually cooling the motor. Both valves are mechanically operated, and the lubrication of the engine is automatic from a reservoir in the crank-chamber, which holds sufficient oil for a day's work. Ignition is by coil and accumulators, although a magneto can be fitted if desired. An interesting feature of the ignition and throttle levers is that they are automatically adjusted to the proper position when the starting handle is engaged. They are also so arranged that they may be locked together so as to form one lever, when the one movement performs the following functions in correct sequence: Throttle, ignition adjustment, exhaust valve opener and switch.

The motor is located under the driver's seat, which is hinged to give access to the various parts. The drive is by a Renold chain direct from the engine to a multiple-disc clutch and two-speed gear, all carried on the back axle. The steering is by a tiller at the side, and double brakes are provided, these having a neat and quick form of hand adjustment. The machine, which has a wheel base of 5 ft. and an overall length of 8 ft., weighs only 3 cwt., yet is able to transport a load of 5 cwt. We have had an opportunity of inspecting the machine, which is also made as an ordinary tri-car with passenger body interchangeable with trade carrier, in operation, and were somewhat surprised at the slow speed at which it could run on its top gear, this being due to the heavy flywheels provided. Another advantage of the

Fig. 2.—The Engine of the "Auto-Carrier."

machine, which has been put on the market by the Autocars and Accessories, Ltd., of West Norwood, S.E., is its ability to turn in a very small circle.

A BRIGHT show-card illustrating their motor hoods and wind screens has been issued by Messrs. Lowe, Bevan and Co., of Clarence Works, Birmingham. The "Pioneer" is one of their leading types of wind screens, its method of attachment having many points of excellence.

THE annual subscription to the *M.C.J.* for Canada is now 8s. 8d.—a matter of considerable interest in view of its growing circulation in the Dominion.

SIR WM. EVANS GORDON has just acquired a 12-h.p. Star car from the Star Motor Agency. The vehicle is being fitted with a detachable side-entrance body so that it can be used when desired as a two-seater with luggage space at the rear.

Mr. P. Lewis on the 30-40-h.p. Ariel Simplex Car he drove in the Irish Reliability Trials, and which has also been entered for the Scottish Trials.

MR. R. BLEWITT is now the proprietor of the Beetle and Wedge Hotel, Moulshford, Berks, which has facilities for repairs to motor-boats as well as a garage for motor-cars.

THREE chauffeurs have been remanded at the Marylebone Police Court. They were discovered by the police in a Paddington garage, having got a large car from its place, preparatory to having a midnight spin, which was prevented by the action of the police.

MOTORISTS at St. Anne's, near Blackpool, on Saturday afternoon, found that a large quantity of wire nails had been carefully arranged on the roadway on the Headroomgate Road. Enquiries discovered four boyish delinquents, and the authorities are considering what steps should be taken to prevent a recurrence of such a dangerous practice.

AT the annual meeting of the Salmon and Trout Association last week a committee was appointed to communicate with the R.A.C. with reference to the effect following the tar treatment of roads. It was alleged that the surface water on the highways thus treated has had the effect of killing the fish in many rivers in which anglers are interested.

SCARCELY a week passes without bringing with it a warning as to the dangers of glass shields. Last week a car collided with another, and one of the drivers was cut about the face with broken glass; this week comes the report of a horse rushing towards a car, smashing the glass shield and doing much injury to the people in the vicinity. To lessen the risks of the ordinary glass Messrs. Pilkington Bros., Ltd., of St. Helens, have adapted their patent polished wired glass to the purposes of motor-car screens. This gives strength, does not obtrude itself upon the vision, and provides a new measure of safety to the passengers. If fractured in an accident it cannot fall out in pieces, and altogether can be well commended. It is manufactured in any length and width. The wire is introduced in such a way as to practically become an integral part of the glass, giving strength and not losing in transparency. Hence its value in motor-car wind shields—an important use in view of the Employers' Liability Acts, as well as on the score of immunity from danger, being given by its use.

MESSRS. McDONALD AND SON had a successful auction of motor-cars at the Great Eastern Motor Mart, Annandale Street, Edinburgh, the other day.

IN the motor-cycle Tourist Trophy race in the Isle of Man the winning "Matchless" machine was fitted with a Gillett-Lehmann controller to the carburettor, which Mr. Collier found to be eminently satisfactory.

AT the Clerkenwell Sessions, George Stephenson, who, in 1905, was sentenced to imprisonment in connection with a bogus motor school, has just been ordered eighteen months' hard labour for having defrauded various persons in connection with a motor-car instruction syndicate in London.

MR. EDWARD WILLIAM WILLARD, of 32, Paradise Street, Birmingham, is well known in the motor trade, and his specialities in motor-body fittings, hood fittings, glass screens, &c., include some really good points. The "Forward" hood joint and extension is a well-made and excellently-finished device likely to be of service; while a large section of our readers will be interested in Slack's studs for non-skidding bands. These are being stocked by Mr. Willard, and can be fitted to any make of tyre, leather band, or garter. They are interchangeable, and motorists who have suffered inconvenience from the studs of their bands coming loose will appreciate these advantages.

THE London and Parisian Motor Company, Ltd., inform us that the week ending Friday, the 31st ult., was one of almost monotonous success as far as the reliability trial of the 40-h.p. six-cylinder Hotchkiss car is concerned. The vehicle arrived in Holyhead on Sunday, the 26th ult., having completed the Irish trials successfully, and on Monday the run was to Liverpool via Conway, Chester and Warrington. Tuesday and Wednesday were spent in making circular runs round the neighbourhood,

The Hotchkiss Six-Cylinder Car at Menai Bridge.

and on Thursday Liverpool was left for Manchester, running via Chester, Whitechurch and Stafford, a most disagreeable day, as the rain never ceased falling in torrents. The car, however, ran through without any involuntary stop. Friday was just as bad as regards weather, when the run was also chiefly in Cheshire. Saturday saw the car in the neighbourhood of Preston and Kendal, and on Monday a start was made for Wales, where the best part of the week has been spent, finishing up in London to-day (Saturday), prior to visiting the south coast. Up to the 1st inst. the car has covered 4,468 miles in England,

It is reported that the tollgate in the College Road, Dulwich, is to be abolished.

A NEW garage has been opened in the Nethergate, Dundee, by the Rossleigh Motor Company, Ltd.

THE Sheppey Motor Company have acquired the business of Messrs. G. E. Gibbs and Co., of Thomas Street, York.

MRS. BROWN-POTTER has recently acquired an 18-22-h.p. Horch car, which she is taking with her to South Africa.

The 35-h.p. Iris Car with landaulet body recently supplied by Iris Cars, Ltd., to Mr. W. Willis, of Brasted, Chart, Kent.

COMMENCING in July, General Booth, of the Salvation Army, will have a fourth motor-car tour for evangelistic purposes.

A RAFFLE for an Argyll motor-car, arranged by the Hon. Lois Buller, has produced £577 for the Brixham Cottage Hospital.

THE 20-h.p. Belsize car made the ascent of Hollywood Hill, in the Irish Reliability Trial, in 3½ min.—not the time originally reported.

MESSRS. PRIDEAUX AND SONS, of Barnstaple, are giving attention to the motor-car business, and had several vehicles on view at the Devon County Show recently held at Bideford.

THE arrangements at Pitlochry for the housing of the cars taking part in the Scottish Reliability Trials will be in the hands of Mr. W. Blues, motor agent, who has arranged for the erection of a large marquee, where they will be housed during the night of the 28th inst.

LAST week a cyclist lost his head and ran immediately in front of a Deasy car driven by Miss Hind, who, to avoid a collision, steered into a bank and luckily suffered very little beyond upsetting the steering gear. The Deasy Motor Company ask us to contradict a rumour that has got abroad that the steering gear was the cause of the accident.

MR. ALFRED BUTT, the managing director of the Palace Theatre, London, who is, by the way, a keen motorist, made elaborate preparations for his bioscope staff to photograph the races in the Isle of Man. Notwithstanding the miserable weather, some excellent results have been obtained.

THE Motor Repair and Supply Company have recently opened a garage and repair shop at 107, Bridge Road, Hammersmith. The premises, which are situated at the foot of the north end of Hammersmith Bridge, are well adapted for the purpose, and the plant which has been put in will enable all classes of repairs to be carried out. The equipment includes an accumulator charging plant and also a tyre vulcaniser, while a couple of inspection pits are available.

THE report that one of the West-Aster cars which ran into the bridge at Sulby, in the Isle of Man, was seriously damaged, was somewhat exaggerated, not in respect to the damage to the bridge, which was charged diagonally, and, unhappily, not in respect to the mechanic, who was seriously hurt, but the car itself suffered but little, and was soon on the road again. Fortunately the wheels (Rudge-Whitworth detachable wire wheels) stood up perfectly and saved the wholesale scrapping that a collision with a wall usually occasions.

A NEW garage for motor-cars has been opened in Cheshire Street, Market Drayton, by Messrs. Halloway Bros.

SEVERAL White steam cars are about to be sent off to India for the service of the Punjab Motor Transport Company.

THE Wilts County Council is applying for a regulation prohibiting the driving of motor-cars along Crab Lane, Mere.

THE stipendiary magistrate of Leeds, in a case heard the other day, stated that in law there was no right or wrong side of the road.

THE Motor Union Insurance Company, Ltd., have prepared special policies for amateur motor-cyclists, including insurance against third party claims.

ILLUSTRATIVE of the signs of the times, we may mention that at the Richmond Horse Show next week there will be an enclosure specially reserved for motor-cars.

THE members of the trade in Dublin are urging the Port and Docks Board to relax the present regulations relative to the shipment of motor spirit at the port of Dublin.

CONSEQUENT on the death of Mr. A. Govan his colleagues on the board of Argyll Motors, Ltd., have asked Mr. W. A. Smith, the chairman, to add to his present duties those of managing director, and he has agreed to act provisionally in that capacity. Mr. E. H. Watson, the chairman of Argylls London, Ltd., has accepted the vacant seat on the board; Mr. A. M. Thomson will continue as general manager; Mr. Allen Coats has been appointed assistant manager; Mr. R. McCormick has been appointed assistant secretary in order to aid Mr. Cruickshank in his largely augmented duties; Mr. McKay will continue as works manager. All these appointments have been made from the present staff, and reliance may be placed upon the continuity of the policy of the company.

AN ingenious vulcanising equipment for garage use has been introduced by Messrs. Harvey Frost and Co., Ltd., embodying the H. F. "Car" vulcaniser, which has been materially improved. This appliance, however, will also be sold separately as previously. The complete plant consists of two independently operated vulcanisers fitted to a light portable stand. By means

The 30-h.p. Siddleley Car recently delivered to the Countess of Bessborough.

The body, which is of the limousine type, built by Hooper, is fitted with a speaking tube, electric lights inside, luggage rack on top of body, and patent leather wings.

of this complete apparatus repairs to the inside of a tyre cover, as well as repairs to the outside, can be effectively carried out simultaneously when desired. Recent users of the "Car" vulcaniser can adapt it to the new apparatus without any difficulty. As we announced last week, Messrs. Harvey Frost and Co., Ltd., have taken premises at 27, Charing Cross Road, for the purpose of demonstrating the equipment, which, in its complete form, has undoubted advantages.

THE COST OF MOTORING.

MUCH has been said and written on the subject of what it actually costs to run a motor-car, but rarely has such conclusive evidence been given as that forwarded by Mr. A. N. Lee, of Cavendish Crescent, South, The Park, Nottingham, who has kept a complete and exact record of what it has cost him to run his Coventry-Humber from October 10th, 1905, to May 9th, 1907, a period of nineteen months. Mr. Lee accompanies his statement, which we reproduce herewith, with the following letter:—"It shows the cost per month since October 10th, 1905, to May 9th, 1907, viz., nineteen months, and also the total running expenses, including new tyres and anything else that I have had new. I can substantiate my statements by the production of receipts where necessary, which tally with my daily record of running. In the trials at Welbeck, for which I entered, I did the flying kilometre in 1 min. 5 1-5 sec., which will tell you my speed per hour. In the standing start mile I covered the distance in 2 min. 3 4-5 sec., which is about 28 miles an hour. These times pretty well prove that there is not much the matter with the car, which has done 8,000 miles. I have the same commutator and sparking plugs as were sold on the car when new. The trembler screw points I have had re-platinumed. The blades are the same as bought. I do not keep a chauffeur, and for the speed trials I did not get anyone to tune up the car, but simply ran it as I should have done had I been going out for an ordinary run. I am so pleased with

the car that I shall not sell it, although I had thought I would get a higher powered engine. I may add that I am now on my second set of tyres only."

It will be seen that the total cost, including every possible item, for nineteen months, is £61 5s. 4d., which is at the rate of rather less than £40 per annum and just over 1 1/2d. per mile. These are the actual figures of a private user, and offer a most valuable evidence of the cost of running a car. The Coventry-Humber is, of course, well known as an inexpensive car to maintain, and this, as well as its low original cost and reliability, has been one of the secrets of its success. The record of petrol is shown as paid for, not as used. Up to the date of the record 386 gallons had been used, the remaining 3 gallons being in the tank, working out approximately at 19.5 miles to the gallon. On long continuous journeys the car will run 24 to 26 miles per gallon.

THE Irish Motor Directory for 1907 is just to hand from Mr. W. Tempest, of Dundalk, who has certainly succeeded in producing a very comprehensive list of owners of cars in the Emerald Isle. The directory is classified into owners of cars and also motor-cycles, and extends to 100 pages. Following these are 70 pages of information with regard to legislation, hotels in Ireland that cater for motorists, and also agents for petrol and repairers of vehicles. Mr. Tempest also sends a pamphlet on the Law and the Motorist, giving in a handy form some of the information which is included in the larger work, which contains names and addresses of more than 4,000 motorists in Ireland.

A SOUTH GERMAN RELIABILITY TRIAL FOR TOURING CARS.

THE Frankfort, Alsace Lorraine, Baden, Rhenish and Wurttemberg automobile clubs are organising a reliability trial for touring cars, which will extend from August 27th to September 1st next, and which will be open only for members of the clubs named. The competing vehicles will be divided into three classes:—(1) Cars with engines having a cylinder capacity of from 2 1/2 to 5 litres; (2) cars with engines having cylinder capacity of from 5 to 8 litres; and (3) cars with engines having cylinder capacity of from 8 to 11 litres. The competition comprises a tour of South Germany, a hill climb and a speed trial, the programme being as follows:—August 27th: Reception of cars at Frankfort-on-the-Main; August 28th: Frankfort-Stuttgart-Triberg; August 29th: Triberg-Basel-Mulhausen-Strasbourg; August 30th: Strasbourg-Hagenau-Baden-Baden-Karlsruhe-Mannheim; August 31st: Hill climb on Königsstuhl, near Heidelberg; September 1st: Speed trials on the level between Seckenheim and Mannheim. The cars must be fitted with touring bodies having four seats, bonnet, mudguards, &c., and be driven by petrol without admixture. At Frankfort both the radiator and the bonnet will be sealed, and at the end of each day's tour the driver, who must be an amateur, will have the right to remove, under surveillance, the seals, for the purpose of taking in petrol, oil and cooling water. Competitors are to do their own controlling, each receiving sixty seals for bonnet

and radiator, the penalty being ten points for every seal used up. At the same time secret flying controllers will keep a sharp lookout for any car which is travelling with the seals removed. The first prize is a work of art known as the Taunus Wanderpreis, worth £1,250, and must be won twice by the same competitor before becoming his own property. Besides this the winner will secure another prize of honour worth £500, and an additional sum of £2,500 lies at the disposal of the committee for prizes. Every competitor who goes through the whole trial will receive a silver cup. The chauffeurs, too, are not being overlooked, money prizes ranging from £15 to 30s. being offered in connection with the first fifteen cars.

WE have received from Mr. J. G. Moody, motor engineer, Harpenden, Herts, a sample tin of a new dressing for clutches which he has just placed on the market. The dressing, to which the name "Velvine" has been given, is guaranteed not to contain resin or any sticky substance, or anything injurious to the finest leather. It is the result of considerable experiments extending over two years, brought about by the numerous complaints of Mr. Moody's motor clients as to their clutch troubles. The maker informs us that it has been thoroughly tested by many motorists, and in no case has it failed to completely remove the trouble—that is, providing the clutch leather was not hopelessly burnt. We may add that arrangements have been made with Messrs. Montague Hawnt and Co., of Clerkenwell Road, E.C., to supply the preparation to motor-car agents.

CORRESPONDENCE

[Letters to the Editor should be addressed to the offices,
27-33, Charing Cross Road, W.C.]

HAS THE TOURIST TROPHY BENEFITED THE INDUSTRY—A SUGGESTED SIX DAYS' RACE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have read with great interest the letter in the last issue of the *M.C.J.* with regard to the Tourist Trophy. I quite agree with your correspondent that the Tourist Trophy races are no test for a car, and as only the slowest paces were done, owing to the petrol consumption limit, by all the cars concerned, they were only subjected to ordinary touring conditions. I do not agree with your correspondent that it is necessary to race for six days in order to show which car is the best. I think if we had a race with a given cylinder capacity limit, without any petrol limit, and the fastest car to win, that the weak spots would very quickly be discovered. It is quite certain there is no test so severe on a motor-car as a speed race, as it means the frequent employment of brakes, and the quickest acceleration possible, the whole time, and this means a great strain on any car. I myself on my 24-28 h.p. Metallurgique in the Tourist Trophy race never even used my accelerator pedal, as I wished to cut petrol down as far as possible, and hardly used my brakes. As I

Car race, the suggestion he makes is worthy of serious consideration. At the same time I do not personally agree with his solution—that of an eight hours' race on six successive days. What I would suggest is the adoption of similar rules to those which have been agreed upon for the forthcoming Criterium de France. In this event, which is for touring cars of a minimum weight of 1,600 kilogrammes, including the passengers, but not spares, tyres, tools, &c., there is a fuel allowance of 20 litres per 100 kilometres, equal roughly to 14·3 miles per gallon. These are details which may be changed to suit either the Tourist Trophy or Heavy Touring Car trials; the point to which I wish to draw attention is that the Criterium consists of a four days' endurance trial, averaging 250 miles per day, and it is only the competitors who survive this who will be permitted to take part in the final event—a 250 mile speed trial—still with the fuel limit, on which the result of the contest will be decided. This seems to me an ideal competition, and one which should try the endurance qualities of motors to the utmost.—Yours truly,

C. J. COOPE.

THE RACES AT BEXHILL.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—My committee have carefully read your criticism of the Bexhill meeting and agree with you that the trials on Monday were too protracted. After the experience Tuesday's events were run through with everybody's approval, in fact, many people said that the meeting was too short. We welcome the straightforward criticism from your paper.

On considering an "Unsuccessful Competitor's" letter my committee have different feelings. They consider that Mr. Jarrott's attack on the R.A.C. handicapping formula is most unsportsmanlike, as it must be well

The Heavy Touring Car Race.—Mr. G. P. Mills on the victorious Humber Car at Glenmoor.

used an absolutely standard car, and as this is fitted with only three speeds, I was put to a great disadvantage in comparison to other cars which had four speeds, and were mostly so high-g geared that it was said on all sides that most of the cars competing in the Tourist Trophy race and the Heavy Car race were not capable of climbing a hill of one in six, which we were supposed to take according to the regulations. The cars for some reason or another were not subjected to this test; in other words, the gearing was especially made for that particular circuit, and most of the cars competing in the Tourist Trophy races were certainly geared in such a way as would not recommend itself to the ordinary buyer.—Yours truly,

OSCAR CUPPER.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to the letter in the last issue of the *M.C.J.* on the subject of the suggested six days' race for the Tourist Trophy, this would no doubt be an interesting event if it could be arranged on proper lines, but at the present time it would be rather difficult, I think, to get the drivers to undertake anything of the kind, with the gruelling of Thursday last week so fresh in their memory.—Yours truly,

THE ROVER COMPANY, LTD.,
H. SMITH.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I was very much interested in the letter from "Streatham" which appeared under this heading in the last issue of the *M.C.J.* In view of the decreasing entries which are being received for the Tourist Trophy race, and the apparent lack of interest in the Heavy Touring

known to Mr. Jarrott that Col. Holden has given a very large amount of time and energy to initiating a handicapping formula that shall be fair to all. This formula has now been tried three times, once at Frome's Hill, once at Nottingham, and once at Bexhill.

Mr. Worby Beaumont, who worked out the handicap on behalf of the R.A.C., did his work conscientiously and accurately, and Mr. Jarrott's criticism of a single-cylinder car having to give a start to a large four-cylinder car is strange, considering that the very car which he mentions, the little car in which he is interested, actually beat the four-cylinder under the handicap, and, as Mr. Jarrott knows, his little car did very well in the first and second rounds and probably would have done very well in the final but for it breaking down. My committee can only assume that Mr. Jarrott can never have read the R.A.C. handicapping formula, or he would understand that wind resistance and weight are quite as important factors as horse-power and number of cylinders.

If he knew so much about the way to handicap, why did he not ask his partner, Mr. Letts, who had accepted a position as an official of the meeting, to place before my committee Mr. Jarrott's knowledge on the subject. But if my committee may be allowed to say so, they think the R.A.C. quite a sufficiently strong body to control race meetings, that their rules are exceedingly adequate and complete, and that the handicapping formula, thanks to the honorary work of Col. Holden, is far in advance of anything that has been done previously. It may not yet be perfect, but why does not Mr. Jarrott give the R.A.C. the benefit of his handicapping knowledge, so that they may improve their formula? Criticism is exceedingly cheap.

Mr. Jarrott's statement that the Club intended that the starts should have been added to the actual running times is incorrect. The officials authorised by the Club to deal with this matter did so on the correct basis and in accordance with the R.A.C.'s regulations. My

committee suggest that they would like to receive from Mr. Jarrott particulars of the officials who carried out their duties in a grossly improper manner, as Mr. Jarrott suggests.

In regard to Mr. Eason's letter my committee would like to point out that the Serpollet steam car record has stood, although attempts were made to beat it by the Mercedes in 1904 and the Daimler, 1905, so it is hardly correct to say that any high powered present day touring cars could beat it. Mr. Eason evidently forgets that when M. Serpollet made his record he had the advantage of nearly half a mile longer track than exists at the present day. Regarding his complaint that Mr. S. F. Edge should have beaten this record, he has evidently forgotten that invitations were sent to Messrs. Jarrott and Letts for a speedy De Dietrich car, and invitations were sent to other owners of speedy motor-cars, but of the five invitations sent out Mr. Edge was the only one who accepted, and my committee's thanks are due to him for carrying out this item on our programme.

Dealing with Monday's meeting as a whole, my committee admit there were two serious delays, first in regard to Event 3, in which the entries were considerably more numerous than they had anticipated; this particular competition was novel and difficulties undoubtedly did arise. The second serious delay arose through a driver being seized with a fit on the mark as he was going to start, and he had to be laid on the track for some considerable time, while medical aid was summoned. My committee wish to draw attention to the fact that the whole of the criticism has arisen from unsuccessful competitors.

It is only fair to my committee that it should be made very clear that Tuesday's meeting met with all-round praise both for interest and the expediency with which all the events were run off.—Yours truly,

HENRY HOLLANDS.

THE R.A.C. SIDE-SLIP COMPETITION.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—In furtherance of my letter on the Royal Automobile Club Side Slip Competition, which you kindly printed in your issue of April 20th, I enclose you copy of a report by Mr. Worby Beaumont on the Hartridge tyre.

In view of the award by the Royal Automobile Club, it is a strange coincidence that "the lengthy series of experiments carried out by Mr. Worby Beaumont in compliance with the instructions of the Hartridge Tyre Syndicate" covers exactly the same period of time as the inception and completion of the trials instituted by the R.A.C., viz., November, 1906, to April, 1907. This, in itself, would occasion no surprise, but it happens that Mr. Worby Beaumont is consulting engineer to the Royal Automobile Club, and one of the judges at the trial, in which the certificate and prize of £100 was awarded to his clients.

The obvious conclusion is, I am afraid, the only explanation to the facts as stated in my former letter. It is certainly to be hoped that the Royal Automobile Club (if they do not reconsider the report and recommendations in question) will endeavour to prevent coincidences of this kind at any of their running or future competitions.—Yours truly,

G. SIMPSON TAYLOR.

THE TOURIST TROPHY ARRANGEMENTS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I beg to point out that the arrangements for the accommodation of the Press at the Tourist Trophy and Heavy Car races at the Isle of Man might easily be improved upon. The Press tent in the R.A.C. enclosure during these races, on Thursday last, was invaded by a crowd of spectators, for whom no shelter from the continuous rain had been provided.

There were two scoring boards, one for each race: that for the Heavy Car race was hidden from view by the judges' box, which, by the way, was a fine weather erection, and its occupants suffered considerably during the day; the times on the other scoring board were rendered indistinct by the rain, and frequently obscured by spectators and officials. As notes are sent to the board markers giving competitors' times and positions in each round, it would considerably help the Press representatives if duplicates of these notes were also at the same moment sent to them, and provision made for sheltering chattering spectators and gentlemen intent on engineering sweepstakes elsewhere.—Yours truly,

J. B. KING.

THE CONTROL OF MOTOR RACE MEETINGS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice in reference to the Bexhill meeting that Mr. Jarrott has been at some pains to explain his views to the public through the medium of your valued columns, and cannot understand how he can have so misread the handicap as to have made the glaringly inaccurate statements which he has done. In reference to Event No. 2, he states that the 9-h.p. Sizaire car with one cylinder, having a bore of 120 mm. and weighing 15 cwt., would have had to cover the distance, namely half a mile, in 28.2.5 sec. in order to have equalled the 10-h.p. Adams car which won the gold medal in this event. Such, however, I fail to find proved by the figures.

Taking the times as stated in the Press, I find that in heat 4 the published time of the 9-h.p. Sizaire is 63.4.5 sec. Now surely Mr.

Jarrott does not think that these times were the actual running times from start to finish. If so, does he realise what they mean, namely that the Adams car covered half a mile from a standing start at an average speed of thirty-nine miles per hour? Obviously absurd.

For Mr. Jarrott's enlightenment, the actual figures should read as follows:—10-h.p. Adams: 46.2.5th sec., plus the handicap, namely 34 sec., equals 80.2.5th sec., or an approximate average speed of twenty-two and a half miles per hour. Whereas that of the Sizaire works out as follows: 63.4.5th sec., plus 18 sec. handicap, equals 81.4.5th sec.

I think that generally a lot too much has been said about the handicapping at Bexhill, and certainly I cannot help thinking that a very false impression has been created in the public mind by the statements that have been made.

Mr. Jarrott further states, in reference to the 14-h.p. Spyker car, that it would have been necessary for this car to have covered the distance in 12.2.5th sec. in order to have equalled the performance of the Adams car, which is equivalent to something over 150 miles per hour. Such is not the case. The actual time in which the Spyker would have had to cover the distance would have been 46.2.5th sec. which is equivalent to just under thirty-nine miles per hour, quite a different matter. In conclusion, it seems to me a most extraordinary thing that, no matter what the event may be, so long as it is connected

The Heavy Touring Car Race.—One of the Ariel-Simplex Cars on the Horse Shoe Curve at Glencarn.

with automobilism, there is at the tail of it a string of protests and grumblings as to what should or should not have been, with a long list of invidious comparisons.—Yours truly,

R. R. SMITH.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—We had the pleasure of hearing Mr. Jarrott's comments on the sporting character of the Frome's Hill Climb, and feel certain that all entrants, winners and otherwise, endorsed his views. The very opposite, however, must be said of the Bexhill meet. We venture to say that had any horse race meeting been held under the same circumstances, the onlookers would have broken up the whole show from the palings to the judge's box; as it was, the public showed their contempt of the whole meeting by leaving the course.

The lack of organisation and want of knowledge on the part of the handicappers was deplorable, and the least said on this subject the better. We understood from the invitation form that all events were open ones. May we therefore ask why Mr. S. F. Edge was alone invited to attempt to beat the previous Bexhill records for touring cars, namely that of 54.53 miles per hour by M. Serpollet on his steam car, which was made five years ago? Surely any present day high-powered touring car would have no difficulty in beating this! And it seems to us the whole meeting was arranged for the benefit of one particular make of car, and we consider that it is very hard that makers should go to the big expense and needless worry for a one-horse show, which sentiment we feel sure will be endorsed by all other competitors. Moreover, it is surely against the rules of all sporting contests for a competitor to act in an official capacity, and have power to disqualify any of his opponents.

In our opinion all motor race meetings should be controlled by a committee approved by the Royal Automobile Club, and not by local

motor clubs. This would not only bring the motor races to the same level as that of other sporting events, but would be of the greatest benefit to both the public and the manufacturers, as such a committee would see that every competitor had a proper sporting chance.—Yours truly,

F. EASON.

TYRE CUT STOPPING PREPARATIONS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—For several years I used, with excellent results, some stuff called Parocert, rubber dissolved in sulphide and sold in collapsible tubes, like Pneu-cure, and a more solid material called Westwood Tyre-stopping, both made by the Westwood Tyre and Rim Company, of Birmingham. Used according to directions these two completely stopped any small cut in the tyres and seemed to amalgamate with the rest of the tyre, and I understand the Westwood Tyre and Rim Company are not now in existence, and I cannot get anything that answers so well for the purpose. It seems a pity that so good a thing should be completely lost, so I am writing to you hoping that you will publish a query about it, which may catch the eye of some of the people responsible for its manufacture, and it may be made again. The two had to be used in conjunction according to directions, and the result was really splendid.—Yours truly,

H. L. L. A.

The Tourist Trophy Race.—The two Star Cars at Kirkmichael.

A SIMPLE HUB BAND BRAKE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I was very much interested in Mr. Hirsch's letter with illustrations of an effective brake in your issue of the 18th ult., as the same is very applicable to my small car, which could easily be altered, the lever, rods and drum being similar. If not troubling Mr. Hirsch too much, would he kindly inform me if the brake band is lined, and the dimensions of the rocker, also what part of the spring is the bracket clipped to, as of course the body clips the top of spring. My brake drum is flanged, and is 1½ in. wide and 9 in. diameter.—Yours truly,

H. S. BALDWIN.

THE BIRDLIP HILL CLIMB.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—As you are probably aware, we have arranged for our annual hill climb to be held at the well-known Birdlip Hill on Saturday, June 29th. The competition is open to members of the Bristol and Gloucestershire Automobile Club and to motorists residing within the city of Bristol and the county of Gloucester; but it has been arranged for a sub-committee meeting to be held a few days before the race to elect, on payment of the ordinary fees, any gentleman residing outside these districts who desires to enter for the hill climb. There will be fourteen classes, and I shall be happy to send full particulars to any lady or gentleman desiring the same, on application to me at 37, Baldwin Street, Bristol. Last year we received complaints concerning the practising of cars on the hill, and we have made a rule that no practising whatever shall be allowed on the hill, and the police have been requested to report any car found so doing.

I might add that we in Gloucestershire are on exceedingly good terms with the police, and up to now have never had such a thing as a police trap throughout the county, and we feel, therefore, more disposed to fall in with any of their desires, especially as we have received their official sanction for the holding of the climb.—Yours truly,

E. H. ATCHLEY,
Hon. Sec.

THE TREND OF MOTOR-CAR DESIGN.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—The progress of automobilism during the past decade has been rapid, and the great strides made both in the design and construction of motor-cars is marvellous. Ordinarily there is no end to innovations, but, so far as the automobile is concerned, a point seems to have been reached when radical changes are things of the past. That there will be changes each year goes without saying; yet, although the car of 1908 will differ but slightly from the car of this season, and the car of 1912 will differ little from the vehicle of 1911, there will be a marked difference between the car of 1907 and that of 1912, the changes coming about through the ordinary means of evolution. The sensible manufacturer of to-day is not seeking for radical departures, he is out to make money, and so long as he can stick to a model year after year, providing it is reasonably up-to-date and in keeping with the public demand, there is no need for material changes and innovations, for it is better to perfect a good thing than to experiment with something that the public may not want. Not only so, but in following this plan he will be better able to meet the increasing demand for a reliable vehicle at a moderate price.—Yours truly,

J. H. R.

CHANGING ENGINES ON A CAR.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to Mr. Gipps's letter in the *M.C.J.* of the 25th ult., it is quite possible and fairly easy to replace a two-cylinder engine by a four-cylinder. I make a speciality of this, and have two in negotiation at present. The new engine should give the increased power at about the same revolutions as the old one, otherwise the speed of car will be affected. In the case mentioned I should say that a four-cylinder 3½ in. by 4 in. giving 14-16 h.p. at 1,000 revs. would do. This engine would occupy about 25 in. in length, exclusive of flywheel. The cost would depend on work in fitting, but probably between £40 and £50 would cover it.—Yours truly,

A. SAUNDERS.

THE BADGERED MOTORIST.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—So much fun has been cast at the motorist who, being a member of several organisations, loyally decorates his vehicle with many badges, that I cannot forbear to tell my confreres of the real value of such a device. Mr. Harold Brewer, a member of the Motor Union, was recently summoned at Raglan for driving his car in a manner dangerous to the public. He instructed Mr. F. C. Shackel, the Union's solicitor at Cardiff, to defend him, and the summons was dismissed. The circumstances were reported to the Union, who are satisfied that Mr. Brewer did not, in fact, commit the offence with which he was charged. As he was carrying the Motor Union car badge on his car at the time of the occurrence, he is entitled to one half of his legal expenses, which will be refunded to him by the organisation in due course. Evidently the wearing of the badge is, after all, a means towards the economical running of the car.—Yours truly,

F.

MR. STENSON COOKE, the secretary of the Automobile Association, will be pleased to hear from motorists whose chances of appeal from police court decisions have been upset by magistrates inflicting fines of an insufficient amount for that purpose.

THE R.A.C. AND UNOFFICIAL TRIALS.—Mr. S. F. Edge writes:—"Referring to my letter in reference to the forgotten R.A.C. rule, there is a sentence which reads as follows:—'There has only been one of these runs that I could find was done in a manner beyond suspicion,' which should have read 'there was one of these runs done in a manner beyond suspicion.' The matter may not seem of much moment, but, reading it as originally sent you, it read as if Mr. Paul's was the only drive above suspicion, whereas, of course, it is quite clear that Mr. Jarrott drove from London to Monte Carlo, and his run was independently verified."

THE ARCHIBALD PATENT WHEELS.—We have an enquiry for the name and address of the maker of these wheels.

A DAIMLER axle cap has been found by Mr. Cox, of Swanley, Kent, who will be pleased to return it to the owner.

MR. W. A. VINCENT, of Gamage's, Holborn, will be pleased to have the name and address of the gentleman who left his sample of tyre stopping with him for testing recently.

MR. SYDNEY HYMAN, 29, Leicester Square, W.C., lost a new Collier cover, which skipped off the top of his car on the 25th ult., between London and Winchester, which road he travelled via Kingston, Staines, Bagshot, and Basingstoke; he is offering a reward of £2 for the recovery of the cover.

CLUBS AND ASSOCIATIONS

AUTOMOBILE ASSOCIATION.

AMONG the 170 members elected at the last meeting of the Automobile Association Committee were the Duchess of Marlborough, the Hon. Mrs. Sergison, General Sir C. J. Burnett, the Earl of Huntingdon, Col. P. E. Monckton, Col. R. Pilkington, Col. Heyworth-Savage, Capt. H. H. D. Tothill, R.N., Major S. F. Williams, R.E., the Hon. Mrs. R. A. Smith, Major W. A. Robinson, Viscount Colville, Lord Rossmore, Capt. Arthur Ritchie, and Major G. Kynaston Cockerill.

The A.A. patrols were on special duty for the Tourist Trophy Race, an exceptionally long stretch of road being covered, viz., from London to Liverpool and Leeds to Liverpool.

LADIES' A.C.

THE members of the Ladies' Automobile Club have again this year been invited by the Committee of the Grosvenor Club to visit that club's enclosure at Henley during the regatta week.

For the convenience of members of this club the Grosvenor Club have arranged that as each car enters the car enclosure its driver will be given a number, which will have to be returned before the car can be taken away.

The L.A.C. Committee have arranged for the cars of members to be garaged during Ascot week at the Ascot Motor Works, Ltd., Windsor Road, Ascot.

There are at the present time 380 members of the L.A.C., and among those who have been elected this year are Mrs. C. Briddington, Miss B. C. Burns, Mrs. Cator, Mrs. Pickersgill Cunliffe, Lady Emily Dyke, the Countess of Dysart, the Hon. Mrs. Asheton Harbord, Lady Louise Loder, the Dowager Duchess of Manchester, the Hon. Lady Miller, the Hon. Mrs. George Napier, Mrs. Newton, Miss Beatrice Savile, Mrs. Frame Thompson and the Hon. Mrs. G. Williams.

WELSH A.C.

A HILL-CLIMBING competition was promoted by the Welsh Automobile Club at Llangennech (Carmarthenshire), on Saturday. Twenty-six cars competed for a challenge cup presented by Capt. Hughes-Morgan, of Brecon, who, according to the award, had the car of highest efficiency himself. He withdrew his claim, however, and the cup will go to another competitor.

Llangennech Hill provides in its length of 3,000 ft. variations of gradient calculated to provide a test as thorough as it is severe, with its total rise of 190 ft., an average gradient of 1 in 15, and 1 in 8 at the steepest part; and there are ample facilities for a flying start.

The following are the results, with the best times made. The actual times on the run are not officially given, but the speeds made are indicated by putting the time of the fastest car at X, and giving all the other times as X plus the number of minutes they were behind that time:—

		Plus.
	X	m. s.
Capt. D. Hughes Morgan's 28-h.p. Daimler	...	0 0
Mr. Basil Valentine's 30-h.p. Beeston Humber	...	0 8 4-5
Mr. T. P. R. Richards's 24-h.p. Minerva	...	0 16 1-5
Mr. Cory Yeo's 28-h.p. Darracq	...	0 47
Mr. F. E. Jacobs's 20-h.p. Darracq	...	0 49 2-5
Mr. S. Williams's 10-h.p. Alldays	...	0 56 4-5
Mr. Geo. Ace's 15-h.p. Coventry Humber	...	1 1 2-5
Mr. Evan Williams's 10-h.p. Alldays	...	1 3 1-5
Mr. E. M. Player's 14-h.p. Thornycroft	...	1 14 2-5
Mr. E. Miller's 20-32-h.p. Darracq	...	1 15 2-5
Mr. W. T. Farr's 16-18-h.p. Darracq	...	1 15 3-5
Mr. J. S. Brown's 12-h.p. Darracq	...	1 23 1-5
Mr. R. L. Sail's 10-12-h.p. Coventry Humber	...	1 32 2-5
Mr. John Player's 7-h.p. Panhard	...	1 32 4-5
Mr. W. Thomas's 8-10-h.p. Lecorte	...	1 33 4-5
Mr. Gregor's 10-12-h.p. Darracq	...	1 34 1-5
Mr. Hubert S. Thomas's 10-12-h.p. Argyll	...	1 43 2-5
Mr. A. E. Reynolds's 12-16-h.p. Talbot	...	1 53
Mr. H. Solomon's 10-12-h.p. Beeston Humber	...	1 54 2-5
Mr. D. Harries's 10-12 h.p. Coventry Humber	...	2 9 1-5
Mr. A. A. Jones's 10-12-h.p. Argyll	...	2 17
Mr. M. Whittington's 8-h.p. De Dietrich	...	4 29 3-5

The above gives the order in which the cars covered the hill in point of time, taking the best time given in the two runs allowed. The formula for handicapping cannot be worked out for a day or two, and then before publication will have to come before the committee, which will have to interpret one of the rules, which, it is said, as it stood on the day of the contests, did not quite conform with those of the Royal Automobile Club.

It was Mr. Morton Evans who suggested that Llangennech Hill should be the scene of the contests, and Mr. Basil Valentine (the president) and the committee of the Welsh Automobile Club readily adopted the suggestion. Mr. and Mrs. Morton Evans dispensed hospitality at their charming residence, Plas Issa, most lavishly. The officials were:—Mr. C. H. Harvey (the hon. secretary), Mr. A. G. Moffet (the marshal), Mr. James Livingstone (the judge), Mr. T. Herschel Jones (the starter), Messrs. W. H. T. and S. H. Webber (the timekeepers), Mr. Tom John (the clerk of the scales), and Mr. H. Marshall and an array of other clerks of the course.

MANCHESTER AUTOMOBILE CLUB.

THE Manchester A.C. held the fifth run of the season on Saturday. The meeting-place was the Izaak Walton Hotel, Dovedale, but the weather being exceedingly bad the turnout was much less than usual. Leaving Manchester, a drizzly rain was falling, and the sky remained obstinately overcast the whole afternoon, while the limestone roads in the neighbourhood of Buxton were in a slippery condition. Those who took the route via Macclesfield and Leek fared much better and obtained tolerably good going. Among the members present were Messrs. J. A. Morris, A. E. Jones, B. Heywood, Parry, Woolley, G. J. Crawford, and Young.

MANCHESTER MOTOR CLUB.

THE reliability trial of the Manchester M.C., reported in last week's *M.C.J.*, was won by Mr. H. Hollingdrake's 35-50-h.p. De la Buire car, of which we give an illustration. The full number of marks were 500 for reliability, 100 for hill-climbing, and 100 for petrol consumption, and the

Mr. H. Hollingdrake on the De la Buire Car which won the Manchester Motor Club's Reliability Trial.

De la Buire car was awarded the full number of marks. The first day run was from Altrincham to Abergwith, a distance of 126½ miles. The second day's run was from Abergwith to Stratford-on-Avon, a distance of 146 miles. The petrol consumption was 13½ gallons, or over 20 miles to the gallon, and the car with its load of passengers and luggage weighed about two tons.

COMMERCIAL MOTOR USERS' ASSOCIATION.

THE first of the provincial meets of commercial motor vehicles, which are being held under the auspices of the Commercial Motor Users' Association, will be held on Monday, the 17th inst., at Reading. The support of the Mayor of Reading and other local gentlemen has been obtained, and it is expected that makers of commercial motor vehicles will take advantage of the opportunity afforded them of demonstrating the efficiency of their vehicles. The cars will assemble in the Market Place, Reading, at 11 a.m., and will be conducted through the principal thoroughfares in processional order, with the Mayor and members of the local committee at their head. The entry fee for each vehicle is one guinea, which includes admission to the official luncheon at the Reading Town Hall, at the conclusion of the procession. Full particulars of the meet, together with entry forms and order forms in respect of seats at the official luncheon, may be obtained on application to the hon. secretary of the meet, Mr. L. O. Harris, 379, Strand, London, W.C., or the secretary of the Commercial Motor Users' Association, Mr. Rees Jeffreys, 1, Albemarle Street, Piccadilly, London, W.

SUSSEX A.C.

A MOTOR gymkhana was arranged by the Sussex A.C. at Worthing on Saturday in aid of the funds of the Worthing Hospital. It was extremely unfortunate that the weather was so unfavourable, as the Club Committee and Mr. F. H. Nye, the secretary, had worked hard to make

the gymkhana a success, and a pleasant afternoon would have been ensured under brighter atmospherical conditions.

The clerks of the course were Messrs. A. Scrase-Dickins, H. S. W. Eyre, and J. P. Cockerell; Mr. C. F. Frowd was the starter; Mr. C. Haines timekeeper; the judges, Earl Russell, Messrs. E. E. Miller, C. E. Collins, E. H. Myddeton-Gavey, and E. E. Braby; and the marshals, Messrs. V. R. Lucas, M. F. Mievill, and W. H. Tribe. The following are the results of the events decided:—

BENDING RACE.—1, Mr. G. Hill, 8-h.p. Darracq; 2, Mr. S. A. Jones, 10-h.p. Darracq. Also competed: Mr. Scrase-Dickins, 9-h.p. Talbot; Mr. H. Musker, 35-h.p. Daimler; Councillor G. H. Warne, 28-h.p. Daimler; Dr. J. Nodes, 10-h.p. Humber; and Mr. W. H. Tribe, 40-h.p. Peugeot. The winner's time was 1 min. 32 sec.

SLOW RACE.—1, Mr. G. Hill, 8-h.p. Darracq; 2, Mr. S. A. Jones, 10-h.p. Darracq. Time: 1 min. 3 2-5 sec.

MOTOR CYCLING CLUB.

THIS club held a climb on Sharpshoe Hill, near Luton, on Saturday, and although the awards have yet to be made, the following times will be of interest. All the other classes were for motor-cycles.

- 1, S. F. Edge, 80-h.p. Napier, 51 2-5 sec.
- 2, P. Graham, 24-h.p. Deasy, 1 min. 12 1-5 sec.
- 3, F. J. Jenkins, 16-20-h.p. Rover, 1 min. 25 sec.

There also ran J. W. Stocks, 24-h.p. De Dion, 1 min. 43 4-5 sec.; E. Perman, 16-h.p. Bell, 1 min. 47 3-5 sec.; C. A. Vandervell, 17-21-h.p. Daimler, 1 min. 54 sec.; J. van Hooydonk, 8-h.p. Phoenix, 2 min. 4 4-5 sec.; F. R. Johns, 16-20-h.p. Rover, 2 min. 42 2-5 sec.; S. H. Fry, 6-h.p. Rover, 2 min. 50 sec.; and J. Platt-Betts, 6-h.p. Rover, 2 min. 53 sec.

The Welsh Automobile Club's Hill Climb.—A View at the Starting Point.

NORTH-EASTERN A.A.

IN our issue of the 11th ult. we gave a profile of Ragpath Hill, where the North-Eastern A.A. will hold open and closed hill-climbing competitions on Saturday, the 15th inst. Forms of entry will be supplied by Dr. J. McHaffie, the hon. sec. of the competition, Talbot House, Tyne Dock, South Shields, to whom they must be returned by noon on Tuesday next. The hill is sixteen miles from Newcastle-on-Tyne, *viz* Burnopford and Aynfield Plain.

SCOTTISH A.C.

THE first issue of the Scottish Club Handbook is now in the printers' hands and will be issued to the members in the course of the next few days.

A considerable proportion of the members of the club have applied for the badge, which can now be had on demand. It is available both in brass and nickel silver to suit the mountings of the car, and its design has met with very general approval.

Last week, at the suggestion of the Secretary for Scotland and in lieu of a public inquiry on the subject, the Club secretary drove Mr. Alex Stuart, advocate, the Commissioner for the Secretary for Scotland, to Castle Douglas, where, in company with an official of the burgh, an inspection was made of the roads upon which the Town Council desire to have ten miles per hour restrictions.

BEDFORDSHIRE.

AT the inaugural meeting of the Bedfordshire A.C., held at the Swan Hotel, Bedford, last week, it was agreed to ask Lord Amptill to be president, and Mr. W. A. Attenborough, Mr. Percy Barlow, Mr. Gny Pym, and Sir Julius Wernher were elected vice-presidents. The following were elected to serve on the committee:—Messrs. W. H. Allen

Adams, Browning, Brackenbury, Colby Sharpin, Archdale Sharpin, Parbury, Hope, Jessop, Wells, R. Allen, Rev. C. B. Hulton, Dr. Bower, Dr. Smithson, and C. R. S. Payne.

JUNIOR AUTOMOBILE CLUB.

THE committee of this club have decided to hold, at an early date, a 200 miles reliability trial, in which entries will be limited to cars selling at or under £300. As the amateur element predominates very strongly in this club, the tentative entrant has no cause to apprehend that he will be handicapped by being expected to meet on equal terms the drivers of motor firms. Mr. S. C. Darrington, "Oakthorpe," Brownlow Road, New Southgate, N., is the hon. sec. of the event.

MR. HOLMES KINGSTON has been appointed secretary of the Motor Club.

CASES UNDER THE MOTOR CAR ACT.

DAINGEROUS DRIVING.

A schedule of times prepared on a motor tour from South to North Wales proved a novelty in a motoring prosecution before the Llangollen magistrates on Monday, when Mr. A. K. Reese, Victoria Road, Penarth, was charged by Sergt. James Wyse, Llangollen, with (a) driving a motor-car at a speed dangerous to the public, and (b) with refusing to stop his motor-car when requested. Mr. S. Lloyd Carter (Carnarvon), pleaded not guilty on behalf of the defendant. After hearing police evidence, Wm. Hughes, Penarth, said he was an electrical engineer and district manager of the Westinghouse Company. He accompanied Mr. Reese and his guests, and they were on a tour throughout Wales. To make the tour more interesting witness along the route kept a correct record of all stoppages and starting times. He worked out the average times and found that in the six days' tour of 529½ miles they did 12·6 miles an hour. They left the Raven Hotel, Shrewsbury, at 12 noon, and arrived at Llangollen at 4.30 p.m. (30½ miles). Their speed at Llangollen was under 10 miles an hour. The prosecution had no idea of speed. The car was not capable of the speed cited of 25 miles an hour. The Bench after a lengthy private deliberation said they considered the evidence conflicting about dangerous speed, and the first charge would be dismissed. The Bench were quite clear there was a refusal to stop the motor-car when requested, and they had to convict on the second charge, but thought the case would be met by the defendant paying the costs.

NOT GIVING WARNING OF APPROACH.

At Bromley (Kent), on Monday, Robert Veitch, chauffeur to Lady Angela Forbes, was summoned for negligent driving though Beckenham, and, further, with not sounding bell, horn, or other instrument to give sufficient warning of his approach, on May 22nd. Police-constable 140 P said he saw the defendant driving a car about ten miles an hour up High Street in the direction of Southend Road, over the railway bridge. At the same time a young lady cyclist, who had turned out of Albemarle Road, was riding in the same direction. The cyclist was going up the rise of the bridge, and about 3 ft. from the kerb, when the motor-car, without giving any warning, dashed into her back wheel and threw the young lady on to the path. He was fined £3 for negligent driving and £2 for not giving warning of his approach, and costs. Defendant gave the name of his employer as surety, and was allowed time in which to pay.

EXCEEDING THE SPEED LIMIT.

At the Arundel Borough Bench, on Monday, four cases were heard against motorists for exceeding the legal limit. Fines ranging from £5 to £8 were imposed in each case. On the same day four cases were heard at Worthing with similar results, and another at Eastbourne.

The Earl of Carnarvon has been fined £5 and costs for exceeding the legal limit at Walton-on-Thames.

A Birmingham motorist has been fined £10 and costs at Market Drayton for recklessly driving a motor-car. The defendant ran his vehicle into a flock of sheep, killing two outright.

MR. J. W. H. DEW informs us that he has resigned the works management of the New Speedwell Motor Company, and is now practising at 100, Rushtall Avenue, Chiswick, W., as an automobile designer and consulting engineer.

MESSRS. HUMBER, LTD., desire to thank the very large number of their agents who have sent congratulatory messages on the performance of the Humber cars in the Isle of Man. As it is quite impossible for Messrs. Humber, Ltd., to separately acknowledge the hundreds of these telegrams which were received on Friday last week, they desire to take this opportunity of expressing their thanks.

At the Madrid Exhibition, the Palmer Cord tyres fitted to the 40-h.p. Iris car, by their excellent appearance after the run from London to Madrid, became quite an attraction. His Majesty King Alfonso showed great interest in them, making a careful examination, while the King's sister, the Infanta of Spain, favoured the Palmer Company with an order for a set for her own use.

COMPANY NEWS.

NEW COMPANIES REGISTERED.

BRIXTON MOTOR WORKS.—£3,000. To adopt an agreement with Mr. H. F. Harding for the acquisition of the business carried on by him as the Brixton Motor Works. First directors: Messrs. H. F. Harding and S. Arnott. 283A, Brixton Road, S.W.

THE DUMFRIES MOTOR COMPANY, LTD., to acquire and carry on the whole business of dealers in motor-cars and motor-car accessories, &c., now carried on at 78, High Street, and 93, English Street, Dumfries. Capital £7,000.

MERO, LIMITED.—This company has just been registered, with a capital of £20,000 in £1 shares, to manufacture, let on hire and deal in motors, launches, flying machines and vehicles, and to adopt an agreement with Messrs. E. G. Meyer, F. A. Kelley, J. H. Kelley, A. J. Mudford, S. Mudford, S. A. Steel, and J. H. Rothardt. Registered office: 3, Central Chambers, High Street, Sheffield.

THE NATIONAL MOTOR MAIL COACH COMPANY, LTD.—The subscription list of this company has just closed so far as 100,000 of the ordinary shares of £1 each are concerned. It has been formed to take over certain postal contracts now enjoyed by Mr. G. H. Hayes, of Plumstead, and to develop the same. Sir Martin Conway is chairman of the company, of which the Hon. F. W. Stanley, Messrs. H. A. Johnson, W. E. Pountney, and Major Vereker are the other directors. The offices are at 71 and 72, Strand, W.C.

BROUGH'S PNEUMATIC SYNDICATE.—£2,000. To acquire and turn to account any inventions connected with pneumatic springs for motor-cars and other vehicles, and to adopt an agreement with Mr. W. Brough, Rowland House, 6, Eldon Street, E.C.

on at Barcelona and at Queen Anne's Chambers, Westminster, as the Belmont Tyre Protector Company, and to adopt an agreement with Emilio Rodriguez, Pauline Rodriguez, W. Murdock, and Miguel Franquet. Linden Arcade, High Road, Chiswick.

BRITISH MOTORIUM.—£100 (£1). Agents for and manufacturers of motor-cars, &c. First directors: Messrs. B. M. Goode and F. Goode.

DALMER MOTOR TYRE SYNDICATE.—£400. To adopt an agreement with Mr. R. Dalmer for the acquisition of certain patents relating to motor-car wheels, tyres, and apparatus, and machinery therefor, including patents for Germany, the United States of America, France, Italy, Belgium, and Austria. 36, Camomile Street, E.C.

A. PULVERMAN AND COMPANY.—£5,000. To take over the business of motor accessory dealers carried on by Messrs. A. Pulverman and Company, at 30, Red Lion Square, W.C., and elsewhere. No initial public issue. First directors: Messrs. A. Pulverman and G. E. Browne.

ASHWORTH AND WILSON, LTD.—This company has been registered with offices at 265, Deansgate, Manchester, and a capital of £10,000, to act as agents for dealers in motor-cars, &c. Among important agencies held by the company are those for Berliet and Stella cars.

MEETINGS AND REPORTS.

A. W. GAMAGE.—The tenth annual general meeting of A. W. Gamage (Limited) was held recently. Mr. A. W. Gamage, who presided, said the directors were pleased to meet the shareholders again with a satisfactory report. Their business had been forging ahead for some years. The goodwill stood at something like £40,000, but it was worth at least £100,000. He believed they were going to have a brilliant year in 1907. Up to the present date of the current year the turnover showed a considerable increase. Mr. J. S. Parker seconded the motion, and the report was unanimously adopted.

The Tourist Trophy Race.—The Weighing-in Enclosure.

CREWE MOTOR COMPANY.—£100. Copthorne House, Audlem, Cheshire.

AUTO-VAPOUR SYNDICATE.—£5,000. To acquire certain inventions and processes relating to the vaporisation of petrol and other fluids, and to adopt an agreement with the Agency and Finance Syndicate, Ltd.

VICI MOTORS (1907) (LTD.).—This company has been formed for the purpose, primarily, of taking over as a going concern and extending the undertaking of Vici Motors (Ltd.), and to provide the further working capital found necessary by the estimated increase in the business. The capital of the new company is £60,000.

ARGYLLS, HAMPSHIRE.—£10,000. To adopt agreements (1) with the Argyll Motors, Ltd., relating to the appointment of this company as selling agents in Hampshire, (2) with Mr. G. H. Cox, as liquidator of the G. H. Cox, Southsea Cycle Company, Ltd., for the acquisition of the business carried on by that company at Portsmouth, and (3) with Mr. G. H. Cox and Mr. P. H. Goodman for the acquisition of the business of motor factors and agents carried on by them at Castle Road, Portsmouth. No initial public issue. 41, Castle Road, Southsea.

HUMPHREY AND LIWENTHAL.—£750. To acquire a certain invention in respect of which British letters patent have been applied for, with right to apply for patents in certain foreign countries, to adopt an agreement with Messrs. A. Liwenthal and E. J. Humphrey, and to carry on the business of manufacturers of and dealers in motors.

SUN GAS COMPANY.—£10,000. To acquire patents and other rights for improvements connected with the manufacture of acetylene or other hydro-carbons from carbide and by-products thereof. No initial public issue.

BELMONT TYRE PROTECTOR COMPANY.—£5,005. To take over the business of manufacturers of the "Belmont" tyre protector carried

BELSIZE MOTORS.—The first annual meeting of the Belsize Motors, Ltd., was held at the Midland Hotel, Manchester, on Wednesday last week. The Chairman (Mr. G. P. Dawson) called attention to the fact that early in the financial year large additions to both the buildings and the plant had to be undertaken, in order to cope with the heavy increase in trade, and later on further extensions and additions were found to be necessary, mainly on account of the success of the new model 20-h.p. four-cylinder car placed on the market by the firm. The state of the order-book was most satisfactory. The gross profit on the year was £15,139, out of which provision must be made for interest on debentures (£918) and depreciation (£4,410). The meeting decided to pay a dividend at the rate of 5 per cent. per annum, free of income tax, which, after paying directors and auditors' fees, will leave, approximately, £5,168 to be carried forward. The retiring directors (Mr. G. P. Dawson and Mr. G. Higginbotham) were re-elected.

The Daimler Company are advised by the De Luca Daimler Co. that Count Florio bought one of the three Daimler cars which made such excellent showing in the recent Taras Florio race.

We learn that the Rover car which won the Tourist Trophy race was fitted with C.A.V. accumulators. This is particularly gratifying to Messrs. C. A. Vandervell and Co., as it puts the finishing touch to quite a long list of successes recently gained by well-known cars with their accumulators.

MR. HARRY SMITH, the managing director of the Rover Company, Ltd., writes:—"I shall be glad if you will kindly allow me to thank, through the medium of your paper, the numerous friends who have wired and written congratulating us upon our success in the International Tourist Trophy Race."

ROAD REPORTS.

WARE.—The most direct route for motor-cars passing through the town of Ware to and from London is by a bridge over the railway line about 250 yards on the London side of the crossing in question. Drivers of motor-cars are apparently unaware of this route, as it is not shown on the maps.

WIMBLEDON.—At a meeting of the Wimbledon Town Council the Surveyor reported that the use of calcium chloride for dust prevention had proved successful during last summer. It had been efficient for the purposes for which it was used, and had reduced the cost of repairing the roads, while it had effected a saving in watering of about £160. It was decided to provide a sum of £120 in the current half-year's estimates for the purchase of calcium chloride for use on the roads during the coming summer.

SOMERSET.—The Motor Union are asking the Milbourn Port (Somerset) Parish Council why they have fixed up notices at the chief entrances to the village restricting the speed of motorists to six miles an hour.

NORTH WALES.—A representative conference of North Wales authorities last week pressed for Government aid in the settlement of the motor dust question.

BEDFORDSHIRE.—In the county of Bedfordshire, Mr. W. H. Leete, the Surveyor, is adopting tar macadam where an entirely new surface is needed, whilst other sections of the roadway are being tar painted as a palliative for the dust nuisance.

ISLE OF ELY.—An experimental length of tar macadam is being laid in the Isle of Ely by Mr. Perkins, the County Surveyor. In his district granite screenings are now being used in place of road scrapings as a binding material for the surface of the highways.

HAYWARDS HEATH.—Motorists passing through Haywards Heath a few days ago complained of punctured tyres, and further investigation has discovered several sharp-pointed nails strewn about the roads for a considerable distance. We trust that the perpetrator of such a dastardly freak may be discovered.

HERTFORD.—In the Fore Street, Hertford, is a short stretch of tarred road which has proved the efficacy of its treatment from the point of view of allaying the dust. On account of the short streets in the town, motorists should drive with particular care.

LLANDUDNO.—The asphaltting of the parade road has greatly mitigated the motor dust nuisance. About five miles of the streets are being tar-painted. Until recently highways leading to Llandudno were all narrow country roads, and unsatisfactory as to gradients. Now one excellent road has been provided, that *via* Deganwy and Llanrhos, and others will be improved as soon as possible.

TARSPRA.—The following particulars relating to the "Tarspra" method are of interest at the present moment. The total mileage completed and on order by the Tarspra Company exceeds eighteen hundred miles. Kent is responsible for 165, Newcastle 24½, Westmorland 10, Chester 10; Sheffield, Nottinghamshire, Birmingham, Hull, and Nuneaton divide 100 miles between them; while Glamorganshire, Bridgend, Swansea, Neath, Bristol, Essex, Taunton, and Weston-super-Mare are responsible for many more.

AUTOMOBILE RACING IN MEXICO.

The first automobile race meeting in Mexico was held on the 12th ult.; it was organised by the Automobile Club of Guadalajara, on a 35 kilometre course near the town of Guadalajara. The race, which was for "La Copa Jalisco," was over a distance of 177·7 kilometres, representing roundly five laps, the contestants being required to come to a full stop at the completion of each round, all repairs and time lost in taking on fuel and the like counting as running time. The start and finish was near Casa Fuerte, an old fort on the hill-side overlooking Guadalajara, where a big grand stand was erected. To prevent accidents from spectators overcrowding the course the promoters had secured a detachment of mounted federal and state troops to patrol the course. The competitors were:—Galheri (120-h.p. Mors), Berrito (30-h.p. Packard), J. L. Lawrence (25·30-h.p. Pope-Hartford), and Bassini (Welch). Of the above the first and last only succeeded in covering three laps. The winner was J. L. Lawrence, who on the Pope-Hartford covered the total distance in 3 h. 17 min. 54 sec., Berrito (Packard), taking the second place in 3 h. 53 m. 9 sec.

On the following day two races for ordinary touring cars were held on the same course, the distance being, however, reduced to two laps, equal to 71 kilometres. In the first event there were five competitors—A. Thomas, a Packard, a Mors, and two Fiats; the event was won by A. F. Lornellera on the Packard, in 1 hr. 2 min. 5 sec., Juarez being second on the Mors, in 1 hr. 23 min. 10 sec. There were only three competitors in the second race—two Buicks and a Haynes, the winner being Dees on a Buick. Time, 1 hr. 33 min.

SINCE taking the Mills at Harpenden, the New Motor and General Rubber Company, Ltd., have laid down an entirely new plant for tube vulcanising, and are now in a position to treat over 1,000 tubes per week.

"HENRY EDMUNDS" TROPHY.

FOR the "Henry Edmunds" Challenge Trophy and the Carter's Hill Cup, to be contested to-day (Saturday) at Carter's Hill, Underriver, Kent, the entries number fifteen and sixteen respectively. For the first event the entries are Messrs. George S. Barwick (30-h.p. Daimler), J. E. Hutton (40-h.p. Berliet), W. Hillman (Hillman-Coatalen), John S. Napier (40-h.p. Arrol-Johnston), Paul Brodtmann (30-40-h.p. Daimler), Frederic Coleman (30-h.p. White Steam), W. T. Clifford-Earp (26-30-h.p. Nordenfelt), Montagu S. Napier (40-h.p. Napier), K. O. Kura (24-h.p. Fiat), Arthur E. Perman (35-h.p. Iris), Capt. G. Hinds Howell (35-h.p. Iris), L. Carle (45-h.p. Mors), E. Herington (30-h.p. Ariel-Simplex), G. Stanley Monck (35-h.p. Horch), A. C. Hills (24-h.p. Martini).

For the Carter's Hill Cup race the cars to take part will include:—24-h.p. Junior, 22-h.p. Berliet, 12-16-h.p. Vauxhall, 20-24-h.p. Talbot, 12-16-h.p. Clement-Talbot, 25-h.p. Arrol-Johnston, 24-28-h.p. Metal-lurgique, 18-28-h.p. Clement, 22-h.p. Minerva, 14-h.p. Thornycroft, 20-h.p. Westinghouse, 17-20-h.p. Scout, 20-h.p. Talbot, and 18-h.p. Germain.

AUTOMOBILE ACCIDENTS.

MR. WILL EVANS, the comedian, had a narrow escape from serious injury whilst returning home from one of the music-halls on Thursday of last week. As his motor-car was proceeding along the Bayswater Road its passage was suddenly stopped by a brougham which emerged from a side drive. The chauffeur ran the car on to the pavement, but in so doing it struck the back of the brougham, knocking the driver off his seat into the roadway. The car was pulled up between a pillar-box and the railings, and Mr. Evans was thrown to the opposite side of the vehicle and seriously shaken.

A SAD motoring fatality, the second in the city within a week, occurred on Saturday at Nottingham. The victim was Doris Egglestone, the four-year-old daughter of a working jeweller, who was attempting to cross a busy thoroughfare when she was knocked down by a motor-car owned by Mr. Groves Hind, of the Park, Nottingham, which was proceeding very steadily. She died shortly after her admission to the infirmary.

POLICE TRAPS.

A MOTOR trap has been discovered at Killinghall, near Harrogate. Visitors to that resort by the Ripon road should exercise care or their pasture may become expensive.

THE police in the district of Wharfedale, and particularly about Ilkley, are said to be eagerly watching motorists of more than dismal speed.

A POLICE trap has been established near Colchester, and the Watch Committee have provided the police with stop watches to be used in connection with the same.

MOTORISTS proceeding through Canterbury are warned to be careful, the local authorities having apparently started a crusade against drivers of motor-cars passing that way.

AMONG the towns where the police are very active just now are Arundel, Lewes, Maidstone, St. Albans, Halifax, Lancaster, Canterbury, and Harrogate.

ON Monday the Beckenham Council resolved to draw the attention of the superintendent of police to the dangerous speeds at which many motor-cars are being driven through Beckenham, Bromley, Croydon, Wickham, and other roads, and agreed that special efforts shall be made on the part of the police to carry into effect the provisions of the Motor-Car Act.

ON the Chester road, between Thingwall and Neston, is a police trap six miles long.

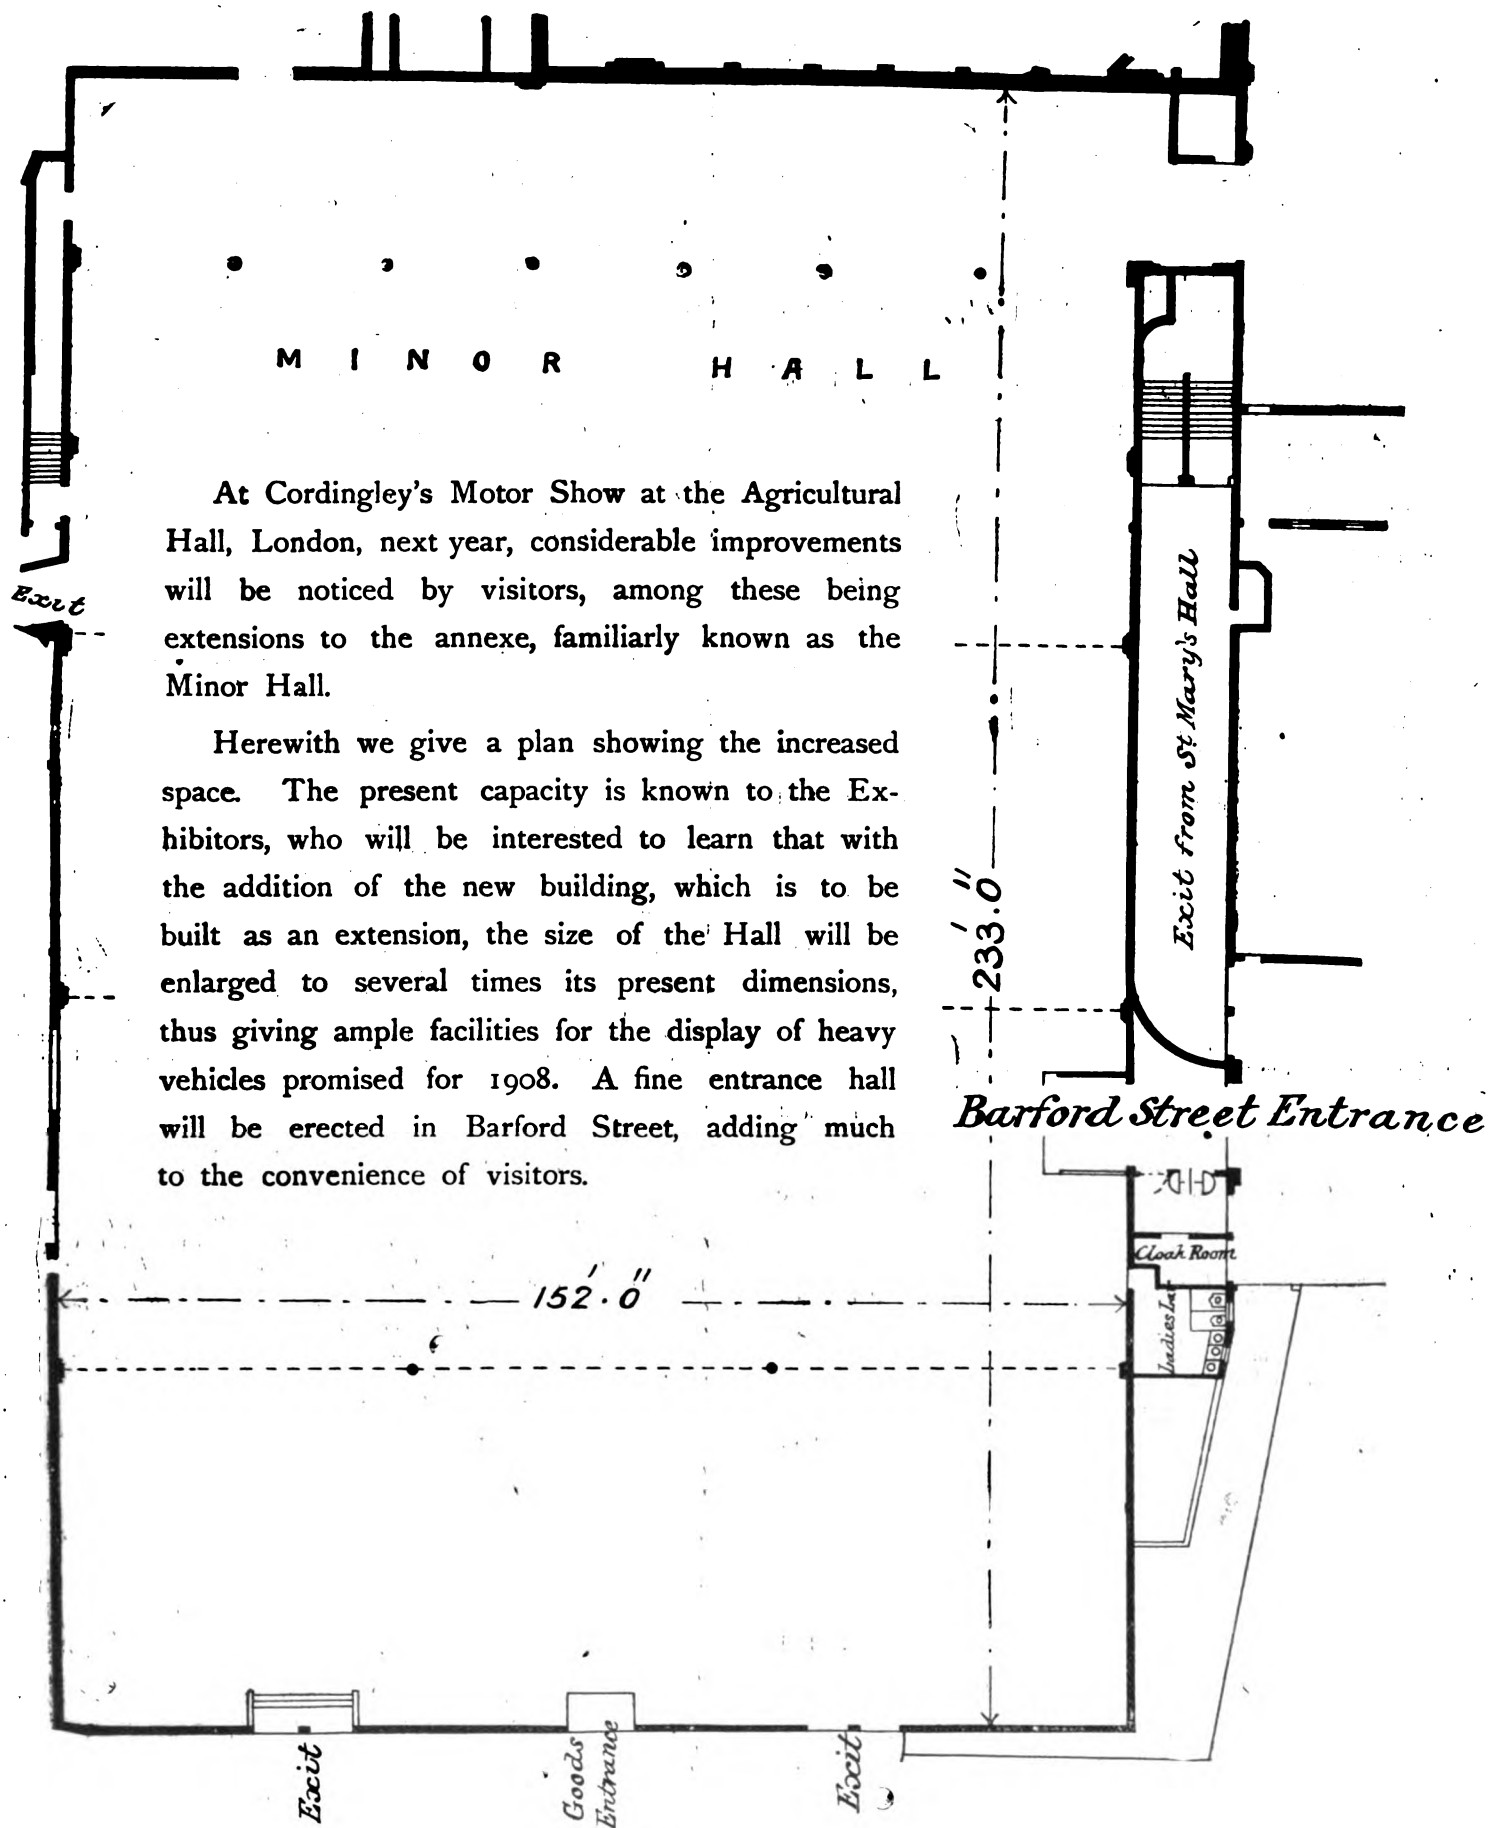

AERONAUTICS.

AT Chichester, on Saturday, the Hon. C. S. Rolls made a balloon ascent from Colonel Daniell's place, Oaklands Park, accompanied by Sir Hugo de Bathe, the ascent being made in aid of the funds of local charities. Mr. Rolls intended to make Sir John Shelley's seat at Avington Park, near Winchester, and by a careful selection of the currents this was accomplished so exactly that the balloon was brought down on the lawn in front of the house, the occupants alighting not twenty yards from the front door. The prize for the motor capturing the balloon was won by Mr. H. Humphry, of the Farrington Works, South Street, Chichester.

SIR HUGO DE BATHE has commissioned Messrs. Short Bros., of Battersea, who were exhibitors at the recent Agricultural Hall Show, to build him a balloon.

THE Monarch Motor Accessories and Gear Case Company, Clarence Street, Coventry, have taken up the manufacture of radiators, bonnets, tanks, &c. They are fitting up their factory with up-to-date appliances under the supervision of Mr. F. J. Page, late a company director with the Doherty Motor Components, Limited, who has had ten years' experience in this branch of trade.

The Extension of the Agricultural Hall.

FORTHCOMING EVENTS.

JUNE.

SATURDAY, 8TH.

At C. Henry Edmunds Hill Climb, Carter's Hill, near River Hill.
 Gymkhana of the Coventry M.C.
 Hill climb of the Blackheath A.C.
 The Kensington A.C. will hold a Gymkhana in the grounds of Chiswick House, Chiswick.
 Speed judging contest at Cranford Bridge, two miles from Hounslow on the Bath Road, between the Southern M.C. and the North London A.C. for the Gamage challenge cup.
 Annual Gymkhana of the Hertfordshire County A.C. at the Grove, Watford.
 Derby and District A.C. Hill Climb.
 Joint Meet of the East Surrey and Kent Clubs.

SUNDAY, 9TH.

The Motor Club's run to Brighton.
 The Motor Cycling Club will meet at the "Cock," Epping, at 11 a.m., for a trip to Maldon.

MONDAY AND TUESDAY, 10TH AND 11TH.

Conference of the Road's Improvement Association at the Institution of Civil Engineers, 11 a.m.

THURSDAY, 13TH.

Notts A.C. Crippled Children's Outing.

FRIDAY, 14TH.

Race for the Kaiser's Prize on the Taunus Course, Germany.

SATURDAY, 15TH.

Conference of officially recognised automobile clubs at Homburg.
 Commercial vehicle meet at Reading. Mr. Leo Harris, hon. sec., 379, Strand, London, W.C.
 The children of the Leicester Cripples' Guild will be taken for a drive by the members of the Leicestershire A.C.
 Joint meet of the Bristol and Gloucestershire and Hereford A.C.'s at Cheltenham.
 Hill Climb of the Ipswich and East Suffolk A.C.
 North Eastern A.A. Hill Climb, Ragpath-side, near Lanchester.

SATURDAY, 22ND.

Yorkshire A.C.'s meet at Saltburn.
 Southern Motor Club's open hill climb on Captain Kydd's Hill, East Grinstead.
 Kettleby hill climb of the Derby, Leicestershire, and Notts A.C.

TUESDAY, 25TH.

25-29.—Scottish A.C. Reliability Trial.

WEDNESDAY, 26TH.

Hastings Automobile Meeting. Appearance Competition and Gymkhana, organised by the Automobile Association and the Motor Club.

THURSDAY, 27TH.

Newcastle Motor Club's run to Edinburgh and back.

SATURDAY, 29TH.

Aero Club race for the Hedges Butler challenge cup.
 Birdlip hill climb of the Bristol and Gloucestershire A.C.
 Joint meet of the Liverpool, Manchester, N.E. Lancs., Sheffield and Yorkshire Clubs at Buxton.

JULY.

2ND.—A.C.F. Grand Prix Race on the Seine Inferieure Circuit, near Dieppe.

4TH.—International cross Channel race for motor-boats from Dover.

6TH.—Inaugural races on the Brooklands Track.

10TH.—R.A.C. South Harting hill climb.

13TH.—Entries for R.A.C. commercial vehicle trials close at ordinary fees.

15TH to 18TH.—The annual automobile meeting at Ostend.

20TH.—Motor Union meet at Southport.

27TH.—Commercial vehicle meet at Maidstone.

AUGUST.

20TH.—Open competition for light cars organised by the Essex Motor Club over a 200 miles course.

SEPTEMBER.

9TH.—Industrial Vehicle Trials commence.

OCTOBER.

19TH.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

Cordingley's Motor-Car Exhibition at the Agricultural Hall, London.

LIGHTING-UP TIMES—LONDON.

BUSINESS NEWS.

WE understand that Mr. F. F. Wellington's agreement with the British Automobile Commercial Syndicate, Ltd., expired on the 31st ult. His numerous friends will be glad to know that he has taken over the management of the Spyker business from June 1st, and all personal correspondence should now be addressed to him c.o. the Trompenburg Manufacturing Company, Amsterdam.

A LEAKING petrol pipe connection is unfortunately a somewhat common trouble when travelling, and many have been the devices introduced from time to time to render the motorist immune from such annoyances. Among the really successful inventions the flexible tubing and unions of E. M. Bowden's Patents Syndicate, Ltd., holds a prominent place. It requires care in fitting, but, once properly attached, the motorist is not likely to be troubled much with leaky pipe connections afterwards.

J. C. LYELL AND COMPANY, LTD., of 55, Victoria Street, Westminster, S.W., have opened a branch office at 84, Rue de Richelieu, Paris.

THE Glasgow Automobile Company, Ltd., West George Street, Glasgow, have been appointed agents for the Iris cars in Glasgow and the West of Scotland.

THERE seems to be an erroneous impression abroad with regard to the Maudslay Motor Company (1907), Ltd., owing to announcements having appeared in the Press relative to the old company (i.e., the Maudslay Motor Company, Ltd.), having gone into liquidation, without any mention of their having transferred the business to the new company, which is now actively carrying on the same.

ORDERS have been received by the Daimler Company from the Right Hon. Earl of Dartrey and Lieut. the Hon. A. Strutt, the latter having ordered a 30-h.p. car of 8½ ft. wheelbase fitted with five-seated body, and the former an open carriage of the Rugby type.

PUBLIC MOTOR SERVICES.

BROADSTAIRS is being suggested locally as a convenient centre for the establishment of a motor-bus service, and we understand that the District Council have expressed their willingness to give all possible facilities for the establishment of such an enterprise.

HAVING regard to complaints made to the Brighton Town Council with regard to the motor-buses in the town, the Watch Committee have suggested to amend the regulations so that that referring to this matter shall read, "The machinery of the motor-omnibus shall be so constructed, used, and maintained, as to prevent, so far as practicable, noise, the emission of smoke or vapour, and the dropping of oil on to the roads, and effective means shall be taken to prevent, as far as practicable, the splashing of mud by the wheels."

THE Sheffield Corporation Tramways Committee is putting several types of motor-buses to the test.

A MOTOR-BUS is now running between Rochdale and Bacup.

A MOTOR-CAR is being run by the Anderson Autocar Co., of Greenock, between that place and Inverkip during the summer months.

AT the last meeting of the Court of Common Council of the City of London, a letter from the borough of Camberwell was read on the subject of motor-omnibuses. The matter has been referred to the Streets Committee for full consideration.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

To insure insertion communications and contributions must be in the Editors' hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case; otherwise no liability will be accepted.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

THE Motor-Car Journal.

VOL. IX.]

LONDON, SATURDAY, JUNE 15, 1907.

[No. 432.

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

THE conference of road users and road makers, held under the auspices of the Roads Improvement Association, on the first two days of the present week, has served to bring into prominence the demand for greater encouragement from the State in the construction of the main roads throughout the country. In the old days before railways, applications in this direction were more recognised than has since been the case, but the opening up of the new means of locomotion has again brought the matter to the front. Practically all the speeches on Monday were directed towards this end, the reasonableness of which is apparent on a moment's reflection. Motorists who take out their registration in one county probably do less travelling in that district throughout the year than they do in other counties towards the maintenance of whose roads they have contributed nothing; so that the system of county registration works out very inequitably, and gives force to the arguments of the surveyors of Middlesex, Lincolnshire, Norfolk, Hornsey, and other places, who have been urging that something more than local effort is needed to secure uniformity in the upkeep of the great main arteries of the country. The Chairman presented a report from the National Dustless Roads Committee, and it was decided to ask the Board of Trade to use its influence to secure a grant from the Treasury in order that experiments might be carried out. It was stated that the committee had £50 in hand with which to do £3,000 worth of work. It was decided to wait upon the Government, and a deputation was appointed, the members of which include Sir John Wolfe Barry, Lord Montagu of Beaulieu, Lord Lovat, Sir John Thornycroft, the Hon. Arthur Stanley, M.P., Major Coates, M.P., Sir W. Bull, M.P., Mr. Robert Todd, Colonel Crompton, Dr. Hele-Shaw, Mr. C. D. Ross, M.P., Messrs. Howard Humphreys, E. J. Lovegrove, J. A. Brodie, Douglas Mackenzie, H. T. Wakelam, E. G. Mawbey, H. P. Maybury, and representatives of societies and institutions interested in the question.

Legalised Highwaymen.

ON a wide road, not intercepted by crossways for a distance of a few miles, and with no houses in the locality, the police were operating near Handcross on Sunday. Sergeant Waghorn, who, with Superintendent Marks and Inspector Jarrett, form a trio of well-known antipathy to motorists, was in command—not on the high road, but lurking somewhere behind the hedges, as is the manner of the police of that part of Sussex. There was no traffic about, and along the stretch where operations were carried out neither cyclist nor pedestrian was in view. A car with wind shield and a heavy top was proceeding leisurely along, the occupants chatting and smoking on their way. Suddenly the two arms of a man were seen waving in the air, and the car stopped—a very easy thing to do having regard to the pace at which it was going. The occupants were surprised to find the cause of the halt was a policeman, who commanded them to wait the arrival of the sergeant from behind the hedge. A summons was promised, and this will be returnable at Haywards Heath court, from which no motorist

escapes. Thus is the safety of the public highway disregarded by the police, who seem more often engaged in such pursuits than in guarding the lives and property of the residents on the roads from London. The matter has become a scandal, and the time has come when the antics of the police should be raised in the House of Commons—if the County Councils will not move in the matter. Had life been endangered by the orderly travelling of Sunday at the particular point to which we refer, a very different view would be taken; but under the circumstances this action must be regarded as un-English, and not unlike the legalisation of highway robbery.

Dust and the Fishes.

SIR H. M. PRAED, keen sportsman that he is, has sent us an excellent letter in reply to the recent strictures that have been made on the use of dust preventives. Whenever anything calculated to prove of public advantage is brought forward there are always opponents ready to throw any kind of missile at such improvements. Last season it was gravely asserted that the dust raised by motor-cars injured the orchards of Kent, although the apple growers of Devon and Somerset ascribed the freedom of the trees from blight to the kindly offices of the skimming of the road; and now that efforts are being directed to assuage the nuisance, other folks are denouncing the new means with vigour, if not always with reason. It has been said that the dust preventives now being applied to the roads will be washed by the rain into the rivers, and that fish will be poisoned in their retreats. To this charge Sir H. M. Praed replies in a letter of such moderation as to carry conviction to every reader.

On the Towing-path.

THE proposal to close the Barge Walk, along the side of the Thames from Kingston Bridge to Hampton Court Bridge, to motorists was supported by three district councils at the inquiry held last week by Mr. F. G. Willis on behalf of the Local Government Board. In addition to this number of local public authorities, the officials of the Office of Works and Public Buildings also raised their voices, and the Hon. Sir Schomberg McDonell was particularly averse to the presence of motor-cars on the path where the track was, he said, only nine feet wide in parts. Another of the officials of the Office of Works, who was, by the way, unable to suggest any accidents which had occurred, raised the point that the dust caused by motor-cars was a great nuisance to persons in small boats on the river. It appears that on the 25th and 26th ult. a census of vehicles using the towing-path was taken, which showed that on this particular Saturday and Sunday it was used by 72 motor-cars, 12 motor-cycles, 997 bicycles, and 89 horse-drawn vehicles. Mr. Rees Jeffreys represented the R.A.C. and the Motor Union as well as the West Surrey Automobile Club at the inquiry, at which considerable testimony in favour of closing the path to motorists was tendered—in fact, the weight of evidence being so considerably in favour of the proposal that motorists will await the result of the inspector's personal visit and inspection with some anxiety as well as interest.

Legislation.

MR. H. C. BRODIE, M.P., has been inquiring of the President of the Local Government Board whether it is the intention of the Government to introduce legislation with a view to put into effect the recommendations of the Royal Commission on Motor Cars, whose report has now been before the country a good many months. In a printed reply Mr. John Burns has referred to the recent announcement by the Prime Minister with regard to the state of business in the House of Commons as justifying the decision not to introduce any new Bill with regard to motor-cars this year. Certainly, in view of the pressure of Government measures, there would not be any opportunity for adequate thought, and we recognise that when any change in the present statute is proposed considerable discussion will be raised in Parliament. Under the circumstances it is probably as well for the future of the industry that legislation is thus postponed, as time is on the side of the motor movement, and every week brings with it new converts swelling the volume of public opinion in favour of, and lessening the opposition to, the advance of the new locomotion.

Prince Fushimi arriving at the Argyll Motor Works at Alexandria, N.B., on the 20th ult.

Dust Competition.

THE views of the motor-car trade have now been obtained on the Dust Competition proposed to be held by the R.A.C. towards the end of the present month on the Brooklands motor track, and the majority of the replies received are extremely favourable, so that it is hoped a large entry will be secured. Prizes will be given to the best cars entered by makers, and there will also be a few private cars which will compete separately. The Club would welcome the entry of any car specially designed or fitted with special designs for dustlessness, even if not already on the market, but all cars entered must be of ordinary working types, and with ordinary working bodies. The Club has pointed out to firms in the industry the great benefit to the trade generally of anything that decreases the public prejudice which is undoubtedly due to the dust nuisance, and, secondly, the distinct trade value of having a car well placed in the competition. The placing of the cars will be done from photographs—a method which has been found extremely accurate, and has given satisfaction when previously employed at the Crystal Palace. There will be two runs for each car at eighteen and thirty miles per hour, and any cars having, in the opinion of the judges, specially interesting points will be tried further as far as time permits. There will also be a standing trial of exhaust dust-raising, and any other trials which time will allow.

Motor-car Imports and Exports.

ALTHOUGH still in advance of last year, May proved a rather quiet month as regards the importation of foreign motor-cars and parts into the United Kingdom, the returns just issued showing that the number of vehicles which reached this country was 363, their value being given as £172,204. Parts were responsible for an additional £224,421, which gives a total of £394,625, as against £393,803 in the corresponding month of last year. For the first five months of the current year the figures are:—Number of cars imported, 2,401; value of same, £984,726; imports of motor parts, £1,102,164; total, £2,086,890. For the similar period of 1906 they were:—2,687 cars of a value of £1,059,670; parts, £861,424; total, £1,921,094. Turning to the exports of British motor-cars and parts, the number of cars shipped during the five months ending with May was 762, of a value of £297,936; to this have to be added parts estimated at £201,730, which gives a combined total of £499,666, as contrasted with only £255,556 in the corresponding five months of 1906.

Tit for Tat.

A FEW days ago when the Home Secretary, replying to a question in the House of Commons, stated that the number of accidents caused by automobiles during six months ending April 30th last was 4,451, a great outcry was raised by those who would seek to continue the reign of the horse. These good folks will find further food for reflection in the number of street accidents caused by horse-drawn vehicles during the same period, the return of which has been presented by Mr. Gladstone at the instance of the member for South-west Ham. During the same period there were no fewer than 9,951 such accidents, in 2,892 of which personal injury was caused. This habit of raising a hue and cry in connection with motor-car accidents is sensibly declining, but is unfortunately still existent, and it is well sometimes to be reminded of the dangers connected with horse-drawn traffic.

The Winning Rover.

THERE was a "sound of revelry" in the proceedings at the complimentary dinner which was given to Mr. E. Courtis, in Coventry, last week. He has attained much distinction as the winner of the Tourist 'Trophy race on a 20-h.p. Rover, which made such a capital showing in that event, for, while others fell out by the way, the Rover ran well to victory. Col. Wyley, the chairman of the Rover Company, presided, Messrs. Harry Smith, A. H. Griffiths, F. Ward, F. J. Jenkins, W. B. Goodwin, and other well-known Roverites being also present. Mr. Harry Smith announced that the same cars and drivers would again compete for the Trophy in 1908—a statement received with enthusiasm, as a second win for the Rover would make a record in the history of the race. Last year the identical Rover that won on May 30th arrived at the enclosure too late for participation in the race, so that its win this year was all the more noteworthy.

Lady Motorist thanked by the Bench.

IN a case heard at Cambridge a motorist has been charged with driving a motor-car in a manner dangerous to the public at Drayton. Mrs. Burkett stated that she was motoring from Bedford to Cambridge. When nearing Drayton her chauffeur drove to the side of the road to allow two cyclists to pass who were coming towards them. She was surprised to see the cyclists go on to the grass track till she saw another car, with a great noise, rush by her own, striking it as it went past. Her own car was going from fifteen to twenty miles an hour. The other went by like an express train. Witness added that she was giving evidence because she did not think other motorists should be classed with the road bullies who went about in motors. The lady was

publicly thanked for giving evidence, and the defendant was fined £5. The incident should do something to convince the public that motorists do not, as a body, condone the discourtesies that occasionally occur on the road, but that they have regard for the comfort and convenience of others. After all, the use of the roads must be a matter of give-and-take between the various classes of traffic on the highway.

The Motor Club Run.

CONFORMING to the original intention that the Motor Club was to be an association of sportsmen concerned mainly with the pastime rather than the politics of automobilism—the initial club run was organised for Sunday last. It was the second day of summer—a season which did not commence until Saturday—and about fifty cars were officially recorded as starting from the clubhouse in Coventry Street for the run to Brighton, *via* Crawley, when a short halt was made by the majority of the participants. The way was led by Mr. C. Jarrott on his 40-h.p. De Dietrich, with Colonel W. J. Bosworth, the

the letters A-J 1-5 maintained a position along the centre of the roadway a considerable distance, and whenever a car wanted to pass the driver never budged, despite the long-continued hooting of the horn and shouting of the passengers close behind the first vehicle. The driver of the latter waved his hand when nearing Crawley, evidently signalling the second car forward, but when the latter drew up the first continued in its track, nearly sending the other vehicle on to the path. Ultimately it did give way a little just before the town was reached, but the incident was one of those irritating occurrences that dispel the freemasonry of the road and give colour to some of the aspersions cast at motorists by opponents.

Tramcars v. Motor-Buses.

WITH a view to secure the most modern method of locomotion in the city, the Tramways and Electric Power and Lighting Committee of the Liverpool Corporation have been considering the respective merits of tramways and motor-buses. They obtained information with reference to the latter vehicles

The Run of the Motor Club to Brighton.—Some of the Cars at Crawley.

club's genial chairman, as his passenger. Incidents were few, showers were sharp and sudden, and the weather added to the pleasure of the trip, the Automobile Association's scouts having evidently kept an eye on the Clerk. Unfortunately the road was not wholly clear of police traps, Sergeant Waghorn being located in the grounds of a private house on the London side of Handcross.

The Use of Traders' Numbers.

THE use of the traders' identification mark should be jealously guarded by the firms to whom they are assigned, for, it must be confessed, many of the incidents that have produced bad feeling against motorists might be traceable to the drivers of vehicles carrying such signs. The intention of the authorities with regard to such marks is quite clear, and on club runs, such as that of the Motor Club last Sunday, they should be conspicuous only by their absence. Certainly, if they do appear, the drivers should have regard to the wishes of other users of the road, and not imitate the manners of the carters and drivers of lumbering vehicles, of which complaint has often been made by motorists. Some miles from London a car bearing

from the general managers of various tramway undertakings, and, as a result, have come to the conclusion that motor-buses cannot as yet be operated in Liverpool with any hope of financial success. The ordinary person might have imagined that direct testimony from the motor-omnibus people would have better enabled the committee to have come to a decision, but apparently the advisers of the Liverpool Corporation in this matter have been content to ascertain the views of the tramway authorities. Anyhow, we learn that a comparison has only to be made between a tramcar capable of carrying seventy-three passengers, earning 11.17d. per car mile over the whole tramway system, as against a motor-bus having a carrying capacity of about half that of a tramcar, with an earning capacity in the same ratio, the operating and maintenance charges being much higher. The fare chargeable on the bus would, therefore, require to be about double that charged on a car in order to make the earning capacity equal to that of the latter. If, however, the same progress that has been made during the last twelve months should continue, and the operating and maintenance costs are reduced, the question of motor-buses might be considered at Liverpool at a future date.

THE ANATOMY AND PATHOLOGY OF FRICTION-DRIVEN PUMPS.

BY CHARLES T. W. HIRSCH.

THE water circulation of many cars is still effected by a pump driven by friction off the fly-wheel, and the disturbed functions of this method of preventing over-heating is such a source of annoyance and delay that a few notes on the subject may be of interest. As, before considering the morbid affections of any part, it is essential to understand the normal appearances, I propose firstly to briefly discuss the physiology or healthy structure of this important part of a car. Roughly, it consists of, usually, a gun-metal casing in which a circular metal disc provided with grooves is made to revolve rapidly by means of a steel spindle, to the other end of which is keyed a friction wheel, kept in contact by a spring or springs with the flywheel of the engine. The back of the casing is concave on the inside, and the ridges on the disc are cut to the same cone; the inner side of the casing is prolonged in the shape of a tube, thus forming a bearing for the spindle, a lubricator being provided. On the more recent patterns the end of the tube has a packing gland to prevent leakage. The water coming from the tank is spun in a screw fashion by the pump wheel through the cylinder jackets and radiator, and then back to the tank, from whence it starts on its journey once more.

We illustrate above a new model Dennis Car recently completed by Messrs. Dennis Bros., Ltd.

The hood has been specially constructed so that it allows no wind or draught to the occupants when it is closed, as shown in the picture, and when the hood is down it is an entirely open carriage. The chassis is fitted with a 30-35-h.p. engine of Messrs. Dennis's own construction, having a bore of 120 mm. and a stroke of 130 mm. This vehicle has a four-speed gear-box, with a highly-g geared fourth speed to reduce petrol consumption, and a direct drive on the third, with no gears in mesh, changing being effected by a "gate" control.

When the pump does not work the water does not circulate, with the result that over-heating troubles, with consequent pre-ignition and loss of power, may occur, if, indeed, not more serious complications, such as burning up of the lubricant in the cylinders, seizing of the piston, &c. Difficulties connected with the water circulation can be divided into two classes: (a) the functional, in which no actual lesion can be found, and (b) the organic or structural, in which a definite morbid change has taken place. Dealing first with (a) functional disturbances, these being due to (1) obstruction in the circulating pipes, such as air locks or kinks in the rubber tubing connecting the metallic pipes. Occasionally in connecting a piece of rubber hose to the metallic tube the outer layer only is pushed on, while the inner portion forms a sort of valve-like obstruction to the passage of the water. As to (b) organic causes, these may be taken under three groups: (1) due to obstruction in the circulating pipes, (2) non-action of the friction wheel, (3) indisposition of the pump wheel. In addition to the functional causes mentioned under a, there may be deposits of lime, due to hard water, in either the pipes or the cylinder jackets themselves,

which might more or less prevent or impede the passage of the water; foreign bodies, such as dust or grease, may do the same.

Non-action of the friction wheel.—To use an Irishism, the wheel may act but not act, that is, seem to go round perfectly, but still not drive the spindle, the key fixing it to the latter having come out or been sheared off, and the wheel going round on the spindle instead of driving it. The friction wheel may be held up by the cap of the packing gland working loose and catching in the wheel. The leather or fibre forming the periphery of the wheel may be worn out of truth, or be greasy and slip, and thus not rotate at sufficient rapidity to keep the water cool. Occasionally the wheel works off its key, and the nut holding it on the taper end of the spindle slips off and the wheel falls off and is lost, with resulting stoppage of the pump. The wheel is kept in contact with the flywheel by one or two bolts fastened to a rectangular shaped bracket suspended from the car frame, springs between the bolt head and the pump keeping up the tension. The bolts may fall out or the springs be too weak and thus the tension not be sufficient to cause the wheel to revolve. The spindle may itself seize as a result of want of lubrication.

The pump wheel.—The grooves on this may wear so that it does not form pockets when working and pressing against the inner side of the casing, and thus the action of the pump either ceases or is not sufficiently strong to keep the water circulating quickly enough. The same result will occur if the concavity on the inner surface of the casing is scored so that the wheel cannot come up flush when working. These are the troubles that may occur, and, excepting those enumerated in the last group, the diagnosis is easy; in fact, knowing what may occur, a careful examination will reveal all the causes except those connected with the pump wheel. Having excluded all but the last-named, the pump should be removed, opened up, and the pump wheel and spindle taken out, when, if the grooves are worn or the spindle has seized, an inspection will reveal the fact. The diagnosis having been made the treatment is simple.

In cases of an air lock, open the cock at the radiator, if there is one, otherwise break a water joint and run the engine until the air is driven out and the water comes. The new joint should be made with either rubber or asbestos. I always carry a piece of asbestos board for this purpose; that about $\frac{1}{4}$ in. thick is the best. For a kink or bend blocking a rubber tube a new piece should be used. Steam hose pipe is the best to use; copper wire may be employed to secure the hose to the metal tube, but the "Bell" water tube clip is safer and easier to apply. Deposits of lime are best prevented by using distilled water. This costs but a few pence a gallon, and saves no end of trouble. Deposits can be got rid of by washing the whole of the water system through with a strong solution of soda. A patent fluid is, I believe, sold, which I understand is most efficacious.

Much trouble will be avoided by keeping the friction wheel well on to its key or feather on the spindle with two nuts, and in addition by putting a split pin through the lock nut and the spindle. If there is a packing gland, the cap should be fixed by either a set screw or a spring catching in serrations in the cap. Fibre makes an excellent friction wheel. Of course it wears out, and a wood wheel $\frac{3}{4}$ in. wide fixed to the spindle by a $\frac{1}{4}$ in. steel bar passing through the wheel and the spindle is a good substitute. In this case the advantage is that "Frood's" patent brake lining can be fixed round the wheel by countersunk screws. It can be had $\frac{1}{4}$ in. or $\frac{3}{8}$ in. thick, wears well, always grips, and is unaffected by either water or grease. The bolts holding the pump to the supporting bracket should be held by two nuts with a split pin through the lock nut; this will obviate the possibility of losing the pump. The lubricator must, of course, always be kept full of thick grease. In case of wear of the pump wheel a new one can be fitted, in which case the inside of the casing may require refacing in the lathe. The packing gland should occasionally be repacked with either asbestos cord or hemp, well greased with candle grease.

ON Tuesday a beginning was made at Sheffield with tar-spraying six miles of road.

THE FUTURE OF THE TOURIST TROPHY RACE.

By T. C. PULLINGER.

AFTER carefully reading the letter by "Streatham" in the *Motor-Car Journal* of the 1st inst., with regard to the Tourist Trophy Race, I am sorry to say that I cannot endorse what he says in a good many instances. In the first place, I should think he has never driven a Tourist Trophy car himself, or he would not say that an average driver could only get seventeen miles to the gallon out of a Tourist Trophy car. Speaking personally, I am willing to wager that any ordinary driver will get nearer twenty-three or twenty-four miles to the gallon out of the Beeston-Humber Tourist Trophy car than seventeen miles, and this without any very skilful driving. To speak of humouring the engine with a mere whiff of petrol for the best part of the course proves that "Streatham" has not any very practical experience as to what an engine wants to get it to run. It is not by giving whiffs of petrol that you will get round the Isle of Man course on a day like the 30th of May at an average speed of twenty-eight miles

such is the case. As to learning anything that may tend to improve the frame and body construction, I do not know that a great deal has been done in this line, but certainly it has caused me to try different metals where I probably should not have done so had I not had the question of weight always before me, and I must say that I have been rewarded by being able to get a car much lighter than I should otherwise have done, and this same car has now stood well through the two races of 1906 and 1907.

As to running a racing reliability trial—I have no real objections to this, although I should think myself it would be quite impracticable to ask the Manx people to close their roads for six days consecutively; they might possibly be persuaded to do so for a few hours per day, and in this I think, with your correspondent, that the extra test of durability would be advantageous. What I should like personally to see would be a race pure and simple for cars of a maximum bore of, say, 100 mm. and a minimum chassis weight, leaving all the rest of the details to the manufacturer, and whether it is a race of one day or two or three consecutive days would not be of any vital importance as long as the distance was sufficient to give the cars a good

M. Degraix on the Germain Car he will drive in the A.C.F. Grand Prix Race. The vehicle is said to be fitted with a four-cylinder engine, 160 mm. bore by 150 mm. stroke and nominally rated at 105-h.p.

an hour. In fact, unless the carburettors had not been of infinitely better design and much more economical than those made some years back, the astonishing results obtained this year would never have been attained. Speaking again personally, although I have some fourteen or sixteen years' experience in motor-car designing, I must candidly admit that I have learnt more about carburettors during the last two years than I did in ten years previously, and this absolutely thanks to the Tourist Trophy Races.

I am not at all in favour of continuing the race under present conditions. I think that, from an advertising point of view, as "Streatham" points out, it is only the first car that gets the benefit, although the second and third, and for that matter the first ten, have put in a remarkably good performance and deserve a larger share of the credit. On the subject of wire wheels I am again not of your correspondent's opinion. I believe that it is the duty of the manufacturers to educate the public up to what is known to be the best thing, and if wire wheels are better than the ordinary artillery pattern—and this I believe myself to be a fact—then I think it is our duty to inform the public and to prove to them as far as is possible why

trial. It must be remembered that the Isle of Man course is a sporting one, it has its ups and its downs, its good and bad roads, and for a thorough test of a car it is what I consider an ideal circuit.

There is another point that I think should be taken into consideration, if possible, with these races and trials, and that is the selling price of the car. If one maker is capable of making a car which will win the Tourist Trophy race and sell it to the public at a price much inferior to his competitors, then I think that he ought to receive the support of the public to a far greater degree than another one who wins the race with a car that he is not capable of putting on the market except at a higher figure. I do not propose to suggest how this price factor could be made to enter into the rules of the competition in a practical manner, but no doubt the Technical Committee of the Royal Automobile Club could solve the difficulty. To resume, my opinion is that the Tourist Trophy races of the past have done an infinite amount of good in improving light tourist cars, including their carburettors, but that I should favour in the future a trial more of the nature of a race without limitations of weight to be carried by the chassis.

AROUND NEWCASTLE-ON-TYNE.

UNIQUE in its method of organisation, the North-Eastern Automobile Association has done much useful work for the automobile movement. It comprises a large and important area, and has branches at Berwick, Morpeth, Hexham, Newcastle, South Shields, Gateshead, Sunderland, Durham, Hartlepoons, Stockton, and Darlington. All these centres of activity can be influenced for mutual protection whenever local prejudice may threaten to assail the rights of motorists.

Fortunately, however, there is a considerable friendliness between the public and the motoring community of the north-east coast, and the motor gatherings organised by the Association are generally well supported by the localities. Last year, for instance, about 5,000 people attended the hill-climbing competition at Ragpath Hill, and the open contest—the committee have wisely extended the interest—there to-day (Saturday) will be the event of the year in that neighbourhood.

Tyneside has perhaps not received its deserved meed of favour from the motorists of other parts. The south-west and some portions of the east coast have been visited by the leading organisations, and the Yorkshire Club has given motoring fame

to Saltburn; but beyond that motorists have not gone in any preconcerted parties. Perhaps next year the Motor Union may be prevailed upon to visit the district; meanwhile, individual visits may be made enjoyable. The accompanying sketch map of the leading streets of Newcastle-on-Tyne, showing various points of practical interest to motorists, is taken from the Handbook of the North-Eastern Automobile Association, it having been placed at our disposal by Mr. J. E. Hodgkin, the hon. secretary of the Association.

The motorist fleeing from the smoke that overhangs Newcastle will have plenty of ways out of the city—either to the coast or to the beauties of Tyneside, full of their historical associations with a very distant past. Considerations of space prevent more than the briefest enumeration of these, but strangers going northward from the Ragpath Hill climb should not omit a run out to Tynemouth, Cullercoats, and Whitley, the

firm sands of the latter place providing good motoring experiences at times. Still further north an interesting expedition is that of tracing the Roman wall, extending from Wallsend to Bowness, on the Solway, a distance of about seventy-three miles. Travelling to the west of Newcastle it is a splendid run through Wylam, where George Stephenson's birthplace still stands; Prudhoe and its castle, where a romantic country is entered and the dark tones of the lower Tyne forgotten; Stockfield, where Watling Street falls into the high road and runs parallel with the railway towards Corbridge, a delightful little town, once a Roman settlement of great renown. From here there is a delightful run to Morpeth, with just a bit of a climb out of Corbridge, a descent into Milford, and a hill climb into Morpeth. A rich pastoral country is now entered, and at Hexham is one of the most picturesque towns in the district.

With regard to the roads, it may be assumed as generally accurate to say that they will be found in the most favourable condition for motoring in the spring or early summer, when the full benefit of the winter repairing can be enjoyed. From Newcastle itself there is the choice of a couple of good roads westward to Carlisle, one through Chollerford and Greenhead, the better one, however, being that to Hexham, indicated on the accompanying sketch map. Care, however, must be exercised in some of these districts, for—owing, we are told, to the speedy motoring of strangers to the locality—a few police traps have been established and are in very frequent operation. Between Newcastle and Morpeth there are two or three of such danger spots, notably at Stannington. There is also a trap in existence on the Newcastle-Chollerford road near the junction of the road to Corbridge, two miles west of Whittledean Reservoir. So far, however, these have not been greatly productive of revenue to the county.

SCOTTISH NOTES.

ON Tuesday, the 25th inst., the Scottish Reliability Trial for touring cars will start from Glasgow and occupy the remainder of the last week of the present month. Although the event will be on the same lines as those of 1905 and 1906, the routes to be followed will provide a severer test of the competing vehicles than those traversed hitherto. In a previous issue we gave a full *resumé* of the rules and conditions; it will now suffice to add that Class 4, which was for vehicles the selling price of which ranged between £400 and £600, has been divided into two sections, and the classification will now be:—Class 1, to £200; Class 2, to £300; Class 3, to £400; Class 4, to £500; Class 5, to £600; Class 6, to £800; Class 7, above £800. The meeting of observers will be held in the St. Enoch Hotel, Glasgow, at 5 p.m. on the 24th inst., on which day the cars will be weighed at the public weighbox, 409, Pollokshaws Road, Glasgow. Passengers, too, will have to be weighed by 7 p.m. on that day.

THE start will take place at Barrland Street, off Maxwell Road, Eglinton Toll, Glasgow, on the 25th at 8 a.m., an hour which will be kept for the start throughout the week. Mr. R. J. Smith's headquarters during the trial will be:—Tuesday, Station Hotel, Perth; Wednesday, Palace Hotel, Aberdeen; Thursday, Station Hotel, Inverness; Friday, Fisher's Hotel, Pitlochry. Storage depots will be established as follows:—Glasgow, the Kennedy Motor Company's depot, Barrland Street, and the Corporation Tramway depot, Albert Road; Perth, in the Little South Inch, Edinburgh Road, provided by Messrs. J. Pullar and Sons; Aberdeen, Messrs. Claud Hamilton's depot in Union Row; Inverness, Messrs. Macrae and Dick's depot, Academy Street; and at Pitlochry in a marquee on ground lent by Dr. Anderson.

OWING to the rebuilding of Advie Bridge it has been decided to continue the route of the Trials on the north-west side of the Spey, where it is joined by the south road beyond Craigellachie.

THE HERKOMER TOURING TROPHY COMPETITION.

AS was announced in our last issue, the start of the third annual contest for the Herkomer Touring Trophy took place at Dresden on Wednesday, the 5th inst. No less than 189 entries had been received, of which six were British, six Swiss, fourteen French, twenty-five Italian, and the remainder German. The reception of the cars on the 4th inst. proved mildly exciting, as the inspection committee exercised their duties rigorously. No less than 161 cars put in an appearance, and of these seventeen were rejected mainly because the body work did not comply with the rules. Loud protests were made, and eventually it was decided to allow the disputed cars to join in the run "*hors concours*,"—that is to say, they would

his steering gear. No. 13, a Stower car, was also disabled, it overturning owing to the driver taking a sharp turn too fast. Fortunately the passengers got off without serious injury. Herr E. Ladenburg (Mercedes), who won the Trophy in 1905, was the first to reach Mannheim, where 131 cars were entered at the control. As a result of the many accidents due to the excessive speed, the organising committee decided to disqualify all cars causing accidents, as a result of which five vehicles have been already put out of the trials. Up to this point Mr. C. Edge (Napier) had lost two marks owing to loss of pressure and Mr. Robertson Grant (Argyll) five points on account of a burst tyre, the other British car, driven by Miss Levitt, having a clean record. Lindau, 337 kilometres, was the destination on Friday, the start from Mannheim taking place at 6 a.m. The course included a very steep hill, extending over 5 kilometres of winding road, which tried the capacity of the cars, especially as it was also

The Herkomer Touring Trophy Competition.—The Cars leaving Würzburg.

be officially controlled like the others, but would not be taken into account as regards the award of the prizes. The first day's run, on the 5th inst., was from Dresden to Eisenach, via Zwickau and Leipzig, a distance of 358 kilometres, and of the 161 vehicles which started 141 completed the day's journey, during which several accidents occurred. In Freiberg a car ran over and seriously injured a man who was trying to save a dog. Another man was run over and hurt outside Freiberg, and a child was also knocked down and had to be taken to the hospital with both legs cut off. The cars arrived in Leipzig before they were expected, and ere the measures taken for keeping the course could be put into force. Sorel's De Dietrich car caught fire in the last named town and was considerably damaged. He, however, managed after a slight delay to continue the run. The three British cars did extremely well, the Napiers making non-stop runs, and the Argyll being delayed only by a puncture. On Thursday, the 6th inst., the run was from Eisenach to Mannheim via Würzburg, 337 kilometres. Dr. R. Stoess, the winner of the Trophy last year, had unfortunately to withdraw his Horch car owing to colliding with a bridge, which damaged

his steering gear. Of the 128 cars which reached Lindau only seven were reported to remain in with no lost marks.

Saturday's run was from Lindau to Munich (222 kilometres), and included a series of speed trials over a 6.9 kilometre course in the Forstenrieder Park, near the latter town. Several accidents occurred during the day, the most serious being that to a 40-h.p. Minerva, which was acting as the following official car, and which, to avoid a collision with a private automobile, was forced into the ditch. Captain Mormann, the hon. secretary of the Bavarian Automobile Club, received the worst injuries, as his left arm was broken in two places, besides being severely bruised. The driver and other passengers fortunately got off with minor hurts. In the speed trials marks were given to the cars according to the nearness with which they covered the measured distance, to a fixed speed ratio allotted per cylinder capacity, so that a car doing faster time than the theoretical basis received so many marks in that proportion, while those slower had a similar proportionate amount scored against them. The three fastest times were as follows:—

1.—Herr Willy Poge, Mercedes, 2 min. 51 3-5 sec. (+ 65 marks).

2.—Herr Hermann Weigand, Mercedes, 2 min. 57 3-5 sec. (+ 59 3-5 marks).

3.—Herr F. Erle, Benz, 2 min. 57 4-5 sec. (+ 59 3-5 marks).

Miss Dorothy Levitt (Napier), was tenth in 3 min. 9 sec. (+ 50 4-5 marks), and Mr. Cecil Edge twelfth in 3 min. 13 4-5 sec. (+ 46 marks).

Sunday was devoted to an exhibition of the cars in Munich and to a carriage body competition, while on Monday morning a start was made for Augsburg (221 kilometres), a hill climbing competition on the Kesselberg being included in the day's programme. There were several mishaps, but fortunately none of them had serious consequences. Much disappointment was caused by an accident to Herr Poege, who had been considered a warm favourite for the hill climb. He ran his Mercedes off the road at the double turn and broke the differential gear. Herr Flinsch's Mercedes also over-ran the road and broke a front wheel. Just outside Augsburg Mr. Cecil Edge is reported to have also broken a connecting-rod, thus leaving only Miss Levitt's Napier and Mr. Grant's Argyll as far as British cars are concerned. As regards the Kesselberg hill climb no official figures are so far available, although it is reported that Mr. C. Edge made the best time, viz., 5 min. 47 sec.

Only 110 competitors were left in at the start of the last day's run, on Tuesday, from Augsburg to Frankfort-am-Main.

The Herkomer Trophy.

Although the actual results of the contest will not be made known for a few days, it is unofficially reported that the winner is Herr Edgar Ladenburg, on a 70-h.p. Mercedes, who was also the victor in 1905. A Métallurgique is said to be second, with either an Adler or another Benz third. Miss Dorothy Levitt, on her six-cylinder Napier, was amongst the early arrivals at Frankfort, making a non-stop record throughout. Mr. Robertson Grant also finished on the Argyll.

HERR M. KRAYN, of Kurfürstenstrasse, Berlin, a well-known publisher of technical books, has just commenced the issue of a new series known as the *Automobiltechnische Bibliothek* or *Automobile Technical Library*. Copies of the first two volumes have reached us; one is from the pen of Herr W. Pfitzner and Herr R. Urtel, and deals in an exhaustive manner with the automobile motor and its construction, while the second, which is by Herr W. A. Th. Muller, deals equally thoroughly with the automobile train, with special reference to the Renard system. Both works are freely illustrated by clearly-drawn diagrams, and should prove of interest and utility to motor engineers.

THE HARTLEY SPEED AND MILEAGE RECORDER.

A SPEED and mileage recorder for motor-cars has been brought out by Mr. Henry Hartley, of 39, Corporation Street, Birmingham, which allows the motorist to know the distance travelled, the time taken to each mile, and the duration of each stop. The apparatus consists of a governor driven

Fig. 1.

either by a friction wheel or by a positive drive. When driven by a friction wheel, as shown in Fig. 1, constant contact is maintained with the periphery of the tyre by a spring in tension, which is attached to the body of the chassis. The friction wheel, which has an unvarying circumference of eighteen inches, can be applied to wheel tyres of any diameter, and, as every second revolution counts one yard of travel, the mileage recorded is exactly that covered by a car wheel of any varying diameter. When the wheel is actuated by positive drive, fittings of various sizes are required to suit the different diameters of the car wheels. With regard to contact there is a direct pull by Bowden cable from the governor to the scribe, which actuates the latter; this, travelling on a worm, makes an indelible and permanent record on a revolving chart (Fig. 2); the scales being graduated both for time and distance. The chart revolves by clockwork at the rate of four inches per hour, whether the car be in action or not; as the drum, unless purposely stopped, continues to revolve while the car is stationary. A special record of every mile travelled is also marked by a dot on the chart by means of a cam and gearing in the governor box, to which a second cable is attached, actuating a pen in the recording instrument. Attached to the scribe is an indicator with a point, so that at any moment the rate of speed

Fig. 2.

at which a car travels can be seen by the motorist, as the recording instrument is fixed on the dashboard directly under his eye; thus a twofold purpose, that of an indicator and recorder also, is achieved. Another important object is attained by an automatic adjustment, which can be set to operate at a maximum limit, in order to prevent the car exceeding the desired speed.

CONTINENTAL NOTES.

The Moscow-St. Petersburg Race.

Considerable interest was evinced in the race from Moscow to St. Petersburg, which, organised by the Automobile Club of Russia, was run off on Friday last week. The competitors, who numbered twenty-seven, were divided into three classes:—(1) Motor-cycles (eleven entries), (2) cars having engines up to 100 mm. cylinder bore (ten entries), and (3) ditto over 100 mm. (six entries). The actual finishing point of the race was at Tsarkoye-Selo, 425 miles from Moscow, the last 12½ miles to St. Petersburg being made in procession. The start took place at 2 a.m., the vehicles being despatched at two-minute intervals. The race, the first of the kind in Russia, was a victory for Duray, who, on a 60-h.p. De Dietrich, made the best time, viz., 9 h. 22 m., equal to a speed of 46½ miles per hour; Champoisseau, on a 30-h.p. C.G.V., second in 12 h. 53 min.; Folkin, on a Fiat, third, in 13 h. 14 min.; and Landon, on a 45-h.p. Mors, fourth, in 14 h. 4 min.

Motoring in Spain.

At Vittoria last week, on the occasion of the Corpus Christi festivities, an interesting competition reserved for touring cars

ninety-two entries were received for the event—thirty-two German, twenty-one French, nineteen Italian, ten Belgian, four British (three Daimlers and a Napier), three Austrian and three Swiss; and, in consequence of the German Government considering this too large a number of powerful cars to be allowed on the course at one time, the German Imperial Club were forced, in spite of protests, to resort to an eliminating contest. This was held on Thursday, the competitors being divided into two groups, the first twenty in each in a 240 kilometre trial—roundly two circuits—being eligible for the race proper, of which a full report will be given in the next issue of the *M.C.J.*

Military Motor Vehicles in Austria.

Some interesting trials have recently been made by the Austrian military authorities with two motor road trains, for the transport of soldiers and war material. One of the trains consists of a 30-h.p. combined trailer and lorry, with nominally two trailers, for a total load of three tons; the other is of 45–60-h.p., and, with three trailing wagons, can haul a total load of eight tons. In the trials above mentioned, which lasted three days, train No. 1 had three trailers, and No. 2 four, these being provided with rough seats for the soldiers. On the first day the vehicles were driven from Vienna-Neustadt, up the Semmering,

M. Baras on the Brasier Car he will drive in the A.C.F. Grand Prix Race. The vehicle is fitted with a four-cylinder engine, 165 mm. bore by 140 mm. stroke, nominally rated at 120-h.p.

was held on the road from Vittoria to Bilbao and back. The race was organised under the patronage of "Les Sports," and was won by Lomas on a 20–28-h.p. Darracq, who covered the 145 kilos. in 2 hours 8 min., which, considering the number of steep hills to be climbed, was a good performance; the second was Prado, also on a Darracq, time 2 h. 11 min.; the third, Luis Alfonso, on a Fiat, 2 h. 14 min.; fourth, Dumay, on a Renault, in 2 h. 14 min. 55 sec.

French Motor-Car Imports and Exports.

At the last meeting of the Chambre Syndicale D'Automobile de France it was announced that the imports of motor-cars and parts into France during the four months ending with April last had amounted to a value of £111,280, an increase of £6,920 over the corresponding period of last year. As regards similar exports from France, these reached a total of £2,077,520, an increase of £229,600.

The Kaiser's Prize Race.

With the completion of the Herkomer Touring Trophy contest on Tuesday, interest in German motoring circles became centred in the Kaiser's Prize Race, which is to be run off on Friday, the 14th inst., on the Taunus course. No less than

up which the annual hill-climb is held. On the second day a test was made on sharp curves and on rough ground, while the third was devoted to ascertaining the speed capabilities on the level. Altogether the authorities are reported to be well satisfied with the results of the trials.

Public Services in Italy.

Arrangements are being made to inaugurate a service of Darracq-Serpellet steam vehicles for the transport of goods between Milan and Genoa and between Verona and Milan.

Miscellaneous Items.

The Automobile Club du Rhone, of Lyons, is organising a series of flying kilometre speed trials on the road between Cheras and Anse for the 16th inst.—The Mont Cenis Pass between France and Italy has within the last few days been opened to motor-cars.—It is reported that the German manufacturers of motor tyres intend to raise their prices on the 1st prox. owing to the increased cost of raw materials.—It is expected that about fifty cars belonging to members of the Volunteer Corps will take part in the forthcoming German military manoeuvres.—A 20–30-h.p. Labor car was last week driven from Paris to Marseilles in 15 h. 45 min. by M. Hours.

A WEIGEL OUTING.

WE gave an illustration, together with some particulars, of the first 8-cylinder car which Messrs. Weigel Motors, Ltd., have built for the A.C.F. Grand Prix race, in our issue of the 1st inst. The second vehicle—a sister car—having now been completed, Mr. D. M. Weigel, on Sunday last, invited a number of Press representatives and friends to accompany him on a run to Brighton, in order that they might have an opportunity of watching the behaviour of the racers on the road ere they are taken over to France ready for the race on the 2nd prox. The party met at the Hotel Metropole, Northumberland Avenue, W., where a fleet of six 40-h.p. Weigel cars were in readiness for the visitors, and a little after the appointed time a start was made by a somewhat unusual route for London-by-the-Sea. Mr. Weigel led the way on the first of the racers, followed by Mr. Pryce Harrison on the other, and the relatively quiet manner in which the two low-built powerful machines wended their way through the traffic was astonishing. Passing through Hammersmith, Mortlake, and Richmond, a halt was made at Kingston in order to replenish the water tank of Mr. Harrison's car. The latter had only been completed on the previous day, and as this was practically its initial run on the road, sufficient time had not elapsed to get everything in

had induced him to enter for the Grand Prix race, although the late publication of the conditions had not enabled him to put in hand the special cars he desired, the two machines he had completed being each practically a couple of Weigel cars rolled into one. Mr. Weigel created a mild sensation when he announced that, provided the rules for the A.C.F. race are made known by the end of September next, he would build three special racers for the contest "which will win." He added that it had been finally decided he himself would not drive in the forthcoming contest on the Seine-Inferieure circuit, but that the cars would be driven by Mr. Pryce Harrison and Mr. R. Laxen, whom he had no doubt would do their best to bring the Grand Prix to England. Mr. Weigel also announced that the two racers will be entered for the Circuit des Ardennes and Vanderbilt Cup contests, these two, in conjunction with the Grand Prix, forming, in his opinion, the three principal contests of the year.

In the afternoon a start was made on the return journey to town, and, although the weather was not so propitious, the rain which fell had more than a counterbalancing advantage in the resulting freedom from dust. Beyond a halt at Crawley, where it was found that the police had been actively at work, our homeward trip, which was made on the car driven by M. Emile Brouard, was a non-stop, and proved an excellent

The Run of Weigel Cars to Brighton.—The two racing cars, with Messrs. D. M. Weigel and Pryce Harrison at the respective wheels, leading the way from Reigate. [Photo by] [Campbell-Gray.]

perfect running order. In this case it was the lubricator which was at fault, which had caused the engine to overheat slightly, the water in the radiator rising fountain fashion several feet high when the filler cap was cautiously removed. After a slight delay a fresh start was made, racer No. 1 going off as quietly and as easily as a touring car, while No. 2 proved somewhat stubborn and inclined to smoke much too freely for the comfort of the passengers in the succeeding cars. However, the trouble was of brief duration, and Mr. Harrison had coaxed his machine into good behaviour ere Reigate was reached, a brief stay being made at the town to allow the inevitable photograph to be taken. From this point onwards a good pace was kept up, the only trouble experienced being the blinding dust, which penetrated the most perfect of goggles. We had but brief glimpses of the racers, for, speedy as our car was, it was, of course, not able to keep up with the eight-cylinders; ever and anon, however, Messrs. Weigel and Harrison pulled up so that the party might gather together. The descent of Handcross Hill was safely made, and, following the usual road through Bolney, Patcham and Preston, Brighton was reached about 2 p.m.

At the excellent lunch which followed at the Hotel Metropole, Mr. Weigel, in responding to the toast wishing his ears success in the forthcoming event, outlined the reasons which

testimony to the speedy and quiet-running qualities as well as the reliability of the Weigel cars.

THE County Councils' Association is urging the Government to deal with motor-car legislation at an early date; but it is generally conceded that the present fulness of the Ministerial programme will prevent anything like prompt attention to this suggestion.

THE corporation of Henley have decided to re-open Henley Bridge to heavy motor traffic. During and since the extensive repairs made to the foundations of the structure the bridge has been closed to all heavy traction traffic, to the great discomfort of timber and brick hauliers, who have had, for at least six months past, to go as far round as Reading in order to cross the river.

A LIQUID metal polish known as Polysol has been placed before motorists by Messrs. Henkel and Co., who recommend its use in connection with the bright parts of motor-cars. It is not accompanied by any unpleasant odour, while its non-inflammability is another point in its favour. In quickly securing a polish Polysol does not scratch the surface of the metal, but gives it a durable gloss. The preparation does not corrode and rapidly secures the desired effect.

MR. ARTHUR MELLOR, in the extension of his works at Commonedge, Marton, Blackpool, has arranged for a motor garage.

THE road from London to Hastings, via Bromley, Sevenoaks, Tonbridge, Lamberhurst, Hurst Green, and Battle, will be specially patrolled by the scouts of the Automobile Association on the 25th, 26th, and 27th insts.

The 28-43-h.p. Limousine recently supplied by the Daimler Company to Sir Frank Forbes Adams.

THE United Motor Industries are about to transfer the manufacture of accumulators from Coventry to a new factory in London, where they will also make the Castle coils.

LAST year's report dealing with patents and trade marks has just been issued, and shows a large increase in the applications due to activity in the motor-car industry.

TEN entries have so far been received for the Commercial Vehicle Trials, as follows:—Milnes-Daimler, Ltd. (six entries); Halley's Industrial Motors, Ltd. (two); Messrs. Savage Bros., Ltd.; and Messrs. J. and E. Hall, Ltd.

ACCORDING to a dispatch from Pekin, five vehicles—a 40-h.p. Itala, a 15-h.p. Spyker, two 10-h.p. De Dions, and a 6-h.p. Contal tri-car left the Chinese capital on Monday in an attempt to carry through a race across Mongolia and Siberia to the European frontier and thence to Paris.

HODDESDON Urban District Council are about to apply to the Local Government Board for an order to limit the speed of motor-cars passing through the streets of the town to ten miles an hour. Other towns and villages in Hertfordshire are discussing the advisability of taking a similar step.

IN the Irish reliability trials the behaviour of the Royal Sirdar grooved non-slipping pneumatic tyres fitted with the patent non-nipping tubes was exceptionally good, and those motorists whose cars were thus equipped were able to go through the test runs with practically no sign of wear and very few cuts on their tyres.

MR. JOHN E. GIBBS has disposed of his works at Thomas Street, York, and has started under the name of John E. Gibbs and Maclean, at Fawcett Street, York. These are much larger premises, and a complete plant of high-class tools has been installed. A speciality will be made of repairing work, with a special department for steam cars.

ON Thursday last week Mr. F. F. Wellington, who has just severed his connection with the British Automobile Commercial Syndicate, Ltd., to take up the management of the Trompenburg Manufacturing Company, the manufacturers of the Spyker cars, entertained a party of friends to dinner prior to his leaving London to take up his residence in Amsterdam. The utmost cordiality prevailed, Mr. Wellington, in reply to the well-wishes of his guests, expressing the hope that he would still frequently see them, and inviting them to visit him at any time in the Dutch capital.

HERE AND THERE.

At a public meeting held in Bexhill condemnation of the motor races held in the town during the season has been strongly expressed.

IN addition to their garage and works, the Halifax Motor Car Company have extensive showrooms at 44, Northgate, where they have now on view a set of the component parts utilised in the building of their new car, the County.

FROM Messrs. Sternberg and Eason, the British agents, we have received a copy of the new catalogue of Buick cars. This is a handsomely got up publication and gives particulars of the various models, including a 22-h.p. double-cylinder and 24-h.p. four-cylinder. The illustrations are very clear, and include not only general views of the vehicles but detailed drawings of the leading components.

BRITISH made Dunlop tyres were fitted to the winning cars in both the Tourist Trophy race and the Heavy Touring Car race. In addition, both the 16-20-h.p. Beeston-Humber, second in the light class, and the 25-h.p. Gladiator, second in the heavy class, together with all the cars which finished the course for the T. T. race, were shod with these tyres.

MESSRS. GILBERT AND SON, LTD., of the Lindum Works, Lincoln, will have the management of the motor-car garage in connection with the Royal Agricultural Show at Lincoln. The space at their disposal will be sufficient to provide accommodation for nearly 300 cars under cover. They will also have a repair department in telephonic communication with their own works.

ON Thursday, the 6th inst., the 45-h.p. six-cylinder Hotchkiss car completed over 5,000 miles in the 10,000 miles reliability trial under the official observation of the Royal Automobile Club, and up to the present has acquitted itself magnificently. Since April 29th this vehicle has completed daily journeys averaging 160 miles over all varieties of roads in England, Ireland and Wales, the daily runs being of almost monotonous success, without necessitating any mechanical adjust-

The Hotchkiss Six-Cylinder Car at Conway Castle.

ments. In addition to this performance this identical car went through a similar tour of 6,250 miles in France, taking all roads absolutely without any involuntary stoppage—an excellent testimony to the workmanship and material.

LORD PORTSMOUTH has, in the House of Lords, voiced the desire of the War Office to get into touch with such organisations as the Automobile Club, in order to find an outlet for the employment of those who leave the Army.

A MOTOR garage scheme is in contemplation for the city of York.

THE Schulte Cup, for the Edinburgh to London run, has been won by an 8-h.p. Rover.

THE Crystal Palace A.C.'s hill climb on Captain Kidd's hill has been postponed to the 27th prox.

A MOTOR-CAR recently stolen from a Harrogate garage has been found on the road, near Thirsk, having been abandoned by the thief after a breakdown.

THE well-known White Lion Hotel at Cobham, on the Portsmouth road, is only two miles from the new Brooklands track—a matter of interest to motorists journeying thither from London via Kingston and Cobham.

FOR the "East Anglian Daily Times," the Derby race was reported by a correspondent who went from Ipswich to Epsom on a 14-h.p. Argyll car driven by Mr. W. H. Scottorn, of Messrs. W. H. Scottorn and Co., the well-known motor agents of the town on the Orwell. They travelled to Stratford, and thence, by way of Poplar, the Blackwall Tunnel, and Greenwich, contrived to escape the ordinary London street traffic before getting into the busy scenes on the road to the Downs. Messrs. Scottorn are prepared to run motor vehicles for public hire in connection with the Bury St. Edmunds pageant next month.

IN the advertisement of the Bowden Patent Mileage Recorder, which appeared in the *M.C.J.* of the 1st inst., a wrong block was inadvertently used, the illustration appearing therein being that of the well-known Bowden Carburettor Agitator. The accompanying illustration will give the reader an idea of the appearance of the Bowden Mileage Recorder, one of the leading

features of which is that it dispenses with the customary flexible shaft while retaining the much-favoured dashboard position. This is accomplished by utilising the Bowden wire mechanism to transmit the movement from the road wheel to the mileage dial. By way of short description we may explain that the eccentric flanged ring shown on the left is fitted to the hub of one of the steering wheels, the eccentric form of the ring causing the small

castor wheel to rise and fall at every revolution, thereby imparting a rocking motion to the lever to which it is attached, which movement is transmitted in turn to the dashboard mechanism shown on the right by means of the Bowden wire. That this form of transmission is thoroughly reliable would appear to be proved by the fact that it has been tested to over 80,000,000 movements before giving out.

A GOOD deal is at present being heard of a new smokeless fuel known as Coalite. It is manufactured by a special process from coal, in such a way that the valuable constituents of the latter, which in the course of ordinary burning are wasted, are converted into by-products of great commercial value. First among these by-products is said to be a new British-made motor spirit, to which the name Coalite has been given. As the results of exhaustive experiments in the manufacture of Coalite, made by Dr. S. Rideal, Professor Vivian Lewes, and Mr. T. Parker, M.I.M.E., M.I.C.E., it has been ascertained that, in treating 3,000,000 tons of coal, no less than 7,200,000 gallons of benzol, toluol, naphtha, &c., are obtained, a large proportion of which is admirably fitted for use as motor spirit. As the promoters of the new Coalite industry have laid their plans to handle the above quantity of coal at the outset, it will be seen that the general use of Coalite in place of coal would involve the production of a quantity of motor spirit far more than sufficient to meet the whole of the present demand. In fact, it is claimed that the supply of Coalite for London alone would mean the production annually as a by-product of 30,000,000 gallons of Coalite motor spirit.

MESSRS. GERHARD AND BACKIE have opened the Brooklands Motor and Cycle Works at 12, Deptford Bridge, S.E.

THE second place in the Manchester Motor Club's reliability trial was won by Mr. V. Foxwell Gray, on a 10-h.p. Alldays, who thus secured the silver medal.

MOTOR-CABS were conspicuous in the traffic going to the Derby, and it is estimated that about 200 vehicles belonging to the General Motor Cab Co. were thus engaged.

At the Bath and West of England Agricultural Show, Messrs. S. and A. Fuller, of Bath, had a good display of motor-car bodies. Motor-cars, including a 40-h.p. Siddeley with a three-quarter landaulet body, were shown by Messrs. Perry and Turner, Ltd., of Bristol and Cardiff.

MR. A. A. REMINGTON, who has been connected with the Wolseley Company since its formation, was married on Wednesday last week. His colleagues at Birmingham, London, and Crayford gladly availed themselves of the opportunity to show their regard and esteem for Mr. Remington, who has been responsible for both the designs of the Wolseley and Siddeley cars for many years.

LAST week we referred to the value of the motor-car in assisting the police of Reading to capture a burglar. We understand that the particular vehicle that was offered for the assistance of the authorities was driven by Mr. E. Stafford, the manager of Mr. Harry Julian's motor works in the Market Place, Reading. The thief when captured was conveyed back to Biscuitopolis on the car, and remarked that that was his first motor ride.

ELSEWHERE in the present issue will be found an article in which Mr. T. C. Pullinger, of the Humber Company, Beeston, expresses his views with regard to the future of the Tourist Trophy Race. Mr. Pullinger, who is well able to deal with the subject, in view of the success of his cars, not only in this event, but in the Heavy Touring Car Race, makes some interesting suggestions, on which we shall be glad to have the opinions of our readers.

IN a case heard at the Shoreditch County Court on Tuesday, the counsel against a motor-bus company unsuccessfully asked for a verdict in his favour, as under section 13 of the Locomotive and Highway Act of 1861 any vehicle propelled by an unknown force was a nuisance until it was scientifically tested. He submitted that the motor-bus was a nuisance, and had not been scientifically tested, and therefore should not have been put on the road. But the judge thought differently.

THE new list of the Talbot cars for 1907 is a good illustration of the advance that has been made in what we term the commercial literature of the Automobile. This is issued from the works of the Clement Talbot Company, at Barby Road, Ladbroke Grove, London, W., and its features include useful drawings of cars and their parts, with keys that will be of service to the novice. The prospective motorist will also be interested in the method adopted to show the four standard colours in which the cars are painted. The abridged specifications of 8-10-h.p., 10-12-h.p., 12-16-h.p., 15-20-h.p., 20-h.p., 35-45-h.p., and other cars are brightened with pictures showing the winners of various races of the past season where this type of vehicle displayed its excellence. Mr. T. H. Woollen, the general manager, is to be congratulated on the production of this list.

IN an appropriate white cover comes the latest publication of the White Company, of 35, 36, and 37, Kingly Street, Regent Street, London, W.—a list relating to the well-known steam cars popularised in this country by Mr. Frederic Coleman. Included in the contents is an authentic account of the recent 1,871 miles non-stop run of a 30-h.p. White car over the Scottish Reliability course and other equally trying routes, illustrated reports showing the appreciation in which the White car is held in the Dutch East Indies and in the Punjab, as well as records of the competitions in which the car has figured so creditably, including the Town Carriage competition of the R.A.C. The technical descriptions are concise and well illustrated by diagrams facilitating the comprehension of the points of simplicity and accessibility possessed by the working parts of a car which has come right to the front by merit, until, like Browning's hero, Mr. Coleman can say "I stand upon achievement."

CORRESPONDENCE

[Letters to the Editor should be addressed to the offices,
27-33, Charing Cross Road, W.C.]

THE FUTURE OF THE TOURIST TROPHY RACE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have had the pleasure of addressing a letter, copy of which I enclose, to the Secretary of the Automobile Club of Great Britain and Ireland.—Yours truly,

COPY.

D. M. WEIGEL.

The Secretary,

The Automobile Club of Great Britain and Ireland,
119, Piccadilly, W.

Dear Sir,—Although not present at the recent Tourist Trophy race, I am given to understand by various members of the trade, and

attention of all foreign manufacturers, especially were they directly challenged to compete, and would also create great interest amongst all English and foreign motorists; in fact, it would be a race run upon similar lines as the Targa Florio, which has met with such universal success. I trust, Sir, that your committee will give my letter due consideration and I hope their reply may be satisfactory.—Yours truly,

(Signed) D. M. WEIGEL.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Your correspondent who refers to the Criterium de France as a suitable model for the development of the Tourist Trophy idea need not have gone so far afield. In the old days the Scottish Trial consisted of a run from Glasgow to London, making halt at Leeds on the way. Could not we have a trial starting from London, making the Yorkshire town the objective of the first day's run, going on to Glasgow for the second, and then, covering the routes for, say, a couple of days in the present Scottish Trials on reliability lines, conclude with a race over the almost deserted highways of certain Highland districts for a final effort, allowing only cars that had attained a certain standard of performance in the first efforts to participate in the last day's run?—Yours truly,

T. JONES.

The Carter's Hill Cup Competition.—The scene at the foot of Carter's Hill, Underriever, Kent.

also private motorists, that the race lacked that enthusiasm so essential to a sporting event. Might I suggest that this is due to two causes?

1. The want of an International character in the race.
2. The difficulty and expense of complying with the intricate and peculiar character of the rules.

With due respect, I would suggest that there is a way to continue the races organised in the Isle of Man by creating greater interest, and yet limiting the speed, and confining it to touring cars and perhaps recalling all the advantages and interest of the old Gordon Bennett cup. I am prepared to offer a suitable trophy for a race in 1908, to be run on the following conditions:—1. To be limited to four-cylinder cars, the bore of each cylinder to be not more than 130 mm. 2. The weight of each car to be not less than 25 cwt., all on, but exclusive of oil, water and petrol. 3. Each car to be occupied by two passengers only, including driver. 4. There to be no other rules of any description as regards body, tyres, wheels, or anything else. 5. That two other firms outside my own firm compete on behalf of Great Britain, and those two firms to join us to be Daimler and Rolls-Royce, or, if the Club prefer it, there be an eliminating race, in which all English manufacturers can compete. 6. With the object of making it an international event, the Automobile Club of Great Britain and Ireland directly challenge any three makers of France, Germany, Italy, Belgium and America, to enter cars to compete against us.

I believe that a race promoted upon these lines would draw the

THE R.A.C. AND UNOFFICIAL TRIALS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Our attention has been drawn to a letter which has appeared in the motor Press, in which a correspondent finds fault with the Royal Automobile Club for their behaviour in connection with a top-gear, non-stop delivery, from London to Edinburgh and on to Dundee, successfully carried out by me on a 50-h.p. Thames six-cylinder car. According to this correspondent, the performance, regarded in the light of a "trial," was a contravention of one of the Club's rules, which lays it down that participation in any "trial or competition, otherwise than under regulations made by the club" shall be deemed a breach of the official rules, where "extensive advertisement" is obtained therefrom. He appears scarcely so well informed as he might be about what actually transpired between the Royal Automobile Club and ourselves. In order that no doubt on the subject may remain we shall be obliged if you will allow us an opportunity of stating exactly what did occur. Our attention was drawn by the secretary of the Club to the rule above mentioned, immediately after the delivery of the car, and an explanation was requested. In our reply, which was acknowledged as satisfactory by the Club officials, we simply stated the actual facts. The run in question was undertaken in no way as a competition or trial, but simply as the method of delivering the car selected by our customer in Scotland. Our customer's representative was on the car throughout the run, and,

naturally, both he and we were anxious to see what the car, with full touring equipment and limousine body, was capable of doing. We claim no "record" of any description whatever and are content that the existing record should still stand, although we are aware that it was made with a car which was specially prepared for the event, being fitted with a light open body, &c.—Yours truly,

W. T. CLIFFORD-EARP.

THE CONTROL OF MOTOR RACE MEETINGS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Replying to the letter written by Mr. Hollands on behalf of the Crystal Palace Automobile Club in connection with the Bexhill farce, I would point out that I never questioned the excellence of Colonel Holden's formula, or the accurate manner in which the handicap was worked out by Mr. Worby Beaumont. I stated in very emphatic language that the organization of the meeting was disgraceful. None of the particulars supplied by various competitors on which the handicap was framed by Mr. Worby Beaumont were checked by the Crystal Palace Club, and even the handicap, as drawn by Mr. Worby Beaumont, was not adhered to.

I make no complaint as an unsuccessful competitor. I did not compete at the meeting and had no intention of competing, as I had had an opportunity of seeing exactly what would take place in connection with any competition promoted by the Crystal Palace Club in connection with the Bexhill topspeed trial. My sole object in criticising

Mr. Burnett Tabrum's 12-14-h.p. Argyll which won the Light Car Class at the Essex County A.C. hill climb at Laindon, on Saturday last.

was to warn would-be competitors in other events which might be run by this club of the sort of treatment they would expect to receive. I have no doubt that, for the purpose of the Crystal Palace Club, it is necessary that outside entries should be obtained in order to give the necessary veneer to the winning cars, but it is just as well that entries should be made with full knowledge. Mr. Smith's letter would be interesting if it were accurate. His figures are all wrong and I still adhere to the figures set out in my previous letter. Had he seen his own car on the track near the finishing post before the opposing vehicle was allowed off the starting line, he would have appreciated exactly the task which his opponents were set to do.

No, Sir! The Crystal Palace Automobile Club is flavoured too strongly with commercialism, and the sooner it stops trying to inveigle members of the industry into entering for "open events," the better it will be for the sport.—Yours truly,

CHAS. JARROTT.

THE HENRY EDMUNDS HILL CLIMB.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—As a competitor in the Henry Edmunds' Hill Climb held by the Royal Automobile Club on Saturday, I was astounded to find, on my arrival at the hill, that the entry of a certain steam car had been accepted to compete against the petrol cars, although the size of the petrol cars was restricted under the following formula:—

Cylinder diameter in inches squared multiplied by the number of cylinders must not exceed 100 inches.

To my astonishment, upon raising the matter with the officials of the Club, I was informed that the entry of the steam car was in order. The idea of putting steam and petrol cars together, relying on cylinder dimensions, seems to me to be so absurd that if it is persisted in it will mean that these club competitions will be looked upon with ridicule; I am certain that in France there will be much derision at such an idea.

Everybody knows that a steam car, with the aid of a specially large boiler (which would be quite unsuitable for an ordinary touring car) can obtain a very big head of steam, which will enable a car to rush up a short hill at a very high speed.

How the Royal Automobile Club could ever have imagined that the two types could be put together under such a very inadequate formula I fail to understand.—Yours truly,

L. CARLE.

APPEALS AGAINST TWENTY SHILLING FINES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice that attention has been drawn in the Press to the fact that under the present Motor Car Act magistrates, by inflicting a fine of 20s. and refusing to increase it to 21s., prevent an appeal against their decisions. This is an old question which three years ago occupied the attention of the Motor Union, who have carried the matter as far as it can be carried until the new Bill is introduced. The Union laid the facts in connection with the matter before the Royal Commission on Motor Cars (see my evidence, questions 587-590), and as a result the Royal Commission have recommended that there should be a right of appeal whenever the conviction has been endorsed upon the licence, irrespective of the amount of the fine. The Union go further, and in their legislative policy, which has been laid before the Government and Parliament, they propose:—

"That in view of the action of some magistrates in fixing the fine at twenty shillings and refusing to increase it to twenty-one shillings, so as to prevent an appeal, there should be a right of appeal in all convictions in connection with the use or ownership of a motor-car.

The question whether "costs" should be added to the fine for the purpose of arriving at the necessary minimum has also been raised in the King's Bench Division and settled. In the case of *Rex v. Novis*, May, 1905, it was held that the cost (18s.) could not be added to the fine (20s.), in order to give the defendant the right of appeal under Section 11.—Yours truly,

W. REES JEFFREYS,

Secretary Motor Union.

VARYING PETROL CONSUMPTION.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—In your issue of May 25th I notice a letter from "D. 2804" in which he mentions the petrol consumption of the 80-100-h.p. La Buire car in the reliability trials promoted by the Manchester Automobile Club, and compares this consumption with other cars of less horse-power which competed in this event, and particularly with a car of 7-h.p. that used practically the same quantity of petrol as the 80-100-h.p., viz., 16½ miles to the gallon. The writer points out the great discrepancies which occur, and states that some explanation will be satisfactory.

There are many points bearing upon petrol consumption, which I will give as follows:—1, perfect carburation. 2, economical transmission throughout from the engine to the road wheels. 3, flexibility of the engine, whereby you are enabled to run on your highest gear at very slow speeds, and 4, thorough knowledge of how to drive your car most economically.

The results obtained on the 80-100-h.p. La Buire in this competition rest, in the first place, principally with the unique carburettor fitted to the car, and, together with the other points I have enumerated, above all assisted to create the wonderfully low petrol consumption in this contest. I myself lately drove a 35-50-h.p. La Buire in a reliability trial with a petrol consumption of over twenty miles to the gallon (viz., Manchester Motor Club Trials, May 23rd to 25th). The 7-h.p. car "D 2804" mentions in his letter I believe is an old machine without any modern improvements.—Yours truly,

HENRY HOLLINGDRAKE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to the letter of "D. 2804" in the *M.C.J.* of the 25th ult., as the owner of the 7-h.p. M.M.C., perhaps I can give some explanation which may elucidate the varying amounts of petrol used. The 80-100-h.p. De La Buire was one of the latest pattern cars, with a carburettor easily altered and adjusted to give different mixtures under varying conditions, and its owner had, by going over the course, previously carefully tuned it up, until he attained what must undoubtedly be called an excellent performance; every advantage was taken of the down grades to stop the engine and let the car run by gravity, starting again at the bottom. The 7-h.p. M.M.C. is an old car I have had five or six years, and has none of the fine methods for adjustment of carburation found in modern cars. The only alteration that can be made is by turning a tap to admit slightly more air, this adjustment being done when the car is standing. My man inadvertently left this closed, the result being we used even

more petrol than is usual for such a length of run. Over and above this, owing to the heavy state of the roads and the brakes being unprotected from the weather, the engine had to be run on the down grades and on the level the engine was kept at its utmost speed to enable the car to be got in the controls within its allotted time.

The 12-h.p. Lanchester mentioned did the worst of the three of that horse power, one using one gallon less and the other even better; the one alluded to is also an old car, whereas the 20-h.p. was entered by the representative of the Lanchester Company in Manchester, and doubtless he was doing all he knew all the time for low consumption, whereas to the purely amateur driver it is not a matter of such vital importance. Your correspondent is wrong, I think, regarding the petrol consumption of the 24-30-h.p. six-cylinder Belsize; it consumed rather more than the three-cylinder 18-24-h.p. car, viz.—8'46875 gallons for the former and eight gallons for the three-cylinder; the latter car is also an old pattern, and no doubt the better consumption of the six in comparison is brought about by improvements the Belsize Company have made in their later models.—Yours truly,

D. ADAMSON PARKYN.

DUST PREVENTIVES AND FISH.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As an ardent trout and salmon fisherman, and at the same time one who has been taking an active interest in the prevention of the dust nuisance, as well as in the permanent improvement of the roads, I wish to allay the apprehensions of my brother anglers, which have been caused by articles appearing in many of the daily papers. Undoubtedly there have been liquid preparations for application to roads which, when carried in sufficient quantity after rain to brooks and rivers, would poison or asphyxiate fish, and possibly might be injurious to human beings, animals, or birds, but, out of the numerous solutions for the purpose, I feel sure that some can be used without injurious results.

It is, however, on the subject of the use of tar itself, for the prevention of dust on roads, that I wish to say a few words. Tar has been, for a number of years, poured or sprinkled on roads, and afterwards distributed by hand labour, which necessitated such a quantity being applied that the surplus beyond what was required for saturating the material and forming a film on the surface might, and did, find its way into gutters, gullies, and water courses. Methods for applying the tar have, however, been improved, and, by means of machines recently invented, it can now be sprayed on to and into roads under very high pressure, in such a way that it forms part of the road itself, leaving no superfluity to run off or be carried away by water. It is calculated that not more than one-third of the tar previously used is now found necessary. This, of course, results in a great saving of the expense of treating roads, an economy still further increased by the rapidity with which the operation can be conducted, while expensive hand labour is replaced by scientific machinery and steam traction. The cheapness and rapidity of the process will enable highway boards to waterproof all, or nearly all, the main roads of the country in a comparatively short time.

I am informed that one company alone, established for this purpose, has already orders for more than 1,400 miles of road, which are now being executed as quickly as the weather will permit, it being essential that the road should be dried before the tar is applied. Mention has been made of the fact that gas works are prohibited by law from allowing their waste water to escape into streams, but the waste products are quite a different thing from the tar itself. It is a pretty good proof that tar is not harmful to fish when it is remembered that fish hatching boxes and nurseries are generally coated with tar. The Roads Improvement Association, assisted by two of the most important of the automobile associations, have been holding very exhaustive trials and competitions near Ascot, Staines, and Twickenham, with different preparations and machines for allaying the dust and improving roads. When their awards are made, and their authoritative report issued, it may be confidently predicted that they will not recommend the use of any substances that could be injurious to the health of either fish or animals, and there being among the judges some of the most eminent chemists will ensure their verdict being reliable.—Yours truly,

HERBERT MACKWORTH PRAED.

A SIMPLE HUB BAND BRAKE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I am glad to hear that Mr. Baldwin is interested in this subject, and I have much pleasure in replying to his queries. 1. The brake band is lined. I use Flood's patent lining, one inch wide by a quarter inch thickness. 2. The rocker is well shown in the sketch published in the *M.C.J.* of May 18th. When in position it is practically an inverted Y piece; suitable dimensions of rocker for the drums mentioned in Mr. Baldwin's letter would be: Height over all 3½ in., thickness of material ¾ in., depth of boss, 1½ in., distance of boss to eyes for band attachment 1 in., and distance of boss to end of lever 2 in. My rocking piece was forged from a piece of 1½ in. square mild steel, and any blacksmith should be able to make one with these dimensions and the drawing on page 255 of the *Journal*. 3. The bracket is held in position on top of the centre of the spring by the U bolts holding the spring to the axle, and the vertical portion is forged

so as to clear the body of the car, and so that the band suspension bolt or pin is exactly over the centre of the brake drum.

Any other information I can give is at your correspondent's service.—Yours truly,

CHARLES T. W. HIRSCH.

TWO-CYCLE PETROL MOTORS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I was very pleased to read in a recent issue of the *M.C.J.* that the French Automobile Club is arranging to hold a competition of two-cycle motors, as it will undoubtedly have the result of drawing more attention to this type of engine, which has undoubtedly been somewhat neglected by automobile engineers in the past. Despite the advanced state of reliability and efficiency to which the Otto or four-cycle motor has been brought, there appears to be no question that it is not generally regarded as representing finality of design in this direction. With its more or less numerous moving parts of small size and its inherent defect of producing but one power stroke in every alternate revolution, it goes without saying that, from an engineering point of view, the four-cycle engine presents ample room for improvement. It has long been recognised by experts that the two-cycle principle offers the foundation upon which to build in this direction, and what is needed is investigation and experiment such as is at last being encouraged by the A.C.F. If half as many builders had been devoting their attention to the evolution of the two-cycle motor as has been the case with its competitor, it is safe to say that more would be known and heard of the former than is at present the case.—Yours truly,

TWO-CYCLER.

Mr. C. A. Glentworth on the 60-h.p. Six-Cylinder Napier he is driving in the Kaiser Prize Race in Germany.

Unfortunately the date on which the conditions of the race were made known to the British competitors was too short to enable Messrs. S. F. Edge, Ltd., to make a special car for it, and therefore they entered one of their 60-h.p. six-cylinder vehicles, 5 in. bore, 4 in. stroke, and endeavoured to lighten the car as much as possible by removing weight in frame and axles and fitting a special type of radiator.

ARE EXHAUST GASES POISONOUS?

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have frequently seen it stated that the exhaust from petrol cars is poisonous and renders the air where automobiles are extensively used unfit for breathing. There is also considerable objection on the part of the non-motoring public to the unpleasant smell of the exhaust gases, and repeated attempts have been made of late to deprive the exhaust products of their objectionable qualities. The unpleasant effect of the exhaust gases on the olfactory is undoubtedly a less serious matter than their injurious effect on the breathing organs. That the exhaust under certain conditions has an intoxicating narcotic effect is well known. If an engine is operated for an extended period in a closed garage, persons within the room will experience a very severe headache and sometimes even become unconscious. This effect is undoubtedly due to carbon monoxide gas in the exhaust, which is highly poisonous and produces exactly the effect on the human system as is observed in such cases. It is only natural that when a motor is operated in the garage for the purpose of making carburettor adjustments, &c., the mixture should occasionally become too rich and carbon monoxide be produced. But in the regular operation on the road the mixture need never be too rich to any appreciable extent, as it is more economical to run on a mixture containing considerably less petrol than the theoretically correct amount, and as an excess of spirit is plainly indicated by a heavy black smoke in the exhaust. In any case the simplest method of avoiding the discharge of carbon monoxide into the atmosphere is to avoid its production by suitably adjusting the feed of

petrol and lubricating oil. There are, however, a number of methods of disposing of the carbon monoxide after it is produced. It may be absorbed by an acid or ammoniacal solution of cuprous chloride, or it may be transformed into carbon dioxide by some strong oxidizing compound, such as copper dioxide, lead chromate, &c. But it is hardly conceivable that any such chemical process can compete in practice with the simple mechanical adjustment of the fuel and lubricant, and it would be greatly to the advantage of the automobile movement if drivers in general paid a little more attention to these points.—Yours truly,

W. STEVENSON.

WIND SCREENS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—With reference to making glass screens safe for use, my suggestion is that a glazier's diamond should be drawn along the glass on both sides of the glass on the lower side of the frame.

This will ensure that if anyone is by an accident thrown forward, the glass will give way all along the lower side, so that no stiff-pointed triangles will be left which may lacerate anyone coming down on the frame after being thrown through the glass.

If the scoring be done only on the lower sides of the sash, there will be no risk of the whole glass being thrown out by the shocks of the road, and there is no serious danger of injury to be guarded against, except from the weight of the person falling down on the frame.—Yours truly,

J. H. A. MACDONALD.

[The suggestion of the Rt. Hon. J. H. A. Macdonald, Lord Chief Justice Clerk of Scotland, is one worthy the attention of motorists generally.]

The 28-38-h.p. Ariel-Simplex Landaulet recently built by Ariel Motors, Ltd., for Mr. Caleb Smith, Liverpool,

In order to meet the regulations regarding the transportation of cars on the Woodside passenger steamers, which require motor vehicles not to exceed 6 ft. 8 in. in height and 6 ft. 6 in. in breadth over all, in order that they may pass under the captain's bridge, Mr. Smith's landaulet has, as will be seen, been provided with a special folding canopy.

OPENING FOR GARAGE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to "M. W.'s" letter enquiring where to open a garage and repair shop, I should certainly not advise him to open on any main road with the idea of catching passing motorists, as they are getting so experienced, and the average modern car carries all that is necessary for an ordinary day's journey. Most towns seem to me to be pretty well equipped with garages, &c.—Yours truly,

H. C. L.

SUBSTITUTES FOR PETROL.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—It may interest your readers to know that I and a few other motorist friends in Harrogate have been trying benzol in our cars of Panhard, Belsize, Decauville and Mercedes types, and, without any alteration to carburettors, find generally a decided increase in power, an increased mileage per gallon above ordinary petrol, and no particular difficulty in starting up. If any difference is observed, it is due to the higher specific gravity of benzol requiring more suction than petrol for the same air, but this is all right directly the engine starts up. The slightly lower thermal value benzol is said to have is more than compensated for by the economy in price and quantity used per charge being less on account of more air being required to meet its higher per cent. of carbon. It has also on this account a better cooling effect on the cylinder walls.

In every way, given a properly regulated air supply (say an auto-

matic extra air inlet for top speeds), there is nothing to prevent anyone obtaining improved results over petrol with increase of power at a much lower cost and no more nuisance of smell than with petrol. The brand of benzol we used was 90 per cent. distilled by the Whitwood Chemical Company, of Normanton, and gave every satisfaction.—Yours truly,

GEO. S. SAYNER.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I was a little disappointed to read the result of Mr. Edge's tests on the brake horse-power given by benzol compared with petrol. We have been using benzol on one of our Milnes-Daimler cars for some little time, and with considerable economy in the quantity required per mile. Our loads vary from day to day, so that it is not possible to get comparable results so exact as one could wish, but, as far as we can see, the economy is between 20 and 30 per cent. The carburettor requires more air, and a cold engine is more difficult to start up, but this latter trouble can easily be obviated by squirting a little petrol into the compression cocks. As long as the engine is warm there is no difficulty whatever in starting or stopping with benzol. The spirit we use is a rectified one commonly known as "90s," and we can at our tar distilling works, Ordnance Wharf, Blackwall Lane, East Greenwich, supply it to any motorists who are interested in substitutes for petrol.—Yours truly,

CHARLES CARPENTER.

Chief Engineer, South Metropolitan Gas Company.

INCONSIDERATE DRIVING.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Knowing your feeling about cars driven at excessive speed to the danger of others, I would mention a case of which I was a witness. It might have been a serious accident to two bicyclists on Sunday last. A car bearing a London mark was coming along the road at high speed between Warrington and Rainhill, and passed between warning signs at four cross-roads without either reducing speed or giving any signs of its approach; it forced the two cyclists on to the side walk, otherwise they would have been run down. This is the sort of work that brings motor-ing into disrepute, and so those who have some consideration for others on the road are classed with such a road hog as was driving the above car.—Yours truly,

AN EYE WITNESS.

Fortunately such cases are, we believe, extremely rare. They deserve the reprobation of all who have the welfare of the industry and pastime at heart.]

THE TERMINALS OF COILS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should be glad if you would kindly let me know why some induction coils have an earth terminal, and some not.—Your truly,

F. BECKER.

[Some induction coils are fitted with an earth terminal to facilitate testing, but the simplicity of the three terminal arrangement seems to have caused its almost universal adoption. When an earth terminal is fitted, the primary coil is connected between the terminal which goes to the battery and the terminal which is connected to the contact breaker. The secondary is connected to the extra earth terminal, which is then connected to earth, the other end of the secondary being attached, of course, to the high tension terminal and thence to the plug. The primary circuit is completed through earth when the contact maker connects it, and the secondary has its earth circuit quite separate. Modern practice has, however, dispensed with the extra terminal, and the secondary is connected to the terminal for the contact breaker.]

THE address of the Arco Rubber Flint Proof Tread Company is wanted by a correspondent.

REGAL CARS.—We have an enquiry for the names of firms stocking spare parts suitable for the 6-h.p. Regal cars.

TYRE CUT STOPPING PREPARATIONS.—Messrs. Joseph Bourne and Son, 7, St. Mary's Row, Birmingham, write, in reply to "H. L. L. A." that they have some Paracert and Westwood tyre stopping in stock.

MESSRS. WASTNAGE AND CO., LTD., of the garage, Kilburn Gate, N.W., ask us to say that their clothing stores were burglariously entered on Sunday, and chauffeurs are invited to inform the firm should any of the coats be offered for sale.

AT Corbridge-on-Tyne a brown canvas bag has been found containing tools, &c., dropped from a car going towards Newcastle. The owner should apply, giving description, to Mr. Mead, carrier, Middle Street, Corbridge-on-Tyne.

HUB CAP FOUND.—On Sunday a lad picked up in the road at Hurst Green a brass hub cap marked "Rochet-Schneider," which the owner can have on application to Mr. W. Hartnup, of the Ivy Motor Agency, Hurst Green, Sussex.

LOST, on June 9th, between Dunmow, Braintree, Colchester and Clacton, a motor-car tyre pump, believed to have been lost one mile out of Colchester on the Clacton road. If this should come under the notice of the finder, Mr. W. A. Bruce, 116, Golden Lane, E.C., would be glad to hear from him.

CLUBS AND ASSOCIATIONS.

COVENTRY M.C.

A CAPITAL afternoon's sport was provided by the Coventry Motor Club on the cricket ground at Coventry on Saturday. The Tourist Trophy Rover car was on the ground, and its progress round the course elicited much cheering from the ring of spectators.

There were seven events on the programme, the results being as follows:—

Motor-bicycle slow race.—First, Mr. Geoffrey Smith (3½-h.p. Triumph); second, Mr. H. R. Fowler (5-h.p. Norton).

Obstacle race for cars.—First, Mr. W. Phillips (20-h.p. Coventry Humber); second, Mr. F. Ward (8-h.p. Rover).

Lady passenger race.—First, Mr. J. C. Maude (15-h.p. Humber); second, Mr. A. E. Gould (15-h.p. Humber).

To and fro motor-cycle race.—First, Mr. S. L. Fletcher (1½-h.p. Motosacoche); second, Mr. H. R. Fowler (5-h.p. Norton).

Potato race for motor-cars.—First, Mr. C. H. Ainsworth (8-h.p. Rover); second, Mr. F. Ward (8-h.p. Rover).

Tilting at rings for motor-cycles.—First, Mr. G. Smith (3½-h.p. Triumph); second, Mr. J. B. Bowen (5-h.p. Viudec).

time in the 2½-h.p. class. In the twin-cylinder class, L. A. Smith, Grimsby, 5-h.p. Viudec, went up in 40 3.5 sec.; H. Haagenzen, Grimsby, 5-h.p. Viudec, 43 sec., and F. Richardson, Lincoln, 5-h.p. Viudec, 47 sec.

MANX A.C.

THE Manx A.C. has thirty-three resident and thirty-five non-resident members. The second annual meeting was held in the president's (Mr. George Drinkwater's) office in Douglas. The president was in the chair, supported by the hon. treasurer (Mr. George Gillmore) and the hon. secretary (Mr. Douglas Everard). The balance-sheet was unanimously passed. It disclosed a very satisfactory state of affairs, the club having a fairly substantial credit balance (£9 17s. 10d., since considerably reduced) in the bank.

The president (Mr. George Drinkwater) was unanimously re-elected. The vice-president (Mr. J. W. Orde) was also re-elected, as were the hon. treasurer and secretary, and the members of the committee.

THE MOTOR CLUB.

THE growth of the Motor Club, which now numbers a thousand members, was evidenced on Sunday by the large number who attended the opening run to Brighton.

By 10.30 a.m. nearly fifty cars had assembled at the Club House in Coventry Street, London, W., and, marshalled in two long ranks, they presented a very striking appearance. All the cars reached Brighton in good time without mishap, and at 1.30 p.m. 150 members and their friends sat down to lunch at the Royal York Hotel, presided over by

The Coventry Motor Club's Gymkhana.

Musical chairs.—First, Mr. A. S. Butler (10-12-h.p. Humber); second, Mr. S. J. Davies (28-h.p. Daimler).

AUTOMOBILE ASSOCIATION.

NUMEROUS complaints have lately been received by the Automobile Association with reference to furious driving of motor-cars in the neighbourhood of Ashford, Kent. The road from London to Folkestone has hitherto been practically free from police persecution of motorists, and it is very desirable that this pleasing state of affairs should continue. In order, therefore, to mitigate the evil caused by a few inconsiderate drivers, A.A. patrols are now on special duty on either side of Ashford, with strict orders to regulate, and where necessary restrain, the speed of motor-cars, reporting every bad case of driving to the Secretary, at Princes Buildings, Coventry Street, W.

LINCOLNSHIRE M.C.C.

THE really wonderful growth of the Lincolnshire Motor Cycle Club was demonstrated at the meet at Leadenham Old Hall on Thursday week, when Mr. Robert Morley entertained the members. Though heavy rain fell for several hours, there were quite 100 members present, including a strong contingent from Grimsby, fifty miles away. A hill-climb was included in the very interesting programme, and some good performances were put up. The hill at Welbourne is a steep one of 700 yards. A. L. Shaw, Grantham, 3½-h.p. Minerva, went up in 43 1.5 sec.; E. R. Cole, Roxholme, 3½-h.p. Brown, 46 sec.; R. N. Morley, Leadenham, 3½ h.p. Brown, 48 2.5 sec.; R. M. Wright, 3½-h.p. N.S.U., 49 sec. T. Jones, Grimsby, 2½-h.p. Minerva, did 56 sec., best

Col. Bosworth, the club's chairman. The homeward journey was begun at four o'clock, many of the members returning to the club for dinner.

Col. Bosworth drove with Mr. Chas. Jarrott in a 40-h.p. De Dietrich, and the following were amongst those who took part in the run:—Messrs. Harvey Du Cros, 45-h.p. Mercedes; Walter Gibbons, 50-h.p. Itala; L. Schlentheim, 20-24-h.p. Clement-Talbot; C. Cordingley, 40-50-h.p. Florentia; C. Temperley, 55-h.p. Isotta-Fraschini; S. H. Pearce, 60-h.p. Napier; E. D. Heinemann, 28-36-h.p. Pilain; Clifton Robinson, 135-h.p. Mercedes; Chas. Sangster, T.T. Ariel; Huntley Walker, 50-h.p. six-cylinder Darracq; Walter Dewis, Mercedes; E. A. Bowden, 25-h.p. Iris; J. de Solla, 60-h.p. Fiat; W. King Perrin, 40-h.p. Bianchi; M. de Brou, 20-30-h.p. Florentia; L. Carle, 45-h.p. Mors; H. T. Vane, 60-h.p. Napier; A. Capris, 50-h.p. Isotta-Fraschini; G. W. Houk, 30-40-h.p. Cosmo and Wylie, Minerva. Messrs. Sternberg and Eason were also present with two Buick cars.

INTER CLUB MEET.

THE following clubs have accepted the invitation of the Manchester A.C. to be present at the Inter Club Meet and Gymkhana at Buxton on the 29th inst., viz., Bradford A.C., Cheshire A.C., Derby and District A.C., Halifax A.C., Lincolnshire A.C., Liverpool A.C., Mid-Staffordshire A.C., N.E. Lancashire A.C., Sheffield and District A.C., Wolverhampton and District A.C., North Yorkshire A.C., Yorkshire A.C.

Members of the Motor Union, on presenting their Motor Union or affiliated club membership ticket, will be admitted to the ground with their cars, and the passengers on their cars, free of charge. Entries for the gymkhana should be made to Mr. J. B. Thistlethwaite, 40, Brazennose Street, Manchester, by the 22nd inst.

DERBY AND DISTRICT.

ON Saturday the annual hill-climbing competition for the Derby and District A.C.'s silver challenge cup took place, the site again chosen being on the hill at Hazlewood leading from the railway station to the church.

The course is a gradually increasing gradient and constitutes an admirable test, not only of the cars, but of the driving capabilities of the drivers.

The cars assembled in the railway station yard at Hazlewood, where each was weighed with its occupants and the measurements and other details of the cars were taken, after which they were lined up at the foot of the hill and were in turn despatched to the top, each driver striving to do his best against the watch, one ascent only being allowed. Some excellent ascents were seen. Appended is a list of the competitors, their cars, and the times made:—

	M.	s.
C. Turner Leech (18-22-h.p. Daimler) ...	2	16 3.5
H. W. Eaton (14-16-h.p. Swift) ...	3	50 2.5
J. C. Wilson (16-20-h.p. Humber) ...	1	52
H. G. W. Dawson (7-8-h.p. Swift) ...	5	22 2.5
Arthur Ford (30-55-h.p. Daimler) ...	1	18
M. Ross-Browne (25-h.p. Gladiator) ...	2	13 1.5
Geo. B. Fletcher (10-12-h.p. Humber) ...	3	13
Geo. B. Dearle (5-h.p. Rex side car) ...	2	10 1.5
Spencer Downing (10-h.p. Alldays) ...	3	31 4.5
P. L. D. Perry (15-h.p. Ford) ...	2	15 3.5
Herbt. Jefferson (10-12-h.p. Humber) ...	3	0 4.5
H. A. Johnson (22-h.p. Crossley) ...	3	16 3.5
L. P. Mell (15-h.p. Darracq) ...	2	34 1.5

Mr. A. Ford thus secures the fastest time medal with his 30-55-h.p. Daimler.

At the conclusion of this competition a further contest arranged on handicap lines took place, for which special silver and bronze medals were offered. This competition, which was arranged in such a form as to be easily followed by the spectators, was on the lines instituted by the Derby A.C. and was based on the times made in the former contest. The cars were drawn in pairs and the slower one dispatched up the hill with its time allowance, and so on in the following rounds, until the event was run through. Curiously enough, two 10-12-h.p. Coventry-Humbers were left to decide who should take the silver medal, Mr. George B. Fletcher securing the verdict at the expense of Mr. Herbert Jefferson. The following are details of the various rounds:—

FIRST ROUND.

- 1.—C. Turner Leech (18-22-h.p. Daimler) a bye.
- 2.—P. L. D. Perry (15-h.p. Ford) scratch, 1; Spencer Downing (10-h.p. Alldays) 1 min. 16 sec. start, 2.
- 3.—L. P. Mell (15-h.p. Darracq) a bye.
- 4.—G. B. Fletcher (10-12-h.p. Humber) with 1 min. 3 sec. start, 1; G. B. Dearle (5-h.p. Rex side car), scratch, 2.
- 5.—H. W. Eaton (14-16-h.p. Swift) a bye.
- 6.—H. G. W. Dawson (7-8-h.p. Swift) a bye.
- 7.—H. Jefferson (10-12-h.p. Coventry-Humber) with 1 min. 8 sec. start, 1; J. C. Wilson (16-20-h.p. Humber), scratch, 2.
- 8.—M. Ross-Browne (35-h.p. Gladiator) with 55 sec. start, 1; Arthur Ford (30-55-h.p. Daimler) scratch, 2.

SECOND ROUND.

- 1.—Geo. B. Fletcher (10-12-h.p. Humber), 57 sec. start, 1; C. Turner Leech (18-22-h.p. Humber), scratch, 2.
- 2.—P. L. D. Perry (15-h.p. Ford), scratch, 1; L. P. Mell (15-h.p. Darracq), 19 sec. start, 2.
- 3.—H. G. W. Dawson (7-8-h.p. Swift), 1 min. 32 sec. start, 1; H. W. Eaton (14-16-h.p. Swift), 2.
- 4.—H. Jefferson (10-12-h.p. Humber), 48 sec. start, 1; M. Ross-Browne (25-h.p. Gladiator), scratch, 2.

SEMI-FINAL.

- 1.—Geo. B. Fletcher (10-12-h.p. Humber), 58 sec. start, 1; P. L. D. Perry (15-h.p. Ford), 2.
- 2.—H. Jefferson (10-12-h.p. Humber), scratch, 1; H. G. W. Dawson (7-8-h.p. Swift), 2 min. 21 sec. start, 2.

FINAL.

- 1.—Geo. B. Fletcher (10-12-h.p. Humber), 12 sec. start, 1; H. Jefferson (10-12-h.p. Humber), 2.

The winning car on this occasion went up the hill in 2 min. 55 sec. while the loser took 2 min. 50 sec.

NORTH-EAST LANCASHIRE A.C.

THE North-East Lancashire non-stop run to Callander and back to Kirkstone Inn was not only a trial of cars, but a still greater trial to drivers, observers and passengers. Fourteen cars started on Friday, and no fewer than thirteen of them reached Callander. Returning on the following morning, the stiff pass of Kirkstone, by which the journey was concluded, proved to be very trying for some of the cars, but most of them arrived at different times during the evening at Bowness.

The trial resulted in six securing non-stop for the whole journey, these being A. Birtwistle, Blackburn (34-45-h.p. Daimler), F. Birtwistle, Blackburn, (60-h.p. Mercedes), A. S. Bury, Accrington (30-h.p. Belsize)

Mrs. T. M. Crook, Hoghton (35-h.p. Mercedes), A. E. Crowdy, Manchester (30-h.p. Siddeley, and J. S. Stafford (16-20-h.p. Argyll). Mr. Crowdy's car, driven by Mr. W. G. Garnett, of Clitheroe, was the first to arrive at Callander on the outward journey, and the second to reach Kirkstone Inn.

BLACKHEATH A.C.

A HILL-CLIMBING competition was held on Saturday last at Hixeydown Hill, near Igham, Kent. Eleven members competed for a challenge cup presented by Mr. Alexander Duckham and for three prizes to be presented by the club. Hixeydown Hill is of the same average gradient as South Harting. The length is 1,377 yards, with a total rise of 341.67 ft., the average gradient being 1 in 12.09, and at parts 1 in 9.02 and 1 in 8.28.

A standing start was made, and the following is the order of the cars in point of relative time of ascending the hill, irrespective of handicap:—

	M.	s.
Mr. W. F. Butcher (12-16 h.p. Clement-Talbot) ...	0	0
Mr. E. W. Stabb-Johnson (7-h.p. Star) ...	0	56
Mr. F. Thorne (20-22-h.p. Brown) ...	0	16 2.5
Mr. J. H. Bowden (10-12-h.p. Coventry-Humber) ...	1	21 1.5
Dr. R. Debenham (10-12-h.p. Coventry-Humber) ...	1	30 4.5
Mr. H. A. Cunis (18-h.p. Regent) ...	1	42 2.5
Mr. A. Jackson (10-h.p. Georges Richard) ...	2	12 1.5
Mr. L. Beadle (8-h.p. Regal) ...	2	29 3.5
Mr. T. Marshall (10-h.p. De Dion) ...	2	40
Dr. J. S. Goodall (8-h.p. Swift) ...	4	14 4.5
Dr. Kingsbury (6-h.p. Rover) ...	4	24 3.5

In regard to the two last-named cars, it should be mentioned that each carried passengers in excess of their seating accommodation, and both came out fairly well in the handicap.

The horse power was worked out on the formula

$$\frac{D^2 \sqrt{S \cdot N}}{5} = H.P.$$

Where D = bore in inches.
S = stroke in inches.
N = number of cylinders.

and the handicap on

$$\frac{\text{Total weight in lbs.}}{\text{Time in sec.} \times H.P.}$$

The highest result being the winner, viz., Mr. W. F. Butcher, this car, it will be observed, being also the fastest in actual time. Mr. L. Beadle obtained the second prize, and Mr. T. Marshall the third prize.

The figure of merit on the handicap of the first three cars was high, and with a small margin of difference, being respectively 1.06, 1.037, and .971. The second fastest actual time of the four-cylinder cars was Mr. F. Thorne's 20-22-h.p. Brown. The fastest and second fastest of the two two-cylinder cars were Mr. E. W. Stabb-Johnson's 7-h.p. Star and Mr. A. Jackson's 13-h.p. Georges-Richard respectively. The award of the prizes is subject to verification by the judges.

The event was thoroughly enjoyed in delightful weather by some sixty members and friends. The cars were weighed at the Bat and Ball near Sevenoaks Station, and tea was taken at the Sir Jeffrey Amherst Hotel, Crown Point, Seal. Professor Carlton J. Lambert, M.A., acted as judge on the course, Mr. A. Duckham starter, and Mr. Hugh Beadle timekeeper.

SOUTH DEVON.

In the hill-climb of the South Devon A.C. at Moorshop Hill, Tavistock, on the 25th ult., the results have been declared as follows:—Dr. A. P. Drummond (9-h.p. Sizaire), winner of club cup; Dr. W. C. Hamilton (10-h.p. Alldays), winner of Mr. E. Parsons' cup; Mr. T. R. Perkin (12-16-h.p. Clement-Talbot), winner of Sir John Jackson's cup; Major A. L. Gallie (30-h.p. Daimler), winner of the president's cup.

ESSEX COUNTY A.C.

ON Saturday the Essex County Automobile Club held an interesting hill-climbing competition at Laindon. The cars were weighed in the morning at Brentwood Station, and, after luncheon at the White Hart Hotel, proceeded to the hill, a distance of seven miles, the direction of which was indicated by confetti on the road.

The distance over which the cars ran was 756 yards, with an average gradient of 1 in 7½.

Splendid weather favoured the hill climb.

In the scratch race the fastest time was made by R. R. Smith, driving Mr. Seaton Edge's 60-h.p. six-cylinder Napier, Mr. J. Mason, 40-h.p. Darracq, being only 2.5 sec. slower. Both cars had Dunlop tyres.

The handicap for cars of 15-h.p. and under was won by Mr. Burnett Taburn's 14-h.p. Argyll, Mr. E. J. Boake, 12-h.p. Corre, being second.

Our photograph of the winning car in this amateur event is the copyright of Argyll's London, Ltd.

The handicap for cars over 15-h.p. went to Mr. Gurney Fowler's 35-h.p. Renault, driven by A. S. Field.

Later tea was dispensed by Col. and Mrs. Weston, at Goldsmiths, Laindon, when all enjoyed both the hospitality provided and the view that could be obtained of the surrounding country.

KENT AND EAST SURREY.

ON Saturday, June 8th, the members of the club were invited to Whyteleafe Grange, Waringham, the residence of Mr. and Mrs. Evelyn Jones, to meet the members of the East Surrey A.C. The Ranelagh Club Band played throughout the afternoon, and in every way possible the members of the two clubs were most hospitably entertained by their host and hostess. The large stable yard was soon crowded with cars of all makes, the inspection of which proved an attraction of great interest to the guests.

Among some of those present were Rev. A. B. Boyd, Mr. and Mrs. Madely, Mr. W. Willis, Colonel Latter and Miss Latter, Mr. and Mrs. Killick, Mr. A. M. Killick, Mr. and Mrs. Kemp, Mr. E. J. Frazer, Mr. and Mrs. Pain, Mr. and Mrs. E. Mumford Preston, Mr. E. Shirley Price, Mr. and Mrs. Baythan, Mr. C. E. Wright, Mr. and Mrs. Norman, Mr. and Mrs. Batchelor, Mr. and Mrs. Granville Kenyon, Mr. D. Robertson,

Ebblewhite as starter, Mr. J. Lyons Sampson as clerk of the scales, Capt. R. K. Bagnall-Wild, R.E., as marshal, Messrs. A. V. Ebbelwhite, T. D. Dutton, C. P. Glazebrook and T. Straight as timekeepers; Mr. J. W. Orde was the secretary of the meeting. The timekeepers are to be congratulated on the celerity with which they worked the times out, Mr. C. D. Rose, M.P., being able to announce the results within a few minutes of the close of the events.

In the climb for the Henry Edmunds trophy Mr. G. S. Barwick, who won the event last year, was again present on his 38-h.p. Daimler, and the presence of several Tourist Trophy drivers gave added interest to the scene.

We give the results in tabular form for ease of comparison, the first column being the times for the straight run, the second for the run with a stop and restart, and the third the aggregate time upon which the result was decided. The h.p.'s are those by the R.A.C. rating. Captain Howell was unfortunate enough to stop his engine on the second run; Mr. Kura, too, was confused by the signal to restart, and Mr. Coleman was unlucky in losing a couple of minutes on the first effort, though his second attempt gave the spectators proof that he was a formidable rival.

	Straight run.			Run with stop.			Aggregate.		
	M.	s.		M.	s.		M.	s.

The "Henry Edmunds" Challenge Trophy Competition.—Mr. K. O. Kura starting on his 24-h.p. Fiat.

Mr. and Mrs. Hutchings, Mr. and Mrs. Brownfield, Mr. and Mrs. Daniel, Mr. and Mrs. H. H. Price, Mr. Pusey Major, Dr. and Mrs. Brookhouse, Mr. and Miss Ellerton, Mr. and Mrs. Frankheis, Mr. and Mrs. Whittington, Mr. and Mrs. Rosling, Mr. Julian Whittington, Mr. Thomas Hart, and Mr. Harwood.

THE "HENRY EDMUNDS" CHALLENGE TROPHY.

ON Saturday the competition for the Henry Edmunds Challenge Trophy and the Carters Hill cup were held by the R.A.C. at Carters Hill, Underriver, Kent. This was the third time the former had been contested, the latter being a new competition. The test was 1,000 yards in length, with a rise of 312 feet, the average gradient being 1 in 11-225, and the steepest a stretch of 33 yards of 1 in 6½, a little more than half-way up the hill. In the Henry Edmunds competition the cars had to make two runs, the first being straight up the hill, and the second including a stop about half-way, within an indicated distance of fifteen yards. The positions were determined on the aggregate of the two times. In the Carter's Hill cup competition the cars made one straight run.

The clerks of the course were Col. H. C. Holden, Captain Dyke Acland and Mr. Robert Todd, with Mr. M. O'Gorman as judge, Mr. A. V.

2.—Mr. J. E. Hutton's 36-h.p. Berliet	1	18	2-5	1	24	4-5	2	43	1-5
Mr. L. Carle's 38-h.p. Mors	1	34	4-5	1	43	1-5	3	18	
3.—Mr. C. Sangster's 36-h.p. Ariel Simplex	1	31	1-5	1	46	4-5	3	18	
5.—Capt. Howell's 40-h.p. Iris	1	32	3-5	1	51	2-5	3	24	
6.—Mr. A. E. Perman's 40-h.p. Iris	1	48		1	45	2-5	3	33	2-5
7.—Mr. G. S. Monek's 32-5-h.p. Horch	1	58	2-5	1	51	4-5	3	50	1-5
8.—Mr. W. Hillman's 47-h.p. Coatalen	1	54	2-5	1	56	4-5	3	51	1-5
9.—Mr. K. O. Kura's 38-5-h.p. Fiat	1	56	3-5	2	41	1-5	4	0	4-5
Mr. A. C. Hill's 27-5-h.p. Martini	1	54	2-5	2	6	2-5	4	0	4-5
11.—Mr. F. Coleman's 30-h.p. White Steam	4	50	4-5	1	25	4-5	6	16	3-5
12.—Mr. M. S. Napier's 38-5-h.p. Napier	1	18	2-5	—			—		
13.—Mr. P. Brodtmann's 38-h.p. Daimler	1	19	3-5	—			—		

Mr. G. S. Barwick with his Daimler again secured the trophy. His car

was fitted with Continental tyres, which were also on the Berliet and Mors vehicles which ran second and third respectively.

In the Carter's Hill cup each car was only allowed one run, and the winner proved to be Mr. O. Copper on his 25-h.p. Metallurgique, whose performance was an excellent one. The times are appended:—

	Mr.	s.
Mr. O. Copper's 25-h.p. Metallurgique ...	1	24 4-5
Captain Masui's 26-h.p. Germain ...	1	34 2-5
Mr. Stokes' 24-h.p. Talbot ...	1	35
Mr. J.S. Napier's 25-h.p. Arrol-Johnston ...	1	43
Mr. J. E. Hutton's 24-h.p. Berliet ...	1	46 2-5
Lieut. Gould-Adams 25-h.p. Metallurgique ...	1	47 4-5
Visct. Ingestre's 26-h.p. Talbot ...	1	50 2-5
Mr. T. H. Woollen's 24-h.p. Talbot ...	1	52 2-5
Mr. A. Mosses' 22-h.p. Clement ...	1	59
Captain Owen's 25-h.p. Junior ...	2	16 1-5
Mr. T. Thornycroft's 22-h.p. Thornycroft ...	2	18 2-5
Mr. A. Gaal's 24-h.p. Westinghouse ...	2	19 1-3
Mr. P. C. Kidner's 21-h.p. Vauxhall ...	2	28
Mr. R. Meldrum's 19-h.p. Scout ...	3	1 1-5

The winning car was fitted with Dunlop tyres, as were also the second, third, and fourth cars in the race.

COMPANY NEWS.

NEW COMPANIES REGISTERED.

SURREY MOTOR AGENCY.—£500. Agreement with H. R. W. Bruce. No initial public issue. H. R. W. Bruce is governing director for life, subject to holding 100 shares. 16, St. George's Road, S.E.

ITALIAN "RAPID" MOTOR COMPANY.—£5,000. As title. First directors: Messrs. H. P. MacConnell and G. Elkin. 20, Avonmore Road Kensington, S.W.

G. STEVENSON (THE KENT AND SUSSEX GARAGE).—£10,000. First directors: Messrs. H. Soper, F. C. Barrow, F. C. Booty, and F. Travers.

ROBERT WOODMAN AND CO.—£1,000. To adopt an agreement with Mr. R. Woodman for the acquisition of the business of a motor, cycle, and athletic outfitter carried on by him at Bourne and Spalding. First directors: Messrs. R. Woodman and P. W. Brown.

WEIGELS MOTORS (1907).—£55,750. To acquire the business of Weigel Motors, Ltd. No initial public issue. Mr. D. M. Weigel is first managing director.

HILLMAN COATALEN MOTOR CAR COMPANY.—£50,000. To acquire the interest of Mr. W. Hillman and Mr. L. Coatalen in a motor-car of new design, &c. No initial public issue.

THE MOTOR-CAR AS A CARRIAGE.

IN the course of his paper before the Institution of Automobile Engineers on Wednesday, Mr. Gilchrist said:—The building of a satisfactory motor-car body is not quite so simple as it would appear to be, and some consideration should be shown to the requirements of the carriage builder. Where a shaft drive and live axle is used the gear-case and all connected with it is fixed within three feet of the dash-board, and by taking up the flooring boards in front all the essential parts can be easily reached. Where a side chain-drive is used, the front boards have still to be lifted, and, in addition, the centre boards for a distance of about two feet in front of the hind wheel tyres must be left loose. A body cannot with advantage be made to suit both types, except by making it to slide off the frame or to lift up. The first mode of removal implies a flat frame and only certain types of body. The body made to lift up is more generally suitable for the frames which have curved members. A body which is made to remove readily without bolts securing it to the chassis frame cannot be made so light as one which is permanently secured to the frame. With bodies the hoods of which are made to open and close, or open phaeton bodies with doors, this is an important matter. Whether the body has to be made to slide off or lift up or be permanently fixed, the body of the landau type has to be made stiffer in the framing and plating than the body of the brougham type. The over-all width of the framing has much to do with the sizes and consequent weight of the timbers used in the construction of cars, especially with the wide bodies seating three on the hind seat. In all chain driven cars the sprocket and fittings should be kept below the level of the frame; the body can then be brought over the sprocket case and partially conceal it. The wheel track of the car has been gradually approaching the normal carriage track of 4 ft. 8 in., but there is an important difference in the construction of the horse-drawn carriage and the motor-car. The hind wheels of a brougham or landau with a track of 4 ft. 8 in. will measure 4 ft. 8 in. between the tyres at the level of the axle in front, and 4 ft. 9 in. at the top. The wheels of a motor-car with a track of 4 ft. 8 in. will measure 4 ft. 4 in. between the tyres at all points. (This varies with the size of the tyres.) To give the same room for the body as in a horse-drawn carriage the wheels should have a track of about 5 ft. This is not always practicable; by placing the wheels further back so that the centre is in line with the back of the body the desired effect may be obtained. The seating accommodation required determines the size of the body, and the type the weight. The average distance from the dash-board to the back of the front seat is 3 ft. 8 in.; in many cars of the phaeton type it is 4 ft. The length of body beyond the driving seat, to seat four

people *vis-a-vis* with reasonable com'ort, requires to be 5 ft. 4 in. between the backs. If the four passengers are facing forward, the length required is about the same if there is foot room underneath the driver's seat. The manufacture of a satisfactory body may be left to the carriage builder, but the engineer who is designing a motor-car should know something of the space required to accommodate the passengers.

MOTOR CAR INSURANCE.

A CASE of importance to owners of insured motor-cars was heard before Judge Rentoul at the City of London Court on Friday week. Mr. Whateley, instructed by Messrs. Amery-Parkes, Macklin and Company, appeared for the plaintiffs, Messrs. Chenard-Walcker Motors, Ltd., of Brighton, and Mr. Gillway, instructed by Messrs. Bayfus and Beyfus, for the defendants, the General Accident Assurance Corporation, Ltd.

The action was brought to recover the sum of £20 12s. 4d. indemnity under a policy of assurance, the plaintiffs having been called upon to pay this amount to the Brighton and South Coast Motor Garages, Ltd., of Brighton, in respect of a judgment obtained against them. It appeared that Mr. Offord, who is secretary to the plaintiffs as well as manager to the Brighton Garage Company, was driving one of the plaintiffs' cars on November 13th last in Brighton. In going up a hill he missed gears, and in order to save it from running backwards he turned it into the pavement, with the result that it smashed the railings, and did other damage to the house of a Mr. Slatter, who made a claim against the Brighton Garage Company. The plaintiffs immediately gave notice to the insurance company of the accident. Mr. Slatter then brought an action in the Brighton County Court against the Brighton Garage, and the insurance company repudiated liability on the ground that they were not the assured under the policy of indemnity. The Brighton Garage contended that the Chenard-Walcker Motors were liable, but judgment was given against them on the ground that Mr. Offord was also in their employ, and the Brighton Garage Company, whose premises are the same as the Chenard-Walcker Company, benefited by the sale of their cars.

The Brighton Garage then applied to the Chenard-Walcker Company for payment of the amount of the judgment debt and costs, which they paid after giving notice to the insurance company, who repudiated all liability. The plaintiffs now contended that they were bound to indemnify their agents, the Brighton Garage, and they in turn were entitled to be indemnified by the assurance company. The defendants submitted that there was no legal liability on the part of the plaintiffs to pay the Brighton Garage, and they did so without their consent and without giving them an opportunity of resisting payment, and that the terms of the policy had not been fulfilled by giving notice of the claim made against the assured by the Brighton Garage.

His Honour upheld the view of the plaintiffs and gave judgment for the amount claimed with costs.

POLICE TRAPS.

A POLICE trap has been reported at Lexden, near Colchester.

THE game of trap-setting by the police and exposure by the motorist is now a feature of American news, and the Automobile Club of America is organising a system of regularly acquainting their members of speed traps in various localities.

THERE is a four-mile trap between Berkhamsted and Tring.

AMONG traps that have lately secured motoring defendants for the Hurst Green (Sussex) Petty Sessions are those at Hurst Green, Barwash Highway, Swiftsden and Etchingham. Sergeant Waghorn seems to be the director in chief.

AT Retford the police have lately become active against motorists, who should exercise considerable care, whether driving into or from the town.

INFORMATION comes of a police trap on the Christchurch and Highcliffe-on-sea road. The trap is 220 yds. in length and is between the turning where this road branches off from theournemouth and Lyndhurst main road and the entrance to Highcliffe Castle.

AT Limpley Stoke, on the Bath to Frome road, the police have lately been active in opposition to motorists.

AT Killinghall, near Harrogate, on the Ilkley-Ripon road, the police have a measured quarter of a mile.

AT Rogate, on the Portsmouth road, a trap has been in operation of late.

THERE is a trap between Epping and Harlow, on the London to Cambridge road.

THE neighbourhood of Handcross is infested with police traps, and Sergt. Waghorn is frequently in operation between the 19th and 20th milestones on that road.

CARE should be taken on the Seaside road, Eastbourne, where police watchfulness has lately proved a sad experience to several visiting motorists.

AT Westhampnett, on the Chichester and Arundel road, a police trap is in fairly constant operation.

ELEVEN of the twenty-eight cars engaged in the hill-climbing competition on Carter's Hill on Saturday last were fitted with Continental tyres.

CASES UNDER THE MOTOR CAR ACT.

EXCEEDING THE LIMIT.

EIGHTEEN motorists were summoned at the Harlow Petty Sessions on Saturday. Fines were inflicted on fifteen of the defendants and the other three cases were adjourned.

THE PRODUCTION OF LICENCES.

MR. WALTER H. JOHNSON, of Cumberland Mansions, West Hampstead, was at Kingston fined £5 for exceeding the speed limit at Walton. He informed the justices that he "produced" his licence to Police-Superintendent Marks, who copied his name and address therefrom. He (Mr. Johnson) held the licence open in his hands and told the superintendent that that was all he was entitled to, but the superintendent and a constable with him took the licence from him by force. If he (Mr. Johnson) had held on to it the licence would have been torn. The Clerk (Mr. F. J. Bell) said that it was a doubtful point, but they could not waste the time of the Court by looking into the matter then.

DISMISSALS.

MISS ELSIE FOX was charged at Royston, Hertfordshire, on Thursday of last week, with the manslaughter of William Parish, who died as the result of injuries received in a collision with a motor-car driven by the defendant. Mr. J. H. Murphy appeared to prosecute for the Treasury, and Lord Robert Cecil defended, Mr. S. J. Miller appearing for the relatives of the deceased. The defendant had been committed for trial on the coroner's warrant on a charge of manslaughter. After hearing the evidence, the chairman of the Bench said the magistrates did not consider there was sufficient evidence to send the case for trial, and the defendant would be discharged.

THE Duke of Westminster was summoned at Eddisbury, near Northwich, on Monday, to answer a summons for driving a motor-car at excessive speed on Chester Cup day. Some witnesses said the pace was "like an express train." He passed through Kelsall village at a speed estimated at thirty-five to forty miles an hour. An hour later the defendant returned by the same road at a great pace. For the defence it was urged that there was no traffic on the road and consequently there was no danger.

ROAD REPORTS.

YORKSHIRE.—The hon. secretary of the North Yorkshire A.C. has obtained the consent of the North Riding County Council to the erection of a warning notice near the level crossing at Barton Hill Station, and has pointed out to the East Riding County Council the advisability of warning posts being erected at Ganton.

CUCKFIELD.—Captain Sergison, J.P., who presided over a full attendance of the Cuckfield Urban Council a few days ago, said the County Surveyor had informed him that the Council could have tar money or water money for dust-laying operations during the summer, but not both. He (the Chairman) thought they might have tar rather than water.—The Council have purchased a considerable amount of refined tar, but their experiments this year have not proved so satisfactory as those of last year. Whether due to the weather or the tar was not decided. It was resolved to apply to the County Council for the use of the tar-spraying machine.

THE TARMACISER.—The judges in the tar-spreading competition arranged to inspect and report upon the Tarmaciser on Wednesday on a portion of the main road between the Cray River Bridge, Foots Cray, and Swanley Junction, by permission of Mr. H. P. Maybury, the county surveyor of Kent.

CRICKLEWOOD.—The Willesden District Council has recently made up Temple Road, Cricklewood, but, owing to the extraordinary traffic passing along the same, for which the London Power Omnibus Company is responsible, the road has been seriously damaged. The company has complained to the council about the condition of the road, and at Tuesday's meeting of the council the Law and Parliamentary Committee recommended that the attention of the company be called to the provisions of the Highways and Locomotives Amendment Act, 1878. They are also to be informed that the council will be prepared to provide a more suitable surface material on the company undertaking to contribute towards the cost thereof.

WORTHING.—The Worthing Council are hoping to turn to good account the clinkers produced at the refuse destructor. The Borough Surveyor (Mr. F. Roberts) has found that with a mixture of tar the broken clinkers can be used for road-making. In several parts of the borough the material has been laid, and the results have been satisfactory, especially at West Buildings, where there is a fair amount of traffic. It has now been decided to use tar clinker for the carriage-way in Warwick Street.

SURBITON.—The Surbiton Urban District Council on Monday night were recommended by the Highways Committee to make an application to the Surrey County Council requesting them to apply to the Local Government Board for an order limiting the speed of motor-cars passing along the Ewell road, Brighton road, and so much of the Portsmouth road as is within the Surbiton urban area to a speed not exceeding ten miles an hour. A resolution to this effect was adopted by the casting vote of the chairman and it was also decided that a copy of the recommendation should be forwarded to the Esher and Dittons Urban District Council, requesting that, with a view to the safety of the public in both districts, they should adopt a similar course.

AUTOMOBILE ACCIDENTS.

MR. PERCY SYLVESTER, coroner for Mid-Wiltshire, conducted an inquiry on Saturday at West Lavington into the death of William Holmes, aged two and a half years, who was knocked down and killed on Friday near his father's house by a motor-car driven by Sir Frederick Douglas Cunningham. A girl of fourteen years, who saw the accident, said the child started out from the roadside when the car was about two and a half yards away, and two yards from the gutter. Sir Frederick and his chauffeur both gave evidence to the effect that the pace of the car was slow, and that the accident was unavoidable owing to the suddenness with which the child ran into the road. The jury returned a verdict of "Accidental death," entirely exonerating the motorist from all blame.

MR. CHARLES MORBEY, well known in horse-racing circles, was motoring at Chippenham, Cambridgeshire, with his three young sons and a chauffeur on Sunday afternoon, when the car broke down and overturned. Mr. Morbey fell under the vehicle, and the car had to be raised before he could be liberated. He sustained cuts about the head and body, and was removed to his home at Soham. The three sons and the chauffeur escaped serious injury.

AT Lambeth, on Monday, Dr. Henslowe Wellington held an inquest on the body of an unknown man, aged about sixty years, who was conveyed to St. Thomas's Hospital dead, on Thursday of last week, having been killed by a motor-car. The car was being driven by a motor driver instructor, who was exonerated from all blame by the jury. The coroner said the driver had given his evidence very fairly. He (the coroner) would remark, however, that it was an unfortunate matter that motor-car people expected other people to get out of their way. They came

The 12-16-h.p. Vauxhall which has been entered for the Scottish Reliability Trials. Seated on the car are Messrs. Percy Kidner and Lewis Walton, directors of Vauxhall Motors, Ltd.

upon the road, and seemed to think they were masters of the highway and that everything was to give way to them, either by standing still or clearing out of the road to let them go by.

ON Monday a terrible accident took place on Sun Rising Hill Warwickshire, the scene of many hill climbs during the last few years. Mr. and Mrs. Blake, of Philadelphia, and Mr. and Mrs. H. Johnson of California, who had only been in England a few days, had hired a 24-h.p. car in Oxford for a trip through the Midlands. They left the University city about 10 a.m. with the intention of making for Stratford-on-Avon. All went well till they reached the Sun Rising Hill, which is the most dangerous of the four hills leading from Oxfordshire into the Warwickshire country. They reached the hill just before noon. Mr. Ballard, of Stratford-on-Avon, who was walking with his wife, saw the car descending the hill at a good pace. A second later the car turned over on exactly the same spot where two Norfolk gentlemen from Diss were killed three years ago. Mr. Ballard rushed to the spot, and found Mr. Johnson under the car and the others lying injured in the ditch. The car itself was a wreck. Mr. Johnson was extricated, and, with Mrs. Johnson, was removed to Rupert Cottage, Mr. and Mrs. Blake being taken to Sun Rising House. Without recovering consciousness Mr. Johnson died shortly after the accident, and the condition of the others is serious indeed.

A DISTRESSING motor-car accident, by which a little boy, aged nearly seven years, lost his life, was witnessed in Reading on Tuesday afternoon. While Mrs. Blandy was being driven by her chauffeur, Charles Bowyer, along Bridge Street, the lad stepped off the footway, and darted across the road in front of the car. The lamp struck him by the side of the head and he was knocked down, his head being nearly severed.

FORTHCOMING EVENTS.

JUNE.

- 14th (F.).—Race for the Kaiser's Prize on the Taunus Course, Germany.
 15th (S.).—Conference of officially recognised automobile clubs at Homburg.
 The children of the Leicester Cripples' Guild will be taken for a drive by the members of the Leicestershire A.C.
 Joint meet of the Bristol and Gloucestershire and Hereford A.C.'s at Cheltenham.
 Hill Climb of the Ipswich and East Suffolk A.C.
 North Eastern A.A. Hill Climb, Ragpath-side, near Lancaster.
 Lincolnshire A.C. meet at Crowland.
 Motor Cycling Club's open competition for cars.
 Wolverhampton A.C. hill climb at Hailey Bank.
 Sheffield A.C.'s hill climb.
 15th (S.).—Open hill-climb of the Auto C.C. at Fernhurst, Haslemere.
 16th (S.).—Southend M.C. run to Newmarket.
 South Herts A.C. run to Westcliffe-on-Sea.
 17th (M.).—Commercial vehicle meet at Reading. Mr. Leo Harris, hon. sec., 379, Strand, London, W.C.
 18th, 19th, 20th, 21st.—The new motor track will be open to members of the Brooklands Automobile Racing Club, by invitation.
 19th (W.).—Meeting of the general committee of the Motor Union.
 20th (Th.).—Lincolnshire A.C. hill climb at Tetford.
 21st (F.).—New Forest A.C. gymkhana at Southampton.
 22nd (S.).—Yorkshire A.C.'s meet at Saltburn.
 Southern Motor Club's open hill climb on Captain Kydd's Hill, East Grinstead.
 Kettleby hill climb of the Derby, Leicestershire, and Notts A.C.
 West Surrey A.C. run to Bognor.
 Sussex A.C. visit to Netley Abbey.
 Sharpenhoe Hill climb of the N.W. London M.C.C.
 N.E. Lancashire A.C. speed judging competition.
 Open 200 miles non-stop run of the Essex M.C.
 Kensington A.C. run to Southampton.
 23rd (Sun.).—West Essex A.C. and Essex M.C. run to Malton.
 24th (M.).—North Wales A.C. hill climb.
 25th (T.).—Closing of entries for first meet on the Brooklands Motor Track.
 Scottish A.C. Reliability Trial starts for Glasgow from Perth, 159½ miles.
 26th (W.).—S.A.C. Perth—Aberdeen, 158½ miles.
 Hastings Automobile Meeting. Appearance Competition and Gymkhana, organised by the Automobile Association and the Motor Club.
 27th (Th.).—S.A.C. Aberdeen—Inverness, 160½ miles.
 Newcastle Motor Club's run to Edinburgh and back.
 28th (F.).—S.A.C. Inverness—Pitlochry, 154½ miles.
 29th (S.).—S.A.C. Pitlochry—Glasgow, 122½ miles.
 Aero Club race for the Hedges Butler challenge cup.
 Birdlip hill climb of the Bristol and Gloucestershire A.C.
 Joint meet of the Liverpool, Manchester, N.E. Lancs., Sheffield and Yorkshire Clubs at Buxton.

JULY.

- 2ND.—A.C.F. Grand Prix Race on the Seine Inferieure Circuit, near Dieppe.
 4TH.—International cross Channel race for motor-boats from Dover.
 6TH.—Inaugural races on the Brooklands Track.
 10TH.—R.A.C. South Harting hill climb.
 13TH.—Entries for R.A.C. commercial vehicle trials close at ordinary fees.
 15TH TO 18TH.—The annual automobile meeting at Ostend.
 20TH.—Motor Union meet at Southport.
 27TH.—Commercial vehicle meet at Maidstone.

AUGUST.

- 10TH.—Open light car competition of the Essex Motor Club.
 20TH.—Open competition for light cars organised by the Essex Motor Club over a 200 miles course.

SEPTEMBER.

- 9TH.—Industrial Vehicle Trials commence.

OCTOBER.

- 19TH.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

OUT of 161 cars which started in the Herkomer Touring Trophy Competition 113 were, we are informed, fitted with Continental tyres.
 MESSRS. MORS (ENGLAND), LTD., inform us that recent purchasers of 45-h.p. Mors cars include the Duc d'Elchingen and the Marquise de Vistabella.

THE GAMAGE CHALLENGE CUP.

ON Saturday the Speed Judging Competition for the "Gamage" Challenge Cup took place at Cranford Bridge, near Hounslow. The cup was presented by Mr. A. W. Gamage for competition between the North London Automobile Club and the Southern Motor Club. The first competition took place last year, the result being a win for the Southern Club by 1,037 yards, the teams consisting of six members from each club.

This year the position is reversed, the North London Club winning by 11 miles 640 yards, the teams consisting of eight members from each club. The following table gives a list of competitors and performance:—

Name.	Rate for Judging.	Actual Rate.	Error. Miles per hr.
Mr. Lendrum	17	16.02	.98
Mr. Cutler	18	13.83	.83
Mr. Smith	19	18.23	1.77
Mr. Cannon	14	17.11	3.11
Mr. Robertson	18	19.33	1.33
Mr. Vincent	15	16.46	1.46
Mr. Paul	16	16.8	.8
Mr. Clements	12	15.67	3.67

Total error ... 12 miles 1,637 yards.

The total error of the Southern Club team was 24 miles 553 yards.

ALLEGED MISREPRESENTATION.

BEFORE Mr. Justice Channell, in the High Court of Justice, an action was brought by Mr. H. A. Lytton to recover from Mr. D. J. V. Langhorne (carrying on business as the Metropolitan Garage Association) damages for misrepresentation or for secret commission, for neglect in looking after an electric landaulet, plaintiff's property, and for a statement of account in connection with the hiring of the car. His lordship gave judgment in favour of plaintiff, awarding £100 damages. The inference to be drawn, he said, was that Mr. Lytton had been induced to buy the landaulet for £175 by the statements of defendant that he had no interest in the matter. The facts, however, were clear, that instead of £175, the sum required by the owner of the car was £100, and under these circumstances plaintiff, according to law, was entitled to recover £75. There were, however, certain expenses incurred by defendant in connection with repairs which had to be set off against the receipts from the hire of the car, and he thought the damage sustained had been £100. Judgment accordingly.

BUSINESS NEWS.

THE winning Rover car in the Tourist Trophy race was fitted with the Guenet coil, and the Godiva mica-porcelain plugs were fitted on the Rover, Star, and Vulcan cars. Mr. E. J. Hardy, Bishop Street, Coventry, is the British representative for these accessories.

MR. V. FOXWELL GRAY, of 264, Deansgate, Manchester, is the sole Manchester agent for the Alldays cars, one of which, a 10-h.p., made an excellent performance in the recent Manchester Motor Club's reliability trials.

THE Stepney spare wheels are being introduced into Holland by Mr. C. de Gorter, of Oosterparkstraat, Amsterdam, who has been appointed the Dutch agent.

THE Beeston-Humber cars are going well in India; after a shooting tour test of several hundred miles over the roughest of roads, the Lieut.-Governor of Bengal, Sir A. H. I. Fraser, K.C.S.I., last month bought the car, a 30-h.p., for the Government College of Engineering, where a motor school has been opened. On his recommendation two other similar cars were sold.

FROM Mr. S. F. Edge comes an interesting photo of a horse-drawn cab and hansom and a 40-h.p. six-cylinder Napier, which shows that the modern automobile, even with its long wheel-base, is shorter than the shortest and most handy horse-drawn carriages on the streets. By actual measurement the car mentioned above is 7 in. less in length over all than a hansom cab, and 3 ft. 10 in. less than a four-wheeled cab, the latter, of course, including the horses.

THE British Motor Company, of Deansgate, Manchester, have written to the Star Cycle Company, Wolverhampton, stating that the 6-h.p. little Starling car they purchased on the 18th ult. has given equal satisfaction to the previous vehicles. From the 22nd to the 26th ult. it ran 750 miles in a total of 40 hours, running without once being stopped for adjustment or repairs of any nature. An independent observer took the second seat for each day, and during the second and third day it was engaged in the reliability trials of the Manchester Motor Club, the road traversed being from Manchester to Aberystwyth, finishing at Stratford-on-Avon.

MR. W. F. PEARE used the A.V. plugs of the French Motor Accessories Company, Ltd., on the 35 45-h.p. Gladiator which he drove through the Irish Reliability Trials, and afterwards drove to complete 1,000 miles non-stop run. He had not the slightest trouble with them.

MR. C. HOYDONK has removed from Leather Lane, E.C., to more central premises in Shaftesbury Avenue, W.C., where he will hold a large stock of all motor accessories, including the "Dependence" lamps, for which he is the sole London agent.

THE Motor-Car Journal.

COMMENTS.

THE committee meeting of the Royal Automobile Club last week was a very full one, and many matters of importance were discussed. Probably, in view of recent references to the "badgered motorist," the decision to have a new badge will occasion some amusement. Of a more serious character is the intention of the leaders of the club with reference to the instruction to the Competitions Committee to hold an inquiry in regard to the recent automobile meeting at Bexhill. This is to be gone into at once, and a report submitted to the next meeting. Another useful piece of work done at the same meeting was to vote £150 for the sign-posting of Watling Street, on the understanding that a similar sum will be donated for the purpose by the Motor Union. A sub-committee has also been appointed to inquire into the scope and possible usefulness of the Children's National Guild of Courtesy to automobilism, by imparting instruction calculated to increase the safety and convenience of the highways. The Dust Competition, previously arranged to be held this month, has been postponed to an early date in July, so as not to clash with the Scottish Trials, which commence on Tuesday next.

The Saltburn Races.

A NEW feature in the organisation of motor races must be placed to the credit of the Yorkshire Automobile Club, which is holding a series of speed trials on the sands between Saltburn and Redcar to-day (Saturday). The local district council having expressed a wish that the public should be protected as far as possible during the race, the club, in addition to obtaining the co-operation of Major Bower (the Chief Constable), have insured at Lloyd's against third party risks. This innovation will probably add considerably to the expense, and, having in view the fact that speed trials at Saltburn have hitherto been carried out without accidents, shows the conscientious regard for Public Opinion felt by the Yorkshire Club in the matter. The public barrier is being extended to a length of two miles, and the entries constitute a record for this meet, including several high-powered cars, and drivers of national reputation as well as of county fame.

The Reading Meet.

THE first provincial meet of the Commercial Motor Users' Association was held on Monday at Reading, this being a development of the run to Ripley organised by Mr. Leo Harris in the early spring. Nearly thirty commercial vehicles of various types assembled in the market place and made a peregrination around the town, the representatives of their manufacturers being subsequently plied with questions as to cost, upkeep, &c., from curious observers as well as interested local commercial people. The Corporation gave every facility for the comfort of those concerned in the Meet, and the mayor, Mr. Edward Jackson, and the Corporation officials received the visitors. Subsequently a luncheon was held, and Colonel R. E.

Crompton, the chairman of the Association, replied to the toast of "Commercial Motoring," expressing the view that a general improvement of the roads cannot long be delayed. This would quicken the interest now being taken throughout the country in the development of the commercial side of automobiles.

Police Infallibility.

A CURIOUS comment on the alleged accuracy and infallibility of the methods of trapping indulged in by the police of East Sussex has been furnished to Alderman Holman, who is the chairman of the Lewes Fire Brigade Committee, and who takes an interest in fairplay to the public. The National Fire Brigades Union held its competition at Lewes recently. The device ordinarily employed by the police for timing motorists was used in connection with the competition. Its failure to secure accurate timing and the uncertainty of operation, even when operated by a gentleman of the name of Waghorn, were so conspicuous that the competitors called the attention of Alderman Holman to the matter. This is important, in view of the many prosecutions, amounting to persecution, that take place in East Sussex; and motorists on their defence in that region should not fail to acquaint the magistrates of the erratic character of the device, as was amply shown at Lewes.

Capt. Kydd's Hill Climb.

THE climb at Captain Kydd's Hill, near East Grinstead, organised for to-day (Saturday) only needs such weather as we enjoyed at the beginning of the week to make it a thorough success. Earl Russell will be the judge, and the enthusiasm of the officers of the Southern Motor Club will secure the assistance of many well-known motorists in keeping the course and generally supervising details. Nearly seventy entries have been received. In the class for ladies, Mrs. Kirton, Mrs. Wylie, and Miss Muriel Hind will compete; Mr. E. Courtis, who won the Tourist Trophy race, will drive a 16-20-h.p. Rover, and Mr. O. Cupper, who won the Carter's Hill Cup on the 8th inst., has entered his 24-28-h.p. Metallurgique. Half-a-dozen of the cars that were entered in the Tourist Trophy race form Class 7, and the actual winning car in that event will be handled by Mr. E. R. Folker. A full list of the entries is given on another page.

Essex Trapplists.

RECENTLY there has been an outbreak of motor trapping in Essex, which seems to point to an emulation of the activity of the Surrey and Sussex police. At the Harlow Petty Sessions fines amount to £128 were recently imposed on one day, eighteen cases against motorists being heard—all resulting from a trap between the sixteenth and twentieth milestones from London on the Cambridge road. The police superintendent stationed several constables with instructions to take the numbers of the vehicles that went that way, as well as the times they passed. Every policeman was provided with a watch which had been previously set by the superintendent's watch, and they were instructed to give the motorists the benefit of fractions of a second. The magistrates gave no leniency, however, and, although speed indicators were called in evidence against the

B

police, the testimony of the latter was held to be conclusive in every instance. The chairman of the Bench refused to accept an invitation to re-measure the distance—the correctness of which was challenged—and altogether the whole proceeding was as intolerable as anything that has occurred at Haywards Heath. Essex has several virile motoring organisations, and they should speedily establish a system of making known among their members the existence of these traps, which have lately been frequently worked near Harlow, Colchester and Woodford. In all these districts extreme caution is generally necessary on Saturdays and Sundays.

The Southport Meet of the Motor Union.

THE arrangements for the next provincial meeting of the members of the Motor Union at Southport, on July 20th, are well forward. On this occasion the Union's hosts will be the Liverpool A.C. and Self-Propelled Traffic Association, one of the pioneer motoring clubs. The General Committee will meet in the morning, when the members will be officially welcomed by the Mayor, and after the meeting is over the members of the Committee will be entertained to luncheon by the Mayor

During the visit of the Rt. Hon. Sydney Buxton, the Post-Master General, to Coventry last week the Daimler Company placed one of their cars at his disposal. The above illustration depicts Mr. Buxton and Mr. A. E. W. Mason, M.P., the well-known novelist, arriving at the residence of Col. Wyley, the President of the Coventry Motor Club.

and Corporation. The Earl of Derby has invited the members of the Union and their friends to Knowsley, and it is expected a large number of members will accept this invitation in order that they may meet the President of the Liverpool A.C. and the late Chairman of the Motor Union in the stately home of the Stanleys. The eighth provincial dinner of the Union will be held at the Prince of Wales Hotel, Southport, in the evening.

Local Agitation.

THE provincial meet of the Motor Union in July comes at an opportune time, for there is much local agitation against motorists in general and the owners of motor char-a-bancs and public service vehicles in particular. The Southport Company-house Proprietors' Association have been considering the speed at which motor-cars travel along the Marine Drive, and suggesting that steps should be taken to deal with the matter. In fact, a deputation has been appointed to interview the Watch Committee. Naturally the Association is interested in the visitors to the town; they must take care not to drive them away by any unreasonable attitude.

The Commercial Vehicle Trials.

ARRANGEMENTS are now going well forward for the Commercial Vehicle Trials, which will commence on September 9th from Brentford. The first stopping place will be at Reading, and on the following days the stopping places will be Hungerford, Chippenham, Bristol, Gloucester, Worcester, Birmingham, Stafford, Newcastle-on-Tyne, Manchester, Liverpool, Manchester (second visit), Huddersfield, Leeds, Sheffield, Mansfield, Nottingham, Leicester, Northampton, Bedford, St. Albans, London, making twenty-two actual running days. All the vehicles will start from the same place each morning, and a variety of routes will be adopted from town to town. At Bristol, Birmingham, Liverpool, Manchester, Leeds, Sheffield, Nottingham and Bedford the vehicles will remain two nights in order that an exhibition may be held in the day-time. It is the intention of the committee to meet weekly during the next two or three months, so that no details to secure adequate organisation shall be omitted. Mr. J. W. Orde will be in charge of the Trials, the other officials being Mr. A. E. Greathed, who will be responsible for the routes; Mr. Martin Duncan, who will arrange for motor-house accommodation and the exhibitions; Mr. R. W. Sprague, who will prepare the observers' instructions; and Mr. J. Stewart Mallam, who will take the reports, &c. A special office for the Trials has been opened at 108, Piccadilly, W., the address of the new motor-house of the R.A.C., and altogether a comprehensive organisation is in progress.

East Sussex.

MR. HENRY MOORE, of Brighton, who has been lane-wandering by motor-car in and about Sussex, makes some interesting suggestions to those who tour that way. In exploring East Sussex he advises motorists to take the coast way to Newhaven, then to Seaford, and, turning round by the Church, cross the river Cuckmere and ascend a very steep hill to Friston. Then begins a steep descent through Eastdean, which should be ridden slowly and with caution. Through old Eastbourne the descent must be made with great care. After continuing along the Seaside Road for about four miles to Pevensey Castle, the car should be turned for Hurstmonceux Castle, leaving the main road for about a mile. Then retracing this mile, continue about half a mile. Turning right where the road terminates, the route lies through Boreham Street down a steady hill, and, passing Ashburnham Park on the left and Normanhurst Court on the right, Battle is entered. Thence to Hastings and the steep hill to Ore, Winchelsea and Rye are worthy a visit. Udimore and Cripps Corner are next visited; then Hurst Green, Etchingham and Burwash; thence it is impossible to mistake the road as far as Blackboys, from whence the route lies through Hallands, Shortgate, and over the Broyle (a wide road four miles in length, quite straight, with broad grass on either side) to Ringmer and Lewes. Here there is a right-angle turn to the right in the main street, and after crossing the river, and making the very sharp ascent up School Hill, Lewes Castle is seen. The motorist has covered roughly 110 miles by the time he returns to Brighton, which is only eight miles distant.

Police Provocation.

IN our reports of cases against motorists we recently gave an instance of provocation on the part of the police which, unfortunately, is only typical of their attitude in some parts of the south, and is deserving of further notice. The motorist was called upon to produce his licence to Superintendent Marks, and held the document open in his hands so that the official could copy any necessary information therefrom. This, however, did not satisfy the Superintendent, who is alleged to have taken the licence from the motorist by force. Had the latter endeavoured to retain his hold, it would have been torn. There is no doubt that it is of importance to motorists who are

likely to be defendants that they should conform to the Act as to the "production" of the licence, but it is unwise for them to allow the police to form a prejudice by any writing that may be on the obverse side. Unfortunately, when the defendant asked for the opinion of the Court on the matter, the only reply he obtained was that the time of the magistrates could not be wasted in that way—an answer not likely to act as a deterrent to Superintendent Marks in his general policy of aggravation.

Progress in China.

A WELL-ATTENDED meeting of motor-car owners was held recently at the residence of Dr. A. MacLeod at Shanghai, for the purpose of discussing the affairs of the Automobile Club of China during the past year, and to devise ways and means of effecting repairs, &c. The membership now numbers over forty and is being constantly increased. During the past year the committee have made certain alterations in their dealings with the Standard Oil Company and the Vacuum Oil Company in regard to the supply of lubricants. Recommendations were made to the Municipal Council regarding the issue of car licences and the examination of chauffeurs, both native and foreign. It was suggested that efforts should be made to secure

passes by suction into the cylinder of the engine to be exploded. The apparatus is simple in construction and may be adapted to any high-speed gasoline motor. It is claimed that whereas denatured alcohol is too slow in vapourising and too slow in explosion to give effective value to high-speed motors, and whereas acetylene gas is too powerful and violent to be used pure as a motor fuel, a combination of the two gives a perfectly satisfactory fuel which costs less than gasoline.

The Endorsement of Licences.

AN appeal heard in the High Courts on Wednesday has resulted in an important decision being given against the London magistrates who have been in the habit of endorsing the licences of drivers convicted of exceeding the ten-mile limit in the Royal parks. Against such a judgment of Mr. Marsham at the Bow Street Court the Motor Union have appealed. The case was heard on Wednesday before the Lord Chief Justice, Mr. Justice Darling, and Mr. Justice A. T. Lawrence; Mr. Horace Ivory, K.C., and Mr. Cleave, instructed by Mr. Staplee Firth, being for the appellants, and Mr. Askwith, K.C., instructed by the Treasury, being for the respondent, Mr. Marsham. After legal argument the justices

The three Buick Cars which took part in the Motor Club's Run to Brighton on the 9th inst.

The two first cars are of the two-cylinder type, while the one at the rear is a four-cylinder. In the first vehicle Mr. F. Eason, of Messrs. Sternberg and Eason, is at the wheel, and at the back are seated Mr. Horace Golding, the well-known illusionist, and his wife; in the second car Mr. John L. Poole, foreign sales manager of the Buick Company, is at the wheel, and next to him is Mr. De Resder, the musical director of the Tivoli.

a skilled mechanic for the purpose of repairing tyres, &c., for the members of the club. Several were in favour of getting a suitable man either from America or England. The meeting finally decided on a resolution that the committee be authorised to go carefully into the matter of tyre repairs and the overhauling of machinery, &c., and also endeavour to secure suitable premises for a club building, and the engagement of a skilled mechanic from abroad if one could not be secured in Shanghai.

A New Gas for Power Use.

MR. E. SEYMOUR BELL, the British Commercial Agent in the United States, has reported that a patent has recently been secured in the United States for a process of producing gas for power purposes, which may prove to be of considerable interest to those engaged in the automobile industry, and, incidentally, the alcohol trade. This is evidently the system referred to in our issue of March 30th. The new process consists of bringing a spray of atomised, diluted alcohol into contact with calcium carbide, thereby forming an explosive vapour. This product, which is a combination of air, alcohol vapour, and acetylene gas, is what is known as "alkoethine." The vapour

decided that the magistrates had no legal right to endorse the licences of motorists convicted on the first or second occasion for exceeding the ten-mile limit in the Royal parks. The Motor Union and Mr. Staplee Firth may be congratulated on the successful issue of the appeal.

Police Traps.

It is regrettable that people should be found to lend the aid of their high hedges for the machinations of the police in trapping people who do not endanger others on the road. But we suppose there will always be a small minority careless of the general convenience in the selfish enjoyment of their own privileges. Prejudiced magistrates and trapping policemen have much in common, and apparently they can obtain the assistance of the county gentry in some few places. Fortunately there are places where a different spirit prevails, such as Shipston-on-Stratford, where the police, using the church steeple for the purpose of keeping a look-out on motorists, were ordered down by the rector. They had, however, managed to catch a trio of motorists, who were summoned recently to the local Petty Sessions, where they were each fined £2 and costs

THE BROOKLANDS RACING TRACK.

THOSE who journeyed to Weybridge on Monday found a piece of typical Surrey landscape without a police trap. Not only were the motorists able to drive up to the legal limit, but go beyond it without fear of the service of summonses. It was the occasion of the preliminary canter over the new motor track which has been made through the enterprise of Mr. F. Locke-King, and which gives opportunities of speed to British motorists that are not possessed by the sportsmen of any European country. The track will be under the authority of the Brooklands Automobile Racing Club, and the first great race meeting will be held on Saturday, the 6th prox. Meanwhile competitors will have opportunities for rehearsal, and those who intend to use it as "a safety valve to their speed proclivities" will doubtless familiarise themselves with its banking and curves.

Pear-shaped in outline, the track measures two and three-quarter miles round, with a width of 100 ft. A straight run of one kilometre has been provided for finishing purposes, so that the length of the circuit and the finishing distance will be just over three miles. In each circuit there will be two miles on the

Essex, Lord Alington, Colonel H. C. Holden, Major W. E. Donohue, Mr. C. D. Rose, M.P., Mr. C. Cordingley, and Mr. E. de Rodakowski were present, and were included in the large company who took luncheon together in the dining-room at the top of the hill. Mr. Locke-King bade them welcome, testified to the splendid assistance given in the preparation of the track by Colonel Holden, and then asked Mrs. Locke-King to head the procession of cars that went around the course.

The processional order was quickly dispelled as the sense of speed grew upon the drivers, and the delights of exceeding the legal limit without risk of police or hurt proved too keen for orderly ceremonial. Forty cars and more progressed with safety, and for awhile all were agog with a new sensation. Then came "the man with the red flag," and the cars were driven demurely into the "paddock" while the fleetest vehicles swallowed distance at a rate which no Surrey policeman could estimate.

Then we literally "saw speed" along the straight, for, it must be confessed, the extent of the track rather minimises the impression gained by the onlooker. It is so stupendous as to dwarf speed, and cars travelling on the distant part of the loop, looking from the hill, scarcely

The Brooklands Racing Track.—A view of the Paddock.

level, while the radii of the banked curves are 1,000 ft. and 1,500 ft. respectively. The track, in the planning of which Mr. F. Locke-King has been greatly aided by Col. Holden, R.E., has been constructed with as little disturbance of the landscape as possible, and the hill through which it passes at the northern end secures a natural vantage ground for the public. Two tunnels and a bridge give access to various parts of the track, from which the spectators will be excluded by railings of formidable aspect.

All along the course a system of telephonic communication has been established, so that the officials at headquarters will be made immediately acquainted of any unexpected incident at any point on the track. Grand stands are provided near the finishing point, and although one or two obstructions in the centre of track obtrude themselves upon the view, the public will be able to enjoy the sport under conditions that are unparalleled, and that are not likely to be exceeded anywhere else.

All the motor world was there on Monday to participate in an event which marks the beginning of a new aspect of Motorism. Many who have not been so closely identified with speedy motoring as Messrs. C. Jarrott and S. F. Edge were present, and some members of the Jockey Club seemed to have wandered from Ascot to Brooklands. The Duke of Westminster, Earl of Carnarvon, Lord Lonsdale, Lord Montagu, Lord

convey the idea usually imagined by eighty or ninety miles per hour. Still the pace was there, and a 100-h.p. Darracq driven by Mr. Warwick Wright developed a speed of approximately ninety miles an hour. We had a run round the track on a Mass car of reliable and speedy character in the company of Mr. Okura on his 120-h.p. Fiat, a Tourist Trophy winner of the past, a six-cylinder Napier, Beeston and Coventry Humbers, several Daimlers, including Mr. Frank Rendle's 45-h.p. car with four passengers up, and still speedier, an 80-h.p. Berliet driven by Mr. E. Hutton, who sported his racing colours of red and white, and a great company of other cars of high degree.

THE Motor Union on Wednesday obtained a judgment to the effect that motor-car drivers' licences shall not be endorsed on a first or second conviction for exceeding the ten-mile speed limit in the Royal parks.

In connection with the Hastings Automobile Meeting, on the 26th inst., the addresses of the leading local garages may be of service. On the London Road, at St. Leonards, is that of the Hastings and St. Leonards Motor Car Company, Ltd.; at the East Ascent, St. Leonards, is the Royal Victoria Garage, and on the Western Road that of Messrs. Skinner and Co. Mr. J. S. Walker has a garage at the Royal Concert Hall, and Mr. E. Stally in the Queen's Road, Hastings.

The Kaiser's Prize Race.

The Kaiser's Prize Race.—The Scene at the Starting Point.

THE great event of the past week on the Continent has been the contest for the Kaiser's prize, organised by the German Automobile Club. Considerable interest was taken in the event, no less than ninety-two entries having been received, viz., thirty-two German, twenty-one French, nineteen Italian, ten Belgian, four British (three Daimlers and a Napier), three Austrian and three Swiss. The main provisions of the regulations called for vehicles fitted with engines of a cylinder capacity of 8 litres—equivalent to a motor of about 50-h.p.—and weighing at least 1,175 kilogs., without fuel, water, oil, parts, or tools. The course on which the contest was held is practically the same as that on which the Gordon Bennett race took place in 1904. It had, however, been reduced to 118 kilometres, this having to be covered four times, giving a total distance of 472 kilometres, or 295 miles. The principal towns and villages passed through were Usingen, Gravenwiesbach, Weilburg, Winden, Riedelbach, Esch, Königstein, Overursel, and Homburg. The starting point was near Kloster Thron, between Saalburg and Wehrheim, and here not only had a large grand stand been erected, but a special box for the Kaiser. The weighing in took place on the 12th inst., when, of the ninety-two entries, eighty-one cars duly appeared and passed the scales.

Owing to the decision of the German Government not to allow all the vehicles to compete in the actual race—considering the number too large—two eliminating races, comprising two laps of the course, or 147½ miles, were held on Thursday, the 13th inst., in each of which half the contestants took part, the fastest twenty cars in each series being eligible for the race proper. The first eliminating contest started at 4 a.m., in the presence of the Kaiser, Prince and Princess Henry of Prussia, the Grand Duke and Duchess of Hesse, Prince and Princess Frederick Charles of Hesse, and many other notabilities. Unfortunately wet weather prevailed, which rendered the roads highly dangerous. There were thirty-nine starters in the first eliminating, these comprising the following cars:—Durkopp, Opel (three), Rebour, Argus, Suddutsche, Benz, Fiat, Mercedes Mixte, Minerva, Martin-Lethimonnier, Mors, De Dietrich, Darracq, Protos, Pipe, Horch, Adler, Vinot, Mathis, Ehrhardt Eisenach, Isotta-Fraschini, Zust, Daimler, Porthos (two), Gobron, Martini, Bianchi, Mercedes, Itala, Metallurgique, Napier, Piedbœuf-Imperia, Graf and Stift, and N.A.G. The

German cars were painted white, the French blue, English green, Belgian yellow, Italian red, Austrian black and yellow, and Swiss red and yellow. Thirty cars finished the first round, the best time being by Lancia on a Fiat (1 h. 26 min. 17 sec.). Those that fell out included Flohr (Argus), Burton (Mercedes-Mixte), Villemain (Martin-Lethimonnier), Trucco (Isotta-Fraschini), Maggione (Zust), Bush (Daimler), Stricker (Porthos), Peters (Porthos), and Spamann (Benz). The second lap was completed by twenty-five cars, with the result shown below. The competitors who failed in this round comprised Taddeoli (Rebour), Buchner (Horch), Glentworth (Napier), Sach (Graf and Stift), and Delrich (Opel). Glentworth and Bush are reported to have been disabled owing to collisions with telegraph poles.

Result of first eliminating contest:—

No.	Driver.	Car.	H.	M.	S.
1.	Lancia ...	Fiat ...	2	56	17
2.	Opel ...	Opel ...	3	1	0
3.	Hautvast ...	Pipe ...	3	2	56
4.	Geller ...	Adler ...	3	2	56
5.	Cagno ...	Itala ...	3	5	26
6.	Wilhelm ...	Metallurgique ...	3	8	5
7.	Joerns ...	Opel ...	3	10	8
8.	E. Schmidt ...	Durkopp ...	3	11	39
9.	Florio ...	Darracq ...	3	11	50
10.	Hemery ...	Benz ...	3	12	25
11.	Moore-Brabazon ...	Minerva ...	3	14	56
12.	Duray ...	De Dietrich ...	3	16	1
13.	E. Jeannin ...	Sud. A. F. ...	3	35	18
14.	Henze ...	Piedbœuf-Imperia ...	3	37	43
15.	Doué ...	Gobron ...	3	41	36
16.	Adelberger ...	Protos ...	3	44	20
17.	Schmidt ...	Eisenach ...	3	44	41
18.	Tommaselli ...	Bianchi ...	3	48	25
19.	Jenatzy ...	Mercedes ...	3	50	55
20.	Bentler ...	Martini ...	3	57	6
21.	C. Salzer ...	N.A.G. ...	3	58	54
22.	Fery ...	Vinot ...	3	59	52
23.	Mathis ...	Mathis ...	4	3	17
24.	Kirchheim ...	Ehrhardt ...	4	16	1
25.	Lavergne ...	Mors ...	4	28	25

Another batch of thirty-nine competitors faced the starter in the second eliminating event, which was run off later in the day in somewhat finer weather. The cars which took part in it comprised Fiat (two), Mercedes-Mixte, Minerva (two), Martin-

Lethimonnier, Darracq (two), De Dietrich (two), Pipe (two), Horch (two), Adler (two), Vinot, Ehrhardt, Eisenach, Isotta-Fraschini (two), Züst, Daimler, Porthos, Gobron, Martini, Bianchi, Mercedes (two), Itala (two), Gaggenau (two), Rochet-Schneider, N.A.G. (two), Durkopp, Opel, and Benz. Nazzaro (Fiat) was the first away, completing the premier lap in 1 h. 24 min. 19 sec., the fastest time of the day, Wagner, on a similar car, being second. The round was successfully accomplished by all but six of the drivers, those who failed to pass the grand stand being Ducom (Martin-Lethimonnier), Conti (Züst), Lucke (Gaggenau), Krapff (Horch), Tamagni (Isotta-Fraschini), and Robl (Gaggenau). The two Fiats maintained their record for reliable running, Nazzara and Wagner again making the fastest times. Five cars fell out on this circuit, viz., Hoffmann (Horch), Bereis (Ehrhardt), Ernecke (N.A.G.), Bojano (Benz), and Goebel (Adler). The latter is reported to have met with a fatal accident owing to his car overturning at a bad corner at Esch. One of the Horch cars, too, met with a bad accident at Gravenwiesbach, both the driver, Krapff, and mechanic being seriously injured. Appended is the order and times of the cars which finished the two circuits.

The first twenty in each of the two preceding tables qualified for the actual race, and we append a further list giving the combined order of classification of the two eliminating contests. As the times are given above we have not repeated them, but it will be observed that not only did the complete Fiat team get through but actually made the three fastest times of the day.

Table showing combined result of the two eliminating contests:—

No.	Driver.	Car.	No.	Driver.	Car.
1.	Nazzaro	Fiat.	16.	Hémery	Benz.
2.	Lancia	Fiat.	17.	Fournier	Itala.
3.	Wagner	Fiat.	18.	Minoia	Isotta - Fraschini.
4.	F. Opel	Opel.	19.	Guyot	Minerva.
5.	C. Deplus	Pipe.	20.	Rougier	De Dietrich.
6.	Hautvast	Pipe.	21.	Fabry	Itala.
7.	Geller	Adler.	22.	Salzmann	Eisenach.
8.	Cagno	Itala.	23.	Moore-Brazon	Minerva.
9.	Wilhelm	Metallurgique.	24.	Duray	De Dietrich.
10.	Gabriel	De Dietrich.	25.	Maserati	Bianchi.
11.	Willy Poege	Mercedes.	26.	Michel	Opel.
12.	C. Joerns	Opel.	27.	Ison	Daimler.
13.	Salzer	Mercedes.	28.	Beck	Martini.
14.	E. Schmidt	Durkopp.			
15.	Florio	Darracq.			

The Kaiser's Prize Race.—The Royal Box near the Grand Stand.

Second eliminating contest:—

No.	Driver.	Car.	H.	M.	S.
1.	Nazzaro	Fiat	2	50	20
2.	Wagner	Fiat	2	56	55
3.	Deplus	Pipe	3	1	45
4.	Gabriel	De Dietrich	3	9	45
5.	W. Poege	Mercedes	3	9	56
6.	Salzer	Mercedes	3	11	37
7.	Fournier	Itala	3	12	32
8.	Minoia	Isotta-Fraschini	3	12	42
9.	Guyot	Minerva	3	13	1
10.	Rougier	De Dietrich	3	13	27
11.	Fabry	Itala	3	14	20
12.	Salzmann	Eisenach	3	14	20
13.	Maserati	Bianchi	3	16	52
14.	Michel	Opel	3	19	5
15.	Ison	Daimler	3	25	28
16.	Beck	Martini	3	25	53
17.	Branda	Darracq	3	28	0
18.	Scholz	N.A.G.	3	31	40
19.	Viton	Rochet-Schneider	3	32	33
20.	Terry	Gobron	3	35	54
21.	Hespe	Vinot	3	37	14
22.	Jarosch	Durkopp	3	38	8
23.	Tasca	Darracq	3	44	11
24.	Colin Defries	Porthos	3	53	54
25.	Lee Guinness	Minerva	3	55	29
26.	Gasteaux	Mercedes	3	56	39
27.	De Caters	Pipe	4	1	49
28.	Fischer	Adler	4	2	39

29.	Branda	Darracq.	35.	Doué	Gobron.
30.	Scholz	N.A.G.	36.	Adelberger	Protos.
31.	Viton	Rochet-Schneider.	37.	C. Schmidt	Eisenach.
32.	Jeannin	Süddeutsche.	38.	Tommasei	Bianchi.
33.	Terry	Gobron.	39.	Jenatzy	Mercedes.
34.	Henze	Piedbœuf-Imperia.	40.	Beutler	Martini.

The Kaiser was again present at Kloster Thron to witness the actual contest for his prize on Friday, the 14th inst. The weather was a considerable improvement on that of the preceding day, with the result that better times were made. The start took place at 6 a.m., when all but one of the forty selected cars were on the scene, the missing vehicle being Jeannin's Süddeutsche. The cars were sent off at two-minute intervals—not in the order they finished the eliminating, but in that of entry—E. Schmidt, on a Durkopp, being the first away, and Fournier, the old Paris-Berlin champion, last on an Itala at 7.16 a.m. The speedy qualities of the Fiats again made themselves evident, the two fastest times in the first lap being made by Nazzaro and Wagner, only 7 sec. separating them. The Pipes also did well, two of them, driven by Hautvast and Deplus, being close on the heels of the Italians. Thirty-four cars finished the first round, those that fell out being Duray (De Dietrich), Wilhelm (Metallurgique), W.

Poege (Mercedes), Florio (Darracq), and Guyot (Minerva). The second round considerably altered the outlook, Hautvast and Deplus proving the speediest and running into the first and second places, Nazzaro falling back to the third position, followed by two Opel cars. Twenty-nine finished the circuit, Brauda (Darracq) and Hemery (Benz) retiring with broken wheels, the other withdrawals being Gabriel (De Dietrich), Moore-Brabazon (Minerva) and Ison (Daimler), the only English representative in the contest. The third circuit brought another change in the position, again putting Italy in front. Lancia, whose Fiat in the first and second laps had been going steadily, but not as fast as Nazzaro's, was now travelling at a terrible pace, making the quickest time of the day so far, viz., 1 h. 22 min. 28 sec., beating his own record again in the last round by completing it in 1 h. 21 min. 52 sec. At the end of the third circuit the general classification gave Nazzaro as the first in 4 h. 12 min. 13 sec., Hautvast (Pipe) being second 33 sec. behind, with

No.	Driver.	Car.	H.	M.	S.
4.	Michel ...	Opel ...	5	49	35
5.	Wagner ...	Fiat ...	5	50	53
6.	Lancia ...	Fiat ...	5	51	1
7.	Minoia ...	Isotta-Fraschini ...	5	51	15
8.	Fournier ...	Itala ...	5	53	18
9.	Salzer ...	Mercedes ...	5	57	33
10.	Cagno ...	Itala ...	5	59	12
11.	Schmidt ...	Eisenach ...	6	3	31
12.	Beutler ...	Martini ...	6	5	11
13.	Rougier ...	De Dietrich ...	6	8	15
14.	Jenatzy ...	Mercedes ...	6	8	54
15.	Beck ...	Martini ...	6	21	14
16.	Fabry ...	Itala ...	6	29	1
17.	Tommaselli ...	Bianchi ...	6	31	45
18.	Scholz ...	N.A.G. ...	6	35	33
19.	Schmidt ...	Durkopp ...	6	46	45
20.	Adelberger ...	Protos ...	7	13	8

After the contest there was a rush for the Royal box, where the Kaiser himself distributed the trophies, Nazzaro taking the

Nazzaro on the Fiat Car on which he won the Kaiser's Prize Race.

another Pipe in the third place. Salzmann (Eisenach), Opel (Opel), Doué (Gobron), Geller (Adler), and Henze (Piedbœuf-Imperia) fell out in this lap, leaving twenty-four competitors for the last circuit, in which, as already mentioned, Lancia established the record for the course. Deplus (Pipe), who up to that point held the third place, and was travelling with great regularity, unfortunately damaged his steering gear. Viton (Rochet-Schneider), Maserati (Bianchi), and Terry (Gobron) also retired, the number of competitors who completed the four laps being an even twenty. Hautvast (Pipe) was the first to finish, but he had started thirty-four minutes in advance of Nazzaro, who, arriving well in advance of his time, proved the winner of the contest, his speed for the four laps, or 295 miles, working out at an average of about fifty-three miles per hour.

The result was as follows:—

No.	Driver.	Car.	H.	M.	S.
1.	Nazzaro ...	Fiat ...	5	34	26
2.	Hautvast ...	Pipe ...	5	39	10
3.	Joerns ...	Opel ...	5	39	49

Kaiser's prize, Hautvast (Pipe), the cup for the first foreign-built car after the winner, and Joerns (Opel) the national trophy. The race was a brilliant victory for the Fiat Company, and, coming as it does so soon after their success in the Targa Florio contest, speaks volumes for the design and workmanship of their cars. In conclusion we may add that of the thirteen German cars which took part in the actual race, eight finished, the respective figures for the other countries being Italy eight out of nine, France one out of eight, Belgium one out of six, Switzerland two out of two, and Great Britain nil out of one.

At 370, Stratford Road, Birmingham, Mr. E. C. Penzer has established a garage, and is also developing considerable business in motor accessories.

SOME of Mr. Jarrott's French friends have presented him with a very handsome engraved silver plaque as a testimonial of the sporting features of his recent drive from London to Monte Carlo on a 40-h.p. Crossley car.

THE ALPHA PETROL MOTORS.

WE illustrate herewith one of the series of well-designed petrol engines which, under the name "Alpha," are now being manufactured by Messrs. Johnson, Hurley, and Martin, Ltd., of Gosford Street, Coventry. The one shown is the 12-16-h.p. four-cylinder type, and, as will be seen, the cylinders are cast in pairs and provided with large water jackets; the bore and stroke is respectively 93 mm. by 105 mm., and at a speed of 1,000 revolutions per minute 18-h.p. is developed. The inlet and exhaust valves, which, like the valve lifters, are interchangeable, are operated off a single cam shaft. The cams themselves are of hardened cast steel and the shaft of mild steel. The latter is enclosed in the aluminium base chamber, so that it obtains a full share of the splash lubrication. The connecting rods are made from steel forgings, and the crank shaft, which is provided with large bearings of Hoyt white metal, is made from a special quality of high-tensile steel. Provision is made for fitting both accumulator and magneto ignition, the contact maker for the former being mounted on the upper end of a vertical spindle driven by bevel gear off the cam shaft. The

firm also make a 25-30-h.p. four-cylinder motor as well as two sizes—8-10 and 12-15-h.p.—of twin-cylinder engines.

As indicating the excellent results the Alpha engines are giving in practice, we may mention that one was fitted to the 16-20-h.p. Calthorpe car driven by Mr. G. W. Hands in the recent Irish Reliability Trials, when the vehicle not only made a non-stop each day on a petrol consumption averaging about twenty-three miles to the gallon, but made the fastest time in its class (under £350) in the three-mile speed trial on Magillan Strand, viz., 4 min. 11 sec., or nearly forty-four miles per hour, and also in the Hollywood and Graiguenamanagh hill-climbs.

A DISSECTED model of a motor-car has been published by Messrs. G. Philip and Son, Ltd., this being supplemented by a concise description of the working parts of the automobile. It is illustrated by a series of useful photographs and outline drawings, while the various parts of the car are shown in the model, upon the publication of which we would congratulate the publishers.

At the beginning of the touring season attention may usefully be drawn to the Ara vulcanising process, the proprietors of which have lately opened a West End depot at 100, Long Acre, W.C., where demonstrations are in daily progress. Ara, Ltd., is the title of the concern that has taken over the business of the Ara Material Patents and Manufacturing Corporation. They have issued a new booklet setting forth the established advantages of their system, which can now be obtained from their City office, 33, Chancery Lane, E.C., or the West End depot.

CONTINENTAL NOTES.

The Grand Prix Race.

Active preparations are being made for the A.C.F. Grand Prix race, which is to be held on the Seine Inferieure Circuit on the 2nd prox. The Fiat racing cars for the contest reached Dieppe on Saturday last. A rumour is current to the effect that a protest is being sent to the French Automobile Club against the participation of the Darracq cars in the race, on the ground that the event is open only to manufacturers and not to private owners.

The French Trials of Industrial Vehicles and Town Carriages.

The French Automobile Club has now announced the awards in the reliability trial of industrial vehicles and town carriages recently held. The contest consisted of twenty runs, ranging from 150 to 200 kilometres, the cars surviving the same being subjected to a fuel consumption trial for the final classification. Out of the forty vehicles which started only fifteen went through the ordeal, the winners in the different classes being: Industrial vehicles for loads up to 2 tons, Delahaye; ditto, from 2 to 3 tons, Darracq-Serpollet; ditto, over 3 tons, Da Dion; public service vehicles, Aries, and town carriages, Da Dion.

The Herkomer Touring Trophy Competition.

The awards in connection with the third annual competition for the Herkomer Touring Trophy have now been made known. The trophy itself is secured by Herr Ladenburg—who also won it in 1905—in respect of his Benz car (cylinder capacity 8.01 litre) driven by Herr F. Erle. The following also made non-stops in the contest, prizes being awarded to the first six in the list:—

Entrant.	Car.	Cylinder Capacity.
Hans Aschoff ...	Metallurgique ...	3.72
Heinrich Opel ...	Opel ...	7.43
Carl Neumaier ...	Benz ...	6.52
H. Weingand ...	Mercedes ...	7.99
A. Schmierer ...	Adler ...	4.16
R. Benz ...	Benz ...	5.98
F. Dahmen ...	Opel ...	8.01
J. O. Mandl ...	Benz ...	6.11
A. Horch ...	Horch ...	5.82
A. Kathe ...	Horch ...	2.73
G. Grüning ...	Adler ...	4.16
G. Braunbeck ...	Benz ...	8.01
S. F. Edge ...	* Napier ...	7.72
W. Opel ...	Opel ...	6.33
E. Ladenburg ...	Mercedes ...	9.24
K. v. Ohlendorff ...	German ...	3.59
Dr. R. Stöss ...	Horch ...	2.73
Karl Prince of Isenburg ...	Mercedes ...	7.99
Paul Beckmann ...	Beckmann ...	8.62

* Driven by Miss Dorothy Levitt.

The result of the classification in the Forstenrieder Park speed trials is—(1) A. Weingand, Mercedes; (2) E. Ladenburg, Benz (driven by F. Erle); and (3) H. Opel, Opel. The premier car in the Kesselberg hill-climb was the Metallurgique, driven by H. Aschoff, while the elegance contest was won by F. Gutschow's Mercedes.

The International Automobile Conference.

A conference of delegates of the various national automobile clubs was held at Homburg, Germany, on the 15th inst. Several matters were discussed, but no important decision was arrived at. It was decided to approach the German, French, Belgian and Austrian Governments with regard to facilitating the entry of motorists when on tour with their cars from one country to another. It was also agreed to hold another conference at Ostend, on July 15th, to discuss the question of drawing up a uniform series of regulations for international motor races. In connection with this matter, the representatives of France proposed a minimum weight of 1,100 kilogs., with a petrol allowance of 20 litres per 100 kilometres. Italy is reported to have been in favour of races without any restrictions whatever, and England for one in which the chassis must not exceed 1,200 kilogs., and have engines of a maximum cylinder

bore of not more than 150 mm. A further decision was the appointment of a central secretarial office of the recognised national clubs, with headquarters in Paris.

The late M. Serpollet.

A sum of £1,026 has so far been received in connection with the fund to establish a monument in memory of the late M. Leon Serpollet, and it has been decided by the committee to organise a competition for the most suitable design. It has also been resolved to purchase the first steam car built by the deceased, and to include it in the historical collection at the forthcoming Paris Salon, after which it will be offered to the museum of the Arts et Metiers in Paris.

An Elegance Competition in France.

During the course of the next Paris Salon, which, as already announced, is to take place from November 12th to December 1st, an elegance competition is to be held, the idea being to encourage the production of more artistic and com-

Dutch, French, German, and English, of idiomatic expressions which may be found useful when touring, gives the principal places of interest in Nijmegen and the routes of a number of motor tours that can be made from the town.

Belgian Motor-car Imports and Exports.

To the end of May last the imports of foreign motor-cars and parts into Belgium this year had attained a value of £63,238, as contrasted with £57,627 in the first five months of 1906. During the same period the exports of motor-cars and parts from Belgium increased from £157,019 to £162,900.

A Competition of Fuel Consumption Indicating Instruments.

A competition for instruments for indicating fuel consumption is being organised by the Association Automobile Generale of Paris. The instruments must be capable of being fitted to all kinds of motor vehicles, and must constantly show the fuel consumption, as well as the revolutions per minute, as long as the motor is running. Intending competitors must present a drawing

Herr F. Erle on Herr Ladenburg's Benz Car. The Winner of the Herkomer Touring Trophy Competition.

fortable motor-cars. The event is intended more for private owners than manufacturers, and in making the awards the jury will have regard to the form of the carriage, the condition in which it is kept, its quietness, freedom from smoke, vibration, &c., and also to the appearance of the passengers themselves.

Touring in Holland.

Judging from the series of views which we have received from Mr. M. L. Jorritsma, the manager of the Hotel Keizer Karel Nijmegen, motorists anxious to discover new places to visit will find Holland an interesting country, and Nijmegen an excellent centre for excursions. They will find their wants excellently catered for at the Hotel Keizer Karel, which is one of the largest and best equipped in the town, and is provided with a large fireproof garage. As illustrating the attention which is being given by the manager of the hotel, we may mention that he has just issued a booklet entitled "Vademecum voor Automobilisten," which, in addition to containing a vocabulary in

of their instrument and demonstrate the apparatus in use on an automobile. The first prize is £40 and the second prize £8. No entry fee is required, and entries will be accepted up to July 31st next.

Public Motor Services in Germany.

A public motor-car service has just been established between Lensahn and Eutin. A company is also being formed to inaugurate a service of motor-buses in the town of Altona.

Miscellaneous Items.

The seventh annual Motor-Car Exhibition in Brussels is to be held from the 17th to the 26th December next.—The Automobile Club de la Sarthe, of Le Mans, is organising a series of flying kilometre speed trials for Sunday next, the 23rd inst.—It is announced that Hemery will drive a Mercedes car in the A.C.F. Grand Prix race.—It is reported from Berlin that the Kaiser is interesting himself in a scheme to establish a large motor racing track in Germany.

A RUN ON A "LEADER" CAR.

AT the invitation of Mr. T. Shaw, of the High Holborn Motor Agency, we last week had an enjoyable run on the Leader car which was entered by Mr. R. Goodenough for the Tourist Trophy race; but which was unable to compete owing to its arrival a few minutes late at the official enclosure. This was particularly unfortunate, as the performance of the vehicle, in view of the fact that it was the lowest power car entered, would have been watched with more than usual interest. Except that the body had been built to comply with the regulations of the Tourist Trophy contest, the car is one of the standard productions of the New Leader Company. The engine comprises four separate cylinders, having a bore and stroke of 85 mm. by 90 mm., and although nominally rated as 10-12-h.p., gives, according to the R.A.C. formula, over 19-h.p. It is equipped with coil and accumulator ignition, with provision for fitting a high-tension magneto. The transmission is through a large diameter leather clutch to a three-speed and reverse gearbox, and thence by a cardan shaft and bevel gear to a live axle, the latter, as well as the gear-box shafts, being provided with roller bearings and ball thrusts.

Leaving the Motor Club in Coventry Street, W., Mr. Shaw, who was at the wheel, first gave us an excellent indication of the flexibility of the engine by driving in the traffic at a very slow rate on the top speed, the engine and car answering instantly to the slightest touch of either the foot or hand throttle lever. Our destination was Virginia Water, but a roundabout route was chosen, so that the hill-climbing capabilities of the machine might be tested as well as its speed qualities on the level. With this object in view the main road was left at Kew, and, passing over the river, the car was headed for Richmond, where the famous hill from whence spreads out one of the finest views in the Thames Valley was quickly surmounted. Then followed a speedy run across Ham Common to Kingston, and, passing once more over the river, good-bye to the tramlines was said at Hampton, from which place excellent time was made through Sunbury to Staines along a wide and tar-sprinkled road, the resulting freedom from dust being much appreciated. The ascent of Egham Hill offered no difficulty to the car, which a few minutes later pulled up at the prettily located Wheatsheaf Hotel, at Virginia Water, where the photograph from which the accompanying picture was reproduced was taken. The return journey, which was made *via* Bedfont and Hounslow, proved equally suc-

cessful, the vehicle proving itself not only capable of attaining a very high speed on the level, but of being manoeuvred through traffic with a minimum of trouble on the part of the driver. On the top gear, which is a direct drive, little more can be heard than the ticking of the tremblers of the coil; in fact, the vehicle is exceedingly quiet and easy running, qualities which testify to the care which has been paid to the design and to the selection of material. As a two-seater, with luggage space at the rear,

the car forms a splendid touring vehicle for the man of moderate means; at the same time, as the illustration shows, the wheel base is sufficiently long to enable a roomy side-entrance body to be fitted to the chassis.

THE DUNLOP TYRE MANIPULATOR.

THE Dunlop Pneumatic Tyre Company, Ltd., have taken up the manufacture of the ingenious tyre lever devised by Mr. Robert Connell, of Gainsborough, and of which some particulars were given in the *M.C.J.* about fifteen months ago. The tool, which is being put on the market under the name of the Dun-

lop Tyre Manipulator, is mainly intended to facilitate the operation of removing and fixing in position the valves of inner tubes and the security studs. Motorists know by experience that the task of inserting these is rendered difficult owing to the fact that as one edge of the cover is lifted to a suitable position, the opposite bead has a tendency to slip forward and partly or completely cover the stud or valve holes. By means of the new lever this difficulty is entirely overcome; the tool consists of a duplex tyre lever provided with pivoted extensions. To lift the cover the lever is inserted in the ordinary way until the projections on the upper arms are forced past the beaded edge. At the same time projections on the extensions or lower arms are forced just beyond the lip of the rim. The handle of the lever is now lifted, taking with it the edge of the cover by reason of the latter resting on the lugs. As the handle is raised the lower end of the extension arms becomes fixed against the opposite bead of the cover, preventing the latter moving forward, owing to the resistance set up by the projections on the same bearing against the rim. By means of the lever the cover can be held up by one hand, leaving the other free to insert the security bolts or the valve stem in their respective holes without any difficulty, while simply lowering the tool to almost a vertical position enables it to be easily slipped out of engagement with both cover and rim. The Manipulator is readily adaptable to all sizes of tyres, but is sent out with strut pieces adjusted to take up to and including 100 mm.

AN American motorist is using a wind screen on his car made of wire gauze instead of glass. The screen is made of zinc wire, the gauze being so fine that it easily excludes dust. It is stated to offer less resistance to the wind than glass, and that it is just as easy to see through.

MESSRS. F. S. CLEAVER AND SONS, who are well known in the soap trade, have introduced their "Antioyl soap," for the use of motorists and others who have occasion to remove traces of grease or oil from their hands. In addition to its exceptional cleansing properties the soap softens the hardest water, and we have no doubt that many motorists will give a trial to this new preparation. We have found it most satisfactory in use.

THE Motor Union have obtained two more convictions for obstruction on the highway, making a total of nine during the past few months.

DURING the past week Mr. James Fryer has exhibited the Beeston-Humber car that was one of the two to finish in the Tourist Trophy race, at the Herefordshire and Worcestershire Show, at Hereford.

THE Brooklands Automobile Race Club has been provided with one of Messrs. W. and T. Avery's latest makes of weigh-bridges, which has a capacity of 13,000 lbs., is graduated by 1 lb. divisions, and is especially sensitive to $\frac{1}{4}$ lb.

THE Port and Docks Board of Dublin has adopted a suggestion of the harbour master that the shipment and discharge of petrol be permitted in the port provided it be taken direct from the steamer to the cart, and from the cart to the steamer at the various berths.

THE Holland Park Motor Company have a well-equipped garage at 124, Holland Park Avenue, London, W., where they are able to also carry out repairs, charge accumulators, vulcanise tyres, &c. The garage is open day and night, while we may add that several cars are kept for hiring-out purposes.

A TWENTY-FOUR hours' motor-car race has just been held on the Point Breeze track, in Philadelphia, U.S.A. There were ten starters, of which five finished the long contest. The winning car was a 30-h.p. Autocar, built by the Autocar Company, of Ardmore, Pa., which in the twenty-four hours covered a distance of 791 miles.

RECENTLY a motor-car belonging to Mr. James de Rothschild took fire at Crewe station through a lighted match being unconsciously dropped in the petrol running from a leaky pipe. The car had been burning ten minutes before Mr. T. Gibson, of 24, Nantwich Road, Crewe, got to it with a "New Era" extinguisher. The result was instantaneous; the flames, which were reaching sky high, were quickly quenched.

THE Marchand-Dufaix racer for the A.C.F. Grand Prix is of Italian construction, but has been built from the design of Messrs. Dufaix Freres, of Geneva; the motive power is supplied by an eight-cylinder engine, 125 mm. bore by 150 mm. stroke; at 1,300 revolutions per min. it develops about 125-h.p. Ignition is by Simms-Bosch high tension magneto. The transmission is through a multiple disc clutch, three speed gear-box and side chains.

A WELL-EQUIPPED new garage at 147, Norfolk Street, Sheffield, has been opened for business by the Hattersley and Davidson Automobile Company. The ground floor of the premises will accommodate forty vehicles, and one side of the premises is completely occupied by a long inspection pit. The petrol store has a capacity of 350 gallons, and in addition to ample facilities for storing spare parts, tyres, &c., the dressing-room accommodation for both lady and gentlemen visitors is a distinctive feature.

MESSRS. S. J. BALE AND COMPANY introduced the motor-car into North Devon some years ago, and have several times extended their motor works at Newport, Barnstaple, to cope with their growing business. The latest departure has been to acquire the premises lately utilised as a carriage factory by Messrs. Moor and Sons, and to adapt them to the purposes of a motor garage having accommodation for thirty cars. The establishment will be well stocked with tyres and spares, and should prove a great convenience to visiting motorists.

MESSRS. HUMBER, LIMITED, have sent us a copy of the 12th edition of their booklet entitled "Humber Cars and How to Manage Them," one of which is issued to every owner of a Humber car. The work is well got up and gives very clear instructions as to the management and upkeep of the various Humber vehicles, these being supplemented by some exceedingly useful lettered drawings, mounted on canvas, showing the various parts of the vehicle, especially those which may require attention. Undoubtedly the work is one which no user of a Humber car should be without.

HERE AND THERE.

IN connection with the Oxford pageant an official motor garage has been organised under the management of Mr. W. F. Parker of that city.

ARRANGED by Councillor Gates, a motor-wagon has been leaving Worthing for London every morning, bringing fruit and produce to Covent Garden. The experiment thus far has been a great success so far as the saving of time is concerned.

THE exports of motor-cars from the United States during April last attained a value of £137,228, as compared with only £81,666 in the corresponding month of last year. Canada proved to be the best customer, taking £34,889 of the total, England being second on the list with £34,855.

WE illustrate herewith an ingenious terminal for the high tension wires of the ignition system of motor-cars which has just been put on the market by Messrs. S. W. Martyn and Co., of Pratt Street, Camden Town, N.W. The arrangement consists of three metal parts and one of an insulating medium. As will be seen from the sectional view, the end of the high-tension cable is bared in the usual way; two parallel cuts, one on either side of the wire, are then made in the rubber, $\frac{1}{4}$ in. from each side and $\frac{1}{4}$ in. deep, so that a small brass piece, through the centre of which the cable passes, can be securely fixed in position by pushing the insulation well home into the slot and the lugs into the cuts in the rubber. The strands of the cable are then spread over the cone face on the outer end of the little brass piece, and the ends cut off level with the bottom of the

thread. The piece is then screwed home in the other brass piece, so firmly securing the cable between two cone surfaces, a perfect mechanical and electrical joint being obtained by finally screwing into place the fibre sleeve. The terminal is connected to the plug through a spring clip action, obtained by double cross saw cuts in the outer brass piece, and an adapter, which can be fixed permanently on the plug. The arrangement is such that the high-tension wires can be readily detached to enable any cylinder of the engine to be instantly tested, the fibre sleeve in addition serving as a locking device for the whole, permitting this to be done without risk of a "short." The terminals are made in four standard sizes to take any diameter of high-tension cable between $\frac{3}{8}$ in. and $\frac{5}{8}$ in.

THE Thornton Engineering Company, of City Road, Bradford, have purchased the Bradford Motor Car Company, of the same town, and the Rosse Motor Car Company, of Saltaire, and will combine the two concerns with their own. Large stocks of cars and accessories will be kept and repair work undertaken.

THE requirements of India in motor-car details have, remarks the "Indian Motor News," long been ignored by the majority of manufacturers at home. It is satisfactory to be able to record signs of improvement in this direction, and the question of magneto ignition is one of the first importance. There can be no doubt that the majority of troubles which have hitherto fallen to the lot of motorists in India have been due to ignition troubles, and in most of these cases accumulator difficulties are prominent. Magneto ignition has become a *sine qua non* for cars in India, and we anticipate that during the next cold weather 90 per cent. of Indian cars will be fitted with magnetos.

A MOTOR car body works is about to be established at Nuneston.

ANOTHER motor meet is proposed to be held at Bexhill on August Bank holiday.

CARLISLE is now included in the list of Ordnance Survey maps published by Mr. T. Fisher Unwin.

MUCH local comment is being made at Leeds about the favour with which the municipal officers regard motor-cars.

THE Parks and Gardens Committee of the Brighton Town Council have restricted the speed of motor-cars travelling through Preston Park to four miles per hour.

THE smart work of the Folkestone Fire Brigade in dealing with an outbreak of fire on the premises of the Folkestone Motors, Ltd., last week, prevented any very great damage being done.

AMONG recent purchasers of S.P.A. cars from Messrs. Hall and Capris, Ltd., are Mr. Leonard Williamson, of Southport, and Mr. G. Grigg, of Cann House, Crown Hill, Devon. The former has acquired a 60-h.p. six-cylinder and the latter a 40-h.p. four-cylinder vehicle.

A TANK, containing 2,000 gallons of motor spirit, exploded on a London and North-Western Railway siding at Birmingham a few days ago. There was a terrific report, and the oil, which had taken fire, was thrown in all directions. The flames shot to a great height, and considerable alarm prevailed in the neighbourhood. Fortunately the lid of the tank was not fastened or the consequences would have been serious. As it was, one man was badly injured and considerable damage was done to rolling stock and other property.

WE are now able to give an illustration of the new two-way switch which, as we stated in a recent issue, has lately been put on the market by Messrs. C. A. Vandervell and Co., of Acton Vale, W. It comprises but two moving parts—the lever and the spring against which it presses, the arrangement being such that the lever is positively locked in each position, so that it cannot be jolted on or off. With the view of rendering the switch dust proof the cover is made to turn with the lever, the size of the slot for the latter being thus reduced to a minimum. While this is certainly a useful feature, it causes the motorist to have to judge by the eye whether the switch is on or off, and we would suggest that a small indication of the “off” and two “on” positions be marked on the fixed disc portion of the switch.

DISAPPOINTMENT is expressed amongst the owners of motor-boats at the lack of encouragement given by the Brighton Aquarium Committee to the proposal to form club premises at the eastern end of the Aquarium Terrace. It is claimed that a number of gentlemen in London would become members of the Sussex Motor-Boat Club if such readily-accessible head-quarters were established, and that Brighton would reap advantage in various ways.

WE have again to chronicle another week of success for the six-cylinder Hotchkiss undergoing a 10,000 miles reliability trial under the supervision of the Royal Automobile Club. Last week the vehicle was subjected to perhaps the severest test yet undertaken, owing to the mountainous roads. In addition continuous wet cut up the surface, so that they resembled cattle tracks. Motorists can judge by the undermentioned programme of last week's runs that the course selected was intended to display the car over most trying country, and again it made an absolutely non-stop run of 980 miles. Appended is a summary of last week's runs:—June 10th, London to Bournemouth, 150 miles; June 11th, Bournemouth to Exeter, 164 miles; June 12th, Exeter, Taunton, Barnstaple and Exeter, 163 miles; July 13th, Exeter to Plymouth, 160 miles; June 14th, Plymouth to Land's End and back, 185 miles; and June 15th, Plymouth to Weston-super-Mare, 158 miles. The total mileage up to date is 7,345. During the present week the car has been working up the West of England, and is due to reach Glasgow to-day (Saturday).

THE Ladies' Quaker City Motor Club has just been formed in Philadelphia, U.S.A.

LORD STANLEY, of Coworth Park, Sunningdale, has placed an order for a 40-h.p. six-cylinder Napier.

THE Duke of Wellington has purchased a 23-h.p. limousine of the Stratford type, with a wheel base of 11½ ft., from the Daimler Company.

MESSRS. ARGYLLS (IRELAND), LTD., have opened a new depot at 121, Old George Street, Cork. The repairing as well as the garaging of cars will be undertaken.

AT the Hastings Automobile Meeting, which is being organised by the A.A. and the Motor Club for Wednesday next, every car displaying the A.A. badge will be admitted free to the enclosure.

The “Automobile” of Milan has sent us a copy of a useful booklet it has just issued under the title “A Catalogue of Catalogues”; it gives brief descriptions of the different cars now being turned out by the rapidly increasing number of motor-car factories in Italy.

MR. R. J. MCREEDY sends the sad news of the mental collapse of Mr. Colman O'Connell, who had assisted at many of the events of the Irish A.C. A fund is being raised by our Dublin confrere in the interests of the wife and family. Those who know Mr. O'Connell will certainly liberally and quickly contribute.

THE latest production of the County Chemical Company, Ltd., of the Excelsior Works, Birmingham, is the Sun Proof tyre paint, a preparation which, when applied to tyres, gives them the appearance of new, whilst at the same time it gives them a coating which in a great measure prevents the injurious effects of sunlight upon rubber, so preserving the life of the tyres.

THE Middlesex Motor Carriage Company, Ltd., are opening a fine new garage at Nos. 1-15, Avenue Close, Poplars Avenue, Willesden Green, N.W., where they will have extensive facilities for garaging cars, and well-equipped workshops for the repair of the same. “Lock-ups” are available for private customers, and the establishment is fully equipped with machinery, vulcanising plant, and opportunities for the charging of accumulators.

CALCULATED to add to the pleasures of touring by car, the new Tabloid tea, introduced by Messrs. Burroughs, Wellcome and Co. should quickly become popular. In this the stem and midrib of the leaf is removed and the remainder compressed into such a small space that tea sufficient for making 50 to 100 cups can be carried comfortably in the pocket. The tea is excellent, and the way in which it is prepared for tourists equally satisfactory.

A NEW combination of battery and coil and low tension magneto ignition for use on motor-cars is being introduced by Messrs. L. E. Wilson and Co., of Imperial Buildings, Cross Street, Manchester. It is known as the Wilson-Birtill twin ignition regulator system, and comprises a battery and a suitably wound coil, which will furnish a spark with the ordinary low tension plug, and a series of special switches, the whole arrangement being contained in a small box fixed on the dashboard.

IN January last Mr. Gretton Mynn fitted the Fastnut Patent Washer to all the bolts on one of the motor-cabs of the Rotary Steering Syndicate, Ltd. It was sent to Scotland Yard and passed by the Chief Commissioner of Police, who approved of the washers. The cab has been running ever since, and on its return to the works last week for overhauling Mr. Mynn personally examined every nut and bolt, and found that in every case the washers had carried out all that was claimed for them by Fastnut, Ltd.

A SMART young trooper in the 16th Lancers recently deserted and visited the works of Messrs. Dennis, Ltd., of Guildford, explaining that he wished to purchase a motor-car. Having selected a vehicle he went for a day's trial, a driver being supplied. The trooper made a round of calls as far as Aldershot. The next day he hired a motor-car from the Pilgrim's Way Motor Works at Farnham, evidently with the idea of having another good day, but was interrupted by the police, who had been communicated with by Messrs. Dennis.

THE SCOTTISH TRIALS.

ON Tuesday next the Scottish Reliability Trials will commence from Glasgow and continue throughout the week.

In a previous issue we gave a complete list of the entries, which number 104, divided into seven classes according to price, as follows:—

Class.	Range of price.	No. of entries.
1	below £200	10
2	£200—£300	16
3	£300—£400	14
4	£400—£500	15
5	£500—£600	20
6	£600—£800	20
7	over £800	9

The action of the committee in dividing the original Class 4 into two is justified by the large entry in the Classes 4 and 5, as seen above.

With regard to the nationality of the cars, the United Kingdom supplies sixty, of which thirty-eight are English, twenty-one Scotch, and one representative of the Emerald Isle, the exact distribution being as follows:—

British	59	French and English	3
French	26	German	2
American	8	Italian	2

Ireland, Austria, Belgium and Holland each supply one car to the entry list.

In Class 1 all the vehicles entered have a seating capacity of two, with the exception of the four-cylinder 15-h.p. Ford, which seats four passengers. Single-cylinder cars in that category are the 10-h.p. Adams, the 9-10-h.p. Cadillac, the 6-h.p. and 8-h.p. Rovers, and the 8-h.p. Jackson.

Among the entries in Class 2 the four-cylinder cars have the majority, although a good showing will be made by two-cylinder vehicles like the Reo and the Buick—both of 18-h.p. The 14-h.p. St. Vincent and the 20-h.p. Imperial will be fitted with Palmer tyres. In this class, too, are entered the 15-20-h.p. Ailsa, 15-20-h.p. Calthorpe, 12-14-h.p. Adams, 14-h.p. Vulcan, 10-12-h.p. Leader, 12-15-h.p. Rex, and the 18-h.p. Mass.

Mrs. Riley will be the only lady driver, and she will appear in Class 3 on a 20-h.p. Belsize. Mr. W. Raikes Bell is responsible for the entry of the 20-24-h.p. Werbell, and some interest will be taken in the performance of the 18-22-h.p. C.C.C. entered by Mr. A. Haygrass. The 12-16-h.p. Vauxhall, the 12-14-h.p. Unic, 15-18-h.p. Swift, and 16-20-h.p. West-Aster are other cars classed in the third division.

Class 4 attracts many famous cars of previous trials, such as the 30-h.p. Beeston-Humber, 16-20-h.p. Sunbeam, 26-30-h.p. Argyll, 18-h.p. Siddeley, 18-24-h.p. Horbick, 24-h.p. Mass, and 18-24-h.p. Austin. Here, too, will be found the only type of steam car in the trial—the 20-h.p. White—and also the 24-h.p. Junior, the 22-h.p. Climax, and the 26-30-h.p. Nordenfelt.

Classes 5 and 6 are responsible for nearly one half of the total entries, and in these categories are such cars as the Siddeley, Berliet, Ariel-Simplex, Straker-Squire, Iris, Vinot, Pilgrim, Ford, West-Aster, Daimler, White, Spyker, Maudslay, Brasier, Porthos, and other well-known makes. There will be four six-cylinder vehicles in the two classes, viz., the 20-h.p. Climax, the 40-h.p. Ford, the 40-h.p. Minerva, and the 30-35-h.p. Simms-Welbeck.

Class 7 is the smallest in number of entries, though the highest in price and power. Here the proportion of six and four-cylinder cars is five to four, the 40-45-h.p. Hotchkiss and 60-h.p. Thames being examples of the former.

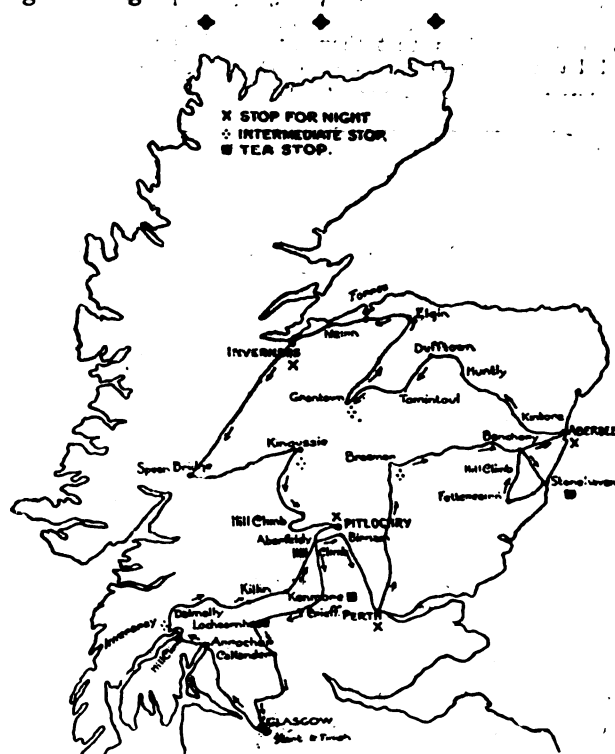

With regard to tyres, we understand that the 18-h.p. Reo will be fitted with removable flanges, the new Arrol-Johnston with Doolittle rims, the 12-16-h.p. Vauxhall with Samson's non-skids, the 30-h.p. Beeston-Humber with Cave rims, the Juniors with detachable rims, the 22-h.p. Berliet with Continental rims, the Gladiators with Jante's "M. L." non-skids, and the 30-h.p. Thornycroft with Vinot rims.

It has been decided that only Pratt's, Shell, Giant and Carburine brands of spirit shall be used, and that the supply must be obtained from the authorised firms each day.

SCOTTISH NOTES.

THE Secretary of the Scottish Automobile Club has received a communication from the County Council of Lanark, stating that representations have been made to the Road Board of that county with reference to the excessive speed at which motor-cars pass through the villages of Stopps, Muirhead, Chryston, Moodiesburn, Mollinsburn, Gartcosh, Auchinlech, Bishopbriggs, Jellyhill, Cadder, Auchinairn and South Lenzie, in the Lower Ward of the county, and asking that the Club would use its influence with its members to prevent any further cause for complaint in this direction. The County Council of Lanark have in various ways and on many occasions shown a friendly attitude towards automobilism, and we would appeal to motorists to see that their request receives every consideration.

THE Great North of Scotland Railway Company are organising tours during the summer months by the Dee, the Don, and the Spey, motor char-a-bancs being employed in conjunction with the railroad to secure for tourists complete trips through the Highlands.

Map of Route of Scottish Reliability Trial.

GIRVAN, Ayrshire, has two new garages. Mr. C. M. Lawson has opened one in Dalrymple Street, where he has a well-equipped repair works, and in the Old Street Mr. R. Dickie has established a repair shop and garage.

THE Council of the Institution of Automobile Engineers has passed a vote of condolence to the family of the late Mr. Alexander Govan, who was their colleague in the direction of the Institution.

THE War Office have appointed Captain Hayter to represent them during the Scottish Trials.

ON the occasion of the recent opening of the Droitwich Brine Baths four Coventry-Humber cars were placed at the disposal of the medical visitors.

THE WOLSELEY MOTOR COMPANY have issued a very interesting little pamphlet giving an illustrated account of the recent Long Distance Trial carried out under the auspices of the Royal A.C. by one of their 40-h.p. Siddeley cars.

CORRESPONDENCE

[Letters to the Editor should be addressed to the offices,
27-28, Charing Cross Road, W.C.]

MOTORING.—A PARTY ASSET.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Particulars have been sent me of a Hastings Automobile Meeting organised, not by local people, but by the Automobile Association and the Motor Club. I cannot understand why these associations—the one formed to clear the roads of police traps and the other to promote the social side of the movement, should be mixed up in this affair. Why should they divert their energies from their useful functions to play with a Borough Entertainments' Association?

Can it be because the local M.P. is also concerned with one of these societies? If so, I object very strongly to anything being done which savours of political favour. The strength of the R.A.C. and the Motor Union in influencing public opinion has arisen from their holding aloof from partisanship and doing nothing which could be construed into assisting party politicians.

Recognising the splendid services already rendered by the Association, and anticipating equally good work from the Motor Club, I write with no spirit of unfriendliness, but would remind the officials of both organisations that they must avoid anything likely to be regarded as assisting to uphold or increase the prestige of local M.P.s.—no matter to what party they belong.

Mr. K. Okura, a Japanese Gentleman and a prominent Motorist in this country, at the wheel of his 120-h.p. Fiat, on which he will compete for the Montagu Cup in the opening meet at Brooklands.

And we may be sure that in such a place as Hastings the incursion of visitors associated with a motor gymkhana will be regarded as a political asset, and that the organisers of such an event will not be held wholly blameless in the matter.—Yours truly,

A.A. MEMBER.

THE DEFINITION OF A TOURING-CAR.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I enclose you copy of letter which I have addressed to the Secretary of the Royal Automobile Club to try and get from them some definition of what is a touring car suitable for their competitions. I trust you will use the influence of your paper to cause the Automobile Club to move in the direction of properly defining what is a touring car, so that everybody may know exactly what they mean, and then in touring car competitions everyone will meet on the same basis.—Yours truly,

S. F. EDGE.

COPY.

J. W. Orde, Esq., Secretary, The Royal Automobile Club,
119, Piccadilly, W.

SIR,—Can your Competition Committee give me any idea of what is a proper car to run in the touring competitions for next season? Is it not possible for them to say some minimum length of wheel base, some minimum weights, or give some indication to manufacturers of what is a touring car and what is not? I have always tried very hard to correctly interpret rules that are made. We are just altering models for next year, and I want to know what is a touring car and what is

not. If I could have some guidance from your committee it would be much appreciated.

I suggest that the Royal Automobile Club would be doing a service to the whole motor trade as well as to private users if they would now lay down what sort of car comes within the definition of a touring car in different sizes, so that everyone can compete on an equality next year in the different events, and that we should not see before us a repetition of apparent inconsistency such as is taking place this year in different competitions. In the Tourist Trophy race, certain conditions are laid down as to what constitutes a touring car, both as to wheel base, minimum weight and size of body. In that race one is allowed to lighten down or do anything in reason provided one keeps within the conditions. In the Graphic Trophy, a touring car there apparently depends on the personal opinion of two or three gentlemen, and all the elaborate conditions laid down for a touring car under the Tourist Trophy rules are swept on one side, and new ones, of which no competitor prior to the event had any knowledge, are apparently brought in to decide what is a touring car and what is not. In the Henry Edmunds Hill climb a similar unsatisfactory state of affairs is also in existence, except that it seems in some way worse, as apparently any sort of fuel is allowed, and competitors can use picric acid, oxygen, or any other illegal aids to speed. Some of the cars are limited in h.p., and others are practically unlimited, and, in fact, it seemed so doubtful as to what one car really developed in the way of h.p. that the R.A.C. itself failed even to rate it.

Now I think you will agree with me that if three events held by the R.A.C. within a few days of one another are so divergent in the application of the rules it is impossible for any would-be competitor to know what type of car he should bring to these events with a reasonable chance of success. It seems to me that if minimum weights, minimum wheel base, minimum height of seats and bodies were settled on, this would give manufacturers an opportunity then of producing, to these sizes, the best possible vehicles for the particular purpose. Any competition which depends upon the individual opinion of gentlemen, however competent, whose opinion is only to be brought into operation at the start of the competition, must be unsatisfactory, whereas, if rules were laid down beforehand, everyone would know what they were, and regrettable incidents would, in the majority of cases, be avoided.—Yours truly,

(Signed) S. F. EDGE.

THE DUST NUISANCE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—You have at various times published a number of articles on, and references to, the question of dustless roads. Experts are agreed that if a waterproof road could be made with granite as the aggregate, most of the difficulties as to efficiency and cost would be solved. There is nothing to equal granite for durability, but the great trouble so far has been in finding a matrix which would permanently bind it. Were this forthcoming, we should have a road which would compare with asphalt as to the length of life and easy haulage, and yet be non-slipping and far quieter, while the cost would compare with that of ordinary macadam, owing to the principal ingredient being the same, viz., granite. But that difficulty of the matrix has been hitherto insuperable. Resort has always been made to tar, but no previous treatment of tar has yet succeeded in getting it to bind granite for any length of time, and, in addition to that failing, tar has certain inherent defects which must be eliminated in order to make it suitable for road construction. For instance, it becomes soft in warm weather, brittle in cold, and makes a dangerously greasy compound in wet weather, while tar-impregnated dust on road surfaces is more harmful than that given off from ordinary macadam. So completely has tar, as previously treated, failed to bind granite, and so complete has been the failure to find a better matrix, that, in despair, granite has been thrown overboard. There is no doubt that road-makers will be compelled to return to granite, for only that material will permit of better roads being constructed for heavy traffic, at less total cost than those now in vogue (by means of the reduced maintenance charges over a greater life). Palliatives, such as tar painting or other methods, and inefficient waterproof macadam, will simply add enormously to the rates instead of reducing them, and will not provide better roads.

That a waterproof road with a granite aggregate is even now available is proved by reference to the States. Such roads have been in existence there for years, and to-day total a mileage of many hundreds, in many cities from north to south and east to west, standing extremes of climate far in excess of any we have here, proving exceedingly durable under heavy traffic, non-slipping on gradients of one in nine, perfectly dustless and mudless, and at a cost within the means of the humblest road authority.—Yours truly,

CHAS. F. VAUGHAN.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have devised an apparatus for the prevention of dust raised by motor-cars, developed on the following data:—

First.—I recognise that the wheels of motor-cars are the great dust raisers, and that they throw out the dust in three directions, viz., two side splashes or mere displacement.

Second.—And to my view the most important point, that they throw out the dust at a tangent equal to about the diameter of the

wheel (a simple experiment proves this) and that the wheels throw this dust against the inrush of air that the body of the car naturally makes when in motion. That is to say, in simple colloquial language, the dust is thrown in the teeth of the wind, with the result that we all know so well.

Third.—That the body of the car raises a certain amount of dust, but not to the extent of the wheels. This dust is raised by mere displacement and not thrown against the inrushing air, as is the case with the wheels.

Fourth.—That it is the whirlwind of air caused by the car's motion that causes the dust cloud to be formed from the dust raised by the car and its wheels, not from the dust left on the road.

With these few data I have developed my contrivance, which consists of an apparatus for the collection of the dust thrown up by the car and wheels; and also for compressing the air under the body of the car and forcing it against the inrushing air so as to counteract that inrush, and in this way prevent the vortex (or whirlwind) taking place in the dust raising-area, which I consider to be the space the car occupies at any given moment when in motion and a few feet to the rear of the car, due to the wheel force which I described above. The apparatus itself is of very simple construction, and not expensive to make, and all that I lack is the opportunity of thoroughly testing the contrivance, and I shall be glad to hear from any persons who possess motor-cars and are sufficiently instructed in this subject to give it a thorough and practical testing.—Yours truly,

WILLIAM BUTTERLY.

coupled with the fact that the steam car on this occasion defeated the successful car in the Henry Edmunds Trophy, for which he was so disappointed a competitor.—Yours truly,

W. GALLOWAY.

CHARGING ACCUMULATORS FROM PRIMARY BATTERIES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—In a recent issue a correspondent gave his satisfactory experiences of the use of a Boron battery for charging accumulators. I have used one of these for a long period but with varying results. Originally it was very satisfactory, but latterly has caused me trouble through not charging properly. If your correspondent can give me any hints I shall esteem his kindness. It always gets the same treatment, viz., 4 oz. chromic acid, powdered, is mixed with 4 oz. (measured) commercial sulphuric acid; this is put in the outside jar and filled nearly to the top with ordinary tap water. The porous pots are filled with 1 oz. commercial sulphuric acid and 11 oz. water. The battery will probably charge the first accumulator all right, but then falls off and fails to charge properly. I am told the battery should keep good for weeks, but after about twenty-four hours the liquid gets olive green, which I am told is an indication that the battery is exhausted, although it has done very little work. Can any of your readers help? The last time I attempted to charge 2-20 amp. car accumulators and 2-10 amp. cycle accumulators (not at

The Herkemer Touring Trophy Competition.—The Speed Trials in the Forstenrieder Park, near Munich.

STEAM CARS IN HILL CLIMBING COMPETITION.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I am diffident about criticising any of your correspondents, but the letter in the last issue of the *M.C.J.* from Mr. L. Carle, of the Moss Company, appears to call for an answer. Having no interest whatever at stake in the Henry Edmunds Trophy, I am struck with the totally one-sided and unsporting view that your correspondent takes. His unfairness is particularly noticeable when he says that "A steam car, with the aid of a specially large boiler, which would be quite unsuitable for an ordinary touring car, can obtain a very big head of steam, which will enable the car to rush up a short hill at a very high rate of speed." I was not a spectator of the contest, but I read that the only steam car present was a 30-h.p. White, which, whatever may be the opinion of Mr. Carle, has only very recently proved itself fairly suitable, to say the least of it, for a touring run of a magnitude which no one could find fault with. Either the 30-h.p. White steam car is more suitable for ordinary touring than Mr. Carle thinks, or the car in question must have been fitted with a specially large boiler for the particular occasion. Mr. Coleman could perhaps re-assure your correspondent. If Mr. Carle has no positive information that the White steam car was so fitted, the suggestion appears to me a very improper one.

Steam cars were also admitted in the hill climb conducted by the North Eastern A.A. on Saturday, in which case I am in a position to guarantee that the steamers there competing were not fitted with specially large boilers, but were standard models exactly as may be seen in various parts of the country. This may interest Mr. Carle,

once, of course) they all showed 4½ volts on coming off, lasted a week or two, and then all failed practically together, leaving me stranded on two occasions.—Yours truly,

ENQUIRER.

POLICE TRAPS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I saw a letter in one of the motor papers some few weeks back advocating a method by which police traps could be broken up, the idea being that a motorist on being caught should retrace his steps to some convenient position behind the trap, and there remain until some other car came along, when it in its turn should do its duty as sentry.

It may interest your readers to know that on returning from the Bexhill meeting, after having been warned that a police trap was in existence between Horsebridge and Uckfield, on the road known as the Dicker, I found a car waiting at the end of this road, the driver of which acquainted me with the fact that a motorist had been caught and had set this method in operation; they having done their share of sentry work, requested me to do the same, which I was most pleased to do, and, accompanied by another car, with which I was travelling, we waited until another car came along, driven by Mr. Warwick Wright; he then took his turn, and we proceeded slowly along; we were thus enabled to discover two guardians of law and order, one being in uniform, quietly reposing behind a hedge, they being at the end of the trap, and we also found the electrical timing apparatus. Soon after discovering this we decided it would be of interest to discover where the

trap started, and on retracing our steps we met Mr. Warwick Wright and his party, who informed us that they had actually done this, the officers being hidden behind a thick clump of trees on private grounds, and their position being such that it would have been impossible for them to see any car passing, and it was therefore assumed that they had to judge the time by hearing only as the cars passed. Our party decided to wait for some time, as we thought that other motorists might like to see what we had found, and after waiting about three hours a message evidently came that the trap was to be abandoned, the uniformed men came out of their lair, and one of them told me that I had been waiting about long enough. We had an interesting conversation with them, in the course of which we learned that a motorist had endeavoured to break up the trap by driving through it blowing a policeman's whistle, but, as they were on special duty, they took no notice of this whistle; in fact, the sergeant in charge of the party informed me that if one of our party was being murdered and we blew a policeman's whistle for aid they would have taken no notice of it.

We were informed that a certain resident was the instigator of this trap, it being laid entirely on his grounds, and he allowed his private servants to assist. It was very evident to me that the villagers residing there were disgusted, as we were constantly being warned by them in various ways to drive slowly, as this unsportsmanlike method of trapping was in operation. I think if this method of breaking up traps were universally adopted we should hear no more of them.—Yours truly,

S. W. PHILLPOTT.

THE TREND OF CAR DESIGN.

To THE EDITOR OF *The Motor-Car Journal*

SIR,—“J. H. R.’s” letter in a recent issue of the *M.C.J.* raises a point of the utmost interest to present and prospective motorists and

Bougier on the De Dietrich Car on which he finished thirteenth in the Kaiser's Prize Race.

manufacturers. We should like to voice our opinion that the craze for high powers and speeds is on the wane, although the principles of car design will not alter much in the future. The evolution of the car to its present state is due to the demands of motorists. These seem to be fairly satisfied now by a high-class vehicle, moderate in price, power and fuel consumption, capable of from 5 to 40 m.p.h. on top and of tackling a hill of 1 in 8 at say 18 to 20 m.p.h. In future we think more attention will be paid to the comfort of the passenger, such as the extended use of foot warmers and draught preventers, rather than to additional mechanical refinement. Four cylinders, ball bearings and a live axle have won the battle for anything under 20-h.p., and such a car, simple and reliable in construction, easy to control and drive, is, in our opinion, what the man in the street is after.—Yours truly,

VAUXHALL MOTORS, LTD.

LIVE AXLE v. CHAIN DRIVE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I am glad to see that the above-mentioned subject, about which I addressed a letter to you some months since, is engaging the attention it deserves. The opinions of some of your correspondents are interesting, but the partisans of chain driving generally seem to forget that live divided shafts are as necessary in that form of construction as with the live axle. The fact should not be overlooked that an increasing number of French firms are using live axles in their high-powered racing chassis, yet the cars they offer to the public are chain driven.

From reading the correspondence some would appear to believe that because in a locomotive running on a smooth track the driving and weight are taken on one heavy cranked axle, it is just as good practice in motor-cars which have all the shocks of the road to withstand. This is quite an erroneous view, which should be expelled from the minds of theorists. In the majority of live axle cars the driving gear is subjected

to all the vibration and strains that can only be taken satisfactorily by a solid steel stationary axle. My experience and study of the question have shown me that a transmission system embodying such an axle without the use of chains is, under, certain important conditions of construction, mechanically perfect.—Yours truly,

E. H. OWEN.

THE TOURIST TROPHY AND HEAVY CAR RACES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—As a cycle manufacturer the result of the two races lately held in the Isle of Man has been a source of much satisfaction to me, as I believe it has been to others in the cycle trade. I have often heard it said that motor-car construction was the province of heavy engineering works rather than that of cycle manufactories. Such erroneous ideas should now be once and for all dispelled, as the winning cars in both of the events were the production of firms which had previously made their mark in the cycle manufacturing world.—Yours truly,

MIDLANDER.

THE FUTURE OF THE TOURIST TROPHY RACE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—With reference to the suggested six days' race in lieu of the tourist trophy, I certainly think that the best test of cars would be one on the lines of the Scottish Reliability Trials, to be concluded by a speed test over some course such as the tourist trophy. This would test any car severely, and one slight mishap, such as tyre troubles, would not necessarily lose the competitor the prize, as in the present instance it practically would do.—Yours truly,

R. GOODENOUGH.

LONG DISTANCE RELIABILITY RECORDS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I am in no way inclined to discount a run of 10,000 miles on any car, and the recent achievement, which at present is so extensively advertised by a certain firm is quite a creditable one, but when one finds that over thirty-three hours—no doubt of feverish haste and legitimate preparations beforehand—were spent in repairs and replacements, it surely becomes somewhat of a farce to call this a record, and I should say the less said about it the better. I know of cars, and your readers must know of many more, which have run 10,000 miles with very much less time spent on repairs than this so-called record car.—Yours truly,

HERBERT S. WATSON.

THE MOTOR ACCIDENT ON SUNRISING HILL.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Owing to many papers having announced that the car which met with the accident was hired from an Oxford garage, I have a great many enquiring if it was one of my cars.

As I have been hiring out motor-cars now for more than nine years' and keep a large stud, this report may injure my business, so I shall be obliged if you will insert this letter informing the public that it was not one of my cars, neither has the driver ever been in my employ.—Yours truly,

A. F. PARKER.

WATER CIRCULATION TROUBLES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to Mr. C. Booker's letter in a recent issue of the *M.C.J.*, the water connections, in this instance, are according to usual practice, and if the pump is working and the connections free, should prove efficient. I should be inclined to think that the cylinder was foul, as this, in many instances, is the cause of overheating. If the cylinder is dismantled and thoroughly cleaned, no doubt a great improvement will be found.—Yours truly,

J. H. T.

THE Acre Rubber Company, Ltd., 58, High Street, Bloomsbury, W.C., are the makers of the Arco flint proof tread, about which a correspondent inquired last week.

A LANCHESTER wheel cap has been picked up in Kensington High Street; it can be obtained by applying to the Century Motor Company, Ltd., Holland Gate, Kensington High Street, W.

THE GERMAIN RACERS FOR THE GRAND PRIX.—Capt. Masui writes that the Germain cars are fitted with engines of only 35-h.p., the bore and stroke being 102 mm. by 110 mm., and the normal speed 1,800 revs. per min. “Of course, with such a small car the Germain works do not expect to win the race, but are endeavouring to prove the reliability and regularity of their manufacture.”

THE TOURIST TROPHY RACE.—Mr. P. R. Lamb, of Messrs. West, Ltd., writes:—“I have noticed in several journals the report published that my West-Aster car (No. 23) in the Tourist Trophy Race retired owing to a nasty side-slip on Snaefell. This was not the case; I retired on completion of the third round owing to mud clogging the gate gear selector bars, which were exposed owing to the dust shield having been removed early in the week for the sake of clearance. In other respects the car ran splendidly, never suffering damage of any description, and has since been continually on the road.”

CLUBS AND ASSOCIATIONS

AUTOMOBILE ASSOCIATION.

GREAT preparations are being made at Hastings for the Automobile meeting there on Wednesday next, which is being organised by the Automobile Association and the Motor Club. All the motoring visitors to the town on that day are invited to follow in the procession which starts from Warrior Square at 11 a.m. sharp. Several valuable prizes have been offered by prominent local residents.

DERBY AND DISTRICT AND MID-STAFFS. AUTOMOBILE CLUBS.

ON Saturday last a hill-climbing contest for the possession of the newly-established Uttoxeter Challenge Cup took place on the hill between Marchington and Uttoxeter.

The cup has recently been obtained mainly through the efforts of the members of the Derby A.C. residing in Uttoxeter and district, and is to be competed for annually.

The Derby Club extended an invitation to the members of the Mid-Staffs A.C. to take part in the competition. The former club were also presenting silver and bronze medals to the winner of the cup as adjudged by the R.A.C. on their formula, and to the runner-up respectively, while a silver medal was also given to the driver making the fastest ascent.

In addition to the cup contest, a handicap competition was afterwards held, the start each car received being based upon the times made in the former contest. Silver and bronze medals were also given by the Derby A.C. to the winner and runner-up in the final heat of this competition.

Appended are particulars of the competitors and the times made in the run-up for the cup:—

	M.	S.
F. A. Bolton (45-h.p. Daimler)	—	50
Arthur Ford (30-55-h.p. Daimler)	—	59
J. Keele (30-h.p. Belsize)	1	13
H. Ford (24-40-h.p. Bianchi)	1	20
C. T. Leech (18-22-h.p. Daimler)	1	32 4-5
R. Ford (12-16-h.p. Clement-Talbot)	1	40
L. P. Mell (15-h.p. Darracq)	1	41 1-5
Miss E. A. Southam (12-16-h.p. Clement-Talbot)	1	43
C. E. Riley (18-22-h.p. Daimler)	1	52 1-5
G. F. Brindley (12-14-h.p. Clement-Talbot)	1	53 3-5
R. G. Meade (12-14-h.p. Clement-Talbot)	1	54 4-5
G. B. Fletcher (10-12-h.p. Humber)	1	56 2-5
Spencer Downing (10-h.p. Alldays)	1	59
H. Jefferson (10-12-h.p. Humber)	2	1 3-5
G. F. Reading (10-12-h.p. Wolseley)	2	14
Alan Ford (8-h.p. Bravier)	2	25 1-5
A. M. Chambers (6-h.p. De Dion)	2	30 2-5
H. W. Eaton (12-14-h.p. Swift)	2	40
W. Smith (8-h.p. Rover)	2	53 4-5

It will thus be seen that Mr. F. A. Bolton (president of the Derby A.C.) takes the silver medal for fastest time on his 45-h.p. Daimler, this notwithstanding the fact that Mr. Bolton only took possession of his new mount late the previous evening.

The times made in this contest, together with the horse power of the cars and other measurements, will be forwarded to the Royal Automobile Club, who will decide what are, in their opinion, the two best performances.

In the handicap competition several excellent ascents were seen.

In the semi-final, heat 1 was won by R. Ford (12-16-h.p. Clement-Talbot), scratch; C. E. Riley (18-22-h.p. Daimler), 12 sec. start, being second. Heat 2 was won by R. E. Meade (12-14-h.p. Clement-Talbot), with 21 sec. start; C. T. Leech (18-22-h.p. Daimler) scratch, being second.

In the final R. Ford (12-16-h.p. Clement-Talbot) scratch, was first.

The trials were witnessed by far the largest number of spectators ever seen at a hill-climbing contest held by the Derby A.C., and it was most encouraging to the officials of the clubs that the meeting aroused so much interest in the neighbourhood. The starters were Messrs. E. H. Fryer, and L. P. Mell; timekeepers, Mr. Chas. J. Allin (hon. sec. Derby A.C.) and Mr. P. E. Joule (assist. sec. Derby A.C.); marshals, Messrs. A. E. Chambers, Arthur Ford, Alan Ford, H. Ford, and R. Ford; clerks of the course, Messrs. C. T. Leech, H. P. Huggins, A. H. Collumbell, and J. Cornes-Nevitt (hon. sec. Mid-Staffs club).

MANCHESTER MOTOR CLUB.

THE speed judgment test of the Manchester Motor Club was spoiled on Saturday last by the inclement weather, rain falling the whole of the time. The meet was arranged for the Kilton Arms, Hoo Green, and a

course of fifteen miles had been mapped out via Lostock Gralam, Allostock, to Lower Paover. A speed of eighteen miles per hour was given, and the driver covering the distance nearest that rate of speed was to be declared the winner. The conditions differed slightly from those of previous occasions, and in lieu of being divested of all timing apparatus an observer accompanied each car. When the calculations were made at the close of the contest it was found that Mr. A. Foxwell Gray (10-h.p. Alldays) had nearest approached the given time, with Mr. J. H. Bennett (15-h.p. Humber) second, and Mr. G. Charlesworth (10-12-h.p. Clement-Talbot) third. Nine cars competed.

THE COMMERCIAL MOTOR USERS' ASSOCIATION.

A MEETING of the Executive Committee of the Association was held on the 12th inst. The action of the Paddington Borough Council with regard to noisy motor traffic was considered, and Mr. S. D. Gilbert promised to draft out counter petitions for users and ratepayers and send in to the secretary. It was resolved, should the matter become urgent, that a special Executive Committee be called.

Mr. F. C. A. Coventry reported as to the trials, and stated that the Association had been invited to nominate five judges to serve at these trials. It was resolved that Dr. H. S. Hele-Shaw, Messrs. F. C. A. Coventry, W. G. Lobjoit, Douglas Mackenzie, and H. Thomson-Lyon should be nominated. The action of the Westminster and Southwark Highway Authorities as to the damage caused to the roadways by the oil and petrol from motor-omnibuses was considered, and the action of the police in enforcing traps to be fixed was reported.

It was resolved that a special cup should be offered in connection with the commercial vehicle trials, to be awarded for cleanliness in respect of the dropping of oil, to be known as "The Commercial Motor Users' Association Cup for Absence of Oil-droppings." It was reported that an enquiry had been received from Messrs. Bass, Ratcliffe and Gretton stating that they had found a difficulty in keeping empty casks on their petrol lorries, and asking whether other brewer members of the Association had been faced by a similar problem. These were

The 40-h.p. Siddeley side-entrance Double Phaeton recently supplied by the Wolseley Company to the Duke of Devonshire.

circularised, and it was found that several firms used nets over the load. It was suggested that probably a double set of springs, one set for use when the vehicle was carrying full casks and the other when carrying empty casks, might meet the difficulty.

SOUTHERN.

A START will be made at 2 p.m. to-day (Saturday) in the open hill climbing contest on Captain Kydd's Hill, near East Grinstead. The headquarters of the Southern Motor Club for the meet is at the Dorset Arms Hotel, East Grinstead, and the secretary of the contest, Mr. S. W. Phillpott, will be distinguished by his crimson rosette.

We have been notified of the following entries:—

CLASS 1.—For touring cars whose cylinder diameter in inches squared and multiplied by the number of cylinders is under 35. 6-h.p. Rover, 8-h.p. Rover, 8-h.p. De Dion, 9-h.p. Sizaire et Naudin, 9-h.p. Riley, 10-h.p. Alldays, 9-h.p. Riley, 10-14-h.p. Gregoire, 9-10-h.p. Cadillac, 8-10-h.p. Darracq, 10-12-h.p. Darracq.

CLASS 2.—For touring cars whose cylinder diameter in inches squared and multiplied by the number of cylinders is 35 and under 50. 12-16-h.p. Clement-Talbot, 12-16-h.p. Talbot, 12-16-h.p. Vauxhall, 14-h.p. Lindsay, 14-h.p. Vulcan, 14-h.p. Vulcan, 16-20-h.p. West Aster, 18-h.p. Osterfield.

CLASS 3.—For cars whose cylinder diameter in inches square and multiplied by the number of cylinders is 50 and under 75. 20-h.p. Belaise, 24-h.p. Deasy, 24-28-h.p. Metallurgique, 18-h.p. Malcolm, 12-h.p. Vici, 20-h.p. Arrol Johnston, 18-h.p. Germain, 25-35-h.p. Gladiator, 24-h.p. Minerva, 24-h.p. Minerva, 20-30-h.p. Florentia, 16-24-h.p. Vinot, 24-h.p. Martini, 15-h.p. Clement-Talbot, 20-h.p. Clement-Talbot, 16-20-h.p. Rover, 20-h.p. Miesse Petrol, 14-h.p. Thornycroft, — Standard, 18-28-h.p. Clement, 18-h.p. Darracq, 18-h.p. Darracq.

CLASS 4.—For touring cars whose cylinder diameter in inches squared and multiplied by the number of cylinders is 75 and under 100.

24-h.p. De La Buire, 25-h.p. Straker Squire C.S.B., 30-h.p. Lindsay, 25-h.p. Austin, 30-40-h.p. Daimler, 30-h.p. Thornycroft, 45-h.p. Mors, 40-h.p. Napier.

CLASS 5.—For touring cars whose cylinder diameter in inches squared and multiplied by the number of cylinders is 100 and under 150. 35-h.p. Iris, 35-h.p. Daimler, 40-h.p. Gracile, 35-h.p. Daimler, 45-h.p. Thornycroft, 30-35-h.p. Brooke, 60-h.p. Napier, 40-h.p. Gobron Brillié.

CLASS 6.—For lady drivers only. (Cars must be eligible to compete in classes 1, 2 or 3.) 6-h.p. De Dion, 24-h.p. Deasy, 6-h.p. Wolsley.

CLASS 7.—For cars actually run in, entered and accepted for the Tourist Trophy race of 1907. 20-h.p. Rover*, 16-20-h.p. Rover, 24-28-h.p. Metallurgique, 16-20-h.p. West Aster, 18-h.p. Darracq, 25-h.p. Arrol-Johnston.

* The winner of the 1907 race.

LEICESTERSHIRE.

THE members of the Leicestershire Automobile Club on Saturday placed a number of cars at the disposal of the Leicester Guild of the Crippled for the purpose of taking some of the cripples for a short motor run. A start was made from the Bishop Street Schools with ninety cripples and their helpers in thirty cars.

The destination was Queniborough Hall, near Syston, and the route thither was via Belgrave, Birstall, Wanlip, to Syston. Tea was provided by their host, Mr. H. W. Reynolds. This was followed by a few brief speeches, in which it was stated that the example of Mr. A. MacAlpin (the secretary of the Automobile Club), in arranging the cripples' outing was being followed by motor clubs in other towns. The return journey was through Syston and Thurmaston, but the rain came down in torrents. Most of the cars had hoods and covers, which were much appreciated, and those in the open cars were well supplied with wraps and waterproofs. Despite the weather, everyone was happy. Amongst those who kindly lent cars were Messrs. Sutton, J. Bennett,

Mr. W. A. McCurd at the wheel of his 24-h.p. Minerva.

P. Baker, Dr. H. W. Bereham, J. A. Doran, A. L. Hewitt, G. H. Wait, Herbert, Captain Byron, J. A. Harper, Jackson, Harding, H. E. Barran, A. B. Partridge, J. Frisby, R. Daniels, W. Cox, Dr. Patrick, W. Bentley, Gipson Clarke, Major Robinson, Dr. Scoot, Dawburn, Earp and A. MacAlpin.

EDINBURGH M.C.

THIS club met on Saturday last for its annual hill climbing competition up Soutra Hill. There were twenty-six entries, all arriving at the starting point. There were three gold medals and a silver cup, the latter presented by the Humber Company for the best time for a Humber car, which was won by Mr. J. S. Honeyman on his four-cylinder 30-h.p. Humber. Another winner in his own class was Mr. John Graham on his Daimler. Mr. Stirling Paterson on his Ariel made the fastest time—3 min. 47 sec. In the two-cylinder class Mr. John Robinson (Peugeot) was awarded the third gold medal. The climb was run in a downpour of rain, though the weather was fine both before and after the competition.

IPSWICH AND EAST SUFFOLK.

ON Saturday, at Lawford Hill, near Manningtree, the Ipswich and East Suffolk A.C. held a successful hill climb, forty-three out of fifty-four entrants actually taking part in the event. Unfortunately the weather was very unfavourable. Rain fell heavily in the morning and continued for two hours without intermission, making the task of climbing the hill less easy than it would have been. The cars had to be weighed with their passengers at Manningtree, and facilities for this necessary preliminary were provided by the G.E.R. Company. Shortly before two o'clock the sky cleared considerably, and as the cars took their places in readiness there were hopes of a fine afternoon. The vehicles were drawn up in a long line behind the starter, Mr. L. H.

Vulliamy, who had the assistance of the police in preserving a clear course, while a constable was also at the other end, where Lieut. Col. Carthew was in charge as judge and official timekeeper, with Mr. A. E. Newby, who made the timing apparatus, as assistant. The road on the north side of the hill was lined with spectators, thanks to the kindness of Mr. Richardson and Mr. Ogilvie in allowing them to enter their fields. Mr. W. H. Scottorn kindly lent his motor for use as Secretary's office. Mr. W. G. Fisk marshalled the cars at the start, and Mr. C. K. Moseley looked after them at the finish. The following is the result, the time given being the number of seconds above the fastest time, which is represented by 0:—

Ladies' Class.—Miss Rainer 1, Mrs. Egerton 2.

AMATEUR SECTION.

CLASS 1.—W. Reed Hill, De Dion, 57 4-5 sec., 1; C. K. Moseley, De Dion (driven by J. Gorham), 59 1-5 sec., 2.

CLASS 3.—J. Gordon Stewart, Talbot, 0 sec., 1; E. L. Rowe, Humber, 20 sec., 2.

CLASS 4.—D. Hepworth, Humber, 30 1-5 sec., 1; J. Grey, Winton, 27 sec., 2.

TRADE SECTION.

CLASS 1.—C. D. Castell, Talbot, 43 sec., 1; F. Scottorn, Rover, 43 1-5 sec., 2.

CLASS 2.—C. R. Garrard, Talbot, 9 2-5 sec., 1; H. C. Gooding, Singer, 29 3-5 sec., 2.

CLASS 3.—E. Marriott, Talbot, 5 1-5 sec., 1; J. R. Egerton, De Dion, 15 3-5 sec., 2.

CLASS IV.—C. R. Garrard, Talbot, 6 sec., 1; Mawdesley Brooke, Brooke (driven by A. E. Andrews), 17 4-5 sec., 2.

CLASS V.—Mawdesley Brooke, Brooke, 0 sec., 1; W. H. Astell, Orleans, 3 sec., 2.

Mr. A. Gordon Stewart won the prize offered by the committee for the best performance in the amateur section, and Mr. E. Marriott won the prize for the best performance in the trade section, Mr. Mawdesley Brooke, however, doing the fastest time.

The first in each class received a silver medal and the second a bronze medal.

The next club competition is the speed trial at Sudbourne Park on the 13th prox., by permission of Mr. Kenneth Clark, for which special arrangements are being made by the hon. secretary, Mr. Gordon Stewart.

SOUTHEND AND DISTRICT.

THE principal club run of the season of the Southend and District Motor Club took place on Sunday, when members and their friends were the guests of Captain Newman, J.P., D.L., and Mrs. Newman to lunch at the Cups Hotel, Colchester. The party numbered nearly fifty. The event proved a most successful one and was even favoured by ideal weather, there being practically no dust. Captain Newman pointed out, in reply to the toast of his health, how gratifying was the success so far attained by this young club, which in practically seven winter months, in a most unsuitable motoring centre such as South East Essex is, had enrolled fifty-four members, including twenty-two car members and twenty-five tri-carists and motor-cyclists. After a most enjoyable gathering the party returned home rather carefully, for the police trap at Lexden, just outside Colchester, was still in working order. The hon. secretary of the club is Mr. A. Warnery, "Chalet Suisse," Baxter Avenue, Southend-on-Sea, Essex.

NORTH-EASTERN A.A.

ON Saturday last the North-Eastern Automobile Association held its annual hill climb on Ragpath Side, Lanchester. This hill is about seven miles from Durham, and is probably the steepest gradient in the North of England. The total length of the hill is exactly half a mile, with a rise of 233 feet, giving an average gradient of 1 in 11.3, the worst part of the hill, near the top, being 1 in 5.3 for a distance of about forty yards.

The hill is beautifully situated from a spectator's point of view, the whole of the course from start to finish being visible from the hill side, where many thousands of spectators were grouped.

The weather was favourable on the whole, and a fairly strong west wind tended to help the competitors up the hill.

The organisation of the competition was in the hands of a special committee appointed by the Association, consisting of Dr. McHaffie, hon. sec. of the Hill Climb Committee, Messrs. Haggie, Taylor-Smith, Dr. Buckham, Natrass, Wood and Newall, also the chairman and secretary of the association, Captain Streatfeild and Mr. Hodgkin. Capt. W. C. Blackett, the chairman of the Durham section of the Association, acted as judge, and the timekeepers appointed by the R.A.C. were Messrs. C. P. Glazebrook and T. D. Dutton. Mr. J. E. Hodgson, hon. sec. of the Association, acted as chief marshal in bringing the cars up to the start, and the actual starting of the cars was done by Mr. Glazebrook, one of the timekeepers.

In addition to the usual method of timing by synchronized watches, a telephone was installed at the start and finish, by which the results were checked, Mr. Glazebrook holding the transmitter in his hand and shouting the word "Go" through the instrument, so that the start was notified at the top of the hill the same moment as at the bottom.

Very valuable assistance was rendered by a staff of police under Superintendent Murphy and Inspector Dryden, and, in spite of the fact that there were between 5,000 and 6,000 spectators present, no accident of any kind occurred during the afternoon.

There were nine classes, the first two being for motor-cycles and the remainder for motor-cars.

The results of the competition could not be prepared on the same day, but the fastest time was made by W. E. Galloway, on a 15-20-h.p. Stanley steam car, his time plus X being 1 min. 15 2-5 sec.

The results are given below:—

Class.	Time.	
	M.	s.
1. No motor-cycles finished.		
2. C. B. Grimshaw (8-h.p. Grimshaw motor-cycle)	1	21 4-5
3. Dr. Patterson (10-h.p. Alldays)	2	48 2-5
4. W. Olliff (12-14-h.p. Singer)	2	22 2-5
5. S. Davies (Isotta Fraschini)	2	21 2-5
6. George and Jobling (18-h.p. Siddeley) ...	2	25 3-5
7. Mrs. Galloway (8-h.p. Stanley)	1	35 3-5
8. Arrol-Johnston Company (16-25-h.p. Arrol-Johnston)	1	59 2-5
9. E. W. Leather (40-h.p. Berliet)	1	33 1-5
10. S. F. Edge (40-h.p. Napier)	1	36 3-5
11. W. E. Galloway (15-20-h.p. Stanley) ...	1	15 3-5
12. G. S. Barwick (35-h.p. Daimler)	1	25 2-5
13. S. F. Edge (60-h.p. Napier)	1	17 4-5

NEW FOREST A.C.

ON Thursday next, the 27th inst., a hill climb is being organised at Stoney Cross, in the New Forest, under the auspices of the New Forest Automobile Club and Hampshire Motor Union. Several prizes are being offered in connection with closed competitions. There will also be two open classes for cars, one the list price of which is £400 and under, and the second for cars of which the list price is over £400. Mr. C. J. Heydon, of Westover Chambers, Bournemouth, is the hon. secretary of the meeting.

MOTOR C.C.

THE Motor Cycling Club held a contest for the Rover Cup on Saturday, starting from Uxbridge and going by way of Oxford, Chipping Norton and Evesham to Worcester, a distance of ninety-five miles. The return journey was via Tewkesbury, Gloucester, Oxford, Henley and Slough, back again to Uxbridge, 122 miles. The time allowed for the out and home journeys was five and six hours respectively. The conditions of success were to make two non-stop runs and arrive at Worcester and Uxbridge as near as possible to the allotted time.

The start was made in a rainstorm and the weather was most unpleasant throughout the day. Several vehicles made non-stop runs, but we await the committee meeting of the club to give the official announcement of the result.

The following were the starters:—Messrs. J. Van Hooydonk, 8-h.p. Phoenix; R. O. Clark, 9-h.p. Sizaire et Naudin; P. L. D. Perry,

The Royal Starling Car lately supplied to Lieut. Bastard, of Bhurtpore Barracks, Tidworth, Hants.

The car is fitted with a 10-h.p. two-cylinder engine and a gear-box giving three forward speeds and a reverse; the transmission is by a cardan shaft and bevel gear to a live axle. Ball bearings are used to all parts except the engine.

In Classes 5, 6, 7, and 8 the first-named is the first of the closed entries, the second of the open.

The handicap results are not known yet, but the challenge cup presented by the N.E.A.A. has been won for this year by Mr. W. E. Galloway.

THE AUTOMOBILE ASSOCIATION OF BENGAL.

THE annual meeting of the Automobile Association of Bengal was held on March 27th, when the following officers were elected by the committee. The Hon. Mr. G. Gordon was elected chairman in place of Mr. C. J. Stevenson, retired. Mr. J. E. Oakley was re-elected vice-chairman, and Mr. E. J. Sanor secretary. The work done by the Association during the past year has been of a varied nature and many matters of interest to motorists have been dealt with to the material advantage of all concerned. Many improvements in the roads near and round Calcutta have been made, notably in that running from the Tollygunge Club through the Steeplechase course to Gurriah and thence to Ballygunge, which was entirely remodelled during the rains, so that it is now possible to motor in comfort along this road, instead of running the risk of a broken axle as hitherto. On the Grand Trunk Road out to Barrackpore all the level crossings have been made smooth and the bad portions of the road repaired. Similar action has been taken with regard to the Grand Trunk Road from Howrah to Serampore.

15-h.p. Ford; J. Browning, 9-h.p. Riley; H. A. Bates, 15-h.p. Ford; F. W. Peckham, 12-14-h.p. Maxwell; E. H. Antony, 15-h.p. Ford; J. Platt Betts, 8-h.p. Rover; E. March, 8-h.p. Rover; J. S. Harwood, 8-h.p. Rover; C. W. Brown, 8-h.p. Rover; O. L. Bickford, 15-h.p. Ford; E. R. Folker, 8-h.p. Rover; F. J. Jenkins, 16-20-h.p. Rover; R. C. Davis, 12-h.p. Enfield; W. Perks, 12-14-h.p. Singer; W. V. Jolly, 8-h.p. De Dion.

SHEFFIELD.

SATURDAY—wet and fitful throughout the country—was the day of the hill climb of the Sheffield and District A.C. at Grindleford. Twenty-seven entries had been received for the three events of the meeting: (1) Open to all members; (2) open to members unconnected with the trade; (3) for single-cylinder cars. So keen were the entrants that, despite the adverse conditions, twenty-two of them put in an appearance.

The course, as usual, was from Grindleford Bridge to just below Fox House, a distance of about two miles and a quarter, with a gradient of one in eight in parts, and one in seventeen on the average. The starting point was a few yards past the cottage over the bridge, and the finishing point the lodge gates at Longshaw. Mr. W. E. Cope was stationed at the starting point, and Mr. T. Lonsdale was at the finishing point. The first car to cross the line was Mr. H. Burgon's 15-h.p. Clement-Talbot, and other cars were sent off at intervals of about two minutes. When the timekeepers had compared their times it was

found that Mr. Albert Farnell of Bradford, had done the fastest time, viz., 4 min. 30 1-5 sec. As last year, he drove a 30-h.p. Daimler, but with the roads in a terribly treacherous condition he naturally took longer on Saturday, his time last year being 3 min. 28 sec. Mr. J. F. Gregory's 24-h.p. F.I.A.T. went very well indeed, running two trials with only a second difference in the time—his fastest being 5 min. 32 1-5 sec., and he proved the second fastest. Last year on a 16-h.p. F.I.A.T. Mr. Gregory took 6 min. 43 sec. Mr. Percy Richardson was third on his 20-h.p. Brotherhood, his time being 5 min. 34 3-5 sec.

Mr. J. F. Gregory proved a good winner in Class 2, with Mr. A. S. Fawcett second. In class 3 Mr. H. Beesley did very well with his single-cylinder 6-h.p. Wolseley, and beat his first time by about 10 sec.

The times were as follows:—

CLASS I.		Min.	sec.
A. Farnell, 30-h.p. Daimler	...	4	30 1-5
J. F. Gregory, 24-h.p. F.I.A.T.	...	5	33 3-5
P. Richardson, 20-h.p. Brotherhood	...	5	34 3-5
F. W. Hubbard, 10-h.p. Alldays	...	6	32 3-5
J. H. Hall, 20-h.p. Darracq	...	6	55
B. Hind, 12-h.p. Clement-Talbot	...	6	59
H. Bargon, 15-h.p. Clement-Talbot	...	7	30 3-5
B. M. Turner, 10-h.p. Alldays	...	9	25 1-5

CLASS II.		Min.	sec.
J. F. Gregory, 24-h.p. F.I.A.T.	...	5	32 1-5
A. S. Fawcett, 22-h.p. Minerva	...	6	4 4-5
J. H. Hall, 20-h.p. Darracq	...	6	57
F. R. Watson, 15-h.p. Darracq	...	7	3 2-5
W. Johnson, 15-h.p. Clement-Talbot	...	7	4
H. Beesley, 6-h.p. Wolseley	...	9	41 3-5
B. T. Turner, 10-h.p. Alldays	...	9	43 3-5
T. H. Firth, 12-h.p. Wolseley	...	10	46 1-5
Dr. O'Connor Parsons, 12-h.p. Swift	...	11	7 4-5
A. Worrall, 10-h.p. Darracq	...	11	42 4-5

CLASS III.		Min.	sec.
H. Beesley, 6-h.p. Wolseley	...	9	31 4-5
G. D. Flather, 6-h.p. Wolseley	...	11	9 3-5
F. B. Cawood, 6-h.p. Wolseley	...	11	38 3-5
W. Watts, 8-h.p. De Dion	...	12	10 4-5

SOCIETY OF MOTOR MANUFACTURERS AND TRADERS.

At a meeting of the Society of Motor Manufacturers and Traders, on Thursday of last week, Mr. E. Manville was elected president of the society in succession to Mr. Sidney Straker, to whom a testimonial is to be presented as a recognition of the services he has given in that capacity.

To the vacancy on the Council caused by the death of Mr. A. Govan, Mr. R. Dennis was elected, and a sub-committee was appointed to confer with the R.A.C. with regard to the holding of reliability trials next year.

A 45-h.p. six-cylinder Napier made fastest time at the Wolverhampton A.C.'s hill climb on Saturday.

THE Reading and District M.C. held a hill climb on Wednesday of last week, which was won by Mr. A. Brown. Mr. F. Deacon, the secretary, acted as starter.

THE Midland A.C. has issued an effective tear-off calendar for use up to May, 1908. It also reminds motorists of the Club's Shelsley Walsh hill climb on the 12th prox., entries for which close on July 8th.

THE Auto-Cycle Club will have a twenty-four hours' run from London to Plymouth and back on July 26th and 27th. The start will be made on the evening of the first day from the Angel Hotel, Thames Ditton, and the run will be confined to members of the club.

THE "Leatherber" band introduced by Messrs. R. and J. Pullman, Ltd., of Godalming, is designed to combine the advantages of a leather band with the appearance of a studded rubber cover.

THE first sod of the new Fiat Works at Wembley was turned on March 8th. Since then great developments have taken place, and the buildings are now nearly completed. In the main erecting shop, which measures 177 by 60 ft., there will be sufficient space to deal adequately with the repairing and overhauling of a very large number of vehicles. Adjoining this is another large shop which will be used as an engine room, and in addition there is a large covered space for the storage of finished cars and chassis. The two storerooms measure 150 by 35 ft. each, the smith's shop 50 by 20 ft. There are inspection pits and sinks for washing cars, a range of lavatories and messrooms, and outside a large open cement yard 150 ft. square. The offices are situated at one end of the building, which contains a large entrance hall, waiting room, telephone room, general offices, clerks' offices, offices for the works' manager, managing director, and lady typists. There are also rooms for the caretaker and works' manager, who will live on the premises. The factory stands on five acres of ground, and it is probable that it will be finished during the course of this week and that the works will be in full swing by the end of the month.

CASES UNDER THE MOTOR CAR ACT.

EXCEEDING LEGAL LIMIT.

At the Edgware Police Court, Robert S. Coeshall, chauffeur to Major Williams, of the Royal Engineers, has been summoned for exceeding the speed limit in the parish of Hendon on the 22nd ult. Mr. Parkes defended, and elicited in the cross-examination of the police that although the defendant when stopped requested the constables to show him the measured distance over which he had been timed, they refused to comply with his request. The defendant's solicitor contended that this was a most unfair proceeding, as it prevented the defendant from obtaining any evidence which might help in defending him at the trial. The Bench upheld this contention, and dismissed the summons. Upon an application for costs against the police the Bench granted the sum of 15s. 6d.

On Friday, the 14th inst., eight cases were heard at Harlow against motorists. One of the defendants had been previously convicted five times.

On Monday four motorists were each fined £7 and costs by the Spelthorne Bench, for exceeding the legal limit.

At Horsham, on Saturday, there were six cases against motorists, five for exceeding the legal limit and one for driving to the danger of the public. The police won in every instance.

COMPANY NEWS.

NEW COMPANIES REGISTERED.

EDGAR MAYALL MOTOR TRANSPORT COMPANY.—£3,000. First directors: Messrs. H. Kershaw and E. Mayall. 203, Manchester Road, Mossley.

"SILENT" AUTOMOBILE SYNDICATE.—£10,000. Agreement with Messrs. G. L. M. Dorwald, J. C. H. Grant, and L. V. Rothschild. No initial public issue. First directors: Messrs. J. C. H. Grant, L. V. Rothschild, F. Nash, and E. Bredermann. 6, Old Jewry, E.C.

SILENT CHANGE-SPEED GEAR COMPANY.—£50,000. To acquire licences for working patent No. 20,464 of 1901, granted to Mr. G. Foullaron, relating to change-speed gear, and patent No. 27,185 of 1905, for improvements therein. 5, Budge Row, E.C.

NEWCOMB NON-SKID SYNDICATE.—£2,000. To adopt an agreement with Mr. S. W. Newcomb for the acquisition of certain letters patent, property, and rights. No initial public issue.

NEW YORK MOTOR CAB COMPANY.—£303,000. To adopt an agreement with the United Investment Corporation, Limited, and to carry on the business of proprietors of motor-cabs, &c.

JULIAN'S MOTORS.—£5,000. To adopt an agreement with Mr. H. Julian for the acquisition of the business of a motor-car engineer, dealer and repairer carried on by him at Friar Street, Reading. No initial public issue. First directors: Messrs. H. Julian, F. Tunbridge, and F. J. Smith. 140-1, Friar Street, Reading.

ROAD REPORTS.

HYTHE.—An important road tar-painting experiment took place in the presence of local town councillors a few days ago.

CLARE'S TAR COMPO.—Large quantities of Clare's patent compo have been supplied to the Corporation of Liverpool, and many important orders are pending in the London district.

STRATFORD-ON-AVON.—The majority of the roads in this district are in good order, although on the Wilnecote and Aston Cantlow side they are not so well made. Repairs have taken place on the Evesham Road.

HOVE.—The Hove authorities are considering to what extent they shall avail themselves of the proposal of the East Sussex County Council to spend £2,000 extra on the treatment of roads with tar and dust-laying preparations.

BRECONSHIRE.—Mr. Howard, the Breconshire County Roads Surveyor, claims to have solved the dust problem. About twelve months ago experiments were carried out on parts of the main road from Brecon to Abergavenny, and the Breconshire County Council are so satisfied with them that they have instructed Mr. Howard to lay down sixteen miles of his road preparation. Mr. Howard has patented his invention.

QUARRITE.—The Northern Quarries Co., Ltd., of Grange-over-Sands, have issued a handbook illustrative and descriptive of "Quarrite," which is suggested to authorities dealing with the dust problem. It is claimed that this paving when laid produces a solid uniform body with close road surface, free from dust and waterproof, which can be renewed after years of wear at a very low cost. Those who go to the next provincial meet of the Motor Union will have an opportunity of seeing the "Quarrite," which has been laid in the carriage drives of the Prince of Wales Hotel, Southport.

THE Godiva plug is of British manufacture, the production of Mr. E. J. Hardy, Bishop Street, Coventry.

THE British Ever Ready Electrical Company, Ltd., of Emerald Street, London, W.C., are introducing a novel and ingenious device known as a tyre-jack for removing and repairing outer covers without trouble.

A QUESTION OF SALE.

THOMAS DUNSTONE, of Carlyle Street, Brighton, sued Messrs. Turner and Company, of St. James's Street, Brighton, motor and cycle agents, before Judge Scully, at the Brighton County Court, for £16 16s., price of a motor-bicycle alleged to have been sold by plaintiff to defendants. Plaintiff said that on May 2nd last he saw Mr. Turner with reference to the sale of a 4-h.p. Alldays motor-bicycle. Mr. Turner agreed to purchase it for 16 gs., and on the following day one of the defendants' employees fetched the machine away. When, however, witness went for the money, defendants would not pay. For the defence, Sidney Turner said plaintiff had previously left the bicycle at the shop for sale by defendants on commission, and as they had been unable to sell it, he had taken it away. On May 2nd they had an inquiry for a motor-cycle from a gentleman, so witness saw Mr. Dunstone and explained the circumstances to him and agreed with him that if the customer were suited with the machine, defendants would buy it for 16 gs. When witness showed the machine to the customer, he refused to have anything to do with it. His Honour held that the plaintiff had not made out his case, and gave judgment for the defendants with costs.

OIL FROM MOTOR-BUSES.

THE legal question of the nuisance caused by oil dropped by motor-omnibuses was involved in a case at Lambeth, in which A. T. Coleman, a motor-omnibus driver, in the service of Messrs. Thomas Tilling (Limited), was summoned by Mr. C. W. Tagg, town clerk of Camberwell, for infringing one of the local by-laws by allowing a quantity of "filth," viz., refuse oil, to fall from the engine of his omnibus on to the roadway, and was fined 5s. and costs.

Mr. G. W. Marsden, solicitor to the Camberwell Borough Council, said many complaints had been received from ladies whose clothes had been soiled in crossing the road.

Mr. W. Roy, a street keeper, in the service of the borough council, said he saw the defendants' omnibus standing at the corner of Rye Lane, Peckham, on the 21st ult. A quantity of lubricating oil dropped from the vehicle into the roadway.

In cross-examination, Mr. Roy said it was a fact that Messrs. Tilling kept a man at the spot to clear up the grease from the road.

Mr. Hopkins said he supposed they all recognised that we were in a transitory stage—somewhere between horse traction and motor traction—and the difficulty was to fit in the two. One of the things that one noticed was that the roadways were covered with a film of oil, and that London mud saturated one's boots with oil, and no longer brushed off one's clothes. The consequence was that the matter was being very seriously taken in hand by the authorities, and motor-omnibus companies and motor-omnibus drivers would be sure to be put to every kind of inconvenience so long as this habit continued. This was, so far as he knew, the first summons against a motor-omnibus driver for oil filth, and there would be quite a nominal penalty—5s. and costs.

COMMERCIAL VEHICLES AT READING.

THE meeting of commercial vehicles at Reading on Monday was a great success. Many of the vehicles arrived in Reading on Sunday evening, and their drivers availed themselves of the offer of Mr. W. Vincent, of Castle Street, to provide free garage for all who took part in the meet at his new and commodious premises. The vehicles were marshalled in procession order on Monday by Mr. Leo Harris, the hon. secretary of the meet, who had the assistance of mounted policemen and a number of constables in preventing the crowd from interfering with the arrangements.

The following vehicles took part in the run around the town:—35-45-h.p. Maudslayi 'bus, 33-40-h.p. Darracq-Serpellet 'bus, 30-h.p. Wolseley-Siddeley 23-seated char-a-banc, 24-h.p. Durham-Churchill 26-seated char-a-banc, 40-h.p. Fiat 'bus, 20-h.p. Straker-Squire 'bus, 40-h.p. Dennis 4-ton lorry, 9-h.p. De Dion-Bouton single-cylinder 15-cwt. van, 12-14-h.p. West-Aster 15-cwt. van, 16-h.p. Lacre 24-cwt. van, 12-15-h.p. Arrol-Johnson 2-ton lorry, 8-h.p. Sturmei "Parsons" 8-cwt. van, 36-h.p. Commercial Car, 3½-ton van, 12-15-h.p. Arrol-Johnston 1-ton van, 40-h.p. Ryknield 5-ton lorry, 20-h.p. Halley 30-cwt. van, 20-h.p. Dennis 2½-ton van, 14-h.p. Gloverley 1-ton box van, 10-h.p. Adams 15-cwt. van, 40-h.p. Fiat 5-ton lorry, 30-40-h.p. Darracq-Serpellet 4-ton lorry, 20-25-h.p. Simms-Welbeck 2-ton van chassis, 20-h.p. Thornycroft 2-ton wagon, Reading Corporation's 5-ton Foden wagon, Mr. Ilted Witherington's 5-ton Foden wagon, and Mr. W. Soundy's 5-ton Yorkshire wagon.

THE LIABILITY OF THE EMPLOYER.

JUDGE WOODFALL has had to decide at Westminster County Court a point of law interesting to motorists. A medical man hired a chauffeur from the proprietor of a garage for two days while his own man was ill, and paid the proprietor 10s. for two days' wages for the man. An accident occurred while the chauffeur was driving, and the point was whether he was the doctor's servant or the servant of the owner of the garage. His Honour found that the chauffeur was for the two days the coachman of the doctor, who was therefore liable for any damage arising out of the accident.

CLAIMS AGAINST MOTORISTS.

A SOMERSET farm hand, named Ernest Dark, has been awarded £300 damages, at the assizes at Wells, against Walter Sarel, an architect, of Frimley Green, Surrey, for injuries received in a motor-car accident. It appeared that Dark, who was leading two farm horses, was struck by Mr. Sarel's car. He was fearfully injured, and for the past two years has been lying in Sherborne Hospital. The principal evidence was given by a farmer, who witnessed the accident, and who said the car was travelling at the pace of an express train.

MISS CONNIE EDISS, the well-known Gaiety actress, last week appeared in court as the defendant in a claim for damages for personal injury brought by Moses Lee, of Lewisham, who had been knocked down by the defendant's motor-car, in which she was travelling and which was being driven by her cousin. The defendant denied negligence and pleaded that the plaintiff was guilty of contributory negligence. In the end the jury awarded the plaintiff £135 damages.

PUBLIC MOTOR SERVICES.

A LETTER has been addressed by Scotland Yard to the various motor-omnibus companies stating that complaints are still being made, especially by the borough councils, of the nuisance caused by oil and grease being dropped by motor-omnibuses. The companies are warned that the regulation on this subject will be strictly enforced, and any vehicle found to be defective in this respect will be considered to be unfit for public use and dealt with accordingly.

THE Northern Garages, Ltd., have a motor wagonette now in service for pleasure parties in the Oldham district.

IN connection with the Royal Cornwall Show at Liskeard the Great Western Railway Company have been running a motor-service from Callington to Liskeard every day.

The 50-60-h.p. Metallurgique Car which competed in the Kaiser's Prize Race. The vehicle was ninth in the general classification in the Eliminating Contests, but met with an accident in the first round of the actual event.

THE Brighton, Hove, and Preston United Omnibus Company have applied for twenty-four motor-bus licences. The Watch Committee of Hove have recommended the council to grant these licences, and also six licences for motor-omnibuses between Hove and Worthing, to the Sussex Motor Road Car Company, Limited, on condition that these same omnibuses obtain licences in the adjoining borough of Brighton, and for the same period.

AT their meeting on Wednesday, the Llandudno council were asked to decide upon a toll of 4s. per trip for the motor char-a-bancs which made excursions round the Great Orme's Head marine drive. These excursions are well patronised, as are also the fifty-mile tours in connection with which well-appointed four-in-hand stage coaches are called into requisition.

AUTOMOBILE ACCIDENTS.

AT London Colney, near St. Albans, on Friday of last week, Colonel E. H. Carlile, M.P. for Mid Herts, was driving in his motor-car with two friends from Canterbury, Mr. and Mrs. Barrett, when, near a turning by the river Colne, their car came into violent collision with another coming in the opposite direction. So great was the force of the impact that all the occupants of the cars were more or less injured, and the cars were completely wrecked.

WHILST a party of motorists were going from London to Brighton, on Saturday afternoon, the car collided with a laundry van. The horse was knocked down, the cart damaged, and the motor, which was driven by Mr. S. G. Brown, of Great Winchester Street, London, then ran into the corner of the Royal George Hotel. The travellers suffered from shock, but were not seriously hurt. They were afterwards driven to the railway station in a cab.

FORTHCOMING EVENTS.

JUNE.

- 21st (F.).—New Forest A.C. gymkhana at Southampton.
 22nd (S.).—Yorkshire A.C.'s meet at Saltburn.
 Southern Motor Club's open hill climb on Captain Kydd's Hill, East Grinstead.
 Kettleby hill climb of the Derby, Leicestershire, and Notts A.C.
 West Surrey A.C. run to Begnor.
 Sussex A.C. visit to Netley Abbey.
 Sharpshoe Hill climb of the N.W. London M.C.C.
 N.E. Lancashire A.C. speed judging competition.
 Open 200 miles non-stop run of the Essex M.C.
 Kensington A.C. run to Southampton.
 Meet of the Cheshire A.C. at Llynhelig, Lloc, near Holywell.
 23rd (Sun.).—West Essex A.C. and Essex M.C. run to Malden.
 24th (M.).—North Wales A.C. hill climb.
 25th (T.).—Closing of entries for first meet on the Brooklands Motor Track.
 L.G.B. Inquiry at Ilford into application for a 10-mile speed limit.
 Scottish A.C. Reliability Trial starts for Glasgow from Perth, 159½ miles.
 26th (W.).—S.A.C. Perth—Aberdeen, 158½ miles.
 Hastings Automobile Meeting. Appearance Competition and Gymkhana, organised by the Automobile Association and the Motor Club.
 27th (Th.).—S.A.C. Aberdeen—Inverness, 160½ miles.
 Newcastle Motor Club's run to Edinburgh and back.
 28th (F.).—S.A.C. Inverness—Pitlochry, 154½ miles.
 29th (S.).—S.A.C. Pitlochry—Glasgow, 122½ miles.
 Aero Club race for the Hedges Butler challenge cup.
 Birdlip hill climb of the Bristol and Gloucestershire A.C.
 Joint meet of the Liverpool, Manchester, N.E. Lancs., Sheffield and Yorkshire Clubs at Buxton.
 Motor Cycling Club 100 miles Private Owners' Reliability Trial.
 Motor Yacht Club races.
 Southern M.C.'s midnight run to Southsea.
 Bradford A.C. hill climb.

JULY.

- 2ND.—A.C.F. Grand Prix Race on the Seine Inferieure Circuit, near Dieppe.
 4TH.—International cross Channel race for motor-boats from Dover.
 6TH.—Inaugural races on the Brooklands Track.
 10TH.—R.A.C. South Harting hill climb.
 13TH.—Entries for R.A.C. commercial vehicle trials close at ordinary fees.
 Meet of the Cheshire A.C. at Plas Newydd, Llangollen.
 Sheffield A.C. outing for crippled children.
 15TH TO 18TH.—The annual automobile meeting at Ostend.
 20TH.—Motor Union meet at Southport.
 27TH.—Commercial vehicle meet at Maidstone.

AUGUST.

- 20TH.—Open competition for light cars organised by the Essex Motor Club over a 200 miles course.

SEPTEMBER.

- 9TH.—Industrial Vehicle Trials commence.

OCTOBER.

- 19TH.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

- Cordingley's Motor-Car Exhibition at the Agricultural Hall, London.

LIGHTING-UP TIMES—LONDON.

The lighting up time for London during the whole of next week will be 9.19 p.m.; at Glasgow 10 p.m.

THE Hillman-Coatalen Motor Company, Ltd., is erecting a large new factory in Folly Lane, Coventry.

MESSRS. LOWE AND WOOD, Broad Street, Birmingham, have received an order for a Spyker landaulet from Mrs. Isabel Jay.

MORS (England) Ltd., 45, Great Marlborough Street, London, W., are now receiving deliveries of the Mors 18-20-h.p. car introduced at the last Paris Salon. Apart from the graceful design of the chassis and the fact that this is the first live axle model turned out by the Mors Company, a noteworthy feature is the extreme quietness of operation. The vehicle is specially built for covered-in carriage work, where silence is necessary, and is particularly suitable for use in town by reason of the fact that it has a very sharp lock on the front wheels, which enables the chassis to be turned in a narrow roadway. Other points of interest include gate change speed-gear, direct drive on top, and the new contracting metal-to-metal clutch.

POLICE TRAPS.

BETWEEN Birkenhead and Chester the police have lately shown considerable activity with timing arrangements and telephonic communications.

AT the village of Horley, which is about ten miles from Newcastle-on-Tyne, a measured distance is used as a police trap by the local police.

A POLICE trap has been set in the outer circle of Regent's Park, in the neighbourhood of York Gate. This trap has been in operation at midnight, and a driver of a taxi-cab has been stopped for exceeding the 10 m.p.h. limit which is in force in the park. The trap is illuminated by means of lanterns.

A REGULAR police trap has been working during the last two Sundays in the village of Thatcham, on the main Bath road. Motor-cars coming from London are timed over a supposed quarter of a mile, and a summons follows charging them with exceeding the legal limit. The method employed is: A constable in plain clothes hides in an old schoolhouse, one window of which commands a good view of the approaching car; he opens the door and signals to two other men in hiding, at the other end of the street; these men hold the watch, and in turn signal to a man in uniform, who stops the car.

THE Burton Road trap, and those known as the Scotforth Road and the Galgate traps have lately been in frequent operation by the Lancaster police.

FOR the benefit of those motorists going down to Weybridge, Mr. Chas. Jarrott informs us that the lower road to Brooklands, through Hershaw, Waltham Common, and Weybridge, is simply swarming with police. The most straightforward method of getting to the track is to go down the main road through Cobham, and then take the second turning on the right after passing the top of Pain's Hill. Motorists using this road who are also members of the A.A. will obtain assistance from the A.A. scouts patrolling the road.

BUSINESS NEWS.

MR. JOHN HARGREAVES, of Templecombe, Somerset, has purchased the six-cylinder Napier which recently beat the previous records from London to Monte Carlo.

THE Municipal Council of Alexandria, Egypt, has just bought a Coventry-Humber car for the use of the President of the Municipality. Mr. F. H. Manley, the Humber agent in Alexandria, writes that the President is exceedingly pleased with the purchase.

THE annual outing of the employees at the Coventry works of Messrs. Humber, Ltd., is taking place this week end to Boulogne, with the option of staying in either London or Hastings. It is expected that about 1,500 will participate in this trip, accompanied by the manager, Mr. Walter Phillips, and several leading officials of the company.

MRS. LLEWELLIN, of Poole, who was recently killed in a motor accident, was insured with the Motor Union Insurance Company, Ltd. The car in which Mrs. Llewellyn was travelling skidded when turning a corner, with the result that it ran up a bank, and the occupants were thrown out. While lying half stunned on the ground a telephone post which the car had knocked over fell upon Mrs. Llewellyn, who died from injuries received. The Motor Union Insurance Company promptly sent a cheque for £1,000 to the deceased's next of kin, although she was not travelling in her own car at the time. It is, however, one of the features of this insurance policy, that members should be protected against personal accident when travelling in any car.

MR. C. STERN has written to the Mors Company stating that he has just returned from Monte Carlo with a 24-h.p. Mors landaulet-limousine, which he has been driving for the last three years, and on which he has now done over 65,000 miles. He has been three times from London to the South of France and back, as well as to Italy, Switzerland, all over France and England, without having the slightest mechanical trouble whatever.

MR. W. H. DOREY, of 14, Rue Torricelli, Paris, has introduced a new electric motor horn, which works in conjunction with an ordinary 4 volt accumulator and is operated by a small push button on the steering wheel.

THE new factory of the New Speedwell Motor Co., Ltd., at Hornsallow is rapidly approaching completion.

MR. J. W. H. DEW informs us that although he has resigned the works management of the New Speedwell Motor Company, Ltd., he will still continue to act as designer and consulting engineer to the company.

IN view of the growing demand from India, the Colonies, and abroad, Messrs. S. F. Edge, Limited, have just issued a special colonial catalogue giving particulars of the successes of the Napier six-cylinder cars and of all points, such as lists of accessories and tools, with prices, shipping measurements and weights, the prices of carriage bodies, cost of packing, a complete cable code, and other matters necessary for those living abroad.

IN the two important motor-racing events which have just been concluded in Germany, viz., the Herkomer Competition and Kaiser's Cup Race, Continental tyres have considerably added to their laurels. In the former the trophy was won for the third time in succession on Continentals, and the first seven cars were also fitted with similar tyres. In the Kaiser's Cup Race, two out of the three cups which were presented by the German Emperor were secured by cars fitted with Continental non-skids.

COMMENTS.

The Motor Union.

AT the June meeting of the General Committee of the Motor Union, held at 119, Piccadilly, W., there was a large attendance of motorists, representing automobile clubs from all parts of the country, and also the Royal Automobile Club. Mr. C. D. Rose, M.P., Chairman of the Union, presided. It was decided to present Motor Union medals to the following clubs in connection with competitions to be held this year:—Kent A.C., Sussex County A.C., Ipswich and East Suffolk A.C., Naval Motor Club, Nottinghamshire A.C., Bristol and Gloucestershire A.C., and West Surrey A.C. The Essex County A.C. having called the attention of the Union to the great danger existing to traffic, particularly on the roads between London and Chelmsford, and between London and Bishops Stortford, caused by drivers of hay carts being asleep while in charge, and the inadequate means taken to stop such danger by the police, it was agreed to communicate with the Chief Constable of Essex. The successful competitors in the recent competition for the best essay on "The Preparation for the Forthcoming Parliamentary Struggle" were announced, the winner of the first prize being Mr. David M. Menzies, M.A. No less than seventy-two applications for advice and assistance in connection with the use and ownership of motor-cars were considered, and in three cases financial grants were made. Several successful prosecutions for obstruction and stone throwing on the highways were reported. The Union decided to compile a draft set of rules of the road, for the guidance of motorists and other road users, which will be done in consultation with the chief constables and authorities. It was reported that applications had been received for over 1,400 car badges, and that twenty-four road signs to indicate special traffic had been ordered from the Union.

Trials.

Now that the Scottish Reliability Trials are nearing a conclusion, the trade generally will welcome a rest until next season, when, it is highly probable, the R.A.C. may be again in the lists. While there may be some natural desire that the great trial of the year should take place in England, it must be confessed that it would be difficult to find such a suitable course as seems natural to the Scottish Club. They have, certainly, a great advantage in that respect, although there is a fairly general feeling that if London could be included in the itinerary greater publicity of a general kind would be gained. But the interest of the event would be decreased considerably, for we can scarcely imagine a route which included the Metropolis presenting such a test as that which comprised the Capital of the Highlands and the wondrous passes and mountain roads over which the cars have travelled during the last few days.

Removal of Endorsement.

IN our last issue we were able to announce the decision of the Court of Appeal, given at the moment of going to press, in the case of the driver of a motor-car convicted for exceeding the ten-mile limit in a Royal park, who had his licence endorsed by the magistrate. Elsewhere in the present issue we report the judgment at greater length, and are pleased

to be able to announce that now that these endorsements have been pronounced illegal, the Motor Union are considering the steps to be taken to secure their removal from the licences of those motorists who have been convicted for exceeding the speed limit in the parks, and whose documents have been endorsed contrary to the intention of the Legislature.

Motor-cars in the Parks.

IN a case against the Hon. C. S. Rolls, heard by Mr. Marsham at Bow Street Police Court on Monday, for an alleged offence of exceeding ten miles an hour in St. James's Park, Mr. Staplee Firth mentioned the recent decision of the Lord Chief Justice, Mr. Justice Darling, and Mr. Justice Lawrence, in which they were unanimous in quashing the endorsement on a motorist's licence, and he pointed out that this case decided that as the ten mile limit is brought under the Parks Regulation Act, and there is no provision under that Act to endorse the licences, any offence created by Regulations since 1st January, 1904, under the Parks Act is not an offence in connection with the driving of a motor-car within the meaning of Section 4 of the Motor Car Act, and licences cannot be endorsed. Mr. Firth informed Mr. Marsham that in consequence of the above decision the Motor Union had elected its chairman, Mr. C. D. Rose, M.P., the Hon. A. Stanley, M.P., and himself as a committee, to take such steps as might be necessary to remove all the endorsements of motorists' licences for exceeding the speed limit in the Parks. Mr. Marsham at once stated that he would cause the endorsements to be removed from the licences in all cases which he himself had dealt with, and that he would also do anything he could to assist in having the endorsements removed in other cases. Mr. Firth, having suitably thanked his Worship in the matter, stated that he would endeavour to make his Worship's decision known to all motorists who had been convicted, and whose licences had been endorsed, so that they could present the same at Bow Street Police Court to have the endorsements removed.

Speed Restriction at Ilford.

A LOCAL Government Board inquiry of considerable importance to suburban London with regard to the speed limit of motor-cars was held at Ilford on Tuesday. Acting upon a resolution of the Ilford Urban District Council, the Essex County Council made application to the L.G.B. to apply the speed limit of ten miles per hour to the County Council main roads in the district of Ilford, which comprise about three and a quarter miles of the well-known Romford road, the main road from London to the Eastern Counties. Several county councillors, urban councillors, and council officials gave evidence of the congested state of the roads in question, the danger to pedestrians, and the reasonableness of the application. The proposed restriction was opposed by the Royal Automobile Club, the Motor Union, the Essex County Automobile Club, the West Essex Automobile Club, the Essex Motor Club, and others. Their contention was that the restricted speed limit was unnecessary and undesirable—unnecessary because the local authority had failed to take advantage of the powers they now had, to prosecute persons driving at a speed exceeding twenty miles an hour or to the danger of the public; and undesirable because so far no accident had yet occurred on the roads proposed to be

scheduled, and because vindictive prosecution might be set up by individuals interested.

The Commercial Vehicle Trials.

PROBABLY the gentlemen responsible for the recent meet of commercial vehicles at Reading, and who contemplated holding a second gathering of the kind at Maidstone, are well advised in postponing further re-unions of the kind until after the trials of the R.A.C. have been held. These have been long in preparation, and now that there seems a likelihood of their actually being held interest is rising perceptibly. Already fourteen entries have been received—four from the Wolseley Co., two from Halley's Industrial Motors, Ltd., one from Messrs. Savage Bros., another from Messrs. J. and E. Hall, and half-a-dozen from Messrs. Milnes-Daimler, Ltd. Other makers will also be represented, and from the information we were able to publish last week it will be seen that the Trials will be of a thoroughly practical character, and of such a nature as to give general confidence in the vehicles that successfully go through the ordeal. No entry will be accepted after August 10th, and on July 13th the fee for each vehicle entered will be increased.

Duray at the wheel of his 60-h.p. De Dietrich Car on arrival at St. Petersburg after winning the Moscow-St. Petersburg Race.

Club Events.

THIS is the season of open-air club delights, when county and local automobile associations seek to increase their membership by bringing together members and friends on terms of social intercourse. Many of the clubs, like the Hereford, Essex, Southern, Yorkshire, Nottingham, and another half-dozen, wisely make some serious competition an incident in the club year—a course for which much may be said. Here again there is likely to crop up the vexed question of trade influence in club life, and care must be taken lest the social aspect is weakened by undue prominence being given to the commercial side of such organisations.

Local Taxation.

THE deputation from the L.C.C. which waited upon the Chancellor of the Exchequer the other day with reference to the Finance Bill now before Parliament had a word to say with regard to motor-buses, Mr. Ernest Gray assuming a very sombre tone in asserting—without too close a regard to the fact—that “motor-buses are now almost monopolising the streets of London.” Against this, however, Mr. Asquith pointed out

that a very large proportion of the owners of motor-cars take out their licences in London and then use the roads of other counties. This is what actually happens to a very great extent, and upon such a basis the present agitation for national roads is laid. The Chancellor's reference was valuable as indicating that the Government is not overlooking this aspect of affairs, which may assist them in meeting reasonable desires of motorists in the matter.

Courtesy to Visitors.

THERE are times when even official severity may be lessened in favour of courtesy to strangers, and the question has just come to light in connection with a gentleman who lives at Nice, and who some months ago came to England for a few weeks' holiday, bringing his motor-car with him. He arrived here, and within a short time found he had come within the provisions of the carriage licence duty, the Board of Inland Revenue requesting him to pay licence for car, chauffeur, &c. No such imposition is inflicted on English visitors who go to France, where the authorities recognise that the motorist is a person who generally manages to financially benefit the district in which he stays. Hence the welcome which is accorded on the Continent to motorists, who are allowed to use their vehicles without having to pay such carriage licences as were intended for permanent residents in the United Kingdom. In the individual case the point may seem a small matter, but surely it is one which the Inland Revenue authorities might regard with sympathy, not only because of the value to English trade in attracting motorists from other countries, but also as an assurance that the *entente cordiale*, of which we have heard so much of late, is something more than a mere sentimental expression.

Brooklands.

MANY good folks are anticipating the opening of the Brooklands Automobile Racing as producing a new and delightful sensation. Their hopes must not run too fast, for disappointment may be their lot. As an occasional way of spending an hour or two some of the public may go to Brooklands, but whether there is sufficient interest in the sport to maintain a constant stream of patrons is a matter that no man can foresee. We wish well to the promoters in their really great enterprise; but, in view of the way men slept near the Grand Stand towards the close of the one Gordon Bennett race in the United Kingdom, and how few go over to the Isle of Man for the motor races, there may be reasonable ground for the lack of optimism in some quarters. Hence the anxiety with which July 6th is being regarded in certain quarters of the automobile world.

Water for Washing Cars.

FOLLOWING its success in the endorsement of licences for conviction in the Royal parks case, the Motor Union has also won a case of considerable general importance. Dr. Mackay, of Harrogate, had been in the habit of using water for washing his motor-car, and, in common with every other motorist, saw nothing beyond the ordinary in the procedure. But this did not meet with the approval of the Corporation of the town, who summoned him before the Knaresborough magistrates for water rent, contending that the water used in washing his motor-car was not being employed for a domestic purpose. The magistrates convicted, whereupon the Motor Union took the matter to a higher tribunal, and the case was before the Appeal Court last week. The Lord Chief Justice held, and Justices Darling and Lawrance concurred, that the supply of water for washing the car did not come within the definition of a supply for business purposes referred to in Section 12 of the Waterworks Clauses Act, 1863, and the Court dismissed the appeal. The value of such a decision to private motorists is at once apparent.

The Flying Machine.

ALREADY flying machines, dirigible balloons, and aeroplanes have a history. As to the future, no man can as yet more than prophesy. Messrs. A. W. Marshall and H. Greenly have set forth to record the one and anticipate the other in their little volume on flying machines just published by Messrs. Percival, Marshall and Co. The public interest in the Aero Club section of the recent Exhibition at the Agricultural Hall was sufficient proof of the fascination that this proposed method of locomotion has obtained over the minds of the people; it must be confessed, however, that even with their score of illustrations the authors have not wholly convinced us as to the lines along which success is likely to be achieved. Much useful work has been done, but the media in which experiments must take place are of so varied and unstable a character that no set plans can yet be determined. However, it is well that the efforts of

at Liverpool they were able to receive their automobile a few hours later without "even a small scratch." Then the tour commenced, the car being headed straight for Stratford-on-Avon, where Miss Marie Corelli's houseboat shared favours with Shakespeare's birthplace. In view of the sad accident to American tourists recently, the warning which Messrs. A. L. Bennett and B. F. Sherman—the motor voyageurs from whose log we are quoting—comes as a coincidence, for they discovered that from Stratford-on-Avon "the roads are a delight to the motorist as regards condition, but they have many bad turns and hills, and fast driving is almost impossible, and dangerous always." As regards general conclusions, the travellers found England and Switzerland the most interesting from a motoring point of view; the long stretches of road in France and Germany finally became monotonous, while the flat paved roads of Holland destroyed its pleasures for our American cousins.

Sir William Treloar, the Lord Mayor of London, and Party motoring through the streets of Berlin.

each succeeding generation should be briefly chronicled, and the principles set forth for the guidance of future experimenters. Many were agreed that the recent Exhibition was the beginning of a new movement in the direction of flying; and although the antics of some of the machines when attempted to be flown at the Alexandra Palace were somewhat incongruous, we are not unhopful that in the process of time the hopes of Santos Dumont and other pioneers may be realised.

An American Impression.

A COUPLE of American motorists recently made a rapid motor tour across Europe, travelling 4,000 miles in a month. Some of their impressions are entitled to further publicity. They advise their fellow-motorists from the States to sail from Boston in preference to New York, the reason being that at the former port it is not necessary to crate the cars; time and money can be saved by shipping them uncrated, a condition not allowable from New York. When they arrived

Roads for Ireland.

UNDER the title of "A Real Need of Ireland," Mr. J. Harris Stone, writing from the Oxford and Cambridge Club, urges the point, so frequently made in these columns, that the development of the roads of Ireland is essentially necessary to the prosperity of the country. Unfortunately, the county and local authorities are not all convinced of what, to us, appears a truism. They would have had a great scheme of road transit in full operation by now had they realised the importance of the matter at the time of the Gordon Bennett race in Ireland. Mr. Stone mentions several highways that were begun after the Famine of 1847, and are still unfinished. Their completion would secure considerable advantages to tourists as well as to local residents—hence their national value. Connecting roads thus imperatively needed might be made in various parts of Connemara, from Reccess to Leenane, at Oughterard, and in Achill, to say nothing of other lesser-known places that might be easily and profitably developed in this way.

A PUNCTURED TYRE INDICATOR.

THE puncture fiend still continues to be one of the greatest drawbacks to motorists, most automobilists having, unfortunately, suffered at one time or another from punctured tyres. While a burst is usually accompanied by a loud noise, and so gives the motorist plenty of warning, the car can cover a considerable distance ere a small puncture makes itself felt, and in the meantime the outer cover may be seriously damaged and the inner tube ruined, owing to driving on a

Fig. 1.—The Indicator as fitted to one of the Road Wheels.

deflated tyre. During the past week the Horley Motor and Engineering Company, of Horley, have brought to our notice an ingenious arrangement they have devised to obviate this, and, at the same time, to render it unnecessary for the driver to anxiously peer over the side of the car to ascertain the condition of his tyres after passing over a bad piece of road. The Horley

Fig. 2.—Details of the Indicator.

device is designed to give audible warning of a deflated tyre, by causing the latter to ring a little electric bell on the dashboard; as will be seen from the accompanying illustrations, secured to the spoke of the road wheel is a small apparatus, consisting of a small gun-metal cylinder, within which is a plunger, and a spiral spring to maintain the plunger in its outward position. The plunger is carried on a rod passing entirely through the cylinder, and at the end which extends

outwardly towards the periphery of the wheel has a rounded head. The other end of the rod, extending, as already explained, through the cylinder, is provided with a bright rubbing surface to provide electrical contact with a fixed piece carried on the axle. This fixed contact is connected up with an electric circuit, in which is an audible signal, viz., a bell, fixed to the dashboard of the vehicle, and a dry battery which furnishes the current. The fixed contact has a curved surface, so that the rotating contact engages and disengages smoothly as the wheel revolves. In operation the apparatus is fixed to the wheel by appropriate clips. The head of the plunger rod extends as far over the surface of the rim as desired, and when a tyre from any cause becomes deflated the head strikes the ground, pushing the plunger inwards and causing it to strike the fixed contact at every revolution, thereby completing the circuit and ringing the bell. By having one of the devices fitted to each road wheel a check can be kept on all the tyres; the contacts for each are all so connected up that when the circuit is completed by any one of the "tell tales" the bell is rung at every revolution. We understand that a syndicate is being formed to put the new device on the market, and as this is to be done at a moderate price the idea is one which may commend itself to a large number of motorists.

STEERING GEAR ADJUSTMENTS.

WITH the summer touring season now in full force, there will doubtless be a recurrence of the string of mishaps, many of them fatalities, that are made so much of by the daily Press and in the accounts of which "deranged steering gear" figures so prominently. Of course, all motor accidents of the class in question are not traceable to the steering gear by any means, any more than so many fires of unknown origin are caused by "defective insulation" of the electric-light wiring. Many a fire which the ubiquitous scribe has put down to this cause has been found to have taken place in buildings totally innocent of electric wiring of any kind; in the same way more than one fatal collision between a motor-car and a telegraph pole which has been attributed to a deranged steering gear, has, in some marvellous and unfathomable manner, left that same steering gear in perfect working order after the shock of the accident. The moral is, remarks an American writer, plain; however, for of all the highly important parts of the car, it is probably safe to say that the steering gear comes in for less attention in the way of inspection than any other which has equally vital functions to perform. It is subjected to severe shocks at all times and the wear on its working parts is considerable, but it is seldom dissected for inspection except when necessity actually demands it. No car should be put in commission for another season's running without having this properly attended to. The entire steering gear and its connections should be dismantled, thoroughly cleaned, and any parts that show undue wear replaced. It should then be well oiled, the joints packed with fresh grease and covered with pliable leather, all adjustments properly made, and carefully reassembled. Advantage should also be taken of the opportunity to test the front wheels to see that they track properly; this is not exactly a dangerous fault, but it is very hard on the tyres and renders steering more difficult and may lead to injury.

MESSRS. THOMSON-BENNETT, LTD., of the Arden Works, Birmingham, have sent us particulars of some of their new ignition specialties. These include the "Internal Wheel" contact breaker, in which the contact is made by means of a roller carried at one end of a special arm. The advantage claimed for the arrangement is that, however worn the insulating ring may become, uneven running and consequent misfiring is prevented. Other specialties of the firm include the Thomson-Bennett switches, which are provided with specially strong handles, and which have no loose parts likely to become detached and so cause trouble.

The Scottish Reliability Trials.

The Scottish Trials.—The Cars waiting to be Weighed-in.

GLASGOW, Monday.

THERE is a rush for *parapluies*, sou'westers and everything calculated to stave off rheumatics, pneumonia, and other associations which some pessimists are already connecting with the annual motor run round Scotland organised by the Scottish Automobile Club. Not only is the rain steadily pitiless in this damp city of St. Mungo, but news from the northerly limits of the tour is equally depressing. A wet time is generally expected in the Highlands, and those cars fitted with hoods and canopies are the envy of passengers assigned to fair weather vehicles.

Fortunately the event is not a race—in the Continental or Tourist Trophy idea of the term. It is a trial of reliability, and, as is shown by the *M.C.J.* route card issued to visitors in Scotland this week, the speed is regulated by a system of controls. A maximum number of marks will be assigned for the run, and deductions will be made for every minute the vehicles

ferred, this year, to the other side of Glasgow, and all this morning vehicles were being weighed at the Public Weigh Box in Pollokshaws Road, whence they were driven to the Corporation Tramways Depot, or to the garages of the Kennedy Motor Company, Ltd., at Eglinton Toll. Here they are being supplied with petrol under official supervision, the supply being measured, so that the fuel consumption during the trial may be entered on the certificate. Examination of the vehicles is also proceeding, to see whether the entries in Classes 3, 4, 5, 6, and 7 are fitted with standard side-entrance bodies, the minimum dimension from the front of the dashboard to the front of the rear wheel tyres being required to be 4 ft. 6 in. The fuel tanks must be of a capacity for the maximum single day's journey, fitted on the bottom with a draw-off tap to facilitate speedy emptying for the purpose of determining fuel consumption.

The Ford 40-h.p. Six-Cylinder Car which is taking part in the Scottish Trials.

The 18-h.p. Buick Car which is taking part in the Scottish Trials.

are stopped during the tour—tyre troubles excepted. Stoppages aggregating one hour on account of tyre repairs will not be deducted from the marking; but all beyond that period will count against the car in its place for reliability or medal awards.

The headquarters of the trial committee have been trans-

Awards will be made on the following basis:—

	Marks.
Reliability	750
Starting	50
Hill climbs	100
Fuel consumption	100

104	26-30-h.p. Nordenfelt ...	J. H. Wilson ...	4	112 × 140 mm.					

These will be expressed in the following formula:—

$$\text{Marks gained for reliability.} + \text{Marks gained for starting.} + \frac{\text{Marks gained in hill-climbing tests.}}{\text{Number of hill-climbs.}} + \frac{\text{Lowest fuel consumption per ton} \times 100 \text{ miles in class.}}{\text{Fuel consumption per ton.mile.}}$$

Writing midday we learn that there will be only a few withdrawals. The twin-cylinder Adams in Class 2 was not ready in time for the Trial, so the 10-h.p. single-cylinder which Mr. R. K. Smith is to drive will be the sole representative of that make. Both Mr. Smith and Mr. F. S. Bennett, who will again steer the 9-10-h.p. Cadillac, were in last year's event. In 1906 Mr. R. L. Jefferson drove the Rover in Class I; this year the 6-h.p. and 8-h.p. Rovers will be driven by Mr. R. Wilkinson and a well-known Irish pressman respectively. Considerable interest attaches to the entry of the 15-h.p. Ford, which has been brought north in order to see whether the chassis constructed for a two-seated car, slightly altered, will go through such a severe test with four passengers. Mr. J. H. Chambers is here with a 10-h.p. car—the only Irish vehicle in

the Trial. Hitherto his firm have been content with an 8-h.p. as the maximum of power, but the new 10-h.p. two-cylinder car is of heavier build. It has single chain drive running in oil, and has a low petrol consumption. In this class, too, is the 10-12-h.p. Swift that did so well in the Irish Trial.

In addition to the Adams car the Maxwell is likely to be a non-starter in Class II. Only three of last year's drivers again appear in the class, viz., Mr. H. Gordon Sharp on the Reo, which made its debut in this country in last year's event, and only escaped a non-stop run by losing a minute in starting; Mr. T. Rimmer, who made an equally good run on the 14-h.p. Vulcan, which he is again driving, and Mr. J. McLean.

Classes 3, 4 and 5 will see several of last year's drivers again on their seats. The Arrol-Johnston team will be as before. Mr. H. Ramoisy, who has now taken part in five of this series of trials on a Germain, will again drive a 14-h.p. car; Mr. G. H. Slaney will drive the 28-h.p. Armstrong-Whitworth, the 40-h.p. car of that type being withdrawn. Two Mass cars are entered, one being driven by Mr. A. F. King as before; Capt. Wentworth (Daimler), Messrs. T. Shaw (Ariel-Simplex), B. Shiell (Maudslay), R. Crossley (Belsize), C. Johnson (Rolls-

Royce), J. Reid (Beeston-Humber), and M. Ross Browne (Gladiator), are others who have become familiar in these trials and who will start again in the morning. Three brothers Earp will handle the Iris (two), and Thames cars, and other interesting personalities will be noticed in the list of starters. Two steam cars are entered, both Whites, and one will be driven by Mr. Frederic Coleman, who recently familiarised himself with the course under the official observation of the R.A.C.

PERTH, Tuesday.

The cars left Glasgow in fine weather, being despatched with the punctuality characteristic of the Scottish Club. Seated on the Straker-Squire car driven by Mr. W. T. Lord, we were soon amid traffic and trams. The way was through Alexandria, where the Argyll Works are situated, and new rows of workmen's houses are an abiding memorial to the late Mr. Alec Govan. Ben Lomond stands sentinel beyond, and we drove for miles along the Loch, glistening in sunlight. The cars proceeded in orderly array, we being preceded by the Austin and followed by an Iris for miles. At the Glencoe hill-climb Major Lloyd marshalled the cars, Mr. F. Straight sending them away up the timed hill. The Straker-Squire car went splendidly, passing a Maudslay and a Thornycroft—both in trouble. An impetuous marshal waved the flag for us to stop and caused us to lose quite seven or eight seconds, all to no purpose. By Rest-and-be-Thankful Stone Mr. Eustace Watson and a crowd of motorists awaited the cars, which then sped on to Inveraray, the procession round Loch Fyne being without incident. At Dalmally Mr. Mitchell, with six-inch Palmer tyres on his Siddeley, and Mr. W. Vincent (of Messrs. A. W. Gamage, Ltd.) were seen, and there we lunched. The drivers of the smaller cars fed at Inveraray, so that news was scarce. Shortly after Dalmally a group of pressmen were seen standing disconsolately by a laggard car, and at Crianlarich the four occupants of a Chenard-Walcker were lifting a lamb from the centre to the side of the road. An earlier car had stunned the animal, and the quartette's explanation of finding it occasioned shouts of "Ba, Ba!"—the only humour of the trip thus far. At Kenmore, where *al fresco* tea was a welcome innovation, explanations were accepted that the lamb is probably mutton by now. Skirting the policies of Taymouth Castle, rain pelted up through the birks of Aberfeldy and the woods of Birnam, calling for sou'westers that were expected to be useful. We entered Perth in a pitiless rain, driving into a tented field, where Messrs. Langridge and Adam supervised the storage. Our Straker-Squire ran throughout with delightful rhythm of motion, and,

both previous trials. To-day he made the fastest time in his class, and was going grandly when he took the bend at the top of the hill by Rest-and-be-Thankful Stone too fine, with such effect on his car that he withdrew at Inveraray. Mr. J. S. Napier, on the New Arrol-Johnston (No. 10, Class 6), withdrew at Dalmally, and Mr. C. Maudslay withdrew his Maudslay (No. 6, Class 6) after the hill climb. Non-stop runs are credited to the 30-h.p. Beeston-Humber (No. 11, Class 4); in Class 5 to

The 8-h.p. Jackson Car which is taking part in the Scottish Reliability Trials.

No. 2, 30-40-h.p. Chenard-Walcker, No. 13, 30-h.p. Siddeley, No. 50, 25-30-h.p. Austin, No. 55, 25-h.p. Straker-Squire, No. 91, 20-h.p. Climax; in Class 6, No. 4, 24-h.p. Albion, No. 14, 40-h.p. Berliet, No. 20, 30-h.p. Daimler, No. 30, 30-h.p. White, No. 41, 30-40-h.p. Ariel Simplex, No. 45, 30-h.p. Spyker, No. 59, 40-h.p. Junior, No. 67, 20-30-h.p. Maudslay, No. 81, 35-45-h.p. Gladiator, No. 87, 30-40-h.p. Brasier, No. 88, 30-35-h.p. Simms-Welbeck; in Class 7, No. 12, 40-50-h.p. Rolls-Royce, No. 21, 60-h.p. Belsize, No. 27, 45-h.p. Mercedes, No. 35, 60-h.p. Berliet, No. 74, 50-h.p. Darracq. The first three in each class in the Rest-and-Be-Thankful Hill Climb were as under:—

Class 1.—No. 60, 12-h.p. Swift, 1; No. 28, 10-h.p. Adams, 2; No. 96, 10-h.p. Chambers, 3.

Class 2.—15-20-h.p. Calthorpe, 1; No. 97, 18-h.p. Mass, 2; No. 82, 14-h.p. Vulcan, 3.

Class 3.—No. 44, 14-h.p. Germain, 1; No. 22, 20-h.p. Belsize, 2; No. 18, 14-16-h.p. Argyll, 3.

Class 4.—No. 42, 24-h.p. Mass, 1; No. 19, 26-30-h.p. Argyll, 2; No. 49, 18-24-h.p. Austin, 3.

Class 5.—No. 40, 28-38-h.p. Ariel Simplex, 1; No. 80, 18-28-h.p. Gladiator, 2; No. 50, 25-30-h.p. Austin, 3.

Class 6.—No. 41, 30-40-h.p. Ariel Simplex, 1; No. 14, 40-h.p. Berliet, 2; No. 64, 35-h.p. Iris, 3.

Class 7.—No. 29, 35-45-h.p. Ariel Simplex, 1; No. 12, 40-50-h.p. Rolls-Royce, 2; No. 35, 60-h.p. Berliet, 3.

The cause of Mr. J. S. Napier's withdrawal is said to be seized gears. The happenings to the cars in the smaller classes are not yet officially reported, but taken altogether the day's run has been most successful.

PERTH, Wednesday Morning.

To-day's run is to Aberdeen, the cars in Class 4 starting out first, led by the Nordenfelt. Mr. A. Campbell Muir is not driving, having decided on that course at the last hour. He was, however, seen on the route on Tuesday calling for a rope for the disabled Arrol-Johnston. The weather this morning is dull, but fortunately it is not raining.

THE members of the Billericay Farmers' Club have decided to inaugurate a service of motor-cars to collect dairy produce in the district, and deliver it in London.

A DOZEN cases against motorists for exceeding the regulation limit of ten miles an hour in Richmond Park were heard at Kingston on the 20th. Fines were inflicted in every case.

The 30-h.p. Beeston-Humber Car which is taking part in the Scottish Trials.

although the 160 miles of sinuous switchback tests a driver, Mr. Lord was able to demonstrate the simplicity of control associated with this silent-running car. On such a vehicle, maintaining its regular course, the incidents seen are few and far between.

Of the ninety-six cars that started, all are reported here save three. Universal regret is expressed at the ill-luck of M. Ramois, on the Germain car, who has done non-stop runs in

CONTINENTAL NOTES.

British Cars in Switzerland.

The Swiss Automobile Club held a hill-climbing competition on a 10-kilometre course, from Gex to the summit of the Faucille, on Sunday last. The awards were based on a formula which took in the cylinder dimensions, the time occupied, the weight, and the fuel consumption. The best time of the day—13 min. 20 sec.—was made by a Cottin-Desgouttes car, but the first place on the formula was taken by M. Firmenich, on a 10-12-h.p. Humber.

Forthcoming Races in Belgium.

A three days' race meeting is to be held by the Belgian Automobile Club, in the Ardennes, towards the end of next month. On July 25th there will be the Circuit des Ardennes (in accordance with the rules of the German Imperial Club). This will be held on an 85.7 kilometre circuit, which, starting and finishing at Bastogne, takes in Longlier, Habay-le-Neuve, and Martelange, this having to be covered seven times. The cars must be fitted with engines of a capacity of not more than

first day's run, on the 20th inst., was from Paris to Boulogne 265 kilometres; the second from Boulogne to Ostend, 125 kilometres; the third from Ostend to Rouen, 185 kilometres; and the fourth, on Sunday last, from Rouen to Paris, 130 kilometres. The Roussel voiturette, in the 90 mm. class, the only entrant in its class, made a non-penalised run throughout, as did all but the Le Metais car in the 100 mm. car section. During the course of the contest a speed trial was held on the road near Ostend, the competitors being timed over a five kilometre course, which they had to cover in both directions. The best aggregate time for the ten kilometres (8 min. 50 sec.) was made by Giuppone on a Peugeot motor-bicycle, Griet, on a Demeester, doing the best (10 min. 33 sec.) in the car section. The result of the trial will be announced later.

The Annuaire de Route de l'A.C.F.

The French Automobile Club has just issued the new edition of its annual handbook entitled l'Annuaire de Route. The work, which is edited by M. Louis Dumontpallier, President of the Foreign Relations Committee of the A.C.F., is of a handy

The Southern Motor Club's Hill Climb.—The Cars on the way to Toy's Hill.

8 litres, and must weigh at least 1,175 kilog., this comprising the body, tyres, oil and fuel, &c. On July 26th the contest for the Coupe de Liedekerke will be run off, this being over six rounds of the Ardennes Circuit. The race is reserved to four-seated touring cars, the engines of which have a cylinder capacity of not more than 3½ litres. Finally, on July 27th there will be the Circuit des Ardennes, held under the rules of the Belgian Club, which admit racing cars without any restriction as to weight or fuel consumption. The contest will be over the same distance as that of July 25th.

The Paris-Ostend-Paris Reliability Trial.

The Auto-cycle Club de France has held a four days' reliability trial for motor-cycles and voiturettes during the past week. There were four starters in the class for motor-bicycles of a third of a litre engine capacity, seven in the quarter litre motor-bicycle category, four in the light motor-bicycle section, four in the tri-car class, one, a Roussel, in the voiturette category (up to 90 mm. cylinder bore), and six in the two-seated car section (up to 100 mm. bore), the latter comprising two Alcyons, two Demeesters, a Fouillaron, and a Le Metais. The

size, and contains a vast amount of useful information. In order to facilitate easy reference, the book has been divided into four sections, the first dealing with France, the second with foreign countries, the third with Algiers and the coast of Tunis, and the last one with the itineraries. In the French section, the sketch plans of towns, giving the main routes of entrance or exit thereto, will be found particularly handy. The information from former editions relating to Customs formalities, transport, taxation, &c., has been revised and brought up to date to March 31st last, and several new features have been added, such as "The Rule of the Road," "The Motoring and Sporting Press," "Affiliated Societies of the A.C.F.," &c. Altogether the Annuaire is a work which can be recommended to any motorist contemplating a tour on the Continent, and especially in France.

The Best Routes in and out of Paris.

Motorists visiting Paris for the first time with their cars usually select the widest and most direct roads into the city, and arrive without anything but a good opinion of the same. It may be useful to point out, therefore, that the paved highways need never be followed in leaving or arriving at the French

capital. The main road to St. Germain, for instance, is mostly pavé. Wise motorists, however, leave the city through the Bois de Boulogne, cross the Seine at Suresnes, climb the Suresnes hill, turn sharp to the right under the railway, pass behind Fort Valérien, and reach St. Germain by a road comprising twenty feet of pavé and as many kilometres of excellent macadam. The old highway from Versailles to Paris *via* Viroflay and Sevres, too, has been abandoned to the steam tramways and market-carts, the modern road being by the Côte de Picardie, Ville d'Avray, St. Cloud, Suresnes, and the Bois de Boulogne. It is a hilly road, but, excepting the short Suresnes hill, has an excellent macadam surface, not an inch of pavé, and is moreover perfectly dustless, the entire twenty kilometres having recently been treated with tar. A Taride detailed map of the environs of Paris will show how to get into the capital from almost any point without suffering pavé tortures. Good work has been done by the Touring Club of France in opening loop roads through or around pavé-stricken towns. Examples of this are to be found between Paris and Fontainebleau, the macadam loop roads being indicated by conspicuous sign posts.

A Combination Motor Car and Motor Boat.

A somewhat novel vehicle has just been brought under the notice of the French Minister of the Navy; it is a combination motor-car and motor-boat. The vehicle, the body of which is boat shaped, is provided with the usual road wheels and, in addition, with a rudder and a propeller. The steering wheel is connected up to both the front road wheels and the rudder, while the shaft from the gear-box to the differential shaft is prolonged to the rear to carry the propeller, a lever being provided whereby the rear road wheels can be thrown out of gear and the engine connected up to the boat driving mechanism. The idea of the designer, M. Ravallier, is that his machine can be used either on land or water, and, so far as the brief trials in Paris and on the Seine are concerned, he has demonstrated the practicability of the combination.

Another Elastic Wheel Competition.

Still another elastic wheel competition is to be held in France. It is being organised by "Le Poids Lourd" in conjunction with the "Auto," and will be confined to devices suitable for use on industrial motor vehicles and public service cars. The competition will take place in September next, and the competitors will be divided into five categories as follows:—Class 1, delivery vehicles of a capacity of from 50 to 500 kilogs.; Class 2, ditto, from 500 to 2,000 kilogs.; Class 3, ditto, from 2,000 to 3,000 kilogs.; Class 4, ditto, over 3,000 kilogs.; and Class 5, public service machines having accommodation for at least ten persons. The trial will consist of seven daily runs of from 100 to 150 kilometres on a circuit in the North of France, the total distance to be covered ranging from 700 to 1,000 kilometres, according to category. The cars in Classes 1, 2 and 5 will be required to attain an average speed of 15 kilometres, in Class 3 12 kilometres, and in Class 4 10 kilometres per hour.

An Historical Automobile Section at the Paris Salon.

The historical cycle section at the last Paris Salon having proved such a success, it is now proposed to organise one for early motor-cars at the exhibition in November and December next. M. G. Rives, the manager of the undertaking, is said to have also had the loan promised of the first De Dion machines, a Panhard Paris-Bordeaux car, Jenatzy's "Jamais Contente," on which several world's records were established, &c., so that an interesting display should result.

Miscellaneous Items.

The Wolsley Tool and Motor Car Co., Ltd., have applied for a space at the next Paris Salon.—The Stelvio Pass, which is at an altitude of 2,756 metres—the highest in Europe—is now open for motor traffic. It is situated on the road from Milan to Innsbruck.—A series of Flying Kilometre Speed Trials was held near Antwerp on Sunday last; there were thirty-two competitors, the best time being made by M. Deplus, who, on a Pipe car, covered the distance in 31 2-5 sec.

THE A.C.F. GRAND PRIX AND COUPE DE LA COMMISSION SPORTIVE RACES.

THE great event of the coming week is the race for the A.C.F. Grand Prix, with which has been combined that for the Coupe de la Commission Sportive. Both contests are being organised by the French Automobile Club, and are on novel lines in so far that they are being held under what are, for France, entirely new conditions, the old rule of a weight limit of 1,000 kilogs. having been abandoned in favour of a restricted petrol allowance. In the case of the cars in the Grand Prix the latter has been fixed at 30 litres per 100 kilometres, equivalent to 9.47 miles to the gallon. No less than thirty-eight entries have been received for this event, which is the one on which interest will principally centre. The appended table shows the competing cars, together with the distinctive numbers with which they will be marked, the names of the drivers and the order of starting. As will be seen, France will be represented by twenty-four cars (painted blue), Italy by five (red), Germany by three (white), Belgium by three (yellow), Great Britain by two (green), and the United States by one (white and red).

The Bayard-Clement cars are of 100-h.p.; the Darracqs, 120-h.p.; Motobloc, 110-h.p.; Corre, 90-h.p.; Panhard, 110-h.p.; Renault, 110-h.p.; Lorraine-Dietrich, 125-h.p.; Germain, 35-h.p.; Weigel, 80-h.p.; Brasier, 120-h.p.; Dufaux-Marchand, 125-h.p.; Aquila-Italiana, 90-h.p.; Mercedes, 130-h.p.; Christie, 130-h.p.; Fiat, 110-h.p.; and Gobron, 100-h.p. The Weigel, Porthos and Dufaux cars have eight-cylinder engines, the Aquila-Italiana six cylinders, all the others having four-cylinder engines. With one exception—the Christie—the vehicles are all provided with magneto ignition.

The contest for the Coupe de la Commission Sportive is for a smaller type of car, for which the quantity of fuel allowed is only 15 litres per 100 kilometres—equal to just under 19 miles

are thus 769.8 kilometres and 461.9 kilometres. The starting point, where quite a little town, comprising a grand stand, cafes, buffets, garages, &c., has sprung up, is located about a couple of miles from Dieppe. Thence the course runs in a south-easterly direction through Envermeu to Londinieres, when it turns sharply to the north, passing Sept Meules, to the little town of Eu, and thence *via* Criel-sur-Mer, following the coast line back to Dieppe. While the circuit has some fine stretches of level open road where fast running may be attained, there are one or two portions between Dieppe and Londinieres where the road is narrow, being at some points less than fifteen feet in width. From Envermeu to Londinieres the road runs alongside a light railway, there being no fence between it and the road, but the authorities, for the purposes of the race, have widened the road by three metres in order to allow ample room for passing. The railway is crossed at a right angle just before reaching Londinieres, after which there is a sharp winding ascent for two kilometres, from which point, until the little town of Eu is reached, is the fastest part of the course, it being a switchback and practically a straight road. At Eu the competitors will pass through the principal square of the town, and, turning sharply to the left, enter upon the last angle of the course. From Eu to Criel good running may be expected, and thence to Tocqueville the cars will pass along a fine stretch, the road being wide and straight,

The A.C.F. Grand Prix Race.—A View on the Course at the fork near Dieppe.

per gallon. Curiously enough, this race has not met with the support of French motor-car manufacturers which the organisers anticipated. It was at first intended to run it on the day following the Grand Prix, but, owing to the paucity of entries—as is shown in the subjoined table, there are only nine—it is being run in conjunction with the more important event.

THE COUPE DE LA COMMISSION SPORTIVE RACE.

Order of Starting.	Car.	Driver.	Distinctive Sign.
1	32-h.p. Gillet-Forest	De la Touloubre	GF-1
2	50-h.p. Darracq	De Langhe	D-1
3	40-h.p. H.I.S.A.	Depasse	H-1
4	35-h.p. La Buire	Dumaine	LB-1
5	40-h.p. Porthos	Defries	P-1
6	50-h.p. Darracq	Demogeot	D-2
7	80-h.p. H.I.S.A.	Moulin	H-1
8	35-h.p. La Buire	Mettard	LB-2
9	35-h.p. La Buire	Deesaigne	LB-3

Considerable time was spent in examining suitable courses on which to hold the races, and eventually that known as the Seine Inferieure Circuit was selected. As will be seen from the accompanying sketch map, it is triangular in shape, having as points the three towns of Dieppe, Londinieres and Eu. The course measures 76.988 kilometres, and the competitors in the Grand Prix have to make ten laps and those in the Coupe de la Commission Sportive six rounds. The respective total distances

and affording opportunities for excellent racing. Altogether the circuit is considered to be a unique one from the point of view of absence of natural difficulties, but it is considered that its short length and the absence of many long straight stretches will cause it to be slower than last year's route. Nevertheless, the passage of the cars in front of the grand stands about every half-hour will afford an element of excitement from a spectacular standpoint, which has been lacking on former occasions.

A good deal of money has been spent in getting the course in good condition and in rendering it free from dust. No less than thirteen foot-bridges have been constructed across the track at different points for the convenience of the public, for the protection of whom it is estimated that 8,000 soldiers and police will be employed. The reception of the cars takes place on Monday next, when the operation of filling and sealing the petrol tanks will be proceeded with. Special precautions have been taken to prevent fraud, any attempt at which will entail instant disqualification. The race itself is fixed for Tuesday, July 2nd, the competitors in the Grand Prix being sent off at minute intervals from 6 a.m., while those in the Coupe contest will follow at five-minute intervals, starting at 9 a.m. A full account of both contests will be published in the next issue of the M.C.J.

MOTORISTS will find interest in the new biograph pictures of the Weybridge motor track now being shown at the Empire, in London.

THE feature of the annual race meeting at Ascot last week was the large number of motor-cars. It is estimated that on one or two of the days not less than 1,000 vehicles were in the district.

THE sub-committee of the Leeds Institute Schools have decided to establish at the secondary school courses in motor-car engineering, should a sufficient number of students come forward.

THE Sirdar Rubber Company have received a large order for Royal Sirdar pneumatic tyres, both grooved non-slipping and plain, for the Sultan of Johore, who, we understand, has about sixteen or seventeen motor-cars.

ANOTHER transformation scene is being effected in Belfast, where the old Hippodrome and Circus building in Chichester Street is to be adapted to the purposes of a motor garage, under the control of Messrs. J. B. Ferguson, Ltd.

WE regret to announce the early death of Mr. John Arthur Croxson, the manager, since its formation, of the Electric Landauette Co., Ltd., Chelsea. Deceased, who was in his fortieth year, succumbed to exhaustion following an operation of a very painful nature.

A NEW toll is now in force on the private road leading from Brooklands Station, near Manchester, to Prospect House, Ringway. The toll for motor-cars, which was formerly 3d., has been increased to 1s., and motor-cycles, which were not charged for previously, have now to pay 3d.

IN view of the near approach of the R.A.C.'s Commercial Vehicle Trials, the question of holding further provincial meets of commercial motor vehicles has been deferred until after those trials have taken place, and the committee that organised the run to Reading has adjourned *sine die*, on the understanding that a meeting is convened about November next.

THE 1907 edition of the Automobile Handbook of the R.A.C. and Motor Union has just been issued. The new volume is much larger than the 1906 edition, the increase in size being accounted for by the additional information contained between the two covers. One of the many new features is the series of maps of towns in which speed limits have been sanctioned, the portion to which the limit applies being indicated.

THE Alpha petrol motor illustrated in the last issue of the *M.C.J.* was wrongly described as being of 12-16 h.p. The normal rating is 16-20 h.p., the four cylinders, which are cast in pairs, being 93 mm. bore by 105 mm. stroke. At a speed of 1,000 revolutions per minute the engine develops 18 h.p. Messrs. Johnson, Hurley and Martin also make a 25-30 h.p. four-cylinder motor as well as two sizes—8-10 and 12-15 h.p.—of twin-cylinder engines.

ARRANGEMENTS are being rapidly pushed forward for the motor trip to be given to the crippled children of Southport on Saturday, July 6th. The trip is again being arranged by Messrs. Armstrong and W. D. Coddington, who so successfully organised a similar event last year. The motor-cars will call at the various homes and pick up the children, and convey them thence to the Promenade, where the procession will start about a quarter past two for a run to Sefton, where the children are to be entertained to tea.

THE Daimler Motor Company have recently put down a new charging plant to enable them to cope with the increased number of accumulators that have to be charged. The equipment includes a dynamo and motor and a large switchboard. The motor develops 10 h.p. and is directly coupled to the dynamo, which is capable of giving 130 amperes at 65 volts. The accumulators are charged in groups of twelve 4-volt accumulators in series, the groups being in parallel with each other. The current in each group can be regulated and is read on the smaller ammeters on the switchboard. To ensure a thorough charging the rate is kept low and a long charge given.

HERE AND THERE.

At the Blackwall Station Wharf, on the 19th inst., the Bishop of Stepney dedicated a new motor-boat to the service of the Missions to Seamen.

MOTORISTS in the neighbourhood of the South of London may obtain Benzole, suitable for use in motor-cars, from the South Metropolitan Gas Company, at their Tar Works, Ordnance Wharf, East Greenwich.

THE Motor Union of Nyassaland has been formed with Mr. J. B. Blenkinson, of Zomba, Nyassaland, *via* Chinde, East Coast of Africa, as secretary, and Sir A. Sharpe, K.C.M.G., as president.

THE Navan Engineering Works is one of the many Irish engineering establishments that have lately been turning their attention to motoring. They have every facility for assisting motorists at their place in Mill Street, Navan.

THE Argylls "Motorist" for May-June contains tributes to the late Mr. A. Govan by Mr. W. A. Smith and Mr. E. H. Watson, who were intimately associated with him in the development of the great industrial concern at Alexandria.

THE following is a summary of last week's runs of the Hotchkiss six-cylinder car under the observation of the R.A.C. :—

The accidental meeting of the Six-Cylinder Hotchkiss Car and one of the Weigel Grand Prix Racers at Sherborne, Wiltshire.

Monday, June 17th, Weston-super-Mare to Bristol (circular run), 154 miles; Tuesday, June 18th, Bristol to Farringdon and back, 126 miles; Wednesday, June 19th, Bristol to Alcester, 167 miles; Thursday, June 20th, Alcester to Kidderminster, 165 miles; Friday, June 21st, Kidderminster to Lancaster, 166 miles; Saturday, June 22nd, Lancaster to Glasgow. The car, which is this week taking part in the Scottish Reliability Trials, has now done 7,113 miles in Great Britain and Ireland, and 6,200 miles prior to this in France, making a total mileage of 13,313, without any mechanical stop.

A COMMITTEE of representative Manchester motorists, consisting of Messrs. W. Hyde, J.P., Sawley Brown, W. Cotworth, and C. B. Holmes, is busily engaged in organising the third annual motor ride for Manchester and Salford crippled children, which is to be held on Saturday, July 6th. The destination is Chelford, where Colonel Dixon has placed the whole of his grounds (Astle Hall) at the disposal of the committee. On account of the dust nuisance, it has been decided not to form any procession. The cars will assemble in Albert Square about 2 o'clock, whence alternative routes will be taken to Chelford, the trip comprising a round of about forty miles. Over sixty cars have, so far, been promised, and it is hoped to reach 100 by next week.

A NEW garage has been opened by Mr. W. Thompson, in Castle Street, Northwich.

TENDERS for a chassis suitable for a landaulet body are invited by the Metropolitan Asylums Board by the 8th prox.

VISITORS to the Lake District will be interested in the new garage erected at Bowness by Mr. Herbert Croft, of Kendal.

ALDERMAN J. SCOTT FOSTER, J.P., of Portsmouth, has recently taken delivery of an Argyll 14-16-h.p. two-seated car.

MESSRS. AVERY AND ROBERTS, LTD., of 64, Stanley Street, Liverpool, have sent us a sample of the Auto Nut Pliers they have recently introduced, and of which we give an illustration herewith. Several advantages are claimed for the new tool

which will readily appeal to motorists; principal among them is that it is specially adapted for use on all nuts up to $\frac{1}{2}$ in., such as on coils, batteries, commutators, and all small nuts. It can be used either vertically or horizontally, and has jaws which are cut to an angle of 120 degrees, so that it fits perfectly without damage to nuts. The pliers, by means of which nuts can be screwed on or off in all sorts of awkward places where it would be impossible to work with ordinary spanners and wrenches, also comprises wire cutters and nippers, burner hole, and ordinary pliers, so that it can be used for screwing up the caps on tyre valves, and the nuts on sparking plugs. Altogether the Auto Nut Pliers forms a useful addition to the tool box equipment.

THE Council of the borough of Bromley (Kent) have applied for a regulation limiting the speed to ten miles per hour in some parts of the town.

MESSRS. CHARLES LEITTS AND CO. send a copy of their Log Book for motorists, which will be exceedingly useful to those who tour by motor-car.

MR. DAVID M. MENZIES, M.A., has been awarded the first prize in the Motor Union's essay competition on "The Preparation for the Forthcoming Parliamentary Struggle."

THE "Ideal" Motor Hood Company, of 43, Parson's Green Lane, Fulham, S.W., is placing upon the market the hood of that name made under Hopper's Patents. This can be easily fitted to any type of side entrance car, and, while not obstructing the outlook when down, gives ample protection to the front seats when raised and extended. The same company has introduced the "Ideal" motor folding seat, which is fitted to the inside of the car, allowing the occupants to sit facing forward, and folding up compactly behind the driver's seat when not in use.

THE attention of motorists will be centred on the Brooklands racing track at Weybridge this week, owing to the attempt of Mr. S. F. Edge to drive his six-cylinder Napier car at the rate of sixty miles per hour for twenty-four hours. The start is fixed for 6 p.m. on Friday, the 28th inst., when Mr. Edge intends to try and drive right through himself. For the purpose of testing the difference of similar cars driven by fresh drivers, he is also arranging for two other 60-h.p. six-cylinder Napier cars to be driven by relays of drivers, a fresh driver every two hours, so as to push the cars to their utmost limit.

A HUNDRED years ago the stables of the New London Inn, at Exeter, could accommodate 300 horses. Now its chief concern is with automobiles, for the accommodation of which a spacious garage has been erected with private lock-ups, as well as general facilities for the storage of vehicles belonging to visitors to the city. While the garage has been erected by Mr. Pople, the proprietor of the hotel, administration will be undertaken by Messrs. Gould Bros., who have had much experience of the motor business. The firm will now have three automobile establishments in Exeter—works on Southernhay, a showroom at the corner of London Inn Square, and the garage behind the New London Hotel.

IN the Scottish Reliability Trials sixty-six cars entered are Dunlop tyred.

THE toll for private motor-cars at Llandudno has now been fixed at 1s., and for public cars at 4s.

THE King's journey by motor-car from Windsor to London on Monday was interrupted between Staines and Egham by a puncture, which caused a slight delay.

THE Chancery Division of the High Court has declined to give the Electromobile Company, Ltd., the exclusive use of the word electromobile in the way of trade.

MR. H. WAYMOUTH PRANCE, A.I.E.E., 39, Westbourne Gardens, W., is rendering useful service to prospective motorists by expert examination of second-hand cars before purchase.

AT a meeting of the North-East Lancashire Automobile Club on Saturday last a resolution was unanimously passed to petition the Fylde Rural District Council and the Lancashire County Council to abolish the toll-bar over the Freckleton Marsh, and make the road a secondary one.

THE Vulcan Rubber Company, of 308, Euston Road, London, N.W., have sent us a sample of the Vulcan rubber cement they have lately introduced for repairing cuts and gashes in the outer covers and inner tubes, a preparation which will be found extremely useful in keeping motor tyres in good condition.

THE Argyll School at Newman Street, W., is now in the capable hands of Mr. Alfred Carter, late Quartermaster-Sergeant Royal Marine Artillery, who gained a sound reputation as a tutor with the Royal Marine Artillery Technical School (Motor Branch), Eastney, and who has been very successful in training men of both services as motor drivers.

WE have had an opportunity of inspecting a section of the new Avon motor tyre with round and square treads, and with the non-slipping cross-grooved type. This tyre certainly appears to carry with it all the elements of success, for the fabric is manufactured of the best Egyptian cotton, of great strength, which, before being incorporated in the tyre, is thoroughly impregnated with pure Para rubber. In this way it is made very waterproof, and is less likely, therefore, to become rotten under the action of wet than if such precautions were not taken. The casing is also made of pure Para rubber, and the tread is so

treated as to become remarkably tough and durable, while its thickness is such that it ought to be very immune from punctures. The tyres, which are entirely British, are made in all standard sizes, from 65 mm. to 135 mm., at Melksham, Wilts, by the Avon India Rubber Company, which is a firm having long and varied experience in the handling of rubber for all purposes, and which enjoys the privilege of contracting for the Admiralty and other Government departments. This company also bear a high reputation for their solid tyres suitable for all types of motor-vehicles, from heavy buses to pleasure cars.

THE DAIMLER-MERCEDES CAR.

WE give herewith two illustrations of the new Daimler-Mercedes 30-h.p. car, which, as announced in a recent issue of the *M.C.J.*, is being put on the market by the British and Colonial Daimler-Mercedes Syndicate, and one of the first of which we were last week able to inspect at the company's depot at 532, Oxford Street, London, W. The new vehicle is a British-built replica of the well-known Mercedes car, being, in fact, built under licence from the Daimler Motoren Gesellschaft patents for the British and Colonial Company by the Yorkshire Engine Company, Ltd., of Sheffield, a large and old-established concern, which has for years been making locomotives for the leading railway companies throughout the world. While, generally speaking, the Mercedes designs have been closely followed and adhered to, a few modifications have been made, in order to meet the requirements of British motorists, such as placing the magneto and pump on opposite sides, to facilitate adjustments. The frame is of pressed steel, narrowed at the front to increase the lock of the steering wheels. The engine comprises four cylinders, $4\frac{1}{2}$ in. bore by 5 in. stroke, cast in pairs. The valves are located on opposite sides, being mechanically actuated off separate cam shafts. The gear wheels operating the latter are located at the front end of the engine, and are not enclosed. We understand, however, that this will be done in future models. The ignition is by gear-driven low-tension magneto, the make-and-break mechanism being fitted at the corners of the cylinders, and the advance and retard obtained by means of a sliding cam shaft. The feature of the pressure feed carburettor is the provision of a device controlled from the dashboard whereby the quantity of spirit delivered through the jet can be varied. The water circulation is maintained by a gear-driven pump and a honeycomb radiator; a current of air is drawn through the latter by a fan formed by the arms of the flywheel. The water jackets, which are of liberal dimensions, are closed by a detachable cap which fits on the cylinder heads. It may be mentioned here that the water passes into and out of the jackets through the caps, a partition being provided to ensure a perfect circula-

Fig. 1.—View of Exhaust Side of Engine on Daimler-Mercedes Car.

tion round the cylinders. The speed of the engine is controlled by both hand and foot levers; a governor is also provided, this being connected up to a sliding spindle, the rear end of which pushes more or less a lever connected with a throttle valve attached to the carburettor. The lubrication of the motor is maintained by the pressure of the exhaust.

The transmission is through a flat disc metal-to-metal clutch and jointed shaft to the gear-box, which is supported at three points and which is adapted to give four speeds and a reverse. The control is by a single lever working in a gate; a locking

device being provided to prevent any but the right pair of pinions getting into mesh. The design of the gear-box is on excellent lines, the pinions not only being wide but of large diameter. The final transmission is by side chains to the rear road wheels. A foot lever controls two contracting metal to metal band brakes—one on the forward end of the gear-box side shaft and one on the differential shaft; the usual hand lever actuates internal expanding brakes connected with the hubs of the rear road wheels, which are shod with new Garantire motor tyres.

Fig. 2.—Rear View of Chassis of Daimler-Mercedes 30-h.p. Car.

The wheel base of the car is of a length which will permit of any style of side-entrance carriage body being fitted. Ball bearings are used to all parts except the engine.

In the course of a short run through the traffic on one of the new cars we were able to verify the claim for quiet and easy running, and can well believe the statement that it is an excellent hill-climber and can attain a good turn of speed on the level. The Mercedes cars have long held a high place in motor-ing circles, and the advent of a British-built sister vehicle is of more than passing interest, especially in view of the relatively low price at which it is being put on the market.

"AUTOMOBILE Dealers and Garages" is the title of a useful book recently published by the American Motor Car Manufacturers' Association, a copy of which has just reached us. It is a paper-bound volume of 176 pages, on which is printed a complete list of motor-car agents and garages in the United States, Canada, Cuba, Hawaii, and Mexico. The different States are arranged alphabetically, while the list of dealers in each State is alphabetically arranged under the city or town named.

THE Pullman Non-skid bands are the subject of a new catalogue which comes to us from Messrs. R. and J. Pullman, Ltd., of the Westbrook Mills, Godalming, Surrey. These detachable non-skid bands have been before motorists for several seasons and have proved most effective in use. The band consists of sections of leather studded with steel rivets covering the surface of the tyre and attached to two chains which follow the circle of the rim. The band takes the entire rub of the road, and stones and grit cannot possibly work in between the band and the tyre, so that the durability of the device is well regarded. Particulars are also given of the tyre repair department established by the firm at their works. The electric chamois leather, specially prepared by the firm to clean all parts of motor vehicles, the "Kaspine" tyre preserver, and the "Kaspine" lubricants, &c., are also described in the excellent list. The whole of the work in connection with the tyres is carried out by Messrs. Pullman, Ltd., in their own factory, which is fully equipped with all the plant necessary for rubber repairs.

CORRESPONDENCE

[Letters to the Editor should be addressed to the offices,
27-33, Charing Cross Road, W.C.]

CHARGING ACCUMULATORS FROM PRIMARY BATTERIES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice in the last issue of the *M.C.J.* that "Enquirer" is experiencing trouble with his charging battery, and I do not doubt but that his letter airs a grievance common to many motorists who, having recognised the great advantages connected with the ability to charge their own accumulators, have invested in one of the numerous charging sets now on the market. I do not wish to convey the idea that these new charging sets are of no use; on the contrary, it is my opinion that a good one, properly looked after, will pay for itself in a very short time. Nine out of every ten of the advertised charging batteries are simply modifications of the old bichromate single-fluid cells, the zinc rod or plate being placed in a porous pot with dilute sulphuric acid instead of in the chromic acid solution with the carbon plates. This is the point at which I think a vital mistake has been made. The separation of the two liquids has not materially increased the capacity of the cell to furnish a steady current for a long time—the main requirement in accumulator charging—for the chromic acid is still present as the oxidising agent, and it is mainly on how the latter does its work that the strength of the cell depends.

Mr. S. F. Edge on his Six-Cylinder Napier Car in training on the Brooklands Track for his twenty-four hours' ride.

Photo by)

(Campbell-Gray.

This brings me to a point that I wish to strongly emphasise; there is no cell, except the Daniell, which is unsuitable for charging purposes, that will supply such a strong current for such a great length of time as the Bunsen. This cell, as many of your readers are no doubt aware, consists of a carbon rod standing in a porous pot, which in turn stands in an earthenware or glass vessel. Surrounding the porous pot is a zinc cylinder—one or two plates act quite as well; the liquid in the porous pot is concentrated nitric acid, that in the earthenware pot dilute sulphuric acid. It will thus be seen that the only difference between this cell and the modified bichromate is that nitric acid surrounds the carbon plate in one and chromic acid in the other. Of these two liquids, the nitric acid is by far the more powerful oxidising agent, hence the Bunsen cell has correspondingly greater powers of endurance than the chromic acid cell.

With regard to "Enquirer's" difficulty, it is quite true that the liquid in the outer cell turns green when exhausted, but then this clearly shows that the solution has given up all its available oxygen, and this in turn points out that the battery has been working. There are, therefore only two explanations of his difficulty, and these are (1) either the battery was overworked during the short time it was in use, or (2) the amount of chromic acid used to recharge the battery is insufficient. If "Enquirer" is of an experimental turn of mind, he might try substituting strong nitric acid for the chromic acid solution in the outer cells—providing, of course, that he does not object to the offensive smell which is an inseparable quantity with nitric acid. This is the only drawback to the use of the Bunsen cell, but it may be overcome by placing the battery in an airy place when in use. A Bunsen charging battery may be easily constructed from four or five

jam jars, Leclanche porous pots and carbons, and the same number of zinc plates, which may very often be picked up cheap at a blacksmith's or ironmonger's.

The nitric acid may be used over and over again till exhausted, and the weak sulphuric acid will last out three or four complete chargings. With a home-made battery like the above plus the little necessary care and attention, a motor-cycle accumulator can easily be charged at a cost of not more than 3d.—Yours truly,

ELEKTRIK.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—As a very old user of Boron cells, I am pleased to be able to reply to "Enquirer." I have used for the past five years two sets of Boron cells. One is a six-cell parallel set which I keep my 40 and 60 amp-hour accumulators constantly replenished with, free from any difficulty and at a trivial expense. The other is a four-cell set for cycle and small car accumulators; the latter, if properly used, is capable of charging two or three accumulators at the same time. In this case the cells are connected together in series, the accumulators in parallel. I prefer to use sodium bichromate on account of its cheapness and equal efficiency to chromic acid. The fact that your correspondent's accumulators show $4\frac{1}{2}$ volts when disconnected is proof that the batteries are thoroughly charging and performing all that is required by them. The reason the accumulator does not retain its charge is either that the plates have become softened by use, as accumulator plates have only a certain longevity, or that a slight crack in the partition of the accumulators allows the voltage to fall. This I know from a lengthy experience to be a fact, over 75 per cent. of the failures in accumulators being traced to this cause. The fact that the solution in the cells turns green quickly would show that the porous pots in the cells have probably perished; these pots will not last indefinitely, the impurities in the chemicals in time deteriorates them. Your correspondent would get quicker charging at less expense by using a set of the sensitive lead negatives which the Boron Battery Company now supply with their latest pattern of cell, which leaves nothing to be desired for charging any form of accumulator.—Yours truly,

JAMES PHILPOT.

APPEARANCE IN COURT.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice a paragraph in the Press this week with reference to the fact "that justices in various parts of the country are taking exception to the practice of motorists who do not appear in person to answer a summons." It recommends "motorist defendants to either appear at the hearing, or to take the precaution beforehand of finding out whether the justices will excuse their non-attendance."

I would like to point out that the A.A. has already recognised this, and has instituted a special department by means of which members are relieved of all trouble of attending more or less trivial cases. A small subscription per annum provides for legal representation at any number of cases in one year. In this arrangement my committee have followed the well-known policy of the Automobile Association, namely, to obtain these benefits for members without the Association making one penny profit.—Yours truly,

STENSON COOKE,

Secretary, Automobile Association, Princes Buildings,
Coventry Street, W.

THE LONG DISTANCE RELIABILITY TRIAL OF A SIDDELEY CAR.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Having received the official certificate from the R.A.C. dealing with the recent long distance trial of a 40-h.p. Siddeley car, the following comments and supplementary information may be of interest to your readers, and at the same time help to clear up any misunderstanding as to the conditions under which this trial was carried out. The car made consecutive daily runs for sixty-seven days with the exception of Sundays, although the weather conditions were at times abnormally severe. Twenty-seven days were wet, and soon after the commencement of the trial the severest gale of recent years was experienced, while in Scotland the car became embedded in a snowdrift. With regard to the adjustments which were made, it should be noted that these were only done when the official observer was making his weekly inspection of the various parts. The adjustments required were very simple, and no effort was made to hurry over them, otherwise they could have been effected in much less time. Those adjustments which were absolutely necessary we find occupied 11 hours 36 minutes and 55 seconds, (note the seconds), the work done in this time being the adjustment of end play on the gear shafts, taking up slack in chains, adjusting brakes, magneto ignition, &c. Calculating the cost of this work on an ordinary repair shop basis of 2s. 6d. per hour, we have a total of 29s. for 10,000 miles, while at the finish of the trial we find that what new parts are required to put this car in perfect running order amount only to the fitting of new bushes and pins to the front spring shackles at a cost of 1s. 10d. inclusive.

Dealing with the question of tyres, the number of replacements was abnormal and requires further explanation, and we are glad to have this opportunity of stating what actually occurred. The "Elastes"

fillings are made on tyres fitted to rims; the rims upon which these tyres were fitted differed in the shape of the edge of the bead from the rims used in the trial. In consequence of this the "Elastes," which is not claimed to be so adaptable as air, was altered in form when fitted to these new rims, causing a sawing action to arise at the head of this bead, cutting through the sides of the tyres; this accounts for the abnormal use of tyres on the trial, and is due to an error of judgment in fitting rims differing in an important particular from the standard rims upon which the "Elastes" fillings were made. The greater number of the tyres used on the trial were damaged from this cause, and which it will be seen was due to exceptional circumstances, and the performance does not reflect in any way on the usual wear of the tyres in question.—Yours truly,

J. D. SIDDELEY.

TAXING VISITING MOTORISTS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I live at Nice, France, and my only domicile is in France, where I pay taxes for my motor. I came to England for a few months as a visitor and received the usual buff paper requesting me to pay for my car, my chauffeur, &c. Knowing that motorists who pay taxes in England, and pass the winter in Riviera hotels, are not taxed by the French Government, I considered that in these days of *entente cordiale* it might be wise to ask for reciprocity.

I wrote to Somerset House, and enclose answer, which may interest your readers and yourself.

People who purchase powerful cars do so because they wish to travel. Now, suppose I decide on taking a trip round Europe this summer and to winter in the South afterwards, is it right that each state should charge me a motor tax? If the French State allow British motorists to winter at Nice without charging the motor tax, and yet makes its own people pay, is it right, fair, or generous to make motorists who have no domicile in England pay when they come over here for a similar period—say, under six months?

Some people say, or think, we have no motor-car ourselves, we therefore hate and abominate all men who own motor-cars because we get the inconvenience thereof and none of the pleasure. They forget British industry.

Every Britisher who is driven to live abroad and purchase a car abroad causes loss to his native land, for this good citizen keeps servants, patronises shops and hotels, and by purchasing a car helps British labour.

Another silly idea people have is to suppose that, because certain millionaires own cars, every car owner must be a Vanderbilt. Therefore because Vanderbilt is a married man, every married man must be a millionaire. This *reductio ad absurdum* may perhaps open people's eyes.

I can remember the time when every cyclist's life was made unpleasant for him by ignorant and prejudiced persons. That time is past; now the motorist has to suffer or go abroad. Thousands are driven across the Channel, much to the delight of French hotel-keepers, &c.—Yours truly,

A BRITISH MOTORIST ABROAD.

[COPY.]

Inland Revenue, Somerset House.
London, W.C.

SIR,—In reply to your letter of the 2nd instant, I am directed by the Board of Inland Revenue to acquaint you that the law makes no provision for exemption from carriage licence duty in favour of temporary residents in Great Britain, and the Board have no power to grant you relief from licence duty in respect of the motor in question while it is kept and used in this country.

I return the form of declaration enclosed with your letter.—I am,
J. B. BYRNE,
Assistant Secretary.

DANGEROUS CROSS-ROADS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Although the local authorities in various parts of the country have erected warnings to apprise motorists of dangerous cross-roads, I am afraid that drivers of cars are not paying much attention to the same. I have for a long time observed that the bulk of the serious automobile accidents that have occurred have taken place at cross-roads. Experience has shown that two objects, proceeding toward a common point from different directions, will all too frequently reach it simultaneously, despite their widely varying speeds. This being so, it behoves every motorist to exercise the greatest caution in approaching any cross-road in the country and in no way to disregard the warning signs. If the latter were heeded oftener there would undoubtedly be fewer accidents to record. The habit of taking chances is too prevalent amongst a certain section of the motoring public; it is a specious form of over-confidence born of an intimate knowledge of the great capabilities of the machine, and sooner or later it ends in disaster. Perfect control and absolute confidence in his car are two requisites of the good driver, but the motorist who so far abuses them as to take chances at cross-roads is not only placing himself in danger, but is possibly risking the lives of others.—Yours truly,

J. GREGORY.

GOOD ROADS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Much has been said and more written about the dust nuisance and the shortcomings of road surveyors, and I feel that it is only fair and right that when one comes across good roads, well kept and free from dust, that it should be brought to the notice of those interested. Having lived for some years at Harrow, I have always taken great notice of, and been pleased with the experiments that have been carried out there by the surveyor, Mr. Percy Bennetts, to minimise the dust. I was over in that neighbourhood quite recently and noticed that the roads had just had their summer coating of tar, even the blind roads. In driving over them there was a feeling of cleanliness and smoothness that one only occasionally experiences, and efforts made in this direction will go far to stamp out the ill-feeling that exists against automobiles on account of the dust raised by them, and the thanks of all good pedal pushers are due to the authorities and surveyors who make them.—Yours truly,

TOM WILLIAMS.

SPEED COMPETITIONS, HILL-CLIMBING TRIALS, AND THE PUBLIC.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—The question of competitions such as speed trials, as recently held at Bexhill-on-Sea, hill-climbing competitions, &c., is an interesting one, and one which is now very much before the motoring public, owing to the rather questionable way in which the Bexhill trials were conducted. If a hill-climb or a speed trial is anything like well advertised, there will be a large attendance of the public; but the point is this—

The 40-h.p. Itala Car which is being driven in the Pekin-Paris Race by Prince Scipio Borghese.

Attention may be drawn to the novel mudguards, which are so arranged that they can be readily detached and used as planks for crossing streams and marshy land.

what do the public come for? Does it influence them in placing their orders for any particular car? In my opinion the public who attend these meetings may be divided into three classes, as follows:—(1) Those people who have nothing particular to do, and go about in search of a sensation (they generally reckon on one or two accidents). (2) Those people who are mildly interested in cars, and like to have a good chance of seeing different makes quite closely. (3) Enthusiastic motorists who are really interested—a good many of whom are deceived by the intricate formulae governing the event, as well as the trade trickery. The last class is the largest, the other two being about equal.

Now the motoring community and those about to motor should consider these events carefully. There is more in them than meets the eye. If we look through advertisements, we always find magnificent lists of wins at various events, and usually we find that these wins are restricted to about two makes of cars. Now, does this prove that these two makes are the best? Most decidedly not. If a person or a firm has the money and the time to spend, it is quite possible, with a selection of two or three cars, to go and live for a few days at the scene of the particular event, and tune up the car for it. Gear ratios may have to be altered, carburetors adjusted, &c., &c., but all this is possible to the man with the time and money. But what about the people who see the competition? They see a certain car make a magnificent show, and only a few of the initiated are aware that the driver has lived on the scene for about a week, and got his car specially prepared. The car that makes such a brilliant display is not necessarily the best—generally otherwise. There are several really good cars which have not distinguished themselves at these events for the simple reason that the people pushing them are not financially able to go to the great expense of getting several cars ready in the way described. Hence a good car often gets a bad name, because the public fail to understand the trade tricks of hill-

climbs, &c., &c. I would suggest a hill-climbing competition as follows:—No competitor is allowed to know where the hill is, and the car entered is to be selected by competent judges from the manufacturer's showrooms as an ordinary standard car, and to be sealed where necessary to prevent "faking." The poor public would then have some chance of getting some idea of a good car, as the possibility of trade trickery would be greatly reduced.—Yours truly,

BRIGHTONIAN.

THE PRESENT SYSTEM OF TRANSMISSION—SOME REFLECTIONS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Does the man in the street rule the design of the modern automobile? The manufacturers, of course, make what they think will sell, and they all certainly appear devoted to the Panhard type. Is it the best? or is it that the makers, not aiming at originality or perfection, and being also in many instances likewise repairers, cling to the one design, the one idea. Take the recent shows. I think I am not far off the mark in saying that over 95 per cent. of the cars exhibited had a gear-box with a first motion shaft connected by some form of coupling to the fly-wheel, and thus the crank shaft of the engine, and meshing with teeth on the second motion shaft in the gear-box, the pinions on which moved on a square, so allowing of various rates, while the end of this spindle terminated in a pinion that drove a bevel keyed to the differential sleeve of either a live axle or a differential countershaft, the direction of the power transmission being in this manner altered.

The Hedges Butler Challenge Cup, presented by Mr. Frank Hedges Butler for the first longest distance balloon and aeroplane race in England from Ranelagh Club to within five miles of the sea.

As long as the two bevels mesh exactly, though power is lost in transmission, no harm results; but bearings, even ball bearings, will wear, and if those on either the countershaft or differential sleeve allow of a little play, then the result may be disastrous—bevels bottom, teeth tear out, motion shaft breaks, differential sleeve fractures, &c. Of course the details in a modern car are improved, the bearings may be of the ball or roller type, or if not, of manganese or phosphor bronze, and yet with a propeller transmission these torts will happen. It is true that there is now less liability to shock; clutches are less fierce, even the modern leather-faced friction clutch has, as a result of spring insertions under the leather, become more gradual in taking up its grip, and of course the disc type is even more perfect. Ball bearings now replace the old thrust collars on the bevel; single and double cylinder motors are giving place to the four; but, as I have already remarked, the transmission worries, though maybe not as frequent, still occur. The propeller shaft, with its attendant necessity for rigidity in all its component parts, seems to be a fixed feature since its first introduction. Bevels—I speak feelingly, having four broken ones on my scrap heap—are expensive to buy, troublesome to fit, and, what is more, wasteful in transmitting power.

In the old-fashioned, but still running, horizontal engines, such as the Benz and Wolseley, the power from the engine was carried by belts in the former type and chains in the latter. Surely some such system could be employed with the fashionable vertical engine. If the motor was placed at right angles to the chassis, with the fly-wheel on one side, or if the crankshaft was built up, the fly-wheels being internal, the power could be transmitted by a Renold chain to the first motion

shaft in the gear-box, on to which a clutch could be fitted, as on the little 6-h.p. Wolseley, and then from the second motion shaft to either the differential sleeve of the countershaft or the live axle by chain. The road wheels would then rotate in the same direction as the engine shaft. There would be no alteration of direction in the transmission, bevels with their attendant worries would be done away with and repair bills would shrink. Chains, it is true, break, still it is easy to carry a few spare links and bolts, and no trouble to thus repair a chain, whereas, putting aside the almost impossibility of replacing a bevel on the road, it is no easy matter to replace, even for temporary purpose, a broken tooth on a bevel pinion. The bevel is usually case-hardened, so it must first be softened by heat before the part where the broken tooth is can be tapped, then if two screws are screwed in they can be filed to do duty as a tooth. My experience of trying to do this on a two to one pinion on the road was instructive, lengthy, but rather monotonous and unsatisfactory. Still the dental substitute did carry me as far as a railway station! A broken chain need never hang one up; a spare link can, in emergency, be held by a bolt, or, if that fails, a piece of a "tommy" makes a good rivet. I believe with some such method as this that much more power would reach the road wheels and fewer roadside stoppages take place. These few words are put out as a suggestion, more with the idea of, perhaps, opening a matter for discussion. All motorists desire to see the advancement of the car. Perhaps the more technical readers of the *M.C.J.* will follow this up, and, I trust, with fruitful results. Absolute alignment is difficult to obtain; but if, as a result of thorough supervision at the manufactory, it is attained, it is not always maintained, but with a flexible transmission slight errors do not signify.—Yours truly,

C. T. W. HIRSCH.

POOR COMPRESSION.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have a 6-h.p. Wolseley, and have a lot of trouble with compression; I have had a man to see to it but with no success. Is it likely that the cam has got out of position, and if so would you kindly tell me how to set it,—Yours truly,

GEORGE COLLIS.

[Even if the cam has been shifted it is quite impossible that this can affect the compression. Seeing that the sequence of operations in engines working on the Otto cycle is induction, compression, explosion, exhaust, a little reflection will show that the position of the exhaust cam is so timed on the two to one gear that the motor could not run at all if it had got shifted as our correspondent suggests. The fault undoubtedly lies with some defect in the valves themselves or their seatings, or else in an escape past the pistons. The valves should first be seen to. There must be an uninterrupted bright line round the valves and the seatings, on testing them by wiping them clean and twisting under pressure. If these are all right it is possible that the valve stems are a shade too long, so that when warm they do not allow the valves to shut properly. If no fault can be detected in the manner described, the pistons and rings must be overhauled. Before taking them out a test can be made by giving a dose of paraffin to the pistons to thin out the oil around them, and then try the compression and listen for a noise of escaping air when the starting handle has been pulled to the point of greatest compression. New rings will probably be required to be fitted.]

ENGINE STARTING TROUBLES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have a four-cylinder car, the cylinder dimensions of which are 4½ by 5 in.; I have run it about 2,500 miles. When I first got the machine I could start on compression, now it is impossible to start that way; in fact, after standing for some little time, I have to inject some petrol through the compression tubes before I can start. I have adjusted the carburettor in every possible way, reducing the air and petrol and increasing both, but all to no effect. The motor has good compression, and once under way runs excellently; it answers quickly to the throttle and to the slightest advance of the ignition lever, but when throttled down will miss explosions and occasionally stop. If you or any reader of the *M.C.J.* can render me any assistance I shall be glad.—Yours truly,

R. WILLIAMSON.

[If the compression is still good and the engine originally started on the switch, it should not be difficult to bring it back to the habit. The fact of difficulty in starting without putting petrol in the compression cocks, and also of the tendency to miss and stop when throttled down, is clearly indicative of a fault in the carburettor. Although the querist has adjusted the carburettor in every possible way, by reducing and increasing the air and petrol, we do not think he has hit on the cause of the trouble, for it is, in our opinion, more probable that the fault will be found to lie in the level of the petrol in the float chamber. For some cause or another the level may have got reduced—there are several things that may lead to this, and in consequence the petrol in the jet, which corresponds with that in the float chamber, is too low. Our correspondent should have this tested, generally about 1 mm. below the top of the jet is about correct. It is just possible that, although there is apparently a good compression when turning the handle round, it may slowly leak out when at a standstill. To facilitate starting on the switch, the ignition should be shut off before the throttle is closed and the latter should be kept open until the motor ceases to revolve.]

CLUBS AND ASSOCIATIONS

THE AUTOMOBILE ASSOCIATION.

THE annual general meeting of the Automobile Association is to be held at the Trocadero Restaurant, London, W., on Friday, June 28th.

The report for the year ended April 30th last shows a total income of £4,715 and a balance in hand of £596. The increase in membership has been most satisfactory. Since the last annual meeting no fewer than 2,555 motorists have joined. The committee have conscientiously followed the policy of laying out where most needed the funds entrusted to their charge.

Many new schemes put forward by the committee have been taken up with enthusiasm, in particular that concerning the special A.A. policy of insurance arranged with Lloyds by the committee on terms advantageous to the members, and without any profit accruing to the Association. Most important and practical work has been done in the display of danger signs and names of villages, which have been, and are being, erected with the co-operation of Local Councils and A.A. agents. It is hoped that this work will be largely increased during the coming year. The Road Department has grown from a mere handful of cyclist patrols to approximately 100, between thirty and forty of whom are on the permanent staff. The system has been organised on military lines, sergeants in charge of each main road are responsible for the work, and these in turn are supervised by the road manager, whose work during the year has entailed travelling over 12,000 miles on a motor-car. In addition to this, two senior men have for the past few months assisted in linking up every main road throughout the country with local correspondents and agents, until at this time the agency system extends from Land's End to John o' Groat's. The following members of the committee retire by rotation in accordance with Rule 10, and, being eligible, offer themselves for re-election:—Col. W. J. Bosworth, Mr. D'Arcy Baker, Captain J. Bennett-Stanford, Mr. C. W. Brown, Mr. C. Cordingley, Mr. S. F. Edge, Mr. Walter Gibbons, Mr. Alfred Harris, and Mr. Charles Jarrott.

The auditors, Messrs. Newson-Smith, Lord and Mundy, retire, and, being eligible, offer themselves for re-election.

AUTO C.C.

ORIGINALLY arranged for the 15th inst., the open hill climb of the Auto Cycle Club took place on Wednesday of last week at Blackdown Park, Fernhurst, by permission of Mr. F. S. Philipson Stow, J.P. The officials of the meeting were: Judge, Mr. B. Chatterton; marshals, Messrs. E. M. P. Boileau and C. A. Smith; timekeepers, Messrs. A. G. Reynolds and F. Straight; stewards, Messrs. J. W. G. Brooker, A. J. Macdonald, and H. B. Renner; secretary, Mr. F. Straight. The results were as follows:—

RESTARTING COMPETITION.—In this competition competitors had to restart on a steep portion of the hill, the awards going to the riders who had the best time from the re-start to the finish, about half a mile: 1, Basil H. Davies (3-h.p. Triumph), 58 1-5 sec.; 2, F. Hulbert (3½-h.p. Triumph) 59 2-5 sec. Also competed, E. Gwynne (Vindee machine, 5-h.p. Peugeot engine), G. Aldington (3½-h.p. Kerry), D. G. Gilmour (Bat machine, 9-h.p. J.A.P. engine), E. Burt (T.B.C. machine, 5-h.p. Peugeot engine), F. W. Applebee (3½-h.p. Rex).

RESTARTING COMPETITION (for passenger motor-cycles).—1, A. F. Halsey (Phoenix machine, 5-6-h.p. Minerva engine), 2 min. 17 sec.; 2, A. Adlington (5-h.p. Kerry), 2 min. 25 sec. Also competed: A. Carmichael, jun. (9-h.p. Riley).

COMPETITION FOR QUAD-CARS, FORE-CARS, SIDE-CARRIAGES, OR TRAILERS CARRYING TWO PASSENGERS.—1, G. Aldington (5-h.p. Kerry), 3 min. 59 2-5 sec.; 2, R. M. Brooks (6-h.p. Singer), 4 min. 13 1-5 sec. Also competed: A. F. Halsey (Phoenix machine, 5-6-h.p. Minerva engine).

COMPETITION for machines with engines having a total cylinder capacity not exceeding 85 by 85 or 482 cub. cms. or the equivalent volume swept out.—1, F. Hulbert (3½-h.p. Triumph), 1 min. 41 4-5 sec.; 2, R. M. Brice (3½-h.p. Brown), 1 min. 44 3-5 sec. Also competed: S. Webb (3½ h.p. Triumph), G. Aldington (3½-h.p. Kerry), J. Marshall (3½-h.p. Triumph), F. W. Applebee (3½-h.p. Rex), E. Gibbons (3½-h.p. Triumph), W. Pratt (4½ F.N.).

COMPETITION FOR MACHINES WITH MULTI-CYLINDER ENGINES.—1, F. Applebee, jun. (5-h.p. Rex), 1 min. 30 4-5 sec.; 2, W. W. Genn (Eland machine, 4½ h.p. Minerva engine), 1 min. 40 4-5 sec. Also competed: B. H. Davies (Vindee machine, 5-h.p. Peugeot engine), W. H. Wells (5-h.p. Vindee), Miss Muriel Hind (5-h.p. Rex), L. A. Baddeley (Vindee machine, 5-h.p. Peugeot engine), E. Butt (T.B.C. machine, 5-h.p. Peugeot engine).

COMPETITION FOR MACHINES WITH ANY SIZE ENGINE.—1, F. Applebee, jun. (5-h.p. Rex), 1 min. 29 3-5 sec.; 2, W. W. Genn (Eland machine, 4½-h.p. Minerva engine), 1 min. 32 3-5 sec. Also competed: B. H. Davies (Vindee machine, 5-h.p. Peugeot engine), W. H. Wells (5-h.p. Vindee), S. Browne (6-h.p. L.C.), E. Gwynne (5-h.p. Peugeot), L. A. Baddeley (Vindee machine, 5-h.p. Peugeot engine), R. M. Brice (5½-h.p. Brown.)

AERO.

THE Aero Club's race for the Hedges Butler Challenge Cup will take place at the Ranelagh Club, Barnes, London, S.W., to-day (Saturday), at 4 p.m. The following entries have been received:—

Mr. Griffith Brewer	...	"Lotus."
Mr. A. Leslie Bucknall	...	"Vivienne IV."
Mr. E. Bucknall	...	"Enchantress."
Mr. Frank H. Butler	...	"City of London."
Col. J. E. Capper, C.B., R.E.	...	"Pegasus."
Hon. Mrs. Assheton Harbord	...	"Nebula."
Professor A. K. Huntington	...	"Kokoro."
Mr. J. T. C. Moore-Brabazon	...	"Venus."
Mr. V. Ker-Seymer	...	"Aero Club IV."
Hon. C. S. Rolls	...	"Britannia."

LADIES A.C.

Mrs. MARK MAYHEW, a member of the Ladies' Automobile Club of Great Britain and Ireland, is giving, in honour of her fellow members, a garden party at Bookhams, Churt, Surrey, on Saturday, July 20th.

Mrs. Mayhew has arranged for carriages to be at Farnham Station at 2.30 p.m. to meet all those who do not happen to be motoring. For those who propose to go by road the best route from London is the following:—Battersea Park, Wandsworth, Kingston, Esher, Ripley, Guildford, Hindhead, Churt. Bookhams is quite near the Pride of the Valley at the bottom of Hindhead.

LINCOLNSHIRE.

THIS year the Lincolnshire A.C. selected Tetford Hill, Tennyson's country, for the northern hill-climb, and on Thursday week there were

The Tetford Hill Climb.—The Winning Car, a Clement-Talbot, surmounting the one in seven portion.

some excellent performances on this hill, which is 1,100 yards in length, and has an average gradient of 1 in 12 and portions 1 in 7. The results were:—

Class A.—Up to 12-h.p. (1) Mr. G. E. Sanders, 4½-h.p. De Dion, 3 min. 40 sec., 108.8 marks; (2) Sir H. B. Bacon, 6-h.p. Wolseley, 3 min. 19 sec., 102.8; (3) Dr. Jessop, 6-h.p. Rover, 5 min. 15 sec., 84.3.

Class B.—Up to 24-h.p. (1) Dr. R. G. Hogarth (Nottingham), 12-16-h.p. Clement-Talbot, 1 min. 59 sec., 124.2 marks; (2) Major F. H. Goddard, 16-20-h.p. Clement-Talbot, 2 min. 33 sec., 103.2.

Class C.—Over 24-h.p. (1) Sir H. B. Bacon, 18-h.p. Wolseley, 1 min. 32 sec., 108.7 marks; (2) Captain H. E. Newsum, 35-h.p. Daimler, 1 min. 13 sec., 102.4.

The special prize for best performance of the day fell to Dr. Hogarth, whose 12-16-h.p. Clement-Talbot went up in excellent style. Mr. G. E. Sanders took the second place with his 4½-h.p. De Dion, Sir Hickman Bacon was a very close third with his 18-h.p. Wolseley, his marks totalling 108.7, as against Mr. Sanders's 108.8. After the competition Mr. F. W. Shepherd Heywood entertained the members and their friends at his beautiful place at Holbeck Manor.

NORTH WALES.

THE hill-climbing trials promoted by the Automobile Club of North Wales were held on Monday, on the road from Llanrwst, in the Vale of Conway, to Llangerniew. The road rises 550 ft. in a mile and a quarter, and, although fairly wide, has numerous sharp turnings. Twenty-one cars were entered, but only seventeen actually started. All these successfully climbed the ascent. The cars were handicapped according to power and the combined weight of machine and passengers. Colonel J. Evans, Colonel Thos. Gee, and Mr. J. R. Dawes were the judges, and four medals were won in the following order:—1st, Mrs. Parry's 12-h.p. Clement-Talbot, driven by Mrs. Parry; 2nd, E. Noel Thornevill's 30-h.p. Daimler, driver Gordon Chapman; 3rd, A. C. Davies's 35-h.p. Daimler, driven by owner; 4th, Mrs. Mason's 14-h.p. Germain, driver Harry Lindop. The first car covered the course in 4 min. 3 1-5 sec.

LEICESTERSHIRE.

THE Leicestershire Automobile Club had a most successful meeting on Saturday, the occasion being their annual hill-climbing contest, which was carried out at Ab Kettleby Hill, near Melton Mowbray. The opening event was timed to start at 1.30 p.m., and shortly after that hour the first car began its task. The course was over a length of one kilometre, the total rise in this length being about 265 ft., and the average gradient 1 in 12. The first event was open to cars of one and two cylinders. This was won Mr. Victor Riley, on a 9-h.p. Riley car, who not only took the gold medal for the fastest time (2 min. 4 3-5 sec.), but also the gold medal for the best performance on the handicap formula. B. Warner, 8-h.p. Clyde, was second in 3 min. 14 1-5 sec.; R. Sutton Clifford, 12-h.p. Brasier, 3 min. 33 4-5 sec., third.

The second event was for four-cylinder cars, not exceeding 20-h.p., and similar medals were also given. These were both won by Dr. P. E. Tresidder, on a 15-h.p. Clement-Talbot car, in 1 min. 39 sec. M. Roes Browne, 18-h.p. Gladiator, was second in 1 min. 36 3-5 sec., Dr. R. G. Hogarth, 12-16-h.p. Talbot, in 1 min. 47 2-5 sec., third.

The third event was for four-cylinder cars not exceeding 30-h.p. The gold medal for the fastest time was taken by A. Ford, on a 30-h.p. Daimler, in the good time of 1 min. 19 3-5 sec. Captain B. Byron, 24-h.p. Minerva, 1 min. 23 sec., was second, and W. Stokes, 20-24-h.p. Talbot, 1 min. 28 4-5 sec., third. Captain Byron won the medal for the best performance on the formula.

The fourth event was for cars over 30-h.p., and both medals in this section were won by Mr. Cecil Edge, on a 60-h.p. Napier, his time being 1 min. 7 sec.

The challenge cup, presented by Mr. J. A. Hartopp, for the best performance on formula in the preceding events (restricted to members of the Leicestershire A.C.), was won by Captain Byron, who also took

Mr. W. E. Galloway's Stanley Steam Car which made the fastest time of the day in the North Eastern Automobile Association Hill-Climb on the 15th inst.

the silver medal, presented by Mr. R. Sutton Clifford, jun., for the fastest time, in the same events, made by a member of the Leicestershire A.C. The time was 1 min. 23 sec.

Twenty-eight cars competed in the contest in the Du Pre challenge cup. The best time was made by Cecil Edge, 60-h.p. Napier, 1 min. 9 4-5 sec., W. D. Wells, 30-40-h.p. Daimler, being second, 1 min. 14 4-5 sec., and Captain Byron, 24-h.p. Minerva, third in 1 min. 22 4-5 sec. The merits of the various performances are to be declared by the Royal Automobile Club on the new formula.

At the conclusion of the racing an adjournment was made to the tent, where, after a few words from the president, Mr. E. Geo. Mawbey, M.Inst.C.E., welcoming the visitors from other clubs, the cup and medals were presented to the winners by Mrs. Mawbey. The management of the competitions devolved upon the following officials, to whose efforts much of the success of the meeting was due:—Judges, Mr. E. G. Mawbey and Col. L. L. Powell, J.P. Clerks of the course, Mr. Mawbey, Captain Byron, Mr. R. Sutton-Clifford, jun., Mr. A. H. Faulkner, and Mr. A. McAlpin. Timekeeper, Mr. F. K. Ward. Starters, Captain Byron and Mr. Sutton-Clifford, jun. Clerk of the scales, Mr. A. Stagg. Secretary to the meeting, Mr. A. McAlpin.

KENT.

ON Saturday last the members of the Kent Automobile Club visited West Court, Detling, the residence of Mr. and Mrs. J. E. Austin, by whom they were most hospitably entertained and a most enjoyable afternoon was spent, over 80 members and friends being present.

Members are reminded that entries for the gymkhana close to-day

(Saturday), on which day members are also reminded of the invitation to Hulsewood by Mr. and Mrs. C. J. Morgan.

WOLVERHAMPTON.

THE results of the Wenlock Edge Hill Climbing Competitions organised by this club show the following results in open handicap:—

Position.	Entrant.	Car Description.	Efficiency as per formula.
1	Newey Motor Co. ...	8-h.p. De Dion ...	74.6
2	W. Stokes ...	20-h.p. Clement-Talbot ...	66.4
3	H. C. Holder ...	Daimler ...	65.3
4	F. W. Bayliss ...	28-43-h.p. Daimler ...	61.8
5	N. Bayliss ...	16-20-h.p. Sunbeam ...	60.6
6	F. Eastmead ...	16-20-h.p. Sunbeam ...	60.4
7	S. F. Edge ...	45-h.p. Napier ...	59.2
8	Wm. Alldays ...	10-h.p. Alldays ...	58.6
9	Heath's Garage ...	8-10-h.p. Darracq ...	58
10	Climax Motor Co. ...	14-h.p. Climax ...	57.3
	Hill's Martini ...	24-h.p. Martini ...	57.3
	Chas. Sangster ...	35-h.p. Ariel Simplex ...	57.3
11	J. W. Davis ...	28-h.p. Daimler ...	57.18
12	Birmingham Motor Car Co. ...	Delaunay Belleville ...	57.16
13	J. O. Evans ...	28-h.p. Daimler ...	55.6
14	New Arrol Johnston, Ltd. ...	Arrol Johnston ...	55.6
	Spencer Downing ...	10-h.p. Alldays ...	52
15	T. Cureton ...	16-20-h.p. Sunbeam ...	51
16	L. Meek ...	10-h.p. Alldays ...	50.6
17	G. V. Lewis ...	18-24-h.p. Austin ...	50.6
18	J. K. Starley ...	16-20-h.p. Rover ...	50
18	J. H. Barnett ...	18-24-h.p. Austin ...	49.3
	Geoffrey Bird ...	35-h.p. Ariel Simplex ...	49.3
19	Adams Manufacturing Co. ...	10-h.p. Adams ...	49.2
20	F. A. Stirk ...	10-12-h.p. Sunbeam ...	48.6
21	Tom Thornycroft ...	45-h.p. Thornycroft ...	47
22	Humber, Ltd. ...	15-h.p. Coventry Humber ...	46.6
23	Sunbeam Motor Co. ...	30-h.p. Sunbeam ...	46
24	E. Lisle, jun. ...	Royal Starling ...	42.6
25	Newey Motor Co. ...	18-h.p. Siddeley ...	42
26	Wm. Guilding ...	16-h.p. Star ...	41.8
27	J. B. Dumbell ...	Turner Seymour ...	41.6
	C. S. Baynton ...	25-30-h.p. Austin ...	41.6
28	G. H. Evans ...	25-30-h.p. Austin ...	41.6
	John Marston ...	16-20-h.p. Sunbeam ...	41
29	E. Lisle, sen. ...	16-h.p. Star ...	40.7
30	J. Lisle ...	18-h.p. Star ...	39
31	E. Lisle, sen. ...	18-h.p. Star ...	37.6
32	E. Lisle, jun. ...	Royal Starling ...	37.4
33	W. H. Evans ...	40-h.p. Napier ...	36
34	F. S. Bennett ...	9-10-h.p. Cadillac ...	31.3
35	Wm. Eason ...	Royal Starling ...	20

The winners of silver medals in the open handicap were:—

Class.	Winner.	Car Description.
1	Newey Motor Company ...	De Dion.
2	Climax Motor Company ...	Climax.
3	W. Stokes ...	Clement-Talbot.
4	F. W. Bayliss ...	Daimler.
5	H. C. Holder ...	Daimler.

In the club handicap the results were:—

Position.	Entrant.	Car Description.	Efficiency as per formula.
1	Chas. Sangster ...	35-h.p. Ariel Simplex ...	62.6
2	J. W. Davis ...	28-h.p. Daimler ...	58
3	J. O. Evans ...	28-h.p. Daimler ...	54.6
4	T. Cureton ...	16-20-h.p. Sunbeam ...	54.3
5	J. H. Barnett ...	18-24-h.p. Austin ...	50
6	G. V. Lewis ...	18-24-h.p. Austin ...	50
	F. A. Stirk ...	10-12-h.p. Sunbeam ...	48
7	Wm. Guilding ...	16-h.p. Star ...	44.6
8	G. H. Evans ...	25-30-h.p. Austin ...	43
9	E. Lisle, jun. ...	Royal Starling ...	42.6
10	J. Marston ...	16-20-h.p. Sunbeam ...	41.3
11	E. Lisle, sen. ...	16-h.p. Star ...	40
12	J. Lisle ...	18-h.p. Star ...	38
13	W. H. Evans ...	40-h.p. Napier ...	36.3
14	E. Lisle, sen. ...	18-h.p. Star ...	36

Winners of gold medals in the club handicap were:—

Class.	Winner.	Car Description.
1	E. Lisle, jun. ...	Royal Starling.
2	F. A. Stirk ...	Sunbeam.
3	T. Cureton ...	Sunbeam.
4	J. W. Davis ...	Daimler.
5	Chas. Sangster ...	Ariel Simplex.

Mr. Chas. Sangster wins the Motor Union medal for fastest time in Club Handicap.

The winning car in the open handicap was fitted with Dunlop tyres.

NORTH-EAST LANCASHIRE.

THE North-East Lancashire Automobile Club held a speed-judging competition on Saturday, the run being from Lea Gate to Lytham. There were thirty-seven contestants and a varied mileage per hour was given to the different classes of cars. The results showed that some excellent estimates of speed were made. The first prize went to Mr. J. Hodson, who drove a 16-h.p. Bell car; he had to run at sixteen miles an hour, and he made an error of only 4 sec. Mr. H. Noble, on a 16-24-h.p. Belsize car, who was 5 sec. out on a speed equivalent to seventeen miles per hour, was second, the third being Mr. A. E. Crowdy, who on an 18-h.p. Siddeley car timed his driving at seventeen miles an hour within 6 sec.

CHESHIRE.

NOTWITHSTANDING the wintry conditions prevailing on Saturday last ninety members and friends of the Cheshire Automobile Club took part in the meet at Llyn Helig, a beautiful spot on Lord Mostyn's estate near Holywell, his lordship, as a vice-president of the club, having kindly granted permission to use the ground for the purposes of the meet. Amongst those present were Messrs. T. Gibbons Frost and Trevor Boscawen (vice-presidents), Mr. A. G. Jeans, J.P. (chairman), Col. A. H. Knight, V.D., Messrs. Edgar L. Billson, J. Royston, J. A.

MOTOR RACING ON SALT BURN SANDS.

THE Yorkshire Automobile Club held its annual speed trials on the sands between Redcar and Saltburn on Saturday last, when a record entry and a promise of fine weather attracted an attendance of about 12,000 spectators. Unfortunately, however, the proceedings were marred by several severe storms, which not only gave a drenching to most of the visitors, but rendered the track anything but good for motor racing. The events were run off in heats, but, owing to the wretched weather, little interest was shown in them. In fact, many of the contests were run in a drenching downpour, and when the signal to start was given some of the cars, with their driving wheels flying round, could not be got to move. The event of the day was the attempt to set up a new Yorkshire record for the flying kilometre. Mr. Warwick Wright, the holder of the record (96½ miles per hour), did not compete, but Mr. A. Lee Guinness provided some excitement by driving his 200-h.p. Darraq over the measured distance in 20 sec., which works out at a rate of just over 111 miles an hour. Mr. L. Guinness's run over the uneven sand track, which in parts was almost under water, was remarkable, and beats the time he put up on the Blackpool promenade last year.

The following are the results of the different events:—

Closed competition for single-cylinder touring cars, maximum bore 115 mm.; "Whiteman" trophy, presented by Mr. F. W. Wood, Leeds, and gold medal.—1, A. L. Rhodes, 6-h.p. De Dion; 2, Albert Farnell, 6-h.p. Rover.

Closed competition for two, three, or four-cylinder touring cars, maximum bore of 111 mm., and rating of 15.3-h.p. for two-cylinder cars,

The Saltburn Race Meeting.—The View on the Beach.

Stephens, Drs. Dawson and Wilkinson (members of the committee), and Mr. J. A. S. Hassal (hon. secretary).

THE membership of the East Lancashire M.C.C. is increasing, particularly from the Preston district. The club is arranging a speed-judging competition for the A.C.C.'s gold medal.

THE members of the Leicestershire Automobile Club have received an invitation from Mr. and Mrs. J. A. Corah to an "at home" at their residence, Oadby Hill, Leicester, to-day (Saturday), from 4 to 6 p.m.

ON Saturday, July 6th, the Essex Motor Club will take a party of crippled children from East London for a trip into Epping Forest, and the committee will be grateful for the loan of cars for that day. Will any motorists who can assist in this matter please communicate with Mr. Harold Fuller, Wivenhoe, Wynnsgate Road, South Woodford, who will be glad to give further particulars?

MR. WM. LETTS, of Messrs. Jarrott and Letts, sailed on Wednesday for New York on a business trip, and will be away three weeks or a month.

THE 26-32-h.p. Metallurgique car that came in second in the Herkomer Trophy Race is the same model as is to be run in the Liedekerke Cup event in Belgium next month.

MESSRS. MECHAN AND SONS, of the Scotstoun Iron Works, Glasgow, who are now turning out a large number of pressed steel motor-car frames, are also now devoting attention to the manufacture of silencers, dashboards, undershields and other motor-car components. In brass work, radiators are a feature with them. Their extensive engineering experience, now approaching half a century, is a sufficient warranty that all work produced by them is of a class in keeping with their high reputation.

maximum bore of 91 mm., and rating of 15.2-h.p. for three-cylinder cars; and maximum bore of 81 mm., and rating of 16.1-h.p. for four-cylinder cars. Cup to be won outright; presented by Mr. J. Charlesworth, of Bradford.—1, H. Pickles, 12-14-h.p. Singer, four-cylinders, rating 15.8-h.p.; 2, S. Downing, 10-h.p. Alldays, two-cylinders, rating 11.25-h.p.

Closed competition for two, three, or four-cylinder touring cars, maximum bore of 131 mm. and rating of 21-h.p. for two-cylinder cars, maximum bore of 106 mm. and rating of 20.9-h.p. for three-cylinder cars, and maximum bore of 91 mm. and rating of 20.2-h.p. for four-cylinder cars.—1, T. H. Woollen, 12-16-h.p. Clement-Talbot, four cylinders, rating 17.9-h.p.; 2, H. Johnson, 12-16-h.p. Fiat, four cylinders, rating 20.08-h.p.

Closed competition for two, three, or four-cylinder touring cars, maximum bore of 142 mm. and a rating of 25.4-h.p. for two-cylinder cars; maximum bore of 117 mm. and rating of 25.7-h.p. for three-cylinder cars; and maximum bore of 101 mm., and rating of 25.6-h.p. for four-cylinder cars. Cup presented by Mr. Rowland Winn, Leeds, for annual competition.—1, J. E. Hutton, 22-h.p. Berliet, four cylinders, rating 24.8-h.p.; 2, C. McAdams, 20-h.p. Humber, four cylinders, rating 24.8-h.p.

Closed competition for touring cars for the club trophy, cars divided into two classes—one, in which there were seven entries, for cars whose rating is not above 21-h.p., and another in which there were twenty-four entries, for cars whose rating exceeds 21 but not 42-h.p. Winner of first class—W. Duffield's 14-h.p. Vulcan, four cylinders, rating 19.6-h.p. Winner of second class—Albert Farnell's 30-h.p. Daimler, four cylinders, rating 41.9-h.p. Final—Albert Farnell's Daimler won easily.

Closed competition for touring cars, with a maximum bore of 160 mm. for four-cylinders and 130 mm. for six-cylinders, with maximum rating of 63-h.p. in both cases. Cup presented by Mr. A. H. Briggs, Bradford.—1, J. E. Hutton, 60-h.p. Berliet, four cylinders, rating 63-h.p.; 2, F. A. Bolton, 45-h.p. Daimler, four cylinders, rating 55.8-h.p.

Closed competition for touring cars carrying full complement of passengers, the chassis price of which does not exceed £250, including tyres.—1, R. Winn, 15-h.p. Ford; 2, P. L. D. Perry, 15-h.p. Ford.

Closed competition for touring cars carrying full complement of passengers, the chassis price of which does not exceed £450. Cup presented by Mr. Alf. Masser.—1, P. Graham, 16-20-h.p. Rover; 2, F. W. Roper, 16-h.p. Vulcan.

Closed competition for touring cars carrying full complement of passengers, the chassis price of which does not exceed £600. The Y.A.C. cup to be won outright.—1, A. Farnell, 30-h.p. Daimler; 2, A. Huntley-Walker, 30-40-h.p. Darracq.

Open competition for touring cars carrying four passengers, chassis price £800.—1, A. Rawlinson, 40-h.p. Darracq; 2, F. A. Bolton, 45-h.p. Daimler.

Racing cars not exceeding in weight 1,000 kilos. To establish a "Yorkshire record," present record 96½ miles. Cup presented by Mr. Penrose-Green.—1, Hon. A. Lee Guinness, 200-h.p. Darracq, speed 111.84 miles an hour.

Racing car of any weight from a standing start.—Hon. A. Lee Guinness; 2, M. Sorcin, on the Maharajah of Tikari's 100-h.p. De Dietrich.

The following were the officials.—Judges, Messrs. A. H. Briggs, J. Constantine, G. Scooby-Smith, W. Penrose Green, E. Gordon Learoyd, and A. Towler; marshal-in-chief, Mr. A. H. Hupper; clerk of the scale, and secretary, Mr. C. P. Wilson; starter, Mr. J. Brogden; timekeepers, Mr. A. Fattorini and assistants. After the trials the prizes and trophies were presented to the successful competitors by Mrs. Hepper, at the Alexandra Hotel, Saltburn, the headquarters of the club.

MOTOR RACING AT BLACKPOOL.

IN the Lancashire Chancery Court at Manchester last week, before Vice-Chancellor Leigh-Clare, the trial of the action taken by the Attorney-General of the Duchy of Lancaster and Mr. Millar Johnstone M'Vittie against the Corporation of Blackpool, to restrain them from holding motor-car races on the Promenade or other public highways within their jurisdiction, was begun. Mr. Cunliffe and Mr. Cavley for the plaintiffs, and Mr. Cave, K.C., M.P., and Mr. Courthope Wilson for the Corporation. The case for the plaintiffs was that in October, 1904, and again in July, 1905, the defendants wrongfully, and in excess of the powers conferred upon them by their local Acts or statutes, promoted, organised, and controlled certain automobile races upon the Promenade, which the plaintiffs held is a public highway, and that a speed was reached by the cars exceeding ninety miles an hour. It was also alleged that they had obstructed the Promenade and so prevented the inhabitants from having access to it and other adjacent streets, and that they had applied part of the borough funds to the prize fund for the race meeting. In October, 1906, against the advice of the Town Clerk, the Corporation had also organised, promoted, and controlled a motor-car race meeting on the promenade. The plaintiff, Mr. M'Vittie, is a ratepayer of the borough. He alleged that he had suffered damage in consequence of these proceedings, and he asked for an injunction to prevent their repetition. For the defence Mr. Cave submitted that the promenade was not a public highway, but a piece of land vested in the Corporation as a place of resort for pleasure or health. Vice-Chancellor Leigh-Clare said that although he had made up his mind on the matter, the case was one of such considerable importance that he would reserve judgment until July 1st.

SPEED RESTRICTION IN SURREY.

AT the County Hall, Lewes, on Saturday last, Mr. F. J. Willis, Inspector of the Local Government Board, held an inquiry into the application of the East Sussex County Council for a regulation restricting the speed of motor-cars to five miles an hour on a portion of the highway leading from the Lewes to Eastbourne main road at Berwick to Seaford, commencing at a point where the boundary of the parishes of Berwick and Alfriston crosses the road near Winton Farm, thence southwards through the High Street, Alfriston, past Frog Fille and Tile Barn, to a point 550 yards south of Tile Barn, a total length of 3,350 yards, or thereabouts. Among those present were Mr. G. W. Osborn, J.P. (Chairman of the East Sussex County Council), Sir James Duke, Bart., Major Lister, J.P., Mr. Rupert S. Gwynne, J.P. (Chairman of the Eastbourne Rural District Council), Alderman Holman (Lewes), Mr. F. Harrison Barker, Mr. Middleton Gayey, Mr. C. J. Knight (Pevensey), Mr. W. Pinyoun (Alfriston), Mr. Hugh Wallis (Alfriston), Councillor Vallance (Lewes), Mr. T. E. Varley Kirtlan (clerk to the Eastbourne Rural District Council), Mr. H. J. Woodhams (Alfriston), and Mr. F. J. Wood, county surveyor. Mr. Merrifield conducted the case for the County Council, and Mr. Rees Jeffreys opposed on behalf of the Royal Automobile Club, the Motor Union, the Sussex Automobile Club, and certain individual members. The county surveyor explained the plan and early in the proceedings the Inspector intimated his intention of inspecting the road. Major Lister, chairman of the committee, explained that they based their application on local representation. Mr. T. E. Kirtlan, clerk to the Eastbourne Rural District Council, said there had been within very recent times two serious accidents on that road. It was in the interests of strange motorists, who would not be aware of the danger of the hill, that a limit should be imposed.

After other evidence as to the dangerous character of the road, Mr. Osborn said the County Council would agree to that. Mr. Rees Jeffreys, who represented the R.A.C., the Motor Union, and the Sussex Automobile Club, said he had come to oppose the application altogether. The suggestion that a limit should be imposed on the north portion—from Winton Farm to Frog Fille—was preposterous. With regard to the descent and ascent and the sharp corner, the Act prescribed that the authority should set up warning boards. He thought in not doing this the County Council had not carried out the spirit of the Act. He thought it was a remarkable testimony to the way motor-cars had been driven along that road—without any warning sign, and with one of the worst descents in the county—that there should have been only one accident since motor-cars had been placed on the roads. He thought the best way to deal with the danger from the top of the hill to the Seaford end was by a special notice such as "This is a dangerous descent with sharp turn at the bottom." If the application for a speed limit were withdrawn, the Automobile Club were prepared to erect such warning boards. He would not, however, offer any opposition to a speed limit over the descent, sharp corner, and ascent, and the question whether it should be five, eight, or ten miles an hour he would leave in the hands of the Board. The Inspector said the evidence did not support the imposition of the limit on the north section. At length it was agreed that the Inspector, Mr. G. W. Osborn, Major Lister, Mr. Merrifield, and Mr. R. Jeffreys should motor to the spot, it being understood that if the Inspector disagreed with the withdrawal of the north portion—Winton Farm to Frog Fille—from the imposition of the speed limit, the inquiry would be re-opened. The settlement of the limit and the distance over which it should be in force on the remaining portion was left to the Board.

THE WASHING OF MOTOR-CARS.

IN the King's Bench, on the 20th, the case of the Mayor, Aldermen, and Burgesses of Harrogate v. Mackay came before the Lord Chief Justice and Justices Darling and A. T. Lawrence, sitting as a Divisional Court, on appeal by the Corporation of Harrogate from a decision of the justices of the West Riding, sitting at Knaresborough. It was a claim by the Corporation of Harrogate against Dr. Ian Mackay, for a rental of 10s. for a supply of water for the half-year ending December 25th, 1906, to the respondent for the purpose of washing his motor-car. The claim was made under the Waterworks Clauses Acts 1847 and 1863, the Public Health Act, 1875, and the Harrogate Corporation Waterworks Transfer Act, 1897. The justices dismissed the claim, but consented to state a special case for the opinion of the High Court. The facts as proved or admitted were that the respondent used a motor-car for the purpose of his business or profession of a medical man, that he regularly used water for the purpose of washing the car, the water being taken from appellants' pipes, that he kept the car in an outbuilding adjoining his dwelling-house, that he paid the appellants the water rate for the half-year, amounting to £1 7s. 4d., but refused to pay the additional rental of 10s. for the half-year claimed by the appellants, though he had paid the rental demanded on two previous half-years without demur. It was submitted on behalf of the appellants that, under the 12th section of the Waterworks Clauses Act, 1863, water for domestic purposes did not include water supplied for washing carriages, and, therefore, they were entitled to charge him such a reasonable sum as they thought fit for the use of the water.

The Lord Chief Justice said it had been decided fifty years ago, in the case of Busby v. Chesterfield, that the use of water for the washing of a carriage was a domestic purpose, and he saw no reason to dissent from that decision. Stockbrokers rode down to the city in their carriages ever since without paying a rent for the water used in washing them, and why a distinction should be made in the case of a doctor he could not see. He thought the magistrates were quite right.

Justices Darling and Lawrence concurred, and the appeal was dismissed, with costs.

Mr. Mackenzie and Mr. Danckwerts urged the Court to allow an appeal in view of the importance of the case, but the Court refused leave.

THE Coventry Chain Co., Ltd., has recently been liquidated in order that a larger company, namely, the Coventry Chain Co., 1907, Ltd., may be formed. This company has now been formed, and has taken over the whole of the liabilities of the old company, and the management will remain exactly the same as heretofore. A new and enlarged factory is in course of construction, to cope with the increased demand for "Coventry" motor chains.

MESSRS. S. F. EDGE, LTD., have sent us a photograph of a 60-h.p. six-cylinder Napier limousine they have just supplied to Mr. A. J. Palmer, of Fairfield Park, Gloucestershire. The body has been specially built to suit Mr. Palmer's own requirements; the interior is arranged for five persons, including two extra folding seats, which open out from either side and meet in the centre. Tables are fitted inside, which fold away when not required for use. The roof is beautifully panelled with choice wood, and the interior very luxuriously upholstered in a light blue cloth of delicate tint, the carpet being a deeper shade of blue. The whole of the woodwork of the car is polished walnut, and the roof has been built specially strong, so that it can be used as a point of vantage from which to view races, &c.

CASES UNDER THE MOTOR CAR ACT.

EXCEEDING LEGAL LIMIT.

At the Hailsham Petty Sessions, on the 19th inst., seven motorists were fined from £2 2s. to £4 for exceeding the legal limit when passing the traps arranged by Sergeant Waghorn.

At Horsham, on Saturday, John Reginald Brown, of Hove, was fined £5 1s. 6d. for driving a motor at Crawley at the rate of twenty-seven miles an hour, and failing to produce a licence.

FURIOUS DRIVING.

Before the Huntingdon county magistrates, on Saturday, Dudley Noble Halliwell, of Regent Grove, Harrogate, was fined £10 and costs for driving a motor-car to the danger of the public at Little Stukeley. The car was stated to have travelled over twenty-eight miles an hour past a dangerous spot where a little boy was killed by a car a short time ago. William Gilmour, of Wood Hall, Worplesden, Surrey, was summoned for a similar offence at Alconbury. Defendant admitted exceeding the limit, but said there was no danger to the public. The magistrates expressed their determination to prevent motorists from going through these dangerous places at anything like the pace defendant admitted.

At Godalming on Monday, Oscar Henry Wilcox, chauffeur to Lord Charles Beresford, was fined £5 and costs for having driven a motor-car at a dangerous speed in the borough on June 9th. The police evidence was that the car covered a measured furlong in 19 sec., which was equal to a speed of 23 miles 1,204 yards an hour. The defendant denied that the speed was as stated, and stated that Lord Charles's instructions as to driving were to be very careful not to exceed the limit, always to drive cautiously, to be very careful when going through towns and villages, and to remember that the road belonged to other people as well as to motorists.

Charles Herbert Cane, of Tangmere, Chichester, was summoned at the Littlehampton County Bench, on Monday, for driving a motor-car in the parish of Angmering, on June 13th, at an excessive speed. The evidence of Inspector Wakeford showed that the defendant covered a quarter of a mile, between the Fox Inn, Angmering, and Dapper's Lane, in 34 seconds, equal to 26 miles 828 yards an hour. Defendant was fined £4 and 3s. costs.

At Warwick, on Monday, Walter John Arthur, Coventry, pleaded guilty to driving a motor-car in a manner dangerous to the public at St. John's, Warwick, on the 8th inst., and also to driving a car without a licence. Defendant said he was trying to discover a defect in a car for which he was responsible. He was fined £2 in the first case, and 10s. and costs in the second. Edward Paddison, 77, Mansfield Street, East Putney, pleaded guilty, at the same court, to driving a car at the rate of thirty-three miles an hour on the Myton Road. He was fined £2 and costs.

At the Coventry Police Court, on Monday, Josiah Job Lee was fined 10s. and costs for driving a motor-car to the public danger along the Foleshill Road. Defendant was further summoned for driving the car without it having been properly registered. It was shown that no notice had been given of the change in the registration of the ownership of the car since it came into the possession of defendant. The Bench fined defendant 5s. and costs.

William Brass, undergraduate, of Trinity College, Cambridge, has been charged at the Cambridge Police Court with driving a motor-car in St. Andrew's Street at a speed which was dangerous to the public. P.C. Wright stated that at 2.30 p.m. on June 11th he was on duty in St. Andrew's Street, when he saw the defendant drive his motor-car from Downing Street into St. Andrew's Street and go towards Regent Street at a dangerous speed. There were a good many cyclists in the road at the time. The magistrates decided to convict, and imposed a fine of £5 and costs.

At Barmouth there has lately been an outbreak of police hostility to motorists, resulting in fines of £5 and costs being inflicted on the Duchess of Westminster and Hon. Walter Vivian.

A TRIPLE CHARGE.

H. C. Rose, of Woodside Park, Wood Green, was charged at Tottenham, on the 20th inst., with being drunk while in charge of a motor-car, also with causing grievous bodily harm to Henry Sayer, a cyclist, through wanton driving, and further with driving the car on a public highway in a manner dangerous to the public. Mr. Barker prosecuted for the Commissioner of Police, and Mr. Purcell appeared for the prisoner. Mr. Barker intimated that it was his intention only to proceed with the first and third charges. The Bench imposed the maximum penalty of 40s. and costs on the first charge, the second charge was withdrawn, and the third dismissed. The prisoner's licence was ordered to be endorsed.

CASE DISMISSED.

WILLIAM WILSON, chauffeur, to Mr. Russell Rea, M.P., was summoned on Monday for driving in a manner dangerous to the public out of the Haymarket across Coventry Street into Great Windmill Street, London, W. Mr. Marshall conducted the prosecution on behalf of the police and Mr. Staples Firth appeared for Mr. Wilson. The police constable on duty stated that he had stopped the traffic coming out of the Haymarket, and notwithstanding this, the defendant came dashing out at the rate of 12 miles an hour and nearly ran into a shop and eventually collided with a milk cart, smashing the shafts and throwing the driver into the road. The defence was a denial of the allegations. The speed was put down at 4 to 4½ miles an hour, that the traffic out

of the Haymarket, was not being held up and he was the last in a line of traffic, there being two hansom cabs immediately in front of him, and that when he had got his car partly into Windmill Street he had to pull up because the cab in front of him stopped. The case occupied a considerable time, and in giving a lengthy and well-considered judgment Mr. Plowden dealt fully with the evidence and said that what threatened to be a very bad case of driving to the public danger, from the evidence of the prosecution amounted to the chauffeur misinterpreting the signal of a policeman, and dismissed the summons.

NO LICENCE.

Harry Key, of Birmingham, who did not appear, has been fined £5 and costs at the Chesterfield County Police Court, for driving a motor-cycle without having a licence, at Tipton, on May 26th. According to the evidence of Police-constable Spencer, defendant gave a wrong address in Leeds, and he was found in Birmingham after considerable enquiries and trouble. He had been summoned for similar offences on two previous occasions.

ROAD REPORTS.

SUNNINGDALE.—The Chertsey Rural District Council has agreed to place danger (motor) signal-posts in several places in Sunningdale within its area. It has also resolved to call the attention of the county authorities to the condition of the main roads. As instancing the amount of motor traffic through Sunningdale, it is said that on the day of the King's Review, recently, the level crossing gates were closed and within five minutes thirty-six automobiles had assembled.

—The Celebrated Spanish Bull-Fighter, Bombitta, at the helm of Mr. E. M. C. Instone's 45-h.p. Daimler. Beside Bombitta is the Duke of Zaragoza, while in the tonneau is Don Carlos A. Levison, one of the pioneers of Automobillism in Spain.

POLICE TRAPS.

TRAPPING is going on merrily in and around Newmarket.

BECKENHAM is the centre of a trap-laid district.

SERGEANT WAGHORN has been operating traps at Dioker, Chiddingfold and elsewhere in his wide area during the last few days.

MOTORISTS at Brighton are advised to proceed along the King's Road at a reasonable pace.

THE police have a measured stretch on the main road between Glasgow and Helensburgh, near Cardross.

AUTOMOBILE ACCIDENT.

A SERIOUS motor-car accident has occurred at Llangollen. A 20-h.p. Humber car, in which Mr. Higginson, owner of the Wrexham Motor Garage, was driving two gentlemen, was emerging from a sharp turning into the Holyhead road, when it collided with a car in which Mr. Harold Copperthwaite, of York, and two ladies were being driven. Mrs. Copperthwaite, who was riding in front with the chauffeur, was thrown from her seat, and sustained severe wounds to her head and face. Mr. Copperthwaite sustained severe scalp wounds. The victims of the accident had their injuries medically attended, and are progressing favourably.

MESSRS. DAVID BRIDGE AND CO., of the Castleton Iron Works, Castleton, Manchester, have sent us a copy of a new pamphlet on india rubber, gutta percha, and balata machinery, including friction clutches, haulage plants, mill gearing, ice crushers, oil separators, boiler feeders, couplings, &c., they have just issued as a supplement to their existing catalogues. The list is well arranged and fully illustrated, and a noteworthy feature is that the particulars of the different machines are printed in English, French and German.

MOTOR LICENCE ENDORSEMENTS.

BEFORE the Lord Chief Justice, Mr. Justice Darling, and Mr. Justice A. T. Lawrence, in the King's Bench division, on the 19th inst., came the case of "The King v. Marsham (ex parte Chamberlain)," in which a rule nisi had been obtained for a writ of certiorari to quash an endorsement on a motor-car licence of a conviction for driving a motor-car in St. James's Park at a greater speed than ten miles an hour, contrary to the regulations made by the Commissioners of Works under the Parks Regulation Act, 1872, in April, 1904, and published by notice exhibited in the park. The matter now came on for argument.

The applicant had never previously been convicted of any offence in connection with the driving of a motor-car, and he was summoned for an alleged offence on February 13th, 1907, and convicted and fined 40s. and 2s. costs. The magistrate also caused his licence to be endorsed with the conviction. The Motor Car Act of 1903 provided that any court before whom a person was convicted of an offence under it, or of any offence in connection with driving of a motor-car, other than a first or second offence, consisting solely of exceeding any limit of speed fixed under the Act; if the person convicted held any licence, should cause particulars of the conviction, and of any order of the court, to be endorsed upon the licence, and should also cause a copy of those particulars to be sent to the council by whom any licence so endorsed had been granted. One of the rules made in April, 1904, by the Commissioners for St. James's and Green Parks, under the Parks Regulation Act, 1872, provided that "drivers of all vehicles must conform to such orders for the regulation of traffic as may be given by the park-keepers or published by notice exhibited in the parks." Another rule laid it down that cars propelled or drawn by mechanical means should only be admitted subject to the rules of the commissioners and exhibited in the parks.

Mr. G. R. Askwith showed cause against the rule, which was supported by Mr. Horace Ivory, K.C., and Mr. J. K. F. Cleave, instructed by Mr. Staples Firth.

Mr. Askwith submitted that the words of the Motor Car Act of 1903 were so wide that endorsement must follow the conviction, as the appellant had been convicted of an offence in connection with the driving of a motor-car other than a first or second offence consisting of exceeding a speed limit fixed under the Motor Car Act, 1903. The speed limit in this case was fixed under the Parks Regulation Act of 1872.

Mr. Ivory submitted that the words "fixed under this Act" on the Motor Car Act were surplusage. It would, the learned counsel said, be absurd that the Court should be bound to endorse a conviction for a first offence of exceeding ten miles an hour in the park when a conviction for a first offence of exceeding twenty miles an hour in a crowded street could not be endorsed.

The Lord Chief Justice said the case was a difficult one, as the framers of the Motor Car Act evidently forgot that speed regulations might be made under the Parks Regulation Act. He could not think that the words of the section, even as framed, included an obligation to endorse a first or second offence of exceeding a speed limit of ten miles an hour in St. James's Park simply on the ground that the speed limit was fixed in some other lawful way. If a man was convicted a first and second time of driving over twenty miles an hour outside the park, his licence could not be endorsed. He thought the endorsement should be quashed.

The other judges concurred, and the rule was made absolute and the endorsement quashed.

MOTOR-CARS IN THE PARKS.

SEVERAL adjourned summonses against motor drivers accused of exceeding the speed limit of ten miles an hour in St. James's Park, London, W., came on before Mr. Marsham at Bow Street Police Court, on Monday. Evidence had been taken on a previous occasion, and Mr. Marsham had intimated his intention of imposing a penalty, but he had ordered a formal adjournment pending an appeal against the magistrates sitting at this court, who had ruled that they were compelled to endorse the licences of drivers convicted of this class of offence. Mr. Marsham said that the defendants now before him would have to pay 40s. each, and 2s. costs, but owing to the decision of the High Court their licences would not be endorsed.

PUBLIC MOTOR SERVICES.

THE Irish Motor Touring Company, Limited, of Haddington Road, Dublin, started their daily motor service from Dublin to Bray and Enniskerry on Saturday last.

A LICENCE was granted last week for the first motor-cab plying in the streets of Edinburgh.

THE attention of the Commercial Motor Users' Association having been drawn to the circular letter which the Commissioner of Police has addressed to the various omnibus companies on the subject of the dropping of oil and grease from motor-omnibuses, the committee has resolved to offer a special cup in connection with the forthcoming trials of commercial vehicles, to be awarded for cleanliness in respect of the dropping of oil.

THE licences of the motor-buses running between Worthing and Brighton and Hove and Kemp Town are to be renewed.

COMPANY NEWS.

NEW COMPANIES REGISTERED

AUTO DE LONDRES.—£10,000. Manufacturers of and dealers in motors, motor-cars, carriages, and vehicles of all kinds, &c. No initial public issue. Registered without articles. 36, Camomile Street, E.C.

MOSELEY MOTOR WORKS.—£5,000. As title. No initial public issue. First directors: Messrs. H. B. Graham, A. J. Smith, and J. L. South. 1, Arundel Street, Strand, W.C.

CHAMBERS' MOTORS, LIMITED.—£15,000, in £1 shares. To enter into and carry out an agreement with Messrs. R. M. Chambers, J. H. Chambers, and Charles E. Chambers, for the purchase of the business of mechanical engineers, motor-car and patent bottle-wiring machine manufacturers, and the interest of the firm in leasehold premises, plant, goodwill, &c. The first directors will be the Messrs. Chambers (already named) and Mr. Charles B. Hurst, of Ballynahinch, Co. Down. Registered office, Cuba Street, Belfast.

BRITISH MOTOBLOC SYNDICATE.—£15,000. To adopt an agreement with the Société Anonyme des Automobiles Motobloc, of Bordeaux, and to carry on the business of manufacturers of and dealers in motor-cars, carriages, cabs, &c. No initial public issue. First directors: Messrs. R. Jackson, J. S. Critchley, L. Delphin and R. Bodden.

SOUTH EALING MOTOR COMPANY.—£1,000. To acquire from Mr. L. F. Bishop the business carried on by him as the South Ealing Motor Garage. No initial public issue. Registered without articles. First directors, Messrs. L. F. Bishop, E. G. Browning, L. S. Bishop, S. A. Day, Miss S. Harris, Mrs. M. Browning, and Mr. H. A. Farman. Ealing Road, South Ealing.

TOWER MOTOR AND ENGINEERING COMPANY, LTD. (3,198). Capital, £1,000. To manufacture, sell, let on hire, adapt, or deal in all sorts of motors, engines, locomotives, carriages, or vehicles wholly or partly propelled by petrol or oil. Directors limited to three, the first being Major Mathew C. E. Fortescue, D.L., Stephenstown, Dundalk (managing); Mr. Charles T. Alston, engineer, Prussia Road, Hoylake, Cheshire; and Mr. W. Blundell Thornhill, gentleman, Castle Cossey, Castlebellingham. Registered office: Castlebellingham, Co. Louth.

LEEDS MOTOR MANUFACTURING COMPANY.—£2,500. To adopt an agreement with A. E. Macleod for the acquisition of a patent, a motor-van, and other property, &c. No initial public issue. Registered office: Balmoral Street, Leeds.

BRAZIL, STRAKER AND CO.—£80,000. To acquire the business of civil and manufacturing engineers formerly carried on by Brazil, Holborow and Straker, Limited, at the Motor Works, Fishponds, Bristol, and at the Vulcan Ironworks, St. Philip's Marsh, Bristol. No initial public issue. First directors: J. P. Brazil, H. F. Moseley, H. G. Holborow, J. N. Williams, and S. Straker.

THE CHARGE AGAINST A LADY MOTORIST DISMISSED.

No evidence was offered by the Crown at the Hertford Assizes on Monday in the case of Miss Elsie Fox, who was indicted on the coroner's inquisition for the manslaughter of William Parish at Royston. She was accordingly discharged. Parish was killed in a collision with Miss Fox's car at the cross-roads as she was returning from Newmarket races. The coroner's jury returned a verdict of manslaughter, but the magistrates decided there was no criminal negligence.

TAR FOR DUSTY ROADS.

AMONG the papers read at the annual meeting of the Institution of Gas Engineers in Dublin, last week, was one on "The Use of Tar on Roadways," by Mr. H. P. Maybury, County Surveyor of Kent. The author said that, since 1903, many experiments towards meeting the demand for dustless roads had been made and numerous chemical compounds had been used with more or less satisfactory results; but it was now generally conceded that nothing was so effective as coal tar. With tar at 1½d. per gallon, the cost of painting the surface of a mile of road, when such work was performed by mechanical means, varied from £30 to £40; and assuming the whole of the main roads were so treated an additional £1,000,000 would be required. This work would represent a yearly consumption of 33,400,000 gallons of tar, its value being something like £230,000. It would thus appear that a new market of considerable importance for that bye-product would shortly be opened up; and it should be the aim of every gas engineer to encourage in his immediate neighbourhood the use of tar for road purposes by putting the purchaser upon the most favoured nation terms.

A SECOND-HAND TYRE TRANSACTION.

AT the Wandsworth County Court, last week, Edward Harrison, of 4, Central Hill, Upper Norwood, sued the Armand Motors, Ltd., of Balham, S.W., for £5 damages for alleged fraudulent misrepresentation on the sale by defendant of two motor-car tyres. Plaintiff said that he purchased two motor-car tyres at different dates from defendants for £2 10s. each. They were alleged to be reinforced tyres. The first tyre-

went to pieces after running 120 miles, and the other got into a similar condition when it had only covered seventy or eighty miles.

Harold Penney, assistant manager of the Armand Company, said the tyres were sold to plaintiff as second-hand covers, and not as reinforced tyres. The judge found for defendant, and said it was unfortunate that such a serious charge as fraudulent misrepresentation had been brought on such slender grounds.

THE SOUTHERN MOTOR CLUB'S HILL-CLIMB.

NOTWITHSTANDING unforeseen difficulties the Southern Motor Club successfully carried out its hill-climbing competition on Saturday last. It was intended to hold the event at Kidd's Hill, near East Grinstead, but a resident on the hill called on the police to prevent the contest being held there. The consequence was that when the competitors' and officials' cars, of which there were altogether about sixty, arrived at East Grinstead, it was learned that the police had made most elaborate arrangements, posting sixteen officers on the hill, and installing an electrical timing apparatus and a field telephone. The officials of the S.M.C. thereupon decided to alter the venue, and the long procession of cars moved off to Toy's Hill, a steep and winding hill, about 1½ miles long, near Brasted, Kent, about 13 miles away. The alteration of the venue naturally caused great delay, the last car not ascending until past seven in the evening. It was decided not to publish actual times, but to take the fastest time as zero and to give the difference between that time and the time accomplished by each of the other cars.

For the first event, for touring cars whose cylinder diameter in inches squared and multiplied by the number of cylinders was under 35, there were eleven entries, the result being:—R. O. Clarke, 9-h.p. Sizaire-Naudin, zero, first; F. W. Huband, 10-h.p. Alldays, 36 sec. slower, second; J. F. Buckingham, 9-h.p. Riley, 49 2-5 sec. slower, third.

Six cars competed in Class 2—touring cars whose cylinder diameter in inches squared and multiplied by the number of cylinders was between 35 and 50. The first place was taken by R. E. Deacon, on a 12-16-h.p. Talbot, zero; A. J. Sproston, 14-h.p. Vulcan, 19 sec. slower, being second; and L. Walton, on a 12-16-h.p. Vauxhall, 30 sec. slower, third.

There were fifteen starters in Class 3, which was for cars which, on the same formula as above, came between 50 and 75. The winner was H. Ramois, on an 18-h.p. Germain, zero; Oscar Cüpper, 24-28-h.p. Metallurgique, 5 2-5 sec. slower, was second; and E. H. Arnott, on a 20-h.p. Arrol-Johnston, 30 2-5 sec. slower, third.

Class 4 (between 75 and 100 on formula) brought out half a dozen cars, two of which failed to take the hill. L. Carle, on a 45-h.p. Mors, made the best time, the second place being taken by O. S. Thompson, 25-h.p. Austin, 27 2-5 sec. slower, and the third, E. Burchett, 24-h.p. De la Buire, 40 1-5 sec. slower.

Considerable interest was shown in Class 5 (between 100 and 150), in which Daimler, Iris, Napier, Thornycroft, Gracile, Brooke, and Gobron cars competed, with the following result:—S. Smith, 60-h.p. six-cylinder Napier, zero, first; J. Goddard, 34-h.p. Daimler, 7 2-5 sec. slower, second; H. Musker, 35-h.p. Daimler, 8 2-5 sec. slower, third.

In Class 6, for lady drivers, there were only two competitors, Miss Muriel Hind making zero time on a 24-h.p. Deasy, Mrs. Kirton on a 6-h.p. De Dion being 3 min. 53 2-5 sec. slower.

The final event was for cars which competed in the recent Tourist Trophy race, and resulted as follows:—Oscar Cüpper, 24-28-h.p. Metallurgique, zero, 1st; A. Instone, 25-h.p. Arrol-Johnston, 1 min. 18 sec. slower, 2nd.

The result of the handicap on the R.A.C. formula will be announced later. Major F. Lindsay Lloyd acted as starter; while the judge was Earl Russell, and the timekeepers, Messrs. J. H. Burley, F. Straight, and H. H. Griffin, official timekeepers of the Royal Automobile Club, with Mr. S. W. Phillpott secretary of the meeting. We may add that we journeyed down to East Grinstead and on to Toy's Hill on Mr. Sternberg's 28-h.p. Mors car, which behaved in excellent fashion.

MOTOR TRACTION IN LANCASHIRE.

THE General Motor Carrying Company, of Deansgate, Manchester was summoned at Radcliffe on Monday for not having a person in charge, of a trailer behind a motor vehicle to apply the brake. The managing director of the company appeared, and told the Bench that there was no danger involved by the infringement of the law. The Act had been framed in ignorance of the working conditions in Lancashire, and prosecutions simply amounted to persecutions against the trade. Between Manchester and Rossendale no action was now taken by the police, with the exception of those in the Bury county division. A fine of 40s. and costs was imposed, this being the company's second offence in the district.

MESSRS. LEMAIRE AND THACKTHWAITE, agents for Messrs. Renault Freres, Ltd., have removed to 119, Regent Street, London, W.

WITHIN the last few days Mr. S. F. Edge has received orders for six-cylinder Napiers from the Duke of Bedford, the Raja of Kheira, Bengal, Lieut. Marshall Roberts, and Mrs. H. W. Pauling, of Cape Town.

THE HUMBER COMPANY'S ANNUAL OUTING.

LAST week end the extensive works of the Humber Company, at Beeston and Coventry, presented anything but their ordinary appearance, for in place of the usual scene of bustle and activity all was quiet, there being hardly a sign of life about. This was due to the holding of the annual outings of the employees. The Beeston contingent, to the number of about 1,000, were conveyed in three special corridor trains from Nottingham Station, on the morning of Friday, the 21st inst., to Heysham, en route for the Isle of Man, by the s.s. "Londonderry," which had been specially chartered for the occasion, to Douglas. Mr. Edward Powell, the chairman of Humber, Ltd., presided at the staff dinner, which took place on Friday evening at the Villiers Hotel, Douglas, when about 100 were present. The musical programme which followed was interspersed with a number of toasts which were duly honoured. The Chairman, in a brief but interesting speech, replied for "The Firm," proposed by Mr. W. Millington, while the popular manager, Mr. T. C. Pullinger, was musically honoured. Messrs. G. P. Mills and A. H. Niblett, his right hand men, being also toasted. During Friday and Saturday excursions were made to the places of interest in the Island, most complete arrangements having been made in order that the visitors should thoroughly enjoy themselves. Not the least interesting feature of the trip was provided by the Beeston-Humber silver prize band of twenty-four performers, one of the most famous of the works bands of the Midlands, which, under the conductorship of Mr. J. Irons, had the honour of being invited by the Douglas Municipal Council to play on the promenade band stand. The return journey was commenced at 12 o'clock on Saturday midnight, Nottingham being safely reached at

The Beeston-Humber Party arriving at Douglas.

8 o'clock on Sunday morning. The arrangements were of the most complete character, and reflected much credit on the joint organising secretaries, Messrs. M. Rallinshaw and H. F. Gray, to whom a special vote of thanks was accorded at the staff dinner. We may add that the Midland Railway undertook the task of conveying the large party to and from Douglas, carrying it through with a degree of promptness and comfort which was greatly appreciated.

While the Beeston party were in the Isle of Man, three long special trains left Coventry at half-past four on Saturday morning, conveying Mr. Walter Phillips, the manager, and about 1,500 employees of the Coventry Works of the company and their friends to London en route for Hastings and Boulogne. An extensive programme was arranged for the day, including arrangements for both land and sea. For those who did not care to cross the Channel pleasure trips were arranged to places of interest in the district. The "Brighton Queen" was especially chartered for the journey to Boulogne, and the party was received by the Mayor and the general officials of the town, and conducted round the colleges, schools, factories, &c. A staff of interpreters was placed at the service of the tourists, and everything done to make the stay of the Coventry visitors in Boulogne as pleasant as possible. The return journey commenced at 11.20 at night, the first train being due back at Coventry at 4 o'clock the next morning.

The excursion was one of the largest which has ever left the Midlands, and, like the Beeston trip, was managed throughout with that thoroughness which has always been a characteristic of Humber undertakings, the arrangements reflecting the greatest credit upon the joint secretaries, Messrs. C. Willson and T. Harrison.

THE United Motor Industries, Ltd., of Poland Street, W., inform us that the Eisemann magneto can now be obtained to run off the half-speed shaft, the rapidity and strength of the spark remaining the same as with the ordinary model.

FORTHCOMING EVENTS.

—●—
JUNE.

- 23th (F.).—S.A.C. Inverness—Pitlochry, 154½ miles.
29th (Sat.).—S.A.C. Pitlochry—Glasgow, 122½ miles.
Aero Club race for the Hedges Butler challenge cup.
Birdlip hill climb of the Bristol and Gloucestershire A.C.
Joint meet of the Liverpool, Manchester, N.E. Lancs.,
Sheffield and Yorkshire Clubs at Buxton.
Motor Cycling Club 100 miles Private Owners' Reliability
Trial.
Motor Yacht Club races.
Southern M.C.'s midnight run to Southsea.
Bradford A.C. hill climb.
Mr. S. F. Edge's 24 hours' run on the Brooklands Track.
End of the Scottish Reliability Trial.
East Surrey A.C. run to Worthing.
Kent A.C. at Dartford Heath, by invitation of Mr. C. J.
Morgan.
Midland A.C. run for crippled children at Castle Bromwich.
30th (S.).—Motor C.C. run to Woburn.

JULY.

- 2nd (Tu.).—A.C.F. Grand Prix Race on the Seine Inferieure Circuit,
near Dieppe.
3rd (W.).—Special meeting of R.A.C. committee.
4th (Th.).—International cross Channel race for motor-boats from
Dover.
Joint meeting of the Lincolnshire A.C. and the Lincoln-
shire M.C. at Willingham.
6th (Sat.).—Inaugural races on the Brooklands Track.
Motor Yacht Club and Notts. A.C. joint meet and races on
the Trent.
Speed judging competition of the Essex County A.C. at
Saffron Walden.
Kent A.C. gymkhana at Holwood.
100 miles trial of the North London A.C.
Run of the Northamptonshire A.C. to Compton Wyngates.
7th (Sun.).—Non-stop run of the Newcastle and District M.A.C.
10th (W.).—R.A.C. South Harting hill climb.
13th (Sat.).—Entries for R.A.C. commercial vehicle trials close at
ordinary fees.
Aero Club ascent, Crystal Palace.
Speed trials of the Lincolnshire A.C. at Grimthorpe.
Meet of the Cheshire A.C. at Plas Newydd, Llangollen.
Sheffield A.C. outing for crippled children.
15th to 18th.—The annual automobile meeting at Ostend.
20th (Sat.).—Motor Union meet at Southport.
27th (Sat.).—Commercial vehicle meet at Maidstone.

AUGUST.

- 20TH.—Open competition for light cars organised by the Essex Motor
Club over a 200 miles course.

SEPTEMBER.

- 9TH.—Industrial Vehicle Trials commence.

OCTOBER.

- 19TH.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

THE OPENING RACE MEETING ON THE
BROOKLANDS TRACK.

THE motor-car race meeting to be held on the Brooklands track
on Saturday, July 6th, has attracted a large entry list, and some excit-
ing performances may be expected. The foreign drivers include
Nazzaro, the winner of the Targa Florio and Kaiser's prize races, Lancia,
Duray, Demogeot, Fabry, and Gabriel. The English cracks include
Messrs. S. F. Edge, C. Jarrott, Warwick Wright, J. E. Hutton,
C. Sangster, E. M. C. Instone, H. R. Pope, and D'Arcy R. Baker.

The following are the races and entrants:—

- The Horsley Plate of 300 sovs., for motor-cars propelled by means of
internal-combustion engines only, of a cylinder dimension 60 to
under 85. Weight about 3,000 lb. Distance, about three miles.—
30-h.p. Thornycroft, 24-h.p. Mass, 25-h.p. Straker-Squire "C.S.B.,"
30-h.p. Thornycroft, 30-40-h.p. Brasier, 18-h.p. Arrol-Johnston,
20-h.p. Brotherhood, 20-h.p. Itala, 30-h.p. Darracq.
The Gottlieb Daimler Memorial Plate of 650 sovs., for motor-cars pro-
pelled by means of internal-combustion engines only, of a cylinder
dimension 120 to 155. Weight, 3,000 lb.. Distance about fifteen
miles.—45-h.p. Daimler, 45-h.p. Daimler, 45-h.p. Daimler, 60-h.p.

six-cylinder Napier, 35-h.p. Minerva, 45-h.p. Daimler, 35-h.p. Ariel-
Simplex, 40-h.p. Darracq.

- The Byfleet Plate of 550 sovs., for motor-cars propelled by means of
internal-combustion engines only, of a cylinder dimension 110 to
under 135. Weight 3,000 lb. Distance about ten miles.—60-h.p.
Berliet, Itala, 45-h.p. six-cylinder Napier, 35-h.p. Minerva, 45-h.p.
Fiat, 50-60-h.p. Fiat, 30-h.p. Ariel-Simplex, 60-h.p. Berliet, Itala,
60-h.p. Lorraine-Dietrich, 40-h.p. Darracq, 30-40-h.p. Darracq.
The Stephenson Plate of 300 sovs., for motor-cars of a price not less
than £600 and not exceeding £700. Weight, 3,500 lb. Distance
about six miles.—30-h.p. White, 40-h.p. Junior, 30-h.p. White,
30-h.p. Ariel-Simplex, 60-h.p. four-cylinder Napier, 30-40-h.p.
Darracq, 30-40-h.p. Darracq.
The First Montague Cup, value £2,100, for motor-cars propelled by
means of internal combustion engines only, of a cylinder dimension
155 to under 235. Weight, 2,800 lb. Distance, about thirty miles.
—90-h.p. Napier, 100-h.p. Fiat, 100-h.p. Darracq, 120-h.p. Mercedes,
120-h.p. Fiat, 40-h.p. Ariel Simplex, 120-h.p. Mercedes, 100-h.p.
Darracq, 100-h.p. Itala, De Dietrich racer, 120-h.p. Mercedes,
120-h.p. Darracq.
The Marcel Renault Memorial Plate of 550 sovs., for motor-cars propelled
by means of internal-combustion engines only, of a cylinder dimension
85 to under 110. Weight, 3,000 lb. Distance about twelve miles.
—35-h.p. Iris, six-cylinder Iris, 40-h.p. Berliet, 36-h.p. Thorny-
croft, Fiat, 40-h.p. Napier, 40-h.p. Junior, Targa Florio Fiat,
30-h.p. Ariel-Simplex, 35-h.p. Vinot, 40-h.p. Weigel, 40-h.p. Itala,
40-h.p. Lorraine Dietrich, 35-h.p. Renault, 30-40-h.p. Darracq.

THE ARMY MOTOR RESERVE.

LIEUTENANT LE VICOMTE DE SATGE DE ST. JEAN drove General
Lord Methuen during night operations, in the vicinity of Folkestone, on
the 7th inst. Lieut. F. Dyer-Dennet was on duty with the General
during similar operations carried out by him, near Sheringham, on the
10th instant.

It is of interest to note that amongst the prospective duties to be
performed by officers of the Army Motor Reserve, four cars have been
detailed to convey the distinguished French military officers, includ-
ing the chief of the general staff, who are visiting this country this
week, during the various operations which they will attend at Alder-
shot and elsewhere.

Major-General H. Hutchinson, C.S.I., Director of Staff Duties (in
the absence of the Chief of the General Staff), directed a staff tour in the
Western Counties of England and in South Wales, between
May 27th and June 1st. The following officers of the Army Motor
Reserve attended with their cars, and materially assisted in making the
tour a success:—Captains R. H. Townshend and A. C. Duckworth,
Lieuts. C. Braby, E. H. Thornewill, E. McNiven, E. E. Richardson,
D. D. Macpherson, E. Chodwick-Brown, Le Vicomte de Satge and
H. G. Nalder. The chief points of rendezvous were Brecon, Carmarthen,
Hereford, Gloucester and Worcester.

Among other duties carried out by the corps are the following:—
Staff tour under the Commandant Staff College, between Gloucester
and Bath, from May 28th to 31st., attended by Lieutenants F. J. Frost,
J. Peyto Shrubbs, R. F. Glyn, and A. C. Edwards. Tour of inspection
of Imperial Yeomanry at North Weald, on June 1st, Lieutenant
R. J. Stilwell. Inspection of manoeuvre area at Salisbury, on June
4th, Lieutenant M. W. Shuttle. Staff tour at Aldeburgh under the
Commander Thames and Medway defences, from June 4th to 7th;
Lieutenants G. E. V. Milbank and C. E. Smith. Staff Tour under the
G.O.C. 1st Division, at Cirencester, from June 13th to 16th, Captain
A. C. Duckworth.

BUSINESS NEWS.

MR. W. F. PARKER, of the Motor Garage, Oxford, has issued a
useful booklet of Coming Events in his district. It gives, amongst other
things, the programme of the pageant which is being held from June
27th to July 3rd, a perpetual lighting-up table and a list of the identi-
fication marks of motor-cars.

THE Glasgow Automobile Company, of West George Street,
Glasgow, have been appointed sole agents for Glasgow and the West of
Scotland for the sale of Weigel cars.

THE United Motor Industries, Ltd., 45 and 46, Poland Street
London, W., have been appointed sole British agents for the firm of
Dupressoir, makers of axles, frames and chassis parts generally; also
for the well-known firm of Hannover, makers of springs.

THE STEPNEY SPARE MOTOR WHEEL, LTD., have just had the
honour of supplying His Majesty the Czar with two Stepney wheels for
use on his car.

We learn that two of the three Nacke cars entered in the Herkomer
Touring Trophy Competition, viz., No. 142 driven by Erich Graf
Kunigl-Ehrenburg, and No. 145, driven by Baron von Gutmannsthal,
obtained full marks and accordingly the gold medal.

THE BRITISH AUTOMOBILE COMMERCIAL SYNDICATE, LTD., inform
us that they have appointed Mr. C. Bertrand, who was formerly with
the A. Clement factory at Levallois-Perret, and the Societe Franco-
Americaine d'Automobiles (E. Lamberjack), of Paris, as their manager,
in succession to Mr. F. F. Wellington.

COMMENTS.

THE inauguration of the racing season on the Brooklands Motor Track by Mr. S. F. Edge, last week end, has certainly excited the country to a very considerable extent. On all hands we hear expressions of admiration for the wonderful tenacity, determination, and patience of the man who could rush round the course 572 times in twenty-four hours without cessation. The feat was, however, more than a mere test of physical endurance, involving as it did quickness of eye and clearness of head in maintaining such consistent running for so long a period. It was to be regretted, however, that the condition of the track was scarcely up to the standard of perfection that it was hoped would have been the case, and we shall watch its behaviour during the season with considerable trepidation unless an early assurance is forthcoming with regard to the firm foundation of the banking. The spectacle of men throwing sand as the motorist rushed along was certainly unexpected, and we trust may not require to be repeated. Apart from this, however, the fact that Mr. Edge travelled the 1,581 miles 1,310 yards in twenty-four hours seems to point to some of the anticipations of the novelists and the poets being realised. Jules Verne's idea of going round the earth in eighty days has already been put into the shade, and now Mr. Edge may show us how to "girdle the world in forty minutes."

Another Badge.

A FORTNIGHT ago we mentioned that a new badge was in preparation for the Royal A.C. This, it is intended, is to be located on the front of the cars of members of the club, thus imitating the successful example of the Automobile Association, and following in the course of the Motor Union. In view of the Royal recognition which has been accorded the premier motoring organisation in this country, the suggestion is being made that the Crown may be incorporated into the design and the motto, "Honi soi qui mal y pense."

Further Taxation Suggested.

THE announcement which Mr. Asquith made in the House of Commons late on Tuesday evening will occasion considerable surprise throughout the motor industry, which was hoping for the reduction, and not the increase, of expenses associated with motoring. The way in which the Chancellor of the Exchequer suggested an increase on the liquor and motor-car licences seemed to point to his intention to introduce the same in the Budget for 1908; and unless the Motor Union is able, in the meantime, to exert the full pressure of its undoubted influence, we are afraid this threatened imposition will be made. It would be unfortunate if the motor movement is to be subjected to piecemeal treatment, and perhaps the most satisfactory way of meeting the case would be to urge upon the Government the advisability, if not the necessity, of letting the country know its intention with regard to legislation as well as to the taxation of motor-cars simultaneously. Otherwise the Local Government Board will be making

provisions for registration and other matters, and later we shall have further impositions on the part of the Treasury. If the industry is to be taxed so that the cost of the business is increased to its disadvantage, it will be as well to know the worst altogether and not be subjected to the caprices of every department anxious to "raise the wind."

Waghorn wins at Haywards Heath.

ALTHOUGH the magistrates at the Haywards Heath Petty Sessions, following their usual plan of convicting every motorist brought before them, did not allow any of the motoring defendants to escape their clutches on Monday, they evidently felt some qualms of conscience. On the occasion of the Motor Club's run to Brighton, Mr. H. T. Vane, Mr. J. De Solla, and several others, were trapped by the ubiquitous Waghorn, and, despite the fact that it was proved in evidence that the cars must have been going at only a moderate pace, fines of £5 and £2 were inflicted in both cases. The Chairman of the Bench remarked that the fine was lower than usual, because it was a very open and straight piece of road, and they did not think there was so much danger to the public as in cases for exceeding the speed limit where there were crossings or a lot of people about. Anyone other than a Haywards Heath magistrate would have declared the trap un-English, and have said something severe to the perpetrator of such a device in such a place. But they do strange things at that Court.

Reigate welcomes Progress.

THE fact that Reigate is on the highway from London to Brighton has given it prominence and popularity among motorists who have some regard for the beauties of this pleasantly situated little town. We doubt, therefore, whether the policy of the Town Council in giving instructions to the Head Constable to rigorously enforce the law with regard to the driving of motor-cars through the streets of the borough will add to the prosperity of the place; in fact, the only effect it can have will be to cause motorists to travel by other roads and avoid Reigate, whose motto, "Welcome progress," seems out of accord with the decision of the Town Council to which we have just referred.

Results at a Glance.

FOLLOWING the plan we originated in connection with the Scottish Reliability Trial, we give on other pages the "Results at a Glance," so that readers will be able to trace the doings of the ninety-six cars that started and the daily records of the eighty-two that finished in Glasgow on Saturday last. The comparative order of each car in the various classes on the different hill climbs is also given in association with its mechanical and driving troubles in order to facilitate reference. A list of the absolute non-stop cars is also given, together with some notes showing that several others would have appeared in that category but for driving difficulties, owing to the exigencies of traffic, &c., which, although not really vitiating the running of the car, have nevertheless lost them the credit attaching to clean records on each day of the arduous task. Last year we gave a list of the drivers, which is

B

again published, as well as the weights of the cars. This information, together with our daily descriptions of the country—shortened somewhat in view of the detailed accounts of the route with which we have previously furnished our readers—makes up a succinct and lucid record of the Scottish Trials of 1907 in a form most accessible for reference in the future as well as for present reading.

Lost Records.

BRITISHERS are sportsmen, and they will regret to see how records were spoilt in the Scottish Reliability Trial, which, as we have already said, is described and catalogued on other pages of the present issue. A quartette of drivers, who in 1905 accomplished non-stop performances, repeated their success last year, viz., Messrs. H. Ramoisy, F. S. Bennett, R. Crossley, and Claud Hamilton. It was hoped that three of these—Mr. Claud Hamilton did not drive this year—would perform the hat trick in 1907, but the Fates decreed otherwise. On the second day, Mr. Ramoisy, after working his 14-h.p. Germain up the hill to the Devil's Elbow in the quickest time of his class, rushed the bank in getting round that piece of roadside anatomy. The earth not yielding the car had the

Mr. Whit Cunliffe, the famous lyricist of the Music Halls, and his Argyll Landaullet, which he uses to cover his many engagements in London and the provinces.

worst of the encounter, and the popular driver became *hors de combat*. On the third day even harder fortune attended Mr. Bennett. His car was one of the last to make the ascent of the Cairn O'Mount. When we ascended, some portions of the road were covered with surface mud to the extent of several inches; what it was like after sixty other vehicles had ploughed their way upwards and onwards was described by Observers as a quagmire. It was really unfit for little cars; but Mr. Bennett's 9-10-h.p. Cadillac, with two speeds of 7 and 30 m.p.h. respectively, ran well until it came to a point where the front wheels were nearly axle deep in ruts on the surface. They absolutely stuck in the road, and, the engine not being constructed for ploughing, could progress no further. Driver and passenger had to dismount and lift the car to a firmer portion of the road. For that Mr. Bennett was penalised one mark, and his three years' record spoiled. The tale of disappearing records is almost like that of the ten little nigger boys. They went one by one, and on the fourth day Mr. R. Crossley was unfortunate enough to have to withdraw his 60-h.p. Belsize. And so there were none to make the triple record. Mr. Bennett and many of the drivers in Class 1, which was the last category to ascend the hill, have, however, entered a protest urging that the Cairn O'Mount hill should not be taken into calculation for that class; and the favourable consideration of such a suggestion would undoubtedly

be well received by the majority of the competitors, who sympathised with the difficulties of the little cars on that day. Credit, therefore, is all the more to be given to Mr. R. Reynold Jackson, whose 8-h.p. Jackson was the only car to make a non-stop run that day.

Rewarding Informers.

WE wonder if the occurrence of the Scottish Reliability Trials last week suggested to Mr. Cathcart Wason that he should ask the question he did in the House of Commons on Monday night, with regard to the publication of the localities which are infested with police traps by ourselves and other journals. Apparently he would not be adverse to the policy of offering rewards for evidence of fast motor driving on the conviction of offenders; a policy which, however, Mr. John Burns recognises as undesirable, and which he certainly does not intend to adopt. Really, Mr. Wason should understand that the publication of police traps in our columns is one of the best means that could be devised for stopping the too speedy driving of motor-cars. It is well known that considerate motorists follow the publication of such notices with a view of assisting the police by taking more than the usual care to avoid fast driving in these districts; and, after all, the object of the police should be, not to secure convictions of persons when offences have been committed, so much as to prevent any likely danger to the public or property on the highway.

Motor Racing at Blackpool.

LAST week we reported the trial of the action by which it was attempted to restrain the Blackpool Corporation from having motor racing on the sands. Judgment was reserved till Monday, when Vice-Chancellor Leigh Clare decided in favour of the plaintiff. The action was brought against the Blackpool Corporation for an injunction to restrain them from promoting or engaging in motor meetings on the Parade or other public thoroughfares in the borough. As our readers will remember, motor races were held in October of last year, and in the two preceding years, on the Parade, which contained tramlines, with the approval and assistance of the Corporation. The Vice-Chancellor now says that in his opinion it was the duty of the Corporation to have protected the ordinary users of the Parade from motor-cars travelling at either a high or low speed along the Parade, and it was inconsistent with their duties and in violation of their powers to authorise and assist in a motor meeting. In the course of an elaborate judgment he set forth the reasons for such a view, and ordered the Corporation to pay the costs of the action.

Traffic Board for London.

ON Monday an important deputation waited upon the General Purposes Committee of the L.C.C. with reference to the institution of a Traffic Board for the regulation and control of traffic in the metropolis. The need for such an authority was recognised by the Royal Commission, which considered the matter some time ago, and practically everyone who has given the subject any thought at all will agree that the urgency of the matter is now even greater than when the Royal Commission reported on the formation of such a body. At present London traffic is more or less of a kaleidoscopic affair. The various factors sort themselves out as best they can with the help of the constable on the roadway and common-sense among the drivers; but there is a larger aspect of the matter which requires consideration. Hence the need for the co-ordination of the existing authorities and the setting up of a body which should consider and then control the means of ingress and egress from the city and metropolitan area. Mr. Charles Booth, who looks at the matter from the point of view of the student of affairs entirely detached from any interest in particular ways and means, regards the formation of a Traffic Board as one of extreme gravity and as a potent influence in ameliorating

the stress of life in the great city. Sir David Barbour, who was chairman of the Royal Commission, hopes that in all questions of transit the proposed board would become the thinking brain of London. Now that the motor-car is developing at such a rapid rate, motorists can do much to promote the ultimate success of their own movement by joining with those who are urging upon the L.C.C. and the Government alike the necessity of no longer delaying what all men are agreeing is a very necessary step in preventing the pressure of London traffic.

A New Fuel.

alcohol produced by the process, he says, would be about 3d. a

MR. ROGER WALLACE has been examined before the Fuels Committee of the Motor Union with regard to a new process in which he is interested for the production of denaturised alcohol suitable for motor spirit produced from peat. The cost of

officer on duty. There is every reason for speaking with hopefulness on this point, as the Inland Revenue authorities are anxious to afford facilities for the use of alcohol for industrial purposes, provided the Revenue could be properly protected and safeguarded. Although Ireland would probably benefit to the largest extent, as it has the most suitable deposits of peat, which is however also to be found in large quantities in Scotland, in Wales, and in England.

Protecting the Highways.

highway, obstruction, and stone throwing. There are seventeen of these convictions recorded, six being for assault, nine for

THE Motor Union of Great Britain and Ireland has issued a striking poster to be hung in public places, motor houses, hotels, clubs, &c., showing some of the convictions secured by the Union during the past year for assaults on the

The Inaugural Meet of the Bedford Motor Club at Bromham House, the residence of Mr. W. H. Allen, M.P., the Chairman of the General Committee of the Club.

gallon in bulk at the works. This material would be 90 per cent. ethyl alcohol; the remaining 10 per cent. would be water and a denaturant. It would be advisable in many cases to mix with this alcohol a certain quantity of other hydro-carbons, because there is sufficient oxygen in the alcohol to combine with the carbon, and the result would be a spirit giving more perfect combustion than ordinary petrol. It would, under these circumstances, be eminently suitable for use in an internal combustion engine. Mr. Wallace thinks that there would be no difficulty in arranging with the Revenue authorities to amend legislation so that industrial alcohol could be produced by this process, and especially for the following reasons:—In the process there is produced more than sufficient methyl alcohol, at so cheap a rate that it could be easily used on the premises in sufficient quantity to denaturise the whole of the ethyl alcohol produced at a very cheap cost. This removes what is really one of the greatest difficulties at present in the production of alcohol for the purpose of use as fuel. It would be easy to ensure that no alcohol left the premises unless duly passed by the Excise

obstruction, and two for stone throwing, obtained in various parts of the country. These prosecutions have been undertaken in the interests of all members of the public using the highway, and it is hoped that they will deter other possible offenders. The union has been successful in every case it has undertaken, and is prepared to prosecute in others when the public interest appears to demand such a course. We may add that copies of the poster for exhibition can be obtained on application to Mr. Rees Jeffreys, 1, Albemarle Street, London, W.

The R.A.C. Dust Trials.

ARRANGEMENTS have been made for the dust trials which are being organised by the Royal Automobile Club to take place on the Brooklands Track on Tuesday, the 23rd inst. The trials have been instituted with the object of encouraging manufacturers to improve the design of their cars with a view of reducing to a minimum the dust raised thereby, and to obtain information for the assistance of manufacturers.

With the advent of the practically dustless motor vehicle much of the present opposition on the part of the public will, it is expected, be removed. The competition will be divided into three classes, viz.:—Class 1, Makers' standard cars, limited strictly to standard patterns as regularly sold commercially, any alteration or addition disqualifying the competitors. Class 2, amateurs' cars, inter-club competition limited to two cars from each club. The cars must be the *bona fide* property of members of the competing clubs, and must be run as regularly used by them on the road. Class 3, experimental cars. This will include cars specially altered or added to in any way for the purpose of lessening dust raising. All the cars are to have an ordinary pattern of body, with at least four seats, and in all other respects to be of an ordinary working type to the satisfaction of the judges.

Rovers in South Africa.

LAST week Mr. R. L. Jefferson completed his arduous task of driving an 8-h.p. Rover from Durban, *via* Ladysmith, to Johannesburg, and thence to Cape Town, *via* Kimberley. Although we have not received full particulars of the journey, he has wired to say that he met with a great reception, and, although the roads were vile, in fact there are hardly any roads at all, as far as we can make out, he appears to have got through his ordeal with flying colours. Previously he had had a great reception at Johannesburg, being met at Boksburg by the committee of the Johannesburg Automobile Club, and, after being introduced to a throng of spectators, was escorted to the Grand Hotel, and he was afterwards entertained to dinner at the Rand Club on June 7th. His ride has undoubtedly created much interest in South Africa, especially knowing (as the residents there do) the enormous troubles that there are to contend with. The ride to Durban was a terrible experience, especially over the Drakensburg Mountains, where the road was as bad as any he had to encounter in his celebrated ride from Coventry to Constantinople—also on an 8-h.p. Rover. It is an interesting coincidence that this trip should have been completed last week, for in 1906 Mr. Jefferson was a participant in the Scottish Reliability Trials, and many in the Highlands last week were asking for news of the rover.

Street Cleaning.

ON Wednesday, at the Congress of the Royal Institute of Public Health at Douglas, Dr. H. E. Hele-Shaw presided at a meeting where a paper on street cleansing in relation to the growth of motor traffic was read by Mr. E. Shrapnel Smith, who particularly directed the attention of the conference to the question of street washing during the day time, adding: The value of water as a cleansing agent has been proved in the principal cities of the world, and few enlightened engineers or cleansing superintendents have failed to use to the best advantage the most valuable and simple of all cleansing agents, a hose-pipe, with suitable nozzle, in connection with their towns' mains. It is to an extension of this proved and satisfactory method that users of motor-buses and goods vehicles look for the elimination of difficulties associated with side-slipping and lack of adhesion. The owner of a private car is able to secure the necessary extra adhesion by covering the tread of his tyres with leather bands or metal studs, to which course he is positively driven by the dangerous condition of the street and road surfaces, but the owners of the heavier types of vehicles, such as motor-buses and delivery vans, which machines are certainly of as great economic value to the country as private motor-cars, are unable to adopt that method of escape from the risks of using the streets when the surfaces are in a slippery or greasy condition, and they are obliged to rely upon the activities of the local authorities. The problem is, therefore, how to hose down the streets during the day-time, when a considerable volume of traffic is upon them, and at a time when pedestrians are pursuing their ordinary avocations in large numbers. It is generally thought, at first sight, that the use of water under pressure in the presence of such traffic is out

of the question, but the suggested plan is not only a practicable one, but one that has been adopted already in London. The Southwark Borough Council has been washing its wood-paved and other streets with water under a pressure varying from 20 lb. to 60 lb. on the square inch, for upwards of a year. This is done by means of air-pressure watering vans, which constitute a most desirable addition to the equipment of any cleansing department. They improve the sanitary conditions of the streets and they make the surface so clean that the side-slipping nuisance is largely reduced.

The Motor-'bus.

THE antipathy aroused by the motor-'bus—which still maintains its throbbing way through the streets of the Metropolis—reminds us of the feelings which were caused by the advent of the railway not quite a hundred years ago. Ordinary motorists, those who drive cars that give less olfactory offence, do not hail the 'bus as one of their tribe, while learned knights seem determined to overweight it with their denunciations. Sir Theodore Martin is one of its most pronounced traducers. To escape its invasion of London a few months ago he went Walesward; and now that inclination has brought him back again to his literary haunts, he still harps on the old chord of hostility to the motor-'bus. Even at the meeting of the Dante Society he dragged in—metaphorically, of course—the motor-'bus, which he declared was poisoning some people, deafening others, and "it was shortening his life." Seeing that Sir Theodore is ninety-one years of age, some may be inclined to doubt the strength of the latter objection. But then Sir Dyce Duckworth has also been railing against this shortener of the day's labours, and urging, as did Macbeth, that it "murders sleep." Add to these gentlemen the Hon. Alfred Lyttelton, who pelts at the motor-'bus in the House of Commons by way of Mr. Gladstone, and we have a trio of adverse persons—fortunately impotent for ultimate mischief, though they may be powerful for delay.

Seeing the Country.

THE Rev. J. Page Hopps does not take so kindly to innovations in locomotion as he does to new ideas in some realms of thought, and he has written to the papers—what a relief to some men is such a proceeding—denouncing the "lust of speed" which he sees demonstrated in the formation of the Brooklands track. "As for the country," he writes, "it is rapidly being spoiled for us by these people, who seem themselves to get nothing out of it but the semi-savage joy of getting from one place to another in a record number of seconds; which, as Ruskin said, is 'the sport of a fool.'" Ruskin may have spoken of "the sport of a fool," but Mr. Hopps should have refrained from applying the phrase to those who have pioneered a new industry in this country. It is very ridiculous to say that the country is being spoiled by motorists when the automobile is opening up new delights and giving people a very extended idea of their native land. Why, the opportunities now presented for enjoying the country are among the things that make life bearable in the Twentieth Century. Would Mr. Hopps expect us to move about by means of the sedan-chair? Really he must keep abreast of the times.

MESSRS. FAHY BROS., of Morecambe, have taken over the Old Lyric Hall, near the Central Pier in that resort, which they will adapt to the purposes of a motor-car garage.

MR. T. BUTLER has just moved into larger premises in Green Street Green, near Orpington, Kent. He has now a garage and every convenience for dealing with motor-car repairs.

ACCOMMODATION for the motor-cars of members of the R.A.C. or the Motor Union attending the pageant at Bury St. Edmunds, from July 8th to July 13th, will be provided on very reasonable terms by the Bury and West Suffolk A.C., which has its headquarters at the Angel Hotel, Bury St. Edmunds.

The Scottish Reliability Trials.

EACH year the Reliability Trial organised by the Scottish Automobile Club grows in intensity and interest. As the test *par excellence* for touring cars it is recognised by all who have experience of roads anywhere. Hence the satisfaction with which we are able to record that each succeeding Trial reveals the greater reliability of the cars and the growing skill of the drivers. For such an event as took place in Scotland last week is a strain on the men who drive as well as the vehicles that are driven. The weather was as varied as the country that was passed through in the 747 miles of stern travel. Over the highest mountain road in Great Britain, across the highest village in these islands, and under the shadow of Ben Nevis, still hoary with the winter's snow, the course circled much of Scotland's wildest scenery. We rose hundreds of feet from valleys rich with their warmest tints of vegetation into the rugged mountain tracks, crossing

FIRST DAY.—Glasgow to Perth.

Last week we were able to telegraph from Perth the account of the first day's doings, which resulted in the withdrawal of three cars, viz., the 35-h.p. Maudslay, which retired at Glencroe owing to trouble with its differential; the 14-h.p. Germain, which side-slipped badly on the Rest-and-be-Thankful Hill, sustaining damage; and the 38-h.p. New Arrol Johnston, which withdrew at luncheon time, a gear pinion having seized. We have already published the fastest times in each class in the hill-climb on that day, and the full record is set forth in the tables on other pages of the present issue.

The undulating run along the shores of Loch Lomond, with Ben of that ilk gloomily watching over all, was an enjoyable experience. It was a pleasant run through Luss, Tarbet and Arrochar, which the 25-h.p. Straker-Squire (upon which we rode) practically had to itself, glances of only a few cars, including the Porthos, driven by Mr. Wilfrid Foulis, and the

The Scottish Trials.—The 15-h.p. Coventry Humber at Rest-and-be-Thankful.

miles of barren, stony heath, with never a tree, and scarcely a break in the monotone of grey and duller brown.

Then the roads. Well, they tried the cars, twisting, rising, falling, crumbling all the way. Rushing watercourses were crossed and jumped; roads destroyed by traction engine traffic were bumped over, and, regarded as a whole, the Scottish Trial may be summed up as proof of the merits of any car that safely made the journey. And of ninety-six that started eighty-two finished in Glasgow on Saturday after the run of 747 miles.

NON-STOP RUNS.

The cars that made non-stop runs on every day of the Trial were as follows:—

- Class I.—None.
- Class II.—12-14-h.p. Argyll.
- Class III.—14-16-h.p. Argyll, 15-h.p. Coventry-Humber.
- Class IV.—30-h.p. Beeston-Humber, 16-20-h.p. Sunbeam, 18-24-h.p. Austin.
- Class V.—25-30-h.p. Austin, 25-h.p. Straker-Squire, 24-32-h.p. Vinot.
- Class VI.—40-h.p. Berliet, 30 h.p. Daimler, 20-30-h.p. Maudslay, 30-35-h.p. Simms-Welbeck.
- Class VII.—40-45-h.p. Hotchkiss.

We set out in tabular form the doings of each car, so that readers may readily know what happened to each vehicle; while the succeeding daily chronicles give the incidents.

smaller Iris, by the younger Earp, being obtainable as the way was taken round the shores of Loch Long. At Ardgartan the ascent of the Pass of Glencroe began. And such a Pass—a wilderness, desolate and wild, with great hills casting their shadows on the zig-zag path that led to the "Rest-and-Be-Thankful" stone which marks the top of the military road through this valley of desolation. The commencement of the hill climb was indicated by the usual assembly of private cars—a crowd that annually thickens—bringing spectators to the scene. The length of the hill was 1,706 yards, with gradients starting with 1 in 20, ascending to 1 in 12.5, 1 in 8.3, to 1 in 7, and finishing with 1 in 21—a fine stiff climb, in which the fastest cars in each class were the 10-12-h.p. Swift, the 15-20-h.p. Calthorpe, the 14-h.p. Germain, 24-h.p. Mass, 28-32-h.p. Ariel Simplex, 30-40-h.p. Ariel Simplex, and the 35-45-h.p. Ariel Simplex—the latter being a remarkably consistent trio to obtain such distinction in their respective classes. Our Straker-Squire strode well up the hill, passing the 35-45-h.p. Maudslay and one of the Thornycroft cars, which proved troublesome to the driver.

From the hill-climb the road lay by way of Inverary, Killin and Kenmore—there tea was ready and welcome—Aberfeldy and the famous woods of Birnam into the city of Perth, where Messrs. Pullar and Son had provided storage accommodation on

the South Inch. It was a wet arrival, and altogether the cars must have presented a very depressing spectacle.

It was unfortunate for the 12-16-h.p. Vauxhall that it had to stop two minutes for the adjustment of its accelerator rod, for it subsequently ran splendidly with a non-stop record every day—a really fine performance. Equally bad luck occurred to the 24-30-h.p. St. Vincent and the 25-h.p. Iris, which lost twenty and eight seconds respectively, the former in changing speed, the latter owing to the lack of sufficient pressure in the petrol tank. Like the Vauxhall car, these had each four non-stops to their credit at the end of the trial.

SECOND DAY.—Perth to Aberdeen.

It was a sullen sort of morning when we trudged down to the bank of the river Tay, in discovery of the whereabouts of the 35-h.p. Iris car, which was to be our mount for the day, and although there were hopes of a fine day they were quickly dispelled. The Iris was driven by Mr. A. Clifford Earp, whose motoring experience has been cosmopolitan and comprehensive, and who now bears upon his forehead an identification mark associating him with the exciting times in Douglas in 1904. The car which he drove through the trials had been driven direct from London to Glasgow, and made a

good showing on each day of the event, the only spot on its escutcheon being a delay of a few seconds on the Tuesday in consequence of insufficient pressure in the petrol tank for the moment. The 35-h.p. Iris had one of the longest wheel bases in its class, being ten feet, and attracted much attention by its appearance. It was fitted with Palmer tyres with ribbed treads, which behaved magnificently not only throughout the Trial, but also on the run back to London following the finish at Glasgow. Leaving Perth with the Ariel-Simplex of Class 6 just before us, we crossed the river, and were soon passing Old Scone into Guildtown. The outlook was somewhat dismal, but companionship on the car was enlivened by the presence of "Kuklos," whose criticisms of cars and their drivers give zest to the columns of a daily contemporary. Every car did not get off so well as our particular flower. The first was especially unfortunate. This was the Nordenfelt, which was withdrawn owing to the fracture of the end of the propeller shaft joint. Beyond Cargill station, where we saw the famous beech hedges about which much has been written (but all descriptions of which have failed to give an adequate idea of their beauty), was a ten-mile motor signboard at the cross-roads, and then we entered Blairgowrie, which was

a luncheon place of last year's trial. Just beyond the 18-h.p. Siddeley had fan belt trouble.

The next twenty-five miles of running was over innumerable humps and steepish hills which tried the drivers as much as they tested the cars till the Bridge of Cally. Then we began to get sight of a scene of wild grandeur that later burst into view after passing the Spittal of Glenshee, where the steep ascent of Cairnwell commences. By now the appearance of this piece of untamed nature is well known, and all are familiar with the awkward turn known as the Devil's Elbow. A crowd had assembled to see the discomfiture of some of the cars, and notice the good performances of the others. At the foot the usual procession was there, the cars awaiting their turn to ascend. The ascent proved a trying experience for some of the competitors, and several Observers had to take walking exercise. On its way up the privately-entered White steam car had trouble with a burst steam pipe, which developed to such an extent that it had to retire on the following day. Mr. Lord on the Straker-Squire took off a corner of the Elbow without damage to the car; others were less fortunate. The clutch of the 28-32-h.p. West-Aster was slipping. The 45-h.p. Mercedes had carburettor trouble, but generally all went well. Needless to say, our Iris made no difficulty at the Elbow.

first away with his 18-24-h.p. Horbick, but he burnt his clutch leather, and stopped on the stiffest part of the hill, subsequently retiring from the contest. He, however, continued running in an unofficial way, wrapping his clutch with bed-ticking, which enabled him to run back to Glasgow. The powerful 40-45-h.p. Hotchkiss, driven by Captain Corbet, made an absolute non-stop throughout the trials, and rode well up the hills, improving its position in this respect each successive hill after Cairn o' Mount. Mr. Frederic Coleman did not make a good start with his White steam car, but improved wonderfully in the last mile of the hill. Mr. A. F. King had the misfortune to shear a pin in the gear-box, necessitating his retirement, but doubtless found compensation in the success of the 24-h.p. Mass, which not only was first in its class in the Wednesday climb, but also on every other timed occasion—a consistency of hill performance only equalled by the 28-30-h.p. Ariel Simplex driven by Mr. T. Cordery. It was on this Cairn o' Mount Hill that Mr. Thomas Shaw obtained second place with the 35-45-h.p. Ariel Simplex, which made the fastest time of any car in the Trial up hills. It was first at Glencroe, Trinafour, and Aberfeldy. On this severe day the C.C.C. car entered by Mr. A. H. Armitage, of Taunton, spoilt its absolute non-stop record for the Trial owing to a leaky radiator. Mr. Gordon Sharp, who

The Scottish Trials.—Mr. F. Coleman on the 30-h.p. White Steam Car at the Cairn o' Mount Hill Climb.

From the Cairnwell the route was to Braemar, where we lunched in two contingents, while the cars waited in the rain, sheets of it. It was a grand run, in the floods, to Ballater, through the wonderful plantations of fir and pine, with the yellow broom enlivening the scene. We slowed by the Dee to take a sidelong glance at Balmoral Castle and Aberfeldie Castle; then cast an upward turn to Crathie Church, on the left. Beech again predominated, and at Ballater and all the villages through which we passed a Highland welcome was given. Then a triangular route was taken in order to have tea at Stonehaven and a hill climb beyond the Clatterin' Brig over the Slack Burn. We went by Fettercairn to the famous Cairn o' Mount Hill, with its gradients varying from 1 in 5.4 to 1 in 20. The timed portion was two miles and thirty-five yards. It was a feast of things mechanical over natural difficulties. Along the burn shaggy cattle grazed with indifference to the advent of the hundred cars; around great hills formed a Coliseum for the chariots that were to struggle upward and onward for a couple of miles. The first cars arrived shortly after four p.m., and excitement rapidly increased. Many had trouble, but several fine runs were made, and among the big cars the 30-h.p. Daimler made the fastest time in Class 6, the 35-h.p. Iris, on which we strode forth, being third, with the 40-h.p. Berliet a good second. Mr. T. Cranham should have been the

had four non-stops to his record, had the misfortune to drop his passengers on this day, otherwise he would have given a completely clean account of his Reo, which has extended its reputation in this country since it was first introduced at last year's trial. Mrs. E. A. Riley, too, was unfortunate in losing a second owing to water getting into the carburettor. Otherwise she had no involuntary halts, and her performance was one of the best in the whole Trial. The 20-h.p. Rover had to fill in the remainder of the petrol, and so destroy the absolute non-stop record—a loss of time, however, in no way associated with the mechanism of the car. Captain Owen had to retire owing to the impossibility of getting a spare part from London, and so the 40-h.p. Junior, which made a perfect non-stop run on the first day, was out of the test. The 24-h.p. Junior did well but for a water leak on this fateful Wednesday. It ran consistently throughout the Trial.

A word should be said about the little cars, which had particularly bad luck in having to wait until all the big cars had ploughed up the surface of the hill. All the greater credit, therefore, to the 10-12-h.p. Swift for being the fastest in its class; and to the 8-h.p. Jackson for being the only car in Class 1 that had a non-stop on that terrible day. Misfortune dogged Mr. F. S. Bennett, who left his 9-10-h.p. Cadillac in charge of the Official Observer to go and watch the ascending cars from the

vantage corner of Clatterin' Brig. The Observer allowed other cars to go forward, and when Mr. Bennett returned to the halting place he found his Cadillac practically at the end of the string of cars. The rain was pouring in streaky lines that gave no impression of drops—so pitiless was the downpour. The surface of the hill, with its gradient in part of 1 in 5.4, had never been good; it was by that time of the consistency, to quote Mr. H. Massac Buist, of the porridge that is indigenous to the country. And so, when the little 9-h.p. Cadillac ascended the hill, it sunk in a soft part up to its axle, and the Observer and Mr. Bennett had to lift it bodily from the morass to a firmer part of the hill. Then it went well forward, but the surface of the hill had destroyed Mr. Bennett's hope of a triple record for the three years. He protested, as did others in the same class, and the point as to the inclusion of the climb in the records for Class 1 is now under official consideration.

The hill climb ended, all danger was not over. The descent was dangerous, and ruts were in the roadway. About five miles beyond the 16-20-h.p. Chenard-Walcker struck the bank and bounded seven feet away, throwing Mr. J. A. Peacock, of Edinburgh, and his three associates into the ditch. The car itself bridged the gulf upside down, and the wheels were revolving

while, when necessary, and that was seldom, to change gear, it was done with a silence that told how well Mr. A. Clifford Earp understood his car.

THIRD DAY.—Aberdeen to Inverness.

This was, by half a mile, the longest day's journey of the Trial, the minimum time allowed being 8 hours 21 min. By way of compensation there was no timed hill, but the Bridge of Avon and then the descent to the hazardous Bridge of Brown were compensating difficulties in the way of the *voyageurs*. The usual prompt start was made from the Granite City, and we were soon away from tram lines into the open country. We were on the 15-18-h.p. Swift, a car as good as its name, driven by Mr. R. H. Every, from the Coventry works. The first forty miles of the way were towards Huntly, with scenery reminiscent of the Peak of Derbyshire all the way. This part of the road had been familiarised to many of the drivers in the last two Trials, so that it presented nothing of novelty and little of difficulty. Historically the region is associated with Bruce and the defeat of the English forces—as our Scottish Observer was not slow to point out to the Southron who rode with him. The route

The Scottish Trials.—Cars waiting in Aberfeldy for the Hill Climb.

when the next car in the competition came along. Several vehicles stopped, and after a delay of an hour-and-a-half the car ran safely into haven at Aberdeen. Fortunately no one was hurt—an almost miraculous escape. Then we went beyond the hill over a road that had been planned, laid out, and never finished. It led the way to a bridge wide enough for a dog-cart, but scarcely sufficiently broad for motor-cars. Even the heavens wept, and all the lochs must have deluged their waters upon the wayfarers. The rain came down as straight and pitilessly as an avalanche. Thanks to our Palmer tyres the Iris skidded not on the roads, while one car just ahead slithered over the highway like a variety entertainment. But all lost interest in the outlook. We dashed on through mud and water, bespattering the pedestrians, who sheltered where they could, while the motorists went into Aberdeen to escape the floods. Once in the Granite City they comforted themselves as though they had been Noahs, while one, the Pilgrim, which ran short of petrol four miles from Aberdeen, found a motoring Samaritan who lent a tin, enabling them to get on when the rain had ceased.

As to the Iris car, we can only say that an hour's dosing after luncheon, when comfortably seated in the tonneau, gave us proof of the absence of vibration and the steadiness of running,

from Huntly was to Dufftown by way of Deveron Bridge, where the 12-14-h.p. Unic had a minor trouble. A non-competing Delaunay-Belleville was descried in the ditch, but otherwise little was seen of motor matters. The scenery now developed into woodland, and it was a splendid run by Glen Rinn to Glenlivet, where the tall shafts of the distilleries formed a variation in the landscape, which was brightened by the glistening streams that frolicked in the sunlight. Thus we strode along for a few miles until the trees disappeared, and we were on a great plain of bog land leading into Tomintoul, the highest village in Britain. Its trim square, hotels with garages, and general appearance, gave it an air of prosperity not usually associated with hamlets in such an elevated position. Then we had a severe run to the Bridge of Avon, where occurred some of the most exciting incidents of the 1906 Trial. This time nothing particular happened. At the foot of the bridge the cars halted to allow the earlier ones to get clear before they made the ascent. Fortunately the surface was good, and most of the cars strode well forward, Captain Wentworth's Daimler and the 24-h.p. Mass being well observed. Here, unfortunately, trouble overtook the 20-h.p. Climax, which, having secured a non-stop on the previous day, broke its differential at the Bridge of Avon, and had to retire from the contest.

Then came one of the great impressions of the Trial—the drop down to the Bridge of Brown, one of the most dangerous bits of the whole tour, the turn at the bridge being particularly vindictive and requiring careful negotiation. The route map had emphasised the need for care at this point, so that all knew the risks they were taking, and took them with caution. From thence the way was to the delightful overgrown village of Grantown-on-Spey, where the travellers took lunch and rested awhile. The succeeding eighty miles were new to most of the competitors, and interesting to all. They were comforting, too, being without dangerous descents or stiff ascents—in fact, much of the way was park-like. The Spey Valley was in most delightful mood, but, the road having dried somewhat, dust was a bit troublesome, and the 14-h.p. Vulcan and Clement cars were delayed—the former owing to dirt in the carburettor, and the latter was bothered with engine troubles. But nothing untoward happened. As we went north the enthusiasm of the people seemed to accelerate and crowds greeted us at Forres and Nairn—two fine towns of popular resort and pleasing appearance. A few miles further an unfortunate mishap occurred to the 24-h.p.

FOURTH DAY.—Inverness to Pitlochry.

Glorious is the situation of Inverness. Overnight we had heard the plaintive music of the bagpipe, and some had wandered to the statue of Flora Macdonald in front of the Castle-prison. Between the town the river Ness flowed like a delicate silver stream to the sea, and our Scottish humour was maintained by boarding the 26-30-h.p. Argyll, fitted with an engine developing 30-h.p. at 1,100 revolutions per minute, and capable of a range of speeds equal to 9½, 19, and 30 miles per hour, the direct drive being on the third. It was one of the Argyll team—a quartette that, as the results showed, fully sustained the reputation of their country of origin. Driven by Mr. J. Allen the vehicle ran well, although a leaky water tank necessitated refilling at the luncheon stop. The run was through a delightful district, opening up to those who only know canals in industrial centres a picture of riparian beauty and serenity of view. Leaving the town we were soon in the Great Glen and in the presence of the Caledonian Canal—and of a stranded car, the 16-h.p. Bell, which had fallen a victim to mechanical worry. Later it suffered from a trouble none

The Scottish Trials.—Cars waiting to ascend Trinafour Hill.

Albion, driven by Mr. G. M. Young. We were going over Culloden Moor, with its cairns to the clans who fell in the Great Rebellion, and the famous Culloden Stone, when some cars were seen backing. The first car, apparently, was stopping and the others came back. A third car ran successfully between the bank and the second vehicle, but just as the Albion was following, the latter reared still more and Mr. Young found two wheels in the ditch. The tie rod of his steering gear was buckled in the operation. Inverness was but a few miles away and there we entered a cheering crowd. The Swift had behaved capitally all the way, securing a well-deserved non-stop and, taking the hills in good style—a feat worthy of note, for, while there were no timed hills there were many of severe gradient up which we had to go.

In the capital of the Highlands tales of woe were plentiful, more regrettable because so many slight causes vitiated non-stop records. Mr. Reynold Jackson had to buy lubricant in Grantown—and so lost marks, although his other four days were straightforward runs. As an instance of the way in which observations were made, we may mention the note of the Observer on the 60-h.p. Thames, that “the bonnet was opened to close the compression tap.”

are immune from. A couple of cyclists were in front of the vehicle riding in a desultory fashion all over the road. The only way to avoid them was to run up the bank, and this Mr. P. A. G. Bell did. The car swerved as though it would topple over, but luckily righted itself, although the driver was thrown on top of the bonnet. Unhappily, however, one of the springs was broken, causing its retirement.

The next twenty miles was a succession of sharp descents, bad corners, a very stiff hog-back bridge, and other road peculiarities, testing the skill of the drivers. The scenery was grand, and the darkened waters of Loch Dochfour stood boldly out from the greenery of the landscape. And along the shore of Loch Ness Nature seemed to have lavished a richness of colouring which gave a rich setting to the grey ruins of Urquhart Castle. Wonderful mountains loomed large on the landscape, and so we went along, in the wake of the Chenard-Walcker that, despite its turtling behaviour of the previous day, was “still running.” We were upon fields of renown in Scottish history, and the scenes around were associated with the memory of famous clans and doings. At the head of Loch Ness, Fort Augustus, with its abbey and monastery, stood guard, and we crossed the canal, again re-crossing by the Bridge of Oich to

Invergarry Bridge. There were some difficulties in the way, of which all drivers had been warned, but which nevertheless almost occasioned alarm when they actually occurred. After leaving Laggan Locks an exciting experience happened. On the left hand the hills rose precipitously to a great height, and on the right ran the uneasy waters of Loch Lochy by the burial place of Glengarry. Down the mountain side the waters rushed, in places forming watercourses across the road. Their impetuous rush prevents the construction of culverts, and at times they are impassable. But just before the trial they had been partially filled in, thus halving their terrors to the springs of even the best made motor-cars. Bump, bump, bump we went—and still the springs stood. And yet another bump, and so on for ten times, until we got to less exciting conditions, and arrived safe and sound at Spean Bridge, the first control of the day. It speaks well for motor-cars that not a mechanical defect was discovered among the eighty and more cars that passed over those watercourses, and the accident list at the end of the day only showed choked carburettors, replaced sparking plugs, adjustment of electrical connections and similar minor ills that motorists are heir to.

We noticed the behaviour of the N.E.C. car, driven by Mr. J. C. Mort, as it crashed over the watercourses, the passengers riding easily and without jolting, owing to the peculiar springing

1,380 yards, with a total rise of 351 feet, equal to an average gradient of 1 in 12.9, these ranging, as a matter of fact, from 1 in 7 to 1 in 21. Last year the 2-10-h.p. Swift, the 14-h.p. Vulcan, the 16-20-h.p. Beeston-Humber and the 30-h.p. Daimler distinguished themselves at Trinafour. This time the fastest cars in their respective classes proved to be the 15-h.p. Ford, which made a capital showing throughout the Trial, the 18-h.p. Mass, another consistently fast car; the 18-h.p. C.C.C., driven by Mr. A. Armitage, of Taunton, which ran well on all the hills, and, but for a leaky radiator on the second day, would have had an absolute non-stop record; the 24-h.p. Mass, well handled by Mr. A. F. King, which was first of its class on every hill, and which also would have had a non-stop run but for a two minutes' driving stop—no mechanical defect; and the three Ariel Simplex cars.

An amusing incident occurred at the foot of the hill, when a short procession was formed of the vehicles awaiting permission to go. Mr. W. T. Clifford-Earp was on his 60-h.p. Thames, almost the largest car in the Trial, his engine running with its characteristic quietness, when the marshal told him he should not have stopped the motor. In vain did the hero of Douglass—for his feats and "moving accidents by flood and field" in Manxland have been retailed anew by the Scottish press—assert that the engine was not stationary, and only when

The Scottish Trials.—The 12-14-h.p. Argyll Car arriving at Pitlochry.

of the vehicle, the back axle being well behind the body of the car. Then the run was by Roy Bridge and the junction of the Trieg with the Spean, where we noticed several cairns to commemorate the temporary resting-place of some on their passage to a little God's acre high among the mountains. Towering above us on the right was Ben Nevis, his great head swathed in foamy clouds hiding his massive brow to our view. But on all the peaks around the snows of winter whitened the scene—such an abundance of snow as our Observer (who knew the Grampians well) had never seen before at the end of June. Amid scenes of luxuriant vegetation and lonely beauty the cars pursued the journey to Newtonmore on the way to the larger town of Kingussie—another place of historical note, forming a link in the sequel to Culloden.

At Kingussie the cars were drawn up in several short lines, and made the targets for amateur photographers, with the great rugged peaks rising high above, their bare sides shivering in the dull day, and vegetation almost non-existent. Then we ploughed along the mountain pass to Dalwhinnie, a sweet, restful, little Highland village with its bit of woodland an oasis in a great barren land, and then a succession of forestal beauty through Glen Erochy enabled us to reach Trinafour for the hill test of the day.

At the hill climb the cars were not long in getting away; nor did many of them delay in the trip uphill—a distance of

he actually saw that such was the case was the marshal satisfied. The Thames was conspicuous for its quiet behaviour, even among a host of well-behaved vehicles, and although one or two driving stops—caused by the driver's anxiety to avoid mishaps to others on the road—were recorded, there was no mechanical trouble throughout the 750 miles. The brakes were never adjusted, no lubricating oil other than the original supply was taken aboard, and the thirst was quenched with only five pints of water up to the evening of Thursday. Altogether the Thames made a very encouraging debut, doing so well that Captain Hayter, who represented the War Office in the Trial, selected it for his seat on the last day—and was as gratified as other passengers with whom we conversed.

From the Trinafour hill the road was through delightful scenery all the way to Pitlochry, one of the most delightful towns in the Highlands. Descending to Tummel Bridge the road skirted the north bank of Loch Tummel for some miles until, through the trees, we saw the Queen's View of the loch—an aspect that monarch and motorist may appreciate in common. Still falling nearer the level of the sea we passed Fincastle Glen to the Bridge of Garry, at the foot of the famous Pass of Killiecrankie, and then, between an avenue of larches with their lissom branches waving a welcome in the breeze, our Argyll followed Mr. Frederic Coleman, going strong on his 30-h.p. White steam car, into Pitlochry, where a "tented field"

proved their resting-place for the night. Fortunately tales of woes were few, and only one need be added to those already recited, Mr. R. Crossley's 60-h.p. Belsize being placed out of the running by a pin dropping from the driving shaft a few miles from its destination for the night. Tyre troubles had been noted earlier in the day; but the final mishap destroyed the sole remaining chance of three annual non-stop runs in succession. It was Mr. Crossley's first breakdown in the Scottish competitions.

FIFTH DAY.—Pitlochry to Glasgow.

Not so late as in previous years we started from Pitlochry for the return to Glasgow—a run of 114½ miles, with a hill climb and a starting test thrown in. Most of the competitors had forgotten about the latter; but one of the rules gave permission for the momentary stopping of the cars on any hill on the route, and the deduction of marks in the event of failure to restart within thirty seconds. For the first four days nothing had been said, and rumour was equally silent on the morning of the fifth. That was a pleasure to come.

Class 5 was the first to go, and being anxious to have an early return we again rode on the Straker-Squire, on which Mr. W. T. Lord led the procession from the Highlands to Scotland's commercial capital. Professor Stanfield, of Edinburgh, was the Observer, being asked to head the cavalcade in order to superintend the measuring of the petrol at the garage. There is an advantage in being first. Dust does not choke the petrol pipe nor clog the throat; but the passengers see nothing of other cars on the road, unless some venturesome driver risks the loss of marks by an excess of speed in order to relieve the tedium of the way. And yet there was plenty to observe in the change from the Highlands to the Lowlands, wild patches of landscape alternating with woodland glen and well-cultivated farms; and then the succession of inland resorts and the frequency with which villages occurred as compared with the sparse populations of the districts we had left. A picturesque view was presented, as the bridge over the Tummel was crossed, and a tall stone cross on the top of a lofty eminence opposite Ballinluig made a landmark. Our Observer knows Scotland and its history, and with no thoughts of car worries the journey was pleasant indeed.

At Aberfeldy was the hill climb. Loch-na-Craig hill has a total distance of 3 miles 484 yards, with a rise of 979 ft., equal to an average gradient of 1 in 17, the range being from 1 in 10 to 1 in 50. Up we glided in fine style into the colder region nearly 1,000 ft. higher than the town of Aberfeldy. It was decidedly chilly, but the ascent did not give much trouble to the cars that followed, the fastest in their respective classes being the 10-12-h.p. Swift, the 18-h.p. Mass, the 20-h.p. Belsize, the 24-h.p. Mass, and the three cars of the Ariel Simplex.

After the climb there was a grand succession of mildly wild country, tame, perhaps, after the experiences of the week, but exciting enough to the southerner who sees that part of Scotland for the first time. On to Crieff and Comrie, with their orchards and fruit farms, and through the Garden of Scotland the way was delightful indeed. At St. Fillans Loch Earn was sighted, and for seven miles we led the cars by the shores of that enchanting stretch of water with its ever-varying colourings in the sunlight and the shadow. Through Kinghouse and Strathgrywe we passed along a narrow road and skirted the shores of Loch Lubnaig, through the Pass of Leny, and strode straight into Callander on scheduled time, followed by Mr. Tom Thornycroft, from whom we had kept our distance all the way from Pitlochry.

At Callander the drivers lunched—the division into two sections for feeding purposes being again to the general convenience. Punctually to the minute we started for the last run of the tour—one of 43½ miles, for which a minimum of 2 hours 16 min. was allowed. We neither exceeded it, nor did we go below it. Just beyond Kippen the Thornycroft and the Clement passed in front, and we were third into the clachan of Fintry. A little further on Professor Barr was discovered in charge of some blocks of wood, and Sir John Macdonald was pointing his camera at the oncoming vehicles. Here, indeed, was the stopping and starting test, which nearly everyone had forgotten in the morning. The cars were halted one by one—at least all except

the Laurin-Klement, which was stopped for nearly two hours from ignition troubles, and did not reach Fintry ere the officials had left the place. Practically all did well in the test, although the 18-h.p. Siddeley failed to hold its brakes and was started from the blocks. The driver of the 20-24-h.p. Werbell stopped his engine and had to re-start. The 16-25-h.p. Arrol-Johnston, too, had trouble, the driver stripping his first gear and having to re-start. Later further difficulties arose, and ultimately the vehicle was withdrawn at Blanefield, the only retirement of the day. It is a curious coincidence that all these troubles occurred in Class 4, every other section of the competitors escaping difficulties. But more remarkable than that was the fact that few of the vehicles required the thirty seconds limit allowed; most of them got away in five or ten seconds, and the test was a distinct tribute to the behaviour of the cars. For, it must be remembered, it took place after the cars had been running several days and had accomplished about 720 miles of travel over roads of all kinds—and of no kind at all.

At Lennoxatoun busy industry indicated the approach to some great centre, and the clouds seemed smoky after the clear atmosphere we had known. Strathblane was passed, a devious, sinuous road was negotiated through Bearsden, and then came

Mr. R. J. Smith, the popular secretary of the Scottish Automobile Club.

tram-lines. Here there was a great city—the city from which ninety-six cars had departed five days before and into which eighty-two went their way on Saturday—the last one literally working his passage home through storm and rain—rain that we had escaped by earlier flight and steadier running through the day. Of the eighty-two vehicles no fewer than fifty-seven made non-stop runs for the day, and, beyond what has been recorded, the causes of loss of marks were mainly trivial. There were five instances of choked carburettors, and the 18-h.p. Buick, driven by Mr. Huszar, an Austrian, who had never realised there were such roads in the British Isles as he went over last week, had the misfortune to lose seventeen minutes in replacing a broken sparking plug. This was all the more regrettable, as the Buick, upon which, by the way, Mr. F. Eason was a passenger, had had a succession of such good runs that at least one of its Observers has become an owner of such a vehicle. Mr. J. W. Stocks, too, had to replace a sparking plug and make other sundry adjustments, which destroyed the record of his 24-h.p. De Dion. Trouble, too, overtook Mr. Frederic Coleman, who, after three non-stop runs on his White steam car, had a solitary finish, pluckily driving into Glasgow some time after the others

of his class. A broken water pump caused an hour's delay, and he the choking of his burners necessitated another halt of similar length. He literally worked his passage home, pumping all the way.

OPINIONS OF THE TRIAL.

Mr. John Adam received the cars at the garage, when their petrol was measured under the supervision of Professor Stanfield, who entered thoroughly into the spirit of the Trial, and who secured a rapid release of the cars as they were reported. We had a few moments' chat with the first score of arrivals, and never a grumble did we hear. All gave praise to the Scotch A.C. in general and Mr. R. J. Smith in particular. Col. Jopp, who rode on the West-Aster during the Trial, agreed that the tour had been very severe, "but," he added, "it has been run on magnificent lines. I have never seen a competition better organised than this." Mr. Ross Browne, of Nottingham, who has had previous experience, regarded the present as the best, and would congratulate Scotland on the possession of such a trial ground. Mr. W. McLean, who drove the 24-30-h.p. St. Vincent, suggests that next year the quantity of lubricating oil used should be checked in the same way as is the petrol consumption. Several cars smoked and smelt terribly at various parts of the route, and Mr. McLean's idea,

generally congratulated on his first Scottish Trial success in securing a non-stop throughout the five days, and the second place in the hill climb on the last. Mr. W. A. Vincent, of Gamage's, was a passenger on a car throughout the run. He, too, was surprised at the unparalleled severity of the route, and rightly observed that the Scottish Trials will give a list of cars in purchasing which no owner need fear, for the vehicles that went through the Trial are good enough to travel anywhere in the British Isles. And here we may advise the reader of the official returns to give no heed to what are described as driving stops, for they indicate no mechanical blemishes on the part of the car, or, for the matter of that, on the driver. Mr. Vincent's view was also shared by Mr. G. H. Slaney, who steered the 20-h.p. Armstrong-Whitworth. He declared that the car which would go through the Scottish Trials would go anywhere. Hence the value of performance in the Trial. Mr. C. Harman Wigan, who has been responsible for the appearance of the Vinot car in each one of the series of the Scottish Trials, thought that the 1907 test was the best of all. Among those who went the round was Mr. Harry Austin, a brother of the designer of the car of the same name. He, too, was delighted with the completeness with which the Trial was organised, as well as the comprehensive quality of the test. In fact, we believe the

The Scottish Trials.—The Cars passing by Loch Lubnaig en route for Callander.

with regard to the lubricant used may be commended to the organisers of the event and to discussion by some of the competitors. Hard as the most recent trial has been, Mr. Harry Prosser, who drove the 30-h.p. Siddley, believes that there is one road in Scotland worse than any yet included in the course, so that possible further development in difficulties may be on the agenda for 1908. But we doubt whether there is really any need to increase the severity of the trial in that respect, for Mr. Sidney Girling, whose experience has been as varied as any other driver, declares that the course is the most difficult he has ever gone over in this or any other country. In fact, Scotland has almost a monopoly in this respect. Mr. Gordon Usmar, who last year drove the Vinot, and this year acted as amateur mechanic to Mr. Tom Thornycroft, regarded the conditions of the Trial as not putting such a severe strain on the driver as the shorter course but longer days of 1907. Mr. Thornycroft believes the five days to be absolutely necessary in order to secure the requisite testing of a marketable touring vehicle, and apparently felt the strain of driving as little as any one at the wheel. Mr. W. T. Lord, of the Straker-Squire, found the course much more severe than he anticipated, and was

latter was a revelation to Mr. J. C. Mort, who drove the New Engine Company's car that attracted considerable attention by reason of its unorthodox appearance. He had scarcely realised before what a Scottish Trial really meant. He knows now—and can look back to a successful *debut* with a vehicle that had been on the road only a week before for the first time. Some other drivers, like Mr. McLean, were suggestive, and did not see why a speed trial on the level could not be instituted, and the bore and stroke brought into a formula in connection therewith.

Honour where honour is due. First and foremost to Mr. R. J. Smith, most accessible of secretaries, most ubiquitous of officials, and most efficient of organisers in the automobile world. Mr. John Adam, too, the convener of the Trials sub-committee, deserves the thanks of the competitors for his readiness to make easy the path of the stranger. Mr. A. W. J. Ferguson is another member of the committee to be signalled out for distinction, for he drove round the course each day after the last car had gone on its journey, picking up spare parts, rescuing passengers and observers fallen by the way and generally assisting the committee to account for everybody and every car at the end of each day.

SCOTTISH NOTES.

LAST year Mr. R. J. Smith was asked what was likely to be the course of the Scottish Reliability Trials for 1907, and replied that it might be the 1906 route partially reversed. The prognostication proved reasonably reliable. When we saw him in Glasgow on Sunday the subject of next year's event was raised, and with a characteristic twinkle in his eye he thought it might not be possible to find a more difficult course, "but," he added, "we may be able to turn this year's route upside down."

WE give the number of starting and finishing cars in the last three Trials. Previously the Scottish tests had taken the form of a run to London from Glasgow with a night stop at Leeds.

	Started.	Finished.
1905	43	31
1906	79	66
1907	96	82

The course for the first year was one of 595 miles; in 1906 it was lengthened to 671; this year it was 717½, being spread over five days instead of four.

IRELAND was represented by Mr. J. H. Chambers, who drove the new 10-h.p. car named after himself, and Mr. W. F. Peare, a pioneer among the motorists of the Emerald Isle, came from Waterford to drive the Tourist Trophy Gladiator, which has been purchased by Sir W. G. Goff, Bart. Mr. T. W. Murphy, of Dublin, was also a driver, taking his 8-h.p. Rover over hill and dale with a determination that won the admiration of brother Pressmen, who viewed the Trial from the rear in preference to the driving seat.

FROM Mr. Peare's car came a suggestion for the improvement of the Scottish Trials. He had as friend and passenger throughout the long run a gentleman named Murphy, who was delighted with the Highlands. When asked if he could suggest a better route, "Ah, bedad," said he, "just you should the Scottish Trial at Killarney."

A PASSENGER on the Spyker car throughout the Trial was Mr. S. A. Frijling, from Amsterdam, who drove a car at Bexhill. He was delighted with the scenery, and the hills were particularly attractive, for, while there are a few steep bits in Holland, there are no such mountains as those in North Britain, but the Spyker took them all with easy nonchalance.

THE average weights of the cars in each class were as follows:—

	cwt.	qr.	lb.
Class 1	13	0	4.76
Class 2	18	3	11.7
Class 3	22	0	7.5
Class 4	24	3	27.9
Class 5	26	1	14.16
Class 6	29	2	11.71
Class 7	33	2	1.8

THE Pilgrim's progress was unfortunate, inasmuch as Mr. F. L. Martineau, who drove the car, had had no opportunity of tuning it up before the Trial. The particular vehicle that he had intended to run was disabled a few days before and the engine put into another car. This was taken up to Glasgow by road. On the way the big end seized on three separate occasions, and had to be seraped up as many times. Consequently there was no opportunity for overhauling before the Pilgrim was garaged the day before the Trial. Misfortune seemed to attend Mr. Martineau, as, for instance, at Aberdeen, when four miles away, the day's petrol supply gave out, causing a stop which vitiated an otherwise good performance that day.

DURING the Trial it was evident that military manœuvres were in progress, but few knew that the Duke of Connaught was in Pitlochry on Thursday. It transpires, however, that while returning from that town after the operations at Loch Ordie, near Dunkeld, on Thursday, the Duke was in a motor-car mishap.

His Royal Highness was in one of three cars descending the rough hill road to the main road. In seeking to draw to the side to pass the Lovat Scouts the car stuck. The wheels of one side of the vehicle in which the Duke was sitting sank into a side drain, thus canting up the car. The ditch had a very soft bed, and, though stones were laid in to enable the wheels of the car to get a firm hold and so move off, it would not budge, and a light traction engine was thereupon sent for from the Scots Greys camp at Tullymet.

MR. S. SAUNDERS, who made his debut as a driver in this Trial, handling the 30-40-h.p. Brasier with skill and judgment, was retailing over dinner at Aberdeen his encounter with a cat which lost its life in attempted negotiations. "That's unlucky," was the suggestion. "Is it?" queried the unwitting despoiler of poor pussy. "Yes, for the cat," slyly added a confrere, with resultant laughter from the motorists, who, tired and weary each night, regarded the dining hour as a time for relaxation.

TWO names familiar in connection with the British eliminating trials for the Gordon Bennett team again came before the motor world—Mr. C. Clifford Earp, the hero of Douglas, in driving the 60-h.p. Thames, and Mr. Sydney Girling, who steered the 50-h.p. Darracq. Mr. Earp's brother Arthur, who was his mechanic at Douglas, was also a driver last week, handling a 35-h.p. Iris in good style, another brother, Hubert, ably steering one of smaller degree.

MR. T. C. PULLINGER was a prominent "free lance" during the Trial, rendering assistance to stranded pressmen and photographers with his 30-h.p. Beeston-Humber. The car of similar type in the Trial was driven by young Reid, who was second in the Tourist Trophy race, and who drove with a careful regard to economical running. The average was about twenty miles to the gallon of petrol. Only three gallons of lubricating oil were used on the 750 miles run.

RARELY has a trial taken place with such comparative immunity from tyre troubles, forcing upon competitors the conviction that the leading makers have considerably improved in manufacture, or that motorists are now fitting more suitable sizes to their cars. The number of tyre troubles recorded was as follows:—Tuesday, 7; Wednesday, 8; Thursday, 9; Friday, 8; Saturday, 9. The total loss of time caused by tyre troubles among the cars that suffered such delay was less than ten hours. Only five new inner tubes appear to have been fitted, and the Dunlop, Continental, and Palmer companies are to be congratulated on the success attained.

AS a team the Argylls did exceptionally well, and to have secured the only absolute non-stop runs in Classes 2 and 3 was an achievement that should delight Alexandria. Then C. J. Waldie, of Glasgow, is to be commiserated with on his hard luck in driving the 16-20-h.p. car. When on the hill climb he put out the sprag, and in trying to lift it broke the wire, refixing it in three minutes. Of the other Argyll in Class 4 it is to be noted that it was among the first four or five cars in the category on the hill climbs, and that a leaky pump necessitated the water tank being refilled at Kingussie; otherwise it, too, would have had an absolute non stop. The 12-14-h.p. and the 14-16-h.p. Argylls not only made non-stop runs, but also did well on the climbs, the latter being first in its class on Cairn o' Mount.

THE 16-20-h.p. Calthorpe car, notwithstanding the terrible roads which resulted after all the other cars had already gone up, and which made the car sink into its depth in mud, not only made fastest time in its class on the hill climbs, but did so without having to shed a single passenger. On the Thursday a stone thrown up by the tyre unfortunately got into the sprag, and damaged in the first place the ball race, and, as a further result, damaged the aluminium case enclosing the differential. This was a very unfortunate incident, which had nothing to do with the reliability of the car, but was sheer bad luck.

THE SCOTTISH TRIAL—PERFORMANCE OF ALL THE CARS IN THE EVENT.

N.S. = Non-stop.

R. = Retired, the cause being given in the description of the day's run. Where the blank appears the Observer's report is under consideration.

The A.C.F. Grand Prix Race.

THE great race of the motor year in France is now an event of the past, and has once again demonstrated the very high place in the automobile industry that has been taken by Italian manufacturers. For the past week Dieppe has been practically *en fete*, and the scene on the way to the Tribunes in the early hours of Tuesday morning was a memorable one—a long continuous stream of vehicles of every kind, from a rambling horse-drawn wagon conveying people at 5 francs a head to the powerful racing motor-car—while at the grand stand itself the crush of traffic was so great that it seemed an almost impossible task to evolve any order out of the chaos. The starting point was about a couple of miles from Dieppe, and here quite a little town had sprung up, every convenience having been provided for the spectators, even to a large open-air garage, in which were collected more cars than we have ever before seen together. Arriving on the scene about 4.30 a.m., we had an opportunity of passing along the long rows of wire cages in which the monster cars were innocently standing under lock and key, all ready for the fray. To the rear, armies of men were busily engaged in making the final preparations—filling up water cans, arranging rims and tyres and the like, while many of the drivers were sitting quietly enjoying a final cigarette. The leading tyre firms each had a large depot in which was a stock of tyres apparently large enough to have shod a thousand cars rather than the thirty-seven which actually ran. Practically all the vehicles were fitted with detachable rims to enable a rapid change to be made whenever necessary. Just before six the work of clearing the course was commenced by the soldiers and the police, and the boom of a cannon announced that the long anticipated hour had arrived.

Of the thirty-eight entries as given in the last issue of the *M.C.J.*, thirty-seven duly faced the starter, the only absentee

the third, while the order of the De Dietrich team was Duray, Gabriel, and Rougier. As is now well known, the cars were allowed a quantity of petrol equal to 9.47 miles per gallon, and had to make ten rounds of a 76.9 kilometre circuit, giving a total of 769 kilometres, equal to roundly 480 miles. Lancia was the first away at 6.1 a.m., the others following at minute intervals, all making fairly good starts with the exception of Le Blon (Panhard), who let his clutch in too fiercely and stopped his engine. All the cars finished the first round, although some of them took a tremendous time, notably Richez (Renault) and Bablot (Brasier), who, it is reported, collided at Londinieres, the former's car overturning. The best time, 39 min. 53 sec., for the first circuit was made by Wagner (Fiat), Duray (Lorraine-Dietrich) being, however, only 7 sec. behind. The position at the end of the second round still gave Wagner as first,

with Duray second, Heath (Panhard No. 1) being the only one to fall out in this circuit. Just as Jenatzy (Mercedes) was completing the round one of his tyres flew off the rim not far from the grand stand. The tyre was flung among the spectators, one of whom is said to have been slightly injured. Jenatzy and his mechanics worked like Trojans to replace the flying ring, and was given a lusty cheer as he quickly got going again. Thirty-six cars finished the third lap, at which point Wagner was still leading, with two Lorraine-Dietrichs now close upon his heels. The fourth round saw the withdrawal of Le Blon (Panhard), Wagner (Fiat), and Laxon (Weigel). The latter had great trouble with his detachable rims, which failed to hold at the great speed attained. We learned that in one round alone he had to fit as many as seven tyres from this cause. Duray was now the first man, and enthusiasm among the French ran very high as he dashed by the Tribunes at a tremendous speed.

Stricker (Porthos), Christie (the only American competitor), and Alezy (Bayard-Clement) disappeared in the fifth round, so

Nezzaro the Winner of the Race

Lancia (No. 1) waiting to start.

being the Aquila-Italiana—the six-cylinder Italian vehicle. A number of changes took place in the drivers and their order of starting, Collomb taking the place of Count d'Hespel on the Corre, and Henri Farman, the old Panhard crack, appearing at the wheel of the second Renault, vice Edmond, who was ill. Hanriot drove the first Darracq, Caillois the second, and Rigal

that of the thirty-seven starters only thirty completed the half distance. Both Duray and Lancia, between whom the struggle had been very keen, pulled up at their respective supply stations. Only the drivers and their mechanics were permitted to do any necessary work on the cars, and the way Lancia literally stabbed the petrol tins to cause the spirit to flow faster had to

be seen to be appreciated. The second to arrive, he was the first away, having replenished in double-quick time. At the half-distance Duray led, his time being 3 h. 24 min. 55 sec., Lancia being second in 3 h. 27 min. 9 sec. Rigolly (Gobron), Page (Motobloc), Rougier (Lorraine-Dietrich), and Harrison (Weigel) fell out in the sixth lap. The latter suffered from detachable rims in the same way as Laxon, so that the hopes of the English spectators in general, and of the Weigel Company in particular, were dashed to the ground. The order at this point was—Duray, Lancia, Nazzaro, and Szisz. Of the twenty-six which set out on the seventh circuit, those that failed to complete it included Hanriot (Darracq), and Farman (Renault, magneto troubles). Lancia fell back somewhat, his place on time being taken by Nazzaro, Duray still leading. The eighth round saw the withdrawal of the Dufaux-Marchand eight cylinder car, which had suffered from overheating troubles, Pierron (Motobloc) and Jenatzy (Mercedes). It was in the ninth round that the position of the race was entirely altered. Duray, who was then leading by six minutes, to the great grief of the French, arrived at the grand stand on foot, he having left his car some distance away *en panne*, the cause of his stoppage being a damaged ball-bearing in the gearbox. Dutemple (Panthard) retired, and Lancia had fallen back considerably, the struggle for supremacy now lying between Nazzaro and Szisz. The last lap was disastrous to Lancia, the engine of whose Fiat gave trouble, and Salzer (Mercedes).

Szisz (Renault) the winner of the Grand Prix last year, was the first to complete the ten rounds, and the anxiety of the French spectators was very great as the minutes flew by; but Nazzaro, on his Fiat, arrived well in advance of the allowance, and was duly proclaimed the victor, thus making the wonderful achievement of winning the three principal races of the year so far—the Targa Florio, the Kaiser's Prize, and the Grand Prix. Nazzaro's average speed works out at just over

seventy miles per hour; his lap times varied between 45 min. 50 sec. and 38 min. 24 sec., the latter, made in the ninth round, being the fastest circuit of the day by any of the competitors. His car is fitted with a four-cylinder engine, 180 mm. bore by 150 mm. stroke, and is nominally rated at 130-h.p. No information was available as to the quantity of petrol consumed, but it was said that Nazzaro had sufficient left for a further thirty miles.

The order of merit at the conclusion of the race was as follows:—

	H.	M.	S.
1. Nazzaro (F.I.A.T.) ...	6	46	33
2. Szisz (Renault) ...	6	53	10

14. Degrais (Germain) ...	9	50	36
15. Roch Brault, junr. (Germain) ...	10	10	45
16. Collomb (Corre) ...	10	24	57

Of the sixteen cars which finished, one was of Italian construction, twelve French, one German, and two Belgian, one of the Germans being still running when the race was called off.

The contest for the Coupe de la Commission Sportive, which commenced at 9 a.m., attracted little or no attention. This was for a smaller type of car, for which petrol to an amount equal to just under nineteen miles to the hour was allowed, on which they had to make six rounds of the course—a total of 288 miles. All the nine competitors started, they being despatched at five-minute intervals. The result is appended:—

The result of the Coupe de la Commission Sportive contest :—

Order at finish.	Car.	Driver.	Time for six laps.		
			H.	M.	s.
1.	Darracq ...	De Langhe ...	5	13	25
2.	La Buire ...	Mottard ...	5	26	19
3.	Darracq ...	Demogeot ...	5	27	56
4.	Le Buire ...	Sibour ...	5	29	2
5.	La Buire ...	Dumaine ...	5	45	40
6.	Porthos ...	Defries ...	6	25	10
—	H.I.S.A. ...	Moulin ...	completed two laps.		
—	Gillet-Forest	De La Touloubre	did not complete first lap.		
—	H.I.S.A. ...	Dupasse ...	ditto.		

Throughout the whole of the day the weather was all that could be wished—indeed, at one time the sun shone brilliantly. The drivers at the end all showed signs of the severe strain they had been subjected to, many of them suffering so terribly with their eyes that they had to have them bandaged up and be led off the field by their friends.

A NEW CONTACT SCREW.

THE Traders' Speciality Company, of St. George's House, 82, Borough, London, S.E., have recently introduced a useful

The Grand Prix Race.—The Dufaux-Marchand and the Mercedes (No. 1) passing through Eu.

little accessory in connection with induction coils known as the Hunter Automatic Contact Screw, which consists of a hollow metal cylinder, with a small plunger inside, supported upon spiral spring; the end of the plunger carries a pure platinum point one-sixteenth of an inch in length. When the contacts come together the action is to push the plunger into the screw barrel against the tension of the spiral spring; thus severe concussion is avoided and the contacts are relieved of all undue strain. It is also claimed that the new device has a great advantage over the rigid screw, inasmuch as it accelerates the speed of the break, this being due to the fact that the two platitudes descend a short distance together, when the plunger in the screw barrel is arrested, whilst the flat spring blade continues on its descent. The platinum points may also be set closer together, so giving a longer period of "make" to allow the trembler to come into operation, there being at the same time no strain on the flat spring blade which carries the other platinum point. The screw head is split to allow for the spring adjustment piece to be locked by the usual locking screw.

SOME USEFUL NOTES.

WHILE there is usually nothing fragile about accumulators and their component parts are not over easily broken, it will be found a wise precaution to carry them on the car as if such were the case. They should not be rigidly fastened to any part of the vehicle, but rather should be packed with some springy, yielding material that will absorb the greater part of the shocks due to jolting over the road, as well as the more or less constant vibration to which they are subjected. The reason for this does not arise from any motive of cleanliness, as the matter of spilling electrolyte is taken care of in the majority of cases by patented devices which permit the escape of the hydrogen, but prevent the acid from being shaken out through the vent. The greatest danger arises from the possibility of loosening the active material from the plates. When sufficient of the active material has been loosened the cell will be short-circuited and put out of action.

AN unusual grating or crunching sound arising from any part of the car should immediately lead the motorist to stop the vehicle, in order that the breakage which may have taken place shall extend no further than need be. Such a warning may indicate a stripped pinion in the gear-box, trouble in the

differential or in the universal joints. Prompt action may limit the destruction as compared to what it might amount to if the car and engine were not immediately brought to rest. Unusual rattling sounds usually denote that something is loose about the frame or body of the car, and should be heeded at once. In the case of a chain-driven car sudden snapping sounds from the rear of the vehicle may indicate the faulty action of the chains, probably caused by their having worn out of pitch, thus allowing the links to ride the sprocket teeth and suddenly snap into place. A broken chain may be the penalty for a failure to act upon the information thus conveyed.

VERY often a squeaking sound proceeding from the engine gives timely warning of a failure of the lubrication, and enables the oil supply to be renewed before the cylinders have become overheated. The driver's ears should be alive to squeaking sounds proceeding from any part of the car, as they are indicative of faulty lubrication.

ON ESTABLISHING A GARAGE.

IN choosing premises for a garage business, it is of the greatest importance that one should not be cramped for space, and whilst, of course, position is a serious item for consideration, plenty of elbow room is equally so. Want of sufficient room is one of the bugbears that sooner or later confront a very large proportion of those who have embarked in the motor industry without sufficient knowledge or experience of its requirements in this direction, or who have relied on incompetent advice in the matter. Motor-cars take up a lot of space, and it requires a trained eye to reckon with any approximation of accuracy the number of vehicles that can be conveniently stored in an empty building. And moreover, as time is money, it is the height of imprudence to have to pack cars together like sardines in a box, so that the men's time is continually being wasted in manœuvring and contriving, not to mention the accompanying profanity thereby invoked.

Another evil from a profit-earning point of view lies in the fact that owners of cars object to make use of garages where the problem of space is always cropping up, and where, perhaps, several other vehicles must first be pushed out into the street before it is possible to admit another. Besides this, there is the question of damage to be considered. Mudguards get scratched and bent, and lamps get broken, and in consequence the price earned for storing a car is lost many times over in making good damages that ought never to occur. The risk in case of fire is also greatly enhanced owing to the impossibility of extricating the vehicles stored quickly enough in the inevitable confusion and excitement.

It is of the utmost importance that ample room be left between and behind every car, so that anyone can walk comfortably around them, and, if necessary, do any desired adjustment *in situ*. A good method of stacking cars is in herring-bone fashion—that is to say, arranged on either side of a central aisle, with their bonnets pointed at an angle of about 45 deg. towards the door. Needless to say, the central passage must be wide enough for the cars to be turned into without a lot of struggling, backing, and locking.

With a great number of repairs that come in it is necessary to remove the bodies, which, of course, take up nearly as much room as the chassis; and, in fact, when it is considered that they must be placed in a position of safety, as being the most likely part of the vehicles to suffer damage, liberal space must be available for their storage. Here, then, is an additional space to be borne in mind in basing calculations of the area required to cope satisfactorily with the size of the business it is proposed to cater for. Some people hang the bodies up over the cars, but there are several objections to this procedure.

As competition becomes keener, and the prices for storage, &c., will inevitably commence to be cut, it will be found that a small garage will hardly pay expenses, and therefore it behoves anyone to very carefully consider the minimum number of cars that it is proposed to deal with. We have already stated that we consider sufficient space of as great importance as position, and, in fact, we know already of several garages in first-class sites whose proprietors would gladly change places with their rivals more abundantly provided with floor space in some back street. We trust that these remarks may prove of service to some of our readers in doubt as to a locality for establishing themselves, and that they will at least keep a weather eye open for future expansion. Very frequently an option of securing adjacent premises may be obtained when taking a lease, which, if the precaution be neglected, may afterwards be lost.

THE Whalley, Clitheroe and District Motor-Bus Company, of which Mr. Wm. M. Cunningham is manager, have just achieved a notable performance with their motor char-a-banc. On Saturday, the 22nd ult., a party from Rishton was conveyed to Llandudno for a week-end's outing, and on Sunday, with a load of twenty, a successful attempt was made to drive the vehicle to the top of Great Orme's Head.

FINGER POST GUIDES.

A NEW volume in the handy "Finger Post" guides published by Messrs. George Philip and Son, Ltd., is to hand. This is compiled by Mr. Gerald Fothergill, who deals with the twelve main routes from London. The system adopted has been to devise a series of diagrams of road junctions enabling the tourist to know how to avoid the next difficult point directly he has left the previous one. By leaving out the many straight pieces of road without junctions, a larger scale has been given to these than would otherwise have been possible. By having the diagrams disjointed the difficulty of road maps (when roads are at a right angle and reach the edge of the paper) does not occur, and the plan thus ingeniously

followed should prove of considerable value to motorists. By permission of the publishers we give one of the 500 circular plans contained in the volume, and which is typical of the arrangement that is followed throughout. Here is a stretch of the London-Portsmouth road, so that motorists will see clearly their way and avoid making detours. In most cases it has been found practicable to give an indication of the approach of a turning by showing some adjacent object, such as an inn, bridge, river, tower or church, but in all cases the mileage between the diagrams is given, and this will act as a guide to the position of the difficult junction. Each set of circular diagrams is prefaced by a route map of the particular road with which that section of the work is concerned.

Just as cycling developed a kind of "road sense" in the people of the last generation, so motoring is developing the same kind of interest in those of this age. And some may appear dubious as to the value of such guides as that mentioned. They acquire the "scent" of the main road, and by almost unerring instinct seem to find the right roads. Increasing use of the highway gives added confidence, and such experience, coupled with a system of road signs, will ultimately enable the traveller by road to find his way about without so many of the maps and routes that now guide or confuse him. Meanwhile some of the northern districts deserve similar attention to that which Mr. Fothergill has given London.

IN view of the motor touring season Messrs. A. W. Gamage, Ltd., have laid in a stock of Tabloid motor-car medicine cases. It is now becoming recognised that it is essential to have on a car, when touring, some means of treating the minor, or even more serious, accidents which may befall the motorist, and the Tabloid motor-car case has been specially designed by Burroughs, Wellcome and Co. to give, in the smallest possible space, the dressings, &c., necessary under such circumstances. It takes up very little room, is neat in appearance, and is inexpensive. It is, of course, intended for first aid in the absence of a medical man, or before his arrival, for which purpose it is one of the most useful cases yet introduced.

CONTINENTAL NOTES.

The Brescia Race Meeting.

The Automobile Club of Milan is sparing no efforts to render the Brescia race meeting in September next a brilliant success, and with the view of securing a large entry list has just issued the rules and regulations in no less than four languages. The first race, which will be run on September 1st, is for the Florio cup; it will be held on a 61-kilometre circuit, which, starting and finishing at Brescia, takes in Castiglione and Lonato. The total distance to be covered is not yet definitely fixed, but will be between 400 and 550 kilometres. The contest will be open to vehicles having engines of a maximum cylinder capacity of 8 litres, and the minimum weight of the car, including racing body, tyres, mudguards, &c., is fixed at 1,175 kilogs. Other conditions with regard to wheelbase, wheel track, distance behind the dashboard, road clearance, &c., are also provided for in the rules, which further require the use of artillery wood wheels, to which detachable rims may be fitted. The winner will be awarded a cup presented by the King of Italy, and will also hold for a year the Florio challenge cup, which has to be competed for seven times, the trophy eventually becoming the property of the firm winning it the largest number of times. It is at present held by the Itala Company, who won it in 1905, no

protest the passengers in bad weather. A front glass is optional. The body must comprise a chest 75 centimetres wide by 75 centimetres deep and 70 centimetres high, and must weigh 150 kilogs., these dimensions being taken as representing the weight and volume of the samples usually carried by a commercial traveller. The total weight of the car, including the special body and passengers, is not to exceed 1,100 kilogs. The awards will be made in accordance with a formula which takes in the average speed, the consumption of fuel, and the first cost.

The Circuit des Ardennes.

Preparations for the three races on the Circuit des Ardennes on the 25th, 26th, and 27th inst. are now well in hand. In order to prevent the public getting on to the course, a wire fence is to be erected on each side right round the circuit, while at the dangerous bend at Bastogne a wooden balustrade is to be erected. The races will start at 5 a.m., and must be finished by mid-day, at which time the road will be opened for the ordinary traffic. Practising is being allowed between the hours of 3 and 6 a.m. as from the 5th inst.

International Racing Rules.

In view of the conference of recognised national automobile clubs which is to be held at Ostend on the 14th inst., the Italian

Ecuyer on the De Dietrich Car he drove in the A.C.F. Grand Prix Race.

contest having been held last year. No firm may enter more than three cars, and entries have to be made before the 10th inst. at the rate of £120 per vehicle or £320 per team of three. On the following day, September 2nd, the event known as the Coppa della Velocita will be held over the same course, the distance being between 400 and 650 kilometres. This will be open to all types of petrol cars, irrespective of weight or power, and will be run on a petrol allowance basis, viz., 30 litres per 100 kilometres. Entries, which will be limited to a maximum of three cars from any one firm, can be made up to July 5th at £120 per vehicle, and for a further ten days at a 50 per cent. increase. The first prize in this consists of the Coppa della Velocita, valued at £1,000, which will be awarded to the maker of the successful car, while the driver will win a cup offered by the Automobile Club of Milan.

A Reliability Trial of Motor-cars adapted for Commercial Travellers' Use.

The Automobile Club of Bordeaux is organising a trial of motor-cars adapted for the use of commercial travellers. It will take place on July 7th and the following days, during which time a distance of 2,500 kilometres will be covered. The competing cars will be required to have comfortable seats for two persons and a hood or canopy with curtains to thoroughly

Club has just held a meeting at which representatives of the leading car builders in Italy were present. It was decided to recommend that, if any restrictions are to be imposed, that of a limit to the cylinder capacity is the best, and that speed contests should in future be entirely confined to cars built in accordance with the conditions agreed upon. The French Automobile Club is in favour of a fuel restriction of 20 litres per 100 kilometres, and also of a chassis weight of at least 1,200 kilogrammes.

Miscellaneous Items.

Three six-cylinder Siddeley cars have been entered for the Brescia Circuit by the Società Wolsit Officine Legnanesi Automobili, of Legnano, concessionnaires for the manufacture of Siddeley vehicles in Italy. —The German Daimler Company has lately supplied a motor chemical fire engine to the fire brigade of Frankfurt-on-the-Main. —Messrs. T. Cook and Son are now running a series of daily motor-car excursions in and about Paris. —It is reported from Berlin that there will be no further contests for the Herkomer Touring Trophy, but that a trial is to be organised in which more regard will be had to reliability than to speed. —A banquet in honour of Nazzaro's "hat trick" is to be given in Turin on Monday next, by the Automobile Club of Italy.

HERE AND THERE.

THE R.A.C. inquiry into the recent motor meet at Bexhill has been fixed for Wednesday, the 24th inst.

THE Motor Manufacturing Company (1907), Ltd., which is now located at its new works at Manor Street, Clapham, S.W., is, in addition to building a new car, devoting considerable

AN examination under the auspices of the R.A.C. will be held on the premises of the West Sussex Motor Company, Ltd., East Street, Chichester, on Saturday, the 13th inst.

IN the Scottish Trial Palmer tyres were fitted on ten cars. One of the latter withdrew from causes other than tyre troubles, the others went through without a single cover being replaced, while only two punctures occurred in 27,000 tyre miles.

Fig. 1.—The 1902 20-h.p. M.M.C. Car in its original form.

attention to the modernising of old vehicles. Some idea of what can be done in this way can be gathered from the accompanying illustrations, Fig. 1 of which depicts a 20-h.p. M.M.C. car built in 1902, and Fig. 2 the same vehicle after it has been rejuvenated by the company, and this at a comparatively small cost. As will be seen, the car has, with its neat bonnet and combined radiator and tank, as also with a side-entrance body in place

ST. ALBANS is so well known to motorists of the north as well as those of the south, that interest is likely to be general among our readers concerning the great pageant to be held there from July 15th to 20th. The mayor is chairman of the committee, with the Rev. Canon Glossop as hon. secretary, and it is intended to set forth eight episodes illustrating the military, ecclesiastical, and general history of the city

Fig. 2.—The 1902 20-h.p. M.M.C. Car after being brought up-to-date.

of the old rear entry tonneau, quite an up-to-date appearance. The Motor Manufacturing Company can, of course, modernise any type of car in this way, and, having regard to the low prices which second-hand cars are at present realising, there will no doubt be many motorists who will prefer to have their old cars dealt with in this way rather than part with them at a considerable loss.

St. Albans is twenty miles north of London, from whence it can be reached *via* Barnet; by the Edgware Road *via* Hatfield. From the north it is found by the Great North Road to Hatfield, or by the Holyhead road, upon which it is situated. That the pageant will be thoroughly up to date is suggested by the intimation we have received as to the provision of an open-air motor garage adjoining the grand stand.

REPORT has it that a new motor-car works will shortly be established at Reading.

A NEW garage has been opened in the High Street, Aylesbury, by Mr. A. T. Adkins.

THE municipal authorities of Southampton are inviting tenders for the supply of a motor chemical fire engine.

IT is reported that the scheme for the establishment of motor-car works in Walsall has been dropped for the present.

WE hear that the new M.M.C. 35-45-h.p. six-cylinder car of the Motor Manufacturing Company, 1907, Ltd., is approaching completion.

THE London County Council is inviting tenders until the 9th inst. for the supply of a petrol motor escape van and a motor steam fire engine for the London Fire Brigade.

VISITORS to the Bury St. Edmunds pageant next week will find a fully equipped garage in High Baxter Street, where Messrs. Thomas H. Nice and Company keep a full stock of spare parts and accessories.

FROM Argylls Ltd., Liverpool, comes an interesting circular showing the varied facilities they have for assisting the motorist, both in his early days and when he has become experienced in the use of the car. The firm's repair shop and depot is at 25, Leece Street, where driving and workshop instruction is also given.

THE Star Engineering Company, Wolverhampton, have, we learn, now been successful in obtaining an order from the Royal Automobile Club for another Star car, one of the latest 12-h.p. vehicles, fitted with a side-entrance body, as shown in the accom-

The New Star 12-h.p. Four-Cylinder Side-Entrance Double Phaeton.

panying illustration. This makes the third vehicle the Star Co. have supplied to the Club, the first being delivered in 1902, and the second car in February, 1906. Having regard to the fact that the car has been bought in open competition with the whole of the British manufacturers, the Star Co. are not unnaturally very pleased with their success.

THE Daimler car presented to the Coventry and Warwickshire Hospital by the Daimler Company has not been disposed of in consequence of the fact that the authorities have declared that a "raffle" is a lottery. Hence the hospital above named has a Daimler car for disposal, and offers are invited from readers of the *M.C.J.*

THE six-cylinder Hotchkiss car undergoing the trial of 10,000 miles under the supervision of the Royal Automobile Club did its work during the past week with the usual brilliancy. Running from south to north, the car has made a circular tour round about Glasgow and Edinburgh, returning *via* Carlisle, Keswick, Bradford, Doncaster, Newark, Sléaford to Norwich, the week's journey, which totalled 941 miles, being accomplished without any involuntary stoppage. The following is a summary of last week's journeys:—Monday, June 24th, Glasgow, Ayr, Lanark, Airdrie, Glasgow, 123 miles; Tuesday, Glasgow, Kilmarnock, Dumfries, Edinburgh, 159 miles; Wednesday, Edinburgh, Lanark, Peebles, Edinburgh, 181 miles; Thursday, Edinburgh to Keswick, 140 miles; Friday, Keswick, Kendal, Doncaster, Newark, 168 miles; Saturday, June 29th, Newark, King's Lynn, Lowestoft, Norwich, 170 miles. The total distance covered, so far, is 8,221 miles.

A FACETIOUS correspondent suggests that the Brooklands track should be renamed the Edge-wear Road.

ON the 15th inst. General Booth will commence his fourth motor-car campaign, starting from the Crystal Palace.

THE Kew Bridge Motor Company have recently opened a motor garage and well-equipped repairing workshops at Kew Bridge, W.

THE Home Secretary is reported to be contemplating the introduction of legislation sanctioning taximeters and sixpenny fares for horse drawn cabs.

MOTORISTS will be gratified at the distinction of knighthood conferred on Professor Hubert Von Herkomer, R.A., whose enthusiasm for motoring is well known.

MESSRS. T. H. FIRTH, BEN HIND AND W. ROBINSON, members of the Sheffield Automobile Club, are organising a motor outing for Sheffield crippled children for the 13th inst.

THE O'Connell fund opened by Mr. R. J. McCreedy, of Dublin, and referred to in a recent issue, has reached £200. We are glad to learn that motorists have made a good response to the appeal.

MESSRS. ASHWORTH AND WILSON, LTD., of 265, Deansgate, Manchester, have supplied the Department of Agricultural and Technical Instruction of Ireland with a 22-h.p. Berliet car, for the use of the visiting committee.

MESSRS. YEATES AND SON, of 2, Grafton Street, Dublin, have sent us a copy of the motor accessory catalogue, they have just issued. It contains illustrations and particulars of a large number of useful fitments and should be of interest to motorists in Ireland.

BY arrangement with Messrs. Brunner, Mond and Co., and the Stirlingshire County Council, one mile of road over which the cars in the Scottish Trials passed on Saturday last, between Lennoxtown and Strathblane, was treated with calcium chloride.

OUT of thirty meetings in which Daimler cars have been entered this season, the Daimler Company have secured no less than twenty-seven fastest times and seven first and second fastest times. In the Irish Trials they made a non-stop run throughout and fastest times (in both hill climbs), and in the Scottish Trials non-stop throughout and the fastest time in their class in the Cairn o' Mount Hill Climb. Moreover they have secured the Wilson Challenge Cup, the Henry Edmunds Hill Climb Cup and the Yorkshire A.C. Trophy.

THE Ordnance Survey Map for Torquay and district has just been issued by Mr. T. Fisher Unwin, who is now the publisher of this useful series of maps, among the excellent features of which we notice that the metalled roads are indicated in three degrees, first, second and third class, and that unmetalled roads, double crossings and even letter boxes are now shown. In view of some unfortunate accidents which have occurred of late, the dangerous corners and hills may some day be pointed out in these official maps of the country.

AN interesting revival, reminding one of the old coaching days, is to be made in purely modern style by Messrs. Teste and Lassen, who are about to start a service of 40-h.p. Weigel cars running up the Great North Road from London to York and back during the next three months. A regular service will be run every Saturday, starting from Warwick Street, W., just after breakfast, and lunch will be taken at the famous old Coach Inn at Grantham. The Great North Road is one of the most picturesque roads in England, and there are few pleasanter all-day runs to be found than a journey by road to York.

FROM the Touring Club Italiano, of Milan, comes a copy of the 1907 edition of their *Annuario dell'Automobilismo*, or Motoring Annual, which will be found exceedingly useful by all motorists who contemplate a tour in Italy. The work gives, among other matters, particulars of the scope and objects of the T.C.I., a list of the automobile clubs in Italy and other countries, Customs duties and motor-car regulations, lists of automobile manufacturers and agents, &c. Of principal interest to motorists is the last section of the book, which gives an alphabetical list of towns and villages in Italy, the principal hotels, garages, petrol depots, &c., in the same being duly set forth.

CORRESPONDENCE

[Letters to the Editor should be addressed to the offices,
27-33, Charing Cross Road, W.C.]

CAR ACCIDENTS AND INEFFICIENT BRAKES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—The recent serious accident to a runaway motor-car shows that there seems to be great need for a reliable system of brakes. In our opinion, far too much use is made of, and reliance placed upon, expanding shoe brakes covered up with a light shell. The result is that the requisite attention to these small and necessarily delicate parts placed in so inaccessible a position is overlooked, and their failure spells disaster.

In our cars we have four brakes instead of three, none of which act upon gear shafts, &c., but direct on the proper part, namely, the road wheels. The brakes are of the contracting band pattern, compensated and adjustable, and, not being enclosed in a metal shell, they do not overheat. As they are of sensible diameter and width they pull up with ease, and, indeed, it has constantly been remarked that both our foot and hand operated brakes act with all the "vigour" and instantaneous certainty of the electric brake, than which it would be hard to find a better. The manufacture of this special system of band brakes is more expensive than that of enclosed brakes, but we prefer not to place the lives of our clients in jeopardy by any cheaper and far less efficient kind.—Yours truly,

THE OWEN MOTOR COMPANY.

The 9-h.p. Sizaire Car which Messrs. Jarrett and Lettis have just supplied to the Brooklands Automobile Racing Club, to be used as the Marshal's car on the Brooklands Track at Weybridge.

The car is painted in the club's own colours—yellow and black—and has an exceedingly smart appearance.

"THE GRAPHIC" TROPHY.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—With reference to letters which have appeared in the Press on the subject of the disqualification of Mr. Edge's car in the race for the "Graphic" Trophy in the Isle of Man, it would be extremely interesting to learn the precise reasons which led the Royal Automobile Club's officials to adopt the course they did. Perhaps Mr. Edge would enlighten us, and, in so doing, put an end, once for all, to the wild rumours which have been so rife. Is it a fact that the car was disqualified on the ground that the body did not conform to the dimensions laid down by the Club for the definition of a touring car, or was objection taken on the score of inaccurate engine dimensions?—Yours truly,

W. T. CLIFFORD-EARP.

THE DEFINITION OF A TOURING CAR.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—We should like to fully support the letter addressed by Mr. Edge to the secretary of the Royal Automobile Club, and published in your issue of the 22nd ult. In connection with the Saltburn Speed Trials a rule reads:—"Vehicles entering in the touring sections shall be of a recognised tourist type similar to the tourist vehicles sold by the maker

in the ordinary way, with finished body. . . ." Amongst the cars in the above competition we noticed 45-h.p. vehicles, with swing front seat bodies measuring from the dash to the back of frame about six feet, with no room for luggage in the tonneau, or, for the matter of that, for one's legs. We also noticed another standard touring car of 30-40-h.p. in which it was a work of art for two passengers to squeeze in the tonneau, and the engine had such a high compression that it was presumably impossible to start by means of the starting handle, as each time the car could only be started by getting an army of willing helpers to push it bodily along. This particular car, on paper, did very well in the trials, but we should be interested to know if it is the recognised touring type as usually sold to the public? We contend the public would not purchase such a car, and are therefore being deceived by the results of such competitions, and such rules made to be ignored are a farce.—Yours truly,

ARIEL MOTORS, LIMITED.

THE BROOKLANDS TRACK.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—In many published reports and interviews concerning the Brooklands track, there seems to be an indication that the curves are difficult to negotiate at very high speeds. It has occurred to us that possibly the extra weight thrown on the springs due to centrifugal force may have something to do with the idea that the track is bumpy and the steering heavy. At 90 m.p.h. on the smaller curve this extra weight amounts to no less than a 55 per cent. increase on the original weight, being thus equivalent to a heavy body. Possibly some of your correspondents who have driven on the track might be able to verify the correctness or otherwise of the above. In any case it appears to be a matter of interest, especially to competitors.—Yours truly,

VAUXHALL MOTORS, LTD.

POOR COMPRESSION.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—In your last issue I note a letter from G. Collis complaining of poor compression on a 6-h.p. Wolseley. A half-compression cam is fitted for starting, and if this became disconnected, or even improperly replaced, the car might be on half-compression all the time. The most frequent causes of loss of power on these cars are weakening of the exhaust spring, which causes the valve to close too slowly, and insufficient lubrication of the piston rings. The expansion of the inlet valve stem would not affect the valve, and if the exhaust stem were too long surely the seatings would be dimmed. But it is best to see to the exhaust spring first.—Yours truly,

IC-14.

THE FUTURE OF THE TOURIST TROPHY RACE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—With reference to the future of the Tourist Trophy race, I do not think that an extended reliability trial would be any more severe than racing over 241 miles of roads in the condition they were during the last Tourist Trophy race. My long and varied experience of testing both high and low power cars has taught me that any defective part of the vehicle is almost certain to show itself under such a test as this year's race was, and anyone who has bumped down the mountain road on a car with a load of 12½ cwt. on the chassis and going at full speed cannot help but wonder how on earth the vehicle can possibly hold together at all.—Yours truly,

E. COURTIS.

CHARGING ACCUMULATORS FROM PRIMARY BATTERIES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Your correspondent, "Enquirer," refers to a letter in a recent issue, giving satisfactory experiences with a Boron battery. There were several, of which I wrote one. Let me state my method of preparing the battery, &c., 4 oz. bicarbonate of soda dissolved in a small quantity of water, to which is afterwards added 4 oz. commercial sulphuric acid. I am describing the process for each cell, of course. I then place the carbon in the jar and the porous pot, with the zinc in position to sink it. Then fill the jar nearly to the top with water. Pour 1-12th sulphuric acid into twelve parts of water by measure, not weight, into porous pot and connect up. While the battery is not in use I take the opportunity of filing off the roughest of the surface of the zincs and amalgamate carefully in a bath of quicksilver, and when charging is completed give the battery a thorough cleaning. I never allow my accumulators to go below four, and when charging them—two 20 ampere hour car accumulators—give each one eighteen hours of the battery. Like our friend "Enquirer," I find mine show 4.5 immediately after charging and in a few hours go down to about 4.3, where they remain for weeks and then gradually fall. My batteries are Lithanodes.

There is a small reduction in the voltage of the battery after the first eighteen hours, but it apparently makes no difference in the charging of the second accumulator.—Yours truly,

G. A. L. RAWSTORNE, Lieut.-Col.

DIFFICULTY IN STARTING.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should be obliged if you could tell me what is the matter with my car; it has a 40-h.p. engine and starts up with half a turn in a morning, but after it has been running a while and I stop the engine I cannot get it started up again without a lot of turning. The valves have all been ground in, and everything seems all right excepting the starting up when the motor gets a little warm. There is always plenty of power when the car is running.—Yours truly,

THOMAS.

[It is somewhat difficult to assign the reason for this trouble from the data given. Most engines start up easier when warm, but we have occasionally experienced cases similar to this one of "Thomas." It must, we believe, be due to the initial mixture, when the motor is warmed, being incorrect. We can suggest the following reason: after an engine has been running, the heat gradually creeps along the induction pipe and warms all the air between the cylinders and the carburettor. Therefore in drawing, by turning the starting handle, hot rarified air past the hot ports and into the cylinders, also heated, a different mixture will result from that obtained when the motor is started from the cold. As "Thomas" finds his engine starts with only half a turn when cold, it is evident his initial charge thus obtained is correct, whilst for the reason we have assigned it may be otherwise when hot. Once the engine is running, the mixture may again become correct, seeing that the velocity of the inrushing vapour keeps the induction pipe and ports quite cold.]

BRAKE OPERATION.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Can you or any of your readers tell me why so many makers of light cars fit the foot brake on to the countershaft and the side brake on to the road wheels? I have noticed this in almost every car out here in Ceylon except the 8-h.p. Rover. The consequence is the foot brake is always used and the side brake seldom. The foot brake acting on the countershaft is naturally a strain on the driving shaft or chain wheels and the braking strain goes through the differential gear. The hills and roads out here, especially up country, are fair twistlers and would almost break a snake's back, and the bends, curves and corners necessitate very frequent application of the brake.

As the before mentioned practice is so common in cars, I feel sure there is some good reason for it, but it does appear to me that if the brakes were the other way about, i.e., the foot brake went on to the road wheels and the side or emergency brake acted on the countershaft, there would be much less wear on the shaft pinions and differentials, as the foot brake is the one that is I might almost say invariably used. I should like to hear your readers' opinion on the matter.—Yours truly,

U 16, CEYLON.

AN ENGINE QUERY.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Would you kindly let me know through the columns of the *M.C.J.* what is the best solution to use to fasten in the plugs over the

Mr. S. F. Edge on the Napier Car on which he last week established his wonderful record on the Brooklands Track.

ENDORSEMENT OF LICENCES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Being a constant reader of your interesting and instructive paper, I take the liberty to ask your opinion and advice on the following: I am a motor mechanic, and occasionally take out cars for testing purposes, and whilst testing a car last week I neglected to see that the identification plates were on, with the result that I was stopped for driving with only one. What I wanted to know was, had the clerk to the justices any authority to write on my licence? The judge, in fixing the fine, said nothing about any endorsement, and on waiting to pay the fine the clerk asked for my licence and wrote on it the offence committed and the sentence—5s. and costs or seven days—the latter I don't like to see.

I may as well mention that I was not exceeding the limit or driving to public danger; as a matter of fact the car would not allow of the former. I shall esteem it a favour if you would inform me whether the clerk was justified in writing on my licence, not being told to by the judge; and if not, whether, on appearing at the next sitting, I could have it crossed out.—Yours truly,

ROB.

[We are afraid our correspondent will have to be put up with the endorsement on his licence, which is in accordance with the Motor Car Act, which provides for endorsement for all offences against the Act, except the first and second conviction of exceeding the legal limit.]

valves? I have been told to use boiled linseed oil, but find this does not answer, and also that washers do not hold the compression.—Yours truly,

CHARLES PRIEST.

[Our correspondent does not state whether the plugs complained about screw into the cylinders, or whether they are held in place by a bridge. If the latter, it is usual to rely on a metal-to-metal joint, the flange on the plug being ground like a valve on its seating. A little boiled linseed oil may be smeared round. But if the plugs are screwed into the cylinders there is nothing to beat copper and asbestos washers. The best variety of these have the asbestos visible on the inner circumference. If washers will not make a tight joint it is the fault of the plug or its seating, and not the washer. Our correspondent should carefully clean the contact surfaces of the plugs and seatings, and then smear the flanges of the former with a little lampblack and oil. Then, on screwing down the plugs, he will probably find that they only bear at one point. The reason for this will be that the screw thread is not square with the face on the top of the cylinder, or the thread on the plug may be "drunk." When the faulty bearing surface is corrected he will have no further trouble in making a tight joint with a washer.]

TYRE LOST.—Mr. J. B. Beal, 42A, Wardo Avenue, Fulham, S.W., recently lost a 915 by 105 mm. Continental tyre on the road between Galashiels, Melrose, Jedburgh, Wark, and Hexham, and will be pleased to reward the finder on its restoration.

MR. S. F. EDGE'S GREAT RECORD.

At six p.m. on the evening of the 28th ult. Mr. S. F. Edge began, on the new Brooklands track, an attempt at a world's record in connection with motoring, and by the same hour on the following day he had finished his self-imposed task. In a recent issue of the *M.C.J.* we dealt with the course at Weybridge on which the long distance record has now been made. Mr. Edge drove a 60-h.p. six-cylinder Napier car, remaining at the wheel for twenty-four hours. A supply of petrol sufficient for a twelve hours' supply was carried on the car, and the track was brilliantly illuminated throughout Friday night, five Bleriot lamps, many Wells lights and thousands of fairy lamps lighting the course for the racers and spectators.

Mr. J. W. Orde, the secretary of the R.A.C., was the starter and Mr. A. V. Ebbelwhite was in charge of the timekeeping arrangements, being assisted by Messrs. J. T. Dutton, H. Glazebrook, J. H. Burley, and E. Fattorini, appointed by the Royal Automobile Club. Mr. Edge was accompanied on his ride by two other Napiers of the same power. These two, however, were operated each by two drivers, taking spells of three hours each. One was handled by Messrs. H. C. Tyron and A. F. Browning, whilst Messrs. F. Draper and F. Newton took turns at the wheel of the other, the former being geared slightly lower than the others. Both these pacing cars accomplished fine performances, the former covering a distance of 1,538 miles 160 yards and the latter 1,521 miles 80 yards.

The first lap was covered at the rate of sixty miles per hour. In the first hour 70 miles 130 yds. were travelled, while at the end of four

Brooklands.			Speed.		Philadelphia.

24	1,581	...	62	...	791	...

Average speed per hour 65.1594 at Brooklands.

There were very few stoppages for other than tyre troubles. After the first two hours Mr. Edge had to stop to take in a fresh supply of water; early in the morning one of the other cars had to have a new plug fitted, which delayed it about eight minutes; after driving for seventeen hours Mr. Edge stopped to change his clothes, and during the twentieth hour the third car had some trouble with the springs, but this was quickly put right. During a stoppage for refreshment a bat, which had been caught in the radiator of Mr. Edge's car, was extracted. The management of matters of detail during the run, viz., feeding, lubricating, tyre repairing and petrol supply, was in the hands of Mr. Cecil Edge, whose task, it may be imagined, was no easy one, and his close attention to details assisted not a little towards the success of the performance, while J. Blackburn acted as mechanic. It is significant of the great powers of endurance possessed by Mr. Edge that at the end of his huge task, and after innumerable handshakes, he turned into a tourist car, and himself drove to his hotel in Cobham to rest.

Mr. S. F. Edge starting for his 24-hours' ride on the Brooklands Track in company with two other Napier Cars.

Photo by

(Campbell Gray.)

hours the distance to his credit was 271 miles 1,160 yds., an average of over 67 miles per hour. In the next hour the distance was increased to 342 miles 1,350 yds. How this rose during the rest of the time can be seen from the following table, the times in the previous best figures for a 24 hours' motor-run by Messrs. Merz and Clemens at Philadelphia in 1905 being also given.

Brooklands.			Speed.		Philadelphia.

18	1,203	830	64	...	609	616

The freedom of the trio of Napier cars from mechanical troubles was a feature of the display, especially when it is remembered that the aggregate mileage was nearly 5,000.

In chronicling this wonderful feat we would mention that as the mileage increased the track showed signs of wear and tear in many places, and the holes that have already shown themselves on the surface required careful negotiation. It is to be hoped that these matters will have been attended to by to-day (Saturday) when the first great race meeting takes place.

The three cars used on the track were fitted with Bleriot headlights, and during the whole of the night powerful new Bleriot petrol oxygen projectors fitted to private cars were sending their beams of light on the finishing line, so that the timekeepers could easily identify the vehicles. Bleriot projectors were also used to light up the cars when they had to stop for changing tyres or filling with petrol or changing drivers.

On all the three cars the ignition used was the Castle accumulators, Castle coils, and Napier plugs. No change of the coils was made, and not even spares were carried. Mr. Edge switched on from his first set of Castle accumulators to the second after 1,000 miles, but simply as a precautionary measure.

Another point of interest in connection with this great run is that it was made on Shell motor spirit.

To their string of Dunlop successes must be added this marvellous record ride, for, at the conclusion of his arduous task, Mr. Edge wired:—"Dunlop tyres on my twenty-four hours were splendidly. Stood nearly 500 miles at over seventy miles an hour, then removed as a precaution."

CLUBS AND ASSOCIATIONS.

THE AUTOMOBILE ASSOCIATION.

THE annual meeting of the Automobile Association was held on Friday last week. Colonel W. J. Bosworth presided, and in presenting the report, which was published in the last issue of the *M.C.J.*, congratulated the members on the success of the association. There was one grievance which he could not refrain from ventilating, and that was the action of the Motor Union in adopting a badge which, when cars were running, was undistinguishable from that of the association. While paying a well-deserved tribute to the good work done by the Union, especially in the prevention of speed limit legislation, he considered that it would have shown a more friendly spirit if it had adopted a more distinctive badge. The report having been adopted on the motion of Sir Archibald Macdonald, seconded by Mr. Walter Gibbons, the following members of the committee retiring by rotation were re-elected: Mr. D'Arcy Baker, Captain J. Bennett-Stanford, Mr. C. W. Brown, Mr. C. Cordingley, Mr. S. F. Edge, Mr. Walter Gibbons, Mr. Alfred Harris, and Mr. Charles Jarrott.

Among the 354 new members elected at the last committee meeting of the Automobile Association were:—The Duke of Westminster, the Countess of Dundonald, the Earl of Northbrook, the Earl of Home, the Marchioness of Ormonde, the Earl of Fitzwilliam, the Duke of Roxburgh, the Earl of Normanton, Admiral Lord Charles Beresford, Lady Idina

The above illustration depicts a handsome 15-h.p. Panhard with single landaulet body built by W. Vincent, of Reading, which he has just supplied to Her Highness the Rane of Sarawak.

There are numerous refinements in the car, which is also fitted with a detachable front extension, so that it makes when required an entirely open vehicle. The car is upholstered in green morocco and painted a dark rich green with black mouldings.

Brassey, Lord Moreton, Lord Hastings, Lady Vivian, Sir George Cooper, Lord Henry Neville, Sir E. John, Sir Thomas Dewar, Major Bulkeley-Johnson, Admiral Tillard, the Hon. C. Baring, the Right Hon. Sir E. Carson, the Hon. H. H. Tracey, Sir James Rothschild, Sir Lewis Michell, and Sir Felix Schuster.

NORTH-EAST LANCASHIRE.

THE North-East Lancashire Automobile Club will hold an open hill-climbing competition on the 19th inst., at Rivington Pike, about a mile from Horwich, on the main road from Manchester to Preston, and seventeen miles from the former place. The hill is on private ground, and admirably suited for a contest of this nature. The trial will be held over a kilometre, the average gradient of which is 1 in 10.84.

Two valuable silver cups (presented by Mr. William Birtwistle, J.P., of Billinge Scar, Blackburn, and Mr. George Burton, of The Lindens, Fulwood, Preston), and twelve gold medals and twelve silver medals (the latter presented by Mr. J. Davis, of Hoghton, and Mr. F. Pearce, of Wilpshire), are to be competed for.

The competition will be divided into six classes:—Class A.—Cars whose cylinder D²N is under 35. Class B.—Cars whose cylinder D²N is 35 and under 50. Class C.—Cars whose cylinder D²N is 50 and under 75. Class D.—Cars whose cylinder D²N is 75 and under 100. Class E.—Cars whose cylinder D²N is 100 and under 150. Class F.—Cars whose cylinder D²N is 150 and over.

The competition will commence at 10.30 a.m. at a place marked "start" on the selected road. No one will be allowed to make a trial run over the course on the day of the competition.

Every car in Class A must carry one passenger at least in addition to the driver, and all other competing cars three passengers at least in

addition to the driver. The average weight of the passengers shall not be less than ten stone, and cannot be supplemented with ballast. No car can be entered in more than one class. Entries must be upon the form supplied by the club, and reach the hon. secretary of the club, at Kensington Place, Blackburn, by 12 o'clock on Monday next, at the ordinary entrance fees, and by 12 o'clock noon on Friday, the 12th inst., at double such fees.

The weighing in will take place near the Crown Hotel, Horwich, or at some other place to be hereafter notified, on Thursday, July 18th, from 2 p.m. to 8 p.m.

THE MOTOR CYCLING CLUB.

THE following cars made non-stop runs in the recent Rover Cup twelve-hour reliability test, and received the awards mentioned:—

Order.	Entrant.	Car.	Driver.	Award.
1.	R. H. Head	12-14-h.p. Singer	W. Perks	The Cup.
2.	F. J. Jenkins	16-20-h.p. Rover	Entrant	Silver Medal.
3.	Chas. Jarrott	9-h.p. Sizaire-Naudin	R. O. Clarke	Bronze Medal.
4.	J. Platt Betts	8-h.p. Rover...	Entrant	Certificate.
5.	J. S. Harwood	8-h.p. Rover...	Entrant	Certificate.
6.	F. J. Jenkins	8-h.p. Rover...	E. R. Folker	Certificate.

The Inter Team competition for the Motor Cycle fifty guinea challenge cup will be held on July 27th. This competition is open to a team of six riders from all recognised clubs. Particulars can be obtained from the trials hon. sec., Mr. R. G. Booth, 118, Dartmouth Road, Brondesbury, N.W. The 150 miles reliability trial for the Reeves Cup, and the 100 miles private owners' trial fixed for Saturday last had to be postponed in order that the conditions of the Reeves Cup competition may be slightly altered to comply with the wishes of the donor of the cup.

ESSEX.

THE Essex Club held a 200 miles non-stop competition for light cars, tri-cars, and motor-cycles on Saturday, the 22nd ult., the start being made from Ongar. Twenty-six competitors started at 6.30 a.m., the first round of 100 miles being through High Ongar, Writtle, Chelmsford, Witham, Marks Tey, Coggeshall, Braintree, Dunmow, Hockerill, Stansted, and Newport, and then back through Hockerill, Sawbridge-worth, Harlow, and Epping to Ongar. The scheduled time for the journey was 5 hours 15 minutes. Of the twenty-six starters, eighteen completed the first round in the maximum time, and three others finished outside time. The second round was the reverse journey, the start being made immediately after luncheon.

Non-stop Run.—Tri-cars, M. W. Randle, 10-h.p. Lagonda; and F. Cozens, 10-h.p. Lagonda. Light cars, G. Hunnabell, 8-h.p. Rover; E. J. Underwood, 8-h.p. De Dion; J. Van Hooydonk, 8-h.p. Phoenix; H. A. Bate, 15-h.p. Ford; and J. Browning, 9-h.p. Riley. Motor-cycles, G. W. S. Merriman, 3½-h.p. Rex; F. C. Mustard, 3½-h.p. Triumph; F. Applebee, 3½-h.p. Rex; S. Webb, 3½-h.p. Triumph; P. S. Anderson, 3-h.p. Acacia (De Dion engine); and C. C. B. Morris, 3½-h.p. Rex.

Speed Test.—Tri-cars, M. W. Randle, Lagonda; 2, F. Cozens, Lagonda. Light cars: 1, H. A. Bate, Ford; 2, J. Browning, Riley; 3, Van Hooydonk, Phoenix. Motor-cycles: 1, Mustard, Triumph; 2, Applebee, Rex; 3, S. Webb, Triumph.

Slow Test.—Tri-cars: 1, Randle; 2, Cozens. Cars: 1, Hunnabell, 8-h.p. Rover; 2, Van Hooydonk, Phoenix; 3, H. A. Bate, Ford. Motor cycles: P. S. Anderson, Acacia; S. Webb, Triumph; G. W. Merriman, Rex.

Hill Climbing.—1, J. Van Hooydonk, Phoenix; 2, H. A. Bate, Ford; 3, J. Browning, Riley.

The awards in each class consisted of a silver cup, gold medal, and centre gold medal for first, second, and third, respectively; and certificates were given to all competitors completing the distance within schedule time and making a non-stop.

SHEFFIELD.

THE awards in the recent hill climbing competition held by the Sheffield and District Automobile Club have now been announced. In Class 1 Mr. F. W. Huband (10-h.p. Alldays), holds the cup for the coming year and takes the club gold medal. Mr. W. Watts (8-h.p. De Dion) holds the cup for single-cylinder cars (Class 3), and also takes the club-gold medal. In Class 3 Mr. W. Johnson (15-h.p. Clement-Talbot) wins the first prize, given by Mr. W. T. Flather; and Messrs. F. R. Watson (15-h.p. Darracq), and H. Beesley (6-h.p. Wolseley), the prizes given by Mr. P. J. Benson and Mr. G. E. Senior.

HERTFORDSHIRE.

ON Saturday last the members of the Hertfordshire County Automobile Club met at Chaulden Boxmoor, Herts., the residence of Mr. Colliver, whose hospitality and charming grounds the members present much enjoyed. Unfortunately the weather was unpropitious, a fine morning being followed by violent thunderstorms all over the county, which prevented many members from accepting Mr. Colliver's invitation. Tea was served in the conservatory, which we believe is the largest in the county, and afterwards the members amused themselves with croquet, golf, or a stroll through the grounds, as fancy dictated, and the cordial thanks of the club are due to Mr. Colliver for a most enjoyable afternoon.

SUSSEX MOTOR BOAT CLUB.

ON Saturday last the club held a sealed handicap for Baron Van Bissing's cup. The course was ten miles. Ten boats had entered for the event, but for various reasons only five started, viz., Annie, Messrs. Akers and Barca; My Lady Ada, Mr. H. J. Preston; Firefly, Mr. W. T. Ashdown; The Grand, Mr. R. Berner, and Wema, Mr. W. J. Flack. The Firefly went away at the start and kept the lead for eight miles, when she stopped for want of petrol. The Grand had only one cylinder running and retired. The other three boats finished in the following order:—

	Actual Time.		Handicap.	M. s.	Corrected Time.		
	H. m. s.				H. m. s.		
Annie...	1	25	5	...	1	25	5 3rd.
My Lady Ada	1	27	14	...	1	25	4 2nd.
Wema	...	1	41	21	...	1	23 51 1st.

IRISH.

THE Irish Automobile Club is organising a hill climbing competition for the 27th inst. The cars will be classified as follows:—A, cars the selling price of the chassis of which with tyres does not exceed £200; B, between £200 and £300; C, between £300 and £450; D, between £450 and £600; E, between £600 and £750; and F, over £750. The selling price for the purposes of the foregoing classification shall mean the price for the year 1907 of a chassis of the same make and horse power, or in the event of none such being then made, the original price of the chassis when new to an ordinary purchaser. All cars must be driven by internal combustion engines, and must have ordinary touring bodies substantially constructed and properly upholstered, and, except in Class A, must have fixed seating capacity for at least four adults facing forwards with independent side entrance doors to the rear seats. In Class A, seating capacity need only be provided for two. In addition to the driver, all cars, except in Class A, must carry three passengers weighing at least 10 st. each, or a gross weight with driver of 40 st. In Class A, each car must carry 20 st. The persons carried will be weighed at the foot of each hill, and any deficiency in the weight of passengers from the above amount will be made up with ballast consisting of sand in bags to be provided by the club. Except for cars competing in Class A the competition will take place on two hills, the locality of which will not be disclosed until the morning of the trial, and the car in Class A climbing the first hill in the shortest time, and the car in each of the other classes which climbs both hills in the shortest aggregate time, will be the winner, and will be awarded a gold medal. A special certificate will be given in each class to the car which, on a handicap prepared by the committee, has, in their opinion, done the best performance; and a silver cup, presented by Messrs. Humber, Ltd., will be awarded to the car which has done the best performance on the handicap in the entire competition. A silver cup, presented by Mr. Thos. Henshaw, will be awarded to the car in any class which climbs both hills in the shortest aggregate time. The entry list closes on the 13th inst.

MR. A. J. SALMON, 15, Westland Road, Watford, has been appointed Press secretary of the Hertfordshire County Automobile Club.

MESSRS. W. FORSYTH AND H. NORTH have been elected representatives of the A.C. of Ceylon to the General Council of the R.A.C.

MR. LEVESON SCARTH and Mr. J. B. Geake have been appointed representatives of the Motor Union on the committee of the Children's National Guild of Courtesy, which is endeavouring to acquaint its members with the rules of right conduct on the road.

IN view of the trouble experienced by the Southern Motor Club, the committee of the Crystal Palace Automobile Club has decided not to hold an event at Captain Kydd's Hill on July 27th. Another suitable venue is being selected, due notice of which will be sent to entrants at the earliest moment.

COMPANY NEWS.

THE annual report of Messrs. Brown Brothers, Ltd., for 1906 states that the profit for the year, after making provision for the depreciation of leaseholds and fixtures, amounts to £17,319, to which must be added the amount brought forward from last account, £2,274, making £19,593.

The dividend on the preference shares at the rate of six per cent. per annum (less tax) to 31st December last, amounting to £5,699, has been paid, and £853, being the ten per cent. on net profits referred to below, has been set aside.

They now recommend that a dividend at the rate of five per cent. per annum, free of income tax, be paid on the ordinary shares, amounting to £7,500, and that the balance of £2,455 be carried forward. In accordance with the articles of association, ten per cent. of the profits available for dividend on the ordinary shares have been carried to reserve fund, which will now stand at £20,127.

NEW COMPANIES REGISTERED.

JANES DETACHABLE RIM COMPANY.—£1,000. No initial public issue. Registered office: 50, Moorgate Street, E.C.

THE Daimler Company have received an order from Sir Edward Wills for a 28-h.p. chassis fitted with a Hampton body.

AUTOMOBILE PARADE AND GYMKHANA AT HASTINGS.

AN automobile parade and gymkhana, organised by the Automobile Association and the Motor Club in conjunction with the Hastings and St. Leonards Borough Entertainments Committee, was held at Hastings on Wednesday last week, and notwithstanding the dull weather which prevailed the proceedings went through very satisfactorily. The cars, to the number of about sixty, assembled in the morning in Warrior Square, St. Leonards, when an appearance and floral decoration competition was held. The weather was fair and the course was in good going. Mr. W. Perkins was awarded the first prize for his 15-20-h.p. De Dion, Mr. W. Lewis's 45-h.p. Mercedes being second, and Mr. P. Hitchman's Panhard third. In the floral decoration contest, the first prize went to Mr. Chas. Jarrott, whose Crossley was decked out in pink blooms. Mr. J. G. Hickman, whose Star car had the appearance of a floral basket on wheels, took the second place, while Mr. A. H. Philpot's Renault was third. The gymkhana, which was held in the afternoon, was originally arranged for on the Central Cricket Ground, but the recent rains prohibited its use, so that an adjacent field was used. Six motor events were down on the programme, including obstacle, bending, starting and stopping, lady passenger, and other races. The novelty of the meeting was the automobile musical chairs. Fourteen cars, each with a lady passenger, were driven round in a circle. Chairs, one less in number than the ladies, were arranged in the centre. When the band stopped the ladies had to dismount and run for chairs, the one unable to secure a seat having to retire with her car. One chair was then taken away, and the process repeated until two competitors and only one chair were left. The spectators were highly amused at the

The 40-h.p. De Dietrich Brougham recently supplied by Messrs. Jarrott and Letts to the Duke of Sutherland.

The body has been specially fitted up for His Grace, and the interior is lighted by an electric lamp in the roof.

struggles of the ladies to reach the chairs, and as the numbers lessened the interest increased. The winning ladies were Misses Phyllis Carlisle and Gladys Hocking, and they rode on Mr. Moyse's 30-h.p. Thornycroft and Mr. B. C. Carr's 12-h.p. Brasier respectively. The obstacle race was a test of skill in driving, and in this race Mr. F. Herbert Shaw won on a Napier, with Mr. F. Baisley's 18-h.p. Gladiator second. The lady passenger's race, consisting of the picking up of ladies at given points, proved an easy win for Mr. J. Moyse, who completed the lap in 58 sec., Mr. C. Jarrott being second in 1 min. 12.5 sec. The starting and stopping race was won by Mr. Williamson on a 14-20-h.p. Hills-Martin, Mr. Shaw being second. The "Turk's head and tilting at the ring" prize fell to Mr. Williams, with Mr. Moyse second. The bending race, in which the competitors had to thread in and out of dummy figures both forward and backwards, was won by Mr. C. Jarrott on a 9-h.p. Sizaire-Naudin, with Mr. Williams second. At the conclusion the prizes were presented by Mrs. Harvey du Cros, who, on the motion of Alderman B. H. W. Tree, J.P., was heartily thanked. Colonel Bosworth, Sir Archibald Macdonald, Mr. L. Schlentheim, Mr. George du Cros, Mr. Harvey du Cros, jun., and Mr. Walter Gibbons acted as judges.

AERONAUTICS.

AN interesting display of kites was given on Monday, at Sunningdale, Berks., by the Aeronautical Society, in the presence of about 3,000 people. Scientific kites flown by Messrs. Balston, Brogden, and Salmon attained great heights. Mr. Weiss exhibited two model gliders, one of which travelled nearly a quarter of a mile.

A JOINT CLUB MEET AT BUXTON.

THERE was a large meet of automobilists at the Buxton Football Club ground on Saturday last, and a gymkhana was held in the afternoon, the clubs represented including the Bradford, Cheshire, Derby and District, Halifax, Lincolnshire, Liverpool, North Yorkshire, Mid-Staffordshire, North-east Lancashire, Sheffield and District, Wolverhampton and District, Manchester and Yorkshire, the credit for the organisation of which belongs to the Manchester Automobile Club. Rain fell heavily when four of the six events had been concluded and stopped further proceedings. The grass, moreover, was slippery and the ground soft through previous rains.

The events began with a starting and stopping competition. Each competitor stood about fifty yards from his car. At the fall of a flag he sprinted to the vehicle, started his engine, and drove to the end of the course, stopping with all wheels between a chalk line and a dummy wall. The first prize for this event went to Mr. V. G. New, who drove a 30-h.p. Siddeley car. Mr. W. Kenyon took the second prize with a 12-14-h.p. Clement. In an obstacle race, small obstacles were placed along the course line, and competitors had to thread their way between them both forwards and backwards. In the final round Mr. Crowley won on an 18-h.p. Siddeley in 1 min. 15 sec., Mr. F. W. Huband, on a 10-h.p. Alldays, being second in 1 min. 22 3-5 sec.

In the lady passenger's race the competitors were required to drive about fifty yards, alight, assist a lady from a chair to one of the back seats of the car, close the door, resume his seat, and drive another fifty yards and take up another lady; then return and repeat the process of taking up a passenger. Mr. A. Birtwistle, on a 35-45-h.p. Daimler, was adjudged the winner, and Mr. V. G. New, with his 30-h.p. Siddeley, was second. A bomb race was a decided novelty. Little balloons were laid on the course, and the driver of the car that traversed the distance in the quickest time and burst most bombs was the winner.

The above illustration depicts a special Saloon Carriage recently completed by Messrs. Sayers and Co. for H.H. the Rajah of Alwar, who is at present staying in London.

The body, which is mounted on a 30-h.p. Daimler chassis, is on exceedingly novel lines, the interior arrangements being of a distinct and most complete character.

In the end the prizes went (1) to Mr. Hooydonk, who drove a 14-16-h.p. Argyll car, and to Mr. V. G. New, with a 30-h.p. Siddeley car.

In the evening the competitors and many friends assembled at the Empire Hotel under the chairmanship of Mr. J. A. Morris, president of the Manchester Club, when Mrs. Morris presented the prizes. Afterwards an entertainment was given by Mr. Foden Williams.

POLICE TRAPS.

MOTORISTS passing through Rugby should "gang warily," as the police have lately issued several summonses for driving to the public danger.

AN electrically-operated police trap has recently been in operation at the village of Killinghall, near Knaresborough.

A CORRESPONDENT advises us of a police trap on the old road between Leamington and Warwick, between the G.W.R. station at Leamington and the Castle Bridge at Warwick. There is also a trap between Warwick and Gaydon, on the Warwick-Banbury road.

THE police have lately had a police trap in operation at the village of Sturry, between Canterbury and Margate, as a result of which several motorists have been fined for exceeding the legal limit.

AT Little Stukeley, near Huntingdon, the police have lately been very active.

A NEW trap has been established between Warnham and Horsham Sussex.

A TRAP is in almost daily operation between Epping and Harlow.

THE Morecambe Motor Garage Company will be pleased to supply motorists visiting their district with particulars of local police traps.

IN the Essex Automobile Club's 200 miles Reliability Competition, a Ford car did a non-stop high gear run, winning the gold medal. The petrol consumption was equal to thirty-four miles to the gallon.

THE BROOKLANDS RACING TRACK.

THE following races will be run on the Brooklands Track on Saturday, the 20th inst.

THE SURREY STAKES of 50 sov., added to a sweepstakes of 5 sov. each (the entrant of the second to receive 20 sov. out of the stakes.) For motor-cars propelled by means of internal combustion engines only, of a cylinder dimension 95 to under 105. Weight 3,200 lbs. About 3 1/2 miles. To close July 12th. Entrance: 5 sov., the whole of which goes towards the stakes.

THE HOLLYCK SELLING PLATE of 200 sov. (the entrant of the winner to receive 150 sov., and the entrant of the second 50 sov.) For motor-cars propelled by means of internal combustion engines only, the winner to be sold by auction for 500 sov. Weight 2,600 lbs., for cars of a cylinder dimension 75 or under, and 3,465 lbs. in addition for every additional 0.1 of dimension. About 8 1/2 miles. To close July 12th. Entrance: 10 sov. p.p. (12 entries, or the race may be void at the option of the executive.)

THE WEYBRIDGE STAKES of 50 sov. each (the entrant of the second to receive one quarter of the stakes.) For motor-cars propelled by means of internal combustion engines only, of a cylinder dimension under 220. Weight 2,600 lbs. About fourteen miles. To close July 12th. Entrance: 50 sov., the whole of which goes towards the stakes.

THE CENTURY STAKES of 100 sov., added to a sweepstake of 10 sov. each for starters only (the entrant of the second to receive 50 sov. out of the stakes.) For motor-cars propelled by means of internal combustion engines only, of a cylinder dimension under 145. Weight 3,500 lbs. About 19 1/2 miles. To close July 12th. Entrance: 3 sov., the only forfeit if declared by July 15th.

THE MANX STAKES of 200 sov., added to a sweepstake of 10 sov. each for starters only. (The entrant of the second to receive 100 sov. out of the stakes, the entrant of the third to save his stake.) For motor-cars which were entered for the Tourist Trophy Race, 1907, and which consume 1 gallon or less of petroleum spirit, measured and supplied by the club at the start. Weight 2,200 lbs. About 29 miles. To close July 10th. Entrance: 6 sov., the only forfeit if declared before July 10th.

THE HUMBER PLATE of 100 sov. (The entrant of the winner to receive 75 sov., and the entrant of the second 25 sov.) For motor-cars manufactured by Messrs. Humber, Ltd., with 4-cylinder engines of a bore of 3 1/2 inches and a stroke of 3 3/4 inches. Weight 3,200 lbs. About 6 miles. To close July 10th. (20 entries, or the race may be void at the option of the executive.)

THE COMMERCIAL VEHICLE TRIAL.

THE following is the list of entries for the R.A.C. Commercial Vehicle Trial to date:—

Entrant.	Class.	Nett load.	Nature of Vehicle.
1. Messrs. Milnes-Daimler, Ltd.	B	20 cwt.	Motor Van.
2. Messrs. Milnes-Daimler, Ltd.	B	20 cwt.	Motor Van.
3. Messrs. Milnes-Daimler, Ltd.	E	60 cwt.	Motor Lorry.
4. Messrs. Milnes-Daimler, Ltd.	E	60 cwt.	Motor Lorry.
5. Messrs. Milnes-Daimler, Ltd.	F	100 cwt.	Motor Lorry.
6. Messrs. Milnes Daimler, Ltd.	F	100 cwt.	Motor Lorry.
7. Halley's Industrial Motors, Ltd.	C	30 cwt.	Halley Petrol Van.
8. Halley's Industrial Motors, Ltd.	D	40 cwt.	Halley Petrol Van.
9. Messrs. Savage Bros., Ltd. ...	G	120 cwt.	Steam Wagon.
10. Messrs. J. and E. Hall, Ltd.	E	60 cwt.	Omnibus or Lorry.
11. Wolseley Tool and Motor-Car Co., Ltd.	C	30 cwt.	Siddeley Commercial Vehicle.
12. Wolseley Tool and Motor-Car Company, Ltd.	C	30 cwt.	Siddeley Commercial Vehicle.
13. Wolseley Tool and Motor-Car Company, Ltd.	E	60 cwt.	Siddeley Commercial Vehicle.
14. Wolseley Tool and Motor-Car Company, Ltd.	E	60 cwt.	Siddeley Commercial Vehicle.
15. Sidney Straker and Squire, Ltd.	B	20 cwt.	Covered Van.
16. Sidney Straker and Squire, Ltd.	D	40 cwt.	Covered Van.
17. Sidney Straker and Squire, Ltd.	E	60 cwt.	Bus chassis with open body.
18. Sidney Straker and Squire, Ltd.	F	100 cwt.	Wagon with open body.

Applications for entry forms continue to be very numerous, and intending entrants are reminded that entries at ordinary fees close at 12 noon on Saturday the 13th inst. In order that the arrangements may be completed as soon as possible, the R.A.C. has purchased a 12-h.p. Star Car, which is at present surveying the routes for the trials.

FROM Messrs. Jarrott and Letts comes an illustrated pamphlet giving an interesting account of Mr. Jarrott's recent record run from London to Monte Carlo, on a 30-40-h.p. Crossley car.

CASES UNDER THE MOTOR CAR ACT.

FURIOUS DRIVING.

At Retford, last week, Herbert G. R. Slings was charged with driving a motor-cycle to the danger of the public, and also with exceeding the speed limit. Mr. A. Barlow (Nottingham) defended for the Motor Union, and objected that the latter summons was bad, as the necessary twenty-one days' notice had not been given. The Bench upheld the objection and dismissed the case, but fined defendant £2 for driving to the danger of the public.

At the Knaresborough Police Court, last week, Alfred Hardy, of Harrogate, was fined £10 and costs for driving through the village of Killinghall at a dangerous speed on June 16th.

At Ayr Sheriff Court several motorists were last week fined for furious driving.

The Earl of Carnarvon, of Highclere Castle, was fined at Newbury, last week, £10 for driving a motor-car at a dangerous speed through Thatcham village on June 16th.

Herbert Warren was fined £10 and £10 costs at Newport on Saturday for recklessly and dangerously driving a motor-car at Rumney, and with failing to give audible warning of his approach, on May 21st. The defendant was driving the car from Caerleon to Cardiff, and when near Rumney ran down a cyclist named John Tobin, who had since been in hospital.

At King's Heath last week, Richard Hargreaves, employed by the Wolseley Motor Company, was fined £10 and costs for driving a car on the Alcester Road, Wythall, on June 17th, at a speed dangerous to the public.

EXCEEDING THE LIMIT.

At the Kingston-on-Thames County Police Court, last week, J. P. Spence, Kensington, formerly chauffeur to the Prince of Wales, was fined £5 and costs for exceeding the ten miles an hour motor-car speed limit at Richmond Park.

Several motorists have lately been fined at Harlow, Essex, for exceeding the legal limit between Harlow and Epping, where the police have lately been very active.

At the Lancaster County Petty Sessions on Saturday last, fines amounting to £25 were imposed in four motor cases, as the result of a trap on the Burton Road at Carnforth.

Nearly twenty London and other motorists were summoned on Monday at Haywards Heath for exceeding the legal limit on the Brighton road at Handcross, Belney, and Burgess Hill. The speeds ranged from twenty-eight to forty miles an hour. Forty or fifty cars from the Motor Club were stated to be on the road at the time of the Handcross "trap," and it was said that the party had been warned of the timing operation when at Crawley, but, in spite of this, two or three got into the net. The penalties imposed ranged from £15 and costs to £2 and costs, and amounted to over £100 with the costs.

At Dublin, Mr. Robert Burns, of Coventry, has been fined £10 for having, according to the police, driven at an excessive rate of speed and on the wrong side of the road—"Just," said the magistrate, "as if he were an ordinary Irishman."

MOTORING IN THE MALAY PENINSULA.

MOTORING in the Malay Peninsula is far from being an unknown art, writes Mr. J. H. Robson, a medical practitioner of Kuala Lumpur, in the Selangor. Mr. Robson, who was the first medical man in the Peninsula to use a motor-car in connection with his profession, reports that Perak, Selangor, and Negri Sembilan, the three States on the west coast of the peninsula, have excellent roads, flat on the coast and hilly in the interior. A very interesting trip could be made to the peninsula by visitors to the Far East, by landing at Penang from any of the steamers from Colombo, Madras, Calcutta, or Rangoon, and staying fourteen days for the next steamer from China. This would give sufficient time for a detailed visit of the peninsula and would allow the tourist to see something of the rubber estates and tin mines.

Landing at Penang, a very interesting trip may be made right through the States as far as the old British territory of Malacca, to the south of Negri Sembilan. The trip could be spread over four days as follows:—First day, Penang to Taiping, capital of Perak; second day, Taiping to Ipoh (Perak), a tin mining centre; third day, Ipoh to Kuala Lumpur (Selangor), the Federal capital; fourth day, Kuala Lumpur to Malacca. The distances average about one hundred miles a day. Steamers do not go alongside at Malacca, so that, except in the case of small light cars, it would be well to work back again from Malacca to the chief port of Selangor (Port Swettenham). If arriving at Singapore, it would be necessary to tranship into a local steamer for Port Swettenham, for there are no roads up north through Johor, the mainland opposite the island of Singapore. There are no customs duties on automobiles. A tourist would probably not be asked to take out a licence if he had papers with him. Petrol costs about two shillings a gallon. At Kuala Lumpur, the Federal capital, there is a garage.

A uniform automobile law applies to the four States of the Federation, and is largely based on the regulations in operation in England. There is, however, no speed limit, the rules stating that no car shall be driven at a greater speed than is reasonable or proper, having regard to other traffic on the thoroughfare.

THE HORSE POWER RATING OF PETROL MOTORS.

THE committee of the Hertfordshire County Automobile Club have given considerable time and thought to the evolution of a satisfactory formula for expressing the power developed by internal combustion engines. Thanks to the careful research and calculations of Mr. Tom Thornycroft they have at last arrived at one which they consider comes nearer to desired results than any other known formula. It is expressed thus:—

$$\frac{R^2 \times \sqrt{S}}{35,000} = \text{No. of cylinders.}$$

So much interest has been aroused by this formula that the committee have had a set of curves produced which graphically illustrate it.

FORTHCOMING EVENTS.

JULY.

- 6th (Sat.).—Inaugural races on the Brooklands Track.
Motor Yacht Club and Notts. A.C. joint meet and races on the Trent.
Speed judging competition of the Essex County A.C. at Saffron Walden.
Kent A.C. gymkhana at Holwood.
100 miles trial of the North London A.C.
Run of the Northamptonshire A.C. to Compton Wyngates.
East Lancashire C.C. speed judging competition.
7th (Sun.).—Non-stop run of the Newcastle and District M.A.C.
Southern M.C. launch party.
10th (W.).—R.A.C. South Harting hill climb.
13th (Sat.).—Entries for R.A.C. commercial vehicle trials close at ordinary fees.
Aero Club ascent, Crystal Palace.
Speed trials of the Lincolnshire A.C. at Grimsthorpe.
Meet of the Cheshire A.C. at Plas Newydd, Llangollen.
Sheffield A.C. outing for crippled children.
Meet of the Bristol and Gloucestershire A.C. at Badminton Park.
Essex, M.C. open race meeting for the Du Cros trophy.
West Surrey A.C. picnic at Thursley, preceded by (weather permitting) dust competition.
15th to 18th.—The annual automobile meeting at Ostend.
20th (Sat.).—Motor Union meet at Southport.
25th (Th.).—Circuit des Ardennes race under German A.C. rules.
26th (F.).—Coupe de Liedekerke race for touring cars, on the Ardennes course.
Circuit des Ardennes Race under Belgian A.C. rules.
26th & 27th.—Auto C.C. twenty-four hours' ride to Plymouth and back.
27th (Sat.).—Aston hill climb of the Hertfordshire County A.C.

AUGUST.

- 20TH.—Open competition for light cars organised by the Essex Motor Club over a 200 miles course.

SEPTEMBER.

- 9TH.—Industrial Vehicle Trials commence.

OCTOBER.

- 19TH.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

- Cordingley's Motor-Car Exhibition at the Agricultural Hall, London.

LIGHTING-UP TIMES—LONDON.

July 6th—9.17	...	8th—9.16	...	10th—9.14	...	12th—9.13
„ 7th—9.16	...	9th—9.15	...	11th—9.14	...	13th—9.12

In Glasgow the lighting up time to-day (Sat.) is 10.2 p.m., and to ascertain the approximate times on succeeding days 45 min. should be added to the above figures; in Birmingham an addition of about 13 min. is necessary.

ROAD REPORTS.

WITHAM.—A motor danger signal is to be erected near the Bridge School at Witham, Essex, and another on the railway bridge, subject to the consent of the G.E.R. Company.

BRIDGNORTH.—The roads generally in this district are in good order, with plenty of metal on the surface. The steam roller is at work on the Shifnal road.

TAMWORTH.—The roads generally in this district are in good order. The Lichfield road is undergoing repair. The Burton and Ashby turnpikes are in excellent condition.

ESSEX.—The annual report of the Essex County Surveyor, Mr. Percy J. Sheldon, states that on March 31st the total mileage of the main roads in the county was 796 miles $4\frac{1}{2}$ furlongs, of which 678 miles 2 furlongs were under the direct control of the County Council. The net expenditure on the roads outside urban areas was £72,560, and in addition £42,210 was paid for the maintenance of the main roads in the urban districts under the control of the local authorities. Mr. Sheldon states that the locomotive traction traffic continues to increase, and this, together with the increase of heavy motor-cars on the more important roads—few of the cars being registered in Essex—makes it impossible to decrease the cost of maintenance.

STIRLINGSHIRE.—The road between Lennoxton and Strathbane, which was included in the Scottish Trial itinerary on Saturday, had been previously treated with calcium chloride.

PUBLIC MOTOR SERVICES.

AN Argyll 16-20-h.p. char-à-banc has lately been supplied by the Western Motor Company, Ltd., Glasgow, to Messrs. Anderson, of Greenock. It is being used on a circular route from Greenock, taking in Gourock and Inverkip.

THE Paddington Borough Council, having recently had many discussions regarding the nuisance caused by motor traffic in the borough, decided to take proceedings. A case was laid before Mr. Danckwerts, K.C., and in face of the opinion given by him legal proceedings were abandoned. The Council now expresses the opinion that as the nuisance appears to be general throughout London a deputation representative of the whole of the Metropolitan Borough Councils should wait on the Commissioner of Police on the matter.

AVOIDING litigation, St Pancras Borough Council has agreed to accept £98, half the cost of making good damage done to the Cobden statue base, seven electric arc-lamps, and seventeen gas-lamps damaged at different times by motor-omnibuses belonging to the Vanguard Company.

IN the new licences issued by the General Purposes Committee of the Worthing Town Council to the owners of motor-buses, &c., several conditions are imposed with regard to the emission of smoke, the dropping of oil and the splashing of mud by the wheels—threefold objections raised by opponents.

AUTOMOBILE ACCIDENTS.

A MOTOR-CAR accident occurred at Sheffield on Sunday. The car, containing Mr. and Mrs. John Meal, of Ashton-under-Lyne, with their two children and a friend, Mr. Albert Stringer, of Manchester, skidded on the tram lines and dashed into a tramway standard. All the occupants were thrown out and suffered from cuts and bruises.

MR. J. C. BATE, the West Cheshire coroner, has inquired into the motoring accident in which Reginald Ireland, the six-year-old son of John Ireland, of Rowton, was killed on the Whitechurch road, about three miles out of Chester. The evidence showed that Mr. William Swift Keyser, a timber merchant, of Florida, U.S.A., and his family were travelling in a hired motor-car from Liverpool to Shrewsbury. They left Chester between six and seven o'clock in the evening, and when three miles along the Whitechurch road came up to a party of boys playing on the roadside. The chauffeur, George Woods, of Leese Street, Liverpool, sounded his horn repeatedly, and the boys ran across the road. He swerved his car to the right with the intention of getting behind them, and Ireland, the last boy, according to the motorists, seemed to hesitate which way to go. He attempted to follow the others, and was nearly across when he was struck by one of the head lamps. The driver had slackened speed as he approached them, and stopped within eight yards after the accident. The jury returned a verdict of accidental death, and attached no blame to anyone.

BUSINESS NEWS.

CAV. CARUSO, the celebrated vocalist, visited Great Eastern Street, E.C., a day or two ago, and purchased several "Harvey Frost" vulcanisers, on behalf of his brother, who carries on a motor garage in Florence, Italy.

A CABLEGRAM has been received from Cape Town stating that Mr. R. L. Jefferson, on his 8-h.p. Rover, fitted with Dunlop tyres, has just made the trip from Durban to Cape Town, via Johannesburg and Kimberley, without a puncture.

THE United Motor Industries, Ltd., have just issued a booklet giving the opinions of some users of the Wagner electric motor horn.

FROM Messrs. W. T. Clifford-Earp, Ltd., 74, Mortimer Street, London, W., comes a copy of their latest catalogue of Thames and Nordenfellt cars. The former are made in two sizes, 50 and 60-h.p., both being fitted with six-cylinder engines. The Nordenfellt cars are built in three sizes, 14-16-h.p., 26-30-h.p., and 35-40-h.p., they being all provided with four-cylinder motors. The list is very complete and is accompanied by a number of very clear illustrations.

AMONG the firms making a speciality of timber for the construction of motor bodies and road wheels are Messrs. Joseph Owen and Sons, Ltd., Liverpool.

NO time has been lost by some manufacturers in entering for the 1908 T.T. race. Amongst others, entries have already been sent by Ariel Motors, Ltd., to the Royal Automobile Club for two Ariel-Simplex cars in the Tourist Trophy race and for the 1908 Heavy Touring Car Race.

ARGYLL MOTORS, LTD., announce that during the months of July, August, and September they will offer monthly cups, each of the value of 50 gs., for the most meritorious performance of any description, either speed record, hill-climbing feat, or long-distance record. The competitions will be open to all Argyll cars, irrespective of the date of purchase or the place where they were bought. A special prize of another 50 guineas cup is to be given for the best performance during the three months in question of any car purchased after the date of this announcement.

IN the Sheffield hill climb competition, the President's Cup and gold medal was won by a 10-h.p. Alldays car, which was fitted with Dunlop tyres.

WE are informed that both the Beeston-Humber cars, which were successful in completing the course in the Tourist Trophy Race and the Heavy Car Race, have been awarded gold medals by the Automobile Club. It is satisfactory to note that so essentially a British firm as Humber, Ltd., has been successful not only in winning one of the two events, and having their car second in the other, but that the vehicles so commended themselves to the Committee of the Automobile Club that a gold medal has been awarded to each of them.

THE Motor-Car Journal.

VOL. IX.]

LONDON, SATURDAY, JULY 13, 1907.

[No. 436.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

SOME notable decisions with regard to the programme of competitions for the next few months have just been arrived at by the committee of the Royal Automobile Club which is responsible for trials and competitions. It has decided that the Tourist Trophy race shall take place in 1908 on an improved basis as compared with previous trials and not necessarily with fuel consumption as the leading essential. Then, too, it is proposed to hold a 2,000 miles Reliability Trial next year, commencing at the end of June and including as many features of the Scottish Trials as can geographically be arranged, as well as a high-speed run on the Brooklands track. This suggestion, which was put forward by the Expert Technical Committee, seems to comprehend many proposals that have lately been made in our columns and elsewhere, and, should it materialise, will give increased zest to the motoring programme of 1908. The Club has also decided upon a repetition of the Town Carriage Competition and also the Vapour Emission Tests, these two events taking place towards the end of October next. Elsewhere we give a supplementary list of the entries for the Commercial Vehicle Trials which will be held in September, so that the Club activities will be well to the front during the next few months.

Motor Union Wins.

SINCE the middle of June several important legal victories have been obtained by the Motor Union on appeals to the Divisional Courts and to the Quarter Sessions, and we would congratulate the General Committee on the success of their efforts in this direction. In fact, appeals have been allowed to such a degree that it would seem to warrant further activities of this kind. Not the least interesting of the cases was heard at the Warwick Quarter Sessions last week, when the allegation of the appellants that the police evidence against a motorist was much exaggerated was actually allowed by the Bench of magistrates, who quashed the previous conviction. Not often do the County J.P.'s disregard the evidence of the police in motor cases; hence the interest which attaches to this particular instance.

What Becomes of Famous Cars.

It would be interesting to learn what becomes of the old cars that are distinguished as containing innovations of note or have won fame on the sporting side of Motorism. Some are still travelling about the country. Many an old Benz with its engine at the rear is still in service, ancient Daimlers are even now carrying passengers in some rural districts, and as recently as last month we saw absolutely one of the first Argylls turned out at the old works at Bridgeton in private use near the Grampians. Mr. S. F. Edge's Gordon Bennett racer had a varied career. After winning the event it was sold to the late Marquis of Anglesey, who later gave it to his mechanic in lieu of other things which were due. The engine of another well-known 50-h.p. car of the same year ultimately found its way into one of the rail motor coaches of the North Eastern

Railway Company. The car upon which Mr. W. T. Clifford Earp met with disaster at Douglas had an accidental career. Originally it was driven by Mr. C. Jarrott in the Irish Gordon Bennett race, and went to grief. Its mishap in the Isle of Man is still remembered. Then it was sold to a Kentish gentleman, who met with so many accidents while using it that he was glad to find an American customer. In the United States it participated in several events, and ran third in a 100 miles race, competing with well-known native productions of that day. Ultimately it had a serious collision, and the engine was taken out of what remained in order to provide the motive power for a motor-boat. And thus are the mighty fallen.

Narrow Escapes.

THERE are "moving accidents by flood and field" happening to motorists almost every time they go for any distance into the country of which their friends never hear. Risks are run even in such well-regulated events as the Scottish Trial, e.g., the overturning of a car and the projection of its occupants into a field yards away. We hear of a remarkable accident which occurred a few days ago in Ireland. A 15-h.p. Humber was proceeding from Dublin to Killiney—a pleasant drive of about ten miles—when, about half-way, a large elm tree was blown down on the car. It fell right across the front of the vehicle, smashing the radiator, bonnet and headlight in its sudden descent. Although there were four passengers in addition to the driver, no one was hurt. The remarkable thing about the incident was that the engine was not damaged, and the driver soon had it running again. He tried to back the car from underneath the tree, but found it was too firmly locked. Assistance was obtained, and with the help of half-a-dozen men the tree was raised whilst the car was backed. It is now being repaired in the Irish capital, and is little the worse for the adventure. But the motorists might have been.

Motor Services.

IN the House of Commons the other night, Mr. Chiozza Money raised the question as to the alleged nuisance of motor-omnibuses in London, and asked the Home Secretary to urge upon the London County Council the construction of a complete London tramway service, so as to render these vehicles unnecessary on the road. Fortunately, Mr. Gladstone recognises that the Government has no right or desire to give to any description of traction the monopoly in the metropolis or anywhere else. In fact, he went on to say that the early objectionable features of the motor-bus are disappearing, and to suggest possibly that in time the difficulties would be quite overcome. This attitude of mind is not exclusive as far as Mr. Money is concerned, for on the same evening Sir Wilfred Laurier, in a speech in celebration of the anniversary of Dominion Day, urged that nothing was so potent in binding people together as a means of transport, and the best of these was railways. In view of the success of the motor vehicle in developing communication in new countries, we are sorry that Sir Wilfred seems so engrossed in the vehicle that must necessarily run on a specially made track. It occurs to us that it might be well if, when the present enthusiasm for the sporting side of automobilism has somewhat waned, a really organised attempt could be made to demonstrate the commercial possibilities of a road motor service

in this country. The unfortunate policy of the Irish local authorities prevented the development of the Iveagh-Pirrie scheme a few years ago, but, having regard to the proved reliability of the motor-car since then, there is no reason why such a suggestion should not have a good chance at the present time. Several folks have proposed to establish such services; their experiences would be welcomed in our columns.

The Notts Club's Meet.

QUITE an interesting variant of the usual motor meets organised by county and other automobile clubs was given on Saturday by the Nottingham organisation, which was able to combine motor-boating with motor-caring for the entertainment of the public. Ascents by balloon had also been promised, but unfortunately the wind made the inflation of the great silk bags impossible, so that had to be abandoned. But in place of the Skegness races, which it has usually organised, the Notts Club was able to run an interesting gathering, affording the public some idea of the diversified character of the automobile movement.

Mrs. E. A. Riley, of Haslingden, on the 20-h.p. Belsize she drove throughout the Scottish Reliability Trials, only having one momentary stoppage recorded against her during the whole five days.

Dust.

A FEW evenings ago there was a public meeting at the village of Forest Row, which is on the main road from London to Eastbourne and Bexhill, to consider the ways and means of remedying the dust nuisance, which is somewhat pronounced in that region. Ultimately it was decided that certain portions of the roads in the village should be tarred in accordance with an offer of the East Sussex County Council to pay one-half the cost if the other moiety was raised locally. It must not be assumed, however, that only those who reside by the roadside are interested in the prevention of dust, for motorists are also contributing their quota to the solution of the problem—as was shown by Dr. H. S. Hele-Shaw in his address to the Congress of the Royal Institute of Public Health at Douglas last week. His paper on "Road Locomotion in relation to Public Health" was a thoughtful contribution to the literature of the subject. He reminded his audience of Professor Tyndall's emphatic illustrations of the connection between dust and disease, and showed that motorists generally are fully alive to the necessity of alleviating the nuisance. In support of this statement he was able to mention the various trials and experiments that have taken place during recent years under motoring

auspices, and to incidentally refer to the forthcoming tests arranged by the R.A.C. at Brooklands. The truth is that motorists suffer in common with others, and the public are really indebted to men like Dr. Hele-Shaw for the trouble they are taking in finding a way out of present difficulties.

No Appeal.

MAGISTRATES seem to be averse to having their judgments reconsidered by Quarter Sessions, and the action of those at the Shoreham Petty Sessions is fairly typical of the general eagerness to escape such possibility of revision. A motorist was summoned for what is technically known as "furious driving." It was generally conceded that the case would never have been brought into court but for the fact that an accident occurred to a cyclist. He, it was acknowledged by the Bench, was wandering about the road, and thus placed himself in the way of danger. Therefore they only fined the motorist £1 and costs (£4 15s. in all), but declined to make it a guinea as the solicitor for the defence suggested. The latter said that his client wanted to appeal—that apparently decided the Bench in adhering to their decision.

A Bishop's Motoring Activity.

THE motor-car presented by the laity in the diocese of St. David's to Bishop Owen has reached Carmarthen, and his lordship is finding it of valuable service in covering his extensive diocese. The car, a Daimler of 28-30-h.p., was put to a severe test on Saturday week, when Dr. Owen, after attending a garden party at Windsor, motored to Cheltenham in the company of Archdeacon Evans. His lordship remained in the Gloucestershire town over Sunday, and on the following day proceeded to Swansea. On the Tuesday he visited Abergorlech, and on Thursday the car conveyed the Bishop of Llandaff to Lampeter for the Degree Day. Friday's programme included a visit to Llanfihangel-Penbedw, in North Pembrokeshire, for the re-opening of a restored church, while on the 29th ult. Dr. Owen completed his week's public engagements by consecrating a burial ground at Felinfoel, near Llanelly—all made easy so far as travel was concerned by the motor-car.

Prosecution of a Fraudulent Motor School.

THE Sussex County A.C., one of the clubs included in the membership of the Motor Union, have recently performed a very useful service by successfully prosecuting a motor school at Brighton, and the Union have decided to make a financial grant towards the costs of the prosecution. The procedure of the motor school in question (which we exposed at the time) was to advertise that on receipt of 5s. they would secure a place for any motor-car driver who might be out of work. They received money from several men, but never secured, or even attempted to secure, one of them a situation. They also advertised that they taught driving for the sum of £2 10s., though they did not possess a car, and one or two men who paid the money were never taught to drive, nor did they see their money again. It was in respect of these frauds that the Sussex Club took action, with the result that one of the offenders—there were two of them—was sent to prison, and the other was given the benefit of the First Offenders Act and released.

Lawyers as Motorists.

IN the old days it was customary for barristers on Circuit to move about in a "four-in-hand," a system that was not finally dispensed with until a quarter of a century ago. We hear, however, that something of a revival of this is occurring in the Leinster Circuit, where some half-dozen members of the Bar have chartered a motor-car to convey them from the Four Courts at Dublin to the various Assizes in which they are engaged. Many instances have lately been given of ecclesiastical favour for the motor vehicle. This, however, is a pioneer

illustration of its adoption by the legal profession. Possibly this close acquaintance with the motor-car may save a good many foolish legal jokes at its expense in the future.

The Press at Brooklands.

THE promoters of motor race meetings at sea-side places do not appear to have been fortunate in escaping troubles during the last few years, litigation having followed the gatherings at Bexhill, Brighton and Blackpool with considerable effect. At the first-named resort only has there been any serious attempt to continue the sport as a permanent attraction. At Bexhill local opposition has lately been very pronounced, and the Commercial Association of that town have protested against the holding of race meetings during the holiday season as not conducing to the financial prosperity of the place. It would appear that the objection occurs in closing the main roads to the public for even a day or two; and all things point to Brooklands Track as likely to become the centre of speed work in this country. In this connection we would suggest to those responsible for the management of the pioneer Motor Course in Europe that they should recognise and assist the Press more than they have done thus far. All sections of the motor business

licences, but also declining to inspect motor vehicles for which such permissions were sought. In view of the development of motor-bus traction in London, Birmingham, and other large cities, the inaction of the Manchester authorities would appear unwarranted and unreasonable.

Running the Blockade.

THERE is a Naval Motor Club at Portsmouth that has recently attempted to avoid the ordinary ruts along which club gymkhanas seem to run. They had a meet in which the idea was developed that the blockade had to be run. Petersfield was imagined to be in the hands of an invading army and held by twenty-six motor-cars or motor-cycles. The blockade runner was to be a member well acquainted with the roads of the district and mounted on a car. Mr. F. T. Jane, the naval author, who is an honorary member of the club, was selected to run the blockade, and he made the attempt on his 30-h.p. Beeston-Humber. The invading army was under the general command of Lieutenant A. Rice, R.N., with Sub-Lieutenant Tracey, R.N., secretary of the club, as second in command. The vehicles available for the blockaders ranged from a 70-h.p. Panhard down to a 3½-h.p. motor-bicycle. The

The Inaugural Race Meeting on the Brooklands Track.

will acknowledge that those journals which have devoted themselves exclusively to their interests have been great educators of public opinion, and have rendered substantial advantage to the industry as a whole. The position of the motor vehicle from its commercial side having thus been assisted, we are surprised that those responsible for its development in the sporting sense have not shown greater eagerness to facilitate newspaper arrangements for duly recording and describing the events taking place on the track. Previous associations will make clear to the responsible parties the suggestion that "a nod is as good as a wink," and probably they will see it is to their interest as well as to that of the public that the regulations with regard to the various members of the staffs of important motoring journals are not restricted in such a way as to minimise the importance of the gatherings to be held on Brooklands during the season.

Motor-buses for Manchester.

THE fact that the Stretford authorities have just determined to give a trial to a motor-bus for the convenience of the public should do something to revive interest in the adoption of such vehicles in and around Manchester. Hitherto the authorities of that city seem to have adopted an attitude of hostility to the motor-bus, not only refusing applications for

invading army's cars were by the rules divided into twelve groups, the units of which had to keep within a few miles of each other at all times. In the result, Mr. Jane succeeded in getting the whole way into Petersfield unobserved. He did so by traversing roads over which no motor-car has ever before been or is likely again to go, as the route necessitated descending precipitous hills on a road that has been practically disused for a hundred years. It is to be found upon the ordnance map, running from Hambledon Race Course to the village of East Meon.

MR. CLAUDE BULLMORE, of Paignton, Devonshire, while attending the Grand Prix Race, was so impressed with the excellent running of the Weigel cars that immediately on his return to London he placed an order for one, the Weigel No. 1 being his particular fancy. To show how enthusiastic this gentleman is, he has entered the car for the Circuit des Ardennes race, which is being held on the 27th inst. Mr. R. Laxen, who was one of the drivers in the Grand Prix race, will drive the car, and Mr. Bullmore, whose initiation into motor racing this is, will act as his mechanic. Weigel Motors (1907), Ltd., have entered their other racing car, along with Mr. Bullmore's, for the Vanderbilt Cup and the Circuit des Ardennes.

Notes on the A.C.F. Grand Prix Race.

By D. M. WEIGEL.

TUESDAY last week, when the contest for the A.C.F. Grand Prix was held, was hardly a lucky day for England, or for the two Weigel cars. The bad luck, however, which was experienced had nothing to do with either the vehicles or the men who drove them, any chance that they may have possessed for victory being utterly ruined by the detachable rims employed. I prefer not to mention the name of the rims. Unfortunately we had not a chance to try them, or we should have found out the error of our choice in plenty of time. They only came into our possession on the Saturday before the race, when we were in France, and immediately we tried them we knew that any chance of success was out of the question. The experience of Mr. Laxen in the race was unique for the trouble he had with his rims. He started

with wheels which had not detachable rims, and Laxen, together with his mechanic, working like niggers, got the front pair on in twenty minutes—a very creditable performance. His next lap was without any of these unfortunate experiences, but, naturally, he had hardly the courage to go full speed, seeing that he still had two of the troublesome detachable rims on his back wheels. Without stopping he passed on for his third circuit, and again he was a long time in turning up. When he eventually did arrive he gave us the information that one of the back rims had come off, and, unfortunately, injured a man. I examined the wheels myself and found there was daylight between the detachable rim and the permanent rim in places over one-quarter of an inch, and that the whole thing was relying upon two very little bolts, and, coming to the conclusion

The Grand Prix Race.—Pryce Harrison on the Weigel car, near Londiniere.

well, but about two and a-half miles from the grand stand his first rim and tyre came off, flew up into the air, hit a temporary wooden bridge, and rebounded on to the mechanic, who was stunned for a few minutes. Laxen naturally looked to the latter first, believing he was killed. He was anything but dead, however, and after a short rest from the shock put the rim back again, they believing they had badly attached it in the first place. Off they started again, but three or four miles further up the same rim (a front one) flew off and disappeared into a field, where in all probability it still remains. They put on their spare rim and started off again, but in the next three or four miles the back rim flew off, and that also disappeared over the hedge. They put on their remaining rim, but within two or three hundred yards the other side back rim came off, and Laxen drove on to the first tyre control on three wheels, where he picked up another rim and replaced it, and took with him two spare rims. To cut an unfortunate story short, he had the same experience in the second half of the lap, and finished his first circuit with the two front rims tied on with rope. Altogether the rims came off five times in the first lap. On his arrival at the Tribune he replaced the two front wheels

that to continue was dangerous to the drivers and also to the public, I instructed Laxen to stop.

Harrison's experience was practically the same. He, unfortunately, started badly, missing a minute in his start. He punctured a tyre, and occupied, roughly speaking, a minute in changing, and he completed his first circuit in 46 min. Seeing that he had never been over the course before excepting once, on the Thursday morning before the race, when the track was covered by a crowd of about 30,000 townspeople from Dieppe, I think it is sufficient proof that the cars were fast enough for the object they were made for. Harrison finished his first circuit in a fair time, and we were all somewhat recompensed for the non-arrival of Laxen. But he failed to turn up on the second circuit, and we again became anxious. When he eventually did appear he arrived without any spare rim, and without any rim upon his off side back wheel. He had therefore shed two rims in the course of the second circuit. He started the same operations as Laxen, but instead of taking off his front wheel he took off the back one, and replaced with wheels not having detachable rims. This occupied 35 min., and whilst he was working we were given the unfortunate information that one of the rims had in the

course of its flight unfortunately hit a woman, and I have since been informed that there is a possibility of the unfortunate person not recovering. Having changed his wheels, he started on his journey, still having two front wheels with detachable rims. Whilst he was away on his third journey Laxen arrived, and I made up my mind to stop Harrison as soon as I had the chance, but he went by the grand stand before I had an opportunity of stopping him. He did not go far, however, and eventually walked home across the field, with the information, on this occasion, that both rims had come off together, and he was minus any front tyres at all! All the efforts we had made to put up a creditable performance in the Grand Prix were absolutely spoiled by the use of unsuitable rims. The cars behaved splendidly, and so did the men, and I have no hesitation in saying that there was not a more reliable car in the race than the vehicles we had entered. As regards their chance of winning, I am quite candid in saying that I do not believe they were fast enough to beat the Mercedes, Fiat or Lorraine-Dietrich, but I am convinced there was not another vehicle in the contest that they could not have beaten on that course in speed alone, and taking all the luck and chance that helped to throw out the unlucky ones, I have no hesitation in believing that had the cars been fitted with good rims we could have been placed third or

ready. The cars that gave me the best impression were the Lorraine-Dietrich, and they were unfortunate in losing. Duray's performance, in my opinion, was wonderful; he had Lancia at his mercy at the end of the first lap, and I believe could have passed him in the second one. But, from my own experience, I know how difficult it is to pass on a narrow course, and he had to wait his time. In the race between Lancia and Duray there was, in my opinion, only one in it, and that was Duray. The two men were ultimately unlucky, both breaking down. Nazzaro's victory, in my opinion, was a piece of luck. At one time Wagner was miles ahead of him, and his other stable companion equally so. Now, as these three men were upon the same cars, it appears, upon the face of it, that Nazzaro was not able or did not care to go the pace his friends did, or possibly he was driving to instructions. But, no matter what the cause may have been, he had no chance at eight and a half laps, and it was purely by the misfortune of his two stable companions and the Lorraine-Dietrich driver that he came home a winner. As regards the other cars, I was disappointed in the Darracqs. They were beautiful little cars to look at, and I greatly fancied them, but they had no speed in comparison with the other vehicles. The Renaults I did not fall in love with, and although, through the accident which occurred to Duray and Lancia, Szisz was actually

The Grand Prix Race.—Nazzaro (the winner) on his Fiat car, passing through the little town of Lendiniere. The illustration shows how all the towns and villages on the course were barricaded for the protection of the public.

fourth. I should like to say that the Dunlop tyres fitted to the cars behaved splendidly, and, as a matter of fact, no fault of any description can be attached to the tyres. The whole fault was in the rims, which were not of our make.

So much for England's unlucky venture. As to my general impression of the race, I think it was the finest that has ever been held. On the day of the contest itself the organisation was perfect. The rules were carried out within their meaning—leniently, yet sufficiently strict, and taking into consideration the fatigue of the men. I consider the officials were just and fair to everybody, no matter what their nationality. I can hardly say as much for the day of verification. If races on fuel limit are to continue, some other system of organisation will have to take place. My cars were not passed until close on midnight, which, seeing that racing started a few hours afterwards, is distinctly unfair to the drivers. There was too much rushing about; everything was done correctly, but it was Bedlam let loose. There were thousands of people all round the cars who had no right to be there, and who impeded the work in progress.

My impressions of the cars, borne out by the times, are distinctly that the Mercedes were the fastest cars on the course. Jenatzy's wonderful lap proved that, but either the vehicles had been lightened too much or the Mercedes Company were not

leading at one time, the machines were not by any means sufficiently fast to win the race on merit.

We have been very unlucky in the Grand Prix, but we have had our lesson and will take it to heart. Two cars will race in the Circuit des Ardennes, and, without hoping to win it, I believe they will be well placed. It must be taken into consideration that the two Weigel cars are practically touring vehicles, being the mere coupling of two touring engines, and I repeat that I have no hesitation in saying that these cars with the exception of the three I have named were the fastest on the Seine Inferieure course.

Viewing the A.C.F. Grand Prix race as a whole, I consider that France is still the centre of motor-car racing, and if British manufacturers wish to obtain a world wide repute and not merely a local one, they would be well advised to assist each other in entering cars for the Grand Prix, and I hope that next year, instead of there being two Weigel cars entered to battle for England, there will be a good assortment of Daimlers, Napiers, Wolseleys, and other leading makes. If they all entered three cars, our chance of winning would be 500 per cent. greater, and, no matter who might be the winner, he would certainly shower credit upon the losers, to the general benefit of the whole of the British industry.

SCOTTISH TRIAL NOTES.

WE cannot but view with repugnance the action of the police authorities who, on the road between Glasgow and Carlisle, on the day following the Trial, were on the outlook for motorists travelling south upon the conclusion of the event. They doubtless counted upon the fact that the drivers had been carefully limited to twenty miles an hour for the whole of the previous week, and that their natural instinct would prompt them to race southwards on Sunday afternoon. There is something almost contemptible in thus planning to trap them instead of affording them a warning, which would have served the purpose. As it was the police were foiled. Two motorists were caught at Ecclefechan, but they succeeded in warning a car which was going north, which in turn warned others going south.

A NEAT pamphlet has been issued by the Dunlop Pneumatic Tyre Co., Ltd., giving the results of the performances of their tyres fitted to cars in the recent trials. The percentage of non-stop runs on these has increased year by year until last month, when 64 per cent. of such runs were accomplished on the Dunlop tyres. Telegrams from sixty of the competitors in the trials are given, showing their appreciation of the performances of Dunlops over roads which were often in a very bad state.

The 12-14-h.p. Argyll on the "Rest and be Thankful Hill," in the Scottish Trial.

DR. A. H. DEANE, a member of the committee of the Motor Union of India, was among the passengers taking part in the Trial.

FROM London, Major Lindsay Lloyd and Mr. G. T. Langridge went to render assistance at the Trial, the latter being merrily engaged in marshalling the vehicles in their resting places for the night. Then, too, the thanks of the Club are due to the dozen firms who lent cars for the transport of officials; to the police, who directed the cars through villages and towns; to the road authorities, who did much to improve the roads the month before the Trial; and to the good fellows who, driving free-lance cars, bothered the competitors on the first day, and who accepted the Club's invitation to resist the temptation subsequently. To all these, and many others, the Scottish Club and the competitors in the Trial are rightly grateful—and we are glad to be a means of communicating this appreciation of willing work to the gentlemen directly concerned and the motoring community that is interested in the success of their efforts.

DESPITE the care taken with regard to the petrol supplies some serious mistakes were made. Water was supplied to one of the Argylls instead of petrol, and the mixture of water with the spirit spoiled Mr. Sidney Girling's chances of a clean non-stop record on the 50-h.p. Darracq.

ON the last day memories of the Stuarts rose at Logierait, where was also a picturesque poorhouse—one of the most admirably located of such institutions in northern Britain. Then by the Tay, splashing and winding along the valley, dashing over boulders and murmuring along by Grandtully, with its fine baronial castle, we entered into a region of agricultural prosperity. The scenery was reminiscent of fairest Devon, the atmosphere as delightfully soft, and the country looked as though 'twere yet spring. They have not had summer in Scotland, although the beaming sun of the last day of the Trial gave hopes to Glasgow in that respect.

By a clerical error on the part of the secretary's staff in posting up the provisional results, some hill stops and shedding of passengers were recorded against the 10-12-h.p. Swift car. This was, however, incorrect, and was only discovered when a more minute examination of the reports was being made after the event. The mistake arose owing to the Observer having made some notes which had reference to other cars, and which were placed against the little Swift. This serious blunder on the part of the official Observer was copied into the columns of all the motor journals that gave a complete account of the event, including the official details. Those, however, who saw the way in which the car took the hills were puzzled at the entry, more especially as in the special telegram published in the *M.C.J.* of the 29th we were able to record that the 10-12-h.p. Swift was the fastest in its class up the hill on the first day. It made a remarkably good performance throughout the Trial, as did also the 15-18-h.p. vehicle from the same works.

THE bad luck of the Chenard-Walcker in turning over, and the good luck of the passengers in not being hurt, were two facts that gave excitement to the first day's run. This car seems dogged with misfortune in the Scottish Trial. Last year the transmission gear of the competing vehicle went awry on Deeside, sixteen miles from a railway station. It had to be stalled in a stable until equine efforts the next day enabled its return to town by train. Fortunately this year no such mishap occurred, although the somersaulting of the car constituted a driving stop, causing the loss of marks.

THE floral tributes were as profuse as ever, and bunches of broom, peonies, rhododendrons, and roses were thrown into the cars, particularly about Aboyne and Ballater. At the latter place for the third year, nosegays, with accompanying good wishes to the motorists, found their way to the cars from Miss Mary Pittar and Miss Jessie Noble, of Turner Hall. One car received a bottle of whisky; another a loaf of bread, in this way.

IN view of the success of Ariel-Simplex cars in the Scottish Reliability Trials, when they won ten hill climbs out of a possible twelve, it can hardly be a matter for surprise that other competitors should have questioned whether extraneous help was employed. "Oxygen" was so freely mentioned that the Chairman and Secretary of the Scottish Automobile Club made an inspection of the Ariel-Simplex cars, and particularly wished to know what was in the ordinary standard lubricating oil tanks attached to the chassis frames. These gentlemen were satisfied in every way, but to prevent any possibility of a misunderstanding, Ariel Motors (1906), Ltd., inform us that they know nothing whatever about the advantages or otherwise of oxygen. They have never even experimented with it, and have always used in all the various competitions in which they have been so successful the petrol supplied by the various clubs or the ordinary commercial article—sometimes bought from the local agent on the spot. Without exception they have always used cars of standard engine dimensions and wheel bases as supplied to the public and standard touring bodies; in fact, cars which they are selling regularly and which they are glad to supply to anyone and everyone.

THE HOTCHKISS SIX-CYLINDER CAR.

CONSIDERABLE interest is being taken in the long distance run which is at present being made by a Hotchkiss six-cylinder car, under the auspices of the R.A.C., the importance of the trial being increased by the fact that the identical vehicle had previously made a tour of France, during which time it successfully covered over 6,000 miles, bringing its record to date to about 15,000 miles. Some brief

cam-shaft. The plugs are mounted above the inlet valves and can be readily removed for inspection and cleaning. The carburettor is of a special type, the size of the jet being varied in consonance with the air inlet, thus the amount of petrol and air is automatically regulated in accordance with the position of the throttle, which latter is controlled by both hand and foot levers. The admission piping is arranged in such a way that an equal distribution of the gas to the six cylinders is obtained. The water circulation is maintained by a gear-driven pump and the Hotchkiss

Fig. 1.—Plan of Hotchkiss Six-Cylinder Car.

particulars of the car have already been given in the *M.C.J.*, but we are now able to give a more detailed account of the various features, together with a number of illustrations of the principal parts. The frame of the vehicle, which is of pressed steel construction, is narrowed at the front to increase the lock of the steering wheels, and raised at the rear to give clearance for the differential casing. A general view of the motor, which is rated at 45-h.p., is given in Fig. 2, from which it will be seen that the cylinders, 120 mm. bore by 120 mm. stroke, are

Hotchkiss type of honeycomb radiator, an air-inducing fan being also provided. Compression taps are fitted, and large inspection covers arranged above the valves. Taps are also fitted to the lowest part of the water jackets so as to facilitate drawing off the water in frosty weather. Special attention has been devoted to the question of engine lubrication, which is effected by an improved form of lubricator. The oil tank is located under the bonnet, which not only prevents any dripping on to the floorboards but keeps the lubricant in a

Fig. 2.—View of Hotchkiss Six-Cylinder Engine.

cast in three pairs. The interchangeable valves are located on opposite sides and operated off separate cam shafts. The half-time pinions are enclosed in an aluminium casing in front of the motor, thus effectually protecting them from dust and dirt, and also muffling all noise. The crankshaft, as is usual in Hotchkiss cars, is mounted on ball bearings.

The ignition is by Eisemann high tension magneto located on the left side of the engine and gear-driven off the exhaust valve

fluid condition even in the coldest weather. The circulation of the oil is effected by a pump operated by an eccentric off one of the cam shafts, which forces it through sight feeds on the dashboard and thence to the various parts of the engine.

Coming now to the transmission, and dealing first with the clutch, this is of the leather-faced cone type, small flat springs being fixed at intervals under the leather to give a progressive engagement. A double universal joint is fitted on the shaft

between the clutch and the gear-box, which compensates for any flexibility of the chassis due to road shocks and ensures it being always truly centred in the flywheel. The gear-box, a view of which is shown in Fig. 4, which is supported on cross members immediately behind the clutch, is adapted to give four speeds and a reverse with direct drive on the high gear. The control is by a single lever working in a "gate" quadrant. The final transmission is by a cardan shaft and bevel gear to a rear live axle. The former is provided at each end with a universal joint, that

are provided with very neat adjustment nuts, which are so made as to provide their own locking device and a "tommy-bar," a refinement which, by reducing the trouble of adjustment, increases the chance of the brakes being always in order. The frame is carried by semi-elliptic springs at the front and rear; the back springs lie outside the side members, and while their front ends are hinged, their rear ends are supported by a shackle on long dumb-irons. The front axle is bent downwards at the centre, and the forks of the steering heads are forged in

Fig. 3.—Elevation of Chassis of Hotchkiss Six-Cylinder Car.

to the front being of the ordinary gimbal type, while the rear one permits of the longitudinal as well as angular displacement. These joints are thoroughly lubricated, both of them being covered by a dust proof cap which is filled with grease. The rear axle comprises two tubular sleeves, which are bolted to a steel casing containing the differential and bevel gear. This casing is in two parts, assembled horizontally, an arrangement which permits the removal of the upper part, thus rendering the

one piece with it. The steering gear is of the screw and nut type, and the ball and socket joint between the lower end of the steering arm and the connecting rod is arranged in such a way that it cannot become disconnected. The car, which is remarkably quiet and flexible in operation, has a wheel base of 11 ft. 1 in. and a track of 4 ft. 7 in., enabling a roomy side-entrance body of the closed or open type to be fitted to the chassis. We may add that the London and Parisian Motor

Fig. 4.—The Hotchkiss Change-Speed Gear.

differential readily accessible for inspection and cleaning, or for changing the gear. The rear road wheels are mounted on ball bearings secured to the tubular sleeve, and are driven by the shafts contained in the latter. The live axle proper has consequently only the driving chain to withstand, the weight of the car being taken by the sleeve.

The car is provided with two brakes: 1, A foot brake acting on a drum secured to the end of the main shaft of the gear-box. 2, An expanding hand brake acting on the interior of two steel drums on each of the back wheels. The brake rods

Fig. 5.—View of Bevel Gear Drive, with upper half of case removed, on Hotchkiss Six-Cylinder Car.

Company, Ltd., are the British agents for the Hotchkiss vehicles, which rank among the high-grade productions of France.

THE Rev. Dr. Eyre, of Scarborough, says that in the near future every young and vigorous prelate will have his motor-car.

THE Competitions Committee of the R.A.C. have investigated the records of the Tourist Trophy Race, and have come to the conclusion that 288 oz. of petrol were left in the tank of the 14-h.p. Vulcan car, and not 188 oz. as stated in error by the club officials at the time.

AN interesting little guide to the beauties of Scarborough has been issued by the proprietor of the Broadway Hotel in that resort.

MR. EDWARD COLES, of 10, Myrtle Road, Acton, W., has sent us some particulars of an improved two-cycle petrol motor he has devised, in the development of which he is anxious to meet with someone to financially assist him.

SEVERAL of the winning cars at the Birdlip Hill Climb used "Shell" spirit, including the Metallurgique driven by Mr. Oscar Cupper and the Mors steered by Mr. L. Carle.

MR. G. CHURCH, the proprietor of the "Grand" Motor Works and garage in South Street, Worthing, has now a complete plant for repair work of every kind on the premises.

It is worthy of note that not only did the Brasier Company secure the third place in the A.C.F. Grand Prix race last week, but it was the only firm whose complete team of three cars finished the entire race, thus repeating its achievement in the 1906 Grand Prix.

MOTORING visitors to Lancashire on the occasion of the Motor Union meet at Southport, on July 20th, will find the garage of Argylls Liverpool, Ltd., in Leece Street, Liverpool, well equipped not only for the storage of cars, but for carrying out any necessary repairs.

A MOTORIST was run down and seriously injured by his own motor-car at Bath recently. Having apparently not placed the change-speed lever in the neutral position, he was using the starting handle in the front of the car, which, thus set in motion, knocked him into a stone wall.

LORD KENSINGTON has collected over £900 towards the purchase of a car for the Bishop of St. David's. In a few days it will be informally handed over to the bishop, at whose request it is to be regarded as belonging to the bishop of the diocese, and not as his private property.

THE four Brown cars which have been touring Ireland with the members of the Royal Commission on the Congestion of Ireland, have now completed 7,152 miles on Irish roads, and the only mishaps have been two punctures and a broken petrol pipe—an excellent record, taking into consideration the state of the roads the vehicles have travelled over.

ON Tuesday the King went on a motor trip through Snowdonia, receiving addresses at Bethesda, Llanberis and Carnarvon, and at Capel Curig, from the Festiniog quarrymen, a slate fan. The Queen and Princess Victoria motored to Baron Hill, Beaumaris, where the King rejoined them. The party then motored back to Menai Bridge and returned to Holyhead.

AN 18-h.p. Buick car will go on a twelve hours' non-stop (engine) run in London traffic on Thursday of next week, the start being at 9 a.m. from the R.A.C., 119, Piccadilly. The route includes Trafalgar Square, London Bridge, Kingsway, Finsbury Circus, Marble Arch, the Bank, Sloane Street, Olympia, Rosebery Avenue, Regent's Park, &c.—a course involving repeated journeys to the City and through crowded parts of the West End.

THE Texaline Company, Ltd., of 33, Chancery Lane, London, E.C., have brought out a compound which they offer to motorists for the removal of dirt and grease from the hands. Texaline is a rich lathering cleanser, and is put up in small tins of a convenient size, so that the motorist can carry it with him when on tour. Those who have not yet found an effectual remover of dirt will be well advised in giving a trial to this new preparation.

THE last American mail brings the news that the week previous to Mr. Edge's record run on the Brooklands track a 40-h.p. Ford six-cylinder car set up a new American twenty-four hours' record, covering in that time a distance of 1,135 miles. The event took place on the State fair grounds track at Detroit, Mich., U.S.A. Nine cars competed, and eight succeeded in completing the long test. The Ford, which proved the winner by twenty-four miles, was driven in turns by Messrs. F. Kulick and B. Lorimer.

HERE AND THERE.

MOTOR char-a-bancs for holiday parties are being hired out from the Bearwood depot of the Smethwick Electric Supply Company.

MR. HENRY J. RANGER has lately opened a new garage at 174, Gloucester Street, Christchurch, New Zealand. The building is well lighted, and is fitted with a large turntable, inspection pit, tyre vulcaniser, charging plant, &c.

MR. CHARLES LYON has opened a new motor garage in Black Lion Street, Brighton, at the rear of the Old Ship Hotel. This is open by night as well as by day. Separate lock-ups are provided for cars, and the Black Lion garage has also a large stock of accessories, &c. Motor repairs, vulcanising, &c., are also undertaken.

THE great publicity given in the Press to the forthcoming Godiva Processional Pageant is certain to take a large number of visitors to the city of Three Spires on August 7th next. Those of our readers who intend being among the number may be glad to hear of means of securing viewing and car storage accommodation, as there will be no chance of doing so on arrival. They should communicate as early as possible with Mr. W. E. Ward, c.o. Messrs. Peto and Radford, Ltd., 128, Much Park Street, Coventry.

THE performances of the Beeston-Humber car in the Scottish Reliability Motor Trials have been shown on the bioscope at the Palace Theatre, London, during the week. The photographs were taken from a special Beeston-Humber car, and give an excellent idea of the delightful scenery of the Scottish Highlands, as well as of the character of the course and the severity of the trials.

THE business of Mr. E. Hy. Jones has been transferred from Church Street, Islington, N., to Thames Bank Wharf, Lupus Street, and Grosvenor Road, Pimlico, S.W. The new premises cover an area of upwards of 100,000 ft., and the newest and most approved methods of production will be installed. The wood-working machine shop alone covers an area nearly equal to the total floor area at the Islington premises.

THE six-cylinder Hotchkiss which is at present undergoing a long-distance trial under the supervision of the R.A.C. has now completed 9,000 odd miles in Great Britain, in addition to 6,200 miles accomplished in France before the commencement of the present trial, making a total mileage done by the car of 15,200 miles, and this without any mechanical trouble. Last week's runs were as follows:—July 1st, Norwich to Leicester, 157 miles; 2nd, Leicester to Derby and back, 154; 3rd, Leicester to Buxton and back, 153; 4th, Leicester to Nottingham, 170; 5th, Nottingham to Buxton and back, 153; 6th, Nottingham to London, 155.

New members of the R.A.C. include Mr. W. J. Crossley, M.P., and Mr. F. Layland-Barratt, M.P.

It is stated that by his three victories this year—the Targa Florio, the Kaiser's Prize, and the A.C.F. Grand Prix—Nazzaro, who is only twenty-six years of age, gained about £8,000.

MESSRS. H. D. WOOLLEY AND CO., of 25-29, Coleman Street, E.C., have brought out the H.D.W. pump gauge perfecter which we illustrate herewith, the actual size of the device being thus shown. To use the device the end A is screwed into the pump connection. The swivel C is then attached to the tyre valve, care being taken that the end E is sufficiently unscrewed to withdraw the lifting pin B level with the washer inside the swivel. The end E is then screwed until

the needle in the pump gauge is deflected to show the actual pressure in the tyre. Should it be thought advisable to further inflate the tyre pumping is continued in the usual way, and when the required pressure is registered in the gauge the instrument is removed, care being taken to unscrew the end E, which controls the lifting pin B. By this means the motorist is provided with a gauge that registers the air in the tyre, not on the way to it. The simplicity and utility of the device are self-evident.

AN interesting demonstration was given last week at the Piccadilly Circus Garage, London, W., of a new puncture stop which has been brought by Mr. M. G. B. Jefferson from Australia, where it is said to have already proved its merits. "Miraculum," as the preparation is called, is a semi-liquid compound, of a consistency and colour similar to cream, which is injected in a cold state through the valve into the inner tube. As the wheel to which the treated tyre is attached revolves, the Miraculum is spread on the inside walls of the tube, ready for a small portion to be forced into the hole formed by the puncture when the latter is sustained. The nature of the preparation is such that when in contact with the atmosphere it congeals and forms a substance not unlike rubber, so completely filling up the wound. To demonstrate the efficacy of Miraculum a set of tyres on a 14-h.p. Star car had been treated therewith. Into one of these a 6-in. nail was forced by a hammer to a depth of 3 in. On withdrawing the nail the vehicle was quickly driven out of the garage for a short spin, and on its return it was found that the punctured tyre was standing up quite hard, indicating that the preparation had properly done its work. The tyre was afterwards purposely deflated, and the tube withdrawn, when it was found that it had at one time or another been punctured at least six times. Miraculum adds about 6 oz. to the weight of a cycle inner tube, the addition to those for motor-cars being in proportion to the size. It is claimed that there is no loss of resiliency by the use of the compound, and that its only effect on the rubber is in the direction of preserving the same. In proof of this we were shown a tube which was treated nearly two years ago, and which certainly appeared in excellent condition. Another advantage lies in the fact that it does not prevent any large hole or burst in the tube being repaired by vulcanisation in the usual way. Arrangements are now in hand for the manufacture of Miraculum in this country, and for treating motorists' inner tubes with the same, as well as for supplying new prepared tubes.

"No houses to let" is the notice which some Coventry house agents have lately been exhibiting—a result of the great development of the motor industry that has taken place there.

THE worst stage of the Pekin-Paris motor race has now been passed by four of the five cars that started from Pekin on June 10th. Prince Borghese on his Itala led the way to Irkutsk, and there M. Godard (Spyker), M. Cormier and M. Collignon (De Dions) last week enjoyed a short rest. The latest news to hand is to the effect that the Prince has reached Krasnoïarsk, 380 miles from Irkutsk.

MR. C. JARROTT has had to put off for the present his attack on Mr. S. F. Edge's twenty-four hours' record on the Brooklands track. Prior to Mr. Edge's run he had engaged the track for that purpose, but the proprietors have refused to allow any more twenty-four hours' records at present, on the grounds that the noise and turmoil cause great inconvenience to the neighbourhood of Weybridge and Byfleet, and that the track has proved to be too freshly laid to successfully withstand the continuous strain of wheels rolling over the same line during twenty-four hours. They have, however, promised to give Mr. Jarrott the first refusal of the use of the course whenever they decide to have another twenty-four hours' record.

ONE of the most extensive catalogues which we have lately received comes from Messrs. Mestre and Blatge, through their sole British agents, Messrs. Monnet Plasse and Co., 20, Store Street, London, W.C. This consists of more than three hundred pages of large size, with illustrations which must run into thousands. Each section is therefore complete in itself, and but the merest indication of the exhaustive character of the contents can be given. Mention may, however, be made of the "Dietz" and the Alpha lamps, scores of types of horns, whistles, goggles, tool kits, jacks, &c., trunks and boxes for motorists on tour, lubricators, electrical specialities, "Nieuport" magnetos, chains, and, in fact, everything that the agent or motorist is likely to require. Messrs. Monnet Plasse and Co. should find considerable accession to business from the issue of this comprehensive commercial volume.

THE illustration herewith depicts the patent detachable motor-car wings or mudguards recently devised by Capt. W. G.

The Patent Wing as fitted to the "Windham" Detachable Bodies.

Windham, of the "Windham" Sliding Detachable Motor Body Company. It will be noticed that the irons, which are slotted, fit into little bolts on the underpart of the wings and are tightened up with two butterfly nuts, spring washers being provided to keep them tight. The utility of the idea, which was invented by Captain Windham, can be readily seen. If one gets a puncture in the tyres, the wings can be easily detached in three to four seconds; also when washing the car, instead of washing the dirt off the wings on to the wheels, the former can be removed, turned upside down, and properly cleansed; also for fitting detachable bodies the wings, which can be adapted to any chassis, can be adjusted to suit a wide or a narrow body.

CONTINENTAL NOTES.

The Brescia Race Meeting.

Already close upon fifty entries have been received by the Automobile Club of Milan for the races which are to be held on the Brescia circuit on September 1st and 2nd. Among them are three Fiats, three Italas, three Rapids, three De Luca-Daimlers, three Isotta-Fraschinis, three Benz, three Wolsits, three S.P.A.'s, &c.

The Paris-Ostend-Paris Reliability Trial.

The awards in the four days' reliability trial organised by the Autocycle Club de France have now been made known. In the voiturette class (under 90 mm. cylinder bore) the Roussel car secured the gold medal, while in the 100 mm. section the first place was taken by the Demeester vehicle.

Cheaper Tyres.

The Continental and Michelin companies have just announced a reduction in the price of their tyres varying from a few shillings to over £3 per cover, according to the size.

The Belgium Criterium.

The Belgian motoring season opened on Friday, the 12th inst., with the weighing-in, at Spa, of the cars entered for the competiton known as Le Criterium Beige, organised by the Antwerp, Flanders, Liege, and Namur-Luxembourg, Spa and Verviers Clubs. The contest is a novel one, as it comprises an eliminating reliability run from Spa to Ostend (274 kilometres), where a series of speed trials on the level and on hills are to be held, the latter being worked in the programme of the Ostend automobile week. Afterwards the competitors, who will be divided into nine classes, ranging from single-cylinder cars to powerful four-cylinder touring vehicles, will continue the run to Calais, Boulogne and Rheims, Spa again being reached on the 20th inst.

Lap Times in the Grand Prix.

The appended list shows the lap times of the first three to finish the A.C.F. Grand Prix race. The best time of the day was that made by Nazzaro in the ninth round—38 min. 24 sec., which is equal to seventy-five miles per hour. It is noteworthy, too, that all the three drivers quickened up their speed in the second half of the race.

Lap.		Nazzaro. (Fiat.)		Sziiz. (Renault.)		Baras. (Brasier.)	
		M.	S.	M.	S.	M.	S.

10.	...	38	35	39	25	40	23

Fuel Consumption in the Grand Prix.

It will be remembered that the Grand Prix race was run on a petrol allowance basis—30 litres per 100 kilometres, equal to 9.47 miles per gallon. Roundly, 231 litres of spirit were served out to each competitor, and the gold medal for the lowest petrol consumption has been awarded to the Darracq driven by Rigal, who, as will be seen from the following table, had 42½ litres of essence left.

Table showing amount of fuel still in hand at end of race:—

Driver.	Car.	Litres.
Rigal ...	Darracq ...	42.49
Barillier ...	Brasier ...	42.12
Baras ...	" ...	38.83
Caillois ...	Darracq ...	35.58
Sziiz ...	Renault ...	30.95
Shepard ...	Bayard Clement ...	30.32
Garret ...	" ...	13.70
Gabriel ...	Lorraine Dietrich ...	11.80
Nazzaro ...	Fiat ...	11.24

French Motor-Car Imports and Exports.

It was announced at the meeting of the French Chambre Syndicate de l'Automobile last week that the imports of foreign motor-cars and parts into France during the five months ending with May last had attained a value of only £131,640, a decrease of £23,720 as contrasted with the corresponding five months of 1906. On the other hand, the exports of motor-cars and parts from France during the same periods had advanced from £2,338,680 to £2,665,000.

Touring in Southern Europe and Northern Africa.

In the opinion of Mr. George C. Tyler, of New York, who recently completed an extensive tour in Northern Africa, that country will eventually become a paradise for motorists. This is Mr. Tyler's fifth season of motor touring in Europe, and in many respects he regards it as the most delightful. He found a country of perfect roads, beautiful scenery, and excellent accommodation, and at the same time was far removed from the beaten track and quaint surroundings to be found elsewhere. Mr. Tyler went from Paris to Marseilles, thence to Genoa, Florence, Rome and Naples, through Calabria and Sicily, and thence by steamer to Tunis. From Tunis a journey was made

The Grand Prix Race.—Duray and his *mechanicien* returning to the Grand Stand after the breakdown of their car.

through Soussa, Monastir, Sfax and Gabes to Tripoli, stopping at the famous mosque in Kirouan. Mr. Tyler's trip was made on his new 45-h.p. Renault car, on which he has covered nearly 10,000 kilometres.

Miscellaneous Items.

A six-wheeled Brillie motor-bus has recently undergone some trials in Paris, using naphthalene as fuel.—The N.A.G. Company, of Berlin, have lately supplied a single-deck motor-bus for service in Varna, Bulgaria.—A new compound known as Elastin, to replace air in the inner tubes of motor tyres, is just now attracting attention in Germany.—The first motorist to make the journey over the St. Gothard this season is said to be M. Andre Soares, of Cairo, who, driving a 30-h.p. Renault, found the road still thick with snow in many parts.—It is announced that the Spanish Army Council will shortly require tenders for about fifteen motor-cars for experimental purposes, scouting, &c.—The Automobile Club du Rhone is organising a hill-climbing contest on the road from St. Chamond to Mont Pilat for September 22nd next.—Twenty-three entries have so far been received for the first of the Circuit des Ardennes races and nine for the second.

CORRESPONDENCE

[Letters to the Editor should be addressed to the offices,
27-33, Charing Cross Road, W.C.]

THE RACES ON THE BROOKLANDS TRACK.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I am sure that every automobile sportsman appreciates the efforts which are being made at Brooklands to popularize the sport of motor racing. Before this can be achieved, however, good and fair racing has to be secured, and it is the duty of every entrant, particularly those in the trade, to assist the B.A.R.C. in every possible manner by playing the game fairly and squarely. I was therefore somewhat astonished and surprised to notice the flagrant manner in which certain cars competing at the open meeting held at Brooklands were fitted up with oxygen cylinders with special apparatus arranged so as to enable the driver to use the oxygen during the race at will. Many people expressed surprise at some of the cars being able to spurt for a short distance at a greatly increased speed, and will now be interested to know how it was done.

With the object of making good racing, certain limitations of engine size are imposed for each race, but if we are going to have this artificial method of obtaining increased power allowed, what is the good of trying to classify cars? If motor racing is to be of benefit to the industry, if it is to be of benefit to the public, and if it is to continue to be a sport, this sort of thing

One of the Daimler Cars which competed at Brooklands on Saturday last.

must cease. The curse of commercialism touches all things, but if certain competitors have such a poor idea of what sport is, and how the game has to be played, then those in authority should teach them. Before any more race meetings are held, the Royal Automobile Club should absolutely prohibit the use of oxygen, &c., on any car run in any event held under their rules, and any infringement of the rule should be dealt with by suspending the culprits—owner and driver—from all events for two years.

The B.A.R.C. is running its meeting on horse racing lines, and if race horses are not allowed to be doped, why should motor-cars?—Yours truly,

CHARLES JARROTT.

THE WORLD'S RECORD.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Whilst the Press is full of the wonderful performance of Mr. S. F. Edge at Brooklands Track, when he put up a twenty-four hours' world's record, many enthusiasts who are writing up Mr. Edge's performance are overlooking true facts.

Mr. Edge undoubtedly beat the world's record by a very wide margin, but correspondents have variously mis-stated what the previous world's record was. In the interests of accuracy, I should be glad if you would kindly emphasise the fact that the previous twenty-four hours' world's record was held by a six-cylinder Ford, which on the 24th of June last, at Detroit, Michigan, ran 1,135 miles in twenty-four hours, officially observed by the Automobile Club of America.

This performance of the six-cylinder Ford beat all previous world's records by 300 miles.—Yours truly,

PERCIVAL L. PERRY.

THE "GRAPHIC" TROPHY.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to the letter from Mr. W. T. Clifford Earp, I very much appreciate the kindness that has prompted him to write and try and assist me in finding out why my six-cylinder Napier was disqualified for the "Graphic" Trophy Race. He very properly raises two queries in his letter, but both these and many others I have already taken up with the Royal Automobile Club, and I am sorry to say that the Club, no doubt from some very good reasons from their point of view, have not thought fit to tell me on what points my car was disqualified, nor am I able to find out from them, although I have asked by letter what alteration I can make to the car to make it conform with the Club's requirements. It could not have been in regard to body dimensions, as they were considerably larger than other cars which competed in the races. It could not be on account of cylinder dimensions, as they were correct and accurate in accordance with the conditions.

Personally, I have not the least feeling in regard to the Club, as they have acted in a thoroughly *bona fide* way under their rules in the matter. My only feeling of dissatisfaction is that they have not told me, and apparently will not tell me, what is the point they object to, as naturally I take a great pride in always keeping to the proper conditions in all these competitions. I still believe that my car was perfectly in accord with the conditions, but even if it was not in accordance with the R.A.C., I think that I am entitled to receive from them the point on which the car did not meet with their approval, so that I may alter it in any future vehicles. At present I am in the unhappy position of being told that my car is not suitable under the rules, but cannot get anything official or unofficial as to what I must do to make it suitable. Personally, I think this is a mistake on the part of the Club, as I am only too anxious to carry out the rules, but I have no means of forcing them to give me the information, and if Messrs. Earp can help me to get it or get it for me they will do me a favour of a greater magnitude, probably, than they appreciate.—Yours truly,

S. F. EDGE.

HELPING MOTORISTS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should like to make a remark through your valuable columns about the way, and the spirit, in which the motor repairers in this (Lancashire) police trapping county are acting towards the motor-ing public in general. I had left Lancaster recently on my way to Preston, and had got some four miles on when we were stopped by an official-looking individual. I naturally imagined that I had got into a trap, but no! This said person placed the enclosed card into my hand, with a few remarks about where to look out, &c. Now I am sure that all your readers will agree with me that if something was done like this universally, it would stop a number of the touring motorists from falling into their snares, especially in this district, where the magistrates seem to take a huge delight in making the fines as heavy as possible. I would make these traps known for the safety of your readers travelling from Preston to the Lake district, or, rather, to be more accurate, from Garstang to Lancaster. There are four measured lengths starting from the twelfth milestone from Lancaster, then again at the ninth, about fifty yards before the seventh, and a measured mile commencing from the first straight length after the sixth milestone. Woe betide the unhappy one who gets caught in the latter, as it seems to be the pet snare of the police.—Yours truly,

ROLAND RYMAN.

[Our correspondent encloses a card in which Messrs. W. Atkinson and Sons, North Road, Lancaster, say "it is not safe to drive at more than twelve to fourteen miles per hour from Lancaster for twelve miles. There are usually four police traps about this district."]

THE EDUCATION OF DRIVERS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Regarding the motor-car wrecked at Sheffield with the resulting injury to six persons, as reported in the daily papers, I would like to point out that this emphasizes very strongly the necessity of the careful examination of each driver of a motor-car, professional or lay, before he is allowed to drive a motor-car on the high road. That official examination of the personal efficiency of each driver cannot be too seriously regarded is perhaps sufficiently obvious, but I may be permitted to point out a few reasons to more fully demonstrate my case.

In London, as an example, although the same thing is taking place in almost every large city of the world, horse traffic is gradually becoming ousted in favour of mechanical traction. Ignorant, bad, and criminally careless driving is due entirely to the absence of official examination of the drivers. As the motor-bus and motor-cab become more in evidence, as in the natural order of events they are bound to be, the danger through ignorant and bad driving will become far greater. These motor-omnibuses and motor-cabs will be chartered more and more for extended country trips, especially during the summer months, and this is only a loophole for more accidents to ensue.

A great many accidents are caused through skidding, and an accident of this kind is due generally to the driver, mainly by reason of his ignorance of some of the elementary rules in driving. A driver normally efficient, unless he has had sufficient experience, may be hopelessly at

sea and fall to bits in an emergency. There are thousands and will be many more thousands of new comers owning motor-cars and driving upon the highways, and as this traffic increases, without the official examination of each driver, accidents are bound to happen due to this increase.

Moreover, there is an enormous number of motor-car drivers who have not the faintest idea as to the margin of safety in the condition of their cars. It should be part of the official examination that each driver should answer, satisfactorily, questions with regard to the safe condition of his tyres, wheels, steering, brakes, and so forth. There is as much danger to the car, its occupants and the public, in a weak front tyre, defective steering, loose road-wheel bearings, or rickety steering wheel, as in careless or ignorant driving.

Before an engine-driver takes the rails on his own responsibility he is submitted to a most searching examination as to his capacity. And yet he drives on rails. In the same way an electric car driver is carefully examined, yet he drives on rails. But the Government has allowed many thousands of motor vehicles of all kinds to be put on to the streets and high roads of this country, with the tremendous traffic encountered in the streets, and the wicked corners and hills in the country to be negotiated, without any preliminary examination of their drivers whatever, and grant a driving certificate for the sum of 5s. to any lunatic or dumb and blind person that may apply with the necessary funds in his hand.

If arrangements are not very soon made for an efficient official examination of every motor-car driver on the road, a responsibility of the gravest kind will rest upon the Government. It would be interesting to have your readers' views on this subject.—Yours truly,

ARCHIBALD FORD.

WEEKLY WINS.

TO THE EDITOR OF *The Motor-Car Journal*

SIR,—The advertisements that have been appearing under the subject matter of "Weekly Wins" are, I think, open to a certain amount of criticism owing to other results, such as "Fastest Times," appearing under this heading, which are not actual wins. These advertisements are very easily apt to mislead the readers by making them think that all the results that are published in them are wins. As a case in point, in connection with the hill-climbing competition held by the Sheffield and District Automobile Club a few weeks ago, a certain firm advertised the fact under the heading of "Weekly Wins" that one of their make of cars accomplished the fastest time. As this car was by a long way the most powerful one in the competition it, of course, easily accomplished this, but on the official results being published the car was only placed fourth, having been beaten by no less than three other cars, including my own 20-h.p. Br.therhood, which was only approximately half the power of the car in question. The advertisement referred to has to my own knowledge been misread by several of my own acquaintances, and as I am sure your readers who follow these announcements can easily understand that no doubt it is misunderstood by numbers of others, and the result that this car accomplished the fastest time being published under the heading of this letter would insinuate that the car, besides making the best time, also won the hill climb.

I understand that the hill-climbing formula and regulations as laid down by the Royal Automobile Club was done by them in an effort to place all cars of varying powers and weight on an equal basis for competition, so that the most efficient car combined with the best driving should be the winner. In consequence, as the Sheffield hill-climb was held under these rules, it shows that the car referred to was only fourth as regards the two points of efficiency and driving that the competition would prove. Personally I think if firms are desirous of advertising under the heading of "Weekly Wins," they ought, to prevent these advertisements from in any way misleading the reader, to confine the matter of the same to actual wins, and, as I have before mentioned, the wording of some of these advertisements can very easily be misunderstood that I feel justified in bringing the point up, so that the actual winners of the competitions may have full credit for their victories, and not have them discounted in any way by advertisements, the matter of which is arranged in such a manner as to be easily misconstrued.—Yours truly,

PERCY RICHARDSON.

AN ENGINE QUERY.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—When in any difficulty in motor-car matters, I usually turn to the huge mass of *M.C.J.*s I have accumulated for years. I am, however, unable to lay my hands upon an answer to the question as to whether there is danger connected with the frequent appearance of a little bluish vapour blowing out of the air inlet of the carburettor (Longuemare), while the engine is at work, also at the slot in the inlet bend where extra air is admitted. Is there any risk of fire passing through the carburettor and reaching the petrol tank on the dash?—Yours truly,

GALLOWAY.

[We are pleased to note that Galloway turns to the *M.C.J.* to solve his difficulties. A somewhat similar query, i.e., as to the danger of petrol and paraffin in tanks, was dealt with a short time ago. The appearance of the bluish flame out of the air inlet indicates that all the

vapour between the carburettor at the moment has been consumed, and for the time being the danger is over. For all that could happen would be the chance ignition of any extraneous petrol that might be within reach of the flame. There is not any risk of the flame igniting the petrol inside the pipe leading to the tank, which we gather our correspondent fears. Petrol must be in a state of vapour to explode, and cannot even burn without the presence of oxygen. The explosions in the induction pipe point to too weak a mixture, or a faulty induction valve.]

TIMING A FOUR-CYLINDER ENGINE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should be obliged if you would tell me how I can time my four-cylinder motor, which has mechanically-operated valves all on one side.—Yours truly,

SUBSCRIBER.

[This can be accomplished by the setting of one cylinder only—the cam being all fixed on the shaft in their proper positions, bring them into work at their proper time. The best method is to take the inlet in, say, No. 1 cylinder; turn the engine round in the direction it has to run, and determine the position of the piston in the cylinder. When this is about to descend, say about $\frac{1}{4}$ in. down the inlet stroke, the valve should commence to open, and close when the piston reaches the bottom of the stroke, or in some instances just over the bottom of the stroke. It will then be found that the inlets and exhaust are all in their proper order.]

The 40-h.p. Siddeley Car recently supplied by the Wolseley Company to Her Grace, Lily Duchess of Marlborough.

The body is of the limousine type, built by Messrs. Hooper and Co., Ltd. The rear wheels are fitted with "Easies."

HUB BRAKE DRUMS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Fractured and worn out brake drums are certainly a subject of serious concern, especially if the countershaft brake is not in working order, the sprag is non-existent, and you happen to be on a hill, you have to decide so quickly on what to do and how to do it. I can write feelingly, as this damp weather makes an old-fractured collar bone bring to my remembrance a rather precipitate rush down Hog Trough hill, Westerham. It is so easy to decide on the correct treatment when seated at one's desk near to a brightly burning hearth; anyway, more so when the drum is on the hill and the car with oneself in it is careering away. This actual personal experience is my excuse for now rushing into print. Hub brake drums are usually made of malleable castings, steel, or gun metal, and now that the metal-to-metal brake is so fashionable the drum is apt to wear, perhaps, sometimes more than the band liner. Steel drums are, of course, the best, and gun metal ones the worst for lasting, and my advice to all fellow motorists is, frequently inspect the drums and liners. It is, of course, important to use the correct material for the band which is suitable to the drum. Gandy belting and Frood's patent brake lining answer well with any kind of drum. The latter is fireproof and certainly has great stopping power. Wrought iron liners answer with a malleable drum and cast iron with gun metal and steel.

To fix a new brake drum is rather a trouble, and if by frequent inspection early wear is detected it can easily be remedied without much bother or expense. To do this take off the wheel and by fixing

the hub in the chuck of a lathe the remains of the drum can be "trued up." A wrought iron or forged steel ring can then be shrunk on. Any blacksmith will make such a ring, one made of $\frac{1}{4}$ or 5-16th stuff would do, and if it is made a shade smaller than the drum and put on hot it will hold, and in addition it can be fixed by a few counter screws. The hub can then once more be put in the lathe and the centre of the drum to the extent of the width of the band turned down about one sixteenth, and thus a flange will be made. Frequently a brake does not hold because the drum is no longer true and does not present sufficient surface for the band to grip. Gun metal drums frequently wear oval and thus fail to act. The treatment here set forth is a sure remedy for such complaints.

The recent casualties due to brake failure seem to be all put down to accident and chance. I honestly believe that with proper attention to brakes, including frequent inspection of bands and drums, over nine tenths could have been prevented.

"None pities him that's in the snare,
And, warn'd before, would not beware."

Yours truly,

H.

AN IGNITION QUERY.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Would you kindly inform me what is intended when a coil is described as $\frac{1}{4}$ in. spark, or $\frac{1}{2}$ in. spark, as the case may be? I have made several alterations in my ignition apparatus at various times, but never succeeded in getting a spark even approaching such sizes. At present I am fitting a Hellesen dry battery, as at my country place in

RACE MEETING AT BROOKLANDS.

THERE was a distinct air of novelty about the race meeting on the Brooklands Motor Track at Weybridge on Saturday. It was the first gathering of the kind, and, although the evidence of popularity was not conclusive, it showed that the initial effort to organise a motor race meeting on horse racing lines could attract a crowd of over 10,000 people. But for the substitution of motor-cars for horses the scene might have been an ordinary race-meeting, for all the paraphernalia of Epsom was there, including the bookmakers. The latter must have found business at first as monotonous as some of the contests, for not until the races were well on the way did there seem a disposition on the part of the public to speculate. And then a certain measure of wariness characterised the crowd.

Society people beamed upon the new sport, and among well-known people to be seen were the Duke of Westminster, Lord Lonsdale, Mr. Lionel Rothschild, Lord and Lady Sefton, Lord Essex, Colonel Holden, Mr. C. D. Rose, M.P., the Earl of Carnarvon, the Hon. A. Stanley, Mr. and Mrs. Locke King, Mr. Wilson Noble, Mr. Julian Orde, and Mr. Walter Gibbons. The members' enclosure was crowded with ladies.

Previous illustrations and descriptions of the track have prepared our readers for a mental picture of the scene. Most of the races were of the processional order, and it was generally agreed that the withholding of times from the public was in order to afford the basis of a system of handicapping which might secure close finishes in the future. The results of the various events were as follows:—

MARCEL RENAULT MEMORIAL PLATE of 550 sovs. (the nominator of the winner to receive 400 sovs., the nominator of the

The Brooklands Track Race Meeting.—The final of the Marcel Renault Memorial Plate Race.

Norfolk I find charging accumulators a great trouble, and, although the voltmeter shows plenty of force, I cannot get a visible spark larger, apparently, than the head of an ordinary pin, and it occurs to me that I may not be getting all I ought. My coil is a Nilmelior 7-16 in. spark. Can you help me with any suggestion, please?—Yours truly,

AH 26.

[When a coil is spoken of as giving a $\frac{1}{4}$ in. or $\frac{1}{2}$ in. spark, it means that if the secondary terminals, or the wire which goes to the plug, and a wire from the contact breaker terminal, are $\frac{1}{4}$ in. apart a spark will pass in the open air. It would also do so on the plug itself if the points could be put far enough apart. Any good coil will spark through $\frac{1}{4}$ in. in this manner, provided that it is properly adjusted, and the battery will give the necessary current. It will, however, not spark through this space under compression. When using dry batteries for ignition, care should be taken to employ a coil taking a very low current, as a dry cell will not easily give a high current for a long time, in the same way that an accumulator will.]

WILL Mr. Godwin, who wrote to the Editor of the *M.C.J.*, kindly send his address, which has been mislaid.

TAIL LAMP FOUND.—Mr. G. W. Hodgkinson, the motor agent of Scarsdale Place, Buxton, sends us a police notification that they have recently found two motor tail lamps in the Macclesfield district. Those to whom they belong should apply to Superintendent Downes, at the County Police Office in that town.

COST OF UPKEEP.—Mr. Cecil Wilson, of the Manor House, Shrivensham, Berk., writes:—"Noticing an advertisement of a car which has been in use for nineteen months (no distance stated) with expenses totalling 17s. 6d., I would like to place against it the record of my 10-12-h.p. Coventry-Humber bought last August. I have been 4,109 miles, my repairs or upkeep (not counting tyres) have been nil.

second 100 sovs. and the nominator of the third 50 sovs.), for motor-cars propelled by means of internal combustion engines only, of a cylinder dimension of 85 to under 110; weight, 3,000 lb.; miles, 11,4328; entrance 25 sov.

HEAT 1.

Mr. S. F. Edge's Napier	H. C. Tryon	1
Mr. A. Huntley Walker's Darracq	Owner	2
Mr. P. Kerr-Smiley's Renault	J. Groves	3

Also ran: Mr. C. Harman Wigan's Vinot Deguingand and Mr. K. Okura's Fiat.

HEAT 2.

Captain G. Hindes Howell's Iris... ..	A. Clifford Earp	1
Mr. F. R. S. Bircham's Iris	Owner	2
Mr. H. R. Pope's Itala	M. Fabry	3

Also ran: Captain W. E. D. Owen's Junior, Mr. J. E. Hutton's Berliet, and Mr. C. Sangster's Ariel-Simplex.

FINAL HEAT.

Mr. S. F. Edge's Napier	H. C. Tryon	1
Captain G. Hindes Howell's Iris	A. Clifford Earp	2
Mr. A. Huntley Walker's Darracq	Owner	3

Also ran: Mr. F. R. S. Bircham's Iris, Mr. H. R. Pope's Itala, and Mr. P. Kerr-Smiley's Renault.

Tryon, on the Napier, led from start to finish, and won by nearly the length of the straight, with the Darracq (which punctured) about 700 yards away from the Iris.

HORSLEY PLATE of 300 sovs. (the nominator of the winner to receive 250 sovs. and the nominator of the second 50 sovs.), for motor-cars propelled by internal combustion engines only, of a cylinder dimension of 60 to under 85; weight, 3,000 lb.; mile, 3-27995; entrance 15 sovs.

Mr. A. Huntley Walker's Darracq Owner 1
 Mr. Sidney Straker's Straker-Squire W. T. Lord 2
 Mr. S. Gore Browne's Thornycroft Owner 3
 Also ran: Mr. A. F. King's Mass, Mr. S. Saunderson's Brasier,
 Mr. P. Richardson's Brotherhood, Mr. G. Moss's Arrol-Johnston, and Mr.
 T. Thornycroft's Thornycroft.

This was an easy win for the Darracq, but there was a fine struggle for the second place, which was won by the Straker-Squire by a bonnet.

GOTTIEB DAIMLER MEMORIAL PLATE of 650 sovs. (the nominator to receive 500 sovs. and the nominator of the second 150 sovs.); for motor-cars propelled by internal combustion engines only, of a cylinder dimension of 120 to under 155; weight, 3,000 lb.; miles, 15-743; entrance 30 sovs.

Mr. E. M. C. Instone's Daimler Owner 1
 Mr. A. Huntley Walker's Darracq Owner 2
 Also ran: Mr. Charles Sangster's Ariel-Simplex, Mr. H. S. Keating's Daimler, Mr. S. F. Edge's Napier, and Mr. J. T. C. Moore-Brabazon's Minerva.

The Minerva led at the start, and when well ahead was brought to a standstill with a flooded carburettor. This let Instone's Daimler into first place, and he won by nearly a circuit. Some minutes later the other car ran home. It had jet trouble, while Keating's had a fuel mishap. Sangster's bonnet flew open and he retired when a stream of oil smothered his face, obscuring his vision, while the Napier also had trouble.

BYFLEET PLATE of 550 sovs. (the nominator of the winner to receive 450 sovs., and the nominator of the second 100 sovs.), for motor-cars propelled by internal combustion engines only, of a cylinder dimension of 110 to under 135; weight, 3,000 lb.; miles, 10-3078; entrance, 25 sovs.

Mr. C. Jarrott's Lorraine-Dietrich Owner +
 Mr. S. F. Edge's Napier F. Newton +
 Mr. A. Huntley Walker's Darracq Owner 3
 Also ran: Mr. J. E. Hutton's Berliet, Mr. J. T. C. Moore-Brabazon's Minerva, Mr. J. E. Hutton's Berliet, Mr. Charles Sangster's Ariel-Simplex, Mr. D'Arcy R. Baker's Fiat, Mr. H. R. Pope's Itala, and Mr. J. H. Bell's Fiat.

In this race Mr. Baker's Fiat was handled by Wagner (who had made fastest time in three laps of the Grand Prix race a few days before), but the interest was centred on Jarrott and Newton. The latter took the lead with his Napier, but Jarrott rapidly drove after him, and got on even terms. As they entered the finishing straight Jarrott slightly headed him on the outside. Newton, however, came again, and a slashing finish resulted in the judge giving the result as a dead heat. It was mutually agreed to divide the stakes. Jarrott used Continental tyres and Newton Dunlops.

FIRST MONTAGU CUP, of 2,100 sovs. (a cup value 200 sovs., and the remainder in specie); the nominator of the winner to receive the cup and 1,400 sovs.; the nominator of the second to receive 400 sovs.; and the nominator of the third 100 sovs.; for motor-cars propelled by means of internal combustion engines only, of a cylinder dimension of 155 to under 235; weight, 2,600 lb.; miles, 30-4562. Entrance 50 sovs.

Mr. J. E. Hutton's Mercedes Owner 1
 Mr. K. Okura's Fiat Owner 2
 Mr. F. R. Fry's Mercedes D. Resta 3
 Also ran: Mr. G. V. Baxendale's Darracq, Mr. W. J. Wright's Darracq, Mr. H. R. Pope's Itala, Mr. F. Rendle's Mercedes, Mr. A. Huntley Walker's Darracq, Mr. D'Arcy R. Baker's Fiat, and Mr. S. F. Edge's Napier.

Wright's Darracq suffered from a fractured base chamber. Edge's car ran out of water. Baxendale's Darracq retired early; while Walker's car, driven by Demogeot, punctured when leading. Hutton finished an easy winner, with Okura some distance away second, and Resta's Mercedes third. It afterwards transpired that Resta had covered one lap extra, this robbing him of the race. Through looking at his tyre, which was damaged, he failed to notice the signal to enter the finishing straight.

STEPHENSON PLATE of 300 sovs. (the nominator of the winner to receive 200 sovs., and the nominator of the second 100 sovs.) for motor-cars of a price not less than £600 and not exceeding £700; weight, 3,500 lb.; miles, 5-997. Entrance 25 sovs.

Mr. A. Huntley Walker's Darracq Marquis de Mouzilly St. Mars 1
 Mr. C. Sangster's Ariel-Simplex A. E. Harrison 2
 Captain W. E. D. Owen's Junior Owner 3
 Also ran: Mr. S. F. Edge's Napier; Mr. F. Coleman's White steam car; Mr. Coleman's White steam car, driven by Mr. P. Northey.

The Darracq car won this race by about 300 yards after a good contest for some distance with the Ariel-Simplex.

We are informed that there appears to be an impression prevalent upon the part of many motorists visiting the Continent that as soon as they cross the Channel they cannot obtain Dunlop tyres, and we are accordingly asked to point out that such an impression is quite erroneous, as the Dunlop Company have factories or depots in all the chief Continental cities, where locally-made Dunlop tyres can be obtained to accurately fit British Dunlop tyre rims.

CRIPPLED CHILDREN'S OUTINGS.

SOME sixty crippled children belonging to the London County Council schools at Mansford Street, Bethnal Green, were taken, under the auspices of the Beaumont Cycling Club, for a day's outing in motor-cars, kindly lent by Messrs. Humber, Brown Bros., the Daimler Company, Mr. S. F. Edge, and Mr. A. S. Reynolds. The children had a delightful day and visited various interesting parts of Epping Forest, being afterwards entertained to dinner and tea at Oak Hill Farm, Theydon Bois. During the afternoon a few of the children who had been brought down in the school ambulances were taken for rides in the cars, nursed by teachers and friends.

On Saturday a Manchester committee provided a motor-car ride for nearly 500 crippled children. About 120 cars were loaned for the occasion, assembling in Albert Square, where the children were gathered. The destination was Astle Hall, Chelford, the residence of Colonel Dixon. The cars were divided into two sections—one going to Chelford by Wilmslow and Alderley, and the other by Altrincham and Knutsford. Each child by this happy arrangement was able to vary the trip by seeing different country coming and going. The children had a good time in the grounds of Astle Hall, where they rambled about happily, and afterwards had tea in marquees erected for their reception. The cars set off back early in the evening, and the party reached the city in good time.

Mr. Ambrose Firth has offered to entertain the crippled children of Sheffield at his residence, The Knoll, Bamford, to-day. Cars will meet at Leopold Street, Sheffield, at 2.30 p.m., and start about 3 o'clock for Bamford via Hathersage, returning via Ashopton. Arrangements are in the hands of the Sheffield and District Automobile Club.

Mr. H. C. Tryon, the winner of the Marcel Renault Plate, on his six-cylinder Napier.

COMPANY NEWS.

NEW COMPANIES REGISTERED.

MOTOR SCHOOLS.—£6,000. To carry on in London and elsewhere schools for instruction in motor driving, &c., and to adopt agreements (1) with T. Smith, (2) with A. W. L. Morgan, and (3) with T. Smith, W. H. M. Burgess, F. N. Gibbs, and A. W. L. Morgan. First directors:—Messrs. T. Smith, A. W. L. Morgan, F. N. Gibbs, and W. H. M. Burgess. 10, Union Court, E.C.

MOTORS AND ACCESSORIES.—£1,000. Motor and accessory manufacturers, dealers, and agents, &c. No initial public issue. Provisional directors:—Messrs. G. M. Roberts, W. G. Cooper-King, H. M. Gowan, C. Piper, H. Ablin, S. Ablin, and R. R. Weston. 364, Birkbeck Bank Chambers, W.C.

THE Metropolitan Engineering Company have taken larger premises at 197, London Road, Norbury, and have fitted them up with modern tools to enable all classes of repairs to be dealt with. The depot is open day and night all the year round, and a fully qualified engineer is always in attendance.

At the recent Royal Agricultural Show at Lincoln, Messrs. Joseph Owen and Sons, Ltd., of Stanley Road, Liverpool, had on view some fine specimens of dry timber in ash, oak and other hardwoods, in boards and planks, suitable for builders of railway carriages, motor-cars, and trade and pleasure vehicles, in addition to a splendid assortment of wheels, wheel rims, felloes, spokes and flanges; every description of bent timber, including lancewood, hickory and ash shafts, tonneau bends, wings, and other requirements for motor-cars.

CLUBS AND ASSOCIATIONS.

NOTTINGHAMSHIRE.

THE first motor carnival organised by the Nottingham Automobile Club took place on Saturday on the Victoria Embankment, Nottingham. In many other towns the entertaining uses to which the automobile can be put have been made familiar by the clubs of the district, but the Notts. organisation had previously held what may be termed their annual public festival on the beach of Skegness. Owing to the sands becoming unsuitable, however, the Skegness speed trials, which were such a popular feature, have had to be abandoned, and instead there was arranged the gymkhana. The splendid asphalt track for the automobile events is in proximity to the Trent, enabling motor-boat events to be organised. The arrangement of this attractive portion of the programme was in the hands of the Motor Yacht Club, which presented two cups for competition. An enclosure had been made for non-competing cars, a band stand erected for the use of the band of the City Police, and for the accommodation of his Worship the Mayor (Alderman J. A. H. Green) and other distinguished visitors there was a covered enclosure. Alderman

Witty's 3-h.p. Wyvenhos; 2, Mr. P. W. M. Wright's 3-h.p. Billie, 16 ft. 4 in.

HANDICAP FOR BOATS OF ANY HORSE-POWER: (1½ miles).—1, Mr. T. Sharp's 4-h.p. Lady Rose; 2, Messrs. Riley and Sampson's 2½-h.p. Chip.

HANDICAP FOR BOATS OF 6-H.P. AND UNDER.—1, Messrs. Cartwright, Neilson, and George's 4-h.p. Togo; 2, Mr. H. Daubney's 4-6-h.p. Dorothy; 3, Mr. J. Redmile's 4-h.p. Lily.

FLYING QUARTER-MILE (Championship of the Trent).—Mr. R. W. Fairbank's 15-20-h.p. Fairbanks; runner-up, Mr. G. Cowen's 15-20-h.p. White Heather.

At the close the prizes were distributed by the Mayoress, who was accompanied by the Mayor (Alderman J. A. H. Green), and on the motion of Mr. Charles Hardy (president of the club) a cordial vote of thanks was passed to them for their presence and interest.

KENT.

IN surprisingly genial weather the Kent A.C.'s annual gymkhana was held on Saturday in Holwood Park, Bromley, by permission of the Earl of Derby. Some forty cars and about 150 members and friends were present. The judges were Capt. the Hon. F. W. Stanley, Dr. Charles Firth, and Mr. W. Ballin Hinde. Mr. G. T. Langridge, of the Motor Union, acted as starter. The other officials were Messrs. C. J. Morgan, Col. Latter, T. H. Nash, Owen Firth, L. C. Fox, J. E. Bennett, and Capt. Page. Lady Alexandra Stanley kindly presented the prizes to the winners at the termination of the programme.

The Nottingham Club's Motor-Car and Motor-Boat Race Meeting.

Sir John Turney and Councillor W. H. Carey (chairman of the Public Parks Committee) were amongst the members of the City Council who were present, amongst the visitors from the neighbouring clubs being Mr. E. G. Mawbey (president) and Mr. A. J. McAlpin (hon. secretary) of the Leicestershire A.C.

The charities of the city, to which the profits of the gymkhana are to be devoted, are likely to benefit substantially, for at the turnstiles, which were under the charge of Mr. H. Hallam, over a hundred pounds was taken. The details of the various events are as follows:—

GLASS OF WATER RACE.—Event A, two-seated cars under 12-h.p.; Event B, four-seated cars. Four seats: 1, Mr. G. B. Fletcher, 10-12-h.p. Coventry-Humber; 2, Mr. W. D. Wells, 30-40-h.p. Daimler. Two seats: 1, Mr. M. Ross-Browne, 10-14-h.p. Renault; 2, Mr. A. N. Lee, 8-10-h.p. Coventry-Humber.

LADY PASSENGERS' RACE.—1, Mr. W. D. Wells, 30-40-h.p. Daimler; 2, Mr. A. Barlow, 16-20-h.p. Argyll.

OBSTACLE RACE.—1, Mr. R. S. Clifford, 12-h.p. Richard-Brasier; 2, Mr. R. R. Latham, 6-8-h.p. Baby Peugeot.

STARTING AND STOPPING RACE.—1, Mr. M. Ross-Browne, 18-h.p. Gladiator; 2, Mr. A. N. Lee, 8-10-h.p. Coventry-Humber.

FLEXIBILITY COMPETITION.—1, Mr. A. Lee, 8-10-h.p. Coventry-Humber; 2, Mr. James A. Doran, 24-h.p. Minerva.

The Motor Union medal for the best performance of the day was won by Mr. A. N. Lee.

MOTOR-BOAT RACES.

TURNING, REVERSING, AND RESTARTING RACE.—1, Mr. A. J.

The results of the events were as follows:—

SLOW RACE.—Class 1.—Four-cylinder cars, Mr. Percival Foster, 18-h.p. Mercedes; Class 2.—Two-cylinder cars, Capt. Page, 7-8-h.p. Swift; Class 3.—One-cylinder cars, Mr. W. E. Brewerton, 6-h.p. De Dion.

BENDING RACE.—Class 1.—Wheel base over 9 ft., Mr. G. M. Kenyon, 22-h.p. Minerva. Class 2.—Wheel base under 9 ft., Mr. W. E. Brewerton, 6-h.p. De Dion.

SPEED JUDGING.—The competitors were timed over a measured half a mile and the speed was to be at the rate of twenty miles per hour. Mr. A. Booth Hearn was the winner and was awarded the cup offered by the chairman. Mr. G. M. Kenyon was awarded the second prize.

ACADEMY STAKES.—In this event each competitor selects a lady who takes her place at a blackboard. Each competitor is then given a slip of paper on which the name of an animal is written. The competitor starts his car (paid drivers not allowed to start engines in this event), races to the blackboard, stops his engine, alights, and draws the animal mentioned on the paper on the board. As soon as the lady names the animal, the competitor re-starts his engine and races to the starting point. The first back wins. A prize is also given to the lady. The prize was awarded to Mrs. Bradshaw, who guessed the drawing made by Mr. Nash.

TILTING AT THE RING.—The chairman's cup was awarded to Miss Rogers (driven by Mr. Nash) who took all four rings. Lady Alexandra Stanley (driven by Mr. Kenyon) was second, taking two rings and striking a third.

During the tea interval the judges had a most difficult task in selecting the best kept and turned out car out of the ten entries. Mr. Morgan's six-cylinder Brooke and Mr. Nash's Unic were eventually selected and pronounced a draw.

MUSICAL CHAIRS.—Miss Winnie Firth, driven by Mr. Kenyon, obtained the prize.

Captain Page was presented with the gold medal obtained by him in the R.A.C.'s mechanical proficiency examination at Maidstone in April last.

BARNSELEY.

THE first competition arranged by the Barnsley and District Automobile Club took the form of a hill climb up the gradient known as Stainborough Lowe, near Barnsley, on the afternoon of Thursday last week. The course measured 1,100 yards, and possessed an average gradient of one in ten, though in parts it was as severe as one in 6.5, but all the competing cars, carrying their full complement of passengers, negotiated the climb, which is regarded as probably the severest in the district.

The president of the club, which was only formed last year, is the Rev. T. T. Taylor, who offered a challenge cup for competition, gold and silver medals being also awarded to the owners of the two cars showing the best results, calculated on the usual basis of weight, time, and horse power. The officials were:—Judge, the Rev. T. T. Taylor; timekeepers, Messrs. E. H. Barker, J. F. M. Coles, and Mr. J. Taylor; secretary, Mr. H. J. Wells. The official placing of the cars, with the actual time occupied in covering the distance, are as follows:—

Dr. W. Craik, Thurnscoe, 8-h.p. Rover, 246.6 sec. ...	1
Dr. A. Thomson, Dodworth, 10-h.p. Alldays, 203.7 sec. ...	2
Mr. E. A. Barker, Barnsley, 10-h.p. Star, 205.5 sec. ...	3
Mr. A. Wainwright, Barnsley, 10-h.p. Alldays, 215.2 sec. ...	4
Mr. E. Turner, Barnsley, 16-20-h.p. Rover, 178.4 sec. ...	5
Mr. J. F. M. Coles, Barnsley, 15-20-h.p. Star, 209.4 sec. ...	6
Dr. F. J. Sadler, Barnsley, 10-h.p. Hallamshire, 286 sec. ...	7
Mr. W. A. Durnford, Elsecar, 15-h.p. Humber, 230 sec. ...	8
Mr. J. Carrington, Barnsley, 15-20-h.p. Star, 220 sec. ...	9
Mr. W. H. Hanson, Barnsley, 20-h.p. Horbick, 173.6 sec. ...	10
Mr. C. E. Hoyland, Brierley, 10-12-h.p. Humber, 256 sec. ...	11
Mr. H. J. Wells, Barnsley, 10-h.p. Star, 239.3 sec. ...	12
Mr. W. A. Durnford, Elsecar, 12-h.p. Darracq, 258.3 sec. ...	13
Dr. H. A. Banham, Worsbro', 7-h.p. Star, 317.4 sec. ...	14

SOUTHERN.

THE results of the Southern Motor Club's hill climb at Toy's Hill, Kent, on the 22nd ult., and described in our issue of June 29th, are now to hand as follows:—

Class I.—1, Sizaire; 2, De Dion; 3, Alldays; 4, Riley; 5, Rover; 6, Rover; 7, Cadillac; 8, Darracq; 9, Gregoire.

Class II.—1, Talbot; 2, Vulcan; 3, Clement-Talbot; 4, Vauxhall; 5, Osterfield.

Class III.—1, Clement-Talbot; 2, Metallurgique; 3, Martini; 4, Germain; 5, Clement-Talbot; 6, Gladiator; 7, Arrol-Johnston; 8, Vinot; 9, Deasy; 10, Darracq; 11, Belsize and Malcolm; 12, Darracq; 13, Rover.

Class IV.—1, Daimler; 2, Mors; 3, Austin; 4, De la Buire; 5, Napier.

Class V.—1, Daimler; 2, Daimler; 3, Gobron-Brillie; 4, Iris; 5, Brooke; 6, Gracile; 7, Thornycroft; 8, Napier. The first two cars in this class were entered and driven by members of the Southern Motor Club, the third car also driven by a member of the same club.

Class VI.—1, De Dien (Mrs. Kirton); 2, Deasy (Miss Hind).

Class VII.—1, Metallurgique; 2, Arrol-Johnston.

Team contest.—1, Clement-Talbot; 2, Rover; 3, Darracq.

R.A.C.

ON Wednesday the South Harting Hill Climb of the R.A.C. was held, the competitors being subsequently entertained to tea by Lady Russell at Telegraph House. In the open competition for the Yellow Trophy there were fifty-five entries and for the closed events twenty-five, making eighty in all. The proceedings were commencing as we went to press.

SCOTTISH A.C.

THE offices of the Scottish Automobile Club have been removed to 163, West George Street, Glasgow. The new telephone numbers are: National 2424 Argyle, Post Office 5948 Central.

The handbook of the Scottish Automobile Club for 1907-8 has just been issued, the primary object being to afford a concise means of information to members of the Club on matters relating to motor touring in Scotland. A list of officially appointed and registered hotels and repairers is given, the detailed information with regard to charges, &c., being most comprehensive, as is usually the case in such official publications. The list of ferries with their tolls in Scotland and steamship charges will be useful to those on tour, and the selected routes have been thoroughly overhauled for publication. Altogether the handbook is characterised by the thoroughness which has become a feature of the work of the Scottish A.C.

NORTH LONDON.

ON Saturday a reliability trial arranged by the above club took place, the following three finishing:—

1. Mr. Max Graddon, 18-h.p. Fiat.
2. Mr. C. Cutler, 15-h.p. White steam.
3. Mr. Perry, 15-h.p. Ford.

Marks were awarded for consistency of running, the times being taken of three circuits. Competitors were not allowed to look at their watches. Mr. Graddon had only a difference of 3 min. 50 sec. on the three circuits of 36 miles each, Mr. Cutler of 4 min. 29 sec., and Mr. Perry did his third round with only a difference of 2 sec. from his first.

LINCOLNSHIRE.

THE Lincolnshire A.C. having invited the Lincolnshire Motor Cycle Club to a combined meet, and offered prizes for a hill-climb for motor-cyclists, advantage was taken of the presence of the two types of automobiles to compare the speeds on the same hill. In the motor-cycles, W. H. Brookes, Market Rasen, 2½-h.p. Humber, won the class for machines 80 × 80 mm., in 1 min. 9½ sec., with 15 marks. In class 2, for machines over 80 × 80, single cylinder, R. M. Wright, Lincoln, 3½-h.p. N.S.U., won in 54½ sec., 16.2 marks. Alan L. Shaw, Grantham, 3½-h.p. Minerva, made fastest time in this class, getting up in 50 sec. In class 3, twin-cylinder machines, G. F. Cusworth, Louth, 5-h.p. Peugeot, won in 39½ sec., 12.7 marks. The best times in the three classes were thus 39½ sec., 50 sec., and 69½ sec. In cars Sir E. B. Bacon, Bart., 18-h.p. Wolseley, made 50 sec., Mr. H. Martyn, 10-12-h.p. Humber, 89 sec.

IRISH.

IN the forthcoming hill-climb of the Irish A.C. the chassis will be handicapped in the following manner:—Cars in Class A (under £200

The above amusing sketch is reproduced from a drawing sent us by Mr. A. House, of the Northern Automobile Company, Manningham, Bradford.

chassis, two seaters) will receive 14 sec. handicap for each £10 they are under £200. In Class B (£200 to £300 chassis, four seaters) 10 sec. for each £10 under £300. Class C (£300 to £450, four seaters) 7 sec. for each £10 they are under £450. Class D (£450 to £600) 5 sec. for each £10 under £600. Class E (£600 to £750) 4 sec. for each £10 under £750. Class F (over £750) 3 sec. for each £20 under £1,150. The winning car in each class will be weighed, and the one showing the highest result obtained by dividing its time ratio by its actual time will be awarded the Humber cup. The time ratio of any car is found by the following:—

$$\frac{120,400 \times \text{weight laden}}{\text{bore 2 mm.} \times \text{stroke} \times \text{number of cylinders}} + 14.34$$

HERTFORDSHIRE.

THE Hertfordshire County Automobile Club issue a list of members with their fixtures for the season. The rules are also included and a notice issued to members urging them to drive their vehicles "in such a manner as to cause the least possible inconvenience to others," in order to educate the non-motoring public to look upon the motor-car with favour.

THE open hill-climbing competition of the North-East Lancashire A.C. will be held at Rivington Pike, Horwich, near Bolton, on Friday, the 19th inst.

WE are informed by the British Petroleum Co., Ltd., that all the winning cars at Brooklands on Saturday used "Shell" motor spirit.

THE Doherty Motor Components, Ltd., held their annual outing last Saturday, the venue being Stratford-on-Avon. Over forty employees had a very pleasant day. A sports meeting was held in the afternoons and prizes distributed by Councillor J. V. Stevens, J.P., to the winner, of the various races. The evening was given over to harmony.

CASES UNDER THE MOTOR CAR ACT.

EXCEEDING THE LIMIT.

On Tuesday the Wokingham magistrates heard a batch of summonses against motorists for driving at excessive speed at Sonning, Wokingham, and other places within the area of their jurisdiction.

At Beaconsfield petty sessions, on Monday, the Earl of Portarlington, of Emo Park, Portarlington, was fined £3 and costs for driving a motor-car beyond the regulation speed on the Bath road, near Taplow, on June 16th. The officer who stopped him said his lordship was most civil; in fact, it was a pleasure to meet him, and that was more than they could say of some motorists.

The following appeared at the Kingston Petty Sessions the other day for exceeding the legal limit: H. Fleck, Tournay Road, Walham Green, fined £5, and 8s. 6d. costs; G. S. Taylor, Horseferry Road, Westminster, £5, and 8s. 6d. costs; G. Jones, Rothschild's Road, London, £5, and 8s. 6d. costs; L. G. Turner, Mitcham Lane, Streatham, £5, and 8s. 6d. costs; S. Hame, Oxford Mansions, Oxford Street, £5, and 8s. 6d. costs; W. Batchelor, of Clarence Street, Kingston, £5 and costs. The following were fined £3 and costs: H. L. Doherty, Kennington Gore, S.W.; A. J. Wainwright, Holland Road, Brixton; F. W. Gorman, Kinnerton Street, Knightsbridge; J. Price, Lower Kennington Lane, S.E.; J. P. Scott, Eaton Mews, South Eaton Square, London; E. Hedeck, Rutland Gate, Kensington; F. Crocker, Chilverton Road, Putney (fined £4); and H. Earons, Claridge's Hotel, Brook Street, W.

At Mortlake Petty Sessions, Henry Anthony, a sergeant of the Army Service Corps, of Government House, Aldershot, has been fined £2 and costs for exceeding the speed limit in Richmond Park with a War Office motor-car on June 21st. General Sir John French was in the car.

DANGEROUS DRIVING.

A fine of £10 and costs has been imposed on a chauffeur at Slough, for driving a motor-car at a speed dangerous to the public. The defendant was a Frenchman named Leon Ostinelli, in the employ of Mr. Arthur Du Cros. The car came collision with a milk cart and the horse was killed.

FURIOUS DRIVING.

At Westminster, on Saturday, George Mauder, of St. Edmund's Terrace, St. John's Wood, was before Mr. Horace Smith, charged with recklessly driving a motor-car and causing injury to Henry Ledger, of Juer Street, Battersea. P.C. Gattling deposed that shortly before one o'clock on Saturday morning he was at Parliament Square. The defendant, driving at a fast rate, went on the wrong side of a refuge and overturned Mr. Ledger, who was riding a bicycle in the direction of Victoria. The witness took the accused to the station, where he expressed sorrow for what had occurred. Mr. Smith said it was a very providential thing that the injured man was not killed outright. He fined defendant £20 for driving the car in a manner dangerous to the public. The fine was paid.

A sequel to an accident which occurred at Lancing in May, whereby a Worthing cyclist, named Jordan, was injured, was heard at the Shoreham Petty Sessions on Monday, before General R. T. Godman and other magistrates, when Mr. Warwick Wright denied driving a motor-car at a speed dangerous to the public along the lower Lancing Road, at Lancing, on May 12th. For the defence Mr. Harker said it was practically certain that if the accident had not occurred nothing would have been heard of the case, and he remarked that the mishap was entirely the fault of the cyclist. After considering their verdict for some little time in private the Chairman stated that the Bench were of opinion the cyclist had contributed to the accident, as he was wandering about the road. But, inasmuch as the driver of the motor-car did not reduce his speed so as to be able to avoid running into the cyclist, the Bench considered he was driving at a speed which was dangerous to the public, and would therefore convict. Defendant was fined £1 and costs (£4 15s. 1d. in all). Mr. Harker asked that the Bench would fix the fine at a guinea, in order that his client might have the chance of appealing at Quarter Sessions, but the Chairman stated that the Bench must adhere to what they had decided.

The Macclesfield magistrates were occupied two hours on Monday in hearing a summons against Gerald Higginbotham, for riding at a dangerous speed and not sounding the horn in Park Lane on June 21st. Mr. Higginbotham on his car and a telegraph messenger on a bicycle collided, and it was alleged by numerous witnesses that the car was driven very fast. Rebutting evidence was given by several witnesses. The magistrates were equally divided for and against a conviction. The case will be retried next Monday.

APPEAL ALLOWED.

Last week, at the Warwick Quarter Sessions, Captain Briggs was successful in appeal, in which he was supported by the Motor Union, against a conviction for driving to the danger of the public at Upton. Mr. Stope, the Motor Union local solicitor, contended before the Justices that the evidence of the police had been exaggerated. Captain Briggs said he saw a constable's helmet through a hedge, and guessed that he was passing a police timing arrangement; he therefore slowed down considerably, and denied that he was driving at a dangerous pace. The two policemen who gave evidence did not make any attempt to stop the car or speak to the occupants. Under cross-examination one of the constables admitted that a man, who was practically blind, further down the road, was really resting on the side of the road, and that a woman with a perambulator had ample time to get on to the path before the car got to the spot. Further evidence was called at the re-hearing in

support of Captain Briggs, with the result that the appeal was allowed and the conviction quashed.

BRAKESMEN ON TRAILERS.

Several firms have recently been prosecuted in the Bury county police district for not employing a man on a trailer behind a motor-vehicle to apply the brake. On Monday Messrs. Beyer, Peacock and Co. defended at the Radcliffe Police Court a charge of this nature. Though they contended that their method of having a man on the front of the motor vehicle was better than having him perched on the trailer behind, fines and costs amounting to about £2 were inflicted.

DRIVING TO THE COMMON DANGER.

At the St. Albans County Sessions, Henry Wilkinson, Kilburn, was charged with an offence under the Motor Car Act. Mr. Arthur Clark, who prosecuted, explained that the proceedings were not taken under Section 9 for exceeding the speed limit; they were taken under Section 1 for driving to the common danger. The alleged offence took place on May 19th last, when the car was driven by the defendant from London Colney in the direction of St. Albans. After hearing evidence Mr. Robinson said it laid upon the prosecution to show that defendant was driving to the danger of the public. But here they had to take the evidence for the prosecution as it stood. Had defendant had the benefit of the quarter of a minute each way that would have reduced the speed to 25 miles an hour. London Road was a broad road, there was not a single cross-road anywhere between London Colney and St. Albans, and at the side there was a footpath. The driver had been three times warned that morning that there were police "traps" about, and Mr. Robinson submitted that knowing this a person would not be likely to exceed the limit. The Bench retired, and on their return the Chairman announced that they held the charge to be "not proven" under Section 1.

PERSONAL ATTENDANCE REQUIRED.

The Earl of Caledon, of Carlton House Terrace, was summoned at Bow Street on Monday for exceeding the ten-mile motor-car limit in the Mall, St. James's Park, on the 23rd ult. The defendant did not appear, and was not represented. In these circumstances the magistrate adjourned the case, and directed the defendant to be served with a summons to attend the court on Monday next.

THE COMMERCIAL VEHICLE TRIAL.

LAST week we gave the first eighteen entries for this trial. The following have since been received:—

Entrant.	Class.	Net Load.	Nature of Vehicle.
19. Darracq-Serpollet Company, Ltd.	Omnibus	C. 30 cwt.	Lorry.
20. Darracq-Serpollet Company, Ltd.	Omnibus	C. 30 cwt.	Van.
21. Darracq-Serpollet Company, Ltd.	Omnibus	D. 40 cwt.	Lorry.
22. Darracq-Serpollet Company, Ltd.	Omnibus	D. 40 cwt.	Char-a-banc.
23. Darracq-Serpollet Company, Ltd.	Omnibus	E. 60 cwt.	Omnibus.
24. Darracq-Serpollet Company, Ltd.	Omnibus	E. 60 cwt.	Lorry.
25. Messrs. Charles Burrell and Sons	H.	120 cwt.	Steam Tractor.
26. St. Pancras Ironwork Company, Ltd.	F.	100 cwt.	Steam Wagon.
27. Wolseley Tool and Motor-Car Co.	E.	60 cwt.	Petrol electric chassis with body.

Entries at ordinary fees close to-day (Saturday) at 12 noon.

The representatives of the R.A.C. on the judges' committee for the trial will be Col. H. C. L. Holden, R.A., F.R.S., Messrs. W. Worby Beaumont, Dugald Clerk, Major T. H. Cochrane, R.E., M.V.O., J. Lyons Sampson, E. A. Cozens-Hardy, A. G. New, and Captain F. E. Dyke-Acland.

It is interesting to learn that the camp, which was a feature of the starting point of the A.C.F. Grand Prix, was equipped by a British firm, Messrs. C. Groom, Ltd., of Leadenhall House, London, E.C., who erected 150 Army bell tents and fitted them with 1,000 bedsteads, mattresses, blankets, washstands, &c.

MESSRS. MARKT AND COMPANY, 6, City Road, Finsbury Square, London, E.C., have issued a new catalogue of their automobile accessories, &c., which will be preserved in many motor establishments for ready reference. The catalogue is based upon the loose leaf system, so that the firm's clients will be able to insert as insets the additional pages which Messrs. Markt and Company will publish from time to time. Among the specialties illustrated are the Jones speedometer, the new Veeder hub odometer, motor horns with grille and tube, the Clarion motor bells, volt and ampere meters, the Royal Flarefront searchlights fitted with the Bausch and Lomb mirrors, securing a powerful and penetrating light. The fronts of these lamps are flared so that more light is shed directly in front of the car. The Washburn pressure gauge recently illustrated in our columns is also described, as well as many motor sundries indispensable to the motorist and the motor agent.

DUST AND THE MOTORIST.

IN a paper read last week before the British Institute of Public Health, Dr. H. S. Hele-Shaw, LL.D., F.R.S., referred to the steps taken by the Roads Improvement Association, the Dust Committee of the Royal Automobile Club, and the National Dustless Roads Association, to grapple with the evil of dusty roads. "Those who read the journals devoted to automobilism," he said, "will be aware how much progress has been made recently in investigating and experimenting on materials for the preservation of the road surface and the prevention of dust. Quite recently very important trials were held on the Staines road, and also of materials themselves for sprinkling on the road. These materials may now be numbered in large quantities, and have quite a vocabulary of their own—those, for instance, treated in the above competitions bearing such names as 'Crepoid,' 'Compo,' 'Ormenite,' 'Hahnite,' 'Pulvicide,' 'Marbit.' These materials for treating the surface of the roads must not be confounded with the processes for constructing the road surface, by which a more permanent surface is obtained, which, though costing more, last as a rule for a considerably longer period. To these also have been attached a number of weird names, as 'Tarmac,' 'Quarrite,' 'Taafalt,' 'Tarlithic,' 'Kleinpflaster,' 'Strongite.' The surveyors of nearly every county, and some city engineers, have been making experiments with the view of the prevention of dust on the roads under their control, and there is every reason for thinking that the dust nuisance will in the immediate future be grappled with in a way that has never been done before. The fact must not be overlooked that the more care and expense that is involved to give a surface of any real value to the macadam road, the more important it is that this surface should not be destroyed by heavy motor vehicles. Speaking at Liverpool before the Incorporated Association of Municipal and County Engineers, on June 20th, the City Engineer of Liverpool (Mr. J. A. Brodie) remarked that 'the ever-increasing use of heavy vehicles for the conveyance of goods along the ordinary roads is in many districts causing road engineers a good deal of anxiety on account of the damage done to their road surfaces, and it appears not unlikely that the provision of satisfactory road surfaces for the conveyance of merchandise may presently form a very important portion of the duties of the municipal and county engineer.' The increase in the motor traffic and the use of traction engines naturally tend to accelerate the destruction of road surfaces, and I have held a strong belief for many years that some substitutes for the ordinary wheel will come into use before long.

I have now strong reasons for believing that such a device is quite practicable, and that it is possible to carry heavy loads at a fairly high speed economically upon ordinary roads, without injury to them. With the ordinary wheel I do not believe that this is possible. Mr. Brodie, in the address above quoted, remarks 'it cannot be doubted that roads so constructed have fairly met the conditions for moderate traffic up to the present time. It is, however, well known that the macadam road is entirely unsuitable for roads carrying really heavy traffic.' He himself only appears to suggest relief from making the roads of more suitable character. It is important to remember that there are two factors to deal with in the road question, viz., the road itself, and the moving thing in contact with it. It is the mutual relation of these two to each other that constitutes the real problem to be grappled with. We have undoubtedly much to learn, but have we done anything during the last few hundred, or let us say thousand, years to improve the wheel, that is, as far as its destructive action on the road is concerned? I am, of course, not alluding to the pneumatic tyre, although the recent extraordinary developments in steel-studded tyres, I think, make the road-destroying properties of the pneumatic tyre in a new state equal to the diagonal bar of a heavy traction engine. We must look to an early answer to the question, can we really modify the wheel under its ordinary conditions of working so as to enable it to carry heavy loads at high speeds, so that it will neither be destroying itself unduly, nor destroy the road in contact with which it works?"

PUBLIC MOTOR SERVICES.

THE Great Eastern Railway Company has twenty-one motor-buses in service in the Eastern counties.

REPRESENTATIVES of various religious bodies in Wandsworth have met to consider the disturbance to Sunday services caused by the noise of motor-buses in particular, and motor traffic in general. They have forwarded a resolution on the subject to the Commissioner of Police.

AT the meeting of the Stretford District Council, a resolution of the Sanitary Committee has been submitted in favour of granting a licence for a month to Mr. W. Stanway, permitting his motor-bus to ply for hire between the boundary of the township in Edge Lane and the boundary in Urmston Lane.

IN connection with the development of Farnham Common, near Burnham Beeches, the Great Western Railway Company have augmented the road motor service to and from that place and the railway station at Slough, while a waiting room has been provided by the Burnham Beeches Estate Company, Limited.

THREE motor char-à-bancs have been bought by a firm at Conway, with the object of running trips to places of interest within a radius of fifty or sixty miles. One of them will confine its service to the loop tour, via Nantfrancon and Bettws-y-Coed.

THE House of Lords has decided that a railway company has no right to carry on the business of an omnibus company. The effect of

this verdict is that the motor-bus service, which has for a considerable time been run by the Mersey Railway Company, must be abandoned. The matter came before the House of Lords on an appeal by the Birkenhead Corporation from a decision of the Court of Appeal. The bus service was started in connection with the company's trains, and the buses were run at a six minutes' interval, but besides carrying railway passengers they took ordinary travellers, picking up and setting down at any point on the route. The company's special Act contains no power to carry on the business of an omnibus company, and the local corporation, who own a system of tramways as well as the Mersey Ferry, brought an action to restrain the company from continuing to run the buses. Mr. Justice Warrington held that a motor-bus service was ultra vires, and granted an injunction. The Court of Appeal, while agreeing with the learned judge, thought that if the company gave an undertaking to run buses for the sole purpose of carrying passengers to and from the station, the buses could be brought within their contention that it was incidental to their business of a railway. The undertaking was given to the satisfaction of the Court, but the corporation were not satisfied and carried the matter to their lordships' house. The Lord Chancellor said he thought the case was covered by the Attorney General v. London County Council—the case of the halfpenny buses across the London bridges. It seemed to him that the decision of Mr. Justice Warrington was perfectly right, and must be restored. The other noble and learned lords concurred. The appeal was therefore allowed with costs.

ROAD REPORTS.

AVOIDING BRENTFORD.—A correspondent, recognising the difficulty of widening the High Street, Brentford, advises motorists to avoid the place as far as possible. "A glance at the map of Middlesex," he says, "shows that the road to Windsor—practically the only road—is

The Fiat Company's New Factory at Wembley.

linked up at Hounslow with the southern of the two western arteries, whereas the logical continuation of what, in this instance, is more than ordinarily the King's highway, should be through Heston to Hanwell. If a junction were effected between the Bath road, just before it emerges at the western end of Hounslow, and the main Oxford Street or Uxbridge road route, one half of the problem would be solved. The Uxbridge road runs due west through Acton to Southall, then takes a north-westerly direction.

FLIXTON.—The Flixton Parochial Committee have agreed to widen the Carrington road, leading up to the new bridge over the Mersey between Flixton and Carrington, at a cost not exceeding £900.

A SUGGESTION.—Mr. Arthur Pimm, of 76, Stoke Road, Guildford, continues his "circular-plan" of educating the British public with regard to dustless, dirtless, permanent roads. His latest pamphlet advocates that, to meet the growing motor traffic, we should "abolish the use of natural stone and form a better shape of road with harder material, especially iron for wheel tracks."

BATTLE.—The Surveyor of Battle Rural District Council has been instructed by that authority to report as to the necessity of providing a danger sign at Henley Down Corner, Catsfield.

DROITWICH.—The town council are arranging for large notice boards requesting motorists to drive slowly through the town, fast driving being dangerous to the many invalids using the roads in chairs and pony carriages.

"THE Motor House," of Euston Road, N.W., have bought the whole of the assets of the Edinburgh and District Motor Omnibus Company, including thirteen chassis, and valued at approximately £11,000. This deal was followed up two days later by a purchase of fourteen 45-50-h.p. Leon Bollees, fitted with handsome bodies.

FORTHCOMING EVENTS.

JULY.

13th (Sat.).—Entries for R.A.C. commercial vehicle trials close at ordinary fees.

Motor Cycling Club hill climb.

Aero Club ascent, Crystal Palace.

Speed trials of the Lincolnshire A.C. at Grimthorpe.

Meet of the Cheshire A.C. at Plas Newydd, Llangollen.

Sheffield A.C. outing for crippled children.

Meet of the Bristol and Gloucestershire A.C. at Badminton Park.

Essex, M.C. open race meeting for the Du Cros trophy.

West Surrey A.C. picnic at Thursley, preceded by (weather permitting) dust competition.

The Leicestershire Automobile Club will meet at Ashleigh, Knighton, by invitation of Sir Herbert and Lady Marshall.

15th to 18th.—The annual automobile meeting at Ostend.

20th (Sat.).—Motor Union meet at Southport. Reception at Knowsley (fourteen miles distant) by the Earl of Derby, K.G., at 3 p.m.; dinner at the Prince of Wales' Hotel, Southport, at 7.30 p.m.

Ladies' A.C. meet at Bookham, Churt.

Newcastle M.C.C. speed-judging contest.

Wolverhampton A.C.'s r-liability trial.

23rd (Tu.).—R.A.C. Dust Trials on the Brooklands track, commencing at 11 a.m.

25th (Th.).—Circuit des Ardennes race under German A.C. rules.

26th (F.).—Coupe de Liedekerke race for touring cars, on the Ardennes course.

Circuit des Ardennes Race under Belgian A.C. rules.

26th & 27th.—Auto C.C. twenty-four hours' ride to Plymouth and back.

27th (Sat.).—Aston hill climb of the Hertfordshire County A.C.

Irish A.C. hill climb.

Motor-Yacht Club eliminating trial for the British International Cup Race.

AUGUST.

19th to 24th.—Auto Cycle Club's six days' trial.

20th.—Open competition for light cars organised by the Essex Motor Club over a 200 miles course.

SEPTEMBER.

9th.—Industrial Vehicle Trials commence.

OCTOBER.

19th.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

Cordingley's Motor-Car Exhibition at the Agricultural Hall, London.

LIGHTING-UP TIMES—LONDON.

July 13th—9.12	...	15th—9.11	...	17th—9.8	...	19th—9.6
„ 14th—9.12	...	16th—9.10	...	18th—9.7	...	20th—9.5

In Glasgow the lighting up time to-day (Sat.) is 9.57 p.m., and to ascertain the approximate times on succeeding days 45 min. should be added to the above figures; in Birmingham an addition of about 13 min. is necessary.

AUTOMOBILE ACCIDENTS.

A TERRIBLE motor-car accident has occurred near Leicester, on the main road to Narborough, resulting in the death of one person and severe injury to two others. The car was owned by Mr. Harry Oliver, who took two young men, named Isaac Gilbert and Walter Higginson, for a drive. During the return journey late at night the party were taking a sharp turn in the road, when they suddenly saw a bicycle light on the wrong side of the road. The hooter was sounded, but as the car was going down hill, the speed was only slightly checked. As both cycle and motor-car were nearing each other they changed their direction. The brake of the motor-car was rammed on suddenly to avoid a collision, if possible, but this caused one of the wheels to come off, and the car turned over into the hedge. Gilbert was thrown forward with great violence, and the overturned motor-car fell on him, killing him instantly. Higginson was also thrown out on to his head and rendered unconscious, and he is in a serious condition. Mr. Oliver, the owner and driver of the car, was also thrown out, but he had a very fortunate escape from injury.

A MOTOR accident occurred at midnight on Monday on the main London road at S'aines. A motor-car was being driven by Henry Rump in the direction of Virginia Water, when it collided with a cart, smashing it to matchwood. The driver was thrown out and badly injured about the legs. The steering gear of the car was damaged, and it crashed through an iron railing surrounding the Metropolitan Water Board's reservoir, twisting it into a shapeless mass.

A MOTOR-CAR, hired for a London touring party by Mr. Hexton, ran into a train at a level crossing on the Isle of Wight Central Railway, between Newport and Cowes, on Sunday night. The car was smashed, and a lady occupant of the car sustained concussion and other injuries. Mr. Hexton's son was also slightly hurt.

LORD MILNER, who is staying at Sandhurst, Kent, has narrowly escaped serious injury while motoring. His lordship was being driven through the country around Sandhurst when some defect developed, and the car, which was passing through a narrow lane at the time, ran into the bank by the side of the road. Lord Milner escaped with nothing worse than a shaking.

SOME excitement was caused in Leicester Square, London, on Saturday night by a motor-car suddenly bursting into flames. The chauffeur and his fare escaped injury by jumping out, and the fire brigade were summoned, the prompt arrival of a couple of escapes causing some amusement. The firemen put out the flames with chemical extinguishers, but the car was practically destroyed.

A FOUR-CYLINDER F.I.A.T. car, containing Mr. Cousins (the owner), Mr. Christian, Mr. Jackson, and a chauffeur, met with a serious mishap on Hindhead on Sunday. Running along the Portsmouth road, the party had just passed the Royal Huts Hotel when the car left the road, ran into a ditch, and then crashed into a telephone-pole. Mr. Cousins and the chauffeur luckily escaped serious injury, but Mr. Christian was removed to Haslemere Cottage Hospital, where he lies with three ribs broken and his head hurt. Mr. Jackson was removed to the Royal Huts Hotel with his head badly injured.

CLAIM AGAINST A CORPORATION.

A CASE of importance to motorists has been heard at the Preston County Court, when Judge Hamilton awarded Frederick Sharples and Henry Charnley, of Blackburn, £35 damages against the Preston Corporation for damages caused to a motor-car through collision with an electric tramcar. During a block in the traffic in Church Street a tramcar ran into the motor-car, which had been brought to a standstill, the accident, it was alleged, being due to negligent driving by a Corporation employee.

POLICE TRAPS.

MANY police traps have lately been notified in the county of Dumbarton.

SEVERAL police traps have lately been reported in the Esher district.

THE number of police traps in Essex continues to increase; especial care should be taken when passing through Coggeshall.

THERE is a police trap at Wistaston, the victims of which are sent to the Crewe Court.

A POLICE trap in West Hill Wandsworth, has been in active operation this week. It is between Wandsworth main street and Wimbledon Common.

BUSINESS NEWS.

THE Singer car which won the Rover Cup in the M.C.C. competition was fitted with "Castle" accumulators and coil and L.M. sparking plugs, for which the United Motor Industries, Ltd., are agents.

DUNLOP tyres were fitted to the winning Mercedes car in the Montagu cup race at Brooklands on Saturday, also to the winning Napier in the Marcel Renault plate, to the winning Darracq in the Horsley plate, and to the winning Darracq in the Stephenson plate.

MESSRS. MORS (ENGLAND), LIMITED, have sent us a copy of a booklet they have issued, entitled "The Story of a Long Drive," giving a description with illustrations of a 20,000 kilometre tour of France, accomplished by three 17-h.p. Mors cars shod with Falconnet-Perodeau tyres.

FROM Ariel Motors (1906), Ltd., comes a copy of the new catalogue of Ariel-Simplex cars they have just issued. Three sizes of four-cylinder vehicles and an equal number of six-cylinder cars are being turned out, full particulars and illustrations of which are given in the list, together with some useful instructions for the efficient maintenance of these vehicles.

MESSRS. JAMES BUCHANAN AND WILSON, of 47-51, Stockwell Street, Glasgow, have been appointed sole wholesale agents for the whole of Scotland for Messrs. Avery and Roberts's well-known specialities, the Auto adjustable box spanner, Auto vice, and Auto nut pliers.

THE Stepney spare wheel continues to make friends wherever it is used. Lord Amphil, writing from Mitton Ernest Hall, Bedford, says:—"I have no hesitation in saying that I consider the Stepney spare wheel invaluable. I have had occasion to use mine on some half-dozen occasions, with the result that great inconvenience and delay were avoided. There was no difficulty about adjusting the wheel in three or four minutes on each occasion, and after it had been fixed there was no appreciable difference in the running of the car."

THE LONDON AND PARISIAN MOTOR COMPANY, LTD., have sent us a photograph of the six-cylinder Hotchkiss car which Captain Corbet drove straight through in the day, on Saturday, the 22nd ult., from London to Hopetoun House, the residence of the Marquis of Linlithgow, fourteen miles beyond Edinburgh, a total distance of 409 miles. Stops were made at Doncaster for breakfast, at Northallerton to fill up with petrol, at Berwick for tea, and Edinburgh, which was reached at five minutes past eight. On the following Monday the car was driven from Hopetoun House to Glasgow, in order to take part in the Scottish Reliability Trials, in which it was the only vehicle in its class to go through with an absolute non-stop run.

THE Motor-Car Journal.

COMMENTS.

Legislative Matters.

SOMEWHAT unexpectedly the Lights on Vehicles Bill passed its third reading in the House of Commons on Friday week, and is now on its way to the House of Lords. The main provisions are familiar to regular readers of the *M.C.J.*, but at the last moment two new points were added, one of which illustrates the danger of the hasty consideration of important measures. A new clause now appears in the Bill exempting from the operation of the Act, when it comes into force, any vehicle carrying farm produce to stack or barn during the months of August, September and October. Evidence of the influence of the agricultural interests is seen in the acceptance of such a proposal by Major Renton, M.P. Our Scottish and Irish readers, however, will be glad to know that the provisions of the Bill are to be extended to their respective areas. Another matter of Parliamentary concern was Earl Russell's interrogation of the Government on Tuesday with regard to their inclusion of the Motor Car Act in the list of statutes to be revised. He took advantage of the occasion to deprecate the Chancellor of the Exchequer's proposed further inroad into the pockets of motorists, and also denounced police traps as ridiculous and unnecessary, two points which were emphasised by Lord Montagu. Lord Allendale on behalf of the Government replied that they did not intend to continue indefinitely the practice of keeping the Motor Act alive by means of the Expiring Laws Continuance Bill. The most important question raised in the report of the Commission was that of the speed limit, which was the crux of the whole matter, and it behoved the Government to walk warily. Existing legislation would therefore be continued in the Expiring Laws Continuance Bill. We agree with his lordship that the delay might not be regrettable in view of the fact that the industry was a new one, but cannot help wondering why the Marquis of Londonderry should have joined in the debate at the last moment to suggest a tax on cars, graduated according to their horse-power.

The World's Record.

THE certificate of the official time-keeper to the R.A.C. in connection with the twenty-four hours' record made on the 29th ult. by Mr. S. F. Edge on a six-cylinder Napier car has just been issued. It confirms the accuracy of the hour by hour times given on page 419 of our issue of the 6th inst., and certifies that in the course of the long run he made the following records:—50 miles in 42' min. 46 2-5 sec.; 100 miles in 1 h. 25 min. 13 2-5 sec.; 799 miles 1,600 yards in twelve hours; 1,000 miles in 14 h. 54 min. 15 2-5 sec.; 1,581 miles 1,310 yards in twenty-four hours. In celebration of the twenty-four hours' ride a dinner was held in London on Monday, when Mr. S. F. Edge presented souvenirs of the record to those who drove the other cars on the track at the time, and also to his mechanic, J. Blackburn, who accompanied him throughout the run. Lieutenant-Colonel Mayhew then handed Mr. Edge a silver plaque upon which was a representation of the famous motorist and his car. In reply Mr. Edge made an interesting speech, thanking all who had assisted him on the eventful journey, promising that his cars should take a prominent

part in international races next year, and enlarging upon the conditions of the industry in Italy.

Dust on Roads.

IN his annual report to the Essex County Surveyor, Mr. P. J. Sheldon, who was the first county surveyor in this country to use a motor-car in the performance of his public duties, draws attention to a point in connection with the solution of the dust problem that has not been greatly considered hitherto. He says he coated about ten miles of roads with tar with satisfactory results as regards dust prevention and surface preservation. In his view, the only drawback to impervious road surfaces, and one too little considered by enthusiasts desirous of reforming road administration, is that the nature of the dust will be entirely altered, and from being comparatively of a harmless character, as on a macadamised road, it will consist mainly of pulverised horse manure with a percentage of dried or absorbed human sputum. This can be dealt with in towns where there is an expensive system of orderlies constantly attending to the streets, but is quite impracticable elsewhere. The ultimate solution of the dust problem lies rather with the manufacturers of motor-cars and their users than with altered road surfaces, and the sooner this is recognised by the legislature the quicker will relief be afforded to those who live upon main roads outside urban areas.

Next Week's Trial.

ON Tuesday next some important dust trials will take place on the Brooklands Track under the auspices of the R.A.C., and, should the weather be favourable, important results are hoped for by those responsible. The tests will be divided into three classes, one being for makers' standard cars, another for amateurs' cars (this taking the form of an interclub competition limited to two cars from each organisation entering), and experimental cars which have been specially altered or added to in any way for the purpose of lessening the dust raised. In the first class ordinary pneumatic tyres must be used without non-skid bands. It is suggested that some makers will also enter their vehicles in the third class, fitting them with other tyres or with non-skid bands or with other types of wheels, so that some comparative results may be arrived at. It is intended that vehicles shall be run at twenty and also at thirty miles per hour over a layer of dust, and that the vehicle will be photographed at each test so as to ensure accuracy of comparison. No such important trials have taken place since those held at the Crystal Palace some few years ago, and the public will not fail to recognise the efforts made by motorists to satisfactorily deal with one of the most troublesome problems now attaching to motoring.

Two Charges Dismissed.

CONGRATULATIONS are extended to Mr. Gerald Higginbotham, of Macclesfield, on the dismissal of the cases against him at the local courts. On the first hearing there was a disagreement among the magistrates, and the matter was re-tried on Monday. Mr. Higginbotham was charged with driving his car at a dangerous speed, and failing to sound his horn. In the course of the evidence, it transpired that the motorist came

into collision with a telegraph boy on a bicycle. In swerving in order to avoid the lad he crashed into a lamppost, smashing it in two. On the other hand, it was shown that the accident was due to the carelessness of the boy, and in the end both cases were dismissed. Mr. Higginbotham was fortunate in not having to appear before a southern bench.

The Ladies' Club.

IN the new motor house of the R.A.C. space is being reserved for the cars of members of the Ladies' A.C., which is within five minutes' drive of the new place in Brick Street, W. This portion of the establishment is now open to members of the Ladies' Club upon the same terms as to the members of the Royal Club. Arrangements have also been made so that in the event of the reserved space being fully occupied by members' cars, and there being space elsewhere in the garage, the cars of the ladies may be allowed to stand there—a concession likely to be appreciated by the members of the Ladies' A.C., one of the most flourishing and prosperous of the ladies' clubs of London.

Carmen Sylva, the Queen of Roumania, in her W.A.G. Car at the Municipal Orphans' Home in Bucharest. [*Allgemeine Automobil Zeitung, Berlin.*]

Brooklands.

REMONSTRANCE with the management of the Brooklands track as to their attitude towards the Press has been fairly general, and what we have already written on the matter has met with general endorsement. A relaxation of the regulations with regard to the public has already taken place, and will be observable at the meet to-day (Saturday), the programme of which appeared in the *M.C.J.* of the 6th inst. We understand that access to the car enclosure will be obtained free from any enclosure at any time during the afternoon. Motorists will thus be enabled to meet friends there without difficulty. Cars entering the grounds will proceed to the vehicle enclosure by the same road as heretofore, but a separate exit has been provided in order to avoid the steep hill by the entrance gates. Free passage will be permitted from any enclosure to a cheaper one. Not only members of the club, but visitors also in the £1 enclosures will be allowed to circulate in the paddock between the races. In order that the race officials may carry out their functions expeditiously and with satisfaction to the competitors, it is requested that visitors to the paddock will kindly refrain from crowding round the marshalling line. Evidently things will be made right in time; but there need not be too long a wait for that happy period.

General Booth's Fourth Tour.

THERE was a novelty about the first motor-car tour undertaken by General Booth in the interests of the Salvation Army. Now these journeys have become almost an annual event. On Monday the forty-second anniversary of the foundation of the Salvation Army was celebrated at the Crystal Palace. Following a demonstration in the central transept, the General virtually commenced his "motor campaign," leaving the grounds of the Palace in the evening in a torchlight procession, and proceeding to his home at High Barnet. He started with five motor-cars on Tuesday morning, the first halt being made at Ware. The trip will last a month, during which period from seventy-five to one hundred places will be visited, at each of which meetings will be addressed. The General hopes to be able to give, on an average, four addresses a day, finishing up at the Dome in Brighton on August 16th. The towns visited will be mainly those urban centres in Lancashire, Yorkshire and Wales which he has been unable to touch in his previous motor journeyings.

Road Signs.

THE fact that nearly 10,000 sign posts, denoting dangerous corners, precipitous places, cross roads, and other points of danger on the great highways of the country have been put up under the Motor Car Act of 1903, will, we imagine, be news to most people. That it is so, however, is fairly certain, for the information is given on the authority of Mr. Burns, President of the Local Government Board. The counties that have been most active in this work are Berkshire, Hertfordshire, Lancashire, Northumberland, Surrey, East and West Sussex, Essex, and Kent; the latter heading the list with no fewer than 655 such posts. Surprise will, doubtless, be expressed that Somerset, Derbyshire, the Holland division of Lincolnshire, Norfolk, and Monmouth should be reported as not having yet put up warning signs. The fact, however, that 9,025 are set up will give something of confidence to those who are in the habit of frequently using the roads, for the good work is being hastened forward.

Motor-cars in London.

IN July, 1906, the London County Council authorised application being made to the Local Government Board for an additional index-mark in connection with the registration of motor-cars, the limit of four figures under the marks "A" and "LC" having been reached. The Board assigned "LN," but as the available numbers thereunder are now rapidly becoming exhausted it has become necessary to make application to the Board for a further index-mark, and the Public Control Committee recommend that it should be "LB." During the month of June last applications were received by the Council for the registration of 648 motor-cars, 56 heavy motor-cars, and 154 motor-cycles, bringing the total number of these vehicles registered up to 15,959, 1,527, and 7,460 respectively. The number of licences to drive motor-cars and motor-cycles issued during the month was 2,235, bringing the total number up to 58,052.

Motor-car Imports and Exports.

THE returns just issued relating to the importation of foreign motor-cars and parts into the United Kingdom during June last show a decrease as regards complete cars and an increase in parts, in which chassis are comprised. The number of complete vehicles which reached this country last month was 400, their value being given as £187,831. Parts were responsible for an additional £214,181, which gives a total of £402,012, as against £388,987 in the corresponding month of last year. For the first six months of the current year the figures are:—Number of cars imported, 2,801; value of same,

£1,172,557; imports of motor parts, £1,316,345; total, £2,488,902. For the similar period of 1906 they were:—3,217 cars of a value of £1,299,262; parts, £1,010,819; total, £2,310,081. Turning to the exports of British motor-cars and parts, these continue to show a steady expansion. The number of vehicles shipped during the six months ending with June last was 886, of a value of £326,476; to this have to be added parts estimated at £246,730, which gives a combined total of £583,706, as contrasted with only £304,108 in the corresponding half of 1906.

Touring in Germany.

At present any person before taking a motor-car to Germany has to obtain the authentication of the Home Secretary and a German Consulate of the entry in the British registering authority's list relating to the car and of the driver's licence—a process which involves delay. The German Consul-General has now expressed his willingness to authenticate such

he advises the names of the destinations should be painted legibly above the driver, so that they may be read from the side walk as well as from the roadway in front of the vehicle—a suggestion which, if acted upon, would be to the convenience of the public. From the police courts comes another proposal of value and interest to the effect that motor-buses should be provided with speed indicators for the guidance of the drivers, who are now liable to be summoned for exceeding the legal speed, and yet who have nothing with which to assist their mental estimates. The point has been raised before, but has not yet been acted upon.

North Wales.

MOTORISTS, in common with others on holiday bent, have been searching for fine weather. According to Mr. A. T. Storey, they should have a fair chance of meeting some in North Wales, where the climate is as varied as the scenery. A Guide to the half-dozen counties comprised within that title

The Paris-Pekin Race.—Unloading the Spyker Car at Peking.

documents without further formality if they bear the seal of the registering authority and are signed, and the Home Secretary concurs in the proposal. It is proposed, therefore, by the Public Control Committee of the London County Council that in future licences to drive motor-cars, and copies of entries in the register of motor-cars, be stamped with a representation of the Council's seal. Doubtless other authorities throughout the country will adopt a similar procedure.

Motor 'Bus Suggestions.

MR. J. BROWN, of Belfast, one of the best known of Irish motorists, suggests that the motor-'bus companies in London should guard their vehicles from the confusion associated with the names of the stations on the railway. He points out that the words "Vanguard," "Union Jack," &c., convey little or no meaning to the man from the provinces, whose desire is to avoid mounting the wrong 'bus. To prevent such a contretemps

has just been issued by Messrs. Methuen and Co., and special attention seems to have been given the roads of the northern part of the Principality. The district is well provided in this respect, and, apart from the great main arteries, the country is traversed in every direction by branch roads and mountain byways. There is the great western road from Shrewsbury to Holyhead, and at right angles are two important roads running on either side of the Conway. Bangor is a good point from which to make excursions into and about Anglesey, which has one good highroad, that to Holyhead, running through Gwalchmai Valley. The way from Chester to Conway and Bangor has many ups and downs, and at the chief towns *en route* are roads opening inland to spots of exceptional interest or beauty.

THE Hertfordshire County Council is applying to the L.G.B. for the limitation of the speed of motor-cars through Watford to ten miles an hour.

SOME FACTS ABOUT VALVES.

ABOUT the first job an amateur motorist indulges in is the grinding in of an exhaust valve, and the quantity of energy and emery so employed may be good for the liver and makers of emery powder, and probably much more so than for the engine. It is so easily carried out, and when it is done there is the satisfied feeling that the compression is good; it is, however, just as well to recollect that emery is not a lubricant, and neither a good application for valve guides nor piston rings. Of course valves do occasionally want grinding in, and for this purpose Davies' 220 corn emery or Richford's grinding compound can be employed, and if, after the operation is ended, all remains of the substance is washed away with a little paraffin no harm results. The inlet valve and its seat can usually be removed together, but the seat of the exhaust valve, as a rule, is part of the combustion chamber, and thus the exhaust has to be ground *in situ*, generally through the inlet valve box opening. The top of the exhaust valve has either a tapped hole so that a tool provided for this purpose can be screwed in, or a groove is cut so that a screwdriver can be employed. To perform the operation, dab with a clean finger a little emery rubbed into a paste with linseed oil, or some of the prepared compound, on the seat, then lower the valve into position and with the tool or a screwdriver slowly twist it first one way and then the other, keeping the valve well pressed down. After doing this some dozen or so times wipe away the emery and replace it by a drop of oil and repeat the movements; then wipe with a paraffin rag the valve and its seat, and notice if a clean ring has been obtained on both without any depressions; if so, the job is done, and by marking the seat with a little chalk, and replacing and twisting the valve when dead home, its perfect fit can be demonstrated.

When the valve is home there should be just room to insert a piece of cigarette paper between the valve stem end and the valve lifter; this will allow for the expansion due to heat. If, as a result of much grinding, the valve seats a little lower, then either the stem or lifter must be adjusted so that there is such a gap between the two, otherwise when running, as a result of heat expansion, trouble will ensue owing to the valve not closing properly, with consequent loss of compression and power. In cars with mechanically-operated inlet valves the same care must be exercised. When seeing to the valves it is as well to notice that the spindles work easily in the guides. A little graphite is a useful application to the spindles, being a good lubricant unaffected by heat. If, as a result of wear, the spindle has too much play in its guide, the lifter may catch, bend, and be thrown out, with the consequence that the engine is no longer capable of "pulling." It is wise to carry a spare valve guide and lifter, because a bent one requires a blacksmith's fire to straighten, and these accidents do not, as a rule, occur outside a forge. Worn

guides can be used again by getting them rebored a shade larger and fitting new lifters with a spindle turned up a little larger so as just to fit the rebored guide.

Most valves are now machined from hammered forgings, and are thus not so apt to fracture at the neck as the older kind, which were made from the bar. When they do break just near the mushroom the result is interesting, but the accident is pregnant with dire possible complications. The mushroom may, if luck is in one's way, break up, and find its way along the exhaust, and its remains be ultimately discovered when the silencer has its spring cleaning. This, unfortunately, is not the general termination; instead, the mushroom has a trial of strength with the piston, which, being a casting, gets the worst of it, with the effect that on the post mortem table a cracked piston is found and a lump of metal with many flats on it which once

upon a time, though its altered state renders it incredible, was the head of a well-behaved valve. Occasionally, as a result of heat and burnt oil, the inlet valve seating is fixed; paraffin and patience will effect its release, and this may be hurried up by placing a cloth over the hole and, with the ignition current switched off, pulling the engine round. The inlet valve seating is in some cars coned so as to make a gas-tight joint with the combustion head, in other cases a copper asbestos ring is used for this purpose; failing such a ring a grommet made of asbestos cord rubbed up with red lead answers.

A rather common source of loss of power is wear of the exhaust cams, with consequent diminution in the lift of the valve and thus throttling of the engine, the exploded mixture being not all got rid of and therefore a full new charge not admitted. The remedy for this is to fit new cams. Spare inlet and exhaust springs should always be carried, as they occasionally break; in addition, the exhaust ones may suddenly, as a result of the great heat they are subjected to, become weak and so not keep the exhaust valve down, and to have to ask for a tow for so simple a cause is exasperating. The inlet valve is kept up by its spring, which bears against a cap, a cotter pin passed through the spindle keeping the latter in position. Occasionally the cotter breaks, and, failing

another, a thick split pin makes a good makeshift to carry one home.

CHARLES T. W. HIRSCH.

The Paris-Peking Race.—The two De Dion Cars at the Ten Chang Man Gate, Peking.

THE roads on Vancouver Island, British Columbia, are well adapted for motoring, the soil being generally gravel and rocks, the heaviest rains not leaving standing water thereon, but drying up with great rapidity. While three years ago only one or two cars were owned in Victoria, B.C., and two years ago there were not twenty, now there are over 100 in the town; and a correspondent writes that, in view of the growing demand, British manufacturers of motor vehicles should give special attention to Victoria, Nanaimo, and other places on Vancouver Island.

THE DUNLOP DETACHABLE RIM.

WE illustrate herewith, in Figs. 1, 2, and 3, the new detachable rim which has just been introduced by the Dunlop Pneumatic Tyre Company, Ltd. It has been known for some time that the Dunlop people were at work on such a device, and the one they have produced is noteworthy not only for the ease of attachment and detachment but for its great simplicity. As will be seen from the photos reproduced herewith, there are no loose parts connected with the arrangement; the components comprise simply the rim carrying the inflated tyre (Fig. 2), the wheel (Fig. 1), and the key (shown at the top of Fig. 3), used to lock the rim on the wheel. Both the wheel and the rim have four driving pieces X, so placed that the two fit as one, precisely as though they were dove-tailed into each other. The locking member consists of a wide U-shaped ring A of spring steel, of a size to envelope the under and side surfaces of the felloe. This ring is split, the two ends being connected at each side by an adjustable link B, which, when moved to the proper position, pushes apart the two ends of the ring, causing it to expand to an abnormal diameter. The link holds the two ends apart, but when this is released the rim regains its normal circumference, which is smaller than that of the tyre rim, and the latter can then be removed altogether by a pull forward,

Figs. 1 and 2.—Views of Wheel and Tyre Rims.

care being taken so to tilt the rim that it clears the hole in the wheel. When fitting a new tyre it is only necessary to reverse the process, using the key to expand the loose ring. A flange is thus formed on each side of the wheel, which prevents any lateral or rolling movement of the tyre and its rim, which cannot take any circular movement, being dove-tailed to the wheel rim proper. The expanding ring, it should be understood, is put on the wheel prior to its being finally built up, the spokes penetrating its under surface, the holes for the latter having sufficient clearance to allow for the movement in the expansion of the locking ring. As already mentioned, only one tool is necessary to manipulate the new rim—the key, which fits over the locking-bar of the link. This, as will be seen, has been given a handle of adequate length, so that it can be operated quite easily. The new device has had a very lengthy trial ere being finally adopted; and some idea of its utility in lessening the delay and trouble caused by punctures may be gathered from the fact that in a recent demonstration a tyre and its rim were detached and replaced in $7\frac{1}{2}$ sec., so that the Dunlop Company are well within their claims in stating that the rims could, if necessary, be changed seven times in a minute.

THE examination for driving certificates held by the R.A.C. at Chichester was a great success.

CONTINENTAL NOTES.

International Motor-Racing Rules.

An important conference of representatives of the recognised national automobile clubs was held in Ostend on Sunday last to discuss the question of the unification of the rules and regulations with regard to important international road races, such as the Targa Florio, Kaiser's Prize, and the A.C.F. Grand Prix, each of which have been run on a different basis, necessitating special vehicles for each event. Delegates were present on behalf of England, France, Belgium, Spain, Germany, Austria, Hungary, Holland, and Italy, and, the principle of a maximum bore and minimum weight having been decided upon, the English representatives proposed a limit of 152 mm. cylinder diameter, the French 160 mm., and Germany 135 mm. After a lengthy discussion it was unanimously agreed that the regulations for all high-speed road races should in future be on the basis of a maximum cylinder bore for four-cylinder cars of 155 mm. and a minimum car weight of 1,100 kilos, such weight being without passengers, water, or spare parts, but with lubricating oil and petrol. The matter of fixing the equivalents to be allowed to six and eight cylinder vehicles was referred to a

Fig. 3.—View of complete Wheel and Tyre, together with the only tool required.

technical committee. The next Congress is to be held in Paris in November next.

The Scheveningen Automobile Week.

The annual automobile meeting at Scheveningen, the well-known Dutch seaside resort, has been held during the past week. The meeting opened on the 8th inst. with a carriage body competition, the first prizes in the three classes falling to two Fiats and a Spyker. On the 9th inst. there was a fuel consumption trial from Scheveningen to Haarlem and back for single-cylinder cars, which was won by a locally-built car known as the V.L.A.M. This was followed by a tyre-changing contest and a procession of ancient and modern cars, in which great interest was shown, the vehicles in line ranging from an 1896 German Daimler to a 1907 30-h.p. Beeston-Humber. Wednesday, the 10th inst., was devoted to a reliability run from Scheveningen to Daal and back, a distance of 94 kilometres, the announcement of the result of which was postponed. Thursday was set apart for a series of kilometre speed trials, the cars being divided into categories on a cylinder bore basis, and a flying kilometre handicap. There were ten events, five of which were won by Spyker cars, one of which also secured the Scheveningen gold cup. This event was also over a kilometre, and a 15-20-h.p. Spyker, which received

260 metres, did the distance in 49 3-5 sec., a 50-h.p. Opel being second, from scratch, in 50 4-5 sec., and a Fiat (233 metres start) third in 53 3-5 sec. Hoboken, on a 90-h.p. Mercedes, won the heavy car class in 49 2-5 sec. The meeting was brought to a close on Friday, the 12th inst., with a procession of decorated cars and a flower fete.

The Belgium Criterium and Speed Trials.

Spa was on fête on Friday last week, when the weighing-in of the cars entered for the Belgium Criterium took place. On the following morning about thirty-five cars set out for the first stage of the contest—to Ostend, a distance of 274 kilometres. This was safely reached by practically all the competitors after a stop for lunch at Malines. The first of the series of speed trials at Ostend was run off on Monday. There were categories for touring and racing vehicles, the tests being over a distance

Martin-Lethimonnier, three Regina, a M.R.G., a Brillie, a Rebour, a Charron, and an Argyll—the latter being the only British competitor. The cars must be fitted with four-seated side-entrance bodies, and be of a total minimum weight of 1,650 kilog., including the passengers or equivalent ballast. The contest starts on August 2nd with a run from Paris to Clermont Ferrand; on August 3rd the journey is from Clermont to Bordeaux; on August 4th to Nantes; and on August 5th to Trouville. The daily distance is about 250 miles, which is to be covered at an average speed of twenty-five miles per hour. Those competitors who successfully go through the four days' reliability trial will qualify for the speed contest, which is to be held on August 6th on a 78.5 kilometre circuit near Trouville, which, starting and finishing at Lisieux, passes through Pont l'Eveque, Cormeilles, Lieurey and les Quatres-Routes, this having to be covered five times to give a total distance 392½ kilometres. This

The Belgian Criterium.—The Cars preparing to leave Spa.

of five kilometres from a standing start. Owing to the large number of entries and to the late start, the times made by the different competitors are not available at the time of going to press.

The Criterium de France and the Coupe de la Presse.

Preparations are now actively in hand for the Criterium de France and the Coupe de la Presse contest, which is to be held by the A.C.F. early next month. The event is a new one, and is practically a combination of the Scottish Trials and Heavy Touring Car race lately held in this country. No less than forty-two entries—thirty-five French and five foreign—have been received for the event, these comprising three Peugeotts, two Gladiators, a Unic, two Mercedes, three De Dions, a Vinot, two Germains, a Lorraine-Dietrich, a Gobron, two Aries, three Cottin-Desgouttes, a Prod'homme, three Cornilleau-St. Beuve, three Mors, two Martini, a Gillet-Forest, a Motobloc, two

part of the trial will be run on a petrol allowance basis, viz., 19 litres per 100 kilometres, equal to, roundly, fifteen miles to the gallon.

The Semmering Hill Climb.

The annual hill climb up the Semmering organised by the Austrian Automobile Club is to be held on September 22nd. There will be classes for motor-cycles, touring cars, racers, and vehicles built to meet the conditions of the Kaiser's Prize race.

A NEW garage has been opened at Dunoon by Messrs. Hubbard and Young. In addition to a workshop for repairs the firm have a vulcanising plant for tyres.

MESSRS. TILLEY, GIFFEN AND CO., of the City Motor and Electrical Works, London Road, St. Albans, had charge of the garage in the field in connection with the pageant at St. Albans this week.

THE VAUXHALL 12-16-h.p. CAR.

AS was stated in a recent issue of the *M.C.J.*, the great development, during the last twelve months, of the motor-car department of the Vauxhall and West Hydraulic Engineering Company, Ltd., has resulted in the establishment of a separate company. The new concern, Vauxhall Motors, Limited, is now in going order with a largely augmented staff both for management and works, and a large quantity of machinery and appliances of every description has been laid down for the manufacture of cars, the whole of which are made and assembled at the works at Luton, which comprise turning, fitting and erecting shops, smithy, body building, and painting and upholstery departments. At present the company are largely devoting attention to a 12-16-h.p. vehicle which is of British construction throughout and of which a description is appended.

The main frame is of pressed steel with perfectly straight side members; the engine and gear-box are supported on a sub-frame, to which a long mud-protecting shield is attached. The engine (Fig. 1), which is rated at 12-16-h.p., has four separate cylinders, $3\frac{5}{8}$ in. bore by $3\frac{3}{4}$ in. stroke. The inlet and exhaust valves are interchangeable and arranged on opposite sides, and are mechanically operated. The cam shafts are driven by silent spur gearing located at the end of the engine, and atten-

Fig. 1.—View of Inlet Side of Vauxhall Engine.

tion may be drawn to the fact that the front cross member of the frame is dropped, so that the cam shaft, complete with its bearings and half-time wheels, may be withdrawn for purposes of adjustment or timing. The crank shaft, which is forged and machined from the solid, is supported by five long phosphor bronze bearings, carried by bolts which pass through to the top of the aluminium crank case. Four large inspection doors are provided on each side of the latter, which allow of immediate and thorough inspection of all the working parts. The crank case cover has at its rear end an oil sump, from which oil is forced by means of a plunger pump into the main bearings, and through the hollow crank shaft into the big end bearings of the connecting rods. This is a useful feature, as only the right quantity of oil required for lubricating the main parts of the engine is used, the emission of blue smoke from the exhaust being, consequently, entirely eliminated. The lubricating pump is so fitted that it can instantly be dismantled for inspection.

The carburettor is of the automatic float feed spray type; a sectional view of it is given in Fig. 2, from which it will be seen that the spirit emerges through the jet B, and is sprayed against the adjustable atomising cone C. An automatic air valve is provided at D. Not only can access be had to all the main parts of the carburettor by removing three butterfly nuts, but

the whole device can be detached in a similar way. The fuel, which is gravity fed, passes from the 8-gallon tank through a strainer, so that there is no danger of the jet becoming blocked. The ignition is by coil and accumulators, with a synchronised high-tension distributor. Magneto ignition can be fitted if desired, and the engine is designed to receive two sets of

Fig. 2.—Sectional View of Vauxhall Carburettor.

G. First speed and reverse gear striking fork. 3. Direct drive third speed clutch.

ribbed-tube radiator and a glandless centrifugal pump. The latter has a spring drive, so that it is impossible for any foreign substance which may become jammed between the impeller and pump casing to damage the pump. The cooling is assisted by a

fan driven from the exhaust cam shaft by a spring belt, which requires no adjustment for permanent stretching. Each exhaust valve has a separate pipe, which conveys the burnt gases to a collecting chamber, from whence they pass to the silencer. The speed of the engine is controlled by means of a hand lever and a foot accelerator. The throttle and ignition levers are mounted on a bracket attached to the column immediately below the steering wheel in such a way that they can be operated without taking the hands from the wheel.

The clutch is of the internal metal-to-metal cone type,

by a metal cover, which can be readily dismantled for inspection, and only needs filling with grease every 1,000 miles. The back axle, of which a horizontal section is given in Fig. 4, is contained in a stiff gunmetal casing, which is stayed to the frame by torque rods. From each end of the casing project two very stiff steel tubes upon which the rear road wheels are supported. The live shafts, which are of nickel steel, have squares formed on their outer ends, which fit into the hub plates, so driving the rear wheels. The differential casing is fitted with a large inspection door, through which it is filled with oil, and all the pinions of

Fig. 4.—Horizontal Section of Back Axle on Vauxhall Car.

running in oil, and so arranged that it can be readily dismantled without disturbing either the motor or the gear. From the clutch the power is transmitted by a universally-jointed shaft to the gear-box to allow for any want of alignment between the two parts due to bad roads. The change-speed gear, which is carried at three points on an underframe (Fig. 3) is adapted to give three forward speeds and a reverse. The gear-box shafts are made of nickel steel, in order to eliminate all chance of springing; they run on ball bearings, and a packing gland is

the spur differential gear, &c., are visible. The bevel pinion can be readily removed by swinging the propeller shaft clear and removing two nuts on the front of the casing. It is supported by one large ball bearing and a tail ball bearing, which prevents any spring in the pinion shaft.

The usual foot and hand brakes are provided, these being of the external metal-to-metal type. Every care is taken to prevent any rattle when the car is in motion, all the brake leads being straight and direct, while easy means of adjustment are

Fig. 5.—Plan of Chassis of Vauxhall 19-16-h.p. Car.

fitted at each end to make the case perfectly oil tight; as for the change-speed pinions, these are of large diameter, with teeth 1 in. wide. The control is by a single lever working in a "gate" quadrant, there being only three moving parts. A large and instantly detachable cover is provided to the top of the gear-box to allow for easy inspection and filling with lubricant. The final transmission is by a nickel-steel cardan shaft and bevel-gear to the rear live axle, which runs on ball bearings. The propeller shaft is provided with universal joints at each end. The latter are of substantial design, all the wearing surfaces being case hardened; they are completely protected from dust

provided. The steering gear is of the worm and sector type; the sector lever is bolted directly to the sector, so that there are no keys to work loose, a special feature of the arrangement being an eccentric adjusting spindle to readily take up any wear between the worm and sector. The rear springs, which are arranged to act as radius rods to the back axle, are 40 in. long, rendering the vehicle very easy riding. The road wheels are all of equal size, shod with 810 mm. by 90 mm. tyres. It may be mentioned that ball bearings are used throughout, except the engine and the back hubs. The car has a wheel base of 8 ft. 6 in., enabling a roomy side-entrance body to be fitted.

COLONEL HAMERSLEY, the Chief Constable of Cheshire, is to be provided with a motor-car by the Cheshire Joint Police Committee.

THE calculations necessary to the awards in the Scottish Reliability Trial are proceeding as rapidly as possible, and the Trials Committee hope that the results will be available for publication next week.

FROM the Continental Tyre and Rubber Company, Ltd., comes a selection of telegrams received from competitors in the recent Scottish and Irish Trials who had excellent runs through-out these events on cars fitted with the Continental tyres.

Mr. E. M. C. Instone on his 45-h.p. Daimler Car on which he won the Gottlieb Daimler Memorial Plate at Brooklands.

THE report of the Fuels Committee of the Motor Union may be presented to the general committee at the Southport meeting to-day (Saturday).

THE Endolithic Manufacturing Company, Ltd., of 61, Fore Street, London, E.C., is specialising in name plates for motor-cars, &c. Quick delivery is one of the factors in their success.

IN conjunction with the local military tournament on the 9th prox. at Lytham, a motor gymkhana will be held, of which Mr. A. Vincent Robinson, Featherstones, Lytham, is the hon. sec.

THE PRINCE OF WALES, on his way from London to Newmarket on Tuesday, reached Baldock, Herts, when the tyre of the off-side front wheel of his motor-car was punctured. At the George and Dragon garage the chauffeur, with local aid, repaired the damage in three-quarters of an hour.

SUFFERING from tyre troubles recently on the way to the South Coast, we found the establishment of Messrs. Rice Bros., Springfield Road, Horsham, well adapted to meet the urgent requirements of motorists. The firm has not only a garage but are well equipped for small repairs and carry a stock of useful accessories.

IN our report of the Scottish Trials we referred to the stop which was forced upon the 24-h.p. Albion driven by Mr. G. M. Young owing to the backing of another car on Culloden Moor. We understand that the committee of the Scottish Automobile Club have now awarded a non-stop run to this car for the five days of the trial.

A NEW type of radiator has been introduced by the Doherty Motor Components, Ltd., of Coventry, who have long been associated with the manufacture of motor parts. In the construction flat tubes of thin section are used, these being fitted in double rows embodied with a new type of gill. The latter are produced from flat sheet brass, being first punched to the section of the tubes and perforated. When the punched pieces are formed into tubes the holes are situated on each side of the tubes and substantially assist in dividing up the air current through the radiator. This promotes a most effective cooling. The tubular gills are about one half inch in diameter, and are threaded on the tubes into close contact with those above and below as well as those threaded on neighbouring tubes. This new type is well calculated to withstand vibration.

HERE AND THERE.

AT Causeway Head, near Stirling, motor repair works and garage are being erected by the Grampian Engineering and Motor Company, Ltd.

PASSING along Long Acre, W.C., the other day, we noticed that Messrs. Morgan and Co., Ltd., have now on view a new type of Adler car—a 9-h.p. vehicle, the engine of which comprises two V-shaped cylinders 85 mm. bore by 90 mm. stroke.

THE L.G.B. have, it is understood, decided to issue an Order limiting the speed of motor-car to five miles an hour on the hills south of Frog Firle, Alfriston, Sussex.

MR. R. WOODHEAD will give free accommodation at his garage in Lord Street, Southport, to the members of the Motor Union attending the inter-club meet there to-day (Saturday).

It was only last week that we wrote about "old cars and what becomes of them." A day or two later one of the very earliest Renault cars pulled up outside the offices of the M.C.J.; the miniature car—its wheel base is no more than the length of some modern engine bonnets—afforded striking evidence of the wonderful progress that has been made in motor-car construction during the past few years.

HITHERTO better known in connection with solid rubber tyres, the Avon India Rubber Company, Ltd., of Melksham, Wilts, are now devoting considerable attention to the motor pneumatic tyre trade. We gave an illustration of the "Avon" tyre with non-slipping cross grooved tread in the M.C.J. of the 29th ult.; they also make them with square and round treads; the firm have sent us a sample pair of the latter for trial, and we hope to report on them at a later date.

SATURDAY last saw the concluding day of the arduous task of the Hotchkiss six-cylinder car of a 10,000 miles tour over the roads of England, Ireland, Scotland and Wales, under the supervision of the Royal Automobile Club. This feat has been accomplished with singular success and the car finished in splendid condition. In fact, its condition was so perfect that the London and Parisian Motor Company, Ltd., the sole concessionnaires, have decided to send the vehicle a further 5,000 miles,

The completion of the 10,000 miles Trial of the Hotchkiss Six-Cylinder Car.—The vehicle at the gates of Hatfield House, Hatfield.

which on completion will, with the trial in France, make a total journey of 21,250 miles. The following is a summary of last week's runs:—July 8th, London, Folkestone, Margate, Canterbury, London, 179 miles; July 9th, London, Hastings, Brighton, London, 169 miles; July 10th, London, Petersfield, Brighton, Lewes, London, 166 miles; July 11th, London, Salisbury, Winchester, London, 178 miles; July 12th, London, Banbury, Oxford, Maidenhead, London, 135 miles; July 13th, London, Hatfield, 21 miles.

THE grant to the War Office for instruction in motor-driving and other trades has lately been doubled.

A FINE new garage has been erected in the Ashton Lane, Byars Road, Glasgow, by the Kelvinside Garage and Motor Company, Ltd.

THE Bombay, Baroda and Central India Railway have recently put into service several covered carriage trucks, specially built for the transport of motor-cars.

THANKS to the efforts of Messrs. H. Armstrong and W. T. Codrington, a number of inmates of the children's homes at Southport have been taken for a motor-car drive, concluding with tea and entertainment at Edge House, Sefton, by invitation of Mr. James Birch.

The value of the motor-cars and parts exported from the United States during May last reached a total of £131,090 as compared with only £96,908 in the corresponding month of 1906. The United Kingdom heads the list with £47,150, Canada taking the second place with £30,015.

WE illustrate herewith a new compression tap for use on petrol motors to facilitate the starting of the same, which has recently been devised by Mr. Geo. Johnson, of Messrs. Johnson, Hurley and Martin, Ltd., Coventry.

The feature of the arrangement is the provision of a valve by means of which the amount of compression in the engine to which it is applied may be regulated so as not to exceed a predetermined limit when starting the motor. It is so arranged that when in potential action any surplus contents of the cylinder above the amount necessary to produce the pressure fixed upon automatically escapes into the atmosphere or to the silencer. As will be seen from the drawing, one end of the valve body is adapted to be screwed into the combustion chamber of the cylinder in the usual way, a plug cock near the base enabling the passage to be opened or closed at will. The body also carries an outwardly opening valve normally retained on its seat by a spring, the pressure of which, and consequently the load at which the valve will open, can be adjusted

by means of a nut on the valve spindle. One of the advantages claimed for the arrangement lies in the fact that any excessive pressure in the cylinder is immediately eased, and shocks caused by back firing are buffered or done away with. A perfect mixture may also be drawn into the cylinder and is not interfered with beyond that any surplus at once escapes when the valve is in action.

SKEGNESS has come well before motorists in recent years in connection with the motor races, and many who have enjoyed their stay there will be pleased with the series of pictures of interesting spots in and about the town published by Mr. G. F. Ball, of Lumley Road, under the title of "Picturesque Skegness." Many owners of motor-cars have visited the town lately, and local attention is being given to their requirements. The Lion Hotel has accommodation for cars, and Mr. W. T. Berry has a repair works in the High Street, Skegness.

THE Elephant Chemical Company, of Neate Street, Camberwell, S.E., have sent us a sample of the new "Vulstop" tyre-stopping they have lately introduced. This is a preparation for filling up cuts and holes in motor tyres, which will be found exceedingly useful in keeping down the tyre bill. It is claimed that the preparation will not harden in the tyre, but remains pliable and full of life so long as the cover is in usable condition. Vulstop is easily applied, so that motorists need not fear trying it on that account, and as the tyre can be used within six hours after treatment, it is well worthy of attention.

AT 10, Bank Street, Coatbridge, Messrs. Kyle Brothers have a repair depot.

THE "Morning Advertiser" is the latest of the London dailies to adopt a motoring column as a regular feature.

THE Gaelic League has arranged a motor-car tour of the Irish speaking districts in the interest of its propaganda. The first part of this will be in Donegal, for which county a motor-car has been placed at the disposal of the League by Mr. F. J. Biggar, of Belfast.

IN a recent issue we referred to the new "Ideal" motor hood which has been introduced by the "Ideal" Motor Hood Company, of Parson's Green Lane, Fulham, S.W. We learn that the company has secured an order from the Regent Carriage Company to fit one of the hoods to a large motor landaulet belonging to the Right Hon. A. J. Balfour.

IN addition to making the automatic lever for raising the bodies of motor-cars in order to give access to the mechanism, described in the *M.C.J.* a month or so ago, Messrs. Pack and Sons, of George Street, Brighton East, are devoting much attention to motor body building. On the occasion of a recent visit to their works, we found a number of bodies of the landaulet and limousine types in course of construction. The firm have also taken up the district agency for Minerva cars, of which they have already sold several.

MR. AND MRS. CHAS. J. GLIDDEN, of Boston, Mass., U.S.A., who have driven their Napier motor-car 33,768 miles in thirty-six countries, will leave London next month for a two thousand mile drive in England and Scotland, over routes not heretofore driven by them. Following this, drives will be made in Norway, Russia, Spain, Portugal, and countries around the Mediterranean Sea, and the world's tour of fifty thousand miles in fifty countries will be completed in the South American republics in the year 1911. The drive commenced in London in 1901.

MESSRS. ALEXANDER DUCKHAM AND CO., LTD., of West Ferry Road, London, E., have issued a set of card maps in a handy form for the pocket, which will be of great utility to the motorist on tour. They are produced on a scale of fifteen miles to the inch, and the series is lettered and numbered in convenient form, so that with the help of the key map the particular direction required can be readily found. On the reverse side of the cards Messrs. Duckham and Co. give some hints on lubrication, and also draw attention to the excellent motor oils which they supply.

THE Acme Rubber and Tyre Co., of 343, St. Vincent Street, Glasgow, have brought out a new non-skid which is likely to attract considerable attention, coming as it does from a firm that has long been known as capable and efficient tyre repairers. In the new non-skid red rubber is used, no leather being employed. The studs are washered at the back, and a layer of rubber prevents contact with the cover, so that the tyre cannot possibly be injured by friction. When the studs are worn there is no difficulty in repair, and from the section which has been submitted to us we have been well impressed with the method of construction as well as the quality of the rubber employed.

THE New Engine Company have been notified by the Scottish A.C. that the stop recorded against their car on the fourth day of the Scottish Reliability Trial has been passed as a traffic stop. Their car is, therefore, credited with four days' absolute non-stop runs. The stops for adding water on the second day were due only to the car having been finished in a very great hurry for the trials. As for the hill stop on Cairn o' Mount, this occurred on the comparatively easy gradient, and Mr. J. C. Mort, who drove, can only say that he has not the faintest idea as to what caused the stop. Four or five minutes were lost in examining the various parts of the car to see if anything was heated. No signs of trouble could be found anywhere, and when the engine was restarted it raced to a high speed immediately, and the car completed the run to the top in fine style without trouble of any sort. With the sole exception of this delay on Cairn o' Mount, the car took all the hills without any hesitation, and, considering this was the car's first public appearance, it made a very creditable show.

ON THE RIVIERA.

MOTORING has encouraged delight in the beauties of the landscape, and to find these the motorist roams far afield. He is commencing his journeys for the year, and although holidaying decisions may have been postponed awhile because of the weather, the British motorist is now pleasuring in earnest. An anticipation of the money-circulating value of the motorist on tour is seen in the work of the Royal Automobile Club's Touring Department, when a total of £4,561 passed through the monthly accounts of that branch of the Club's activity, of which £3,847 was paid by members in connection with Continental customs facilities. Those figures relate only to one month, and that an early one, of the roving year. Further, they concern only a section of the great motoring fraternity. The importance, therefore, of the British motorist to the foreign host is evident.

Probably the most delightful touring ground of the Continent within easy access is the French Riviera, properly speaking, that region bordering upon the Mediterranean west of the Italian frontier and east of Toulon. On the way the

boundaries—the olive, the vine, the apricot, the peach, and vegetables of the finest quality. The mutton and beef of the Crau, the Camargue, and the hillsides of the coast ranges are most excellent, and the fish supply of the Mediterranean is varied and abundant; *loup*, turbot, *thon*, mackerel, sardines, and even sole, which is supposed to be the exclusive speciality of England and Normandy, with langouste and coquillage at all times. No cook will quarrel with the supply of his market, if he lives anywhere south of Lyons; and Provence, of all the ancient *gouvernements* of France, is the land above all others where all are good cooks—a statement which is not original with the author of this book, but which has come down since the days of the old *regime*, when Provence was recognised as *la patrie des grands maitres de cuisine*.

We are taken across the Pays d'Arles, one of the subdivisions of the ill-defined limits that are scattered all over France. It comprises about sixty towns and villages, the descriptions of which have been familiarised to readers in the "Monte Cristo" of Dumas. There is Arles itself, older even than Marseilles—and looking more its age than the cities of greater progress and prosperity—and St. Remy with its wonderful gardens of fruits and flowers and its trading in "grandfather's clocks." Nearer the Mediterranean is Martigne—a paradise for artists and a new land for tourists—which is practically the gateway to all the attractions of the wonderful region lying around the Etang de Berre and of

Touring in France.—A Mors Car in front of the Statue of Napoleon at Cherbourg.

journey can be agreeably broken at Nimes, Arles or Avignon, cities of celebrated art, possessing interests of antiquity that stand alone without inviting comparison with the newer and more florid glories of the buildings along the coast. These towns are not resorts as understood by the modern pleasure seeker, but, like the mountain country lying but a few miles back behind the blue waves that flow by Cannes, Nice, Monte Carlo and Mentone, they will give new impressions and sensations of delight. Having ourselves tasted of the pleasures of all this district, we have perused with all the greater avidity the account of pleasure trips made by Mr. Francis Miltoun, published by Sisley's, Ltd., under the title of "Rambles in Provence and on the Riviera." This is something more than the historical or archaeological guide-book of the book-maker. It revels in the ancient spirit of the region and seems to have caught something of the atmosphere of the modern world that is steadily pressing back the ancient *regime*. Pictures made "on the spot" add much to the interest of the work, which revives memories in old tourists and suggests fresh fields of travel to new ones. Both author and artist know Provence well; they start with the material comforts of the country, and Mr. Miltoun has this to say of the *cuisine* :—

The very best proof one could wish that Provence is not a poor, impoverished land, is that the best of everything is grown right in her

the littoral between Marseilles and the mouths of the Rhone.

Thus the traveller is prompted from place to place, and all that he wants by way of supplement is a good motor-car to carry him along. As for roads, suffice it to say that they are French—with stretches of well-constructed straight highways, and with scarcely a turn, along which the joy of speed that the late W. E. Henley versed can be realised to the full. Here and there some quiet hamlet breaks the line, or a little town adds variety to the scene. But until he has motored that way, the Britisher—trapped, misbelieved, and doubly fined—scarcely knows the capacities of his gallant car.

With regard to the Riviera the author writes in the most interesting style, and, although partisans of other places may sing their praises, the charms of the Mediterranean coast-line are likely still to attract their devotees. This is obvious, he says, for three reasons—(1) accessibility, (2) the moderate cost of getting there, and (3) the familiarity of the visitors. Any language may be spoken; anything and everything can be enjoyed; and this book is one of the pleasantest companions *en voyage*.

At Barrhead Messrs. Patterson Bros. have a motor garage well arranged and equipped.

CORRESPONDENCE

[Letters to the Editor should be addressed to the offices,
27-33, Charing Cross Road, W.C.]

THE USE OF OXYGEN IN RACES.

TO THE EDITOR OF *The Motor-Car Journal*

SIR,—I am pleased to note that others are at last in accord with me. I made great attempts last year to have the use of oxygen and such aids to speed prohibited, but received very little support or sympathy from other competitors, and it was not until the Crystal Palace Automobile Club held hill climbs, flexibility competitions and speed tests where oxygen, &c., were prohibited, that cars had the opportunity of showing their true form.

I wrote to the secretary of the Royal Automobile Club so recently as June 12th, as the Club, instead of absolutely prohibiting the use of oxygen, actually allowed it in the Henry Edmunds hill climb.

Up to the present the Royal Automobile Club, with all the arguments I can advance against oxygen, will not prohibit it in some of their competitions, and the same remarks apply to the Brooklands first meeting. There is no advantage in using it, as naturally everybody can do so, and it simply puts everyone on an equality; it causes more trouble in

Mrs. Parry (the wife of Colonel Parry, D.S.O.), of Pengwern, Rhuddlan, at the wheel of her 12-16-h.p. Talbot Car, on which she won the North Wales Automobile Club's Hill Climb near Llanwrst on the 22nd ult., being awarded the Gold Medal.

It will be noted that the car is standard in every respect, being fitted with the full Roi des Belges side-entrance body, and the illustration shows the car exactly as Mrs. Parry steered it to victory, fitted with Cape cart hood, wind screen and heavy shielded wings.

racing and much more uncertainty; there can be no good argument for its use.

I have had most careful tests carried out and can speak from experience that its use, or the use of any similar thing for the same purpose, should be absolutely prohibited in all motor-car competitions. In the past we have seen motor-cars winning races which could not do anything like so well in the hands of ordinary users, and it was after making careful experiments that I realised what was being done. In all touring competitions in which Napier cars have taken part I have expressly run the cars without the use of oxygen.

I trust, now that my business opponents are agreeing with my campaign against oxygen, sufficient weight will be brought to bear on competitors to make the use of oxygen illegal.—Yours truly,

S. F. EDGE.

THE RECENT ROAD CONFERENCE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—The resolution passed by the recent Conference of Roadmakers and Users in favour of compelling "all vehicles to keep to the near side of the road except when overtaking other vehicles" is a little vague, in that it does not say how near.

If quite near, one runs serious risk of damaging the absent-minded pedestrian, whom we all know placidly walks off the footpath immediately in front of our motor, hearing not our warning nor giving his, and it would be necessary to couple with the regulation a decree that

all side paths must be provided with a railing on the kerb just high enough to catch the absent-minded's shins and remind him that there is a road full of motors just beyond the railings. He would then step over cautiously, leaving time to avoid him.

If the resolution meant that fast vehicles are to keep on the near side of the middle of the road, the driver would then usually have time to gauge the intended manoeuvre of the absent-minded before he got under the car instead of afterwards.—Yours truly,

J. BROWN.

SPEED COMPETITIONS AND HILL-CLIMBING RULES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I beg to send you herewith a copy of a letter I have addressed to the secretary of the Royal Automobile Club. The matter is one which I think can do with some ventilation at the present time, and I shall be greatly interested to have the opinions of your readers, both those in the trade and also private owners, on the subject, and I will particularly welcome the opinions of secretaries of provincial automobile clubs.—Yours truly,

D. M. WEIGEL.

COPY.

The Secretary,
Royal Automobile Club,
119, Piccadilly, W.

July 9th, 1907.

Dear Sir,—So much has been said in the Press lately by disappointed competitors who have met with scant success at meetings of provincial and affiliated automobile club hill-climbs and other trials, that I beg to suggest that it is advisable, for the benefit of the sport and the industry, to endeavour to standardise as far as possible the rules governing all provincial events, whether open or closed. In other words, I think it would materially assist the success of all events if the matter of formula were relegated to one standard.

At the present time we have the Frome's Hill (Herefordshire A.C.) formula, we have the chassis price formula, the Scottish Reliability formula, and others, and the consequence is that whilst to enter and make a good show with these various formulæ cost manufacturers (without whose support, indeed, the events would hardly be successful) a good deal of experimental work, it affords no particular guide to the motoring public as to the merits of one car over any other, and in many cases the present formulæ, embracing as they do factors for wind resistance, road resistance, and hosts of other details, offer very little that is interesting to the general public. By the adoption of a standard formula as indicated above, the onlookers would, I feel sure, be much more interested in the results, if for no other reason, on account of the simplicity.

Whilst writing on the subject of competitions, there is another matter upon which I should like to offer a suggestion, and that is the establishment of different classes of cars driven by the trade and those driven by the owners, such cars to have been the absolute property of the driver for at least two months. It is manifestly unfair that the private owner should have to put his car against works experts with chassis tuned up to the last notch. And, furthermore, in a manufacturers' class I would strongly urge that manufacturers be allowed to race on chassis only. The appearance of this class would give the event a much more sporting appearance and would enable the sight-seers to much more easily differentiate between one class and another. In addition, the manufacturers would be grateful for any rule such as this, that would cost them less to run than under existing conditions.—Faithfully yours,

D. M. WEIGEL.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—The letters now appearing in the press throw much illumination on the subject of hill-climbing competitions. We now have members of the trade frankly admitting that the cars entered by them in these contests are not standard type at all, but are deliberately faked up to show well on particular hills, irrespective of their speed capabilities on the road or whether they could be driven by the average amateur. We will leave the trade and the buying public to form their own opinion of these methods of commerce. If club competitions are to be sporting events, and not the hunting ground of advertisement mongers, it is the duty of those members of the trade who enter "specially adjusted" cars to either withdraw or organise competitions of their own. They can then pit their faked-up products against each other to their hearts' content. At any rate it seems to me that the much-advertised fastest times and club wins should be regarded with suspicion by the amateur, and should not be allowed to outweigh the many other desirable points on a car by the buying public.—Yours truly,

T. WILLIAMS.

PROVINCIAL CLUB COMPETITIONS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Might I call your attention to the rules governing the open hill-climbing competition held under the auspices of the North-East Lancashire Automobile Club? I feel sure that the committee of this club, like that of any other racing club, are desirous of making their competitions as interesting as possible, but in this particular case I fail

to see how great interest can be maintained or a good race obtained where so wide a range is given to cylinder dimensions in each class. As an instance, in Class E there is a range between a cylinder dimension of 100 to 150, or, roughly speaking, the same class would be open for four-cylinder engines of 6 in. down to 5 in. It is obvious that there can be no "race" between an engine with 5 in. cylinders against an engine with 6 in. cylinders.

I have recently written a letter upon similar lines to the effect that some standard unit should be adopted by all clubs holding races in this country; and I would suggest that a meeting of the hard working secretaries of the various provincial clubs might find means of regulating what, up to the present moment, has been a most unsatisfactory method of judging local events.—Yours truly,

D. M. WEIGEL.

THE PIONEERS OF MODERN MOTORING.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have no desire to detract from the fine performance of Mr. Edge at Brooklands, but I feel that the old heroes of motoring who did greater deeds should not be forgotten. Especially I refer to the wonderful feat performed by the late Monsieur Levassor (founder of the firm of

One feature of most chain-driven cars which is often overlooked is that the only unsprung weight consists of the wheels and axles, which may be of a light construction, while in gear-driven cars the whole of the weight of the heavier live axle, including the differential, rests directly on the tyres. The mechanism in the latter case is subject to all the shocks of the road and the tyres wear more rapidly. Chain driving produces, therefore, a decrease in the cost of upkeep of a car and more comfort in riding.

Mr. Hirsch speaks of chain breakages. Actually breakages never occur in ordinary circumstances when the size of a chain is in proper relation to the work it has to do, and reasonable attention is given to it. Chains will, of course, wear out and so become weaker, but if they are correctly selected in the first instance they are unfit for use through being out of pitch long before they approach breaking point. A chain should on an average do good work for 7,000 or 8,000 miles, but of course the mileage is influenced by the character of the roads in the district. Where chains are well cared for, and especially if provided with gear cases, such as are fitted by the Sunbeam, Albion and Arrol Johnston companies, it is not uncommon for them to run double this distance. When unprotected they should be more frequently cleaned, lubricated and adjusted. If a partially worn chain is allowed to rust and the joints to become stiff, it is more liable, especially if loosely adjusted, to mount the teeth. This,

The Midland A.C. Hill Climb at Shelsley, Walsh.—The Cars assembled near the Starting Point.

Panhard and Levassor), in 1894, upon ordinary roads, and with a short wheel base car mounted on solid tyres, and no big head lights after dark. M. Levassor stuck to the wheel for fifty-six hours continuously and won the race, "Paris-Bordeaux et Retour," at an average rate of about twenty-seven miles an hour. It is doubtful if any modern motorist on the vehicle he drove could do this now after being used to the luxurious high-power cars of to-day, with long-wheel bases and pneumatic tyres. My only apology in thus addressing you is that your readers should not forget the great events of the past.—Yours truly,

DAVID SALOMONS.

[Sir David Salomons, Bart., does well to remind the motor world of some of the trials of those early pioneers.]

THE PRESENT SYSTEM OF TRANSMISSION.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—It seems to be true that fashion has much to do with motor-car designs, as Mr. C. T. W. Hirsch suggests in his letter appearing in your issue of the 29th ult. Competition, however, will eventually compel motor-car manufacturers to find means for reducing the cost of running and upkeep, and then we feel sure the simple, flexible, and economical transmission by chains will receive more attention.

of course, subjects it to undue strains and probably is one of the most fruitful causes of accidents with chains.

Temporary repairs of the kind described by Mr. Hirsch may be unavoidable in an emergency, but chains so treated would be injured if run far, and the manufacturer should not be blamed for after results. Spare parts of the correct size make a more satisfactory repair possible, and if never required, as is most likely, will occupy little space.

The ease with which it is possible to examine chains and learn their condition is one advantage resulting from their use.—Yours truly,

CHARLES G. RENOLD.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Your correspondent, Mr. C. T. W. Hirsch, in the *M.C.J.* of the 29th ult., appears to have overlooked the screw and worm wheel drive, in place of bevels. Provided the screw is long enough, wear on the thrust bearing does not affect the mesh unless, of course, the screw is very much worn and the change occurs suddenly. The efficiency of the screw may be less than that of a good bevel; but then, as Mr. Hirsch points out, the bevel ceases to mesh properly, and, therefore, ceases to be a good bevel drive.—Yours truly,

H. LANGDON-DAVIES.

CHARGING ACCUMULATORS FROM PRIMARY BATTERIES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As an old admirer of the *M.C.J.*, kindly allow me to express myself briefly upon this subject. I have used the Bunsen cells, and find them more than is claimed for them for efficiency in charging any make or form of accumulators. It is not my intention, however, to recommend or advertise this cell so much as to call attention to some of the erratic statements made by "Elektrik," who advises the Bunsen cell for charging accumulators. He does well to advise the placing of the battery in an airy place: the fumes, even if one cell only is in use, are most intolerable, and will quickly destroy any metallic article with which they come in contact; as to the extremely deleterious nature of the consequences of the inhalation of the fumes a very slight experience should be sufficient even for the uninitiated. One drop of the acid on the skin of the hands, &c., will cause a very serious burn, to say nothing of the more than probable and utterly irreparable damage to clothing and similar stuffs.

The Bunsen battery certainly gives a powerful current when newly charged, but this very quickly falls as the nitric acid becomes exhausted; the acid, being in a liquid form, cannot be strengthened or recuperated by the addition of further quantities of depolariser as in the case of a chromic cell; the only method that can be adopted in order to maintain a constant current from a Bunsen battery is to entirely renew the acid as soon as any depreciation in the current is apparent. Will "Elektrik" be good enough to explain how he manages to prove that nitric acid is a more powerful oxidising agent than chromic acid? Has he forgotten the formulæ:—Nitric acid, HNO_3 ; chromic acid, C_2O_3 (combining with water to form $\text{H}_2\text{C}_2\text{O}_4$)? The greater part of the nitric acid in a Bunsen cell is converted into ammonium nitrate, which renders the cell inert and

The A.C.F. Grand Prix Race.—Mr. Pryce Harrison Changing the Wheels on his Weigel Car.

the upkeep of the battery most expensive. By the way, the depolariser is not the most important feature in a primary battery, not by far so important as the nature of the carbon surface.—Yours truly,

ANALYST.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice in Mr. Rawstorne's letter *re* accumulator charging from primary batteries, which appeared in a recent issue, that he states he charges his battery with "4 oz. bicarbonate of soda dissolved in a small quantity of water, to which is afterwards added 4 oz. commercial sulphuric acid." This is clearly a mistake, for, besides being absolutely useless as an oxidising material, the bicarbonate of soda—used in making tea—would at once chemically interact with the sulphuric acid, resulting in carbonic acid gas being liberated with much effervescence and sodium acid sulphate being left behind in solution. The writer evidently meant to say that he used bichromate of soda, not bicarbonate of soda, which is quite a distinct, and for this purpose useless, body.—Yours truly,

ELEKTRIK.

CHARGING ACCUMULATORS ON HIGH VOLTAGE CIRCUITS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Clients occasionally inform us that their accumulators have been burnt up whilst charging on 200 volt or 220 volt lighting circuits, and we think it would be of general interest to call attention to the probable reason for this, which is, not excessive current passing through the battery itself, but a leak to earth through a film of acid on the case. This will sometimes generate sufficient heat to ignite the celluloid, with

disastrous results. The remedy is to simply stand the accumulators whilst charging on a board which rests on glass jam jars, and keep the top of the accumulators as dry as possible.—Yours truly,

C. A. VANDERVELL AND CO.

A WARNING.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—In the interest of the trade and as a warning to others, will you kindly give publicity to the following incident.

A customer at our Clapham garage asked that some of the firm's cards might be given to him, in order to recommend the garage to friends. As there was nothing unusual in this, he was handed three or four cards.

Two days after we received a telephone communication from a certain firm of tyre manufacturers, asking if the man in question was a member of the firm. Upon being asked the reason of the inquiry, we were informed that he had called upon the firm and, producing one of the cards, requested that certain tyres should be sent to his private address, giving them to understand that he was a member of the firm. Had these people not had the foresight to communicate with us, the man would have purchased goods at trade price. As we have since heard that he has lately bought several accessories for his car, we can only conclude that this ruse has succeeded with other firms not quite so particular as the one in question.

It is really appalling the number of people who, obtaining trade cards by fair means or foul, make use of them as above. This is not the only incident of its kind that has happened to us, but is a fair example.

In conclusion, I would earnestly appeal to the trade that in a case like the above they refuse to supply goods until assured of the customer's bona fides.—Yours truly,

UNION MOTOR CAR COMPANY.

CHANGE-SPEED GEAR TROUBLES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Could you or any of your readers explain the reason the change-speed gear of my car grinds on the second speed? I have had a new shaft and one new wheel fitted, but still the grinding goes on.—Yours truly,

CONSTANT READER.

[It would assist matters if readers will give fuller details from which to diagnose troubles. The grinding noise on the second speed of the car of "Constant Reader" may be due to several causes that a careful examination should at once reveal. If, for instance, the wheel with which the new one meshes is worn on the pitch line the noise may result in consequence. The depth of the mesh is also important, for if either too deeply engaged, or, on the other hand, not sufficiently, a grinding noise will result. If the shaft is too long between its bearings, it will spring and cause trouble; for the teeth—especially on the second speed—will be forced out of mesh, and will moreover bear on one side only. It is possible, of course, also that the whole shaft is out of alignment, or that the new wheel supplied has been cut with a milling cutter suitable for a wheel of a different number of teeth, although of the same pitch. For each pitch has a set of cutters, each of which is only suitable for a short range in the number of teeth it can cut with any approach to mathematical accuracy. Milling cutters being very expensive, it is quite common for jobbers to employ a cutter for a far greater range of sizes than they should legitimately employ them.]

EXPLOSIONS IN THE SILENCER.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should be glad if you or any readers of the *M.C.J.* would kindly explain why my four-cylinder engine occasionally, when starting, goes off with a bang in the exhaust, and a cloud of black smoke follows for a few seconds. Also would you explain how I can avoid this? I have had it occur about four times this last six months.—Yours truly,

A CONSTANT READER.

[Explosions in the silencers happen occasionally on the best regulated cars, and are sometimes rather alarming to nervous people. Of course, directly anyone turns the starting handle round the engine will commence, if the initial charges are not fired in the cylinders, to pump them along the exhaust pipe and so into the silencer. Once there, the chance of an explosion taking place or not depends on whether the first time the engine fires there be sufficient continuity of heat to reach the explosive vapour in the box. And the force of the explosion will depend on the quantity and proportion of oxygen to hydro-carbon of which the particular mixture in question happens to be composed. Unduly retarding the ignition in starting up is conducive to these explosions, as also is the habit of turning the starting handle round repeatedly before switching on. The black smoke shows that the mixture is too strong.]

"NOT in the Trade" writes in agreement with Mr. Percy Richardson's letter of last week.

THE SOUTH HARTING HILL CLIMB.

ON Wednesday of last week the annual hill-climb of the R.A.C. at South Harting was held in weather which was not altogether enjoyable. It was at a very early hour when many of the competitors left town for the hill-climb, going by way of the Portsmouth road to Liphook, where the cars were weighed at the railway station at 8 a.m.

From thence the journey was made to South Harting, where the competitions commenced an hour before noon. Mr. M. O'Gorman was judge, Mr. A. V. Ebbelwhite starter, Mr. J. Lyons Sampson clerk of the scales, Mr. F. P. Armstrong head marshal, with Mr. J. W. Orde as secretary, and Col. H. C. L. Holden, R.A., Major T. H. Cochrane, R.E., and Capt. R. K. Bagnall-Wild, R.E., as clerks of the course. The measured distance was about a mile.

For the "Yellow" trophy there were fifty-five entries, and a large proportion faced the starter. This is open to vehicles fitted with internal combustion engines complying with the following conditions:—Cylinder diameter in inches squared multiplied by the number of cylinders must not be less than forty-five nor greater than 151; and to steam vehicles the maximum brake horse-power of whose engines for a given period has been ascertained by the Club, and found within the limits of corresponding maximum brake horse-power of the internal combustion engines.

The fastest time was made by Mr. C. Edge, on the 60-h.p. Napier, with Mr. Frederic Coleman's White steam car a close second. The result of the handicap was as follows:—White steam (Coleman), 1; Clement-Talbot (Stokes), 2; Clement-Talbot (Deacon), 3; Berliet (Watson), 4; Clement-Talbot (Hedge), 5; Deasy (Lewis), 6; Clement-Talbot (Viscount Ingestre), 7; Napier (Newton), 8; Clement-Talbot (Day), 9; Maudslay (Verney), 10; Deasy (Graham), 11; Daimler (Goddard), 12; Dietrich (Phillips), 13.

Alldays	E. J. Blakemore	11.25	2	3 1/2	3 37 2.5
De Dion Bouton	H. J. Stanbon	12.37	2	3 1/2	5 0 3.5
De Dion Bouton	E. J. Underwood	6.18	1	3 1/2	4 53 3.5
Renault	E. B. Wagget	12.37	2	100 mm.	5 57 4.5

Name of Car.	Driver.	R.A.C. Rating.	... of cyls.	Bore of cyls.	Time up hill. M. s.
Peugeot ...	M. F. Mieville ...	13.6	2	4.1338	4 52 4.5
Singer ...	H. E. Hall...	15.93	4	3.4	4 18
Baby Peugeot ...	M. F. Mieville ...	6	1	3.937	7 52 3.5

Mr. J. L. Scott's Lindsay was thus the winner, followed by the All-days and Mr. H. G. Hall's Singer.

PUBLIC MOTOR SERVICES.

THE London and District Motor-bus Company, the London and Provincial Motor-bus and Traction Company, the Motor-bus Company, and the London Motor Omnibus Company are about to amalgamate to form the Vanguard Motor-bus Company (Ltd). The shareholders in all the four companies named met on the 10th inst. and confirmed resolutions passed at previous meeting: for the voluntary liquidation of their undertakings.

THE House of Commons Committee has given the Sheffield Corporation power to run motor-omnibuses within the city, but has declined to sanction routes beyond the boundaries of the town.

Mr. Cecil Edge making the ascent of South Harting Hill on the 60-h.p. Six-Cylinder Napier.

IN confirming the permission of the Commissioner of Police of the Metropolis to allow public motor char-a-bancs in London, Sir E. R. Henry makes a condition that the gangway shall be at least 15 in. wide and the means of ingress and egress safe and convenient.

A COLLISION between two motor-omnibuses near Putney Bridge, in the early hours of Sunday morning, resulted in injuries to half a dozen passengers and considerable damage to both vehicles.

THE Watch Committee of the Birmingham City Council has renewed the licences of two motor char-a-bancs to ply in the city.

THE Home Secretary is about to introduce legislation to remove the limitations with regard to the provision of taximeters on horse-drawn cabs.

ELECTROBUSES were running on Monday between Liverpool Street and Victoria, London, S.W.

THE first of a dozen motor-cabs that are to ply for hire in Edinburgh has been placed in Princes Street, by Mr. W. K. Muir, 69, Lothian Road, Edinburgh.

CAPTAIN HUGHES MORGAN, on his Daimler, made a non-stop run in the Welsh A.C.'s Reliability Trials on Thursday of last week.

WHILE on a visit to England recently, the Gaekwar of Baroda purchased a 24 h.p. Fiat limousine from the Motor House, Euston Road, N.W. This car was despatched to him in India when he left our shores, and is now in daily use, the Gaekwar being well pleased with his purchase.

ON the 6th inst. the annual picnic of Mr. William Lea's employees at Liverpool was held at Chester. The party, consisting of over fifty, journeyed to Chester via Warrington in motor-cars. In the unavoidable absence of Mr. Lea, Mr. C. R. Clark (sales manager) occupied the chair, being supported by Mr. E. J. Hartenfeld (works manager).

CASES UNDER THE MOTOR CAR ACT.

A LICENCE SUSPENDED.

The Earl of Caledon appeared before the Stevenage (Herts) magistrates on the 11th inst. charged with driving a motor-car to the common danger at Stevenage on June 3rd, also with failing to produce his licence when requested. His Lordship should have appeared a fortnight before, but did not do so, and a warrant was issued. He afterwards surrendered, and was admitted to bail. Mr. Ross Brown, for the defendant, now said he was not in a position to excuse the second charge, and pleaded guilty. In regard to the first charge, he asked the magistrates to adjourn the hearing owing to an important witness being in France. The chairman said it would be unfair to the prosecution to adjourn the case. Evidence was then given to show that the defendant's car left Welwyn at 5.56 p.m., and was stopped in Stevenage at 6.5 p.m. The distance was 6 miles 992 yards, and the speed worked out at 43½ miles per hour. Sergeant Brice, who stopped the car at Stevenage, said he did not know who drove the car from Welwyn to Stevenage. When the car stopped the defendant was driving. There were many people about the streets, and the pace the car travelled was extremely dangerous. The Bench convicted, and previous convictions were proved. At Horsham last December defendant was fined £25 and £9 costs for driving to the common danger, £5 for not producing his licence, and his licence was suspended for three months. The chairman said the defendant would be fined £30 and costs for driving to the common danger, and £5, including costs, for not producing his licence, and his licence would be suspended for six months.

ON THE WRONG SIDE.

At Neath Police-court, Edwin Pullman, a cycle agent, of Merthyr, was charged with driving a motor-car recklessly on the wrong side of the road. Riding a motor-cycle in the opposite direction was Mr. Catt, of Northampton, and there was a collision, the latter being thrown violently on to a hedge. For the defence it was insisted that Catt was on the wrong side of the road, that the defendant pulled across to avoid a collision, and that Catt, doing the same, ran into the car. Pullman was fined 50s. and costs for taking the wrong side of the road, and £10 and costs for reckless driving.

EXCEEDING THE LIMIT.

Sir Henry Norman, M.P., was fined £3 by the Guildford Justices on Saturday on police evidence that he had driven his motor-car at Milford at a speed of thirty miles an hour, on a clear road. Sir Henry gave notice of appeal. He offered to admit exceeding the speed limit, but denied the thirty miles rate.

THERE were two prosecutions under the Motor Car Act at Coventry on the 11th inst. In the case of Henry Hudson, chauffeur to a Leicestershire gentleman, the offence alleged was driving at a speed dangerous to the public. He was on the high road between Foleshill and Bedworth, and went over cross roads at, it was alleged, thirty-five miles an hour. A previous conviction in Northamptonshire was proved, and defendant, who pleaded guilty, was fined £5 and costs.

THE other case was against John Henry Slingsby, a Nuneaton solicitor, who was said to have driven past Longford Police Station at from thirty-five to forty miles an hour, and failed to stop when Superintendent Drakeley signalled him to do so. Defendant and his solicitor (Mr. W. Maddocks) contested the police evidence as to speed, Mr. Slingsby's case being that he travelled between Coventry and Bedworth at the rate of only twenty miles. The magistrates imposed a fine of £1.

Several motorists have been fined at Ayr, Wokingham, Odiham and at Huntingdon for exceeding the legal limit.

CHEQUES NOT TAKEN.

A motorist convicted at Kingston of exceeding the speed limit tendered a cheque in payment of the fine, but the magistrates would not accept it, and gave him a week in which to pay the money. Mr. W. Y. Cockburn remarked that recently a motorist who tendered a cheque in payment of a fine stopped the cheque immediately he got out of court.

EXCEEDING PARK REGULATIONS.

At Bow Street, London, the Earl of Caledon was summoned on Monday for driving a motor-car in the Mall, St. James's Park, at a pace exceeding the limit of ten miles an hour. He was represented by Mr. Granville Kenyon, solicitor, who, on his behalf, pleaded guilty. A park-keeper stated that his lordship's car was driven over the measured furlong at the rate of twenty-one miles an hour. Mr. Marsham (magistrate): I have seen something about him in the papers, but that is not before me. There will be a fine of 40s., with 2s. costs.

THE POLICE AT MIDNIGHT.

At Bridlington, on Saturday, a gentleman who had been summoned under the Motor Car Act complained of the conduct of the police in calling at his house at midnight, and with having referred to him as a chauffeur after having been informed he was the owner of the car. The chairman agreed that the police ought not to call upon respectable citizens at midnight.

THE Seine Inferieure Circuit, on which the A.C.F. Grand Prix race was held, was tarred and rendered dustless by the Lassally Patent Tar Road Binder Machine, the total area of 400,000 square metres having been tarred within a period of five weeks. Mr. Robert Johnston, of 45, Parliament Street, Westminster, possesses the Lassally patent rights for the British Islands.

CLUBS AND ASSOCIATIONS

LINCOLNSHIRE A.C.

THE speed trials organised by the Lincolnshire A.C. in Grimsthorpe Park on Saturday, by permission of the Earl of Ancaaster, were most successful, although at one time there was every prospect of their being spoiled by rain, but happily this cleared before the time announced for the racing to take place. The conditions, however, were not at all inviting, and several intending competitors who had entered cars failed to put in an appearance. The private road through the Red Deer Park was not at all in bad condition, and the competing cars were able to make some excellent times. The length of the course was about a mile, and it incorporated the stiff ascent—which, at its steepest part, has a gradient of one in nine, and which has been the scene of several hill-climbing competitions.

There were three events, all for cars of the touring type, and the handicap was on the formula adopted by the Royal A.C., under whose closed competition rules the trials were held. The final results will not be known until the times have been before the Competitions Committee of the Royal A.C., and the club's representative, Capt. R. K. Bagnall Wild, R.C., attended to take the times, &c. These competitions also decide the winner for the year of the Newsum Challenge Cup, for the best amateur performance in the handicap, and, in addition to the prizes for amateur members of the club only, another, open to all members, was for the best performance in the handicap. All the events were from a standing start, and each competing car carried one passenger, as well as the driver, "seated side by side in fair manner." The officials engaged in the trials were:—Starter, Capt. H. E. Newsum; time-keepers, Messrs. T. E. Foster and W. Mansell; clerks of the course, Sir Hickman Bacon, Major J. A. Cole, Capt. R. K. Bagnall Wild, R.E., Mr. C. W. Pennell, Mr. C. Hardy, Mr. A. A. Padley; marshal, Dr. Gilpin; assistant marshals, Dr. Husband, Major Fowler, Mr. C. Nelson, Dr. E. H. Cragg, and Mr. W. A. Tomlinson; hon. sec., Mr. Godfrey Lowe. The names of the competitors' cars and the official times were as follow:—

CLASS A, for cars not exceeding 12-h.p.:—

	M. s.	Time.	Relative Efficiency.
Rev. T. A. Stoodley (Dowsby), De Dion	3	0 2.5	—
Dr. E. H. Cragg (Billingboro'), Baby Peugeot	3	9 2.5	3
Mr. G. E. Sanders (Scampton), De Dion	3	21	2
Dr. F. Husband (Crowland), Wolseley	3	30	1
Dr. White (Surneshead), Wolseley	3	40 2.5	—

CLASS B, for cars not exceeding 24-h.p.:—

Mr. R. S. Hogarth, Talbot	1	48 3.5	1
Mr. R. M. Wright (Lincoln), Argyll	2	14 2.5	2
Hon. M. Giffard (Boothby), Sunbeam	2	16 1.5	—
Mr. R. M. Wright, Humber	2	17	—
Dr. Husband, Spyker	2	38 2.5	3
Dr. Sharp (Brant Broughton), Richardson	2	43	—
Mr. C. Gray (Stamford), New Pick	2	51 2.5	—
Mr. G. Linnell (Deeping), Argyll	3	13 4.5	—

CLASS C, for cars exceeding 24-h.p.

Major R. H. Fowler (Louth), Siddeley	1	9 1.5	—
Mr. C. Hardy (Nottingham), Daimler	1	13 2.5	3
Col. J. S. Ruston (Lincoln), Daimler	1	33 3.5	1
Capt. Newsum (Lincoln), Daimler	1	40 2.5	—
Major J. A. Cole (Roxholm), Humber	1	48 4.5	—
Mr. A. A. Padley (Market Rasen), Humber	1	53 2.5	2
Mr. C. W. Pennell (Lincoln), Siddeley	1	55	—
Mr. C. Nelson (Lincoln), Siddeley	2	29 4.5	—

For the Newsum Challenge Cup for the best amateur performance on the handicap the winner was Dr. R. G. Hogarth, of Nottingham, and Dr. Hogarth also won the special prize open to all members of the club, for the best performance on the handicap. In Class A Dr. Husband was first, and the second prize was not awarded. Dr. Husband also won the first prize in Class B, and Dr. P. Sharp was second. In this class neither Dr. Hogarth nor Mr. R. M. Wright were eligible for the prizes. Mr. A. A. Padley was first prize winner in Class C, and Mr. Chas. Hardy was second. Col. Ruston's Daimler was not competing for prizes.

NORTH YORKSHIRE A.C.

A HILL-CLIMBING competition, promoted by the North Yorkshire Automobile Club, took place on Saturday at Garrowby Hill, a portion of the main road from York to Driffield, five miles east of Stamford Bridge. The competition was open to standard touring cars, which were handicapped under R.A.C. formula, and mustered at Stamford Bridge railway station for weighing and measuring (for wind resistance). The cars were weighed with their full complement of passengers, not one of whom was to be of less weight than 14 stones. Only petrol cars, the

property of members of the club, were eligible to compete. There were fifteen entrants, and thirteen cars competed. The distance over which the competition took place was 153 yards short of a mile, the steepest gradient being one in seven, and the average gradient one in 10.61. The cars were dispatched singly at brief intervals, and the whole of them negotiated the course, though there was a considerable disparity in the times made, which were as follows:—

8-h.p. Rover, G. W. T. Wade, Hull, 5 min. 45 2.5 sec.; 8-h.p. Rover, C. Wade, Hull, 7 min. 46 sec.; 14-16-h.p. Fiat, W. Cliff, Melbourne, 4 min. 1 1.5 sec.; 10-12-h.p. Humber, W. F. Greenwood, York, 5 min. 28 sec.; 15-h.p. Humber, D. W. Jackson, York, 6 min. 1 1.5 sec.; 16-20-h.p. Argyll, P. Saltmarsh, Saltmarsh, 4 min. 8 sec.; 22-h.p. Berliet, H. A. Watson, York, 4 min. 11 sec.; 20-28-h.p. Darracq, A. J. Atkinson, Brough, 5 min. 14 sec.; 28-h.p. Daimler, C. Wade, Hull, 3 min. 34 2.5 sec.; 28-h.p. Daimler, G. Moor, Hull, 3 min. 26 sec.; 35-h.p. Daimler, H. J. Lloyd, York, 1 min. 53 4.5 sec.; 45-h.p. Daimler, G. S. Barwick, Northallerton, 1 min. 32 sec.; 60-h.p. Itala, O. B. Pease, Richmond, 2 min. 52 4.5 sec.

The result will be announced when the handicap allowances have been adjusted. There are two prizes, one presented by the chairman of the club committee, and another by the competition sub-committee.

YORKSHIRE AUTOMOBILE CLUB.

THE committee of the Yorkshire Automobile Club has decided to hold a closed hill-climbing competition during the latter part of August.

The Motorists' Welcome, 1897 and 1907.—From a sketch by "Galop," published by the De Dietrich Company.

An excellent hill has been found, and the arrangements are now being made and will be published as early as possible.

The following gentlemen have been elected to membership of the Club:—Mr. W. H. Wilkinson, Bradford, Mr. R. Hutchinson, Leeds, and Rev. G. A. Marshall, Pickering.

CHESHIRE A.C.

THE members of this club held their third meet of the season at Plas-Newydd, Llangollen, on Saturday last, at the invitation of Mr. G. H. Robertson, J.P., who is a vice-president of the club. Members and friends to the number of eighty-five attended, and amongst those present were Messrs. Trevor Boscawen, Dr. Stevenson (vice-presidents), Col. A. H. Knight, V.D., J. Arnitt Dear, J.P., Col. Mainwaring, J. W. Harvie, J. M. Frost, J.P., E. C. Thin, M. Clover, Jun., W. H. S. Oulton, F. E. T. Briscoe, J. Clarke, Maurice Stern, and W. A. Williams.

MIDLAND A.C.

AGAIN the Midland A.C. secured success with their hill-climbing contest at Shelsley Walsh on Saturday. The committee was fortunate in obtaining the permission of Mr. M. C. Taylor to hold the contest on the road leading to the Court House in his private grounds, away from the tantalising attentions of the police. Proceedings began with the weighing in at Martley, and then a general move was made to Shelsley Walsh, which is about seven miles from the ancient city of Worcester.

Time was taken over a measured distance of 1,000 yards, and praise must be given the officials for the promptitude with which their

work was done. About one third of the length was one in six, the average being one in eight, while the bands secured the attention of the drivers to their task. The surface was in good condition, so that good times were the order of the day.

Excitement was quickly aroused, Mr. J. E. Hutton being one of the first to make the ascent, speeding away in what proved to be the fastest time, and securing the silver cup. Some entrants were disqualified because they were not in a perfectly finished condition for touring, and others had ill-luck, notably Mr. C. Sangster's 40-h.p. Ariel, which suffered from a choked petrol pipe. Eventually, however, the outstanding feature of the competition was the success of the Clement-Talbot cars, which secured four out of five places in the open handicap and the first in the closed classes.

The times and handicap points of the leading cars in each class were as follows:—

OPEN HANDICAP.

Car.	Driver.	Points.	Time.
			M. s.
1. 10-12-h.p. Clement-Talbot	T. W. Bowen	1-675	2 56 4-5
2. 15-h.p. Clement-Talbot	J. Hedge	1-4857	2 23 4-5
3. 20-24-h.p. Clement-Talbot	W. Stokes	1-4856	1 59 3-5
4. 9-h.p. Sizaire-Naudin	R. O. Clark	1-4850	2 50 2-5
5. 15-20-h.p. Clement-Talbot	Viscount Ingestre	1-467	1 31 2-5
6. 40-h.p. Napier	Sydney Smith	1-404	1 32 3-5
7. 24-h.p. Deasy	E. W. Lewis	1-385	1 54 2-5
8. 35-45-h.p. Maudslay	R. H. Verney	1-348	1 39 3-5
9. 20-h.p. Lancheater	G. H. Lancheater	1-307	2 24 1-5
10. 24-h.p. Deasy	P. Graham	1-273	2 9 1-5
11. 16-20-h.p. Sunbeam	F. Eastmead	1-254	2 38 1-5
12. 10-h.p. De Dion	C. J. Newey	1-241	4 48

CLOSED HANDICAP.

Car.	Driver.	M.	s.
1. 20-24-h.p. Clement-Talbot	W. Stokes	1-4856	1 59 3-5
2. 9-h.p. Riley	V. Riley	1-428	2 23 1-5
3. 20-h.p. Lancheater	G. M. Lancheater	1-307	2 24 1-5
4. 17-21-h.p. Daimler	A. J. Astbury	1-281	2 35
5. 24-h.p. Deasy	P. Graham	1-273	2 9 1-5
6. 10-h.p. De Dion	C. J. Newey	1-241	4 48
7. 10-h.p. Allday	C. E. Simms	1-183	3 25 2-5
8. 28-h.p. Lancheater	T. Hamilton Barnsley	1-173	1 59 4-5
9. 35-h.p. Daimler	H. C. Holder	1-167	1 19 1-5
10. 24-h.p. Minerva	G. F. Heath	1-147	2 18 1-5
11. 16-20-h.p. Calthorpe	G. W. Hands	1-144	2 18 1-5
12. 10-h.p. De Dion	W. B. Kent	1-114	4 59 3-5

Other competitors and their times were:—

Car.	Driver.	M.	s.
80-h.p. Berliet	J. E. Hutton	1	7 1-5
28-h.p. Mercedes	C. A. Bird	2	11 1-5
16-20-h.p. Rover	H. F. S. Morgan	2	41 2-5
25-30-h.p. Austin	S. C. Harrison	2	25 4-5
18-24-h.p. Austin	S. Hands	2	3 2-5
18-h.p. Siddeley	P. D. Lee	1	32
60-h.p. Napier	Cecil Edge	1	9 2-5
28-h.p. Ariel	T. Cordery	1	56 1-5
30-h.p. Ariel	P. Lewis	1	25 3-5
35-h.p. Ariel	A. E. Harrison	1	11 1-5
40-h.p. Ariel	C. Sangster	2	17 4-5
12-14-h.p. Singer	W. Perks	3	41 3-5
10-h.p. Alldays	F. W. Huband	3	44 2-5
20-24-h.p. La Hispano	W. H. Weeks	2	46
30-h.p. Siddeley	A. McCormack	1	48
20-h.p. Alldays	C. M. Taylor	3	31 4-5
10-h.p. Alldays	S. Downing	4	12 3-5
10-h.p. Alldays	E. J. Blakemore	3	18 1-5
12-16-h.p. Clement-Talbot	H. G. Day	2	28 3-5
10-h.p. Alldays	L. Meek	4	26 2-5
30-35-h.p. Ariel	G. Bird	1	44 1-5
24-h.p. Minerva	G. Patterson	2	39 1-5
9-11-h.p. Clement-Talbot	W. A. Riley	4	15 4-5
8-10-h.p. Darracq	H. P. Barker	2	35 1-5
60-h.p. Mercedes	H. du Cros, jun.	1	25 3-5
16-h.p. Star	W. Guilding	2	48
18-24-h.p. Swift	R. Burns	3	4 1-5
35-h.p. Daimler	A. E. Ansell	2	2 1-5
45-h.p. Thornycroft	Disqualified.		
16-25-h.p. Arrol-Johnston	J. Fairman	1	59 2-5
20-h.p. Arrol-Johnston	E. A. Roenheim	1	53
15-h.p. Humber	A. E. Gould	3	4 1-5
25-h.p. Arrol-Johnston	J. S. Napier	4	2 1-5
45-h.p. Daimler	G. Ison	1	24 1-5

Last year's event was won by Mr. Frederic Coleman on a White steam car. This year a change in the programme prevented petrol and steam cars competing together.

SOUTHERN MOTOR CLUB.

OVER sixty members of this club had an outing on Sunday the 7th inst. to Bourne End by steam launch from Windsor. The most noticeable function of the day was the presentation of a diamond ring to Mr.

S. W. Phillpott, the club's sports secretary, in recognition of his services in the recent open hill climb. The chairman, Mr. A. Vickers, N.C.U., in a short speech voiced the appreciation of the members for Mr. Phillpott's services, to which that gentleman made suitable reply. The garden party and gymkhana was to have taken place last Saturday but was unavoidably postponed.

ESSEX MOTOR CLUB.

ON Saturday the Essex Motor Club held their annual race meeting on the Canning Town Track. Some new records were made as follows:—

C. R. Collier beat the previous record for five miles to the finish of 51 miles 540 yards in the hour; he also rode a mile in 63 sec., beating the previous best by 1 1-5 sec.

G. A. Barnes created a flying start record for five miles in 5 min. 54 2-3 sec. and for ten miles in 11 min. 12 4-5 sec.

C. R. Collier beat the flying start mile record by 1 1-5 sec., his time being 63 sec.

In the Five Miles Handicap for Racing Motor-bicycles, with engines not exceeding 76 by 76, or the equivalent volume swept out, D. R. Clarke (2½-h.p. New Century) 25 sec. start, was first; C. R. Collier (2½-h.p. Matchless), scratch, second; H. V. Colver (2½-h.p. Matchless) 10 sec., third. Won by half a lap; third man 200 yards away. Time, 5 min. 18½ sec.

In the Ten Miles Handicap for Tourist Motor-bicycles, with engines not exceeding 90 by 90, or equivalent volume swept out, and the gear not higher than 4 to 1, with 26 in. wheels, H. A. Collier (3½-h.p. Matchless), 5 sec., was first; A. E. Dendy (3-h.p. Centaur), 50 sec., second; G. Aldington, (3½-h.p. Kerry), 40 sec., third. Won by half a lap; 50 yards between second and third. Time, 11 min. 40 1-5 sec.

One Hour Scratch Race for Racing Motor-bicycles, 76 by 76. First prize, the Du Cros Challenge Trophy (holder, H. V. Colver).—C. R. Collier (2½-h.p. Matchless), 51 miles 540 yards, first; C. E. Bennett (2½-h.p. Mansfield), 44 miles 611 yards, second; H. V. Colver (2½-h.p. Matchless), 42 miles 1,319 yards, third.

NORTH LONDON A.C.

THE gymkhana organised by the above club was held in the grounds at the rear of the Green Dragon Hotel at Winchmore Hill, on Saturday last. Owing to the threatening appearance of the weather the company was not as numerous as was expected.

The following is a list of the various events with the winners:—

Toll-gate Race.—C. Cutler.

Circle Race.—Max Graddon.

Lady Passenger Race.—Four-seated cars: 1st, Max Graddon; 2nd, C. Cutler; two-seated cars: 1st, R. F. Barker; 2nd, A. E. Robertson.

Obstacle Race.—C. Smith.

Egg and Spoon Race.—Mrs. Kent, driver Mr. Kent.

Coach House Race.—C. Smith.

*Glass of Water Race.—J. Cogdale, driver C. Cutler.

Motor Musical Chairs.—Miss Healy, driver A. E. Robertson.

Captain Cecil Banbury was judge, Mr. C. Cannon the timekeeper, and Mr. J. T. Barber starter.

The prizes were subsequently distributed by Colonel H. F. Bowles, J.P., president of the club.

* Time limit, 20 sec. Competitors penalised 5 marks for every second exceeding the 20 sec., and 5 marks for every ¼ in. of water spilt.

BRISTOL AND GLOUCESTERSHIRE A.C.

THE results of the Birdlip Hill climb of the Bristol and Gloucestershire A.C. are as follows:—

Class A, for two-seated cars the cost of which does not exceed £250. Gold medal, 9-h.p. Riley, entered by Mr. H. E. Steel; silver medal, De Dion, entered by Mr. A. G. Elder.

Class B, for cars costing not more than £400. Gold medal, 10-h.p. De Dion, entered by Mr. R. M. Fisher; silver medal, 10-h.p. Clement-Talbot, entered by Mr. W. G. Bridges.

Class C, for cars not exceeding £600 in cost. Gold medal, special silver medal and special Motor Union medal, 15-20-h.p. Clement-Talbot, entered by Viscount Ingestre; silver medal, 12-16-h.p. Clement-Talbot, entered by Mr. E. A. Stretton.

Class D, for cars exceeding £600 in cost. 24-28-h.p. Metallurgique, entered by Mr. O. Copper; silver medal, 45-55-h.p. Morris, entered by Mr. L. Carle.

The winner of the silver cup for the fastest time of the day was Mr. George Young, on a 45-h.p. Daimler.

BLACKHEATH.

ON Saturday the Blackheath A.C. had a speed gauging competition and picnic tea in Holwood Park. The event was thoroughly enjoyed amid beautiful surroundings by some sixty members and friends. Two runs, at varying speeds, were arranged over a measured distance in the park. Fifteen cars competed. The winner of the first prize was Mr. Horace A. Cunis (18-h.p. Regent) and Mr. Alexander Duckham (14-h.p. Germain) the second prize. The winner of the prize in the visitor's class was Mr. C. W. Woodall (15-h.p. Darracq). Professor Lambert and Messrs. Frank W. Jackson, Quick and Stanley Marshall acted as observers and timekeepers.

MANCHESTER A.C.

At the hill-climbing competition of the Manchester A.C. on Werneth Low, on Saturday last, the prize for the fastest time was won by Mr. J. Higginson, jun., with his 80-h.p. La Buire. The results on the formula which had been arranged for handicapping were as follows:—Class 3, for cars of 24-h.p. and under:—(1) J. Arrowsmith, 18-24-h.p. Horbick; (2) R. Crossley, 20-h.p. Belsize. Class 4:—(1) H. Hollingdrake, 35-50-h.p. La Buire; (2) A. Birtwistle, 35-45-h.p. Daimler.

The H.P. formula used was $\frac{D^2 \sqrt[3]{SN}}{5}$, and for handicapping Weight

Time \times H.P.

The Motor Union medal for the best performance on handicap irrespective of class was won by J. Arrowsmith, 18-24-h.p. Horbick.

THE MOTOR UNION.

THE Motor Union will visit Southport to-day (Saturday), where they will be the guests of the Liverpool Automobile Club. In the morning the general committee will meet at the Town Hall, and the members of the committee will be officially welcomed by the Mayor. After the meeting they will be entertained at luncheon by the Mayor and Corporation. In the afternoon there will be a gathering at Knowsley, by invitation of the Earl of Derby, president of the Liverpool Club and

ment. Motoring pictures on the bioscope formed one of the principal features of an exceptionally strong programme, and very wonderful were these reproductions of some really exciting racing. The audience watched the race for the Grand Prix at Dieppe with tense nerves, and motorists present agreed that nothing more thrilling has ever been seen on the bioscope. After the performance a large number of members adjourned to the Motor Club for supper.

THE AUTO-CYCLE CLUB.

THE total distance to be covered by the competitors in the forthcoming six-days' trial will be 1,002 miles. The route chosen for this year's trial covers some new ground and should be valuable in popularising the motor-cycle in Wales. All descriptions of roads will be travelled by the competitors, from the flat roads of the Fen district to the charming but hilly roads of North Wales, whilst on the last day competitors have to climb the famous Birdlip Hill after leaving Gloucester.

It has been definitely settled that the annual race meeting will be held at the Canning Town track on Saturday, August 10th. The M.C.J. cup will be competed for.

HERTFORDSHIRE COUNTY A.C.

ON Saturday the members and friends of this club were entertained by Mr. Ernest Webster, the chairman and Mrs. Webster at their charming place at Berkhamsted.

On Saturday the 27th inst. the club will hold an open hill climbing

The Vauxhall 12-16-h.p. Landaulet. (See page 457.)

father of the late chairman of the Union—the Hon. Arthur Stanley, M.P. In the evening the eighth provincial dinner of the Union will be held at the Prince of Wales Hotel, Southport, when the chair will be taken by Mr. W. Becket Hill (chairman of the Liverpool Club), supported by Mr. C. D. Rose, M.P., the Mayor of Southport, and many well-known automobilists. The main thoroughfares of Southport will be illuminated in honour of the occasion.

The latest returns of the membership of the Motor Union show an influx of members during the past ten weeks which probably constitutes a record for any motoring organisation. At May 6th the membership was returned as 15,500, while it now totals 17,500, showing an increase of 2,000 in the ten weeks an average of 200 new members per week.

THE MOTOR CLUB.

THE Motor Club's re-union at the Palace Theatre (London) last week was a brilliant success, all available space was occupied, and the greatest enthusiasm prevailing throughout the evening. Col. W. J. Bosworth, the chairman of the Motor Club and president of the Automobile Association, occupied one of the private boxes, supported by Mr. Walter Gibbons and Mr. Holmes Kingston, the club secretary, while Mr. Charles Jarrott, Mr. L. Schlentheim, Mr. Whittaker and Mr. C. Edge were to be seen in other boxes.

The theatre wore a festive appearance, the boxes being draped with the club flag and banners, and every member displaying in his button-hole a flower made up in the club colours and presented by the manage-

handicap on Aston Hill. Entries close at 6 p.m. to-day (Saturday). There will be four classes for petrol cars and one for steam vehicles.

THE hill-climbing competition of the Essex County A.C., originally fixed for to-day (Saturday), has been postponed to the 27th inst.

THE fastest times at the Southend and District Motor Club's hill climb last week were made by Mr. Perry's 15-h.p. Ford car and Mr. Head's 16-20-h.p. Humber.

THE Southend and District Motor Club Journal is the latest addition to official literature, and reveals considerable enterprise on the part of the committee and no lack of judgment in the editorial sanctum.

THE Sheffield and District A.C. will hold its third annual gymkhana at Niagara Grounds, Wadale Bridge, on the 25th inst. The usual features of such events will be arranged, one of the most interesting being the contest in balancing a car on a rocking platform.

MR. JOSEPH R. BRAMAH, of Chapel Walk, Sheffield, is devoting much attention to the manufacture of radiators and engine bonnets for motor-cars; mud-guards are another speciality of the firm, these being made in planished steel or aluminium with moulded edges.

MR. TOM WILLIAMS will shortly commence a tour of all the principal towns in England with a 12-16-h.p. "Vauxhall" car, with the object of explaining the details of the machine to members of the trade. This car will be the 1908 model and fitted with large cylinders and an inclined engine. Agents who would like to try the vehicle should write to Vauxhall Motors, Ltd., Luton, for an appointment.

THE IRISH RELIABILITY TRIAL.

OFFICIAL AWARDS.

In our issue of June 1st we gave a full report of the Irish Reliability Trials organised by the Irish A.C., with Dublin as the radiating centre from which runs were made on the four days of the trial. We are now able to give the official awards in connection with the event, prefacing the list with the intimation that in Classes C, D and H of the limited section and Class A of the open section no awards were made. Attention should also be called to the fact that the awards of a silver medal in some classes, and in others gold, does not mean that the cars that received the former did less meritorious performances; the class of medal depended on the entries received for each class.

The 200-guinea Dunlop Challenge Cup for the best performance of all the cars in the open section was won by the 15-h.p. Clement-Talbot car, entered and driven by Mr. S. T. Robinson, of Dublin.

The 100-guinea Dunlop Challenge Cup for the best performance of cars in the limited section was won by the 20-h.p. Clement-Talbot, entered and driven by Mr. Walter Sexton, the hon. treasurer of the Irish Club.

The Goff Cup for the car showing the least cost per ton per mile for fuel consumption was won by the 15-h.p. Humber, entered and driven by Mr. J. B. Dunlop, jun.

The awards in the price classification classes are as follows:—In Section 1 (open) the winners of gold medals were: Class B, 15-h.p. Ford; Class D, 16-20-h.p. Calthorpe; Class E, 15-h.p. Clement-Talbot; Class F, 30-h.p. Beeston-Humber; Class G, 35-45-h.p. Daimler. Silver medals have been awarded as follows:—Class C, 10-h.p. Chambers; Class H, 40-h.p. Hotchkiss.

The order in Section 1 (open classes) was as follows:—

CLASS B.

Car.	Entrant.	Hill Mark.	Speed Test Mark.	Fuel Mark.	Reliability.	Total.	Place.
15-h.p. Ford	P. L. D. Perry	120.0	59.5	48.8	1,199	1,427.3	1
10-12-h.p. Swift	R. Burns	115.6	54.1	51.3	1,200	1,421.0	2
7-h.p. Star	W. D. Turner	82.9	41.1	53.1	1,200	1,377.1	3
10-h.p. Cadillac	F. S. Bennett	91.8	52.9	48.7	1,176	1,369.0	4
10-h.p. Chambers	J. W. Hurst	54.9	46.9	51.5	1,113	1,336.3	5
9-h.p. Adams-Hewitt	A. W. Inglis	106.7	60.0	52.8	1,106	1,325.5	6
15-h.p. Ford	R. W. Archer	32.5	40.9	18.5	1,160	1,251.9	7

CLASS C.—£150 to £250, four seats.

10-h.p. Chambers	J. H. Chambers	120.0	60.0	60.0	1,200	1,440.0	1
9-10-h.p. Cadillac	F. S. Bennett	113.4	53.9	48.3	1,200	1,415.6	2

CLASS D.—£250 to £350.

16-20-h.p. Calthorpe	G. W. Hands	120.0	60.0	46.1	1,194	1,420.1	1
10-h.p. Chambers	C. E. Chambers	69.7	44.2	52.7	1,200	1,366.6	2
12-14-h.p. Singer	Singer Motor Company	95.3	43.9	57.4	1,164	1,360.6	3
12-14-h.p. Argyll	A. Govan	74.5	38.2	37.1	1,200	1,349.8	4

CLASS E.—£350 to £500.

15-h.p. Clement-Talbot	S. T. Robinson	116.8	60.0	60.0	1,200	1,436.8	1
15-h.p. Clement-Talbot	Viscount Ingestre	113.8	59.0	51.7	1,200	1,424.5	2
15-20-h.p. Unic	R. J. Mecredy	91.3	52.7	55.6	1,200	1,399.6	3
18-22-h.p. C.C.C.	A. Armitage	91.4	52.1	52.2	1,200	1,395.7	4
20-h.p. Belsize	R. Crosley	120.0	51.9	42.4	1,179	1,393.3	5
15-20-h.p. Unic	E. M. Stirling	83.2	54.7	50.2	1,200	1,388.1	6
16-20-h.p. Chenard-Walcker	W. Guttman	81.8	46.9	53.8	1,200	1,382.5	7
14-16-h.p. Argyll	A. Govan	92.3	52.4	29.3	1,177	1,351.0	8

CLASS H.—Exceeding £850.

40-h.p. Hotchkiss	Capt. Corbett	120.0	60.0	60.0	1,080	1,320.0	1
-------------------	---------------	-------	------	------	-------	---------	---

In Section 2 (limited to private owners) gold medals were awarded as follows:—Class B, 10-12-h.p. Swift; Class E, 15-20-h.p. Unic; Class F, 20-24-h.p. Clement-Talbot; Class G, 35-h.p. Daimler.

CLASS B.

10-12-h.p. Swift	F. Carter	120.0	60.0	60.0	1,198	1,438.0	1
10-h.p. Chambers	Jas. Hurst	67.4	51.4	49.4	1,183	1,351.2	2

CLASS E.

15-20-h.p. Unic	B. J. Mecredy	120.0	60.0	51.2	1,200	1,431.2	1
15-h.p. Humber	J. B. Dunlop, Jun.	89.0	53.3	59.2	1,200	1,402.1	2
14-16-h.p. Argyll	J. H. Kenny	90.5	55.6	38.5	1,172	1,356.4	3

CLASS F.

20-24-h.p. Clement-Talbot	W. Sexton	120.0	60.0	59.6	1,200	1,439.6	1
18-24-h.p. Austin	H. P. Wilson	111.0	53.2	58.7	1,198	1,420.9	2
24-h.p. Minerva	T. M. Greer	109.1	51.1	51.0	1,200	1,411.2	3
15-h.p. De Dion	G. B. Geake	63.7	41.0	32.5	1,146	1,283.2	4
22-h.p. Orleans	Capt. Lindesay Knox	15.6	33.1	7.3	1,182	1,238.0	5

CLASS G.

55-h.p. Daimler	T. Henshaw	120.0	59.4	48.5	1,200	1,427.9	1
25-36-h.p. Brasier	T. M. Downie	86.2	60.0	57.4	1,200	1,403.6	2
32-h.p. Maxwell	H. A. Browning	69.7	52.5	29.3	1,172	1,323.5	3

In the Cup marks the order in Section 1 was:—

15-h.p. Clement-Talbot	S. T. Robinson	120.0	60.0	54.56	1,200	1,434.56	1
35-h.p. Daimler	T. Henshaw	103.6	48.9	50.4	1,200	1,402.7	2
60-20-h.p. Calthorpe	G. W. Hands	108.0	57.1	40.9	1,194	1,400.7	3
30-h.p. Beeston-Humber	T. C. Pullinger	92.02	51.2	56.4	1,200	1,398.8	4
10-h.p. Chambers	J. H. Chambers	90.9	51.9	36.3	1,200	1,379.2	5
15-h.p. Ford	P. L. D. Perry	85.6	46.9	32.2	1,199	1,363.7	6
40-45-h.p. Hotchkiss	Capt. Corbett	90.5	48.3	22.7	1,088	1,241.7	7

Section 2 resulted as follows for Cup marks:—

20-24-h.p. Clement-Talbot	W. Sexton	120.00	60.00	53.38	1,200	1,433.38	1
15-20-h.p. Unic	R. J. Mecredy	116.4	56.96	53.0	1,200	1,426.36	2
35-h.p. Daimler	T. Henshaw	114.92	49.46	52.90	1,200	1,416.65	3
10-12-h.p. Swift	F. Carter	100.20	52.56	43.62	1,198	1,394.38	4

THE Portlao car which competed in the A.C.F. Grand Prix Race was fitted with Peter Simplex rims and tyres.

THE first serious effort of the Palmer cord tyre in the Scottish trials was an unequalled success. Ten cars were fitted with Palmers; nine completed the course, while the tenth covered the greater portion of the course before it was withdrawn, but suffered no tyre troubles. The tyre mileage of these cars collectively amounted to 27,554½, and only two punctures are recorded in that distance. In the Leicestershire A.C. meet, Capt. Byron won the Hartopp Challenge Cup and two gold medals with his Minerva car shod with Palmer cord tyres. At the North Wales Hill Climb, Mrs. Parry won with her 12-16-h.p. Clement-Talbot fitted with Palmers. In the Leeds to Edinburgh twenty-four hours' reliability trial for motor-cycles, four gold medals were won by riders of Triumphs and other machines fitted with Palmer tyres.

MESSRS. CRAVENS, LTD., of Darnall, Sheffield, the makers of the automatic carburettor described in a recent issue, have sent us a specimen of a handy little waistcoat pocket gauge for measuring the correct gap at the points of a magneto sparking plug and the distance the points should separate at the contact maker, they have lately introduced. The two gauges are hinged and duly marked, one showing the proper gap for the sparking plug, viz., 4 of a millimetre; the other, the space recommended by the Simms-Bosch Company for the separation of the points at the contact maker, viz., 5 of a millimetre. The company will be glad to send one of the gauges to any applicant on receipt of a stamped addressed envelope.

ROAD REPORTS.

INVERNESS.—The ten mile speed limit is now enforced through the main road leading through the village of Newtonmore from a point opposite to where the Strone road branches from the main street or road to the junction of the roads leading to Dalwhinnie and Fort William respectively, nearly opposite the Newtonmore Hotel, thence (a) to a point on the road leading to Dalwhinnie, fifty yards south-west of where said road intersects or crosses the road leading to Newtonmore Railway Station, and (b) to a point on the road leading to Fort William, 100 yards west of where the road is joined by the said road leading to Newtonmore Railway Station.

WINDSOR.—The only main road under repair in the borough during the next month will be the St. Leonard's Road, the road leading from the centre of the town to Ascot.

GUILDFORD.—Nothing further will be done to the main and district roads of this town, as regards metalling, until the fall of the year, but several miles of roadway will be disturbed in putting in new water mains, including London Road, Aldershot Road, Worplesdon Road and Woking Road—a fact of which motorists should make note.

BRIGHTON.—At present there is no intention on the part of the Borough Surveyor of Brighton to repair any of the main roads leading in or out of Brighton, within the boundary.

BEXHILL.—The local authorities have just completed the repairs on the main roads leading out of the town, and they are all now in order. No further repairs in the immediate future are contemplated.

KENDAL.—The roads within this borough are in good condition and no extensive repairs will be undertaken within the next few weeks. Notice boards have been fixed at roads on the borough boundary requesting motorists to drive slowly through the town.

SOUTHPORT.—One of the roads in Southport known as Rufford Road (about three miles N.E. of the town), is now being converted from a stone paved road into a tar-macadam road for a length of about a mile. This is the main road between Southport and Preston, and the portion under repair is in Crossens village. Motorists using this road for the next two months should exercise great care. Mr. R. P. Hirst, the Borough Engineer, is sorry at having to do this work at this time of the year, but the bad weather prevented it being done earlier.

HERTFORDSHIRE.—The Hertfordshire County Council are spending £200 in tar-coating certain lengths of road as an experiment against dust, and at the meeting on Monday they contributed £12 to the Stevenage Urban Council towards the cost of treating part of the Great North Road at Stevenage to obviate "the serious nuisance caused by motor traffic."

ABERFELDY.—A ten mile limit is now being enforced at Aberfeldy, which will have the effect of barring to the future Scottish trials a portion of the hill that was selected for the climb on the last day in the recent event.

THE COMMERCIAL VEHICLE TRIALS.

In our issues of the 6th and 13th inst. we gave the first twenty-seven entries in the R.A.C. trial. We now add the later entries received as follows:—

Entrant.	Class.	Net Load.	Nature of Vehicle.
28. A. R. Atkey and Company, Ltd.	E.	60 cwt.	Atkey Gimson Waggon.
29. William Foster and Company	H.	120 cwt.	Wellington Steam Tractor.
30. Etablissement Turgan, Ltd.	A.	10 cwt.	Parcels Delivery Car.
31. Albion Motor Car Company	B.	20 cwt.	16-h.p. Albion Lorry.
32. Etablissement Turgan, Ltd.	E.	60 cwt.	Delivery Van.
33. Yorkshire Patent Steam Waggon Company			
34. Milnes-Daimler Ltd.	D.	40 cwt.	Delivery Van.
35. De Dion Bouton, Ltd.	A.	10 cwt.	Delivery Van.
36. De Dion Bouton, Ltd.	E.	60 cwt.	Lorry.

Entries at the ordinary fee of £25 per vehicle were received up to Saturday last. Until 12 noon on Saturday, 10th August, the fee is £30 per vehicle. No entries will be accepted after that date.

CRIPPLED CHILDREN'S OUTINGS.

ON Saturday about a hundred of Sheffield's crippled poor children enjoyed the delights of a motor-car trip to Bamford in cars kindly lent for the purpose by members of the Sheffield and District Automobile Club. This idea of a motor picnic for children originated with Mr. T. H. Firth, and he it was who arranged the event which was such a success about twelve months ago. On Saturday over forty private cars went in response to Mr. T. H. Firth's invitation, many of them driven by the owners themselves, so that it was possible to take a greater number of children than on the previous run.

On Wednesday the crippled children of Accrington and district were taken for an outing by local members of the automobile club. The arrangements were in the hands of the Mayor (Mr. T. E. Higham). Last year the North-East Lancashire Automobile Club organised an outing for the crippled children of Blackburn and Preston. They were requested by the Ragged School authorities to repeat the event for the Blackburn children this year, but the committee pointed out that the district covered by the club embraced the whole of North-East

Lancashire, and that under these circumstances they felt obliged to give first consideration to the districts not included in last year's events. Accordingly, the crippled children of Padiham, Burnley, and Colne on the one hand, and of Darwen, Chorley and district on the other, have been the first to be considered this summer.

On Thursday of last week an outing for the crippled children of Nottingham was arranged by the members of the Nottingham Automobile Club, who placed forty motor-cars at the disposal of 137 unfortunate children. Mr. Booth Grainger, the hon. sec. of the Nottingham Club, had made excellent arrangements for the marshalling of the youngsters, and Mr. C. Hardy led the procession in the first car to Bulwell Hall, where they were entertained by Mr. J. H. Hardy, whose kindness was greatly appreciated.

COMPANY NEWS.

NEW COMPANIES REGISTERED.

COVENTRY MOTOR OMNIBUS COMPANY.—£5,000. First directors: Messrs. W. R. Taylor, C. H. Wootton, H. H. Hailstone, P. E. Overton, E. Woodhead, and J. Holt. 130, Cox Street, Coventry.

TAXI-CAB COMPANY.—£100. No initial public issue. Registered without articles.

BRITISH MOTOR AND ENGINEERING COMPANY (1907).—£50,000. To acquire the goodwill and assets of the British Motor and Engineering Company, Ltd., now or lately carrying on business at Caversham Road, Reading. First directors: Messrs. E. C. Buik and G. S. Ullathorne. 12-13, Henrietta Street, W.C.

LEON BOLLEE (1907).—£330,000 (150,000 preference and 175,000 ordinary of £1 and 100,000 deferred of 1s.). To adopt certain agreements with the Westminster Syndicate, Ltd., and to carry on the business of manufacturers of and dealers in motor-cars.

The Field Garage and Tent established by Mr. W. F. Parker, of the Oxford Cycle and Motor Car Company, in connection with the pageant, lately held in Oxford.

DELAHAYE AND CO.—The first annual general meeting of this company was held on Tuesday under the presidency of Mr. A. A. Campbell Swinton, who said that the profits for the year 1906 had exceeded those of the preceding year given in the prospectus. The directors were able to pay the full 7 per cent. dividend on the preferred ordinary shares, and one on the ordinary shares at the rate of 7 per cent. per annum, carrying forward £1,318. Satisfactory progress was made last year with the new works, but no profit could be derived from them in 1906. It would accrue in the current year. The turnover for the first half of 1907 showed a substantial increase over that of the previous year. They had sold nine cars to the Court of Spain following upon the sale of a car to the King of Spain. He moved the adoption of the report, which was seconded by the Hon. Reginald Parker, and carried without discussion.

POLICE TRAPS.

KILMARNOCK is now the scene of a good many motor traps. **SHOOTERS HILL ROAD**, Blackheath, is again being used by the police for trapping purposes.

MOTORISTS should be careful in going through Wharfedale, traps having lately been discovered there, and also on the Leeds and Otley road.

We learn from the United Motor Industries, Ltd., that the Hotchkies car which has just completed its 10,000 miles run in Great Britain and Ireland was fitted with the Eisemann high tension magneto, which gave no trouble throughout. The 10,000 miles is additional to the previous run of 6,250 miles in France, where also the same magneto was used without the slightest difficulty.

FORTHCOMING EVENTS.

JULY.

19th (F.).—North-East Lancashire A.C. open hill climb on Rivington Pike.

20th (Sat.).—Motor Union meet at Southport. Reception at Knowsley (fourteen miles distant) by the Earl of Derby, K.G., at 3 p.m.; dinner at the Prince of Wales' Hotel, Southport, at 7.30 p.m.

Ladies' A.C. meet at Bookham, Chert.

Newcastle M.C.C. speed-judging contest.

Wolverhampton A.C.'s reliability trial.

Derby A.C.'s speed judging competition.

East Surrey A.C.'s run to Farnham.

Harrogate A.C. run to Hackfall.

Lincolnshire M.C.C.'s hill climb at Ludborough.

Newcastle M.C.C. speed judging competition.

N.W. London M.C.C. petrol consumption competition.

Sussex A.C. run to Bodiam Castle.

Southern M.C. run to Worthing.

21st (Sun.).—Essex M.C. run to Yarmouth.

25th (Th.).—Circuit des Ardennes race under German A.C. rules.

26th (F.).—Coupe de Liedekerke race for touring cars, on the Ardennes course.

Circuit des Ardennes Race under Belgian A.C. rules.

26th & 27th.—Auto C.C. twenty-four hours' ride to Plymouth and back.

27th (Sat.).—Aston hill climb of the Hertfordshire County A.C.

Irish A.C. hill climb.

Motor-Yacht Club eliminating trial for the British International Cup Race.

Cardiff M.C. run to Southerndown.

East Surrey A.C. run to Cuckfield.

Harrogate A.C. competition.

Notts A.C. hill climb, Hazelwood.

Somerset A.C. 100 miles reliability trial.

AUGUST.

3rd (Sat.).—Southend M.C. holiday tour on south coast.

5th (M.).—Crystal Palace A.C.'s races at Bexhill.

19th to 24th.—Auto Cycle Club's six days' trial.

20th.—Open competition for light cars organised by the Essex Motor Club over a 200 miles course.

SEPTEMBER.

9th.—Industrial Vehicle Trials commence.

OCTOBER.

19th.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

Cerdingley's Motor-Car Exhibition at the Agricultural Hall, London.

LIGHTING-UP TIMES—LONDON.

July 20th—9.5	...	22nd—9.3	...	24th—9.0	...	26th—8.58
„ 21st—9.4	...	23rd—9.1	...	25th—8.59	...	27th—8.57

In Glasgow the lighting up time to-day (Sat.) is 9.50 p.m., and to ascertain the approximate times on succeeding days 45 min. should be added to the above figures; in Birmingham an addition of about 13 min. is necessary.

AUTOMOBILE ACCIDENTS.

A WEST HARTLEPOOL motorist, touring through Lunsdale, collided with a governess-car containing three ladies at Burrow, between Kirkby Lonsdale and Lancaster. The vehicle was smashed and overturned, the pony broke away from the damaged harness, and the ladies were all thrown into the road.

WHILE Mr. and Mrs. Ernest Reed were driving near Hethersett, Norfolk, on Monday, a motor-landulet, driven by the Earl of Albemarle, approached from behind. The motor horn caused the horse to swerve, and a collision followed, Mr. and Mrs. Reed being thrown from their vehicle, the former sustaining cuts and bruises. The occupants of the motor-car were uninjured.

A SERIOUS collision between a motor-car and a wagonette occurred at Sawbridgeworth on Sunday evening. The motor-car, belonging to Captain Wilkinson, R.N., of Blackheath, was damaged, but its occupants were uninjured.

THE Kingston companies of the 3rd Volunteer Battalion East Surrey Regiment were returning on Monday night to headquarters at Kingston, along the Richmond road, when a motor-car driven at a moderate pace by Mr. Frank Bourn, of Tooley Street, Southwark, dashed into the band. Nine of the bandmen were knocked down, and two of them were so badly injured that they are detained in hospital. The accident occurred at a dark part of the main road, just after the Volunteers had left Ham Common.

TOWARDS the end of the month a 30-h.p. Daimler car will be on exhibition at Messrs. Pale and Co.'s Garage, Barnstaple, in order to convince those interested of the hill climbing powers of the Daimler. Runs over the Devonshire hills can now be arranged.

CONVICTION FOR MANSLAUGHTER.

At Chester Assizes the Lord Chief Justice addressed a grave warning to motorists in passing sentence on William Bracewell, aged 28, a mechanic, found guilty of the manslaughter of John Nairey by negligently driving a motor-car at Ashton-on-Mersey on May 17th. The Lord Chief Justice said he had no doubt whatever that the prisoner was driving the motor-car recklessly. He thought it right to say that he recognised in these cases there was no criminal intent, but, on the other hand, drivers of motor-cars must understand that if they caused death by negligent driving they would receive severe sentences. It was not sufficiently understood that when a machine was being driven along the public roads the lives and property of other people must be respected. Although he should not inflict upon the prisoner so severe a sentence as would be passed in ordinary circumstances of manslaughter by negligence, it must not be thought that if death occurred by this kind of negligence such light sentences would be inflicted in future. He sentenced the prisoner to nine months' imprisonment in the second division.

BUSINESS NEWS.

THE Daimler Company have received an order from Sir George Newnes, Bart, M.P., for a 35-h.p. car of the Evesham detachable type with a 10½ ft. wheelbase.

WHEN at Northampton this week we had considerable difficulty in getting a small car to start, and after going through everything ourselves, occupying a couple of hours, we asked Messrs. Grose, Ltd., to send along an experienced man, who eventually discovered the cause of the trouble to be in the ignition coil. It was a most difficult fault to find, and speaks highly of the class of men this firm employ. Mr. Grose informs us that he is doing a large business in detachable tyres and rubber treading, and has several new things coming along for next season.

AMONG the latest patrons of the Knightsbridge depot of Humbers, Ltd., are Sir Frederick L. Robinson, Sir S. E. Dallas and Captain Guy V. Baring, M.P.

FROM Messrs. Edward Joy and Sons, of Leeds, comes a copy of their new pocket price list of "Filtrate" lubricating oils, which are already well known in the motoring world for their many favourable qualities. From the list we learn that "Filtrate" oils were used by eleven competitors in the recent Tourist Trophy and Heavy Touring Car races in the Isle of Man.

ON Friday night, the 12th inst., a 15-h.p. Coventry-Humber started from Exeter on a twenty-four hours' non-stop run through the South of England. The early part of the route lay through the excessively hilly country of Cornwall and Devon, and then the road to London was taken, the car returning to Exeter at 7 p.m. on Saturday, the 13th inst., having been exactly twenty-four hours on the road without a stop. The non-stop capabilities of the Humber cars have been demonstrated this year in a most remarkable manner, they having been made in every reliability trial for which the vehicles have been entered; these include the Tourist Trophy and Heavy Car Races, the Scottish, Irish, Welsh, Dutch, Manchester and the North-Eastern Reliability Trials.

SINCE the recent demonstration of "Miraculum" considerable interest has been aroused in the new puncture stop for pneumatic tyres, which will shortly be placed upon the market. We are given to understand that the capital of the syndicate about to be formed to exploit the invention will be very moderate, £25,000. We wish the investors in "Miraculum" success, which, if the preparation does all that is claimed for it, motorists and cyclists of the United Kingdom will not begrudge them.

OWNERS of motor garages and repairing establishments will be interested in the motor spirit safe—a specially constructed receptacle for the storage of two-gallon tins of petrol—recently introduced by Messrs. William Tupholme and Sons, Ltd., of 48-56, Bridge Street, Sheffield.

H.H. THE MAHARAJA OF ALWAR, of India, has become the owner of a 60-h.p. six-cylinder Napier, and Messrs. Marcks and Company have sent orders to England for two 40-h.p. six-cylinder Napiers with specially designed bodies, for Indian potentates.

PALMER CORD TYRES have had a long list of wins in one week, including successes at the Kettlebury hill climb, the North Wales hill climb, the Saltburn speed trials, and four gold medals won at the motor-cycle meet of the Leeds Club with machines fitted with these tyres, whose excellent showing in the Scottish Trial is the subject of a new circular issued by the Palmer Tyres, Ltd.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

THE Motor-Car Journal.

VOL. IX.]

LONDON, SATURDAY, JULY 27, 1907.

[No. 438.

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

QUESTIONS of interest to those who motor through Surrey were raised in the House of Commons on Tuesday. Mr. Marnham asked the President of the Local Government Board whether his attention had been drawn to the danger and inconvenience run by the inhabitants of Weybridge from the influx of motor vehicles, including racing cars, into that town on days when races were held on the Brooklands Motor Track; and whether he would consider the advisability of issuing restrictions of such traffic on the race days through the town of Weybridge in accordance with Section 8 of the Motor Car Act, 1903? Mr. Burns replied that his attention had been drawn to the matter. The urban district councils of Walton-on-Thames and Weybridge had written to the Surrey County Council with a view to an application being made to frame regulations relating to motor-car traffic in their districts. No application from the county council has yet been received at Whitehall, but the L.G.B. is in communication with the county council on the subject. Mr. Trevelyan wanted to know if any steps had been taken to regulate the traffic in the same neighbourhood on the tow-path between Kingston-on-Thames and Hampton Court Bridge? Mr. Burns said that an inquiry had been held, and as the result of the report which he had received on the subject he had decided to retain the riverside resort between Kingston Bridge and Hampton Court Palace for the use of the general public free from the inconvenience and discomfort that would arise therefrom motor-car traffic. So that motor-cars are to be prohibited from that part of the tow-path.

The Recognition of Drivers.

anxious to secure the *kudos* that may be associated with perfect running in such an arduous event. There is, however, something to be said in recognition of the driver. It would not be difficult to give diplomas to those who handle their vehicles without experiencing delays on the road; and there are many who would, in view of the severity of the test, value highly such awards. For the strain upon the driver during the five days of such a trial is not a light one, and an official record that such was successfully gone through would be appreciated.

The Automobile Handbook.

WE have received a copy of the Automobile Handbook, issued under the auspices of the R.A.C. and the Motor Union, the publication of which has already been announced in the *Journal*. An interesting feature of the 1907-8 edition is the series of maps showing the areas where speed limits prevail, as well as a selection of plans of the principal towns, indicating official hotels, garages, &c., on the plan adopted by the North-Eastern Automobile Association, of which we recently gave an illustration. An idea of the importance

of the organisations responsible for the issue of this authoritative book of reference may be gleaned from the fact that at the time of its compilation they had ninety-four affiliated bodies in various parts of the world, exclusive of the allied organisations. Lists of the motor-cars of the year, particulars of the performances of cars in trials under the auspices of the R.A.C., and a compendium of the legal position of automobilists are included in the book, which will also be of service to all who contemplate touring, whether at home or abroad. We have only one suggestion to make, and that is that some particular date of publication should be agreed upon, so as to avoid the apparent lateness of such information as is seen on certain pages; as, for instance, that of giving the itinerary of the Scottish Trial of June, 1906—in a handbook issued a year later, and after the 1907 Trial has taken place. Here the inclusion of this year's route would have brought the work up to date. Otherwise its utility, completeness, and accuracy are unimpaired.

London Traffic Problems.

THE London motor-bus seems to be in the backwaters of prosperity just now, and the whole problem of Metropolitan locomotion is in the melting pot. Three companies have withdrawn their motor vehicles from the streets; 200 of these 'buses have been ordered from the streets owing to the development of mechanical imperfections; the ratepayers of many boroughs are petitioning against extensions of such services; borough councils have been sending deputations to Sir E. R. Henry, the Commissioner of Metropolitan Police, and the various companies which carry passengers in the Metropolis have formed the "London Passenger Traffic Committee" in order to protect their interests. Replying to the deputation already mentioned, the Police Commissioner satisfied the speakers that the police had been active in the exercise of their present powers with regard to motor vehicles, and said that a great many motor-omnibuses had been taken off the streets, or had had the two days' notice in respect to miscellaneous defects. Things, he acknowledged, were getting better, but the improvement was slow. Still we have the satisfaction of knowing that we have heard the noisiest of the motor-buses.

Motoring and Health.

DESPITE the exciting events that have lately taken place in the motoring world, a correspondent of a contemporary writes to say that not only is there no sport in motoring, but that devotion to the car is responsible for the decline of sport. He maintains that driving a car is merely a form of misdirected energy and must have a bad effect on the nerves. But against such a view is the testimony of the doctor who examined Mr. S. F. Edge both before and after his great ride. His evidence was conclusive on this and some other points of importance in any review of the health of the country. Dr. L. P. Gibson, of Cowes, was the medical man in question, and he says that before the ride a specimen of blood was taken and examined for the tuberculo-opsonic index, which was found to be 0.85. Another specimen, taken directly after the race, gave 1.17. That the power of resistance to the tubercle bacillus should be raised after the long journey is very noteworthy, and helps to strengthen the

B

opinion held by many doctors that motoring is an effective treatment in some cases of tuberculosis, and that the gloomy prophecies of some anent the bad effects of great speed on the system were incorrect. "Mr. Edge may therefore," continues Dr. Gibson, "be congratulated on the success of his ride, and also on the fact that this effort of his remains as one of the finest possible object lessons of, and pleas for, the simple life, and as such is recommended to the young man of the present day to be read and marked."

A Traffic Test of a Buick Car.

A RELIABILITY test of a novel character was undertaken on Thursday, last week, by Messrs. Sternberg and Eason, under the observation of the R.A.C., when an 18-h.p. two-cylinder Buick motor-car was driven for eight hours continuously through the streets of London. The trial began at 9 a.m., and included the crowded thoroughfares of the West End as well as around the Mansion House, which were traversed over and over again, with a view to showing how easily handled the car could be in the thickest traffic. For hour after hour it reappeared with unvarying regularity at specified spots, where passengers were exchanged. It had been intended to run the

The 18-h.p. Buick Car leaving the R.A.C. for its Non-stop Engine Trial.

car in this way for twelve hours, but at 5 p.m., when the vehicle was proceeding along Stamford Street, S.E., a large van suddenly drove right across the road in front of the car, and in pulling up quickly the driver unfortunately stopped the engine. The fact, however, that the Buick—which was the identical car which behaved so well in the Scottish Reliability Trials—travelled for eight hours in such traffic without incident speaks very highly for the reliability and excellent qualities of the machine, and demonstrates that the horizontal double opposed cylinder engine with which it is fitted is not only capable of standing the strain of touring work in hilly districts, but also is particularly well adapted for town use.

Motoring in the Royal Parks.

ON behalf of the Motor Union, Mr. Staplee Firth, on Monday, made an application to Mr. Denman, at Marlborough Street Police Court, with reference to the endorsement of motorists' licences for exceeding the speed limit in the Royal parks. Mr. Firth explained that recently it was held by the Lord Chief Justice and Justices Darling and A. T. Lawrence that the endorsement of licences for that offence was illegal, and he was directed to ask the magistrate to have all those endorsements on licences that had come under his personal ruling removed by cancellation. The decision of the judges was in an appeal from a decision of Mr. Marsham at Bow Street, and

he had expressed his willingness to have the endorsements removed. Mr. Denman said that before making a definite statement as to all endorsements of this nature, he should prefer to consult his colleague, Mr. Mead, but as far as he personally was concerned there would be no difficulty, and he did not think there would be with other magistrates, as all the endorsements of this nature were nullities. Mr. Staplee Firth thanked the magistrate and withdrew. Mr. Marsham has now agreed that any licences endorsed by him will be cancelled if the licences are forwarded to Bow Street for that purpose; and Mr. Denman has also arranged that any licences endorsed at Marlborough Street for convictions of this character shall be cancelled upon application to the Court. Motorists affected by this arrangement are accordingly advised to send in their licences without delay. Application is being made by the Motor Union to the magistrates sitting at other courts in which Park cases have been heard, and no doubt similar arrangements will be made.

Speed in Sussex.

IN our Correspondence columns this week will be found a warning against the activities of the police to those motorists who are contemplating a visit to Goodwood. In the Arundel district not only are the police exceedingly vigilant, but the question of securing a reduction of the maximum speed at which motor-cars can pass through the borough of Arundel is to be brought before the Town Council at its quarterly meeting this week. Councillor Whittaker has given notice that he will move:—"That the County Council be petitioned to sanction a by-law prohibiting drivers of motor-cars and motor-cycles from going faster than eight miles an hour, commencing at the east end of the borough and ending by the Chichester road lodges on the west." It is urged that the situation of the town renders it imperative for the speed to be restricted; on the east it is approached by a sharp hill leading over the railway bridge, and on the west are two steep hills—one on the Chichester road and the other on the Petworth road.

The Taxation of Motorists.

ALREADY the various public departments of the State are clamorous for the revenue that is likely to accrue from the promised increase in motor-car taxation. Speaking at Newport (Mon.) the other day, Mr. Sydney Buxton (the Postmaster-General) referred to the cost of an universal penny postage, and said that it was not easy to obtain the money such a scheme would cost. "Perhaps next year," he went on to observe, "they would be able to get it by taxing motor-cars." Doubtless his will not be the only Department to claim from the Chancellor of the Exchequer some share of the increased taxation, which—should it be ultimately levied—ought as a matter of justice to go to the upkeep of the roads. If motorists are to be mulcted in any extra charges, it certainly should be understood that the results must be expended in improving highways that are at present in an intolerable condition, and in making new roads to meet the convenience of those who have adopted motor traction as a means of speedy communication.

Colonial Motorists.

Two important colonial motoring organisations have just been affiliated to the Motor Union of Great Britain and Ireland. The first is the Automobile Club of Ceylon, which has a membership of over 150. This club have elected Mr. Edward Posling, a member of the Legislative Council of Ceylon, who is at present in England, to represent them on the General Committee of the Union. The second organisation is the Automobile Association of Bengal, which has its headquarters at Calcutta, and has for its object the encouragement of automobilism and the industry connected therewith in the province from which it takes its name. There are now three Indian motoring associations included in the membership

of the Motor Union. Their flourishing condition proves that motoring is prosperous in our Indian Empire, while their association with the parent body at home illustrates the imperial character of the Motor Union organisation.

The Fuel Question.

THE most important matter before the Motor Union at their very successful gathering at Southport was undoubtedly a presentation of the report of the Fuels Committee, which has lately been inquiring into the rise in the price of petrol with a view to suggesting steps for the protection of private consumers. Many meetings were held and several important witnesses were examined, forcing upon the committee the conclusion "that a famine in petrol appears to be inevitable in the near future." Having sifted the evidence, they point out that they have arrived unanimously at the conclusion that the efforts of the Motor Union should be in the direction of encouraging in every way the use and development of a sub-

From time to time we have given a synopsis of the evidence which has been brought before the committee by various authorities, which information has been of great value in enabling the committee to produce the excellent report they have just issued. On another page we give extracts from the report which will be of general interest to all concerned with motoring.

Smoke from Motor Vehicles.

AN important appeal concerning the emission of smoke from motor-vehicles on the highway has been won by the Motor Union at the Worcester Quarter Sessions. A driver in the employ of the Little Malvern Granite Company was convicted by the local magistrates for that he did "unlawfully use on a highway there a certain locomotive not consuming as far as practicable its own smoke." The appellant was represented by Mr. Milward, instructed by Mr. M. Clive Blewitt for the Motor Union, and the respondents were represented by Mr.

The Motor Union Meet at Southport.—The Cars at Knowsley Park, the seat of Earl Derby.

stitute, such as alcohol produced from vegetation. According to the report, alcohol offers a complete and satisfactory substitute for petrol as far as its properties are concerned, and the most important recommendation of the committee is that alcohol should be produced on a large scale for the purpose of a fuel. Consequently they recommend that a movement should be inaugurated with a view of bringing about a reduction in the restrictions now imposed on the production of commercial alcohol, and that the R.A.C. should be asked to conduct experiments on the comparative merits of alcohol and petrol as a motor fuel. Further, they are of opinion that modifications in some of the present regulations for the storage and distribution of petrol might be made with a view to the reduction of the cost to the individual consumer. And then the Committee go on to recommend that competitions should be organised for paraffin carburettors and vapourisers, awards being given to the successful competitors. The attention of members is also drawn to the use of benzole, and it is suggested that a Standing Committee of the Motor Union should be formed for the purpose of giving early effect to these recommendations.

J. B. Matthews and Mr. Woodward. The tractor, it was alleged at the hearing before the Justices, emitted black smoke for a distance of about 400 yards, but the defendant denied this, though he admitted that a yellow vapour was emitted while coming up a hill. Expert evidence was given showing that the tractor was constructed upon the most approved modern principles. The Justices held that the tractor did not satisfy the conditions of a light locomotive, as defined in the Act of 1896. The arguments at Quarter Sessions lasted a considerable time, and finally, after the Court had retired to consider their decision, the Chairman announced that, without going into the question of whether the appellant's vehicle was amenable to the Highways and Locomotives Amendment Act, 1878, or not, they found, according to expert evidence adduced by the appellant, that the vehicle was constructed on the principle of consuming its own smoke. That being the fact, they next found that the Justices below were wrong in holding that the tractor did not consume its own smoke as far as practicable, therefore the conviction under the Highways and Locomotive Amendment Act, 1878, Section 30, must be quashed.

THE LIGHTER SIDE OF TECHNICAL MATTERS.

IT is quite safe to say that nothing has done so much to educate the man in the street on mechanical matters to anything like the extent as has the motor-car. Further, it has done more to arouse an enthusiastic interest and a desire for information on technical matters on the part of the average layman than have the combined inventive results of a quarter century of the most marvellous progress the world has ever seen. Naturally enough a thorough knowledge of any piece of mechanism, or of its underlying principles, is not to be gained by scraping a bowing acquaintance with it; such lore as may be accumulated in this manner must necessarily be purely superficial, even though it does permit its possessor to talk learnedly. In the acquisition of this store of knowledge on the part of thousands who truly did not know enough to distinguish their right hand from the left when it came to things mechanical, it was inevitable that many highly amusing situations should be brought about, and it is the object in the present instance, remarks Mr. C. B. Hayward in the "Automobile," to review a

"Well, are you quite sure you did not leave them behind in the garage, John?" ^{my dear J}

This naturally precipitated a host of "missing" stories based on the same fundamental idea, though probably the cleverest modification was the work of a Chicago scribe, who twined his recital about a "Cholly" boy who had a plethoric bank account and "nothing on his mind but his hair." All attempts to sell him a car had hitherto proved futile, his chief amusement consisting of chair-warming in one of the windows of his club. A mutual friend finally introduced a Chicago dealer, who managed to land an order for a high-priced car with all the "trimmings" he could possibly think of to bring up the amount of the bill. The new owner engaged a high-priced chauffeur and invited his friends for a trial run. Not many miles out of the city there were signs of trouble, and the chauffeur began to tinker about the motor, to the host's great surprise.

"Now, what on earth is the matter?" he inquired peevishly.

"The motor's missing, sir," replied the hired man in the uniform.

"Just as I expected," retorted his employer, for the benefit of his guests. "Even your friends do you. I trusted that man to get me the best machine on the market and to see that I got

The Fleet of "Pioneer" Motor-Buses of the London Power Omnibus Company, Ltd., outside the depot at Cricklewood.

few of them. To the wise ones they are one and all mildewed chestnuts, but unfortunately the category referred to is not an extensive one, so that both the country at large and the automobile industry is safe for some time to come.

Probably the man who invented the missing cylinder story was responsible for the advent of an epidemic of similar crimes; but, however that may be, the idea was a clever adaptation of a quasi-technical term—a bit of the current automobile vernacular in brief, to an existing situation, the recital of which has been responsible for many a smile. It was originally told—if the actual origin of the natal form of such circulatory whisks can ever be really traced—regarding an old lady who was out driving in the park alone with her chauffeur. The latter brought the car to a stop several times by the roadside and tinkered with something under the bonnet, while the old lady maintained a posture of dignified serenity in the tonneau, utterly oblivious of the interested group that watched John try to fuss about and keep his livery immaculate at the same time. After two or three such halts womanly curiosity got the better of mi-lady, and she inquired, "John, what can the matter be? Why are you stopping so often to look at things?"

"A couple of the cylinders is missin', ma'am, and she don't pull well," replied the puzzled ex-jehu.

everything that ought to go with it, and now there's something missing. I'm going back to the city to get that motor if it costs me ten dollars for a cab."

Would-be wise owners are also responsible for many of these "breaks," not a few of which are highly diverting, to say the least. For instance, a quite newly fledged owner, who was riding beside his driver while treating some friends to a spin, took occasion to ask his man some questions in order to display his knowledge.

"Why doesn't she pick up better on hills?" he inquired, as the motor slowed down and began to labour, due to the fact that the driver was trying to take a rise on the top speed that was too much for the car.

"She's losing compression," was the reply.

"That's so," remarked his employer in a relieved tone of voice, "I thought I heard something drop back there," and he looked anxiously back along the road to spot the lost compression lying on the dusty highway.

(To be concluded.)

A MEETING of protest against a proposed motor garage in Alexander Square, Brompton, S. W., has been held in the Brompton Church choir school.

THE DORWALD 35-45-h.p. MOTOR.

THERE are several interesting features in the new 35-45-h.p. petrol motor which Messrs. G. L. M. Dorwald and Company, of High Street, Wandsworth, S W., have lately put on the market, and of which we are here- with able to give some illustrations. It has been specially designed for all-round work and is suitable for use either on touring cars or motor-buses, and also for electric lighting or

Fig. 1.—End View of Dorwald Engine.

motor-boat work, as well as for any industrial purpose. In the first place, it will be observed that the four cylinders are all in one casting, Mr. Dorwald claiming that not only does this reduce the cost of manufacture, but results in a steadier running engine, owing to the greater mass present to withstand the force of the explosions. Large water spaces are provided round the valve

Fig. 2.—General View of Inlet Side of Dorwald Engine.

chambers and cylinders by the jackets, which at the top are closed by a large detachable gun-metal cap. By means of these large openings it is possible for the founder to see entirely round every part, and so ensure a sound casting and free waterways as well as to completely clean out the sand used in the cores. The cylinders are $5\frac{1}{2}$ in. bore by $5\frac{1}{2}$ in. stroke; the normal speed is 800 revolutions per minute, at which 35-h.p. is developed; this can, however, be easily increased to 1,000 revolutions.

All the valves are mechanically operated and interchangeable, the inlets being on the right and the exhausts on the left. The valve tappets are provided at their lower ends with rollers, which bear on the cams, and at their upper extremity are provided with adjusting nuts, so that the lift of the valves can always be set at the required position. The valve tappet guides are held in place in pairs by a bridge-piece and a single nut, so that it is an easy matter to remove them. The cams are made unusually large, the idea being to provide against jumping of the valve plungers at high speed. The cam shafts, which are supported on three bearings, are driven in a somewhat novel way; on the forward end of the crank shaft is a worm wheel which drives a worm shaft set across the motor, which shaft, still through worm gearing, operates in its turn the inlet and exhaust cam shafts, the outer ends of which are arranged to be connected up to the water-circulating pump and ignition device—contact maker for coil and accumulator, or magneto. The valve-operating mechanism is entirely enclosed in an extension of the crank case, but is so arranged that it can be readily dismantled, or the big ends of the forward pair of cylinders easily inspected. Large detachable covers are provided for a similar purpose as regards the rear cylinders in the base chamber, which is of aluminium.

The pistons, which are turned both inside and out, are

Fig. 3.—Part Sectional Elevation of Dorwald Engine.

fitted with four rings, which are provided with locking joint, and a device which keeps each one in its proper position. The gudgeon pin is carried in a special form of plate which fits flush against the inside surface of the piston head, to which it is secured by two bolts. The centre of the gudgeon pin is near the top of the piston, so preventing side thrusts on the cylinder walls, and enabling a short piston with easily-lubricated connecting rod end to be used. The connecting rods themselves are of a special section of steel, which are claimed to be lighter and quite as strong as the usual form. In the absence of a drawing it may be roughly stated that they are of + section, the vertical portion having thickened heads, the side extensions tapering away from the centre, so forming strengthening ribs. Special attention has been devoted to the design of the nickel steel crank shaft, the diameter of which varies from $1\frac{1}{2}$ in. at the front to $2\frac{1}{4}$ in. at the flywheel end. It is supported on three bearings, which are also proportionate in size to the work they have to perform, while the big end bearings are each 4 in. long. Another characteristic of the Dorwald motor is that the crankshaft is *desaxé*—that is to say, it is slightly out of line with the centre of the cylinders. The advantage claimed for this off-setting is that during the maximum effort of the power or working stroke the connecting rod is practically vertical and parallel with the sides of the cylinder, thus giving a direct thrust from the piston to the crank-shaft without side thrust on the cylinder walls, and so aiding in producing a smooth

and silent-running engine. The flywheel is 18 in. diameter by 6 in. face, its weight having been carefully calculated to ensure steady running.

The supply of gas to the engine is by means of a two-way branch pipe from the Dorwald automatic carburettor adapted to use either petrol or paraffin as fuel, and of which an illustrated description has already been given in the *M.C.J.* The exhaust is on the left, and is led away by means of two leads so arranged that good accessibility is given to the valve springs and tappets. The lubrication of the motor is effected by the pressure of the exhaust; an ingenious automatic arrangement is provided for the oiling of the big end and gudgeon-pin bearings. The former is provided with an eccentric groove, which causes the oil to pass round and rise to the highest point. As is shown in Fig. 3, the connecting rods are provided with a central hole closed at the bottom by a steel ball; under the action of centrifugal force the oil passes up through the connecting rod

The Paris-Pekin Race.—Slow Progress at Nankoo.

to the gudgeon pin, where suitable channels are provided. Any surplus passes down the inside of the piston to a circular lip, where it collects and finally passes through holes on to the cylinder walls. The engine is arranged for dual ignition, two separate sparking plugs being fitted to each cylinder, which are also provided with compression and water draw-off cocks.

Altogether, the Dorwald motor bears indications of having been carefully designed, and its clean and substantial appearance, as well as its smooth operation, render it well adapted to meet the various purposes for which it has been produced.

MR. J. W. BLOOMFIELD has issued an interesting illustrated booklet of his Red Lion Hotel, Banbury, from which we gather that he is now specially catering for the patronage of motorists passing through that interesting town. The hotel, although of old-time appearance, is internally on modern lines, and the garage in connection therewith has accommodation for about a dozen cars, including five lock-up motor houses.

MOTORING IN SOUTHERN IRELAND.

ON the dusty roads of the south of Ireland the motorist may enjoy himself just now, and the promise of August is filling all the hotels from Waterford to Glengariff. It is a good run from Waterford to Cork, passing Cappoquin and Lismore. From thence the motorist will assuredly go to the Lakes of Killarney and Glengariff. The best known road is by way of Bandon and Bantry, and thence by the Prince of Wales route through Kenmare. A pleasant variant is to go to Macroom—a place of somewhat dubious appearance—and then take a twenty-one mile run to Gougane Barra. On the way is one of the few recommendable hotels to be found in Munster, viz., the Lake Hotel at Inchigeela, where motorists will find plenty of amusement. The road is by the lakes of Inchigeela for six or seven miles, and there is just, but no more, room for a couple of cars to pass. The scene is reminiscent of some of the Scottish

lakes, and the way leads to Cronin's well-ordered hostelry, by the desolate lake of Gougane Barra, which is reached by turning from the main road for a couple of miles. Then the track should be retraced and the original route continued through the wild Pass of Keim-an-eigh—one of the loneliest and grandest of the roads among the mountains of these islands. Glengariff is about thirty miles distant, and there Mr. Duke, of the Eccles Hotel, gives motorists hearty welcome. Quite a large number of the Americans who have lately been visiting the Emerald Isle have brought their cars, to accommodate which a garage 25 ft. by 60 ft. is being added to the handsome hotel at the head of the harbour of Glengariff. Chatting with Mr. Duke recently, we found him fully alive to the transformation that the automobile promises to effect in connection with travel in co. Kerry; and the day of the motor-car is not far distant in that part of the world.

LADY MAUDE BARRATT has just bought a 15-h.p. Coventry-Humber car.

THE L.C.C. has decided to arrange for a deputation to the Prime Minister to urge the establishment of a London traffic board.

MR. STRAKER and Mr. Burford have been appointed to represent the Society of Motor Traders on the Engineering Standards Committee in connection with the question of screw threads.

In the garage of Messrs. George and Jobling, at Newcastle-on-Tyne, is an electrically-driven tyre pump by which the labour of inflation is materially lessened, with consequent saving of time.

In his Stable Handbook Mr. T. F. Dale is caustic on the subject of the motor-car invasion, and ends by accepting it philosophically as a not entirely useless scourge if in the end it teaches people how to drive horses more carefully on the high roads.

THE next examination for the Club's driving and mechanical proficiency certificates will be held at 119, Piccadilly, W., on August 14th, the examination arranged for August 7th having been postponed owing to the proximity of Bank holiday.

THE Glentworth garage and works have been established in Lower Glentworth Street, Limerick, under the management of Mr. J. T. Dilworth. The garage is open night and day, and all classes of repairs can be dealt with, as well as tyre work, vulcanising, accumulator charging, &c.

THE programme of the City and Guilds of London Institute for the session 1907-8 has just been published by Mr. John Murray. It contains a syllabus of the examination in motor-car engineering to be held in April next, and advises that the course of instruction should occupy at least two years.

MR. M. DAVIES, of the Shrewsbury Motor Garage, has just finished a tour of nearly 1,000 miles on a 16-20-h.p. Argyll car. The way was by the coast roads from Bristol, down and round as far as Bournemouth, when he struck inland again through the New Forest to Winchester and Oxford. The car made the ascent from Porlock in fine fettle, and was dexterously handled in making the precipitous drop into the town of Lynmouth.

Two men who have been guilty of fraud on motor firms have just been sentenced to penal servitude at the New Bailey, London. The plan adopted by them was for one of the two to ring up a firm saying that they were the representatives of one of the Embassies in London and that their car had broken down. Calling later, he would endeavour, with the help of his confederates, to borrow money from the firm with whom he was in communication, sometimes with success. The case may be a useful warning to others in the trade.

MR. CHAS. SANGSTER, of the Ariel Motor Company, Ltd., has written to Mr. E. De Rodakowski, of the Brooklands Automobile Racing Club, that he cannot see his way to enter for any future races unless the use of oxygen is barred. He considers that the use of oxygen should be forbidden, because its use is distinctly a species of "faking," and it is extremely unlikely to be so developed as to become a commercial article; not only so, but it is highly dangerous, and when used without accident and with the greatest care and experience it burns up the valves, overheats the engine, and causes other minor troubles.

THE first instalment has been knocked off the additional 5,000 miles trial the London and Parisian Motor Company decided to submit the six-cylinder Hotchkiss to, and, as usual, the 899 miles have been traversed without involuntary stoppage. This brings the total mileage in Great Britain and Ireland to 11,002, and the grand total, including France, to 17,252. The following is a summary of last week's runs:—July 15th, London to Newark, 181 miles; July 16th, Newark to Nottingham, 135 miles; July 17th, Nottingham to Leicester, 169 miles; July 18th, Leicester, Coventry, Uttoxeter, Derby, Leicester, 154 miles; July 19th, Leicester, Grantham, Wisbech, Peterborough, Leicester, 157; July 20th, Leicester to Cromer, 169.

MOTORISTS will regret to learn that Captain H. H. P. Deasy has been ordered by his doctor to take a sea voyage and a long rest.

THE St. George's Motor and Engineering Company, Queen Street, Leicester, have made extensive alterations and additions to their works, and have added a garage with accommodation for twenty cars.

MISS RATOLIFFE, who drove a 10-12-h.p. Humber doctor's car in the Birdlip hill-climb, has been awarded one of the special silver medals for the amateur doing the best performance in its class. Previous to the competition Miss Ratcliffe had only been driving a car for about six weeks.

A MOTOR-CAR belonging to Mr. Stonard, of Leytonstone, was standing outside a garage at Lewes one day last week, when some boys tampered with the machine, and it started running down the steep hill in Station Street. The car knocked down a man named Sinnock, and eventually dashed into a wall.

THE Automobile Club of Southern California is busy erecting official signs throughout Southern California, to guide motorists not only to the proper roads and directions, but to repair shops, hotels, and supply stations where they may expect good treatment. Similar work in the northern and central parts of the State is also being done by the Automobile Club of Cali-

fornia, which has adopted the same set of emblematic road signs, and will also appoint official repair shops, hotels, and petrol stores, the only difference in the signs being the change of the club name in the lower corner. The signs themselves, as the accompanying illustrations show, are rather out of the common, the symbols chosen being very easy of ready interpretation.

AT Saturday's meeting of the Street Noise Abatement Committee it was stated that the motor-bus and traction-engine traffic had in the course of two years depreciated the value of house property in London to the extent of fully £6,000,000. It would be interesting to know on what basis this calculation is made.

THE Secretary for Scotland has now issued his decision with regard to the speed limit inquiry at Hawick, and the ten mile limit has been imposed on the busy portions of the main routes through the town, the portions of those between the centre of the town and the burgh boundary, which were also included in the application, having been exempted from the order. Mr. William Oliver, S.S.C., Hawick, conducted the inquiry on behalf of the Scottish Automobile Club.

ON Thursday, the 25th inst., the members of the Imperial Industries Club honoured Argyll Motors, Ltd., by paying a visit to their works at Alexandria, N.B. Special arrangements were made for a methodical view of the various departments, and lunch was provided by the company. The object of the club is the promotion of social and business relationships between representative commercial and professional industries, no two industries in the club being of the same or of a conflicting class.

MR. ROCCO GATTI has lately acquired a 40-h.p. Itala car from Itala Automobiles, Ltd.

In the Upper Gray Street, Edinburgh, Mr. H. L. Swears has opened a garage with accommodation for a score of motor-cars and plenty of accessories.

THE Wicklow County Council is being asked by the Bray Urban Council to put in force in their area the same regulations concerning the speed of motor-cars that prevail in the city of Dublin.

ACCORDING to Col. Roy Lewis one effect of the displacement of horse traction by mechanical vehicles, especially in London, has been the transfer of a large number of horses into rural districts, where an increase of glanders has been noticed.

WE illustrate herewith a new continuous to continuous current transformer which has just been introduced by the Crypto Electrical Company, of 155 and 157, Bermondsey Street, London, S.E., for use in connection with the charging of ignition and car-lighting accumulators. The machine, which should be of interest to all garage owners, can be wound on the primary side for any voltage up to 250 volts, and has an output on the secondary side of 15 volts 7 amps. The firm have for years been manufacturing a transformer similar to the above, but the primary has been wound for alternating current; and having supplied hundreds of these machines they have been encouraged to put on the market a machine to reduce the voltage of continuous current mains in the most efficient way possible for the purpose of charging motor-car ignition and lighting cells. We

frequently meet with garage owners who regard accumulator-charging in the same light as selling petrol—viz., a necessary evil, owing to the price being so cut. The cost of charging six accumulators, at a charging rate of 3.5 amps., by means of the transformer comes out at 4d. for an eight-hour charge, whereas the same accumulators would cost more than 1s. 3d. when charged through lamps. The above calculation does not, however, represent the full saving owing to the current used by the transformer being charged up at the power rate, which is usually 2d. per unit, whereas the lamp rate is never less than 4d. per unit, and often as high as 8d. This would, of course, completely alter the above figures, leaving the cost of running the transformer as before, but increasing the cost of charging through lamps, the rate of 4d. per unit being equal to 2s. 6d. per eight hours' run.

POLYSOL is the distinctive name of a good type of liquid metal polish brought out by Messrs. Henkel and Co., of Moorgate Station Chambers, London, E.C. It will give a durable gloss to the metal parts of motor-cars, and is well recommended by its many motoring users.

IN connection with the recent South Harting hill climb, where the Yellow trophy was won by the White steam car, and the fastest time made by a 60-h.p. six-cylinder car, it is worthy of note that the 35-h.p. four-cylinder Ariel, driven by Mr. A. Harrison, was credited with the second fastest time, being beaten by only two-fifths of a second. This performance confirms the splendid impression of the Ariel's hill-climbing powers demonstrated in the Scottish Trial.

A BEESTON-HUMBER car has been supplied to the Belfast Water Works Commissioners.

A COMPANY has lately been formed in Tokio, Japan, to introduce a service of motor-buses in that city and district.

ON Tuesday Lieutenant Shackleton's Antarctic expedition will start from the East India Dock, London. A motor-car is comprised in the equipment.

THE Index to Vol. VIII. of the *M.C.J.* will be supplied to readers who file their copies on receipt of two penny stamps—or it can be ordered through newsagents.

IN order to meet the requirements of their clients, many of whom are this year touring in Europe on their cars, one large American motor-car firm has established a depot in Paris where a stock of spare parts for their particular vehicles will be kept on hand.

THE road from London to the Brooklands track on Saturday last fairly bristled with police traps. We journeyed down on a 25-h.p. Straker-Squire car kindly placed at our disposal by Mr. W. T. Lord, and were fortunate in escaping the attentions of the police.

THE Daimler Motor Company have intimated their willingness to erect danger boards, at their own expense, in places where they are required. This is in view of the fact that bad accidents so frequently occur owing to insufficient warning being given to travellers.

THE Falcon Motor Works at Guildford have lately been extended, so that the proprietor, Mr. E. A. Humphries, has now accommodation for fifty cars and ample room for the large stock of spare parts and accessories which he keeps for the convenience of motorists passing that way.

THE Caravan Club of Great Britain has been formed to bring together those interested in van life as a pastime, to arrange camping grounds and generally to further and protect the interest of amateur caravanists. Mr. J. H. Stone, 72, Stamford Brook Road, London, W., is the hon. sec. of the new organisation.

THE Executive Council of the Social Democratic Federation is instructing its members throughout the country to organise meetings in places where motorists are convicted, urging that imprisonment without the option of a fine should be made compulsory in the event of the third conviction for furious driving.

PRINCE BORGHESI, who is driving an Itala car in the record run from Pekin to Paris, reached Omsk, Siberia, on Sunday, the 14th inst., having completed about a third of the long journey. Some repairs to the vehicle necessitated a stop of three or four days in Omsk, but the Prince expects to reach St. Petersburg by the end of this week. The last news of him was from Perm.

THE Mechanical Branch of the American Licensed Association of Automobile Manufacturers has adopted the horse-power rating formula by the Royal Automobile Club, viz., $\frac{D^2 \times N}{2.5}$

in which formula D represents the diameter or bore of the cylinder expressed in inches, N is the number of cylinders, and the 2.5 is a constant determined by computing the average obtained from the known horse-power of many four-cylinder motors.

MR. FRANK GOULD, motor engineer, of 35, Broadway, Kettering, has sent us a sample of a patent Tyre Repairer he has lately introduced. It consists of a strip of chrome leather mounted on tyre canvas, the latter being provided with snap-on buttons, similar to those used on gloves. The Repairer is intended for use in connection with outer covers in which a weak place has developed or in which a burst has taken place. By buttoning it round the inner tube at the place where the cover has been damaged, and, after insertion, re-inflating the tyre, the strip of leather affords a protection to the tube, and also a means of getting to one's destination when otherwise, in the absence of a spare cover, considerable delay would ensue. The Repairers take up but a very small space, and we can strongly recommend motorists to carry one or more of them, as the condition of an outer cover need then cause no anxiety; in fact, Mr. Gould informs us that a tyre with a burst 4 in. long has been run over 100 miles without trouble owing to the presence of one of his protecting strips.

CONTINENTAL NOTES.

Motor Racing in Roumania.

The Automobile Club of Roumania is organising a speed contest for the end of September, the exact date not yet being fixed. The contest will be over a 120-kilometre course, which takes in Targoviste, Galsti and Tartasesti, this having to be covered twice to give a total distance of 150 miles. The competitors will be divided into three classes—(1) cars up to 18-h.p.; (2) cars from 18-h.p. to 45-h.p.; and (3) cars over 45-h.p.

A Royal Motor-Car Track in Germany.

The German Emperor is having two cement tracks, exclusively for motor-cars, constructed on his estate of Schorfheide. The total length of the tracks is twenty-three miles, and the breadth thirty-six feet.

The Circuit des Ardennes.

The first of the Circuit des Ardennes contests—that under the German Club rules—was held on Thursday, the 25th inst., but the results are not available at the time of going to press. Twenty-six entries were received for the event, viz., four Pipe

The Ostend Speed Trials.

A series of five-kilometre speed trials from a standing start were held at Ostend on Monday of last week; the cars had to make two runs, one in each direction, the classification being in accordance with the best times set up for the 10 kilometres. In the racing car class five vehicles competed, two Darracqs, two Mercedes and an Itala, the winner being Rigal (Darracq) in 5 min. 6½ sec. Tuesday, the 16th inst., was devoted to flying kilometre and standing mile contests, the cars being timed in each direction, and the total of the two runs only announced. Rigal repeated his victory, doing the two flying kilometres in 50½ sec. In the two standing miles, however, he was beaten by Baron de Caters, who drove his Mercedes, in 1 min. 43½ sec.

A Combination Speed and Hill Climbing Competition.

On Thursday last week the Automobile Club du Nord de la France held a combination event in the neighbourhood of Boulogne for the cars competing in the Belgian Criterium. The programme comprised a 3 kilometre run on the level, a mile hill climb (average 1 in 10), and a 300 metres hill climb (1 in 14), all from a standing start. The times were added together to give the winners, who were as follows:—Single-cylinder cars up to 130 mm. bore, Cissac (Alcyon), 7 min. 6 sec. Four-cylinder

The Winning Team of Talbot Cars in the Irish Trials.

Reading from left to right they represent:—Lord Ingestre's 15-h.p. Talbot, which was second in Class E, open section, and made a non-stop run throughout. Mr. W. Sexton's 20-h.p. Talbot, which made a non-stop run throughout and won Class 2 in the amateur section, and was awarded the 100-guinea Dunlop Cup and a gold medal. The centre car is Mr. Thompson's 20-h.p. Talbot, which, unfortunately, just missed a non-stop run throughout owing to magneto troubles losing him nine minutes. The next is Lord Shrewsbury's 20-h.p. Talbot, which made a non-stop run throughout, and was second in its class (F) open section. The remaining car is Mr. S. T. Robinson's 15-h.p. Talbot, which also made a non-stop run throughout, and was finally declared the winner of the Trials, being awarded the 200-guinea Dunlop Cup and a gold medal for being the winner in its Class (E), open section. It will be noticed that all the cars are standard touring models in every respect.

cars, a Gobron, three Benz, three Adler, three Gaggenau, four Minerva, two Aries, three Imperia, a Darracq, a Mercedes, and a Metallurgique. For the Coupe de Liedekerke, to be held on the 26th inst., there are nine competitors—three each Metallurgique, Vivinus, and Minerva. The third race, under Belgian Club rules, which impose no restriction of any kind, is to be held to-day (Saturday). There are thirteen contestants—three Lorraine-Dietrichs, two Mercedes, a Belgian Rochet-Schneider, four Bayard-Clements, a Darracq (which is to be driven by Mr. Huntley Walker), and the two Weigel racers, which will again be entrusted to Messrs. Laxen and Pryce-Harrison, who drove the vehicles in the Grand Prix.

The Prince Henry of Prussia Touring Trophy.

Prince Henry of Prussia has notified the German Imperial Automobile Club of his intention to offer a trophy for an international touring competition, which is to be competed for in three consecutive years. It is proposed that the trial shall consist of seven daily runs, a speed trial on the level, and a hill-climb. It is to start from Berlin and end at Frankfort-am-Main, the route including Dantzig, Stettin, Kiel, Hamburg, and Trier.

cars up to 85 mm. bore, Ville (Saventhem), 6 min. 54 sec.; ditto up to 100 mm., De l'Épine (Darracq), 5 min. 49 sec.; ditto, up to 100 mm., Servais (Germain), 4 min. 47 sec.; ditto up to 120 mm., Wery (Nagant), 4 min. 8 sec.; ditto up to 130 mm., Grisard (Belgian Rochet-Schneider), 4 min. 5 sec.; ditto up to 145 mm., Gasté (Radia), 4 min. 27 sec.; ditto over 145 mm., Franchomme (Peugeot), 4 min. 35 sec., and six-cylinder cars, Stekke (Minerva), 4 min. 48 sec.

Miscellaneous Items.

A return just issued shows that eighty-three motor-cars were last year imported into Roumania, the majority being of French construction.—The annual hill-climbing competitions on Mont Ventoux are to be held on the 14th and 15th September next.—A new self-starting arrangement for petrol motors has lately been devised by M. Brasier, of the Brasier Company.—Two Westinghouse cars have been entered for the Criterium de France and the Coupe de la Presse contest, bringing the total number of entries up to forty-four.—It is announced that the A.C.F. made a profit of £2,800 out of the Grand Prix race. The money is to be devoted towards the cost of organising the event next year.

27-33, Charing Cross Road, W.C.]

SPEED COMPETITIONS. HILL CLIMBING, TRIALS AND THE PUBLIC.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—The letter from "Brightonian" in the *M.C.J.* of the 29th ult. in regard to motor-car competitions is most opportune. There is no question that last year a great many hill-climbing successes were scored by cars with chain drive that made a practice of practically living on the hill before a hill-climbing competition, and changing their sprockets until they got the exact one to suit. The class of competition that puts this kind of competitor out of court was the flexibility competition inaugurated by the Crystal Palace Automobile Club, where the cars not only had to climb steep hills but also run fast on the level at Bexhill. If every hill-climbing competition included a run on the flat and the whole of the work done on the top speed of the car one would soon see the best cars always winning, and not simply vehicles with big engines which are only useful to win hill-climbing competitions.

I have always made a great point of entering the same type of car

The Aries car which will take part in the Circuit des Ardennes Race. The vehicle is fitted with a high speed engine (2,300 revolutions per minute), the bore and stroke of the four cylinders being 160 and 98 mm.

in hill climbs, appearance competitions, flexibility competitions, and track races, so that people may see that the same car can score equally well in every type of competition.—Yours truly,

S. F. EDGE.

CONTESTS FOR 1908.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice a 2,000 mile reliability trial is likely to be arranged for next year. I venture to ask, through the medium of your columns, Is it not possible for the R.A.C. to hold an open speed contest for which Continental firms would consider it worth their while to enter cars direct from their works and driven by their own expert drivers? I am sure the Scottish Trials give us all we require in the way of reliability trials where speed is not taken into consideration except in the hill climbs. I think most people will agree with me that more proof is required of the reliability of British cars under more severe conditions. Most people are quite ready to acknowledge that cars made by our leading manufacturers are capable of being reliable at about twenty-five miles per hour over ordinary roads, for this has been proved time after time, but what proof have we that these same manufacturers are capable of building cars which can maintain a speed of about sixty miles per hour over ordinary give-and-take roads for three hundred miles or more? We have proof that the Fiat, De Dietrich, Renault, Brasier, and other Continental cars are capable of withstanding such a strain, and, as is only natural, the credit of the racing car reflects on its touring brother. If British manufacturers would prove themselves able to build cars which are reliable under these severe conditions, even foreigners would give the makers credit for being able to produce a car which would be

reliable at a less rate of speed, because the greater the speed the greater the test of reliability.

We have been unlucky in most of the big races in which our cars have been entered, I admit, but surely we are not going to declare ourselves beaten and stand aloof. The English representatives in the last great race were in no way disgraced, and they are to be congratulated on their entry. Their inability to finish was in no way due to the failure of the cars or the fault of the drivers, but the failure of British-made detachable rims, which would perhaps have held in an ordinary reliability trial, but were found perfectly useless when subject to a much greater strain. Could not a place be found in the British Isles where a speed contest for high-powered cars could be held without much inconvenience?

In any case I believe that if only British manufacturers would show, by entering for the Grand Prix, Circuit des Ardennes, &c., that they are not afraid to compete against the best Continental houses, under the most severe conditions, the export of British cars to foreign countries would increase, and at the same time we would capture more home and Colonial trade than we are doing at the present time.—Yours truly,

A. H. M. C.

SOME TECHNICAL OBSERVATIONS OF BROOKLANDS RACING.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—The racing track at Brooklands is already affording observant competitors many points for reflection. Mr. Edge is credited, as a result of his record run, with the statement that pre-ignition is likely to take place in any engine run for twenty-four hours at practically its maximum rate, owing to over-heating troubles due to insufficient cooling surface, while Duray is said to have suffered from the same trouble on Saturday last.

In other quarters, too, I hear that lubrication difficulties have been experienced by some of the drivers, and that the duties of many of the mechanics on Saturday last were confined to pumping a steady stream of oil into the base chamber. In connection with this question of motor lubrication it would be interesting to know whether the position assumed by the car on the steep portions of the banking affects the efficiency of the lubrication in any way.—Yours truly,

COBHAMITE.

THE USE OF OXYGEN IN RACES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have read Mr. S. F. Edge's condemnation of the use of oxygen in events open to petrol engines. In an article by another writer it is suggested that Napier cars which raced at Brooklands were fitted with oxygen cylinders. Mr. Edge does not say in his letter that Napier cars were not so fitted at Brooklands. Will he be good enough either to deny the challenge that has been made, or, if oxygen was used on Napier cars, admit it; and if the article be true, might I suggest that he puts the trophies and stakes up again and have them re-competed for without the utilisation of such a "fake."—Yours truly,

D. M. WEIGEL.

A NEW RACING TROPHY.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As you are aware, a unanimous decision, which is momentous from the point of view of automobilists, has been arrived at by the conference of the automobile clubs of the world at Ostend on the 14th inst. This decision, by unifying the basis of rating for international road races for a definite period, and by fixing the size of the largest engine for which such road races will be held, secures for manufacturers a very great economy in the number of racing types they can be called on to build. In fact, for the largest races only one size of car will be required, viz., one having a 155 mm. bore per cylinder for four cylinders or the equivalent piston area, if any other number of cylinders be decided on. The minimum chassis weight to correspond to this is 1,100 kilogs. This result, coming after the year in which the Kaiser Preis, the Grand Prix, the Herkomer Race, and the Targa Florio are run under entirely divergent rating rules, will be appreciated by those who have faced the immense expense involved by these races, and the conference is certainly to be congratulated.

As the decision of the clubs was unanimous, it is scarcely likely that any road race inviting cars of a widely different specification to compete will receive support. It is to be noted, however, that this ruling does not affect track races or runs for the short records of one mile, one kilometre, one hour, &c. Now it seems to be a matter of great importance, and a matter which the existence of the Brooklands track brings into the field of practical politics, that the efforts which have been made year after year to build machines of the maximum possible speed and power should not be entirely relaxed. The past shows how much is to be learnt from attempts to reach the utmost extremes of engineering possibilities. In ten years we have seen to our own surprise that 12-h.p., 24-h.p., 30-h.p., and 40-h.p. machines, which were year by year called freaks or "machines fantastiques" when they appeared on the race-ground, have taught us how to make touring-cars of the greatest possible utility; indeed, we may say that incidentally the appearance of the

motor-bus engine, which has about 40-h.p., would have been delayed many years but for the races, which resulted in these freak engines being built and stringently tested.

Without pretending to say whether it will be the motor-boat, the big motor road tractor, the aerial motor, the railway explosion engine or military transport wagon that will benefit most from a race in which no limit is artificially placed on the power, I think it has been abundantly proved in the past that automobilism will benefit largely from deliberately offering an inducement to makers and inventors to show what can be done when physical science is confronted by physical difficulties only, and unhampered by arbitrary regulations. With this end in view I have offered to the Brooklands Club a trophy, to be called O'Gorman's (no limit) Trophy, to be competed for annually over not less than 100 miles. Whether or not this offer be accepted, I think the subject is worth ventilating.—Yours truly,

MERVYN O'GORMAN.

WEEKLY WINS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I wish to strongly protest against the advertisement of Messrs. S. F. Edge, Ltd., in which they state that for efficiency the 40-h.p. six-cylinder Napier beat a large number of cars at South Harting and Shelsley Walsh, including the Clement-Talbots. This is entirely misleading, and I append a copy of the results as published by

The Napier cars finished as follows:—6th, "marks on formula," 1'404; 29th, "marks on formula," 1'058—average, 1'231. Average in favour of Clement-Talbots, 2348. The 15-20-h.p. Clement-Talbot again beat the 40-h.p. six-cylinder Napier on actual time, on this occasion by 1 sec.

In the Members' Race, at the same meeting, Clement-Talbots were placed as follows:—1st, "marks on formula," 1'485; 26th, "marks on formula," 0'910—average, 1'1975. The latter is an obsolete type of car which has passed through several hands. The only Napier finished as follows:—16th, "marks on formula," 1'058. Advantage in favour of Clement-Talbots, 1395.

I do not think it necessary to comment on the above figures, they speak for themselves.—Yours truly,

T. H. WOOLLEN.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I was a spectator at the Shelsley Walsh hill climb, and noticed that in the open event the fastest time was made by an 80-h.p. Berliet, and in the closed event by a 35-h.p. Daimler. Under these circumstances I am quite at a loss to reconcile Mr. Edge's statement in his advertisement that he made fastest time at Shelsley Walsh in the club event. In view of the fact that modern fashion in advertising is to secure at least a moral victory in every event in which each maker's

Mr. Ernest Gould, of Exeter, on the 15-h.p. Coventry-Humber Car on which he recently completed a 24-hours' non-stop run.

the Royal Automobile Club and the Midland Automobile Club, so that your readers may judge for themselves as to the accuracy of Mr. Edge's statement.

At South Harting, Clement-Talbot cars finished as follows:—

2nd relative efficiency	...	72.25	Average 65.39.
3rd	"	71.60	
4th	"	69.50	
6th (bracketed)	"	68.75	
7th	"	56.8	
32nd	"	43.25	

The six-cylinder Napiers occupied the following positions:—

6th (bracketed) relative efficiency	...	68.75	Average 59.5
23rd	"	49.35	

The average relative efficiency in favour of the Clement-Talbot over the six-cylinder Napiers is 5.89 per car. The 15-20-h.p. Clement-Talbot beat the 40-h.p. six-cylinder Napier in actual speed, their respective times being 2'237 and 2'280 minutes.

At the Midland Hill Climb, Shelsley Walsh, the Clement-Talbot cars finished as follows:—

1st	...	" marks on formula "	...	1'675	Average 1'4658
2nd	...	(bracketed	"	1'485	
2nd	...	with another)	"	1'485	
5th	...	"	"	1'467	
15th	...	"	"	1'217	

car competes, it would be interesting to have Mr. Edge's explanation as to how he came to add this to the list of successes.—Yours truly,

F. M. GREEN.

ENGINE LUBRICATION.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—A noticeable change in the fittings of motor-cars is the banishment of the lubricating oil supply from the dashboard. At one period of automobile history it actually seemed to be held desirable to crowd as much apparatus on the dashboard as possible, but good taste appears to have moderated this tendency, and now some manufacturers are calling attention to the simplicity of their dashboard equipments. The carrying of the engine lubricator on the dashboard has always resulted in more or less "messiness." Oil is likely to be spilled during the filling process and is prone to escape around the pipe connections and the gauge glass, increasing the possibility of soiling the clothing when entering or leaving the car. The more general use of modern cars during cold weather has called attention to the necessity of keeping the oil supply artificially warmed under such conditions. As the necessity for positive driving means for lubricators has become more generally recognised it has been found desirable that the lubricator mechanism should be close to the motor. These considerations have had a tendency to bring about the removal of the lubricator itself from the dash and mounting it on some part of or near the engine, and whatever spilling of oil may result from

the filling or leakage of the lubricator reservoir under these conditions does no particular harm, and the lubricant remains fluid under the influence of the heat from the motor even in the coldest weather. The popularity of the system in which a pump draws a large volume of oil from a well or sump in the engine base, and returns it thereto after passing it through the engine bearings, has contributed to the passing of the dashboard mounted oil supply, as the lubricant in this system is naturally carried elsewhere. The removal of the lubricator from the reach of the motorist, of course, renders it impossible for him to make adjustments of the oil feed to the different supply points from the seat, but this will probably be found of really very slight disadvantage in practice.—Yours truly,

R. J. ASPINALL.

GOODWOOD RACES—A SPECIAL WARNING TO MOTORISTS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should esteem it a great favour if you would, through the medium of your columns, issue a special warning to all motorists who intend to visit Goodwood for the races, that not only all the roads leading to or in the neighbourhood of Goodwood, but also the main roads for

preferable, when re-charging is a difficulty, for instance, but their practical extinction for motor-car work shows that the accumulator has merits that far outweigh any advantages possessed by the dry cells. The voltage of a dry cell battery can, of course, be increased by adding more cells, so that it is not correct to state that a dry battery has six volts, it may have any voltage according to the number of cells. Another reason for failure in the case of dry batteries is the fact that the voltage falls when the discharge rate of the current is increased, so that a battery which will work well on a coil which takes one ampere will fail entirely on a coil taking three amperes, as the voltage will probably fall below four on account of the current being too much for the internal resistance of the battery. An accumulator will discharge at any rate up to five amperes without drop in voltage, as the coil is only taking current at intervals.]

FOUND, between Luton and Bedford, a tail lamp. Owner, on sending description to Dr. Smithson, Luton, can have same.

LOST.—Inner tube, Sunday morning, between Kingston and Ripley. —Apply, Warn King, Poole.

WANTED, a dog! Would the two gentlemen who left Skindle's garage, Maidenhead, between half-past one and two o'clock on Sunday, the 21st inst., on a 15-h.p. Darracq chassis painted red, with a test body on it, and who were followed by a wire-haired fox terrier, which

The Ostend Automobile Week.—A View at the Speed Trials.

several miles in every direction, will be specially trapped by the police. It behoves all motorists to be particularly careful or to give the place a wide berth, otherwise they may have to pay heavily for the pleasure of visiting the neighbourhood.—Yours truly,

M. F. MIEVILLE.

DRY BATTERY OR ACCUMULATOR.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I drive an Oldsmobile car with ordinary 4-volt accumulator. Would there be any reason against using a dry battery in place of the accumulator? I understand the dry battery usually gives off a 6-volt current. Would this damage the coil, or otherwise be unsuitable for my use? Thanking you in anticipation.—Yours truly,

CONSTANT.

[The proposed change of battery is the reverse of what is usually required, as users of dry batteries generally want to change them for accumulators. Though a dry battery gives six volts on open circuit, that is to say when no current is flowing, it does not give more than five volts in use, and this gradually falls to four volts. The dry battery has a very high internal resistance, the accumulator has none, and as a rule the latter is preferable. The voltage of the accumulator can be increased to six volts by adding another cell, and a good modern coil will not be damaged by the extra volts. In some cases dry batteries may be

they picked up on the further side of the bridge and drove off with, be good enough to return the dog to Mr. Duncan Campbell, 81, Shaftesbury Avenue, London, W.?

A DANGEROUS VILLAGE FOR MOTORISTS.—A correspondent writes:—"Motorists who travel into Leicestershire should take a special note of the several extremely abrupt and sharp turns which are to be found in the picturesque village of Evington, two miles from Leicester. After entering this village no less than three positively dangerous curves occur within a distance of 150 yards, and in spite of the high hedge which exists at each curve, and which makes it impossible for motorists to see or hear anything ahead, there are no danger or warning boards of any kind. Unless a driver is experienced he will find it very difficult to negotiate these curves, where many accidents have occurred from time to time."

A SPORTING EVENT AT BROOKLANDS.—Mr. S. F. Edge writes that he will be very pleased for his six-cylinder car to meet Mr. Jarrott on his car at Brooklands under the Byfleet Plate conditions, which are the conditions under which he and Mr. Newton ran a dead heat, oxygen barred preferably. Mr. Edge is prepared to run this match off at the earliest date the Brooklands people can arrange it, and he thinks a suitable stake would be for each to put down what they divided over the Byfleet Stake. Mr. Edge adds that it would be agreeable to him if it could be arranged for three races, the best two out of the three to define the winner.

RACING AT BROOKLANDS.

THE second race meeting on the Brooklands track at Weybridge took place on Saturday last in beautiful weather. The arrangements, although not yet perfect, were a considerable improvement on those which prevailed on the opening day, but whether it was due to the bad impression caused by the latter, or to counter-attractions, the public were conspicuous by their absence, the total number of spectators in the paddock and the various enclosures not exceeding a couple of thousand. More freedom was allowed to the members and those who patronised the £1 enclosure, and better preparations had been made by the caterers in the way of refreshments. The band of the Coldstream Guards had also been engaged. Much has still to be done, however, to render a visit to Brooklands attractive to the ordinary public, to whom the short contests are of vastly more interest than the long-drawn-out events. The long time which elapses between the various events is, moreover, very tiresome to those who are unable to stroll about the paddock in the interval. The starts of the different contests all took place a considerable distance from the enclosures, whence it was impossible, except with strong glasses, to see what was going on. If it could possibly be arranged, it would be decidedly more interesting, and help to fill up the long waits, if the starting could be effected within a short range of the spectators. No times were again issued—this being another point in which an improvement could be effected. Even if the actual time could not be made known, it would add to the general interest if the result-board gave some information as to the speed in miles per hour that had been attained by the different competitors. Professional betting men were again present, but, notwithstanding their noisy solicitations to "back your fancy," business was anything but brisk with them. Exploiters of the

Eight entries had been received for the Century Stakes of 100 sov., added to a sweepstakes of 10 sov. each for starters only; the entrant of the second car received 50 sov. of the stakes. The race was for cars propelled by means of internal combustion engines only, of a cylinder dimension under 145; and the distance 19.586 miles.

There were two non-starters, Mr. E. M. C. Instone's and Mr. G. S. Barwick's 55.8-h.p. Daimlers, leaving six cars—Napier, Darracq, Gobron-Brillie, Charron, Ariel-Simplex, and Lorraine-Dietrich—to take the field. Mr. A. Huntley Walker, on the 55.8-h.p. Darracq, got away first, with Mr. C. Sangster, 57.6-h.p. Ariel-Simplex, second, and Mr. F. Newton (49.9-h.p. Napier) third. In the second lap, however, the latter ran into first place, the race then resulting in a contest between Newton and Walker. Mr. C. Jarrott (52.9-h.p. Lorraine-Dietrich) had clutch troubles on the starting line and did not get away. Mr. H. Vincent, of Reading, who was driving the 51.8-h.p. Gobron, fell out in the fourth lap owing to a broken sparking plug, as also did Mr. Sangster on account of a broken valve spring. Result:—

Entrant.	Driver.	Car.
1. S. F. Edge ...	F. Newton ...	49.9-h.p. Napier.
2. A. H. Walker ...	A. H. Walker ...	55.8-h.p. Darracq,
3. J. B. Hissey ...	J. B. Hissey ...	48.6-h.p. Charron.

What might have proved a serious disaster occurred just after the two first cars had crossed the finishing line. In pulling up one went to the right and the other to the left to turn round. In trying to avoid the Napier Mr. Walker put the brakes of his Darracq on exceedingly hard, with the result that one of them snapped; the gear is also stated to have sprung into the reverse, with the result that the driver was unable to prevent the car running backwards down the sandy banking, in imminent peril of turning over and impaling Mr. Walker and his

Racing at Brooklands.—Mr. Tryon on the Six-Cylinder Napier leading in the Surrey Stakes.

three-card trick were, however, actively engaged in the half-crown enclosure in fleeing some of the more innocent visitors.

The first event of the day was the Manx Stakes of 200 sov., for cars which were entered for the 1907 Tourist Trophy Race. The contest was over a distance of 29.3 miles, for which only a gallon of spirit was served out by the Brooklands Club at the start. There were only three entries—Mr. C. Harman Wigan's 27.3-h.p. Vinot (R.A.C. rating), driven by Mr. N. Littlejohn; Mr. F. C. Baisley's 22.4-h.p. Gladiator, Mr. M. Ross Browne driver, and Mr. T. Thornycroft's 22.5-h.p. Thornycroft, owner up. The last-named was the only one to finish, the Vinot running out of petrol 1½ laps from finish, and the Gladiator retiring in the eighth round with a punctured float in the carburettor.

The second event—the Surrey Stakes of 50 sov., added to a sweepstakes of 5 sov. each—for cars propelled by means of internal combustion engines only, of a cylinder dimension 95 to under 105, distance 3.279 miles, brought out eleven competitors, including a Napier, a Junior, three Daimlers, an Isotta-Fraschini, a Lorraine-Dietrich, a Weigel, an Iris, a Darracq, and a Minerva. The event proved one of the most interesting of the day, the shortness of the race—only once round—not only putting the drivers on their mettle, but attracting the attention of the spectators much more than any of the longer contests. In fact, the general feeling of the public was that short races were by far the best. The Daimler team got away first, but the Napier soon got the lead and maintained it easily to the end. Result:—

No.	Entrant.	Driver.	Car.
1. ...	S. F. Edge ...	H. C. Tryon ...	38.4-h.p. Napier.
2. ...	E. Manville ...	G. Ison ...	41.9-h.p. Daimler.
3. ...	Capt. Howell ...	Capt. Howell ...	40-h.p. Iris.
4. ...	Percy Martin ...	J. Hodierne ...	41.9-h.p. Daimler.
5. ...	Charles Jarrott ...	C. Jarrott ...	41.9-h.p. Dietrich.

mechanician on the spiked iron railings at the bottom. Fortunately, however, the wheels sunk securely in the sand, which stayed the progress of the machine when it had fallen about four-fifths of the way down. Happily Mr. Walker and his man got off with nothing more than a scratch. The incident was, however, an exciting one, and indicates that some regulations ought to be made as to the direction the cars should take in pulling up.

Another short distance race—once round the track, 3.279 miles—which promised to be of an interesting nature, but which proved a disappointment, was the match of 60 sov. between Mr. F. Coleman's 30-h.p. White steam car and Mr. C. Sangster's 30-h.p. Ariel Simplex petrol car. Mr. Sangster got first away, and was first round the home banking. Mr. Coleman was, however, close up, and a tight finish was expected. As the event proved, however, there was no change of place, for the safety valve on the steam pipe from the generator to the engine—which had been screwed down on the White car to enable a higher pressure than normal to be employed—blew out when a lap had been completed, putting Mr. Coleman out of the running and leaving Mr. Sangster to finish alone.

The noise and smoke next indicated that the time for the race for the big cars had at last arrived. This was for the Weybridge Stakes of 50 sov. each, for cars propelled by means of internal combustion engines only, of a cylinder dimension under 220; distance 14.15 miles. Five vehicles faced the starter—Mr. D. Resta on Mr. F. R. Fry's 75.9-h.p. Mercedes, Mr. H. R. Pope on his 84.9-h.p. Itala, Mr. A. Huntley Walker (whose appearance after the incident in the Century Stakes resulted in his having an enthusiastic send off) on his 80-h.p. Darracq, Duray, the well-known French racing man, on Baron Turekheim's 80-h.p. Lorraine-Dietrich, and Mr. J. E. Hutton on his 75.9-h.p. Mercedes. Mr. Hutton was first away, with Duray and Resta in hot pursuit in the order named. Pope retired in the fourth round, when the order was

Hutton, Resta, Walker, and Duray, a position which was maintained till the end. Result:—

Entrant.	Driver.	Car.
1. J. E. Hutton ...	J. E. Hutton ...	75.9-h.p. Mercedes.
2. F. R. Fry ...	D. Resta ...	75.9-h.p. Mercedes.
3. A. H. Walker ...	A. H. Walker ...	80.4-h.p. Darracq.
4. Baron Turckheim ...	M. Duray ...	80.4-h.p. Dietrich.

The last event of the day was the Hollick Selling Plate of 200 sov., for cars propelled by means of internal combustion engines only, the winner to be sold by auction for 500 sov.; weight 2,600 lb. for cars of a cylinder dimension 75 or under, and 3,465 lb. in addition for every additional 0.1 of dimension; distance 8.715 miles. Out of ten entries nine competed, Mr. T. Sopwith being unable to get his Minerva going in the paddock. Mr. A. Huntley Walker (Darracq), led from the start and proved an easy winner. Result:—

Entrant.	Driver.	Car.
1. A. H. Walker ...	A. H. Walker ...	34-h.p. Darracq.
2. C. G. White ...	C. G. White ...	27.9-h.p. Minerva.
3. H. J. S. Moyses ...	B. Redwood ...	32.4-h.p. Thornycroft.

The other cars which ran, all of which finished, were Capt. W. E. D. Owen's 27.3-h.p. Aries (Mr. H. E. Hives driver); Messrs. Straker and Squire's 30-h.p. Straker-Squire (Mr. W. T. Lord); Mr. H. V. Hermon's 27.9-h.p. Minerva, Mr. A. Huntley Walker's 41.9-h.p. Darracq (the Marquis de Mouzilly St. Mars); Mr. S. Sanderson's 31.1-h.p. Brasier and Mr. D. Jameson's 41.9-h.p. Isotta-Fraschini (Mr. N. Macklin). The end of this race furnished the second piece of excitement of the day, Mr. Hives' Aries bursting into flames after it had crossed the finishing line. As the other competitors came up they assisted in running to the side of the track for handfuls of sand, and eventually the fire was extinguished without serious damage to the car.

200 sov. for cars propelled by means of internal combustion engines only, the winner to be sold by auction. Weight 1,800 lbs., for cars of a cylinder dimension 40, and 3,465 lbs. allowed or added for every 0.1 difference of dimension, distance 0.5 miles; the Heath Stakes of 350 sov. for cars propelled by means of internal combustion engines only, of a cylinder dimension under 200, distance 2.155 miles.

THE MOTOR UNION MEET AT SOUTHPORT.

THE eighth provincial meet of the Motor Union was held at Southport on Saturday last. It was arranged by the Liverpool Automobile Club, and the prospect of brilliant weather attracted an exceptionally large number of cars—nearly 200, a considerable increase on the recent meet at Lincoln. The proceedings opened with a general committee meeting at the Town Hall in the morning, when, in reply to the Mayor's speech of welcome, Mr. C. D. Rose, M.P., the chairman of the Union, said he was sure that the prejudices of the people in the South against motorists were not shared by people in the North of England. The committee appointed to consider the question of fuel then presented its report—a *resume* of which is given elsewhere in the present issue—the recommendations being adopted. The Highway Traction Committee were authorised to place a limited number of trustworthy agents on the roads to act with the police in warning drivers of dangerous places; and advising motorists where special caution is necessary in driving through villages. It was resolved to support the efforts of the North-East Lancashire Club to secure the removal of the toll-bar on Freckleton Marsh, near Preston. It was reported that the Automobile Clubs of Ceylon and Bengal had affiliated. The Western District Motor Club and Durham District Motor Cycle Club were admitted to

The Brooklands Race Meeting.—The Scene in the Paddock.

The proceedings were brought to a close by a sale by auction—the first of the kind—of the winning car in the Hollick Selling Plate, in accordance with the rules. Mr. John Waterer, of Chertsey, was the auctioneer, but, despite his blandishments and the low reserve price fixed—£500—no offer was forthcoming for Mr. A. Huntley Walker's successful 34-h.p. Darracq.

The programme for the meeting on Saturday, August 3rd, comprises the White Steam Car Plate of 150 sov. for White Steam cars of the 1907 30-h.p. type, distance 5.9 miles; the Levassor Memorial Plate of 500 sov. for cars propelled by means of internal combustion engines only, of a cylinder dimension 135 to under 160, distance 10.3 miles; the International Plate of 500 sov. for cars propelled by means of internal combustion engines only, of a cylinder dimension under 135; to be driven by subjects of the country of origin of the vehicle, with that country's flag as distinguishing mark, distance 8.7 miles; and the Walton Stakes of 200 sov. for motor-cars of a price not exceeding £850, distance 3.2 miles; the Tappet Stakes of 100 sov. each, for cars propelled by means of internal combustion engines only, of a cylinder dimension under 6.41, distance 5.9 miles, and the Brooklands Plate of 600 sov., for motor-cars propelled by means of internal combustion engines only, of a cylinder dimension under 215, distance 3.2 miles.

A meeting is also to be held on Monday, August 5th, when the programme will comprise the Daimler Plate of 150 sov. for motor-cars manufactured by the Daimler Company, with four-cylinder engines of a bore of 134 mm. and a stroke of 150 mm., distance 8.7 miles; the Belgian Plate of 350 sov., for motor-cars which comply with the regulations of the 1907 Ardennes Circuit Race (Kaiser Prize regulations), distance 11.4 miles; the Prix de la France of 800 sov. for motor-cars which comply with the regulations of the 1907 A.C.F. Grand Prix race distance 15.7 miles; the Outlands Selling Plate of

membership. The membership of the Union is now 17,900, representing 99 clubs.

In the afternoon the members of the Union were entertained at a garden party by the Earl of Derby. Nearly 200 cars put in an appearance, and the motorists spent an instructive time in examining each other's vehicles. In the absence of the Earl, the motorists were received by the Hon. Arthur Stanley, M.P., and the grounds and hall were visited, the afternoon being thoroughly enjoyed.

The Hon. Arthur Stanley, M.P., presided at the banquet at the Prince of Wales Hotel, Southport, in the evening. Dr. Hele-Shaw, in proposing "The health of the chairman," said that the tact of Mr. Stanley was largely responsible for smoothing over any differences that may have existed between the Motor Union and Automobile Club, and Mr. Stanley, in reply, remarked, amid laughter, that whoever put his finger into the Motor Union's mouth would be bitten by the Automobile Club.

Mr. H. A. Watson proposed the toast of "The Mayor of Southport and the Corporation." The Mayor, in reply, assured the visitors that the considerate motorist would always be welcomed, and he hoped that the Union would again visit Southport. Mr. G. T. Langridge proposed "The Liverpool Club," to which, in the absence of Mr. Beckett Hill, Mr. A. Rathbone responded.

ONE of the earliest 1908 announcements from the large American motor factories is that of the Ford Motor Company, of Detroit, in which it is stated that there will be no change in the 1907 six-cylinder model for the season of 1908.

ARIEL MOTORS, LTD., have been honoured with an order from the Right Honourable Lord Digby for a 30-40-h.p. car with Carlton limousine landaulet body.

CLUBS AND ASSOCIATIONS

AUTOMOBILE ASSOCIATION.

THE last executive committee meeting of the Automobile Association was marked by the pleasant duty of electing nearly 400 new members, among whom were the Duke of Westminster, the Duke of Richmond and Gordon, the Earl of Loudoun, Baron Adolphus Ott, Lord Boston, Lord Wolverton, Sir George E. Armstrong, Lady Paget, the Lady O'Hagan, the Hon. D. Scott, the Hon. A. Harbord, the Hon. F. Meynell, Lady Clark, and Lady de Bathe.

Quite recently several A.A. patrols have been put on point duty at the entrance to long narrow villages for the purpose of regulating and restraining the speed of motor-cars. This work has aroused keen approval from all sides, especially from local authorities.

THE INSTITUTION OF AUTOMOBILE ENGINEERS. COUNCIL MEETING.

A MEETING of the council of the institution was held on the 11th inst., Colonel R. E. Crompton being in the chair. The question of the vacancy on the council caused by the decease of Mr. Alex Govan was considered, and it was resolved that Mr. L. A. Legros should be invited to accept a seat on the council.

It was reported that the following papers had been promised and accepted for next session:—

1907.			
October	Colonel Crompton	...	Presidential Address.
November	Dr. H. S. Hele-Shaw	...	The Fuel Question.
December	Mr. Dugald Clerk	...	The Principles of Carburetting as determined by Exhaust Gas Analysis.

1908.			
January	Mr. J. S. Critchley	...	Subject not announced.
February	Mr. F. W. Lanchester	...	Some Problems peculiar to the Design of the Automobile.

A letter was read from the Engineering Standards Committee inviting the council of the institution to nominate two of its members to meet the committee in conference to take evidence as to whether the findings of the committee are likely to prove acceptable to the automobile industry, and it was resolved that Messrs. F. W. Lanchester and C. R. Garrard should be nominated as the representatives of the Institution of Automobile Engineers. A letter was read from the secretary of the Institute of British Carriage Manufacturers inviting one of the members of the Institution of Automobile Engineers to read a paper on "The Motor from the Engineers' Point of View" at a conference to be held at Chester in September next.

THE COMMERCIAL MOTOR USERS' ASSOCIATION.

A MEETING of the Executive Committee of the Association was held on the 10th inst., Colonel R. E. Crompton being in the chair. The recommendation of the sub-committee, that no further meet be organised this year, in order to avoid clashing with the R.A.C. trials, was approved. It was reported that the appeal of the Little Malvern Granite Company against the decision of justices that one of their light tractors did not satisfy the conditions of a light locomotive, as defined in the Act of 1896, had been won, the Court of Appeal finding that the justices were wrong in holding that the tractor did not consume its own smoke as far as practicable, and that therefore the conviction must be quashed.

A letter was read from the Engineering Standards Committee inviting the association to nominate two of its members to meet the Committee in Conference to take evidence as to whether the findings of the committee are likely to prove acceptable to the automobile industry, and it was resolved that Messrs. F. C. A. Coventry and E. Godfrey Brewer be nominated to represent the Commercial Motor Users' Association. Mr. Howard Humphries reported as to the present position of the matter of the bridges in Cambridgeshire, and stated that notice had been served on the Great Eastern Railway for them to repair the bridges. The railway had approached the County Surveyor of Cambridge with a view to discussing the extent of the repairs to be made.

LINCOLNSHIRE MOTOR-CYCLE.

UNDER the management of the officials of the Grimsby Centre, a hill-climb for members of the Lincolnshire Motor-Cycle Club was held at Lamcroft Hill, Ludborough, on Saturday. The meeting was excellently managed and very enjoyable in every way. Results.—Single-cylinder machines: Plastow, 2½-h.p. Ariel, 68 3-5 sec., 15.5; White, 3-h.p. Wellington, 56 3-5 sec., 14.51; Shaw, 3-h.p. Minerva, 53 4-5 sec., 14.48; Wright, 3½-h.p. N.S.U., 63 1-5 sec., 14.25; Pearson, 3-h.p. Wellington, 64 4-5 sec., 13.35. Twin-cylinder machines: Proudman, 4-h.p. Minerva, 57 2-5 sec., 12.4; Smith, 5-h.p. Vindoc, 52 sec., 11.22; Ensworth, 5-h.p.

Pengeot, 50 2-5 sec.; Haagsen, 5-h.p. Vindoc, 65 sec., 9.7; Willson, 5-h.p. Brown, 64 4-5 sec., 8.7. Plastow won the open class, Shaw, who made the fastest time single-cylinder class, being second.

NORTH-EAST LANCASHIRE.

GLORIOUS weather favoured the North-East Lancashire Automobile Club for their hill-climb competition up Rivington Pike, near Horwich, on Friday, last week. The competition was an open one, held under the rules of the R.A.C., and attracted a big entry from many parts of the country. Forty-two cars competed, they being divided into six classes—for cars whose cylinder diameter in inches, squared and multiplied by the number of cylinders, was under 35, 50, 75, 100, and 150 and over 150 respectively. The course was one kilometre in length, and for more than two-thirds of this distance the gradients were 1 in 10.1 or 1 in 9.9, the last 27 yds. being 1 in 9.8. Two gold medals were given in each class, one to the entrant of the car showing the best performance under the formula of the R.A.C. and the other to the entrant of the car making the fastest time. In the classes where there were six starters two silver medals were also given, one to the second under the R.A.C. formula and one to the car making the second fastest time. Each car had two runs, the fastest counting.

The winners were as follows:—

Class A (fastest time and formula): Mr. C. Jarrott, 9-h.p. Sizaire (driver R. O. Clark); time, 2 min. 24 3-5 sec.

The North-East Lancashire Club's Hill Climb at Rivington Pike.—The Cars lined up near the starting point.

Class B (fastest time and first formula): Earl of Shrewsbury and Talbot, 12-16-h.p. Clement-Talbot (driver, G. Day); 1 min. 41 1-5 sec. Second formula, W. J. Griffiths, 12-14-h.p. Singer (driver, W. Perks): 2 min. 40 4-5 sec. Second fastest time, St. George's Motor Car Company, 10-12-h.p. New Eagle (driver, W. Ashford); 2 min. 23 3-5 sec.

Class C (fastest time and second formula): Viscount Ingestre, 15-23-h.p. Clement-Talbot (driver, F. Blake); 1 min. 14 3-5 sec. First formula, Mr. T. H. Woollen 15-h.p. Clement-Talbot (driver, J. Hedge): 1 min. 50 4-5 sec. Second fastest time, Mr. A. E. Crowdy, 18-h.p. Siddeley; 1 min. 38 sec.

Class D (fastest and first formula): Mr. W. D. Coddington, 30-40-h.p. Daimler, 1 min. 16 4-5 sec. Second fastest time, Colonel Whyllie, 24-40-h.p. Berliet (driver, W. Watson); 1 min. 22 2-5 sec. Second formula, Mr. E. N. Thornewill, 30-h.p. Daimler (driver, Gordon Chapman); 1 min. 29 4-5 sec.

Class E (fastest time): Mr. Fred Birtwistle, 60-h.p. Mercedes, 1 min. 6 3-5 sec. Second fastest time and first formula, Mr. Fred Birtwistle, 35-45-h.p. Daimler (driver, O. E. Bush); 1 min. 9 4-5 sec. Second formula, Mr. E. L. F. Curties, 35-h.p. La Buire (driver, E. L. F. Curties); 1 min. 19 3-5 sec.

Class F (fastest time and formula): Mr. S. F. Elge, 60-h.p. Napier (driver, Cecil Edge); 52 2-5 sec.

Special prizes were as follows:—Silver cup to the entrant showing the best results on the formula: The Earl of Shrewsbury and Talbot, 12-16-h.p. Clement-Talbot. Silver cup to the entrant of the car showing the best result under the formula, confined to members: Mrs. A. E. Riley, 20-h.p. Belsize, 1 min. 39 sec. Silver cup for the entrant of the car making the fastest time: Mr. S. F. Edge. Mr. W. Birtwistle (the president of the Club), acted as judge, Mr. F. Straight as timekeeper and starter. Mr. A. Birtwistle, of Blackburn, was the hon. sec. of the meeting, which went off without a single hitch.

THE CRYSTAL PALACE A.C.

THE Crystal Palace Automobile Club have just had presented to them for competition at their Bexhill meeting, on August Bank Holiday, a silver cup, from the Mayor of Bexhill, Alderman Glover, to be called the Mayor's cup, and also a 30 gs. cup from Messrs. Spyker, of Amsterdam. Both cups are to be won outright.

Star Hill, leading from Dunton Green to Knockholt Pound, has been chosen for the club's hill climb to-day (Saturday).

COVENTRY.

THE annual hill-climbing competitions of the Coventry Motor Club were held on Saturday afternoon, on Newnham Hill, near Daventry. The cars, instead of starting at the cross-roads as last year, started from the bottom of the hill, and finished fifty yards short of the top, the distance being 1,300 yards.

The gradient is 1 in 30 at the commencement, then 1 in 13, and towards the end 1 in 7 and 1 in 6. The competition was divided into

The Coventry Motor Club's Hill-Climbing Competition.—Mr. G. Street starting on the 45-h.p. Daimler.

three sections: 1, motor-bicycles of any type; 2, petrol motor-cars of 20-h.p. and under on Coventry Motor Club rating; 3, petrol cars of any type over 20-h.p. and steam cars of any type. In Class 1. there were twenty-six entries, the results being as follow:—On handicap: 1, R. M. Brice, 3½-h.p. Brown; 2, G. L. Evans, 3½-h.p. Rex; 3, R. W. Ayton, 3½-h.p. Ayton-Riley. On time: 1, O. C. Godfrey, 5-h.p. Rex; 2, F. Appleby, 5-h.p. Rex; 3, W. H. Wells, 5-h.p. Vindec.

Twenty-two cars had entered in the second class—that for cars of 20-h.p. and under.

The result on handicap was:—1, W. Guilding, 10-h.p. De Dion; 2, J. F. Buckingham, 9-h.p. Riley; 3, E. G. Newey, 8-h.p. De Dion. On time: 1, Mrs. E. W. Lewis, 16-h.p. Rover; 2, J. F. Buckingham, 9-h.p. Riley; 3, T. Astbury, 17-21-h.p. Daimler.

Fifteen entries were received for Class 3. On the handicap, the first place was secured by C. C. Maudslay, on a 35-45-h.p. Maudslay; P. Graham, 24-h.p. Deasy, being second; and Miss Muriel Hind, 24 h.p. Deasy, third. On time: Cecil Edge, 60-h.p. Napier, was first; F. H. Bolton, 45-h.p. Daimler, second; and G. Street, on Mr. E. M. C. Instone's 45-h.p. Daimler, third.

LADIES' A.C.

LAST Saturday just 100 of the members of the Ladies' Automobile Club motored with their friends to the beautiful Hindhead district and attended a garden party at Bookhams, Churt, the home of Colonel and Mrs. Mark Mayhew. Mrs. Mayhew, herself one of the pioneer members

of the L.A.C., give the party in honour of the club, and, to meet her fellow members, invited some 300 guests. The day was in every way a success. Colonel and Mrs. Mark Mayhew welcomed their friends under an awning on the terrace outside the library, from whence there is to be had a splendid view of the far-famed Hindhead. During the afternoon everyone found his or her way to the wide open space where nearly fifty cars were lined up opposite a group of their friendly rivals—the horse-drawn carriages. Near the cars was stationed the band of the 5th Lancers, which played off and on until late in the evening. After the visit to the cars almost everyone sought refreshment at little tables, daintily and alluringly set forth under quaint many-coloured Japanese umbrellas. Among those present were Lord and Lady Russell, General and Mrs. Wilson, Miss Trench, Major and Mrs. Madocks, Mr. and Miss Pilcher, Mrs. Hartung and Mrs. Satchell, Mrs. Geoffrey Marks, Mrs. Merryweather, Miss Antrobus, Miss Burns and Miss Muriel Thompson.

SOUTHEND AND DISTRICT.

THE first hill-climbing competition promoted by the Southend and District Motor Club was held last week on Langdon Hill, which has an average gradient of 1 in 10, with a steep portion of about 1 in 6½. The surface at the top of the hill was very loose, thus somewhat interfering with the speed of the vehicles.

The official results are as follows:—

CAR CLASS.

	On time.	On handicap marks obtained.
Mr. Perry's 15-h.p. Ford	1	Unknown as yet.
Mr. Spencer's 8-h.p. Maxwell	3	188
Mr. Head's 16-20-h.p. Humber	2	123
Dr. Laing's 10-12-h.p. Humber	4	120
Mr. Greenfield's 10-12-h.p. Humber	0	Was unfortunately not timed.

The winner on handicap of the gold medal offered to the winner of the car class cannot be decided until the number of marks obtained by Mr. Perry's Ford car are known.

TRI-CARS.

	On time.	On handicap marks obtained.
Mr. Goodman's 6-7-h.p. Phoenix Quad	1	1
Mr. Seager's 9-h.p. Riley	...	Made a flying start instead of a standing start, and was accordingly not timed.

Mr. Goodman in the tri-car class is the winner of a silver medal, as the number of starters in his class did not reach the minimum fixed for a gold medal.

WEST ESSEX.

THE West Essex Automobile Club's competition for the President's Trophy finished on the 14th inst., with the following result:—

1st. W. E. Gunnett	3-h.p. Triumph	196 miles non-stop.
2nd. C. D. Makepeace	7-h.p. Phoenix Quad car	194 miles non-stop.
3rd. G. Boddy	15-h.p. Darracq car	182 miles non-stop.
S. Wickens	12-h.p. Whitlock-Aster car	159 miles non-stop.
A. Newman	3½-h.p. Vindec	118 miles non-stop.
J. C. Brown	3½-h.p. Brown	65 miles non-stop.
V. Baldwin	3½-h.p. Brown	23 miles non-stop.
S. Hood	3-h.p. Fafnir	12 miles non-stop.
G. Cowper	3-h.p. four-cylinder F.N.	12 miles non-stop.
A. E. Dendy	3-h.p. Centaur	12 miles non-stop.

The above results must be considered very good, having regard to the severity of the course, which took in the celebrated Langdon Hill every round; all the very small mileages were due to failures to ascend this hill.

The next competition is for the 1907 cup on August 10th, full particulars of which will be duly sent to members by the hon. competitions secretary.

OXFORD AND DISTRICT.

IN connection with the Oxford and District Automobile Club a hill-climbing competition took place last week on Irondale Hill, a very steep ascent on the Deddington and Chipping Norton road. Out of the eighteen entries fifteen faced the starter, Mr. H. Coxeter, of Oxford, winning with a 9-10-h.p. Swift. Mrs. A. Tisdall Johns, of Banbury, who drove an Adams Hewitt, was second.

NORTH YORKSHIRE.

THE results, after calculation of the handicap conditions regarding weight, wind resistance, &c., in the climbing competition for touring motor-cars, held by the North Yorkshire Automobile Club at Garrowby Hill, near York, on the 13th inst., are as follows:—

1st, Mr. H. J. Lloyd's 45-h.p. Daimler (actual time, 1 min. 53.4-5 sec.); 2nd, Mr. G. S. Barwick's 45-h.p. Daimler (actual time, 1 min. 32 sec.); 3rd, Mr. G. Saltmarsh's 16-20-h.p. Argyll (4 min. 8 sec.); 4th, Mr. W. Cliff's 14-16-h.p. Fiat (4 min. 11.5 sec.); 5th, Mr. G. W. T. Wade's 8-h.p. Rover (5 min. 35.2-5 sec.); 6th, Mr. G. Moor's 28-h.p. Daimler (3 min.

26 sec.); 7th, Mr. C. Wade's 8-h.p. Rover (7 min. 46 sec.); 8th, Mr. C. Wade's 28-h.p. Daimler (3 min. 34 2-5 sec.); 9th, Mr. H. A. Watson's 28-h.p. Berliet (4 min. 11 sec.); 10th, Mr. O. B. Pease's 60-h.p. Itala (2 min. 52 4-5 sec.); 11th, Mr. D. W. Jackson's 15-h.p. Humber (6 min. 11 5 sec.); 12th, Mr. A. J. Atkinson's 20-28-h.p. Darracq (5 min. 14 sec.); 13th, Mr. W. F. Greenwood's 10-12-h.p. Humber (5 min. 26 sec.).

HERTFORDSHIRE.

FOR the annual open hill climb of the Hertfordshire County Automobile Club at Aston Hill, near Tring, to-day (Saturday), a very satisfactory and representative entry has been received, the number of competitors being about sixty.

The cars will be weighed in at Boxmoor Station, L. and N.W.R., and the weighbridge will be closed at 1.30 p.m. sharp. The hill contest will be started at 2.15 p.m. instead of 3 o'clock as previously announced. It should be noted that the committee have decided not to allow the use of oxygen or other extraneous aids to combustion.

Members and competitors should be on the look-out for police traps at Hendon, Edgware, between Edgware and Stanmore, on Bushey Heath, and the usual four-mile trap between Berkhamsted and Tring.

DERBY.

ON Saturday last, the members of the Derby and District Automobile Club held a speed-judging competition. The meeting place appointed was at the cross roads on the summit of Cumber Hill, near Duffield, and the route chosen was along Windley Lane, through Weston Underwood, and back along Kedleston Road to the starting point. Members were allowed to name the miles per hour at which they intended to do the circuit, and the two making the least percentage of error took silver and bronze medals for their respective performances. Each car carried an observer to ensure that the driver relied on his judgment alone. The following were the figures made by the first three competitors:—Mr. H. G. W. Dawson (8-9-h.p. Swift), who completed the course taking only eight seconds longer than he should have done. He was closely followed by Mr. Charles J. Allin (hon. sec.) on an 8-10-h.p. Humber, who with an allowance of 19 miles an hour made an error of 1.43 per cent. Mr. George B. Fletcher (10-12-h.p. Humber) was third with an error of 16.16.

THE AUTO-CYCLE CLUB.

THE next event to be promoted by the club will be the London to Plymouth and back ride. Competitors in this event will be started from the Angel Hotel, Thames Ditton, on Friday night, the 26th inst., at 9 o'clock and are due back at Thames Ditton the following evening at 8.30 p.m.

The Annual Reliability Trial will commence on Monday, August 19th, and finish on Saturday, August 24th.

Owing to insufficient entries the penalty runs which were to have been held at Derby and Gloucester on July 13th had to be postponed. The date now fixed is August 10th.

SCOTTISH A.C.

THE committee of the Scottish A.C. have passed a special vote of thanks to the following firms, who placed their premises gratuitously at the disposal of the Club for the storage of the competing vehicles and for the other purposes necessary to the trial:—The Kennedy Motor Company, Ltd., Glasgow; Messrs. Macrae and Dick, Inverness; Messrs. Claud Hamilton (Aberdeen), Ltd., Aberdeen. Each of these storage depots has been erected for the purpose of storing motor vehicles, and their first use in every case has been by the Scottish Club for the reliability trial purposes, in the case of the first two for this year's trial and in the case of Messrs. Claud Hamilton, Ltd., for the 1906 trial, on which occasion also the equally large and suitable building of the Western Motor Company, Glasgow, was used for the first time.

THE EDINBURGH MOTORING CLUB.

THIS club held their second hill-climbing competition on Saturday last in the grounds of Messrs. Lamb, of Firth House, Roslin, the course being 605 yards, full of twists and turns, and other motor pitfalls, and in places very steep, running to 1 in 6. The weather was ideal, and upwards of thirty cars ran out from Edinburgh and district, a distance of about ten miles, to take part in it. The fastest time was accomplished by Mr. W. L. Sleigh, in 1 min. 8 sec., on a Berliet, which works out at over twenty miles an hour. A gold medal was awarded Mr. Sleigh for his performance. The fun of the meeting was accentuated by a special competition for the ladies who were the passengers in the various cars ascending the hill. At the start they were provided with tumblers filled with water, which they held in their hands till the close of the race, the prizes going to the ladies who retained most water in their tumblers. There were five prizes given in this competition.

MOTOR CYCLE UNION OF IRELAND.

A HILL-CLIMBING competition for motor-cycles took place on Saturday last in Co. Wicklow, under the auspices of the Dublin centre of the Motor-Cycle Union of Ireland. The hill on which the competition took place has a steadily rising gradient for about a mile and five eighths. There were two classes, in the first pedalling was permitted,

and in the other pedalling was barred, and in addition there was a slow test, in which the prize went to the rider climbing the hill in the slowest time without stopping or assisting the machine by pedalling. In the latter most of the riders went so slowly at the start that they stopped before coming to the steep part of the hill. The test was won by Mr. S. Findlater's 5-h.p. Morehampton (time 10 min. 3 sec.) who in the earlier trials made a record for the hill by going up in 3 min. 13-5 sec. The prizes will be awarded for the best performance as determined by a formula in which the weight of the machine and rider and also the horse power are taken into account.

SOUTH AFRICA.

MR. R. L. JEFFERSON, F.R.G.S., who recently established a record by travelling from Durban to Cape Town on an 8-h.p. Rover, was entertained at luncheon in Cape Town on June 30th by the Automobile Club of South Africa at the Grand Hotel. Mr. A. T. Hennessy (the chairman of the club) presided, and was supported on his right by Mr. Jefferson, and on his left by Mr. F. G. Connock, who accompanied Mr. Jefferson. The chairman, in proposing the health of the two guests, said the automobile club was very pleased to have the opportunity of welcoming them. It was not quite two years since the club had the pleasure of holding a similar gathering to congratulate Count Revertera, who made the first trip from the Rand to Cape Town by motor-car. It was interesting to note that the cars used by Count Revertera and Mr. Jefferson were both single-cylinder machines. An attempt had, he believed, been made to motor from Cape Town to Johannesburg by a large four-cylinder monstrosity, but he thought the attempt ended in the major portion of the journey being completed by rail. It was about time the owners of

The N.E.C. Limousine Car recently delivered by the New Engine Company to Lady Muir.

The car has a wheel base of 10 ft. 6 in., which enables a large body to be fitted to the chassis entirely within the wheels. The vehicle has given great satisfaction, Lady Muir considering it an ideal carriage owing to its smoothness, freedom from vibration and silence.

multi-cylinder vehicles did something for their reputation. The toast was drunk with musical honours. Mr. Jefferson, in reply, thanked the Automobile Club for their hospitality, and remarked that he had had a series of receptions since he landed at Durban from Ceylon. When he reached Durban he knew nothing of South Africa or its roads, and absolutely nothing of its people. The journey from the Rand to Cape Town was not nearly so difficult—although it was more than double the length—as that from Durban to Johannesburg. The latter was really terrible for a motor-car, and it necessitated a pace so slow that their general average from Durban to the Rand was not more than eight miles an hour. Owing to the enormous spruets it would be almost impossible for a very heavy car to get from Durban to Johannesburg. He did not think that during the whole of their drive from Durban to Cape Town they had one surly word said to them; on the contrary, both Dutch and English had been most hospitable, and farmers and others had gone out of their way to show them the road, and render others little kindnesses. Mr. Connock also briefly replied. The proceedings then concluded, and the members of the club and their guests motored to Hout Bay, returning to Cape Town via Constantia. A halt was made at Groot Schuur, where the party was entertained to tea by the Prime Minister.

A MOTOR club has been formed for Scarborough and the district. The first run took place at Thornton Dale, Pickering, and Malton on Saturday last.

ON Friday, the 26th inst., a meeting is being held at the Town Hall, Trowbridge, for the formation of a motor club for Wiltshire. There are 1,100 automobiles registered in the county.

THE car driven by Dr. F. Husband in Class A. in the Lincolnshire A.C.'s speed trials was a 6-h.p. De Dion.

CAPT. CECIL BANBURY, who some time ago consented to become a vice-president of the North London Automobile Club, and who is taking an active interest in their events, has presented a handsome silver cup for competition at the club's reliability trial to be held next year.

It was on the motion of Mr. H. A. Watt, the member for the College division of Glasgow, that the amendment to the Lighting on Vehicles Bill applying the proposed measure to Scotland was inserted. The committee of the Scottish A.C. have tendered the thanks of motorists to Mr. Watt for his services in the matter.

THE COMMERCIAL VEHICLE TRIAL.

SUPPLEMENTING the list of entries already published in connection with the Commercial Vehicle Trial of the R.A.C., we now give the following entries which have been received:—

Entrant.	Class.	Net load.	Nature of vehicle.
A. Darracq and Company, Ltd.	A	10 cwt.	10-12-h.p. Delivery Van.
A. Darracq and Company, Ltd.	A	10 cwt.	14-16-h.p. Delivery Van.
W. T. Clifford-Earp, Ltd.	A	10 cwt.	Delivery Van.
Sidney Straker and Squire, Ltd.	B	20 cwt.	Covered Van.
Lacre Motor Car Company, Ltd.	B	20 cwt.	Lacre Van.
Palmer Tyre, Ltd.	B	20 cwt.	Delivery Van.
Dennis Bros., Ltd.	C	30 cwt.	Petrol Van.
J. I. Thornycroft and Company, Ltd.	C	30 cwt.	4-cylinder Motor Van chassis with body.
Durham, Churchill and Company	D	40 cwt.	Churchill Lorry.
Dennis Bros., Ltd.	D	40 cwt.	Van.
Milnes-Daimler, Ltd.	D	40 cwt.	Lorry.
Durham, Churchill and Company	E	60 cwt.	Churchill Lorry.
Maudslay Motor Company (1907), Ltd.	E	60 cwt.	Motor Lorry.
Commercial Cars, Ltd.	E	60 cwt.	Petrol Lorry.
Sir W. G. Armstrong-Whitworth and Co., Ltd.	E	60 cwt.	Delivery Van.
Dennis Bros., Ltd.	E	60 cwt.	Petrol Van.
W. T. Clifford-Earp, Ltd.	E	60 cwt.	Thames Delivery Van.
J. I. Thornycroft and Company, Ltd.	E	60 cwt.	4-cylinder Motor Wagon chassis with body.
St. Pancras Ironworks Company	F	100 cwt.	Steam Wagon.
Yorkshire Patent Steam Wagon Company	F	100 cwt.	Yorkshire Patent Steam Wagon.
Dennis Bros., Ltd.	F	100 cwt.	Petrol Lorry.
W. Tasker and Sons, Ltd.	H	120 cwt.	Little Giant Steam Tractor.

The last day for receiving entries for these trials is Saturday, August 10th, at 12 noon.

THE Anglo-American Oil Company, Ltd., announce that they have reduced the wholesale price of Pratt's motor spirit one penny per gallon as from the 22nd inst.

THE ASHBY DE LA ZOUCH GARAGE COMPANY have informed the Coventry Chain Company, Ltd., that a pair of their chains have been in use on a 16-h.p. car for four years, during which time they have travelled close upon 50,000 miles without a single breakage.

W. AND F. THORN write that during the re-building of their premises in Great Portland Street, W., their carriages and motor-cars will be on view at Ranelagh House, Lower Grosvenor Place, S.W., 10, Little Portland Street, W., and 25 and 30, Islington Green, N. All communications should be addressed to the Factory, 16 and 17, Little Portland Street, London, W.

OWING to the great pressure at which the whole of the staff of Clement-Talbot, Ltd., have been working since the commencement of the year, in their endeavours to cope with the huge demand they have experienced for the 15-h.p. Talbot and other models, and as, by working early and late, they have now practically caught up with their delivery contracts, they have decided to entirely close the works at North Kensington for one week, commencing from Friday night, the 2nd August, till Monday morning, 12th August. The company are making great efforts to execute before that date standing urgent orders for new cars and repairs, and ask us to request that any orders for parts, &c., which may be required during the week in question be forwarded at least three or four days prior to that date, as otherwise they cannot guarantee the execution of same.

THE REPORT OF THE MOTOR UNION'S FUEL COMMITTEE.

IN September, 1906, the Motor Union decided to appoint a special committee to enquire into the recent rise in the price of petrol. This consisted of Dr. H. S. Hele-Shaw (chairman), Messrs. J. L. Lock, R. W. A. Brewer, Chas. McWhirter, and Rees Jeffreys (sec.).

In their report just issued they place the alternatives to petrol in two main divisions as follows:—

- (a) Derived from petroleum and shale.
 - 1. Heavier spirit.
 - 2. Paraffin.
- (b) Derived from coal
 - 1. Dust.
 - 2. Gas from producer.
 - 3. Benzol.
- (c) Derived from vegetation
 - Alcohol.

Then they advise the encouragement of the use of alcohol in motors, and the use of heavier spirit for cars. The increased demand for petrol was shown in the imports, which rose 123 per cent. from 1904 to 1906, when the total was twenty-seven million gallons per annum. To this the Eastern oil fields have materially contributed in a progressive ratio, while the increased home consumption in the U.S.A. has restricted supplies from that country.

The committee accept the views of experts as to the prospective shortage of supplies, and point out that the control of the available petrol is in the hands of two companies with which motorists should co-operate in securing the removal of the restrictions now prevailing as to the handling, storing, and licensing of the spirit. The danger of shortage is declared to arise from natural causes; hence the recommendation to discover alternatives.

Reference has been made to the use of heavier spirit. With regard to the use of paraffin the committee feel that organised tests should be made, and hope that a fund will be raised under the auspices of the R.A.C. in order that a series of scientific trials may be held. No mere offer of a reward will by itself result in the solution of the problem. Such a body as the Technical Committee of the R.A.C. might, by so setting forth the conditions of a trial and examining how far those conditions are complied with, not merely encourage inventors to work on right lines but educate the users as to the conditions which must be fulfilled if they want to obtain successful results, as well as in the manipulation of the carburettors themselves.

But the committee place most emphasis on the question of alcohol as the fuel holding out the greatest promise. The use of alcohol for heat, light or power has never had any encouragement in this country, as has been the case in Germany and France, where the Governments favour and encourage the production of this spirit. The reason why motor-car engines specially designed for the use of alcohol have not been made in Germany is owing to the fact that the best customers of the German motor-car manufacturers are in England and other countries where petrol has up to now been the only fuel used for this purpose.

The advantages of alcohol are compared with those of petrol as follows:—(1) Safety.—Alcohol can be extinguished by water, whereas petrol is only scattered under similar circumstances and the area of conflagration increased. The flash point is considerably higher, being 60 deg. Cent. compared with petrol, which may be taken as anything down to 10 deg. Cent. below freezing point. This enables the alcohol to be carried and stored with safety under conditions where petrol would not be permitted, and reduces the cost of freight and insurance. (2) Thermal Efficiency.—Owing to less air being required and a consequent reduction in the amount of inert gas, the thermal efficiency of alcohol is as high as 35 per cent., as against something below 20 per cent. in the case of petrol. (3) Calorific Value.—The calorific value of absolute alcohol is 12,600 B.T.U., that of methyl alcohol with a specific gravity of 0.820 is 11,300, and alcohol with the addition of 20 per cent. of water shows a calorific value of 9,810; whereas that of petrol with a specific gravity of 0.722 ranges from 20,300 to 19,300 B.T.U. (4) Practical Limit of Compression.—The practical limit of compression of alcohol is about 200 lb. per square inch; and its explosion pressure is therefore considerably higher than that of petrol, the practical limit of compression of which—in view of possible pre-ignition—is limited to 80 lb. per square inch. (5) Complete Combustion.—With alcohol complete combustion is more easily attained, owing to the fact that it distils completely in its commercial form over a small range of temperature (80-100 deg. Cent.), a very accurate degree of carburation thus being maintained. In the case of petrol the range of boiling points extends between 50 deg. Cent. and 150 deg. Cent.; such a large range of boiling points renders accurate carburation at all times more difficult, and makes the spirit what is commonly known as stale owing to the evaporation of the lighter fractions. (6) Propagation of Flame.—There is less rapid propagation of the flame when alcohol is used, which gives a much more uniform pressure throughout the stroke than petrol. (7) Smell.—With alcohol there is approximately no offensive smell in the exhaust, as compared with petrol. (8) Flexibility.—Alcohol will explode when mixed with air over a wider range than petrol—4.13 per cent. alcohol vapour in the air being combustible, the range in the case of petrol vapour being 2.5 per cent.; thus the engine will be much more flexible.

There are three points, however, on which it is popularly supposed that alcohol compares unfavourably with petrol. These are:—(9) Corrosive Effect.—With regard to alcohol, any corrosive effect that may occur is probably due to impurities in the denaturing agent present in acetone and

methyl alcohol, but these difficulties would be overcome if the carburation is such as to give complete combustion. (10) Starting from Cold.—As for difficulty in starting from cold, it will be probable that alcohol as a fuel will almost always have a greater or less quantity of benzol mixed with it, in which case this difficulty entirely disappears. Even without the addition of benzol there is little doubt that the question of starting from cold will be almost entirely overcome by use of a suitable carburettor. (11) Vaporisation.—Alcohol requires 5½ per cent. of its total heat of combustion to vaporise it, whereas, on the other hand, petrol vaporises without any external assistance. With regard to the heat required to vaporise it, it is to be noted that inasmuch as a large amount of the heat produced passes off in the exhaust, this is really available for the purpose of vaporisation and does not represent any thermal loss.

The committee further recommend:—(a) That the Motor Union support any steps that may be taken, and if necessary inaugurate a movement, with the object of bringing about a reduction in the restrictions now imposed on the production of commercial alcohol. (b) That a prize be offered for the best essay on the subject of the manufacture and introduction of cheap alcohol as a motor fuel. (c) That the Royal Automobile Club be asked to organise and to conduct impartial and trustworthy experiments on the comparative merits of alcohol and petrol as a motor fuel, with a view to encouraging both users and manufacturers to turn their attention to this subject. That the notice of members of the Motor Union be directed to the use of benzol, either alone or in combination with petrol, as a motor fuel, since it can be used with complete success with the present type of engines and carburettors; moreover, it is a home production, and more economical in use than petrol at the present time. That a Standing Committee of the Motor Union be formed for the purpose of giving effect to these recommendations, and generally of recommending from time to time any line of practical policy in connection with fuel supply that may be desirable in the interests of users of motor-vehicles.

AUTOMOBILE ACCIDENTS.

At an inquest at Edmonton last week on William Lucia, aged five, who was killed by a motor-car, a verdict of "Accidental death" was returned. When the accident occurred the car was passing a tramcar, going in the same direction, on its off-side, and the jury raised the point as to whether it was proper for a driver to leave his near side. The coroner said there was a difference of opinion on the subject, and the jury ultimately exonerated the driver from blame.

A VERDICT of manslaughter was returned against a chauffeur named William Adams, at an inquest at Walton-on-Thames on Miss Mayhew, an inmate of a convalescent home, who was killed on Wednesday week by a motor-car, which mounted the footpath on which she was walking. It was stated in evidence that the motor-car was being driven at the rate of thirty-five miles an hour before the accident, and that after striking the deceased the car ran a distance of 78 ft. along the footpath before it was pulled up. The driver of a brewer's van, which was in the road at the time, said his vehicle was practically stationary, and there was plenty of room for the car to pass. Mr. McCandlish, the owner of the car, said it was not being driven at the rate of ten miles an hour, but Dr. Burrell expressed the opinion that the injuries sustained by the deceased woman could not have been caused by a car going at that pace.

A serious motor-car accident occurred near Denmark Hill station early one morning last week. Mr. Levy, of Hampstead, was driving a Mercedes car down the steep hill known as Grove Lane, and when he was about to turn into Champion Park the tyre came off one of the front wheels. This upset the steering and the car dashed into the iron railings along the railway, and fell some 20 ft. down the bank. Mr. Levy and two gentlemen who were with him were thrown over the fence, but not seriously injured. They had, however, an extraordinary escape, as the railway at this point is about 50 ft. below the level of the road.

At the Liverpool Assizes last week the dependents of a fitter and cycle repairer named John Morgan Powell, of Prescott, sought to recover damages from Dr. T. U. Mercer, of Hough Green. On October 16th last the deceased was cycling along the Warrington Road in the direction of his home, and looking at a steam-wagon, which was travelling along the road in the same direction, when he was run into by the defendant's motor-car and sustained fatal injuries. It was admitted that the defendant sounded his horn, but it was not heard, according to plaintiffs, by the deceased on account of the noise made by the steam wagon, and also that the defendant applied his brakes. The jury were, however, satisfied that defendant had done all he possibly could to avoid the accident, and a verdict was given for him.

G. F. O'Connor, twenty-one, a motor-car driver, of Walworth, was charged on Monday, at West Ham, with the manslaughter of Lawrence Sargeant, aged seven years, by knocking him down and running over him. On Saturday last, at about six o'clock, O'Connor was driving a motor-car along the Barking road, Canning Town, in the direction of Southend. The parents of the boy had just crossed the roadway, but their child was caught by the motor-car, two wheels of which passed over him. O'Connor pulled up at once and took the child to Poplar Hospital, but death had taken place. A remand was ordered, bail being allowed.

SHELL MOTOR SPIRIT has just been reduced one penny per gallon, a fact of interest to all motorists.

CASES UNDER THE MOTOR CAR ACT.

EXCEEDING THE LIMIT.

On Saturday, at the Doncaster West Riding Police Court, James C. Baxter, Dundee, and George E. Hudson, Leeds, were ordered to pay penalties of 40s. and costs for having exceeded the legal speed limit at Skellow, on the 5th inst. The first car was stated to have travelled over a measured half-mile at a rate of 33 miles 135 yds. per hour, and the second at the rate of 33 miles per hour.

Two motorists were fined £2 and costs at the Horsham Petty Sessions, on Saturday, for exceeding the speed limit at Ifield.

At Lancaster, Mr. Leonard Williamson, of Southport, was fined £10 and costs, or two months' imprisonment, for driving his motor-car on the Garstang road at a speed exceeding the limit.

A large number of motorists were summoned at Kingston, last week, for exceeding the twenty-mile speed limit and driving to the common danger, a large proportion of the defendants being stopped as they were returning from the opening meeting at Brooklands on July 6th. The evidence of the police showed that the defendants were travelling at high speeds, ranging from thirty to fifty miles an hour, and Sergeant Lucas, of the Surrey Constabulary, informed the Bench that thousands of motor-cars going to and returning from the race meeting passed through Hersham and Walton during the day, and in almost every case they were exceeding the limit. Fines ranging from £3 to £10 were imposed.

The Duke of Westminster was summoned before Mr. Curtis Bennett, at the South Western Police Court, on Monday, for driving his motor car in Portsmouth Road, Putney, at a greater speed than twenty miles an hour. Mr. Curtis Bennett imposed a penalty of 40s. with 2s. costs. Mr. Victor Seymour Egan, 7, Park Lane, Piccadilly, was also summoned for a similar offence. He stated that the speedometer, which cost him twelve guineas to obtain, registered the speed at between fourteen and

Mr. F. Carter, of Sunderland, on the 10-12-h.p. Swift Car which won a gold medal in Class B, Section 2, for privately-owned Cars.

fifteen miles an hour. Alluding to the police trap, the defendant said with a smile, it was like a shot from a gun, it was never felt. Mr. Curtis Bennett ordered him to pay 30s. and the costs.

A number of chauffeurs were fined by Mr. Marsham, at Bow Street Police Court, London, for exceeding the speed limit in St. James's Park. The defendants included the chauffeur to the Earl de la Warr. He was fined £3 and 2s. costs.

FURIOUS DRIVING.

A fine of £2, including costs, was imposed upon each of four defendants who were summoned at the Uckfield Petty Sessions last week for driving motor-cars at excessive speed on the Eastbourne Road at Framfield. The cases were proved by Sergeant Waghorn.

At the Sparkhill Police Court, Birmingham, H. S. Bevins was summoned for recklessly and negligently driving a motor-car. A fine of £10 and costs was imposed.

Three motorists were last week fined at Kilmarnock Sheriff Court for driving at an excessive speed.

Two Southport chauffeurs, named Walter McCommand and Norman Strickland, were convicted, at Bingham, Nottinghamshire, last week, of driving motor-cars on the highway at a dangerous speed. McCommand was fined £5, and Strickland, who did not appear, was ordered to pay £6.

At Croydon, last week, William Hylton Lamotte, of Shirley, was summoned for driving a motor-car at a dangerous speed in Addiscombe Road, Croydon, on July 2nd, and also for failing to produce his licence.

The Mayor said defendant would be fined £10 and 9s. 6d. costs for the excessive speed, and he would have to pay 5s. 6d. costs on the summons for not producing his licence.

At Hampstead last week Charles Gibson, a chauffeur, of Fulham, was fined £10 and costs for driving a motor-car at the rate of over thirty-six miles an hour on the Spaniards Road, Hampstead Heath.

CASES DISMISSED.

At the Newcastle Police Court, last week, Cecil Armstrong, a chauffeur in the employ of Mr. W. Blumer, shipbuilder, of Sunderland, was charged, first with having disobeyed the signal of a policeman to stop; and secondly with having driven a motor-car in a manner dangerous to the public. After hearing the evidence tendered on both sides the magistrate dismissed the case.

At the Nottingham Summons Court, last week, Arthur Cox, chauffeur to Mr. Alfred Swingle, J.P., of Smalley Hall, Derby, was summoned on four charges of driving a motor-car recklessly, negligently, at a speed and in a manner dangerous to the public in Carrington Street, on June 26th. Police-constable Aubrey stated that on the date in question he was on point duty in Carrington Street, when he saw defendant driving a motor-car in the direction of Trent Bridge at a furious rate. Witness held up both his hands for defendant to stop and also shouted to him, but he drove straight on. Mr. C. E. W. Lucas, who defended, said there would be a direct contradiction to the evidence on behalf of the police. The defendant held a "white licence," and this meant a good deal in these days of motor prosecutions. Mr. Horace Crossley, J.P., said the car was crawling along. He had driven hundreds of miles with the defendant, and had always found him to be an extremely careful driver. Similar evidence was given by Mr. A. Swingle, Mrs. Swingle, and Miss Hilda Crossley. The magistrates were of opinion that, whilst the police evidence was correct as to a car having been driven in a dangerous manner, a mistake had been made as to what car it was, and the case would be dismissed.

At Gateshead Police Court, on Monday, Louis Edward Witz, of York, was charged with driving a motor-car in Durham Road to the danger of the public on July 5th. The police had secured the number of the car, but could not identify the driver. Mr. Crombie, for the defence, submitted the case could go no further unless they could identify the driver. Other witnesses were called, but they could not speak to the identity of the defendant. The Bench ultimately said they had decided under the circumstances to dismiss the case.

DRIVING TO THE DANGER OF THE PUBLIC.

At the Southampton Police Court James Edward Winhurst, of Portawood, was summoned for having driven a motor-car in Above Bar Street at a speed dangerous to the public on the 7th inst. The Bench imposed a fine of £5 and costs.

The Earl of Caledon, who has acquired some notoriety lately by repeated convictions for furious driving, was fined £5 and costs at Slough last week for driving a motor-car at an excessive speed at Datchet, a rate of 26 miles per hour being alleged.

Mr. Algernon H. Pease, of Witton Castle, county Durham, was charged at Harrogate last week with driving a motor-car to the danger of the public on the Ripon road at Harrogate on June 9th. There were two further charges of refusing to stop the car when called upon by the police to do so. The police and independent witnesses judged the speed of the car at thirty miles an hour, and also said that a lady in the car looked terribly frightened, and held on to the gentleman as though she wanted the car stopping. The defence was a total denial of the facts alleged, and it was contended that the police did not properly indicate on either occasion that the defendant was to stop. The Bench fined the defendant £10 and costs for driving to the danger of the public, and £5 and costs in each of the other cases, making a total of £20 and costs, with endorsement of the licence.

REAR IDENTIFICATION PLATE NOT ILLUMINATED.

At the Dorchester Borough Petty Sessions, Ernest Parsons, chauffeur, of Clifton, Bristol, has been fined 2s. 6d. and costs for driving a motor-car on May 14th at 9.15 p.m. without having the rear identification plate illuminated.

COMPANY NEWS.

NEW COMPANIES REGISTERED.

RADNORSHIRE AUTOMOBILE AND GARAGE COMPANY.—£1,000. First directors: W. Miles, F. Miles, A. L. Thomas, W. Jones-Powell, and C. Jones-Powell. Church-street Chambers, Pontypriid.

ERA MOTOR HIRING COMPANY.—£1,000. First directors: A. S. McPherson and F. A. Wilkins (managing directors) and F. Wilkins. 54, Whitechapel, Liverpool.

MOTOR WAGONS.—£20,000.—To adopt agreements with the Mercedes-Daimler and De Dion companies of Great Britain, Limited, to acquire certain licences and rights, and to carry on the business of motor-car, omnibus, van, and cab proprietors, &c.

MOTORLAND.—£10,000. To take over the sole selling and agency rights for the United Kingdom and colonies in respect of Gui cars, manufactured by H. Guillemin et Cie, of Courbevoie, Paris, together with all patent or other rights in connection with the Pasco governor throttle, the property of W. W. Stanton and P. H. Tiddy, to acquire the sole selling rights in Great Britain in respect of the Demeester cars, manufactured at Courbevoie, aforesaid, and to adopt an agreement with W. W. Stanton. First directors: F. R. Quilter, A. Salter, Colonel C. H. Shepherd, D.S.O., and W. W. Stanton. 304, Vauxhall Bridge Road, S.W.

ARISTODOS DUSTLESS ROADS SYNDICATE.—£2,000. To adopt an agreement with J. W. Metcalf to acquire the patents granted to him for an invention for a new method of tarring roads and apparatus and machinery therefor, together with any subsequent inventions therein.

First directors: J. W. Metcalf, A. Stedall, W. C. Manning, and A. S. Manning. Rutland Chambers, Newmarket.

RIGNOLD'S ADJUSTABLE CARBURETTOR COMPANY.—£1,000. To acquire certain patents for an invention for improvements in carburettors for internal combustion engines, the property of H. R. Rignold, and to take over the business of motor specialists, mechanics, repairers, and engineers carried on at 27, Ro-coe Street, Liverpool, as Rignold and Benyon. First directors: H. R. Rignold and J. Taylor (both permanent).

H. P. ROSE.—£2,000. Manufacturers of and dealers in motors, motor-cars, and accessories, &c. Agreement with Mr. H. P. Jones. First directors: Messrs. H. J. Densham, C. A. Davidson, E. R. Moon, and H. P. Rose. 28, Frith Street, Shaftesbury Avenue, W.C.

BRITISH MOTOR CABS.—£2,000. 7, Addison Place, Brixton, S.W. HERBERT FROOD COMPANY.—£8,812. To acquire the business carried on by Messrs. H. Frood and D. G. Holmes at Sovereign Mills, Chapel-en-le-Frith, Derby, as the Herbert Frood Company, and to carry on the business of manufacturers of brake-blocks and other accessories for motor-cars.

INCORPORATED INSTITUTION OF AUTOMOBILE ENGINEERS.—"Limited" omitted from title by licence of Board of Trade. 1, Albemarle Street, W.

ARGYLL MOTORS, LTD.—A special meeting of the shareholders of this company was held in Glasgow last week. Mr. Smith, chairman, moved a resolution authorising an increase of the capital from £500,000 to £650,000. He admitted that the proposal had met with opposition from some quarters, but the proxies returned showed an overwhelming majority of capital in favour of the increase. Mr. Henry Reynolds moved the rejection of the resolution, which, he said, must have come as a great surprise to many shareholders, after the increase of the capital by £100,000 not many months ago. The amendment did not find a seconder. Mr. Maybery advised that the directors should be given an opportunity of going forward. The resolution was adopted.

ROAD REPORTS.

IPSWICH.—There will be no large repairs going on on the main roads leading out of Ipswich during the next few weeks. Local opinion is coming to the conclusion that a uniform system of repairing the main highways of the country, and also for dealing with the dust question, is necessary.

YORK.—The main North Road in the Clifton and Bootham districts has been under repair.

REIGATE.—None of the main roads in this borough are likely to be under repair during the next few weeks. Extensive works have been carried out in connection with the main roads in providing dusting surface, and further works to reduce dust are to be carried out by Mr. Fred T. Clayton, Borough Engineer and Surveyor, within the next few weeks by treating the surface of the roads with tar. The work is being carried out by the Johnston Lassally tar binding process. Motorists generally should drive with care through the two towns, Reigate and Redhill. If attention were paid to this by all motorists, it would remove a great amount of the prejudice at present existing on the part of some of the general public.

HARROGATE.—The main roads passing through this borough are treated with "Akonia," and not likely to be in course of repair during the next few weeks.

GRANTHAM.—The roads are under repair for the Grantham Town Council, and motorists should have a good run through the district.

WORCESTER.—One of the approaches to Worcester at its northern boundary, called Ombersley Road, is under repair. When it is finished the other main approaches from the north, called Droitwich Road, will be under repair for about a fortnight.

WANDSWORTH.—The Tarspra Company have been engaged on the task of tarring the carriageway of the Kingston road from the top of West Hill, Wandsworth, to the county boundary. The road has just been resealed, and advantage has been taken of this fact to try the experiment of using tar for laying the dust.

EASTBOURNE.—Experiments in tar-paving having proved very successful, the Borough Surveyor's Department is now busily employed in treating many of the principal roads in the town.

GLAMORGAN.—As a remedy for the dust nuisance, the Glamorgan County Council recently tried tarring the Mumbles Road, near Swansea. At a meeting of the Roads Committee several claims for damages have just been received. One doctor, whose bicycle skidded and caused him to be covered with tar, claimed 15s., while another medical man put in a claim for a new straw hat and shirt and the cost of having his suit cleaned. Two other claims for 10 gs. and 8 gs. respectively were received. The clerk said that under the tar-spraying contract the county council were not liable.

NATIONAL ROADS.—At the annual conference of urban district councils of England and Wales at Ventnor on Saturday a resolution in favour of roads for national use being made a national charge was unanimously adopted.

EAST GRINSTEAD.—The East Grinstead Surveyor has made a start with the long-deferred tar-washing of the roads through the town. During last week the High Street was tar-washed, and a start was made with the London Road.

LA BOURMINE, Baron de Magnin, and the Marquis de Heredia are among the recent purchasers of Mors cars.

A MOTOR-CAB INCIDENT.

LORD MONTAGU of Beaulieu figured in a case heard before Mr. Paul Taylor at the Marylebone Police Court on the 18th inst., in which a motor-cab driver, named Henry Pottier, was summoned at the instance of the Office of Works for driving a motor-cab in the Outer Circle, Regent's Park, at a greater speed than ten miles an hour. Evidence was given that shortly before midnight on July 8th Park-constables Petherick and Smith timed the defendant's cab over a measured furlong with the aid of lamps and stop watches, and according to their timing the cab covered the distance at a speed of eighteen miles an hour. A third park constable then stopped the cab, and was speaking to the driver about the speed at which he had been travelling, when Lord Montagu, who was riding in the cab, jumped out, and in an excited manner caught hold of the constable by the lapels of his coat and demanded his number. An altercation took place, and the result was the appearance in the witness-box of Lord Montagu, who denied that he seized the constables by the collar, though he might have pulled one of their mackintoshes aside to verify the number. He interfered as a public duty because he felt the driver was being harshly treated. The cab was not travelling at the alleged rate. In the end the man was fined 40s. and costs. Lord Montagu reluctantly interfered in the case only as a matter of public duty, and because he thought the park keeper did not treat the motor-cab driver fairly. His lordship voluntarily attended the court as a witness at great personal inconvenience for the purpose of giving independent evidence in the interests of justice.

AN APPEAL DISMISSED.

In the Edinburgh Justiciary Appeal Court, last week, William Grant Christie, Saltcoats, appealed against a conviction secured against him in the Sheriff Court at Kilmarnock, for having driven a motor-car at a speed of eighteen miles an hour in the village of Seamill, and adjudged to pay a fine of £7. The distance libelled as that over which the complainant had driven at an excessive rate of speed was three-quarters of a mile, and proof was led, he said, only with regard to a quarter of a mile where the police had laid a trap. The complainant, therefore, it was maintained, had no sufficient notice given him as to what was to be proved against him. The Lord Justice-Clerk thought it was fairly satisfactorily shown that the gentleman who was charged had not suffered any injustice, but it was another question whether he was now entitled to have the suspension sustained on the ground of want of specification. He did not think that he was, but his Lordship did not like the form of the complaint. It would be just as simple and much clearer if the complaint always bore that the offence was committed within points which are to be founded upon being a place within the ten mile limit fixed by the Secretary for Scotland. But he did not think the complaint was irrelevant. The appeal was dismissed, with modified expenses of £7 7s. to the respondent.

THEFT OF MOTOR FITTINGS.

At Bow Street Police Court, last week, George E. Pearce, Tooting, and Charles Payne, Peckham, were charged on remand with stealing and receiving motor fittings. Pearce was employed as a night watchman at the Daimler Motor Works, Brownlow Mews, Guildford Street, W.C. A week ago he stole from there some motor fittings worth £12 and handed them to Payne. Detectives Barr and Joslin stopped Payne in the street as he was carrying the fittings away, and took him into custody.

Mr. Armstrong appeared for Payne, and said that his client was the son of one of the oldest and most respected tradesmen in Peckham. He kept a motor-car for business purposes, and as he wanted to repair it he got these fittings from Pearce. Up to now Payne had borne an unblemished character, and he (Mr. Armstrong) suggested that it was one of those cases which the First Offenders Act was intended to meet. Sir Albert De Rutzen said there were one or two bad features in the case. Instead of protecting his master's property, as he was paid to do, Pearce had robbed them, and he would be sentenced to four months' hard labour. Payne must have known that the goods were stolen, and he would go to prison for two months.

BALLOON v. MOTOR.

A BALLOON ascent was made at Lister Park, Bradford, on Saturday by Mr. Reuben Bramhill, a well-known aeronaut in the North of England, the object being a race against motor-cars. Twenty-eight cars belonging to the Bradford Automobile Club entered. The conditions were that the aeronaut was not to travel more than fifty miles, and was to have his balloon deflated and packed before it was touched by any occupant of a car. Mr. Bramhill ascended about half-past three, and disappeared into the clouds, the pursuing cars taking various routes in an E.N.E. direction. Eventually it was found that the aeronaut had descended near Mirfield, nearly south-east of Bradford, in a direction entirely opposite to that taken by his motoring competitors, and was thus an easy winner.

ALL the winning cars at Brooklands last Saturday, in connection with the second meeting of the Brooklands Automobile Racing Club, used Dunlop tyres.

THE DUST TRIALS.

UNDER the auspices of the R.A.C. some important trials with regard to the dust raised by motor-cars were held on the Brooklands Track at Weybridge on Tuesday, resulting in several photographs which should give the manufacturers food for thought, if not the basis for innovations in the construction of cars. Lieut.-Col. R. E. Crompton is the chairman of the committee of judges, of which Mr. C. W. S. Crawley is the hon. sec., and these gentlemen with their colleagues were in attendance taking notes of the performances of the cars.

The tests were made over a 100 ft. course on the straight finish on the track, this being covered for a width of 10 ft. with limestone dust. The cars were required to run over this at varying speeds, an endless cord with ribbons being run alongside the track to secure uniformity in the running of the different vehicles. The day was well suited to the purpose, there being no wind sufficiently strong to raise the dust from the ground, and just enough to disperse the clouds of dust made by the vehicles.

Class I. was for makers' standard cars, the cars which were driven over the course being the 10-h.p. Adams, 24-30-h.p. Dennis, 10-h.p. Turner-Miesse steam, 30-h.p. Thornycroft, 30-h.p. White steam, 24-h.p. De Dion, 15-h.p. Coventry Humber, entered by the Elastes Company Ltd., 16-h.p. Vauxhall, two 15-h.p. Fords, 30-h.p. Pilgrim, 20-h.p. Dennis, 30-40-h.p. Spyker, 30-h.p. Lindsay 12-16-h.p. Wilson Pilcher, 24-32-h.p. Porthos, 28-36-h.p. Armstrong, 36-h.p. Thornycroft, 15-h.p. Mors, 50-h.p. Thames, and 18-24-h.p. Austin.

The R.A.C. Dust Trials at Brooklands.—The 30-35-h.p. Dennis, with cased-in wheels, travelling over the prepared stretch.

In Class II. the inter-club competition for amateurs, nine competitors ran over the course, the Southern Club being represented by Messrs. Malcolm Brooke and J. Clingoe on the 18-h.p. Malcolm and 14-h.p. Lindsay respectively; the Blackheath A.C. by Messrs. W. Whiteway and A. Duckham, who entered their 16-h.p. Calthorpe and 14-22-h.p. Germain; the Irish A.C. by Mr. D. Mooney, 20-h.p. Stanley steam car; the West Surrey A.C. by Mr. G. M. Ledebor, 10-12-h.p. Coventry; the East Surrey A.C. by Mr. F. Hughes, 20-h.p. Dennis; the Coventry M.C. by Miss Muriel Hind, who drove the 24-h.p. Deasy, and Mr. A. F. Slee, a member of the Motor Union, entered his 1903 10-h.p. Renault.

Class III. was in many respects the most interesting event of the day, this being for experimental cars altered or specially fitted with a view to the mitigation of the dust. A 1901 10-h.p. Mors was run by Mr. Cook, this being fitted with solid rubber tyres working on hollow rubber rings. Mr. J. C. Dennis had a 30-35-h.p. Dennis car with wheels cased in, the front mudguards not flared, and an undershield from the flywheel tapering upwards towards the end of the frame. The 15-h.p. Coventry-Humber entered by the Elastes Company in Class I. was also a competitor in this category, for which it was fitted with Elastes filled round tread tyres. A 20-h.p. Brotherhood was entered by Mr. Conrad Ingleby, this being fitted with a light canvas screen under the body and projecting some distance beyond the rear of the vehicle. Mr. E. Martin was a competitor with a 20-h.p. Velox shod with pneumatic disc wheels. Considerable interest was aroused in the performance of the last car to run in this class, viz., the 22-28-h.p. Vivinus, for the entry of which Messrs. Wayman and Matthews were

responsible. A special device was fitted consisting of a flat steel bottom underbody, the full length of the vehicle, with its sides overlapping the sides of the cars and with shoes replacing wing-guards on the wheels.

Impressions as to the behaviour of each vehicle are necessarily of little value until we get the photographs before us for purposes of comparison. These are now being prepared for the judges, and the results will shortly be announced.

FORTHCOMING EVENTS.

JULY.

26th (F.).—Coupe de Liedekerke race for touring cars, on the Ardennes course.

Circuit des Ardennes Race under Belgian A.C. rules.

26th & 27th.—Auto C.C. twenty-four hours' ride to Plymouth and back.

27th (Sat.).—Aston hill climb of the Hertfordshire County A.C.

Irish A.C. hill climb.

Motor-Yacht Club eliminating trial for the British International Cup Race.

Cardiff M.C. run to Southerndown.

East Surrey A.C. run to Cuckfield.

Harrogate A.C. competition.

Notts A.C. hill climb, Hazelwood.

Somerset A.C. 100 miles reliability trial.

Essex M.C. run to Epping.

Manchester M.C. run to Tideswell.

West Essex A.C. run to Billericay.

AUGUST.

2nd to 5th.—Automobile Club of France Criterium and Coupe de la Presse.

3rd (Sat.).—Brooklands Automobile Racing Club meeting.

Sussex County A.C. Gymkhana at Eastbourne.

Southend M.C. holiday tour on south coast.

5th (M.).—Crystal Palace A.C.'s races at Bexhill.

19th to 24th.—Auto Cycle Club's six days' trial.

20th.—Open competition for light cars organised by the Essex Motor Club over a 200 miles course.

SEPTEMBER.

9th.—Industrial Vehicle Trials commence.

OCTOBER.

19th.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

Cordingley's Motor-Car Exhibition at the Agricultural Hall, London.

LIGHTING-UP TIMES—LONDON.

July 27th—8.57 ... 29th—8.52 ... 31st—8.50 ... Aug. 2nd—8.46
 „ 28th—8.54 ... 30th—8.51 ... Aug. 1st—8.48 ... „ 3rd—8.45

In Glasgow the lighting up time to-day (Sat.) is 9.40 p.m., and to ascertain the approximate times on succeeding days 45 min. should be added to the above figures; in Birmingham an addition of about 13 min. is necessary.

PUBLIC MOTOR SERVICES.

THE Denholm Co-operative Dairy Society, Ltd., have secured a char-a-banc motor-car, which they intend running regularly between Hawick and Jedburgh, N.B., for passenger traffic.

A MOTOR service between Redruth and Falmouth will probably be established by the Great Western Railway Company within the next few days.

THE Brighton, Hove, and Preston United Omnibus Company, Ltd., have commenced a half-hourly summer service between Brighton and Worthing.

WITH the holiday season now commencing, there are few pleasanter methods of seeing Yorkshire than by the motor char-a-banc trips run by the North-Eastern Railway. Daily tours start from Bridlington to Flamborough for the caves and lighthouse, *via* Sowerby, a distance of eleven miles; to Filey, *via* Hummanby and Reighton, a circular trip of twenty-two miles; as well as to Hackness and Thornton Dale, *via* Scarborough. There is also a motor char-a-banc service between Ripon and Studley Park and also at Harrogate. From this latter town the North-Eastern Railway run seven different motor tours from Harrogate station yard to all the places of interest in the neighbourhood, the distances of the runs being from eight to forty miles.

AN ACCIDENT IN A MOTOR FACTORY.

MR. CECIL F. KARUTH, a solicitor, of Crediton Road, Hampstead, was at Marylebone County Court on Monday awarded £13 and costs for injuries sustained by falling down a motor pit at Messrs. Panhard's Works, Acton Vale, W.

Mr. Karuth was inspecting a car when he suddenly disappeared from view.

The defence was that Mr. Karuth had been guilty of contributory negligence.

A CASE AGAINST THE POLICE DISMISSED.

SERGEANT HAYES and Constable Powin, of the Altrincham police force, were summoned last week for an alleged assault on a chauffeur named George Jones, of Bowdon. The case arose out of the arrest of Jones for drunkenness and disorderly conduct on July 16th. The case for Jones was a complete denial of the charge of drunkenness, and allegations were made to the effect that Powin irritated him. The constable, it was said, used unnecessary violence, and when Sergeant Hayes arrived, it was alleged, he kicked Jones behind the knee. Colonel Hammarsley, the chief constable, gave the officers excellent characters. The Bench dismissed the summonses against the police, and fined Jones 10s. and costs on the charge of drunkenness and allowed an advocate's fee of two guineas.

NO INLAND REVENUE LICENCE.

AT the Westminster police court last week Lieut. Henry Sheehy Keating, of Wellington Barracks, was summoned, before Mr. Curtis-Bennett, by the Inland Revenue authorities, for employing a male servant without a licence. There was a second summons for keeping a motor carriage without a licence.

An Inland Revenue officer deposed to seeing a car in York Street, Westminster, on June 10th, which it was afterwards found belonged to the defendant. There was a chauffeur in the car, and no licence was held by the defendant for either.

Mr. Curtis-Bennett imposed a fine of £2 2s., including the licence for the servant, on the first summons, and £4 4s. and £1 1s. costs on the second.

POLICE TRAPS.

THERE is a measured quarter of a mile on the Chichester Road, Arundel.

A CORRESPONDENT writes that two police traps are in operation at Keswick, one being from a bridge near the pencil works at the entrance to the town and past the High School. The second is on a slight incline near Braithwaite Station, three miles from Keswick.

THE police have lately been at work on a measured furlong at Pinner.

THE police in the Tintern district have lately been devoting attention to speedy motorists.

THE Skipton Urban Council having asked the local police to pay special attention to motor-cars passing through the Gargrave Road district, an outbreak of police trapping may shortly be expected.

BUSINESS NEWS.

THE French Minister of War has just bought from Société Mors the van which took part in the recent Commercial Vehicle Trials in France.

THE Motor House inform us that an error occurred in their advertisement in the *M.C.J.* last week. The Winton cars they are disposing of at reduced prices are of the 1905 and 1906 models.

OWING to the shabby appearance of the ordinary brown canvas tyre carrier after some little wear, Messrs. Gamages, in response to enquiries, have introduced a cover made of black japanned Roanoid, which is waterproof, always looks nice, and is in every respect superior to the old pattern.

THE method of repairing broken or cracked castings of any metal by welding adopted by the Fitton Engineering Company, of 664, Old Kent Road, London, S.E., has proved so satisfactory that the most complicated break or fracture can, it is claimed, be united, and the casting, which otherwise would be thrown on the scrap heap, rendered stronger than new and in every way serviceable for a further term of useful work. The Fitton Company have already found it necessary to increase their plant to cope with the number of motor-car cylinders sent to them for repair.

ACCORDING to the official results of the Irish Reliability Trial, two gold medals were awarded in Section I., and one gold medal and the 100 guinea Dunlop Challenge Cup in Section II., to cars fitted with Continental Red-Black non-skid tyres.

THOSE having business with the E. M. Bowden's Patents Syndicate, Ltd., should note that the works in Baldwin's Gardens, Gray's Inn Road, E.C., will be closed from the 2nd until the 12th August. The warehouse will be open, however, on August 7th for the convenience of customers whose requirements can be filled from stock.

QUITE an amusing situation has occurred in connection with the old "Mors" premises in Shaftesbury Avenue, W.C. These premises are among the most extensive in London, and few firms are in a position to warrant their taking such premises, consequently they have lain vacant for some time. It came rather as a shock, then, when, twenty minutes after the landlord had let them to The Motor House, whose requirements necessitated them taking further premises, the agents came along with a tenant to whom they had let the building. However, The Motor House got in first.

FROM the British and Colonial Daimler-Mercedes Syndicate, Ltd., comes a copy of the catalogue they have just issued of the new British-built Daimler-Mercedes car, of which a description was given in a recent issue of the *M.C.J.*

THE Motor-Car Journal.

VOL. IX.]

LONDON, SATURDAY, AUGUST 3, 1907.

[No. 439.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

NOT content with a previous rebuff from the Local Government Board Inspector, the Carnarvonshire County Council have made a second attempt to secure the imposition of a speed limit on motor-cars in Llandudno. At an inquiry just held it has been made fairly clear that the opposition to motor-cars on the Promenade and in Mostyn Road arises from the local tram and cab interests. This is certainly true so far as the latter thoroughfare is concerned. At the first inquiry nothing was proved against the

streets or town. Everyone, including the L.G.B. Inspector, was agreed that they were "fine and broad" (to quote the testimonial of the inspector himself), and the only point to consider was any fresh evidence as to danger. There the witnesses for the Council seemed to draw a blank; and they must have been considerably chagrined when their representative called Mr. Rees, the Superintendent of Police at Llandudno, whose evidence should be exceedingly useful to Parliamentary motorists in forthcoming discussions. There had only been eight convictions against motorists in the town under Section 1 of the Motor Car Act of 1903, and the police had lost two cases, "but," added the inspector apologetically, "they were very weak ones." He then went on to say that he was against any speed limit, and believed that the rate should be arranged according to the traffic in the streets at the time. Sometimes five miles an hour would be too fast, and at other times motorists would be justified in going twenty miles an hour. The streets in Llandudno in the afternoon were very clear, but in the evenings they were very crowded. With regard to the county of Carnarvonshire there were no police traps, and, in his view, if a motorist was travelling in the open country with a clear road it did not matter what speed he was going at. Superintendent Marks, Inspector Jarrett, Sergeant Waghorn, and all the lesser policemen of the south should take their holidays in Wales and learn wisdom while off duty.

Highways Protection.

THE Highways Protection League is adding to the gaiety of London and providing opportunities for Mr. J. Cathcart Wason, M.P., to give examples of his humour. At the annual meeting the other day that gentleman made a speech in which he pointed out that the French Revolution was caused by the Court and aristocracy "driving at a furious rate, trampling on the people, and showing utter contempt for the amenities of other people." Having thus relieved himself of an important historical fact, he went on to say that nowadays people were realising that motoring was an expensive amusement that had "engendered obesity and set up the disintegration and decay of the nervous tissues." All this will be very amusing to those motorists who have won renown on the Brooklands track, and to the many hundreds of drivers throughout the country who recognise the motor-car as an avenue to good health and a means of keeping in fit condition. Evidently the Highways Protection League has a few friends, subscriptions and donations for the past twelve months

having amounted to £281. The expenditure totalled £294, but from all we can learn the League has left to the motoring organisations the duty of protecting the public on the highway, by the issue of warning signs, &c., and has so far mainly confined itself to sending letters of an alarming character to the public Press. If it really intends to act up to its name it should work in conjunction with the M.U. and the A.A. in signposting the roads, and generally safeguarding the public.

The Price of Petrol.

Now that the Motor Union report is out the discussion with regard to the future fuel for motor-cars is likely to be renewed with vigour. Sir Marcus Samuel made an interesting contribution to the subject the other day at the meeting of the "Shell" Company. He expressed amusement at the suggestion of a petrol famine, and declared that he had no misgiving as to the ability of those responsible for the trade to supply the demand. The reduction in price, instead of being regarded as a comment upon the report of the Fuels Committee of the Motor Union, was but an endeavour to encourage consumption—a mere coincidence, in fact. There is one element in the situation that must not be overlooked, viz., the interdependence of industries. The price of petrol is not regulated solely by the demand; much depends upon the outlet for the by-products which are left when the petrol is refined from the crude oil. Sir Marcus assures us that at present the market for such products is remunerative, from which we gather that in his view petrol has not reached its settled price, and any restriction of the demand for by-products would raise the rate. It is this uncertainty that has produced the feeling of unrest among motorists, and that is causing them to encourage experiments with a view to finding a fuel of a lower price.

Lights on Vehicles.

MANY are the vicissitudes that have befallen the Lights on Vehicles Bill, which appeared in the House of Lords on Tuesday, and was almost held up to public ridicule by Lord St. Aldwyn as an example of legislation in a hurry. The proposal for universal lights, which is the basis of the measure, has been before the country for years, and hence the surprise with which many of their lordships heard such a declaration. A new clause was proposed by Earl Beauchamp giving power to county councils to make orders of exemption from the operation of the Act of vehicles carrying, in the course of harvesting operations, any farm produce to stack or barn. After some discussion the clause was agreed to and added to the Bill. And then, upon the motion of Lord Hamilton of Dalzell, it was resolved that the Act shall not apply to Scotland. This latter decision is one greatly to be regretted, and shows again the difficulty of securing uniformity in British legislation.

National Roads.

IN a very unostentatious way some of the rural councils are endeavouring to educate the public mind towards a recognition of the advisability of making the main roads of the country a national charge, as in many of the awakened countries on the Continent. With such an object in view the Settle

(Yorks) Rural Council is now circularising similar bodies with their views in favour of such a course, and asking their opinion on the subject. The result is that a great deal of discussion is now going on throughout the country, much of it on very sensible lines. Thus, at the Westhampnett Rural District Council meeting a few days ago Mr. R. A. Gregory put the subject very clearly before the people of his place when he said that the State control of our main roads would have to come eventually. In former days, when the traffic in a certain district was confined to that locality, on account of the difficulty of conveyance, those who used the roads paid for them, but now the radius of movement was so greatly increased on account of motor-car traffic that the roads were quite a national matter, far more so than fifty years ago, when people rarely left their district by road. It cannot be too strongly enforced that this traffic is not all of the pleasure kind, but much of the new use of the roads will be of an essentially commercial character; hence, the wide view that should be taken of the matter. For instance, fruit growers around Worthing have contracted for motor-cars to take the bulk of their fruit by road from Worthing to London, and obviously it may be very hard indeed on the intervening rural districts, both in Surrey and Sussex, who by the very circumstances of the case get no benefit whatever from the traffic. Such examples show the importance of getting at least some contribution from the national funds for the upkeep of the roads.

Mr. and Mrs. Charles Braun, of Lymington, Hants, on their De Dietrich Cars.

Both the vehicles are of the 24-h.p. type; one is a landaulet, which Mrs. Braun uses personally, and the other an open touring car, with Mr. Braun at the wheel. After touring some thousands of miles on his old machine Mr. Braun just recently ordered and obtained delivery from Messrs. Jarrett and Letts of one of the latest 1907 cars. It is fitted with a very comfortable low side-entrance touring body, specially designed to meet the owner's requirements.

In East Anglia.

MR. J. E. VINCENT, who combines a knowledge of automobilism with a ready pen, writes pleasantly on some of the eastern counties as a motoring country in his latest volume, "Through East Anglia in a Motor-Car." The chapters are prefaced with some practical observations showing where garage and repair facilities exist, which might usefully have been supplemented by the names of the proprietors of such establishments. Such information would not have been out of accord with the character of the work, for Mr. Vincent supplies his readers with the names and features of the various cars upon which he made his way through Cambridge, Suffolk, Norfolk, Essex, and other localities within the area of East Anglia. The references to the character of the roads, the occurrence of hills, and the distances on the selected routes will be serviceable to

owners of cars of comparatively small power, enabling them to avoid the roads likely to present difficulties. Mr. Vincent is evidently a lover of nature, and writes knowingly of the tree life of the roads he describes. He knows car-lovers as the result of long acquaintance, and describes Bottisham as possessing "a motorist's church," "that is to say," continues the author, "one of which a passing view gives pleasure"—a characteristic utterance of the *Times* motoring correspondent, who is none other than Mr. Vincent. Here and there evidences of a local patriotism occur in the references to Abingdon; otherwise, Mr. Vincent has a discriminating mind and sifts the researches of county historians with a view to popularising hard facts. The book is the first volume of a series to be published by Messrs. Methuen and Co., which should be helpful to tourists *en automobile* in its characterisation of the highways of the country from the view of the motorist as distinct from the ordinary maker of guide books.

Hotel Charges.

THOSE responsible for the management of hotels should take Mr. Vincent's animadversions upon British ideas of reasonable charges into account when presenting bills to motorists in the future. Unfortunately the law of libel prevents men from writing the truth with regard to many of their experiences in connection with hotels, but as a general principle it is correct to say that "hotel keepers frequently behave as if they thought the owner of a motor-car must needs possess an endless supply of ready money, whereas the legitimate inference from his ownership of an expensive vehicle is that he has none to spare." Motorists go abroad not because they wish to ignore the beauties of their own country, but often from a desire to escape the rapacious hotel-keeper, who regards them as sheep to be fleeced whenever they present themselves at his doors. In time a more reasonable attitude will doubtless prevail, and such comments as are made by Mr. Vincent may hasten the day.

Motor Lifeboats.

EXPERIMENTS conducted by the National Lifeboat Institution in connection with lifeboats installed with petrol motors continue to be made with varying results. Only partial success attended the fortunes of the boat stationed at Newhaven; that at Walton-on-the-Naze was fitted with a Blake motor, and has done good work; another, for reserve purposes, has been ordered to the Tees for September. Until the boats have had some years' work at their stations it will be difficult to gauge the exact degree of success which has been attained. So hopeful, however, does the outlook seem that the Committee of Management of the Institution have felt justified in ordering four more motors for lifeboats which have been specially built for them, instead of, as in the case of the three experimental boats, simply adapting existing boats.

A Question of Averages.

A CORRESPONDENT in one of our French contemporaries writes as follows:—"I am tester in a large motor-car factory, and we are instructed, when trying the speed of a car, to make the test on the same route in opposite directions, in order to take account of the wind that may be blowing and of the gradient, and then to take the mean. The other day I had a 24-h.p. car to test, and during the ascent I made a kilometre in exactly 60 seconds. In the descent I occupied 36 seconds, which makes 60 kilometres per hour up hill and 100 kilometres down hill. I therefore determined the mean to be 80 kilometres per hour. A friend, who, like myself, is also a tester, told me that since I made one kilometre in 60 seconds and another in 36 seconds, I made two kilometres in 96 seconds, which is equal to 75 kilometres per hour, instead of 80. I believe that he is wrong, but I cannot explain just where the

error lies." Perhaps some of our mathematical readers will give their ideas on the subject.

Inconsiderate Drivers.

IN view of the motor-car legislation which cannot be much longer delayed, the Motor Union is issuing a strongly-worded protest with regard to "the crisis into which a few selfish and inconsiderate drivers have this summer plunged the pastime of touring." Apparently as a result of the action of a small minority of motorists a large crop of applications for the restriction of the speed limit of motor-cars has lately been received by the Local Government Board. So general is the demand that Mr. Rees Jeffreys would appear justified in the superlatives which he has used in writing of the position. The Somerset County Council has accepted applications for a ten mile limit in no fewer than twenty-two villages. This is only one instance from the West of England. Similar applications are being made in Hertfordshire, Surrey, Sussex, and other southern districts, while the Kent County Council, which hitherto has consistently refused to apply for speed limits, is now thought likely to accede to such requests from four important districts within its area. More than that, the Bridges and Roads Committee of the county is communicating with the police authorities with a view of severe action being taken to deal with speedy motorists. Under

supported by the trade; and its members should not be discouraged by the uncertainty at present associated with these climbs.

The Scottish Trial.

ELSEWHERE we give the awards in connection with the Scottish Reliability Trial, issued with the celerity that is regarded as a characteristic feature of the organisation of that northern event. The Scottish Club deserve well of the industry, and we trust that in the negotiations now proceeding between that society and the Royal Club in London full allowance will be paid to the position it has obtained in the organisation of such trials. A preliminary communication on the subject from London with regard to next year's event is now under the deliberation of the Trial Committee for report to the Scottish A.C., and altogether there is some uncertainty with regard to the locale of next year's great Trial. But that is anticipating. We have now before us the results of this year's event, and would congratulate the medallists on the proud positions they have attained, while commendation may also be bestowed on many of the other competitors whose loss of marks was due to bad luck rather than inefficiency in their cars. As a matter of fact the vehicles that struggled over the tortuous roads of the Highlands in weather that was as complete a selection of samples as any student of climatic conditions

Negotiating some of the terrible roads of Southland in the depth of winter.

Crossing the Murrumbidgee River on the way to Lake Ta Anan and Milford Sound.

MOTORING IN NEW ZEALAND.

these circumstances the Union is pushing with some vigour the decision of the general committee to place a number of trustworthy agents upon the roads to act with the police in warning drivers of dangerous places and advising motorists when driving through villages and towns where special caution is necessary. The manner in which considerate drivers face the present crisis may in no small measure influence the Government a year hence in their promised legislation, for courage of a high order will be needed on the part of the Legislature to adopt the chief recommendation of the Royal Commission to abolish the speed limit on the open road.

Uniformity wanted in Regulations.

DIFFICULTIES are as frequent as weekly wins in connection with hill climbs, and competitors are urging for some standard definition as to what constitutes a car that will be uniformly welcome at all such competitions. One well-known vehicle that competed at the South Harting climb of the R.A.C. was disqualified at the Shelsley Walsh event of an affiliated club a few days later. In some of these trials grave discontent has arisen owing to the presence of cars in a partially finished condition, while these have been allowed to run in other competitions. Events of this kind are mainly

could desire, demonstrated their reliability in a way to satisfy the ordinary tourist. On the point of the recognition of drivers raised in our columns last week something may well be urged for consideration in future Trials of the kind. Many of the drivers drove as amateurs, undertaking the arduous task from a sporting instinct, and they would greatly appreciate some official souvenir of their success in so important an event. As it remains the majority have to be content with a formal letter of thanks from the firm whose car they steer to honour and profit. And in the case of the professional drivers the recognition would be equally useful, although from a different point of view.

MR. NORMAN GUTTERIDGE, of Ballindune, Haslemere, Surrey, has recently returned from an interesting Continental tour on his 10-12-h.p. Coventry Humber car. He drove it from Naples to Dieppe in seven days, a distance of 1,215 miles. The stages were:—Naples to Rome, 145 miles; Rome to Sierra, 140 miles; Sierra to Parma, 160 miles; Parma to Susa, 181 miles; Susa to Lyons, 179 miles; Lyons to Bourges, 175 miles; and Bourges to Dieppe, 235 miles. The car ran the whole distance without a single involuntary engine stop, three passengers and heavy luggage and spares being carried.

THE LIGHTER SIDE OF TECHNICAL MATTERS.

(Concluded from page 470.)

THE man who is never satisfied with any piece of machinery that comes into his possession until he has taken it to pieces to investigate its interior, usually finding himself in a predicament when it comes to reassembling it, is also responsible for not a few of the gems that go to make up the shining array. One, for instance, bought a motor-cycle, and after he had had his first ride on it—it may have been before, for that matter—started to dismantle it and distribute its various component parts round about the adjacent scenery, so that by no possibility could he find them handily when it came to putting the machine together again. He got the cylinder off and took the piston out, and then and there he made a most wonderful discovery. Every one of the piston rings was broken! He immediately took to pen and ink and wrote the manufacturer of the machine a sermon on the evils of trying to deceive innocent purchasers such as himself by sending out a machine in such a condition. He would please forward a new set of unbroken rings immediately or the motor-cycle would be returned at his expense, and he would be sued for the money!

Another equally good one that concerns the owner of a motor-cycle relates to the oft-used theme of compression. He had

Mr. W. T. Clifford-Earp on his 60-h.p. Thames Car.

had his machine for some time and it had given good service until recently, when it failed to develop its customary power, would not climb hills formerly made light of, and more to the same effect. The owner was the only motor-cyclist for a good many miles round, and his only haven in case of need was a bicycle repairer, whose knowledge of such things probably did not greatly exceed the legitimate allowance, though he correctly diagnosed the case by informing his inquirer that what was needed was "more compression." Whereupon the motor-cyclist, quite satisfied at having learned the trouble, was at pains to sit down and write to the maker requesting that he kindly forward him a "package of compression by express," as the machine was quite useless without it.

This was equalled, if not exceeded, by the plaint of the buyer of a new car who found it impossible to make the motor go, close following of the maker's instruction on every point to the contrary notwithstanding. He then set out to make an investigation on his own account and was quite satisfied that he had found the root of the trouble when, on dismantling the silencer, he discovered a peculiarity of its internal construction with which he was evidently not very familiar. The usual irate letter to the manufacturer telling him how little he knew about motor-cars in general and how very little he knew about the particular one that he had sold or rather palmed off fraudulently to the writer of the letter. "How on earth can you expect me to make your

old machine go," he concluded, "when the pot on the end of the pipe that comes from the motor is as full of holes as a sieve?"

But, after all, the tyro and the beginner are not the only ones who fall by the wayside when it comes to realising the limitations of their own knowledge where the technical side of automobiling is concerned and who fail to go slow until sure of their ground. The foregoing are naturally but a few of the very many stories of this kind that could be told—new ones are coming to light every day, though the old ones seldom fail to bring a laugh. In fact, it would require a small volume to do justice to the number of these tales now current, and many of which are destined to live for years to come, if not as long as the automobile lasts, through the unending repetition that is given them wherever motorists congregate. Many of the stories told of the landlubber and the greenhorn on a yacht are the same to-day as they were a century ago, so it is reasonable to believe that the automobile classics will suffer the same fate.

I presume an apology should really be in order before dragging the following to the light again, as within the inner circle an attempt to tell it is usually heralded with groans, and it is universally regarded as one of the many that will simply not go down. But then the inner circle is a very small thing indeed, and there are doubtless far more motorists who have never heard it than the reverse. It seems that an elderly woman had met with a most peculiar accident in which a motor-car was the chief aggressor. In short, she had simply been run into and knocked down at one of New York's bad traffic spots. She was not killed, nor in fact very badly injured, despite the fact that both her age and the speed of the car in striking her were certainly not in her favour. Had there been no other circumstances connected with the accident it might have passed almost unnoticed as but one of the many that appear to be inevitable, whatever the nature of the vehicle, under such crowded traffic conditions and careless humanity in getting in the way of moving objects. But the car caused the woman to measure her length directly in front of it and then passed over her without the wheels touching her; after it passed her clothing was found to be in a brisk blaze. There must have been an automobile "stringer" on the spot, and he took two of the scribes representing leading New York dailies in tow, and told them all about how it happened. As a result there was a front-page story in two of the next day's morning papers to the effect that a woman had been run down by an automobile and her clothing had caught fire from "a hot coal which dropped from the carburettor." A handy policeman extinguished the flames promptly, but it never developed that he found any hot coals or any ashes to explain the cause of the fire.

It would seem as if the fraternity must have missed an excellent opportunity to perpetuate a good show-time story by not patterning after Mark Twain's amused query at the end of a lengthy and much involved explanation of the working of the automobile from beginning to end. The well-known humorist had requested to be inculcated into the mystery of transforming petrol into speed, and the demonstrator had been at pains to describe every step in the operation down to the last detail, including the characteristics of each part of the mechanism in its function of transmitting the power.

"But what makes the car go?" asked the writer in a most puzzled tone of voice at the end of the long explanation.

Getting into the realm of the demonstrator's and salesmen's stories opens up too broad a trail to pursue much further, as the number of these that can be told is only limited by the memory of the teller. Their name is legion, and a booklet filled with them would make interesting reading. To cite but a single instance, there may be recalled the "spiel" of the new salesman who reduced the explanation of the motor's working to the vernacular. "You see," he said to the seeker after information, "a lump of gas is sucked inside right here, the piston comes up and hits it a whack, the spark jumps in, and there you are."

THE CIRCUIT DES ARDENNES RACES.

THE first of the three races on the Ardennes circuit organised by the Belgian Automobile Club was held on the 25th ult. The rules, which were the same as those for the recent Kaiser's Prize contest, provided that the engines should have a cylinder capacity not larger than 8 litres, the weight of the car not to exceed 1,175 kilogs. The race took place over a circuit which, starting and finishing at Bastogne, took in Longlier, Leglise, Habay-la-Neuve, and Martelange, a distance of 85.7 kilometres. The course had to be covered seven times, giving a total of, roundly, 600 kilometres or 375 miles. Twenty-five entries had been received, and of these the following twenty-three actually started, being despatched at minute intervals from 5 a.m.:-

47 min. 59 sec.—in fact, it proved the fastest of the day—had now run into the first place, being nearly five minutes in advance of Wilhelm (Metallurgique), who was followed by Hautvast, Moore-Brabazon, Jenatzy, and Warwick Wright in the order named.

The success of the Minervas was foreshadowed at the end of the fourth lap, when Lee Guinness still led, with Moore-Brabazon and Koolhoven in the second and third places respectively. Hautvast, who led for two rounds, turned over at a dangerous corner at Habay-la-Neuve and was forced to retire, as did also Jenatzy at Martelange, two of the Pipes being thus put out of the running. The pace perceptibly slackened, the best

The Circuit des Ardennes (German Club rules).—Moore-Brabazon, the winner, on his Minerva Car at Longlier.

No.	Driver.	Car.	No.	Driver.	Car.
1.	Warwick Wright	Minerva.	13.	De Guise	Imperia.
2.	Hieronymus	Gaggenau.	14.	Hanriot	Benz.
3.	Glaisinger	Adler.	15.	Deplus	Pipe.
4.	Vallee	Aries.	16.	Moore-Brabazon	Minerva.
5.	Schulz	Imperia.	17.	Picoli	Gaggenau.
6.	Hemery	Benz.	18.	Bartel	Adler.
7.	Hautvast	Pipe.	19.	Henze	Imperia.
8.	Wilhelm	Metallurgique.	20.	Spamann	Benz.
9.	Koolhoven	Minerva.	21.	Jenatzy	Pipe.
10.	Robl	Gaggenau.	22.	Lee Guinness	Minerva.
11.	Adelberger	Adler.	23.	Pilette	Mercedés.
12.	Villemain	Aries.			

As will be seen from the above, France was represented by only two cars, Germany by ten and Belgium by eleven, interest in the latter from a British point of view being increased from the fact that three of the Minervas were driven by well-known English motorists. Hautvast (Pipe) made the best time in the first round, 48 min. 38 sec., Jenatzy, also on a Pipe, being second and Lee Guinness (Minerva) third. Twenty-one competitors finished the lap, those that retired being Villemain (Aries) and Picoli (Gaggenau). At the end of the second circuit Hautvast was still leading, but Lee Guinness, who made the fastest time, had run into second place, being 34 sec. behind, Jenatzy being third, and Deplus (Pipe) fourth. Seventeen cars were round within the hour. De Guise (Imperia) was held up for sometime, and Glaisinger (Adler), Vallee on the second Aries, and Hemery (Benz), retired. Only one competitor fell out in the third circuit—Spamann on the third Benz. Lee Guinness, who made another fast lap—

time to the credit of Koolhoven being only 51 min. 57 sec. The fifth lap saw no change in the two first places. Hanriot, the well-known French driver, seen at the wheel of a German car for the first time, was travelling well on his Benz, and had driven it into the third position, beating Koolhoven by a minute. Robl (Gaggenau) who had been considerably delayed in the fourth circuit, finally gave up, Deplus on the third Pipe following his example. Lee Guinness still led at the end of the sixth round, but there were several changes in the other places. Moore-Brabazon fell back to fourth, but Koolhoven took his place, the only serious competitor being Hanriot (Benz), who was only four minutes behind the leader. The field was reduced to eleven competitors by the retirement of Adelberger and Bartel, both on Adlers. Although the outlook at this time was decidedly in favour of a Minerva success, the last lap brought several unlooked-for changes. The pace quickened, and although Lee Guinness fell back, Moore-Brabazon got round in 49 min. 42 sec., securing for him the honour of winning the race, the result of which is shown below:-

No.	Driver.	Car.	Time.
			H. m. s.
1.	Moore-Brabazon	Minerva	6 14 5
2.	Koolhoven	Minerva	6 14 32
3.	Lee Guinness	Minerva	6 15 24
4.	Hanriot	Benz	6 16 5
5.	Hieronymus	Gaggenau	6 23 27
6.	Warwick Wright	Minerva	6 27 54

Moore-Brabazon's average speed works out at sixty miles per hour. The result of the race is an excellent testimony to

D

the reliability and excellent design and construction of the Minerva cars, which formed a new record by scoring a triple victory. As will be seen, there was only a difference of 1 min. 21 sec. between the three. The course had to be opened for public traffic at mid-day, at which time five competitors, in addition to the six above-named, were still running, viz., Wilhelm (Metallurgique), De Guise, Henze, and Schultz (all three on Imperias), and Pilette (Mercedes).

The Motor Bicycle Race.

The meeting was continued on Friday with the race for motor-cycles. There were twenty-three starters for the event, in which the competitors had to make two circuits of the course by way of Habay-la-Neuve, Corne du Bois des Perdus, and Martelange, back to Bastogne, making a total distance of 171.428 kiloms. The best time of the day was made by Coutant on a Werner, his time being 2 hrs. 24 min. 14 sec.

The Circuit des Ardennes (A.C.B. Rules).

On Saturday was devoted to the Circuit des Ardennes contest, under the Belgian Club rules, and the Liedekerke Cup race, they being run off concurrently. The first named event was one of speed only, the regulations being reduced to an irreducible minimum. In other words, any vehicle was eligible, there being no restrictions either as to weight, cylinder capacity, fuel consumption, &c. The contest was over a distance of 375 miles,

Mr. P. L. D. Perry on the Ford Junior 15-h.p. Four-Cylinder Car which won the Gold Medal in Class B Open Section in the recent Reliability Trials of the Irish Automobile Club.

representing seven laps. Thirteen entries had been received, but at the last moment forfeit was declared in respect of three Lorraine-Dietrichs and four Clement-Bayards owing, it is stated, to the lack of interest shown in the race by French builders. This left only six to face the starter, who were despatched at minute intervals from 5 a.m. in the following order:—

No.	Driver.	Car.
1.	Pryce Harrison Weigel.
2.	Lee Guinness Darracq.
3.	Mercedes De Caters.
4.	Laminne De Laminne-Duchene.
5.	Laxen Weigel.
6.	Jenatzy Mercedes.

Jenatzy led at the end of the first round, making the fastest circuit of the day (47 min 48 sec.), but at the termination of the second lap De Caters was seventeen minutes in front of him, with Lee Guinness in the second place. The order was unchanged at the completion of the third circuit, but in the fourth Lee Guinness ran into first place, having nearly three minutes in hand. No alteration took place in the fifth and sixth laps. Pryce Harrison gave up in the penultimate round; both he and Laxen on the second Weigel are stated to have suffered from tyre troubles, the former puncturing as many as three times in one lap. The struggle

between the Darracq and the Mercedes was exceedingly keen throughout the race, and in the final circuit De Caters got round in four minutes less than Lee Guinness, winning the event by the narrow margin of one minute. The result is appended:—

No.	Driver.	Car.	Time. H. m. s.
1.	De Caters	Mercedes	6 29 10
2.	Lee Guinness	Darracq	6 30 34
3.	Jenatzy	Mercedes	6 49 40
4.	De Laminne	De Laminne-Duchene	7 22 20

De Caters' average speed works out at 57.8 miles per hour.

The Liedekerke Cup.

The annual contest for the Liedekerke cup, which was to have been held on the 26th ult., had to be postponed, owing to a fog, until Saturday. This race is for touring cars fitted with fully-equipped four-seated bodies and engines of a capacity of not more than 3.75 litres. Two persons—the driver and mechanic—had to be carried as well as ballast to represent a total passenger load of 280 kilogs. Six rounds of the Ardennes Circuit had to be made, giving a total of 321 miles. The nine competitors—all Belgian—were sent off in the following order, immediately after the competitors for the Ardennes Circuit had been despatched:—

No.	Driver.	Car.
1.	Fischer	Vivinus.
2.	Wilhelm	Metallurgique.
3.	Moore-Brabazon	Minerva.
4.	Wilford	Vivinus.
5.	Ricken	Metallurgique.
6.	Elskamp	Minerva.
7.	Pilette	Vivinus.
8.	Jaeger	Metallurgique.
9.	Porlier	Minerva.

Two Metallurgique cars, driven by Ricken and Wilhelm, led at the end of the first lap. They were passed, however, by the Minervas in the second, when Porlier took the first place and Moore-Brabazon the second. From this time onwards the race resulted in a struggle between the two Minerva drivers, Moore-Brabazon being slightly in front at the end of the fourth circuit, but falling into second place in the final. Jaeger retired in the second lap, owing to upsetting at Bastogne, Wilhelm in the third, and Ricken, all driving Metallurgiques, in the fifth. The result of the race was:—

No.	Driver.	Car.	Time. H. m. s.
1.	Porlier	Minerva	6 40 11
2.	Moore-Brabazon	Minerva	6 40 46
3.	Wilford	Vivinus	7 15 25
4.	Fischer	Vivinus	7 25 47

Elskamp (Minerva) and Pilette (Vivinus), although still running, had not finished the sixth lap when the race was called off. The average speed of the winner works out at 48.2 miles per hour. The outstanding feature of the meeting was, of course, the success of the Minerva vehicles—the achievement of securing the first three places in one event and two in another being one that is hardly likely to be repeated for a long time to come. Not only so, but the equal running of the vehicles is worthy of more than passing note—in the big car race on the 25th ult. there was only 27 sec. difference between the first two cars in a distance of 375 miles, and in the Liedekerke Cup 35 sec. was all that separated the first two drivers at the end of 321 miles.

A USEFUL Glossary of Technical and Commercial Terms, Words and Phrases in English, French, and German has been compiled by Mr. H. R. Carter, and published by Mr. Robert Sutton, 43, The Exchange, Southwark Street, London, S.E. The words are arranged in equal columns, those in English being given in alphabetical order, and, so far as we have tested them, the equivalents in French and German have been reliably compiled. Several pages at the end are devoted to some useful tables showing the metrical equivalents of British weights and measures. The book is published at a relatively low price, and should form a serviceable addition to the reference library of engineers and others concerned with the international engineering trade.

ACCORDING to a Central News telegram from New York it has been decided not to hold a race for the Vanderbilt Cup this autumn.

WHILE practising on the Brooklands track, Mr. F. Draper, who was a driver of one of the Napiers during Mr. Edge's twenty-four hours' record ride, sustained injuries owing to his car overturning. We are glad to hear he is progressing favourably.

SEVERAL motor-wagons were surrounded by strikers at Belfast during the last few days in their efforts to prevent the carrying of goods belonging to the local railway companies; but few stood in their way.

THE following is a summary of last week's runs of the Hotchkiss six-cylinder car under the observation of the R.A.C.:—July 22nd, Cromer to Leicester, 168 miles; July 23rd, Leicester to Hull, 160 miles; July 24th, Hull, Beverley, Thirsk, York, Hull, 150 miles; July 25th, Hull, York, Caterick Bridge, Thirsk, Hull, 150 miles; July 26th, Hull, Beverley, Doncaster, Nottingham, 154 miles; and July 27th, Nottingham to London, 130 miles—the week's total of 912 miles being made without involuntary stoppage. The total mileage in Great Britain and Ireland has now amounted to 11,969, and of this 7,442 miles have been covered without involuntary stoppage of any description, thus breaking the previous World's Record of 7,089 miles.

MR. HUNTLEY WALKER, when driving his Darracq racer from Boulogne to Brussels last week, to take part in the Ardennes races, met with an exciting incident. It was just getting dark, and a sharp turn in the road revealed the closed gates of a level crossing. Mr. Walker's car was travelling at a fast pace, and was followed closely by another Darracq. Instant decision was necessary, and observing no obstruction but the closed gates, Mr. Huntley Walker resolved to drive through, smashing the gates to matchwood. The car was overturned by the shock, and Mr. Walker was flung into a field, but escaped serious injury. The driver of the second car applied his brakes suddenly, causing the car to swerve, and finally it dashed into the gatekeeper's house. The driver and his mechanic were both injured, and were sent on by train to Brussels, while Mr. Walker, after having a spare wheel fitted to his car, continued his journey by road.

ARA, LIMITED, have now opened a branch office at 100, Long Acre, London, W.C., where demonstrations are being given of their simple yet ingenious method of repairing the inner tubes and outer covers by cold vulcanization. We called in the other day and witnessed the operation of repairing a punctured inner tube, which occupies relatively so little time that it can easily be performed on the road-side. Indeed, the Aralising outfit, as it is called, occupies so small a space that it can readily be carried on the car ready for any emergency. The principal feature of the process is the use of what the firm call "concrete" rubber—small slips of rubber—a sufficient number of which to repair the cut in the cover or puncture in the tube is placed in a little receptacle known as an extruder. The whole is now dipped for ten seconds into a special vulcanizing solution, and then for a similar period in a second solution to remove any trace of acid. The concrete rubber is thus transformed into a very soft form of bulk rubber and is ready to be placed in position. The extruder containing the material is fixed over the cut or puncture and, by means of a metal bridge piece and screw, the prepared rubber is forced on to the desired part. After being left for a few minutes the extruder is removed, when it will be found that the insertion has become part and parcel of the tube or cover, evidence of which was afforded us by cutting through a section of the repaired tube. The Aralising outfit has already met with a large adoption, and as it becomes better known is like to prove exceedingly popular among motorists—especially those in the country who may be some distance from a tyre-repairing establishment. The complete outfit has been put on the market at a moderate figure, and an extra supply of the repairing materials can readily be obtained, when necessary, at equally low rates.

HERE AND THERE.

To relieve the pressure at their depot in Brook Street, W., Messrs. J. Keele and Co. have opened an additional garage at 17, Hanover Square, W.

SIR CLIFTON ROBINSON is the chairman of the Surface

Transport Committee which has been formed in connection with the Franco-British Exhibition at Shepherd's Bush, London, next year.

THE General Committee of the Scottish Automobile Club has remitted to its Trial Committee a communication from the R.A.C. with regard to the proposed 2,000 miles Reliability Trial next year. It will be considered by the Committee when those responsible for the Trial have reported on the matter.

THE eliminating race to choose three British representatives to defend the British International Motor Boat Cup was held on Saturday in Southampton Water. The course had to be covered five times, making a total distance of thirty-two nautical miles. Daimler II. finished first, her time for the five rounds being 1 h. 30 min. 50.4-5 sec.; Daimler I. was second, time 1 h. 34 min. 36.2-5 sec.; Daimler III. completed the race in 1 h. 43 min. 16.2-5 sec. These three boats are owned by Lord Howard de Walden.

THE accompanying illustrations depict a new method of fitting the patent terminals recently introduced by Messrs. Chater Lea, Ltd. The terminals are usually fitted by slipping the tubular portion over the insulation of the cable. The improved way is to file the edge of the tubular portion so that it is moderately sharp; the wire is bared in the ordinary way, and by wetting the terminal and screwing it into the rubber an

excellent joint is made which will hold fast without flattening the end, although the makers strongly advise that this should be done in addition. The advantage of this method of fixing is that there is very little metal exposed, so that there is no chance of the terminal eyes touching on accumulators or any other part where close together, and also it permits small-size terminals to be used with large diameter cables.

MR. J. G. GROSE, of Northampton, whose motoring experience dates from the early days of the movement, has lately acquired a 28-40-h.p. Zusta car, with side-entrance double-phæton body, from the Farman Automobile Company, Ltd. Mr. Grose drove the car from London to Northampton by road, and has already expressed his satisfaction with his new Italian-built vehicle.

WE have received a copy of the handsome Godiva Souvenir presented by the Daimler Company to the Organising Committee of the Godiva Procession, which is to take place in Coventry on the 7th inst. The Daimler is the only advertisement in the book, this being due to the fact that the Daimler Company have been entirely unsupported by other firms in their endeavour to support the Coventry and Warwickshire Hospital. The consequence is that the whole expense of the reproduction has been thrown on their shoulders. The presentation amounts to a sum of £735 to the hospital, and this, taken in conjunction with the fact that they have recently presented a Daimler car valued at £740 to the same hospital, indicates the interest the Daimler Company is taking in the general welfare of the city of spires. The firm is also taking part in the procession itself with a Renard Train and other vehicles. Considerable interest is being shown in the event.

THE accompanying illustration depicts the new Ford four-seated four-cylinder car which Messrs. Perry, Thornton and Schreiber, Ltd., of Long Acre, London, W.C., have just put on the market to meet the demand for such a vehicle at a moderate price. The chassis is identical with that of the Ford Junior, which, introduced into this country a year or so ago, is now a well-known type. The motive power is supplied by a four-cylinder engine $3\frac{1}{2}$ in. bore by $3\frac{3}{4}$ in. stroke, and rated at 15-h.p. Two speeds and a reverse are provided, the transmission being through an improved form of planetary or epicyclic change-speed

gear, cardan shaft, and bevel gear to a rear live axle. The latter runs on roller bearings. The body is of the double phaeton type, the entrance to the rear portion being through a swinging front seat. Before placing the new model on the market the firm have submitted it to several exhaustive tests, amongst others being that of the Scottish Reliability Trials, when one of the machines, carrying four passengers and luggage, ran through the whole trials without any stop for mechanical troubles, and made the fastest time in its class in the hill climb at Trinafour Hill.

THE Straker-Squire Company have recently supplied a number of motor char-a-bancs to the Cairo Public Motor Car Company, Limited.

THE Daimler Company's list of royal clients now includes H.R.H. the Duke of Connaught, who has placed an order for a 30-h.p. Daimler chassis of $10\frac{1}{2}$ ft. wheel base.

THE United States Department of Agriculture has published a bulletin on "The Construction of Macadam Roads," by Mr. Austin B. Fletcher, special agent of the Office of Public Roads and Secretary of the Massachusetts Highway Commission.

MOTORISTS who are touring in Sussex and are including Pulborough in their itinerary will do well to proceed carefully through the village, as not only is there a sharp descent but there are some very dangerous and narrow turns to be negotiated.

ALL three White steam cars entered in the Glidden tour of sixteen hundred miles over all kinds of roads have made perfect scores. The model "G." touring car and model "H." touring car had perfect records for the Glidden Trophy, and model "G." runabout was equally successful for the Hower Trophy.

ON a meadow near the beginning of the Trinafour hill climb in the Scottish Trial a motor-car was observed having broken its chain—apparently owing to neglect of the same—and providing an object lesson in the necessity of frequent and regular overhauling of every part of the car. As usually happens, its cargo on that occasion consisted of Pressmen anxious to save time.

IN a case heard at Bristol conflicting evidence has been given as to the effect of creosote fumes on flowers. The gardener in charge of the grounds at Hyde Park stated that wind from the direction of a newly-tarred road will kill flowers and shrubs. On the other hand, an experiment by Mr. Stoddart, the Bristol analyst, showed that a plant could be kept for several weeks under a glass case with two ounces of raw creosote without being killed.

APPARENTLY the "Daily Chronicle" has opened its columns again for a correspondence in which slow moving members of the public may write recklessly with regard to motor-cars.

MESSRS. GRIFFIN AND SLEAT have opened a motor garage and repair works in the Pevensey Road, Terminus Road, Eastbourne.

PREVIOUSLY to taking part in the Scottish Trial, the 14-h.p. Vulcan, driven by Mr. T. Rimmer, successfully competed on Saltburn sands.

REV. J. PAGE HOPPS, of Shepperton, suggests that motor-cars capable of exceeding a speed of fifteen miles per hour should not be allowed upon British roads.

THE Itala Automobiles, Ltd., have issued an interesting pamphlet describing Mr. H. R. Pope's recent record run from Monte Carlo to London on the 40-h.p. Itala car.

THE Buick Motor Co., Flint, Michigan, U.S.A., have just appointed an agency for Australia, Tasmania and New Zealand, and another for the Argentine Republic, Uruguay and Brazil.

THE Sirdar Sahab Appa Sitole of Gwalior has recently acquired a 15-h.p. Siddeley car. The Wolseley Company have also received through the K. and S. Cycle and Motor Company of Bombay an order for a Siddeley car for the Maharajah of Bikanor.

THE secretary of the Widnes and Runcorn Bridge Transport Co. sends us an interesting postcard with a map showing the convenience to motorists afforded by that particular bridge, the motor-car tolls for which are 8d. for the single journey, and 1s. for the return.

LORD SALTOUN'S chauffeur took his employer's car out without permission and assaulted a policeman. Result, six weeks' imprisonment, with hard labour. Owners of vehicles should exercise stringent control over their vehicles, so that drivers should not be allowed to indulge in these escapades.

MESSRS. A. P. LUNDBERG AND SONS, of the Pioneer Electrical Works, Liverpool Road, London, N., send us particulars of the new "Torpin" combination switch and charging plug they have lately introduced for use in connection with the charging of ignition accumulators from direct-current house circuits.

MESSRS. HUMBER, LTD., have now a quintette of depots in London: on Holborn Viaduct, in Eagle Street, Brooke Street, Holborn, Cambridge Place, Paddington, and in the Brompton Road. The latter is at 60-64, and comprises a splendidly arranged showroom for the productions of the Beeston and the Coventry works.

MOST of those participating in the Scottish trials went northward from London by the L. and N.W. Railway on the Sunday night preceding the event, while the night train on the last day brought back a full contingent of journalists and others recognising that the excellent service to Euston enabled them to breakfast in town, while the motorists were steadily pursuing their way over Shap and other desolate places.

The 35-h.p. Iris Car which won the Gold Medal in Class VI. in the Scottish Trials.

It will be remembered that Mr. Joseph Taylor waged a long war against the Corporation of Maidenhead with reference to the tolls for crossing the bridge. His agitation resulted in an inquiry being held by the Charity Commissioners in November, 1902, at which it was admitted that the tolls were irregular. Litigation occurred later and costs were given against him in February, 1905. Mr. Taylor appealed and has just obtained a reversal of that judgment.

CONTINENTAL NOTES.

A German Industrial Vehicle Reliability Trial.

The German Imperial Automobile Club, in conjunction with the German Society of Motor Manufacturers, is organising a six days' reliability trial of public service and industrial motor vehicles, to be held at the end of September or the beginning of October next. The competitors will be divided into the following six classes:—Class 1, covered public service vehicles capable of seating at least twelve persons. Class 2, delivery vehicles of a carrying capacity between 750 and 1,500 kilog. Class B, ditto, between 1,500 and 2,500 kilog. Class 4, ditto, between 2,500 and 4,000 kilog. Class 5, ditto, over 4,000 kilog., and Class 6 motor road trains. The vehicles in Classes 1 and 2 will have to cover an average daily distance of between 150 and 180 kilometres; in Classes 3 and 4, between 100 and 120 kilometres; and Classes 5 and 6, 100 kilometres in the case of rubber tyred cars, and 80 kilog. for those with iron tyres. The contest is open

item is an allowance of 86 centimes per horse power per day, the War Department supplying the fuel, lubricating oil and grease. Two men are to be supplied with each wagon; they will be paid 2½ francs per day, and the time they are on duty will be reckoned as part of their military service.

Belgian Motor-car Imports and Exports.

To the end of June last the imports of foreign motor-cars and parts into Belgium this year had attained a value of £99,276, as contrasted with only £90,956 in the first half of 1906. During the same period the exports of motor-cars and parts from Belgium increased from £203,444 to £220,784.

The Motor Movement in Russia.

With the object of developing the motor movement in

The Circuit des Ardennes (A.C.B. rules).—Laxon on the Weigel Car at the turn at Bastogne.

to machines using any form of fuel, and entries from firms only can be made up to September 1st at £15 per vehicle for any of the classes, except No. 2, for which the fee is only £10.

Motor Vehicles in the French Army.

The French Ministry of War has informed the A.C.F. that it has decided to purchase the five lorries—two Darracq-Serpollets, a De Dion, a Mors and a Turgan—which gained distinction in the recent heavy vehicle competition. It has also been decided to make some important trials during the forthcoming military manoeuvres by employing motor-wagons in the commissariat department of the 12th and 18th army corps. The operations will extend over twelve days, and be held in the Bordeaux, Angoulême and Limoges districts. It is estimated that forty lorries capable of carrying a load of 3 tons per axle will be required, and the terms which the authorities are prepared to allow those manufacturers who are desirous of furnishing vehicles have just been made known. The principal

Russia a company has just been formed in St. Petersburg under the auspices of a large German bank. It is proposed to organise services in different parts of the country for the transport of both passengers and goods, and also to introduce a number of motor-cabs in St. Petersburg.

Miscellaneous Items.

A report is again current that a large racing track is to be established near Paris.—The Swiss Army authorities announce that they desire to hire several motor-wagons capable of carrying two and a half tons for the approaching manoeuvres of the First Army Corps.—A company has just been formed in Vienna to establish works for the manufacture of Fiat cars in Austria.—The touring car contest for the Rochet-Schneider Cup, organised by the Automobile Club d'Auvergne, is to be held on the 19th inst. So far sixteen entries have been received.—Three Mors cars left Paris on Monday on a 10,000 kilometre tour of France, Spain, and Belgium.

SPEED RECORDERS.

WE recently spent an interesting hour in the London showroom of Messrs. Markt and Co., at 6, City Road, Finsbury Square, E.C., extending our knowledge of the various devices for recording the speed and mileage of automobiles. The "Jones" speedometer is well known, and has often been employed with success by motorists giving evidence in police courts—so that it has legal value as well as mechanical merits. This is made in several useful combinations, notably with a maximum hand. It has, in addition to the regular black variable speed band, a maximum speed hand of a distinctive red colour which moves forward, always indicating the maximum rate reached by the car. A touch on the resetting stem releases the hand, which drops automatically and instantaneously to the speed at which the car is then travelling, remaining there even when the vehicle is stopped. A single turn of the resetting stem dispenses with this feature of the device, and causes both hands to act as one, showing variable speed only. An important consideration, in view of the frequent unauthorised use of cars by chauffeurs, is that the resetting stem may be sealed so that the use of the car in the owner's absence or without his knowledge can be disclosed.

Another interesting combination is that known as the "Jones" triplet, which consists of a fifty-mile speedometer-odometer, clock, and annunciator with electric light attachment, securing complete control on the part of the owner of the car over his driver when making a trip. We were also shown the new "Veeder" odometer illustrated in the accompanying sketch. This provides the motorist with a really accurate and satisfactory mileage recorder at a very moderate cost. It is suitable for any type of car, and can be easily attached to the outside of the hub cap or oil cap, the odometer being adjustable on its plate. The striking-pin standard is fitted through a hole drilled in the centre of the hub cap and screwed into the end of the axle, or fixed by a nut. The striking pin is adjustable on its standard to suit the size of the hub cap. Its ease of attachment, as well as its unobtrusive appearance, are points of advantage, to which accuracy and reliability may be added with assurance.

DURING the recent visit of the French officers to Windsor Castle, General Michet, owing to the breakdown of his own car, made use of the Daimler owned by Lord Esher.

THE SCOTTISH RELIABILITY TRIAL.

WE give on page 499 the results of the Scottish Reliability Trial which took place north of the Tweed in June, and which was fully described in our issue of July 6th. The highest number of marks possible was 1,000 on the following basis:—For reliability, 750; starting, 50; results in the hill-climbing tests, 100; fuel consumption, 100. The trial was over a course of 747 5-8 miles and occupied five days. The committee of the Scottish A.C., which organised the event, are of opinion that the satisfactory results of the Trial should be a source of gratification to the automobile industry in general, and point out that the performance of the vehicles in Class 1, and the fact that every car entered in that class completed the entire trials is especially worthy of note.

The Gold Medals have been gained by, and are awarded to:—

CLASS 1.—Vehicles, the selling price of the chassis of which, with tyres, does not exceed £200.

10-12-h.p. **Swift**, entered by Mr. Robert Burns, Swift Motor Company, Ltd., and driven by Mr. James Low. This gained 978·4 marks.

CLASS 2.—Vehicles, the selling price of the chassis of which, with tyres, exceeds £200 but does not exceed £300.

18-h.p. **Mass**, entered by the Lancaster Motor Garage, and driven by Mr. M. L. Livings. This gained 966·5 marks.

CLASS 3.—Vehicles, the selling price of the chassis of which, with tyres, exceeds £300 but does not exceed £400.

20-h.p. **Belsize**, entered by Mrs. Ed. A. Riley, and driven by her. This gained 966·375 marks.

15-h.p. **Coventry Humber**, entered by Mr. Walter Phillips, and driven by Mr. Wm. Tuck. This gained 964·2 marks.

CLASS 4.—Vehicles, the selling price of the chassis of which, with tyres, exceeds £400 but does not exceed £500.

24-h.p. **Mass**, entered by the Lancaster Motor Garage, and driven by Lieut. W. R. Ledgard. This gained 983·2 marks.

30-h.p. **Beeston Humber**, entered by Mr. T. C. Pullinger, Humber, Ltd., Beeston (Notts), and driven by Mr. James Reid. This gained 982·8 marks.

CLASS 5.—Vehicles, the selling price of the chassis of which, with tyres, exceeds £500 but does not exceed £600.

28-38-h.p. **Ariel Simplex**, entered by Ariel Motors (1906) Ltd., and driven by Mr. T. Cordery. This gained 995·4 marks.

CLASS 6.—Vehicles, the selling price of the chassis of which, with tyres, exceeds £600 but does not exceed £800.

35-h.p. **Iris**, entered by Iris Cars, Ltd., driven by Mr. Arthur Earp. This gained 964·5 marks.

CLASS 7.—Vehicles, the selling price of the chassis of which, with tyres, exceeds £800.

40-50-h.p. **Rolls-Royce**, entered by Rolls-Royce, Ltd., and driven by Mr. Claude Johnson. This gained 976 marks.

The Scottish Cup, for the vehicle showing the lowest fuel consumption per ton mile over the whole Trial, has been gained by the 24-30-h.p. New Arrol-Johnston, driven by Mr. Walter S. Macharg, with a consumption of 0·2413 gallons per ton mile, equal to 41·44 ton miles per gallon of fuel.

The Scottish Motor Trade Association, Ltd., Prize, for the vehicle entered by a member of that association showing the lowest fuel consumption per ton mile, has been gained by the 14-h.p. Thornycroft, driven by Mr. Tom Thornycroft, with a consumption of 0·2827 gallons per ton mile, equal to 35·37 ton miles per gallon of fuel.

No vehicle fell to be penalised for stops due to tyre troubles.

MR. HUTTON, the magistrate at Greenwich, told a motorist in court the other day that, whilst he (the stipendiary) knew nothing about cars, he was on the Bench for the purpose of teaching speed.

WE learn from Paris that the Argyll car—a 40-h.p.—which has been entered for the Criterium de France and La Coupe de la Presse will be driven by M. Jules Dubois, whose manipulation of a little Decauville in the 1,000 miles trial of 1900 in this country will be remembered by those who took part in that epoch-marking event.

OFFICIALDOM was kind throughout the Scottish Trial, and in many places the police not only assisted to point the cars the way but waved the flag of danger or of direction. Mr. Claude Johnson had the Chief Constable of Elginshire on his car from Granton to Inverness, and the road surveyor of the county rode from Aberdeen to Inverness on one of the two Austin cars which made non-stop runs throughout the Trial.

THE SCOTTISH RELIABILITY TRIALS.

SUMMARY OF RESULTS—IN ORDER OF TOTAL MARKS GAINED.

Official No.	Description of Car.	Car Miles per Gallon.	Marks for Reliability.	Marks gained for Fuel Consumption.	Marks gained for Hill Climbs.	Total Marks gained.	Official No.	Description of Car.	Car Miles per Gallon.	Marks for Reliability.	Marks gained for Fuel Consumption.	Marks gained for Hill Climbs.	Total Marks gained.
CLASS 1 (not exceeding £200).							CLASS 5 (exceeding £500, but not exceeding £600).						
60	10-12-h.p. Swift, G.M.	34.57	779	100.0	99.4	978.4	40	28-38-h.p. Ariel-Simplex, G.M.	19.29	798	97.4	100.0	995.4

FROM the Russa Engineering Works, of Calcutta, we have received a copy of the motor-car catalogue they have lately issued. It gives a description of their garage and repair plant, as well as illustrations of the same, from which we gather the firm have a well-equipped establishment. The remaining pages are devoted to particulars and illustrations of the Ford, Clement-Talbot, Albion, and Darracq cars, for which they are agents.

MESSRS. BRENCLEY BROS. AND HOLMAN, the Humber agents in Folkestone and Ashford, have just supplied a Beeston-Humber landaulet to Colonel T. J. Congdon, who figured so prominently at the battle of Khartoum, and a 15-h.p. Coventry-Humber to Canon Tindall, of Ashford, Kent, and they are also now executing an order for a 15-h.p. landaulet for Mr. Laurence Hardy, M.P., of Sandringham Park, Hythe.

THE MOTOR FUEL PROBLEM.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As one of the witnesses who gave evidence recently before the Fuels Committee of the Motor Union with reference to the question of the supply of petrol, I would ask your indulgence while I make one or two explanations which are necessary in view of the publication of the recommendations of the Fuels Committee. The subject has naturally received careful consideration from myself as being closely associated with the petroleum industry, and it may be recollected that at two sittings of the committee I put forward evidence which has led the committee to frame two of their recommendations. In the committee's report, just published, I note with considerable surprise that they state the optimistic views which I hold as to there being no possibility of a shortage of crude oil for many years to come are not supported by the information they have obtained.

It is very regrettable that the committee have not seen their way to divulge this information, which apparently is contradictory to mine on this point; but, as having devoted considerable time to this subject of oil production, I am confident that my contentions cannot be refuted by facts. I have again and again made it clear that if the motorist will only go in for adopting generally a spirit of heavier gravity, then a dearth of supply is removed from the bounds of possibility, while at the same time a reduction in the price of the article is tolerably certain. Upon this matter, as upon others, to which I will refer later, it appears to me that the committee has been "totally at sea."

By way of corroborating the statements I made before the com-

This car seen in the above illustration has not broken down. It depicts Mr. M. F. Miville's Peugeot. Owing to this gentleman's activity in endeavouring to warn motorists of the traps, the police have openly vowed to catch him if they can. Therefore, on coming to a measured distance, he deliberately gets down and pushes his car through the trap.

mittee, I need only say that once this heavier grade of motor spirit is recognised as being suitable for all cars, our markets are at once opened to a class of benzine which has hitherto been shut out. Roumanian spirit, for instance, could be supplied in almost limitless quantities, and the present production of oil in that country would allow of a quantity being exported sufficient to meet all European demands. To-day Roumania alone is capable of supplying no less than 90,000,000 gallons of this motor spirit. I simply mention this to show that when the committee say that my optimistic views cannot be supported, they totally ignore all facts which corroborate my statements. I am very pleased to note that this heavier spirit is now being accepted by many motorists, and consequently there is every reason to hope that this, in itself, will permanently solve the motor fuel problem. As to price, there is no doubt that when this heavier spirit comes more into general use prices will decline, and as evidence of this we see that during the past few days petrol has dropped 1d. per gallon throughout the land.

I now come to chiefly deal with that portion of the committee's report which deals with the alternative fuels to petrol. It is not for me to say whether the committee has been biased in favour of finding, at any cost, some substitute for petrol, but many of their recommendations not only show a remarkably optimistic view in favour of alternative fuels, but are nothing more nor less than absurd and impracticable propositions. "Alcohol," says the committee, "is the one of all the liquid fuels considered that holds out the greatest promise." But the Committee abstain from giving any reason which led them to come to this conclusion. Personally, I totally fail to see how alcohol can ever stand the slightest chance of competing with petrol in this country; for, after all, the question must of necessity narrow itself down to that of

£ s. d., and, as the committee puts it, "the best way of ensuring that the price of petrol shall not become excessive is to have available a fuel that can compete with it, and that can be produced at a moderate price in unlimited quantities." Now, according to the committee's own argument, the calorific value of methyl alcohol is 11,300 b.t.u., and that of petrol 20,300 b.t.u. This being so, the value of alcohol to the motorist is about one-half that of petrol, and not, as the committee say, two-thirds. Upon the question of the cost of alcohol the committee is judiciously very silent, and although it comes to the conclusion that it can be produced at a moderate price, we are all left to guess what that price would be, or how it is arrived at. Seeing that the calorific value of alcohol is about half that of petrol, it stands to reason that the cost to consumers must be 50 per cent. less volume for volume. Going upon volume also, we know that in the oil trade, with the most perfect organisation for distribution, the necessary expenditure, after petrol has reached this country, is about 2d. per gallon before it reaches the consumer, and inasmuch as seeing that about double the quantity of alcohol would be required as compared with petrol, volume for volume, it is very easy to see that, so far as competing in price with petrol, alcohol can never hope to make any headway in this country. As I say, in the face of these facts, one cannot reconcile the conclusions of the Fuels Committee, or see why, in its first recommendation, it is so optimistic regarding alcohol.

The committee also looks upon benzol as solving the fuel problem, and urges that the notice of the members of the Motor Union should be directed to its use, as, apart from benzol being a home production, it can be used with complete success in the present type of engine. Then it goes on to make the following remarkable statement:—"There are firms in this country who are willing, should there be a largely increased demand for benzol, to erect benzol recovery plants in connection with coke ovens and similar appliances for the treatment of coal; the erection of such plants would mean within twelve months an increase of benzol produced in this country of approximately five million gallons per annum, which is equal to doubling the present supply."

I will take the figures of the Fuels Committee for defeating its own arguments. Approximately the present production of benzol in this country is 2,500,000 gallons per annum, and for years past this has been the quantity that has been sold in this country for the making of aniline dyes. Now, is it reasonable to assume that there is not being more benzol recovered because it cannot find a ready market? It is true that the quantity could be increased by the erection of special and expensive washing plant, but to what extent? As I have previously pointed out, the maximum quantity of benzol that can be recovered is about 2 lb. per ton of coal, and surely no sane company would ever dream of laying down special plant for the purpose of recovering about two-pennyworth of benzol for every ton of coal treated? This is the reason why it is foolish to look to benzol as a substitute for petrol, and the fact that the Fuels Committee is very optimistic about the subject does not bring it one iota nearer realisation.

There may yet be time for a supplementary report to be issued by the committee giving reasons which have led it to put forward such strange recommendations as the substitution of petrol by alcohol or benzol. It certainly would be perused very carefully by those who have studied this interesting question for years, but by no one would it receive more consideration than by—Yours truly,

P. DVORKOVITZ.

THE WEIGEL CARS AND THEIR DETACHABLE RIM TROUBLES IN THE GRAND PRIX RACE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Regarding the misfortune which occurred to the Weigel cars in the Grand Prix race in having removable rims which failed to remain in position on test, I wish to make the following explanation.

As you are no doubt aware, my rim is not yet on the market, as the Stevenson Wheel Company, who are manufacturing it for me, are only now completing the necessary jigs for absolutely standardising its production. When, shortly before the date of the Grand Prix race, Messrs. Weigel ordered, through the Dunlop Company, two sets of wire spoked wheels fitted with my rims, the gutters for the same, which were produced under standard jigs, were turned over to the Rudge-Whitworth Company, to be built up into wire wheels, which were afterwards returned and the outer rims cut and fitted by hand to same. In speaking up these gutters it became necessary to recess the spoke heads from a part of the circumference to permit room for my operating mechanism, and this I found afterwards was done by neatening the gutter and depressing the steel at various points where the spoke heads came, with the result that the gutter was considerably enlarged in circumference, and unfortunately the Stevenson Company did not perceive this change, and fitted the rims to this larger circumference than the standard. At the last moment Messrs. Weigel expressed a lack of confidence in the wire wheels and requested that wooden wheels should be sent them, so that they could take their choice in the race. These wooden wheels were made by the Stevenson Wheel Company and fitted with the standardised gutters, but with the excep-

tion of two or three they were only finished after the wire wheels with all the spare rims had been despatched to Dieppe.

I accompanied the wire wheels and those two or three wooden ones myself, and as the racing cars were both of our commission, on their arrival I had one of the wooden wheels put on their service car, and this, with six up, was sent on the course at its maximum speed, and was taken with all the speed that safety would permit of, the speedometer on the car recording sixty miles an hour on several stretches, and on one long down grade it touched the maximum of seventy miles an hour. After the round, the rim was removed and examined and was found to be absolutely secure, and not moved or chafed in any way, and those wheels that had them properly fitted did not give any trouble in the race. On the conclusion of the third round these same wheels were removed from Harrison's car and critically examined, and the examination showed that no movement whatever had occurred.

The result of changing the rims from the wire wheels to the wooden ones, therefore, was that, when the rim was in its contracted position, it still allowed play between it and the gutter, and at the high speed of the race and by the high vibration thereby induced, the security keys cut their way through the side of the rim, until the latter was permitted to fly from the wheel, which it did not fit. The disaster was unaccountable to me during the race, as it was to Mr. Wright, the manager of Messrs. Stevenson, but on returning to Coventry Mr. Wright showed me

held under competition rules of the R.A.C., but that, on the contrary the official race card contained a statement to the effect that the races were governed by the racing rules of the B.A.R.C., as adopted by the R.A.C. I also enquired whether the R.A.C. had handed over the control of automobile racing to the B.A.R.C., as the aforesaid statement would appear to infer, or whether the rule of the R.A.C. providing for the notification that a meeting is held under the R.A.C. rules had been waived or ignored, or whether it was a case of the tail wagging the dog. As two issues of the R.A.C. Journal have appeared without the insertion of my letter, I can only assume that it is not intended to publish it, and, as the matter appears to me to be one of considerable importance both to promoters and competitors, I seek the publicity of your journal.

If the notification rule (Rule 3) has been waived in favour of the B.A.R.C., it would be interesting to know the reason why.—Yours truly,

ROBERT E. PHILLIPS.

SHOULD LADIES DRIVE MOTOR-CARS?

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As a result of one or two accidents recently in which lady motor-car drivers were involved, the question has been raised whether

The Aston Hill Climb.—Mr C. Saugster nearing the top of the hill on his 40-h.p. Ariel Simplex.

a gutter for a wire wheel which the Rudge-Whitworth Co. had returned, having damaged it during their manipulation, and on measurement we at once found that they had elongated it and hence caused all the trouble. No one regrets more than I do myself the misfortune from a sporting point of view, but I write this for you to know that there is absolutely nothing inherently wrong with the rim, as I have driven my present car 8,000 miles, and, for a test, 2,000 miles of that was driven with the rear wheel unlocked and simply prevented coming off by the compressing action of an inflated tyre, and as this test included the rough trip through the Scottish hills and back to the south of England at speeds which reached the car's maximum of 45 miles per hour frequently, no better demonstration, I take it, could be made as to the stability of the principle, and this, in actual construction, is backed up by strong cross-keys, which will absolutely prevent the rim coming off, even if unlocked and the tyre deflated.—Yours truly,

P. E. DOOLITTLE.

RACING RULES AT BROOKLANDS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—After the first race meeting of the Brooklands Automobile Racing Club I addressed a letter to the editor of the Royal Automobile Club Journal commenting on the fact that none of the announcements of the meeting contained any intimation that the said meeting was to be

the law should prohibit the fair sex from driving automobiles or not. Although probably I shall find myself in the minority, I, for one, see no objection to ladies taking charge of the wheel, provided, of course; they have had the necessary tuition and have a good knowledge of the rule of the road. There is far more danger in a lady driving a restive horse—danger not only to herself but to other users of the highway, than there is in the operation of a motor-car at reasonable speed, and if any restrictions against driving by ladies are ever contemplated, the driving of restive animals which are apt to become frightened at the sight of motor-cars should first be prevented.—Yours truly,

XENOPHON.

SPEED COMPETITIONS AND HILL CLIMBING RULES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Mr. Weigel's letter in a recent issue of the *M.C.J.* seems to lose sight of the fact that hill climbing competitions should be efficiency tests and not races, though indeed, by the way in which the results are advertised, he might well be excused for so thinking. Strictly speaking, fastest times mean nothing, since it is obviously only a matter of possessing a big engine and entering a competition against smaller cars. The R.A.C. hill climbing formula has been evolved to provide for the first time a means of comparing efficiencies on a rational basis. Whether

such is the case is a matter of opinion upon which we have recently expressed our views. As such, the division of competing cars into classes is only to provide more interest for competitors and possibly more scope for advertisement, since only one car out of the whole number competing can have the highest efficiency and be termed the winner. If there were no classification there would be only one winner. Hence, the more classes the more winners. The result of the South Harting Hill Climb shows plainly that the mechanical efficiency of a car is by no means a function of its cylinder bore or the number thereof.

If hill climbs are to be turned into races, as suggested by Mr. Weigel, then it seems to us there must be as many classes as there are types of cars, and the hard-worked secretaries would be worked still harder. At present all that is needed is a system of handicapping which shall take into consideration at least the most important variables. Given this, and a moderate number of classes to provide sport, then we believe all contestants would feel that they were receiving as much consideration as possible in the light of present knowledge.—Yours truly,

VAUXHALL MOTORS, LTD.

THE ETIQUETTE OF MOTORING.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Our social duties and obligations are as troublesome as technical matters, and a little point that has worried me much of late may be deemed worthy of ventilation in your columns. I have a car with a tonneau, and friends have been buzzing about on fine Saturdays to know whether I am bound. Somehow or other I have come to the conclusion that they have wanted invitations for the afternoon.

Then comes the question of additions to running cost. Talking to

The 16-h.p. Siddeley Car recently delivered to H.R.H. Prince Louis of Battenberg by the Wolseley Company.

a fellow motorist on the matter I find that advanced etiquette is to put the "stopper" on the motoring guest who by a few tactful words of admiration at the car's wonderful running qualities obtains for himself all the pleasures of regular automobile riding with none of the expense of maintaining the car or of paying for the entertainment at hotel or roadside inn. That which is offered now as the correct thing is described as "a new rule of reciprocity courtesy and hospitality," by which the guests must do all the spending that is done for refreshment or entertainment while on the trip, though not extending to the cost of supplies for the car. That there is a large basis of reason for some such rule of action is apparent enough, so that the motoring host will not have to consider the matter of entertaining expenses in connection with extending invitations to enjoy the pleasures of his car. There is a tradition of a thrifty owner who took as many people as possible on his Sunday trips, because, as he explained, it made more people to divide the cost of the fines, but most owners have in the past seemed to feel a host's responsibility in every feature of the trip, a burden which thoughtful guests will find means of lessening.

To the man of moderate means the problem is sufficiently serious to make me often wish that my car was a two-seater.—Yours truly,

A. B. WOODCOCK.

SOME SUGGESTIONS TO INTENDING MOTORISTS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As one who has been through the mill, as the saying goes, the following suggestions to intending motorists may not be out of place. Among the points which he should keep well in mind in selecting his car are, first, the extent to which the various parts of the vehicle are made on the interchangeable system and the custom of the manufacturer with regard to replacements. The advantages of parts made on the

interchangeable system are obvious. In case any one gives way from any cause a new part may be obtained from the factory and put in place of the old one with a minimum of trouble and delay. Unfortunately, not all motor-car manufacturers have perfected their organisation to such an extent that their parts are perfectly interchangeable; quite often some fitting is required, and the extent of this and the cost and delay incurred should be considered by the prospective purchaser.

The other element to be considered relates to the prices asked for spare parts and the promptitude with which they are forwarded. While there are some who are reasonable in the charges there is, unfortunately, a tendency among some manufacturers, as I know from experience, to charge as high prices as can be obtained for all repair parts. Regarding prompt deliveries there are also wide variations. Some firms will do almost anything to please a client. Others will keep a customer waiting several weeks in the middle of the season for a repair to a model that may be a little out of date. The only method of obtaining reliable information on these subjects is by consulting owners—as many as possible—of the make of cars in question, and form one's own opinion from the answers received.

It may be added that in purchasing a second hand machine it is good policy to inquire if the firm or company which made it is still doing business, and whether spare parts may be readily obtained.—Yours truly,

EXPERIENTIA.

THE USE OF OXYGEN IN RACES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I note a letter on this subject from Mr. Weigel in your last issue. As a competitor at Brooklands, Mr. Weigel is evidently ignorant of the fact that oxygen was specifically allowed for at Brooklands races up to July 20th, therefore the Iris, Junior, and other cars which used it were perfectly entitled to. The Napier, I happen to be in a very excellent position to know, did not use it because it was unnecessary, but if it had been an advantage they would have used it. They were properly equipped with everything to help them to win under the rules. My idea of a sportsman is one who tries to win under the rules, and takes every trouble and care to win under the rules. For the races at Brooklands on Bank Holiday, August 5th, oxygen is barred.

I hope Mr. Weigel will enter a car and show us what he is capable of doing. I have noticed the claims in the past for his car, and if he would like to run one of his 41.9-h.p. cars against a 38.4-h.p. six-cylinder Napier, I shall be very pleased to race him, beat two out of three, say one, five, and ten miles or any reasonable distance for any sum Mr. Weigel likes. I hope he will take up my challenge, when I will drive personally against him. The money should be placed in the independent hands of the Brooklands Automobile Club before the race takes place.—Yours truly,

SYDNEY SMITH.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Mr. Edge's letter amazes me! He accuses me of being unsportsmanlike in drawing attention to the evil of the oxygen dope in motor races, and then would have us believe that he himself strongly disapproves of the use of oxygen, but I note that he very carefully avoided saying anything about its use on his own cars in racing at Brooklands. I do not wish to disparage the efforts of the Napier drivers, who handled their cars splendidly, but will Mr. Edge be good enough to inform an expectant and interested public whether or not it is a fact that oxygen cylinders were fitted to Napier cars competing at Brooklands on the 6th and 20th instant, as everyone would then be able to form a much better opinion of Mr. Edge's real views on the matter.

It is interesting to notice that in the rules issued by the Brooklands Automobile Racing Club dealing with future events the following appears:—"20. No fuel other than petroleum spirit shall be used in internal combustion engines, except where specially provided in the race proposition, and the use of any other ingredient shall be deemed a corrupt practice, and dealt with accordingly." Apparently, therefore, the discussion has been of benefit.

I am quite agreeable to race Mr. Edge on my Lorraine-Dietrich car under Byfleet Plate conditions—oxygen barred—provided he will drive his own car himself. I have no wish to race him for money, and perhaps a trophy would meet his wishes. On this point, provided Mr. Edge will race, the B.A.R.C. have very kindly offered a handsome gold cup for the winner. Apart from the personal element, I may say that my De Dietrich will be running in the International Plate on Monday next, driven by Gabriel or Duray, and as Mr. Edge's car and driver is competing in the same event, there is no need to arrange a special match for the cars alone.—Yours truly,

CHAS. JARROTT.

ACCUMULATOR FOUND.—Mr. F. Sanders, of the Barbourne Motor Garage, Worcester, has found an accumulator on the main road near his place. The owner is invited to send a description of the same.

GLOVE FOUND.—Mr. A. Waldon, of Dunchurch, near Rugby, has found on the main Leicester road, between Blaby and Lutterworth, a gentleman's motor driving glove, which he will be pleased to return to the owner on application.

NOTES ON THE ARDENNES RACES.

By D. M. WEIGEL.

THE great Ardennes races were, I say it with regret, an absolute failure for the year 1907. The Automobile Club of Belgium appear to have desired to do too much, with the result that they did nothing. Instead of a classical race, they made a three days' meeting. The first day's race, held under the Kaiser Preis rules, was practically a match between Minervas and Pipe cars. There were no Darracqs, Clements, Panhards, Dietrich, Brasiers, or, in fact, anybody of note. The result was practically a walk-over for the Minervas owing to all the Pipe representatives breaking their steering gears. Notwithstanding the fact of the poor entry, great credit is due to the Minerva Company, as it is not their fault if others did not care to compete, apart from which the remarkable times done by the Minerva cars will stand everlastingly to their credit.

I went round the course, and saw the remains of the Pipe cars. One was down an embankment about 50 ft. deep. Unfortunately, I understand, the mechanic was killed. Hantvast, the driver, was not scratched. Jenatzy did the reverse of Hantvast. He ran up a bank when his steering smashed. Both he and his mechanic came off all right. Deplus went down an embankment of about 15 ft. slope. He received fairly severe injuries, and I am told a woman was killed, for which, notwithstanding his injuries, he was immediately arrested, until he found security in the sum of 20,000 fr. The Belgians evidently believe in protection. The other Pipe car I did not see.

The second day's racing was confined to motor-bicycles, and I had so little interest in it that I made no inquiries and can give no description. The third day's race was devoted to the great Ardennes race, but I trust that no greater fiasco than this will ever take place on the Ardennes circuit again. The start was given to six cars, including two Mercedes, one Darracq, and two Weigels, the drivers of all of which appeared to be very much out of place, not appreciating whether it was a race, a tour, or a joke, but it was mostly taken as a joke. Harrison, on a Weigel, started first, Guinness second, and Jenatzy last. On the first circuit Guinness turned up first. Hard on his heels, much to everybody's astonishment, came "old man" Jenatzy, the only one of the crowd who really had done the circuit at racing speed. He had passed everybody, was three minutes in front of Guinness on time, and miles in front of everybody and everything, bearing out the remarks that I made in my description of the Grand Prix, that the Mercedes cars were the fastest of the year, and old Jenatzy the finest driver we had. The old man's luck, however, as usual, was out. On the second lap he turned up miles behind everybody, his car going like a lame duck. Investigations showed a seized inlet valve, which occupied him about twenty-five to thirty minutes to put right. Meantime the duel continued between De Caters and Guinness; the latter at the third lap was behind, but eventually he took the lead, which he maintained until the last round but one. In the third lap, De Caters was in difficulties, his non-return pressure valve going wrong, and thus giving him trouble throughout the race plus other mechanical troubles. Guinness was going very well for six laps, that is to say he kept on going, but I can hardly suggest that any of them, bar Jenatzy, was ever racing. Averaging between fifty-three and fifty-five minutes per lap of fifty-three miles is hardly modern racing, and inasmuch as the Ardennes circuit is a far finer course than the Dieppe one, the speed compares poorly with Nazarro's wonderful average of seventy miles an hour.

After six laps, Jenatzy in one lap actually gained six minutes on Guinness, who was going round at his usual speed of fifty-three to fifty-five minutes, proving that the former was still the game racer of years gone by. Even at the sixth lap, had he had the slightest bit of luck, I believe his racing ability would have brought him through a winner, but his luck was all out from start to finish.

For the last round home Guinness was leading by four minutes. De Caters stopped for some trouble; I was standing by him and told him: "You are four minutes behind. Why bother to do anything? It is win or lose, and you surely lose if you do not hurry." De Caters seemed to take the tip and went on. Guinness was due to appear as usual between fifty-three and fifty-five minutes, but he did not turn up, and we all became anxious, as I should certainly have liked to have seen an Englishman come in first. His four minutes' advance went by and still no Guinness, but then, in a few seconds, a huge shout went up from Belgian throats, welcoming their countryman, De Caters, as the winner. He had started one minute behind Guinness, and having appeared first on the last lap, it was obvious to all he must be the winner. Guinness followed hard on his heels, and was unfortunate in losing the race by a minute and a few seconds. It appears that Guinness had had inlet valve troubles on the last lap, which put him out of the race, but apart from this, even if De Caters was unlucky with his car, Guinness was equally so with his tyres. Every lap he changed his back wheels, and in my opinion changed perhaps a little too often, out of desire, probably, to be sure of no trouble. Had he risked one lap without a change he must have won.

So far I have said nothing about the Weigel cars. If ever these two cars, built with touring engines, had a chance of winning a classical race, they had it last Saturday, but, if in the Grand Prix they were unlucky with their rims, they were on that day unlucky with their tyres. They had between them twenty-four back tyres, and before the sixth round was completed the whole of these had been used up, with

the result that Harrison at the sixth round had no spare tyres to change, and was forced to stop. We managed to fix up Laxen with three old tyres which had been used in practice, so as to let him finish, as he desired to do, and which he did, the result being that for fourteen laps, eight for Laxen and six for Harrison, twenty-seven tyres were used up. Harrison's first lap of fifty-four minutes shows that he was quite fast enough to have got near the performance of, and perhaps to have done as well as Guinness. The average of the winner turned out at fifty-seven miles per hour, and I should be sorry to think that even three cars, given tyres that would stand, were not capable of averaging such a speed as this. Harrison had no trouble on the first lap, Laxen one puncture. In the second round, Harrison changed three tyres on the road, and two in front of the Grand Stand, making five for one lap, but his fifth circuit was his record. He changed at both controls, making four tyres, and also three tyres on the road, a total of seven tyres for one lap, which occupied him 1 hr. 29 min. Still, I do not wish to harp upon the tyre troubles. I had been warned by Mr. Egan, of the Dunlop Company, that I was bound to have this trouble with the tyres I was having, as they had no stock, and had to make the tyres fourteen days before the race started, and he, in fact, begged of me to use some other make of tyres, but I obstinately refused to use anything but English-made tyres. The result was deplorable, but, on the face of the facts, no blame can be attached to the Dunlop Company. The tyres neither burst nor wore out. All that happened was, the outside covering of rubber came completely off, because they had been too recently vulcanised. The treads came off in pieces about a foot long

An Experience in Spain.

From a Sketch]

[Published by the Berliet Company.

luckily injuring nobody but the unfortunate drivers, whose hands and necks were covered in weals, as if they had been struck by a whip. In one respect I am almost pleased that they did not win the Ardennes Race, as, had they done so, no glory would have been attached to it, inasmuch as the race was not a representative one. One thing I am proud of, however, and that is that they were the only cars that went through the race without mechanical troubles to any part of the chassis.

On the same day, and during the same time, was run off the Liedekerke Cup, for small cars, having engine of a capacity of 3½ litres. Only three firms entered—the Vivinus, Minerva, and Metallurgique. After the first lap two of the latter cars collided, so, like on the first day, it was a duel between two firms, resulting in an easy victory for the Minerva. At one time it actually looked as if these tiny little cars and engines were going to beat the racing cars. The betting was actually only five to one against their doing so. They certainly went wonderfully well.

In the conversation I had with Baron De Crawhez, he told me he was under the impression that French firms had boycotted the Ardennes Races in their desire to have racing in France and nowhere else, but he ventured to believe that the Ardennes Races next year would be as great a success as the Grand Prix, as it was their intention to re-introduce the rules of the Gordon Bennett Cup, but that instead of the entries being confined to countries they would be open to individual firms. The formula is to be the one adopted and passed at the Ostend meeting, maximum bore 155 mm., minimum weight 1,100 kilos. For the first time since the old Gordon Bennett Races, Englishmen have been informed well beforehand of the rules which will apply to a great classic meeting, and I have Baron De Crawhez's absolute authority to make the above statement, and I hope, with all this before them, English firms will make an effort to be properly represented in next year's Continental races. I for one will answer that Weigel Motors (1907) Ltd. will be represented by three cars, built specially to fill the programme.

CLUBS AND ASSOCIATIONS.

CRYSTAL PALACE.

ON Saturday the open hill climb of the Crystal Palace A.C. was held on Star Hill, Dunton Green, under the open competition rules of the R.A.C. Mr. Philip Runciman was the judge, Mr. F. T. Bidlake starter, Mr. R. S. Harding clerk of the scales, and Mr. G. H. Smith marshal, with Mr. Henry Hollands as secretary of the meeting. The road used was the old trunk road from London to Hastings, now displaced by the new road out round Polhill. The surface was in excellent condition, and the patrolling and control of the hill were well done by the officials. The measured distance was a mile in length, the steepest portion being 1 in 9.

There were twenty-three entrants, twenty-one in the first event, which was divided into five classes, and two in the second event. Mr. John Goddard's 35-h.p. Daimler proved the fastest car of the day, while the 10-h.p. De Dion entered by Mr. J. W. Stocks was awarded an additional medal for the best performance on the handicap.

The handicap order gave the first position in each class as follows:—Class 1, 10-h.p. De Dion; Class 2, 15-h.p. De Dion; Class 3, 20-h.p. Belsize; Class 4, 35-h.p. Horsch; Class 5, 35-h.p. Daimler.

The following table shows the order of handicap times and also actual difference in times reckoning the fastest car as zero:—

The Crystal Palace A.C. Hill Climb.—The 20-30-h.p. Florentia going well.

EVENT I., CLASS I.

No.	Car.	Entrant.	Order of Handicap	times.	Actual difference in times.
				M. S.	M. S.
1	9-h.p. Riley ...	J. F. Buckingham	3	1 38 3.5	1 6 1.5
2	10-h.p. De Dion	J. W. Stocks	1	1 9	2 35 2.5

CLASS II.

3	17-20-h.p. Scout	Roy Meldrum	17	2 46 3.5	2 55 1.5
4	15-h.p. De Dion	W. Munn...	11	2 10 2.5	1 55 2.5
6	16-20-h.p. West	P. Lamb...	12	2 13	1 55 2.5

CLASS IV.

11	35-h.p. Horsch	G. S. Monck	8	1 40 1.5	0 37 4.5
12	24-h.p. De Dion	J. W. Stocks	9	1 47 1.5	1 17 2.5

CLASS IV.—Continued.

No.	Car.	Entrant.	Order of Handicap	times.	Actual difference in times.
				M. S.	M. S.
13	26-30-h.p. Nordenfelt	W. T. Clifford	15	2 34	1 26 4.5
14	30-h.p. Belsize	J. Keele...	14	2 28 3.5	0 58 1.5
15	18-h.p. Daimler	J. Goddard	19	3 47 4.5	3 25
16	30-h.p. Lindsay	H. Pennington...	20	4 34	3 6 2.5

CLASS V.

17	30-h.p. Daimler	F. A. Potts	18	3 25 2.5	1 46 3.5
19	35-h.p. Daimler	H. Musker	6	1 39	0 7
20	35-h.p. Daimler	John Goddard	2	1 33 3.5	0 0

EVENT II.

22	35-h.p. Daimler	H. Musker	4	1 38 3.5	0 6 3.5
23	35-h.p. Daimler	John Goddard	5	1 38 4.5	0 5 1.5

No. 5 in Class 2 and Nos. 18 and 21 in Class 5 were absentees.

In view of the Bexhill meeting clashing with the races at Brooklands and it being very difficult to get sufficient entries to make a success of the meeting, the Crystal Palace A.C. has been compelled to cancel the meeting they had proposed to hold at the southern coast resort on Monday next.

AUTOMOBILE ASSOCIATION.

THE Automobile Association has organised special services of patrols on the roads for practically every important function to which motorists are attracted during the season.

The Great North Road will, during the opening of the shooting season, be patrolled in several important districts. This, however, can hardly be called a special service, because the operations of the A.A. organisation have already been permanently extended in Yorkshire, Huntingdonshire and the North.

YORKSHIRE.

THE committee of the Yorkshire Automobile Club has arranged for a closed hill-climbing competition to take place on Greenhow Hill, near Pateley Bridge, on the 24th inst. There will be three events. (1) For single-cylinder cars whose rating $\frac{D^3 N}{2.5}$ does not exceed ten. When D = bore in inches, N = the number of cylinders, and 2.5 being a constant. (2) For 1, 2, 3, or 4 cylinder cars whose rating $\frac{D^3 N}{2.5}$ does not exceed twenty-four. (3) For cars with any number of cylinders whose rating $\frac{D^3 N}{2.5}$ exceeds twenty-four.

The results will be worked out upon the following basis:—
Total weight in lbs.

Time in seconds \times H.P.

Further particulars and entry forms may be had from Mr. Charles P. Wilson, hon. secretary, Town Hall Chambers, Victoria Square, Leeds.

SHEFFIELD.

THE third annual gymkhana of the Sheffield and District A.C. was held on the 25th ult. at the Niagara Grounds, Wadsley Bridge. Dr. Thorne and Mr. P. S. Benson were the judges and Mr. F. B. Cawood the hon. secretary of the event. The results were as follows:—

Obstacle Race.—1, J. H. Hall, 20-h.p. Darracq, 51 sec.; 2, E. W. Hatfield, 6-h.p. Regal, 52 sec.; 3, F. W. Huband, 10-h.p. Alldays.
"Tying the Knot" Race.—1, F. W. Huband, 30 sec.; 2, C. Dixon, 16-20-h.p. Clement, 31 sec.; 3, E. W. Hatfield, 32 sec.
Tilting at the Rings.—1, F. W. Huband, 19 sec.; 2, B. Turner, 10-h.p. Alldays (after a dead heat).

Musical Chairs.—1, B. Turner; 2, C. Dixon.

Academy Stakes.—1, F. W. Huband; 2, C. Dixon; 3, J. Barber, 10-h.p. Belsize. Winner's time, 1 min. 13 sec.

Potato Race (for the ladies).—1, Mr. W. Robinson's car, 10-h.p. La Plata (driven by Mr. J. Hind); 2, Mr. J. H. Hall.

Balancing Car on Rocking Platform.—Mr. J. Hall was the only motorist to perform this feat.

HERTFORDSHIRE.

THE annual hill climb of the Hertfordshire A.C., held at Aston Hill, near Tring, on Saturday, was a great success. There was a good attendance of spectators, and Mr. Alfred Rothschild entertained the officials in the grounds of his house at the top of the hill. Among those who assisted were:—Judge, Mr. E. Webster; clerks of course, Messrs. James and McWhirter; marshals, Messrs. Corse Glen and Frank Shorland; clerk of the scales, Mr. T. Williams; press steward, Mr. Arthur J. Salmon; secretary of meeting, Mr. W. Whittall; and time-keepers Messrs. Griffin and Straight. The winner of the Aston Cup for private members of the club was Mr. E. Edwards, 24-h.p. Minerva;

Mr. W. Frank Young, who was last year's winner, was second, and had bad luck, breaking his pump spindle on the way to the hill; Mr. Colliver was a good third. The winner of the prize for best handicap performance irrespective of class, was Mr. C. J. Newey. The results were:—

CLASS I.

For petrol cars up to 10-h.p. by formula.

Plac-ing.	Car.	Driver.	Marks.	Time.	Placing by Time.
1	10-h.p. De Dion	C. J. Newey ...	70.6	x+ 51 4.5	2

CLASS V.

For Steam Cars.

Plac-ing.	Car.	Driver.	Marks.	Time.	Placing by Time.
1	15-20 Stanley	D. J. Mooney ...	—	—	—

NORTHAMPTONSHIRE.

A MEETING of the committee was held at the George Hotel, Northampton. There were present the Rev. W. Seggins Pratt (in the chair), Sir Thomas Hesketh, Major W. Briggs, Lieut.-Colonel A. F. Mulliner, Dr. A. A. Hope, Dr. Lewis, Councillor S. Yarde, Mr. J. G. Hipwell, Mr. Charles W. Phipps, Mr. Sidney F. Harris (hon. secretary), and Mr. J. F. Stops (hon. solicitor).

It was agreed that a hill-climb should be held, and that the hill leaving Priors Marston for Helidon should form the first part of the test, taken from a standing start at the cross-roads. After that the cars should proceed through Priors Marston on to the Byfield road, where there is a second hill, which could be taken with a flying start.

A sub-committee was also appointed to arrange a gymkhana at Easton Neston on the 17th prox.

AUTO-CYCLE.

THE Auto-cycle Club's twenty-four hours' ride from London to Plymouth and back finished at Thames Ditton on Saturday evening. Rain held off on the return journey, but the roads were greasy, and several sideslips occurred, though there were no bad accidents from this cause.

Out of thirty-three starters the following competitors accomplished the double ride in twenty-four hours, and so qualified for gold medals: O. C. Godfrey 5-h.p. Rex; R. M. White, 3½-h.p. Hazel; J. S. Cavalier, 6-h.p. N.S.U.; R. G. Mundy, 3½-h.p. Triumph; J. S. Harwood, 3½-h.p. Triumph; A. S. Phillips, 5-h.p. Vindec Special; Martin Geiger, 3½-h.p.

The Auto-cycle Club's 24-hour Ride.—The five leading competitors at Photo by] Yeovil on the return journey. [E. W. Ashworth.

N.S.U.; F. C. Dee, 5-h.p. Vindec Special; W. G. McMinnies, 5-h.p. Vindec Special; L. A. Baddeley, 3-h.p. Baddeley; and W. M. Randle, 10-h.p. Lagonda tri-car. Silver medals were also offered for completing the ride in twenty-six hours, but no one qualified for these although three other riders completed the distance so as to secure certificates, viz.—E. B. Denbigh, 8-h.p. Eysink, S. Brough, 3½-h.p. Brough, and A. G. Peppercorn, 2½-h.p. Anglian.

MANCHESTER.

THE club held the last run of the season on Saturday, when twenty cars mustered at Tideswell, near Buxton. The air was fresh, and the alternative routes, if hilly, were varied and pleasant. After tea at Tideswell the old church was inspected, and the fine afternoon tempted many to continue the journey through the Derbyshire hills before returning home.

BROOKLANDS.

THE race meeting arranged at Weybridge for to-day (Saturday) has been cancelled, but that announced for Bank Holiday will take place. The race for the Daimler Plate will not be held on that day, as originally announced. In its stead the International Plate and Walton Stakes, originally fixed for the 3rd inst., have been transferred to Monday's list of races. An entirely new feature will be the half-mile sprint for the Oatlands Selling Plate.

Before the next meeting the members' car enclosure, which has been arranged on a plot of ground bordering the inner edge of the track, will be ready for use. It is situated near the fork at the entrance to the

finishing straight, and will be approached from the Byfleet road through a new entrance.

In addition to the previous races it has also been decided to hold the following event, which was originally fixed for to-day, viz., the White Steam Car Plate of 150 sov., for White steam motor-cars of the 30-h.p. type of 1907. Distance 5.997 miles. The entrants are Earl Russell, Lord Blythswood, Sir John Murray, Messrs. F. Coleman, Col. Wentworth-Forbes, W. Northey, F. Payne, Col. John Wright, E. C. Wright and J. W. Hunt. In the International Plate, a 60-h.p. Gobron Brillie car has been entered by a lady, Mrs. G. E. Taylor; and Messrs. J. T. C. Moore-Brabazon, A. L. Guinness and Warwick J. Wright will drive Minervas in the Walton Stakes.

ESSEX COUNTY.

THE hill-climbing competition of the Essex County A.C. was held on Saturday, at Battledown Hill, near Billericay. The result was a win for Sir Charles Locock, Bart., Mr. J. Gurney Fowler winning the sealed handicap.

IRISH.

THE competitions held under the auspices of the Irish Automobile Club invariably possess the merit of novelty, and the hill-climbing contest, which took place on Saturday last was not an exception. The contest was decided on the aggregate time taken by the cars to climb two hills. One of these had a gradient of 1 in 5.3, and its surface was very bad. The second hill was longer, but had a better surface and a much easier gradient. Consequently the possibility of the competing cars being specially geared to suit the gradient of the hill was put out of court, and as a further precaution in that direction the location of the hill was not disclosed to the competitors until the cars assembled at the club house on Saturday morning. The cars were classified according to their chassis price, and to the car doing the fastest aggregate time on both hills a gold medal was offered, with a silver medal to the second fastest. In addition there was a handicap in each class, the cars that were under the extreme limit of price receiving an allowance, but as a matter of fact the car that won the gold medal in the price classes also won the special certificates offered in the handicap. There was also a cup offered, presented to the club by Messrs. Humber, Ltd., to the class winner whose performance showed the highest result by dividing its time ratio by its actual time. The time ratio of the car was found in the following manner:—

$$\frac{129,400 W}{B^2 \times S \times C} + 14.34.$$

This cup was secured by the 16-h.p. Calthorpe driven by Mr. G. W. Hands. A cup presented by Mr. T. Henshaw for the car doing the fastest aggregate time on the two hills was won by the donor on his 35-h.p. Daimler.

The two hills selected for the competition were Altidore Hill and Ballinaslaught Hill. Both lead from the low-lying land on the Co. Wicklow coast to the watershed of the River Vartry. Altidore is 1,284 yds. long, with a total rise of 418 ft., while Ballinaslaught Hill has a total rise of 611 ft. in 1 mile 755 yds. The sharpest gradient on Altidore is 1 in 5.3, while the other hill has a bit of one in 6.8. We append a return showing the time of the first three competitors in each class on the two hills and their total time, and also the handicap results. His Excellency the Lord Lieutenant honoured the competitions by his presence. He drove down in his Daimler car, accompanied by Lady Aberdeen, and watched the ascent of the cars in the second test.

ON Thursday the North-East Lancashire A.C. had a garden party at Stanley Grange, Hoghton.

THE Guernsey Motor Association held its first run last week to the residence of the Lieutenant-Governor.

THE Automobile Club of Ceylon is renting premises at Colombo for the purpose of a garage for the use of members.

THE competition for the Gamage Cup of the West Essex A.C. will take the form of a non-stop run from the headquarters at Seven Kings to the 48th milestone on the Colchester road and back again, on Saturday, the 10th inst.

OF the nine gold medals awarded in the Scottish Reliability Trials seven have been given to cars which were fitted with Dunlop tyres.

SUCCESSSES of the "Continental" tyres during recent weeks include fastest times at the Lincolnshire A.C.'s speed trial, the Manchester A.C.'s hill climb, Midland A.C.'s climb at Shelsley Walsh, and the Coventry M.C.'s open hill-climb reported in last week's M.C.J.

A SHORT time ago the Motor House had over fifteen high-powered cars in stock. Now, probably as a result of the opening of the Brooklands track, not a single one remains. It certainly looks as if there are plenty of private people about who intend to take up motor racing as a hobby now that the track is provided, and if the Motor House can find a ready market for racing cars, it behoves go-ahead makers to list such vehicles as well as ordinary cars in their catalogues. Although the demand in nearly all instances has been for a British vehicle, the fact that very few firms in this country have built racing cars has resulted in the Motor House having to supply foreign-built machines to satisfy their clients' requirements.

CASES UNDER THE MOTOR CAR ACT.

ALLEGED NOISE.

Mr. W. T. Lord answered to a summons at the South-Western (London) Court for failing to stop the action of the machinery of his motor-car, necessary for the prevention of noise. Defendant had visited the motor track at Weybridge, and returning, pulled up in Priory Lane, Putney. The noise of the machinery was said to be considerable; so much so that a polo pony took fright and, wrenching itself away from the groom, bolted, causing two lady cyclists to fall into a ditch. P.C. Welton said the defendant was asked many times to stop the engine. Defendant said the machinery did not make any more noise than a sewing machine. The magistrate fined the defendant £5, with £5 5s. costs.

EXCEEDING THE LIMIT.

At Kilmarnock, a motor-cyclist has been fined £3 and costs, for exceeding the ten mile limit in Dalry.

At Lancaster, on Saturday, John Cunningham, chauffeur, Edinburgh, and Ernest Henry Bunnay, motor-car owner, Birkenhead, were charged on separate informations with exceeding the speed limit over the Garstang Road trap, Ellet. The Chairman said the Bench had decided to fine each defendant 50s. and costs, or in default a month's imprisonment. These amounts are only half what has hitherto been imposed by the Lancaster county magistrates for speeds up to twenty-five miles an hour. Beyond that speed the fines have been £7 and £10.

At Haywards Heath Petty Sessions, William K. Lamotte, of Shirley, has been fined £15, with £1 17s. 6d. costs, for driving a motor-car at Handcross at a greater speed than twenty miles an hour. Defendant has been previously fined £10 for a like offence.

A REGISTRATION POINT.

At Dudley, John Eades, of Birmingham, has been fined £3 for using a motor-cycle without registering it, and with refusing to give his name and address after an accident. Defendant was making a trial run with a motor-cycle which he had recently purchased, when he ran down a cyclist, smashing his machine and breaking his arm.

ALLEGED OBSTRUCTION.

Chester police have initiated a crusade against owners leaving motor-cars in streets unattended. On the 26th ult. Mr. Crosland Taylor, J.P. Helsby, and Mr. Claremont, of Old Trafford, were charged with wilfully causing an obstruction. The magistrates' clerk said the way owners left their cars standing with the machinery in motion was a perfect nuisance. Mr. Crosland Taylor pleaded that it was merely a technical offence, and the Bench dismissed both summonses on payment of costs.

DANGEROUS DRIVING.

Percy Mitchell, of Hampstead, was summoned, at Raglan Petty Sessions, for driving a motor-car to the danger of the public. Superintendent Captain Parker handed a letter to the magistrates, and stated that if the defendant had in the first place given them the information he had since communicated, proceedings would not have been taken. Considerable correspondence had passed with solicitors in London, and it now appeared that it was the chauffeur who was driving. He was now travelling about the country, but they hoped to catch him in due course. Upon the payment of £3 2s. 8d. costs the summons against Mr. Mitchell was withdrawn.

George Lowrie, a chauffeur, was summoned at Gateshead, on Monday, for driving a motor-car without lights and to the danger of the public. The police said he dashed across Redhugh Bridge at fifty miles an hour without paying his toll. He was fined £5 and costs for each offence. Charles E. Smith was also summoned at Gateshead for driving a motor-car to the danger of the public. He was fined £5.

Captain John Haig, of the Lodge, Ascot, was fined £18, including costs, by the Berks magistrates at Wokingham, on Tuesday, for driving a motor-car at a speed dangerous to the public at Eashampstead. Major Daikie, of the Royal Field Artillery, Tidmouth, the principal witness, said the car passed a wagonette, containing three ladies, which he was driving, at a terrific speed, and it was a merciful providence that they were not killed.

HEAVY HAULS.

At Morpeth, on the 24th ult., five motorists were fined sums aggregating to £7; on the 25th eight were fined £33 and costs at Kingston. On Monday last five drivers were fined £14 and costs for exceeding the regulation limit in Bushey Park, and five others were fined £24 and costs at St. Ives (Hunts) for exceeding the legal limit at Fenstanton. On the same day £70 were paid by motorists summoned at the Steyning Petty Sessions, and £50 by other victims at Godalming. At Arundel, too, there was a batch of cases, the fines aggregating £59, and at Haywards Heath three fines totalled £25, exclusive of costs. On Tuesday, at the Beaconsfield Sessions, five motorists were fined £12 5s. and costs and a warrant was issued against another—all for exceeding the legal limit. Three motorists were also fined £5 each at Wokingham.

In the Scottish Reliability Trial five of the gold medallists used Shell motor spirit. The winner of the Scottish Cup for the vehicle showing the lowest petrol consumption also used Shell spirit.

MR. F. L. MARTINEAU, who drove in the recent Scottish Reliability Trials, is enthusiastic as to the behaviour of the Palmer tyres fitted to his Pilgrim car. From start to finish they were not touched, and the vehicle was driven to and from Scotland from the works at Farnham, fitted with the same tyres.

THE PEKIN-PARIS MOTOR RUN.

PRINCE BORGHESE has at last crossed Asia on his Itala car and is now in Europe, he having safely arrived in Moscow on Saturday last, forty-seven days after setting out from Pekin. He left Nijni Novgorod, where he was entertained by the Vice-Governor of the province, early on Friday, the 26th ult. The entry into Moscow was most enthusiastic, the whole populace turning out to give the Prince a royal welcome. He was met eighteen versts outside Moscow by the Italian and French Consuls and the representatives of the Moscow Automobile Club. Eighteen cars and many members of the Italian colony escorted the Prince into the city, where the local motorists presented him with a medal. In the evening the Italian colony gave a banquet in honour of the intrepid motorist, to whom they presented a beautifully bound album adorned with a large enamelled gold crest of the city of Moscow, and containing an address and numerous views of the city and its environs, while the journalist who accompanied him from Pekin received a gold pen mounted with a sapphire. In the course of an interview with the representative of the "Standard" Prince Borghese, in recounting some of the incidents of the journey, stated:—"We travelled only by day, and always contrived to sleep somewhere, either in peasants' huts or inns. Incidents? Oh, yes, incidents enough, but—" and the gesture implied that it was hopeless to expect him to begin on that interminable subject. "There was nothing unpleasant, and it is untrue that the peasantry ever attempted to prevent our progress. The best piece of road from Pekin to Moscow was undoubtedly the Gobi desert. I was never over such places as are called "roads" in Russia. When I was told that a highway existed between Irkutsk and Moscow I expected to find something like a road, but I was disap-

The Visit of the Imperial Industries Club to the Argyl Works at Alexandria.

Sir G. Hayter Chubb, Sir T. B. Hitching, the Hon. J. W. Taverner, Sir J. Roper Parlington and Mr. Gilbert Batholomew being received by Mr. W. A. Smith and his co-directors.

pointed. I avoided the worst place round Lake Baikal, and took the ferry across. I believe the road round the lake is impassable for man and beast, to say nothing of a machine. Forty kilometres an hour was the best speed I have made in Russia, and fifteen kilometres the slowest. The weather has been bad, and it has rained almost incessantly since I left Irkutsk, there having been only three fair days. I have been surprised and gratified by my reception in Moscow. I shall drive myself to Paris, but it looks as if the rest of the trip would prove rather a test of my internal economy than anything else."

The Prince, who was resting in Moscow until Wednesday, hopes to arrive in Paris on the 10th inst., two months to a day after his departure from Pekin.

The last news of the Spyker and two De Dion cars was from Tscheliabinsk, near the frontier, which place was reached on Monday.

THE IDEAL CHAUFFEUR.

Here's to the man with nerve of steel,
Here's to the man behind the wheel,
Whose eye is true and temper mild,
Who ne'er his lips with curvè defiled
E'en though he punctured every tyre.
His work is more to him than hire.
He keeps his motor clean and bright;
He ne'er demurs at trips by night.
If you should meet this man some day,
Please send him to me right away.

G. E. BIRD in "Automobile Topics."

COMPENSATION CASES.

In April John Rous was knocked down by a motor-car when crossing one of Bristol's busiest roads. A claim for compensation has just been heard at Bristol. It was alleged by several witnesses that the car was travelling twelve or fourteen miles an hour. The jury awarded £100 compensation.

At Gainsborough County Court, Charles Warboys, of London, has claimed damages from Messrs. Rose Brothers, Ltd., engineers, Gainsborough, for loss by the death of his son, Robert E. Warboys, who died as the result of a collision with a motor-car while cycling to Gainsborough on February 21st last. For the defence the driver of the car and the other occupant said they saw Warboys 150 yards away as they turned the bend in the road at the rate of seven or eight miles an hour. He was on the wrong side and had his head down. They continued towards him, sounding the horn continuously. When twelve yards separated them Warboys raised his head. The driver thought he was going to turn to the correct side, but he did not. When they were only two or three yards apart the driver of the car turned with the object of avoiding the cyclist. The latter turned towards the proper side simultaneously, and this brought about the collision. Mr. Turrell contended this was the only course the driver of the car could take. His Honour, in summing up, said the question for the jury was whether, when the occupants of the car saw the deceased coming on the wrong side of the road they were guilty of negligence in waiting until they were within two or three yards before applying the brakes and putting on the clutch. The jury after a long absence announced that they were unable to come to a decision.

At the West Riding Assizes, on Monday, Mr. Justice Ridley and a special jury heard an action in which Hugh Curran, a groom, claimed £500 damages for personal injuries against Mr. T. H. Woollen. Mr. Scott Fox, K.C., for the plaintiff, said that Curran had been employed to go out with a horse from Scarborough each evening to meet the coach. On the 22nd August of last year, while he was riding the horse on the grass about two miles from Scarborough, a motor-car came up from the rear and struck the horse on the left flank. The groom was thrown off and was for some hours unconscious. He was in hospital from August 22nd to February 18th, and was now only able to move about on crutches. The defendant went into the witness-box. He said he saw the plaintiff on the horse on his left side sixty or seventy yards ahead. The witness was about in the centre of the road, and blew his horn twice. When he was near the level of the horse it suddenly swerved and jumped over the corner of the radiator, bending the right lamp bracket and doing other damage. The jury found a verdict for the plaintiff for the amount claimed.

AUTOMOBILE ACCIDENTS.

THE case of G. F. O'Connor, mentioned in last week's *M.C.J.* as having been remanded on a charge of manslaughter at West Ham, has been again before the magistrate, who discharged the accused with the remark that he did not see that a case of manslaughter was made out. At the inquest a verdict of "Accidental death" was recorded.

WHILE alighting from a motor-bus, on which he was travelling from the Law Courts to his residence in London, the other day, Mr. Justice Joyce stumbled and has been absent from the courts for a week in consequence.

A RUNAWAY motor-wagon on Wednesday week, on the main road between Woodley and Stockport, resulted in the Old Toll-bar House at Lower Bredbury being partly wrecked.

An elderly lady, named Miss Hooper, of Wimbledon, was run over and killed on the evening of the 26th ult. by the motor-car of Mrs. C. N. Williamson, the novelist. Mrs. Williamson and a lady friend were being driven through Wimbledon, when Miss Hooper, in attempting to cross the road in front of the car, was knocked down. The front wheels passed over her, and she was dragged along the road for some distance by the hind wheels, receiving such terrible injuries that she died almost immediately. At the inquest on Tuesday, the jury found that the fatality was due to a pure accident, and exonerated the chauffeur from blame.

THE heroic conduct of a nurse who lost her life in an endeavour to save a small boy named Greenwell has been told to a coroner's jury at Streasley, near Reading. Her charge was about to cross the road when the nurse, named Harris, heard the sound of a motor horn. The road is narrow and full of curves, and, realising the danger, she at once rushed and clutched him, but both being frightened they hesitated, and failed to get out of the path of the car, both being run down. The nurse, however, flung the child before her, and took the force of the blow of the vehicle herself, receiving such injuries that she died. The owner of the car, Mr. Morley, of Eversleigh, Hants, said he was sure deceased sacrificed her life in saving the child, who was merely scratched.

A "VANGUARD" motor-omnibus overturned on Sunday afternoon at Hackney, and several passengers were seriously injured. The vehicle, which was on its way from Epping Forest to Bethnal Green, skidded, collided with the kerb, and turned completely over. There were seven inside and two outside passengers at the time of the mishap and all were injured.

At Kingston, on the 26th ult., William Adams, a chauffeur, nineteen years of age, of Epirus Road, Fulham, was charged with recklessly driving a motor-car at Walton-on-Thames on July 17th and causing the death of Rebecca Mayhew, a patient at the Metropolitan Convalescent

Home at Walton-on-Thames. Mr. William Lewis appeared to prosecute on behalf of the Treasury, and Mr. C. L. Attenborough defended. The magistrates committed the defendant for trial at the Surrey Assizes.

WHILE cycling along the Windsor Road between Slough and Eton a few evenings ago Mr. Gny Nickalls came into collision with a motor-car. Mr. Nickalls, who had an arm broken, was taken home by the motorist to Farnham Royal, where he was surgically treated.

A MOTOR-CAR accident occurred at Kingston-on-Thames on Saturday morning. A car owned by Mr. Foster, Kingston, and driven by Mr. Wilson, of the same place, was proceeding along Queen's Road, in the direction of Richmond Park, when, in passing Alexandra Road, it collided with a grocer's cart, driven by George Hall. The force of the impact overturned the cart, and Hall was thrown on his head into the roadway, and rendered unconscious. He was removed in the motor-car to Kingston Victoria Hospital, where his condition was considered critical.

A MOTORING fatality occurred at Nottingham on Saturday. As Mr. George Fowler, of Basford Hall, was being driven into the city by his chauffeur past a coal cart, a man who had been noticed counting the money he had in his possession stepped from behind the cart in front of the car, which was proceeding at a moderate pace. The man was knocked down, one of the wheels of the vehicle going over his head. Mr. Fowler at once conveyed the unfortunate man to the general hospital, where, however, he died shortly after admission.

A SERIOUS motor-car accident occurred near Monmouth, a car, containing Captain E. Evans, colliding, head on, with that of Mr. J. N. Booker, of Ross. Mr. Booker sustained a lacerated knee, and Captain Evans's chauffeur, who was shot through the wind screen to the road, was badly cut by the glass.

ROAD REPORTS.

BRENTFORD.—The Rev. T. Henry, Vicar of St. George's, Brentford, has suggested that a petition from the ratepayers be prepared for presentation to the King, asking him to use his best endeavours to widen the High Street, Brentford, through which he frequently passes on his cars.

COWFOLD.—At a general meeting at Cowfold it has been agreed to have the main road tar-sprayed. It will cost the village about £20 for the tar, the County Council bearing the cost of labour involved.

REDDITCH.—The main roads in this district are now for the most part in excellent condition. Some of the country lanes and bye-roads are rough and uneven. Long stretches of the Bromsgrove road are still under repair.

RATHDRUM.—The district council of this Irish resort have passed several recommendations of the county surveyor in regard to the improvement of the roads of the rural district. The report of the surveyor that Aughavannagh Bridge is in parts "shaky, distorted, tilted, sagged, bulged, with stones missing and others split," was considered. He suggested that £300 should be expended upon it, a proposal which was adopted.

WEST SUSSEX.—The West Sussex County Council has decided to tar the surface of any main roads in their area where half the cost is contributed by the locality, the county contribution for the whole of such work not to exceed £100.

HAYES.—At the Bromley Rural District Council, on Tuesday, a letter was read from the Hayes Parish Council suggesting that a danger signal should be erected near the schools at Hayes as a warning to motorists not to drive too quickly, as the road was largely used by school children. Sir Henry Lennard said at West Wickham they had put up a large placard: "Drive slowly; schools in front." This has had good effect, and he suggested that the same plan should be adopted at Hayes. This was agreed to.

New showrooms have lately been opened at 93, Fulham Road, S.W., by the Miesse Petrol Car Syndicate, Ltd.

WEIGEL MOTORS (1907), LTD., have opened well fitted up West End show-rooms at 30, Dover Street, W., under the management of Mr. Pryce Harrison.

MORS (ENGLAND), LTD., have just issued a new catalogue of the Mors 15-20-h.p. live axle car, which gives full particulars of the vehicle, together with very clearly prepared drawings of the different parts of the chassis. In the course of a run from Brooklands to town the other day on one of these cars, in company with Mr. L. Carle, we were very much impressed with its silent and speedy qualities.

WE are informed that both the Daimler Motor Company (1904), Limited, of Coventry, and the Daimler Motoren Gesellschaft of Unterturkheim Germany, have instituted actions in the Chancery Division against the British and Colonial Daimler-Mercedes Syndicate, Ltd., claiming injunctions to restrain the latter syndicate from using the name "Daimler-Mercedes" in connection with motor-cars dealt in by them.

FROM Messrs. Brown Bros., Ltd., comes a copy of their new catalogue of "Brown Cars"; this gives full particulars of the five models, viz., 10-12-h.p. two-cylinder, 18-20-h.p., 20-22-h.p. and 25-30-h.p., four-cylinder and 40-h.p. six-cylinder. Illustrations are given of the principal parts of the chassis as well as of complete vehicles, the latter including: not only touring vehicles but a useful 10-12-h.p. traveller's car and a 20 cwt. delivery van.

PUBLIC MOTOR SERVICES.

THE service of motor-wagons for goods from Leith to Galaahels is being largely taken advantage of by merchants and manufacturers in the border town.

THE increasing number of empty properties in the borough of Paddington is ascribed by the finance committee, in a report issued on Saturday, to the motor-bus traffic in the neighbourhood.

ON Saturday Messrs. Tilling and Company's motor-bus service from Peckham and Catford to Greenwich was terminated; on Sunday the firm initiated a new service from Oxford Street to Sidecup.

MR. S. A. CHAMBERS, presiding at the meeting of the Automobile Cab Company (Ltd.), on Monday, said the loss of £10,196 on the year was mainly due to two causes. They had been unable to obtain full delivery of the cabs until November, 1906, which caused them to miss the best part of the season of that year; while exceptionally bad weather had been experienced in 1907. As an instance of how the weather affected their takings, he pointed out that for the week ending January 12th, when the weather was bad, the takings per cab were only 19s. per day; during the Easter holidays, when it was fine, they rose to £1 16s., and during Whitsuntide, when it was bad again, they fell to £1 1s. 7d. Of their thirty-two cabs, the average number running was nineteen or twenty, the remainder being in the hospital, while their experience had led them to regard it as not imprudent to write off 33½ per cent. depreciation off their cabs. Several shareholders suggested that a committee should be appointed, but nobody would volunteer to serve on the committee, and eventually the resolution for the adoption of the report was agreed to, and the retiring directors, Mr. S. A. Chambers and Mr. C. G. Henty, were re-elected.

ARRANGEMENTS are in progress for placing another 400 motor-cabs on the London streets. The cars will be four-cylinder, of 12 to 16-h.p., and fitted with a taximeter.

PASSENGER coaches run every Wednesday over the level roads through Romney Marsh to the interesting old Sussex town of Rye. The motor traffic has given several little frequented towns and villages in the Hythe district a new lease of life.

COMPANY NEWS.

NEW COMPANIES REGISTERED.

MOTOR INVESTMENT EXCHANGE.—Registered in Guernsey, £15,000. The signatories are: J. Le Messurier, Ecirvain, Manor Place, Guernsey; H. M. Mauger, St. Martin's Road, Guernsey; A. J. Roussel, Guelles Road, Guernsey; P. J. Mauger, Fort Road, Guernsey; H. Ogier, La Croix, Castel, Guernsey; H. Le Messurier, Hauteville, Guernsey; G. Ridgway, Manor Place, St. Peter Port, Guernsey.

S. F. EDGE (1907), LTD.—£275,000. To acquire the business of S. F. Edge, Limited, and to carry on the business of motor-car manufacturers and dealers, &c. 75,000 £1 shares have been offered for public subscription, the list of applications for which closed on Thursday.

READING MOTOR COMPANY.—£2,000. To acquire the business carried on at 57, Castle Street, Reading, and elsewhere as Cannadine and Company, and to carry on the business of motor-car manufacturers and dealers, &c.

POLICE TRAPS.

THE trap in the Shooter's Hill road is again in frequent operation, its victims being summoned at the Woolwich Police Court.

THE Birmingham City Council has been considering the traffic by-laws of the town, and in the course of the discussion the chairman of the Watch Committee promised that the question of the speed of motor-cars passing through Birmingham would have the attention of the chief constable. Wariness should therefore be practised by motorists in the district.

THE police trap on the Garstang road at Ellet is again in active operation, leading motorists to the Lancaster court.

SURBITON is again the centre of a carefully planned police trap.

A MEASURED distance of a mile in the vicinity of Bishopston, Renfrewshire, is reported as having been the scene of police trapping activities lately.

CAVENDISH PLACE is a favourite spot in Eastbourne for police traps.

P.S. WAGHORN is operating in the Handcross, Friars Oak, and Bolney districts of Sussex.

A MOTOR trap is being operated at Fenstanton, on the road between Huntingdon and Cambridge.

THERE is a measured furlong in the borough of Godalming.

ON the Chichester road, near Arundel, the police trap is in daily operation; at Poling is another trap a quarter of a mile in length; Walberton is also the scene of a trap of regular occurrence.

HENFIELD, Washington and Bramble are three villages from which large hauls of motorists have lately been made to the Steyning Petty Session. Motorists should be careful when passing through these during the holidays.

THE police trap in Loampit Vale, Blackheath, is likely to be in operation on Monday next.

UNDER the title "A Remarkable Brochure," Messrs. Humber, Ltd., have issued a circular summarising the success of the Humber vehicles in the Isle of Man and Scottish trials.

MOTORING ON THE RIVIERA.

THE "Corniche d'Or" of the Estérel, as the coast road is known, was only completed in 1893, and as a piece of modern roadway-making is the peer of any of its class elsewhere. The record of its building and the public spirited assistance which was given the project on all sides would, or should, put to shame those road-building organisations of England and America which for the most part have aided the good-roads movement with merely an unlimited supply of talk about what was going to be done. As a roadway of scenic surprises, the "Corniche d'Or" of the Estérel is the peer of the better known rival beyond Nice, though it has nothing to excel that superb half-dozen kilometres just before, and after, Monte Carlo and Monaco. The interior route of the Estérel, the Route d'Italie, mounts to an altitude of 300 metres, while the "Corniche" is practically level, with no hills which would tire the least muscular cyclist or the weakest powered automobile. Since the beginning of the transformation of the Estérel 240 kilometres of new roadways have been laid out. After this great work was finished, came the question of erecting sign-boards along the various routes and chemins and carrefours and bifurcations, and the work was not treated in a parsimonious fashion. Within the first year of the completion of the road-building over two hundred important and legible signs were erected by the efforts of a wealthy resident of St. Raphael, with the result that the value of the Estérel as a great "parc nationale" became apparent to many who had previously never even heard of it.

This delightful track of unspoiled wildwood is bounded on the north by the Route d'Italie, while the ingeniously planned "Corniche" follows the coast-line all the way to Cannes, which is really the door by which one enters the Riviera of the guide-books and the winter tourists.

The "Corniche d'Or," its inception and construction, was really due to the efforts of the omniscient "Touring Club de France." Formerly

The 30-h.p. White Steam Car fitted with limousine body for the Marchioness of Bute.

the way by the coast was but a narrow track, or a "Sentier de Douane." To-day it is an ample roadway along its whole length, on which one has little fear of speeding automobiles, for the simple reason that the jutting capes and promontories of porphyry rocks are death-dealing in their abruptness and frequency, and no automobilist who is sane—let it be here emphasised—takes such dangerous risks. The forest and mountain region of the Estérel between those two encircling strips of roadway is possessed of a wonderful fascination for those who are brain-fagged or town-tired; and to roam, even on foot, along these by-paths for a few days will give a whole new view of life to any who are disposed to try it. If one purchases the excellent map of the region issued by the "Touring Club de France," or even the five-colour map of the "Service Vicinal" of the French Government, he will have no fear of losing his way among the myriads of paths and roadways with which the whole region is threaded.—Mr. F. Miltoun in "Rambles in Provence."

INTER-MOTOR CYCLING CLUB CONTEST.

FIVE clubs competed in the inter-team contest promoted by the Motor Cycling Club on Saturday. The competition took place on 12½ miles of road between Daventry and Rugby, with Daventry as headquarters, and had to be covered several times, the full distance being 100 miles, with a luncheon stop at fifty miles. The conditions were for a non-stop run, no adjustments being permitted, and the clubs were represented by six riders each—viz., four motor-cyclists and two drivers of passenger machines. The result was a win for the Coventry Motor Club, with 534 marks, the Motor Cycling Club being second with 479½, Birmingham Motor Cycle Club third with 392, Southern Motor Club fourth with 359½, and the Great Yarmouth and District Motor Cycling Club fifth with 239 marks.

FORTHCOMING EVENTS.

AUGUST.

- 2nd to 5th.—Automobile Club of France Criterium and Coupe de la Presse.
 3rd (Sat.).—Sussex County A.C. Gymkhana at Eastbourne.
 Southend M.C. holiday tour on south coast.
 The Somerset A.C. run to Weymouth.
 Gymkhana of the West Surrey A.C.
 5th (M.).—Crystal Palace A.C.'s races at Bexhill (abandoned).
 Brooklands A.R.C. Meet.
 Meet of the New Forest A.C. at the Burley Pony Show.
 10th (S.).—Entries for R.A.C. Commercial Vehicles Trials finally close at 12 noon.
 Annual Race Meeting of the Auto Cycle Club at Canning Town.
 Meet of the Lincolnshire A. C. at Brocklesby Park by invitation of Earl Yarborough.
 17th (S.).—Brooklands A.R.C. Meet.
 Lincolnshire A.C. Hill Climb at Syston Park.
 19th to 24th.—Auto Cycle Club's six days' trial.
 20th.—Open competition for light cars organised by the Essex Motor Club over a 200 miles course.
 24th (S.).—Hertford County A.C. at Lower Aston Hill for a members' driving test.

SEPTEMBER.

- 9th.—Industrial Vehicle Trials commence.
 14th (S.).—Motor Union Meet at Leicester.

OCTOBER.

- 19th.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

- Cordingley's Motor-Car Exhibition at the Agricultural Hall, London.

LIGHTING-UP TIMES—LONDON.

Aug. 3rd—8.45	...	5th—8.41	...	7th—8.38	...	9th—8.36
" 4th—8.43	...	6th—8.40	...	8th—8.37	...	10th—8.34

In Glasgow the lighting up time to-day (Sat.) is 9.40 p.m., and to ascertain the approximate times on succeeding days 45 min. should be added to the above figures; in Birmingham an addition of about 13 min. is necessary.

THEFT OF A MOTOR-CAR.

GEORGE GARRARD, chauffeur, was found guilty at the New Bailey, London, on Monday. He was charged with obtaining £100 by false pretences from Samuel Brown, a motor dealer, Brompton Road, and pleaded guilty to a second indictment charging him with stealing a motor-car, the property of Mr. B. L. Rose. Garrard was a chauffeur in the employ of Mr. Rose, who in June had two motor-cars—a Daimler and an Argyll. Garrard was instructed by his master to sell the latter car, and he accordingly went to Mr. Brown and represented that he had a Daimler car for sale. Brown having tried the car agreed to give Garrard £205 for the car, after Garrard had produced what purported to be a written authority from Mr. Rose for the sale. Brown parted with £100, but on making inquiries as the car was not delivered he learned that Garrard had no authority to sell the Daimler car, and that consequently he had been defrauded of his money. The man, however, had sold the two head lamps, which cost £16, for £4 10s. The Recorder passed a sentence of six months' hard labour.

GARAGE LIABILITY.

In a case heard at Birmingham, Mr. F. A. Byrne claimed £39 from Motor Plants, Ltd., for damage to a motor-car while in their keeping for sale on commission. The cylinder was cracked owing, it was alleged, to the defendant's negligence in not draining the water jackets during frosty weather. After hearing evidence Judge Bray said it had not been established to his satisfaction that the damage to the car was caused by the negligence of the defendants. There would, therefore, under the circumstances, be judgment for the defendants on the claim.

THE COMMERCIAL VEHICLE TRIAL.

SPECIAL difficulties have arisen in connection with the routes for the heavy classes (classes F, G, and H) in the R.A.C. Commercial Vehicle Trials, for which fifty-five entries have been received. If a weak bridge is found anywhere along the line of direction chosen, it probably causes a disorganisation of the scheme for that day, and a general substitution of fresh routes. For six weeks past the R.A.C. has had a car travelling throughout the districts that are to be invaded, and it is gratifying to know that the plans as regards routes are now nearly all settled. Vehicles in Class A travel 70 miles a day, in Class B 60 miles, in Class C 55 miles, and so forth, bringing up the mileages to be arranged and mapped to a total of about 300 per day, or 6,600 for the twenty-two running days of the trials.

THE DU PRE CHALLENGE CUP.

THE contest for the Du Pre Challenge Cup took place on Kettleby Hill, on June 22nd, the event being restricted to members of the automobile clubs of Leicester, Nottinghamshire, and Derby and District. We have just received the adjudicated result as decided by the R.A.C., showing that Mr. G. H. Waite's 8-h.p. Clyde was the winner of the cup this year. Others in order of merit were Dr. P. E. Tressider, 15-h.p. Clement-Talbot; Dr. Hogarth, 12-16-h.p. Talbot; Capt. Byron, 24-h.p. Minerva; Mr. H. Wormleighton, 14-h.p. Clyde; Mr. H. B. Oliver, 24-h.p. Minerva.

BUSINESS NEWS.

MR. GIBBON BROOKS, 51, Queen Street, Cardiff, has been appointed agent for Cardiff and district for the sale of Weigel cars.

CALLING in at the works of Messrs. Dorwald and Company at 30-32, High Street, Wandsworth, S.W., the other day, we found them well equipped to undertake all kinds of repairs to motor-cars at the shortest notice.

MR. W. H. TOWNSEND, of 124, Commercial Street, Newport, Mon., is making a speciality of the welding of castings by means of his special oxy-hydrogen process; he claims to be able to repair every description of broken or defective castings, and sends us an illustration of a damaged base chamber which was finding its way to the scrap heap, but which he was able to restore to its original condition.

IN exactly a fortnight from receiving the first Leon Bollee cars out of the fourteen purchased by the Motor House twelve of them were disposed of, the twelfth, a handsome landaulet, being sold to the Duchess of Newcastle.

ARRANGEMENTS are being rapidly pushed forward for the manufacture and marketing of "Miraculum," the new puncture stop for pneumatic tyres.

THE CRYPTO ELECTRICAL COMPANY, of 155-7, Bermondsey Street, S.E., have appointed Mr. S. Mansel Jones their sole agent for the whole of South Wales for the sale of their dynamos, motors, alternating to continuous current transformers, &c.

A TYRE repair establishment has been opened at 215, Shaftesbury Avenue, London, W.C., by Mr. H. George.

THE New Engine Company inform us that they have increased the horse-power of their smaller N.E.C. car from 15-h.p. to 20-h.p., and have also lengthened the wheel base from 9 ft. to 9 ft. 6 in., making it an all-round carriage suitable for any class of work. They have also got out a new 40-h.p. chassis designed chiefly to meet the demand for a car suitable for extremely large bodies, so that they now build three types—20-h.p., 30-h.p. and 40-h.p. Amongst recent orders received are one for an extra large 30-h.p. landaulet for Mr. William J. Parkyn, of Manchester, a 30-h.p. Victoria for Mr. F. Copestake, of Hentfield and Brighton, a 20-h.p. double landaulet for Mr. Fred Wallis, the well-known surgeon, and a 20-h.p. double landaulet for Dr. Owen Lankester.

A COMPANY has been formed in New Zealand to develop a new motor tyre made of chrome leather, devised by Mr. W. H. Bird, of Wanganui. The feature of the new production is the building up of the tyre in such a way that the edge of the leather engages with the ground. Small pieces of chrome leather, cut in the shape of the cross section of the tyre, are placed side by side until the circle is complete, when it is compressed and vulcanised to form.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

To insure insertion communications and contributions must be in the Editors' hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case; otherwise no liability will be accepted.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment or some is directly specified in forwarding, and the terms arranged before publication.

THE Motor-Car Journal.

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

CONSIDERABLE interest attaches to the Reliability Trial which the Royal Automobile Club has decided to hold next year—probably in June. So far as present information goes the scheme is to devise a 2,000 miles Reliability contest, included in which will be not less than 20 miles of timed hill climbs and a run on the Brooklands Track of 200 miles. Here is a combination of the Scottish Trial idea with an essential feature of the Tourist Trophy, it being proposed that the car which does not finish on the track on the allowance of fuel provided shall be out of the event. The presumed average time per mile over the 2,000 miles will be arrived at by the time per mile on the track in minutes; then the time lost by delays on the road will be added in minutes—except the delays on the hill climbs—and the time occupied in the hill climbs will be also added in minutes. Classification will in all probability be by price, minimum weight, minimum wheel base, and minimum piston area. An event organised on such a comprehensive scale, and embodying most of the ideas that are comprised in the leading Continental and British trials, should become a classic institution, and also have the effect of encouraging the trade to concentrate their efforts on the Trial of the year, leaving the county and other contests of minor degree to amateur owners of cars.

Club Contests.

SHOULD the 1908 Trial have such a result we do not anticipate any restriction of energy in club life. In fact, it should be quickened by the chances offered to amateur drivers to get the best out of their vehicles. At present many private owners do not enter for club events because of the competition of the trade. They feel the opportunities for success are unequal, and are inclined to hold aloof. This question of club competitions is becoming a very difficult problem owing to the multiplicity of the meetings and the variety of regulations governing the same, and should be made the occasion of a conference to draw up some scheme of uniformity ere the next season.

The Brooklands Track.

MONDAY'S prize list at the Brooklands Motor Track totalled £2,400, and attracted cars and drivers of international renown. But it cannot be said to have excited the public to any extent; and to the improvements already made since the opening day others will have to be added if motor racing is to become a Bank Holiday sport. Firstly, punctuality in running the events should be secured; secondly, the possibility of confusion as to the identity of cars on the track should be eliminated by the numbers being newly painted before they enter the course; and thirdly, some indication of the speed attained should be given at the earliest possible moment after the race. If the authorities continue to withhold the actual time of each contest, or decline to publish the rate of speed per hour, they might at least have the time taken along the finishing straight duly proclaimed. People like to be able to say they

saw a vehicle going at so many miles per hour, and even such a modicum of comfort as we suggest would probably satisfy many. Otherwise there are indications that unofficial times will leak out, and then the inaccuracies made public will be worse than the absence of knowledge altogether.

Petrol Precautions.

THE warning which the London County Council have again addressed to the Metropolitan City and Borough Councils with regard to the discharge of petrol into sewers is of general importance. They state that, from information in the possession of the Council, there is good reason to believe that much waste spirit is discharged into the sewers from private premises, and it is suggested that the best safeguard against the danger seems to be the provision of suitable intercepting chambers on the surface drainage at large garages and other premises where considerable quantities of petroleum spirit are used. Thus far the immunity from accident from such causes which has been enjoyed by the automobile industry has been a tribute to the care generally exercised. These periodical warnings of the L.C.C. have, however, their service in keeping constantly before private and trade users the risks associated with the careless handling of motor spirit.

Dust Trials.

THE Dust Committee of the R.A.C., the members of which were the judges in the Dust Trials, has been authorised, in view of the Vacation, to make and publish the awards in the Dust Trials on its own responsibility. The Dust Committee is already in a position to report that the Trials have yielded very valuable data, that the photographic records give clear and unmistakable comparative results, and that it will be easy to correctly and fairly award the prizes in the first two classes in a few days, i.e., for manufacturers' standard cars, and for the inter-club competition for amateurs' cars. It will take some time, however, to consider whether any award should be given in the experimental class, and to work out the information derived from the experimental work carried out by manufacturers and by the Club itself.

Damages against a Motorist.

LAST week we reported the circumstances of a case heard at Leeds in which a groom recovered £500 damages from Mr. T. H. Woollen, who is well known as one of the most careful drivers in the country. The plaintiff took action to recover damages for personal injuries caused in a motor-car accident which happened a year ago. In opening the case counsel acknowledged that the motorist was not proceeding at more than eight or ten miles an hour, and it was not disputed in evidence that the horse swerved and jumped over the right hand side of the radiator, doing damage to the car. Although some of the jury seemed anxious to respond to the invitation of the defendant's counsel to inspect the car for themselves, the judge said he did not wish to see the vehicle, and after his summing up the jury quickly found for the plaintiff. After perusing the evidence we feel sure that there were points

requiring further elucidation; and it is certainly strange that juries and judges are not more keenly desirous of confirming, or otherwise, the evidence that is brought before them by actual investigation. The damages in this particular case appear altogether out of proportion to the offence, and Mr. T. H. Woollen will assuredly have the sympathy of his friends in this his first experience in a law case in connection with motor matters.

The Motor Club and Motor Boating.

THE Motor Club continues its progressive way and the membership is rising rapidly, its influence also advancing in proportion. A most important development has just taken place by which the British Motor Boat Club has joined forces with the establishment in Coventry Street, London, W., so that members of either organisation will enjoy all the advantages and privileges of the other. We would congratulate the Motor Club on thus becoming possessed of a marine section, and the British Motor Boat Club on this alliance with one of the most virile of the motoring organisations. The combination promises to become an important factor in the British automobile movement.

The Bexhill Meeting.

It will be remembered that the Competitions Committee of the R.A.C. were recently commissioned to inquire into the proceedings at the last automobile race meeting at Bexhill. This investigation has now taken place. Statements as to the conduct of the meeting, submitted by competitors and others, were read by the secretary and noted; and Mr. Robert Todd, who had previously examined the evidence on behalf of the R.A.C., summarised the chief points of complaint. These points had been duly forwarded to the Crystal Palace A.C. in order to give that club full opportunity to prepare their case. Evidence was taken by the Competitions Committee from the following:—Mr. H. Hollands, hon. secretary of the Crystal Palace A.C.; Mr. S. F. Edge and Mr. F. W. Bailey, Clerks of the Course; Mr. E. G. Hemmerde, M.P., instructed by Messrs. Kenneth Brown and Co., on behalf of the Crystal Palace A.C.; Mr. G. Skinner, a non-competitor; Mr. Chas. Jarrott, a competitor; Mr. A. V. Ebbelwhite, starter and timekeeper; and Mr. F. Straight, timekeeper. Ultimately, after discussion, it was resolved that the permit for the Crystal Palace A.C.'s hill climb on the 27th ult. should be allowed to stand, and that the Crystal Palace A.C. be given the opportunity of requesting the R.A.C. to cancel the permit already granted for their Bexhill meeting on August Bank Holiday. If the secretary of the R.A.C. was not notified of such request within forty-eight hours of the time at which the resolution was communicated, the permit was to be cancelled by the R.A.C. without further notice. It was further agreed that

the committee should be informed that the permit for the hill climb had not been withdrawn, in view of the inconvenience which would result to competitors from such short notice of the cancellation of the meeting. It was unanimously resolved:—"That the committee of the club be requested to instruct the Competitions Committee to consider and report as to the best method of ensuring the attendance of competent officials at all open meetings."

Competent Officials wanted.

THIS is an important point requiring the serious consideration of motoring authorities, and, although it will doubtless be a difficult task to arrive at a satisfactory solution of the difficulty of providing such officials for all open meetings, the Committee should carefully consider the question—as they have now been officially requested to do. At the meeting of the R.A.C. Committee last week, Col. Holden, in moving the adoption of the minutes, dealing with the inquiry, said that the resolutions indicated that, in the opinion of the Competitions Committee, the meeting had not been conducted in several particulars in strict accordance with the Open Competition Rules. This is the first time such an inquiry has been held; we trust such procedure will not be required at any future race meetings, no matter under whose auspices they are held.

Liability in Motor-car Accidents.

ON Tuesday, Mr. J. Bertram, M.P., introduced a Bill into the House of Commons, with the object of defining the liability of the owners or persons in charge of motor-cars in cases of accident. The Bill provides that in all cases of injury to persons, or damage to property arising from motor-cars on a highway, the owners and the persons in charge shall be jointly and severally liable in damages to the person injured, or his dependents, as defined by the Workmen's Compensation Acts, or to the owners of the property damaged, unless and until it can be shown that such injury or damage was due to the wilful negligence of the person injured, or the person in charge of the property. As the law stands now, a person suing for damages would have to prove that there was no contributory negligence on his part. If this Bill becomes law, the owner of the motor-car will have to prove that there was contributory negligence—a very different thing, and one that will require careful consideration by those who look after motoring interests in Parliament.

Alcohol from Peat.

THE publication of the report of the Fuels Committee of the Motor Union and the importance which it assigns to alcohol in connection with the future of the motor industry gives added interest to some experiments recently carried out under the direction of Sir William Ramsay by some Swedish and French chemists. These were made with dried and compressed Irish peat which was first mixed with 90 per cent. of water. Diluted sulphuric acid was added to the peat in definite quantity, and the whole heated to a certain temperature. The resultant was then cooled, and the acid neutralised with lime. Fermentation was next set up, the mixture being frequently aerated, and ultimately alcohol was distilled from the supernatant liquid. Apart from the bye-products of the process, the system is valuable, and its simplicity leads to the hope that it may be developed on some of the peat lands of Ireland. Mr. Roger Wallace, K.C., who was the first chairman of the Automobile Club in the old days when Whitehall Court was the hub of the automobile world, is interesting himself in the furtherance of the project, and should his plans mature automobile engineers will do well to anticipate the position by carefully studying the construction of engines designed for use with alcohol.

In a Swarm
of Bees.

MOTORISTS have strange experiences on the road, and to the terrors of stone-throwing by lads and other incidental dangers of the journey must be added the attentions of insects, &c., that infest the highways. The other day as Mr. W. Boswell, of Horncastle, was riding his motor-tricycle while on his business rounds in the Fens he ran into a swarm of bees. At a little distance he had thought they were flies; when he drew nearer it was not difficult to discover that they were bees. He had to face the music, and, putting on speed, drove as mightily as he could. They pursued him for a couple of hundred yards, and then he got beyond the majority. But a number clung to his clothing, and as they were subsequently shaken off they appeared stupefied, and fell to the ground—as Mr. Boswell surmises in relating the experience to us, overcome by the fumes of petrol. The incident is not unique, but exceptional enough to be worth the recital.

watching motorists on the road than to allow them to go about the work for which they were primarily instituted.

Reciprocity when
Pleasuring.

A CORRESPONDENT draws attention to one of the worries incidental to motoring that have occurred in his experience. We all know the familiarity of the acquaintance who learns that his neighbour has a new car, and who is not averse to having spins thereon to anywhere that is forty miles distant. Then comes the social aspect of the matter, and in the end the host—not always a voluntary agent, by the way—finds his trip somewhat expensive. As our reader observes, the matter does not concern Midas, but it gives quite a shock to the professional man who has had a series of tyre troubles, and did not contemplate the cost of entertaining his neighbours when he determined to become a motorist. Doubtless the best way to settle such a matter would be for the host to find the motive power for the machinery and the guests to reciprocate with

King Edward and the Prince of Wales leaving Goodwood. In the car with his Majesty is Count Mensdorff, while in the doorway is the Duke of Richmond, who entertained the King last week.

(Russell and Sons.

Police
Traps.

THERE is no doubt that police activity during the holiday season will be energetically directed against motorists on many of the main roads. As usual, from the south we have reports which show that a large proportion of the police force will be located in many villages as well as upon the lonely parts of the main road watching motorists. In many of the northern districts, too, provocation will have to be endured by those who drive cars, as local authorities apparently have an idea that the holiday seasons are profitable trapping times, and may be utilised to add substantially to their revenues. Reference to our report of cases under the Motor Car Act last week afforded ample illustration of the way in which, to quote the "Sussex Daily News," "motorists help to keep the rates down." At Steyning, Arundel, Haywards Heath and elsewhere many motorists were summoned, and it would really appear as if there were something in the suggestion made in a northern county the other day that it is more profitable to employ police

regard to fuel supplies for the passengers. Should fines occur a kind of co-operative alliance might be established, for these are risks to be shared. Besides, an arrangement like that with J.P.'s aboard would be of considerable educational value.

Poona.

FOLLOWING the success of the 14-16-h.p. Argyll cars in Scotland comes news of a good run of a similar vehicle in India. A gentleman anxious to test the merits of the car decided to travel from Poona to Mahabaleshwar and back in company with several other motorists on cars of various makers. A start was made from Poona at 7.35 a.m., the several cars starting simultaneously, and Mahabaleshwar was reached by the Argyll exactly three hours later, no stop of any kind having been made. It was the first up all the hills. An abnormally good run was made back to Poona and thence on to Bombay, no trouble of any sort being met with and the engine running as cool as when the run was started.

B

THE PEKIN-PARIS RUN.

THE ARRIVAL OF PRINCE BORGHESE IN ST. PETERSBURG.

BY CAPTAIN W. G. WINDHAM.

B EING the only Englishman who went out to meet Prince Borghese on his arrival at St. Petersburg on the 1st inst., I have thought it might be of interest to give a few details of his magnificent reception. Arriving at St. Petersburg on Saturday morning the 27th ult., I ascertained that the first motorist expected to arrive was the Prince on his 40-h.p. Itala, and that he was due on Monday morning. However, owing to his reception in Moscow, he did not leave there till 6.30 the following Wednesday morning. As soon as the news spread that the car had left Moscow, arrangements were made by the Automobile Club of Russia for as many of their numbers as possible to go out in their cars to welcome him and to escort him back into St. Petersburg.

The rendezvous was made outside the magnificent building of the cathedral of St. Isaacs, so at 10 a.m.—the time appointed—I wended my way there and found several cars with their occupants lined up ready for the start. I had the honour of being

Prince Borghese arriving on his Itala Car on the outskirts of St. Petersburg.

asked to accompany M. Nicholas Kritch on his Buick car, who was appointed to lead the way, flying the C pendant as leader. Shortly before the departure was made, at 10.30 a.m., a large English-made motor-omnibus made its appearance, which caused no little curiosity and sensation; apparently, it was hired by the Italian community of St. Petersburg to welcome their country's representative, who had accomplished such a wonderful feat. Some time after the procession had started a two-seated Gobron-Brillie came rushing along, and I ascertained that it had been placed at my disposal by Mr. N—, the head of some enormous iron works. As I was, however, already comfortably situated, I declined it with thanks and the car was sent back.

The journey out was an eye-opener to me as to what is expected of a car in Russia and also what the vehicles must have gone through on such a journey as that from Pekin to St. Petersburg. Owing to a mistake in the route we crossed over a road that throughout my travels in all parts of the world I have never seen the equal of—enormous deep holes and ravines passed through it, loose rocks, weighing anything up to 50 or 100 lbs., and, added to this, the mud was in most places a foot thick. The cars skidded in all directions, and one, in consequence of a skid, nearly went down the side of a steep ravine. Having arrived at a picturesque village about 20 versts out of Petersburg called Poulkovo (observation station), my friend blew a trumpet to stop the cars in order that those who were behind

should have time to collect, when the lot—some eight or nine—should get together in order to meet the Prince, who was expected about eight or ten versts further on the road. But, before this could be done, lo and behold, the Prince's car was seen to appear round the bend of the hill, and before anyone could realise the fact he was in our midst. Immediately a loud "Hurrah" went up and he was surrounded by his friends and a large bouquet of flowers was presented to him. I was lucky to have my camera ready and got the first photo which was taken of him. After a lot of hand shaking the various vehicles were ordered on to Tsarskoe Selo, where several people had gone out by train to meet the traveller, who, being ahead of his time, had to retrace his steps some few miles.

While waiting in this village I carefully examined the car and was greatly surprised as to the excellent condition it was in. There was not, as far as I could see, a single thing about it which was the worse for its journey, and, considering the awful country through which it must have travelled, it is indeed truly wonderful. People in England cannot imagine the kind of roads there are in Russia, and it is no little wonder that most of the cars imported into that country are quite inefficient for the work expected of them.

Prince Borghese told me that he had only his second pair of tyres on the front and his fourth pair on the back wheels; they are made by Pirelli, of Milan—square-treaded without non-skids—and judging by the look of them they are about 920 by 120 mm. on all four wheels. He carried four spare tyres, two of which had not been opened out and were still in their waterproof wrapping as supplied by the makers. The lamps were self-contained acetylene, made by Carello, of Turin. The bonnet has the words, in large white letters, "Pekino" (Pekin) painted on one side and "Parigi" (Paris) on the other. The engine was in excellent condition, and I could not detect the slightest thing wrong in the working of the car except that the radiator was steaming somewhat. One cannot be surprised at this, as the car was not fitted with wings and the mud covered the lower part of the radiator. Apparently there were no number plates on the car, and I wondered what Police-Sergeant Jarrett, of Ripley fame, would have said had he been on duty at that spot. I noticed that indiarubber shock absorbers had been roughly tied on between the springs, showing one the necessity of a properly sprung car on bad roads.

The cortège of cars arrived and formed up into line opposite the station of Tsarskoe Selo, the Itala car standing alone directly opposite the entrance. Here several hundreds greeted the prince, and champagne being handed round in the open, a speech was made in French welcoming the Prince to Russia, and congratulating him on being the first man to cross from Pekin to St. Petersburg on a motor-car. After this luncheon was served, and a medal bearing the inscription "Souvenir de l'Automobile Club de Russie," encircling the club's initials was handed to the prince by the president of the club. On the reverse side was an automobile in gold, and the words Pekin—St. Petersburg—Paris.

I had a chat with the Prince, and asked him, as an old motorist of '97 and a member of the English Automobile Club, if he had any message which I could convey to the English club, and he said, "Yes; I am very disappointed that there were no English competing, and I hope if ever there is another journey of this sort made that England will take part in it." On thinking over these words I cannot help from expressing my thoughts that had the British flag been attached to that car instead of an Italian I certainly should have had a mixed feeling of pride and joy. It was only some three years ago since I went over the factory of the Itala firm in Turin—then quite an insignificant and small factory—and again last February I had the pleasure of being shown round their new works, which are far bigger than anything I have yet seen in our country.

plainly showing one the enormous strides Italy is making in the manufacture of motor-cars.

Luncheon finished, the party, led by our car, proceeded back towards St. Petersburg. The only stop made was to meet the Italians, who presented the Prince with an address; they had only managed to get out part of the way on account of the roads being too bad for the bus. With the blasting of trumpets and every head out of the window Prince Borghese entered St. Petersburg. The cars were temporarily halted under the shadow of the large granite rock on which stands the equestrian statue in bronze of Peter the Great, where the prince was photographed. The cars in procession paraded the Neveski, finishing up at the Hotel de l'Europe, where the traveller was received by more friends. A dinner was given to him in the evening by the leading officers and merchants of the city, finishing off what might be truly said a very pleasant memory of a great performance.

Before finally concluding I should like to say a few words about the motor-car in Russia, having carefully watched its progress during the last four years, in which time I have made some twenty visits. There is no doubt whatever that there is a very big business to be done with cars and accessories in that country. So far, I am sorry to say that it is the foreigner who has got a footing. English cars are few and far between. I was informed by several leading motorists in St. Petersburg that the English did practically nothing at the last motor exhibition held early this year. Last February I was asked by letter to publish the fact that a show was to be held at St. Petersburg and to try and induce British manufacturers to exhibit. This letter was published in nearly all the leading motor papers, but notwithstanding this I hear that there were only a few motor-buses and mackintoshes on exhibition, the cars being conspicuous by their absence.

A very wealthy merchant, owning enormous steel works, told me that the car which was wanted for Russia is not a fast one—as it is impossible to drive them fast—about 14-h.p., and one which is built fairly high off the ground, and above all one which is strong. He also told me he was prepared to take over an agency for a car of this description. But in Russia, he added, no agent will buy a lot of chassis on the chance of selling them, but if they were sent out there he would push the sale of them, and these are the only conditions which would ensure a car agency being taken up. Surely a statement or offer made by one who, I am informed, is one of the richest men in Russia, is worth the attention of some English firm.

MOTORISTS who contemplate a tour in France may be interested to know "Continental" tyres are stocked by the Societe Automobile du Nord, 12, Rue de la Pomme d'Or, Calais; Messrs. Coleman-Fourquet, Garage du Casino, Boul. Sainte-Beuve, and the Grand Garage International, 83, Boul. Daunou, Boulogne.

THE six-cylinder Hotchkiss car still maintains its record of reliability by adding yet again another week's non-stop run to the already large total in its great trial of 15,000 miles under the observation of the R.A.C. Having completed 947 miles during the past week, the absolute non-stop run to last Saturday's date now amounts to 8,389 miles, and brings the grand total in Great Britain, Ireland, and France to 19,166 miles.

TWO separate challenges for £1,000 each have been issued by Mr. S. F. Edge. In the first he offers to pit a team of six six-cylinder Napiers, identical with that on which he made his twenty-four hours' record, against any other team in the world, on the condition that the cylinder capacity of the acceptors' cars shall be the same as that of the Napiers. He proposes three races of three, twenty and 100 miles to be run off at Brooklands some time this month. The other challenge arises out of a controversy with Mr. Charles Jarrott with regard to the use of oxygen, and Mr. Edge suggests a race for £1,000 stake, under Byfleet Plate conditions, without oxygen.

THE BAILEY DETACHABLE MUD GUARD.

WE illustrate herewith a new design of patent detachable mudguards or wings, which has lately been introduced by Mr. Wm. Bailey, of Speke Hall, Garston. The upper illustration gives an underneath view of a mudguard being placed in position on the brackets, which, while normally attached to the body of the car, are shown temporarily fixed to a bench. As will be seen, the brackets A are of a flat shape, so made to fit into sheaths B, connected to the under side of the wing, which, when in position, are secured by winged screws. The method of connecting the guard to the step, by which means all rattle is obviated, is depicted at F. In this case the sheaths are fixed to the bottom side of the step, and pass through holes made in the guard. A locking bar F is then inserted, this being secured by the winged screws D. The front guards of most cars can be attached in the same way, but in cases where the wings extend over and down the inside of the

wheel, the sheaths would require to be attached to the side of the chassis with the opening facing forward, the brackets on the guard pointing rearwards. Mr. Bailey claims that with mudguards arranged on his system the set of four can be removed with the greatest ease within three minutes, thus facilitating access to the engine, brakes, tyres, &c., and enabling the wings to be properly cleansed without the dirt passing on to the wheels.

SIR JOHN LAWSON WALTON, M.P., the Attorney-General, has just acquired a 15-h.p. Coventry Humber car.

MESSRS. F. G. GROOME, LTD., of Whalley, Lancashire, are encouraging picnic parties to adopt motor char-a-bancs for their trips. They have several vehicles in this service.

"THE MOTOR CHAPERON," by Mr. and Mrs. C. N. Williamson, is a novel introduced with a map showing the full geographical extent of the scenes over which the action takes place. Its utilitarian value is further foreshadowed in the dedication to the president of the Rowing and Sailing Club at Rotterdam, and then the list of illustrations suggests a most extensive and interesting itinerary. The novel has a plot which many will follow for its own sake; those who do not, will read to the end for the delightful impression that is given of motor boating along the Dutch waterways.

SOME NOTES ON RADIATORS.

RADIATOR troubles are, of course, mainly two in number. One is heating and the other is leaking. It is the duty of the manufacturer to fit a radiator that will cool sufficiently in all cases. There are certain ways of estimating the size of radiators of any given type necessary for any given motor, but these are only approximate and simply lessen the amount of labour necessary in the actual testing, which is the only proper way. When a car comes into the hands of the user with a radiator that does not cool properly, several things may be tried in the hope of finding a way out of the trouble. The pump may not be carrying water through fast enough, and the use of a larger, more powerful pump may help. If the radiator has vertical tubes or vertical water passages it will sometimes work better without a pump than with one, and this experiment deserves a trial. The water connections should always be examined, and, if there is any chance for an air or steam pocket or trap, this should be eliminated, for it will effectually stop the circulation. The connections should

by substituting a rotary pump for the geared one, so that the water can flow by thermal currents even after the pump has stopped.

If the radiator is going to leak through faulty construction, it will do so in the first few days of use. After that a leak is the result of either accident, freezing or faulty suspension. A radiator should be supported on the frame in a manner to give it slight play so that the bending of the frame will not pull it to pieces. When a radiator is tied to the frame by cross rods running from the right-hand side of the radiator to the left-hand side of the frame, and *vice versa*, it will, remarks an American writer, surely leak.

There is no reason for a radiator leaking on account of freezing if the user will be thoughtful enough to put in wood alcohol before the cold weather comes instead of waiting for the first cold snap. Forty per cent. of wood alcohol and sixty per cent. of water will keep a radiator from freezing down to about zero weather. Leave this mixture in until after the last frost in the spring. If the radiator shows a tendency to boil over or evaporate rapidly,

One of the most interesting items of the programme at the recent automobile meeting at Scheveningen was a procession of early motor-cars, some of which are shown in the above illustration. No. 1 is a 1900 Peugeot, No. 2-3 an 1898 Daimler, No. 4 a 1901 Peugeot, No. 5-6 an 1897 Peugeot, and No. 7 an 1889 Delahaye. [De Auto.]

be inspected for carrying capacity. On a 6-h.p. car the smallest point in the connections should not be below $\frac{1}{2}$ in. or $\frac{3}{8}$ in. inside diameter, increasing gradually as the power increases, so that with a 40-h.p. car the connections should be $1\frac{1}{2}$ in. or more.

Sometimes a radiator will suddenly begin to act badly and the driver notes that, although the engine is overheating, the radiator itself is cool. This generally means that the pump is not working, or, if the latter is in operation, that the water is not going through the radiator, but is being by-passed at some point. A steam pocket in the piping will also produce similar results.

When the water boils for a minute or two after stopping the water, the radiator is probably a little too small. The geared pump in stopping, of course, stops the water flow and the still water in the cylinder jacket continues to heat to the boiling point, producing steam and forcing the water out of the overflow. This can sometimes be overcome by steam venting the top of the water jackets or the radiator inlet pipe. It can also sometimes be overcome

replenish it with about half and half wood alcohol and water. The presence of the wood alcohol will do no harm and cause no danger, and will in every way act exactly like water except that occasionally a very slight odour of the alcohol may be detected. When a slight leak occurs, it may often be stopped temporarily by throwing in a handful of bran or some similar substance.

A honeycomb radiator, if it has very thin water spaces, will in time become clogged with lime deposits and should therefore be flushed out with steam and a little glycerine about once a season. A thermo-syphon radiator will not work when the water level gets below the radiator inlet pipes. With this, when the pipe that conducts the hot water from the motor to the radiator enters the latter near the top, it is necessary to keep it well filled with water at all times. When the water in the radiator is boiling, care should be taken in removing the filler cap, for the chances are that the moment it is detached boiling water and steam will shoot up through the opening.

THE CRITERIUM DE FRANCE.

THE Criterium de France reliability contest, which has been looked upon in France as the principal event of the motoring year—after the Grand Prix race—has been attended with unfortunate results, largely as the result of excessive speed, so much so that on the end of the second day, M. Maujan, the Under Secretary of State to the French Ministry of the Interior, ordered the event to be stopped. Forty-four entries were received for the trial, and of these thirty-five were duly weighed in, the vehicles comprising two Gladiators, two Peugeots, three De Dions, a Vinot, a De Dietrich, a Gobron, two Aries, three Cottin-Desgouttes, three Cornilleau-Sainte Beuve, two Martini, a Gillet-Forest, two Martin-Lethimonnier, three Regina-Dixi, a Mercedes, a Motobloc, a M.R.J., a Brillie, a Rebours, a Charron, two Westinghouse, and an Argyll, the latter, driven by M. Jules Dubois, being the only British car in the competition. The vehicles were required to be fitted with four-seated side-entrance bodies, and to be of a total minimum weight of 1,650 kilog.,

vehicles taking part in the Criterium. It appears that Rouiller was trying to pass a vehicle and the two were enveloped in a thick cloud of dust. At that moment the other car dashed up in the opposite direction. The crash was terrific, both cars being smashed to pieces, four persons—Rouiller, on the Bordeaux car, and Martin, one of the directors of the company, Villemain and Metayer on the Martin-Lethimonnier—being killed outright and two (Amigues and Fauveau) succumbing the same evening to their injuries. It had been arranged that those competitors who successfully went through the four days' reliability trial would qualify for the speed contest known as the Coupe de la Presse, fixed for August 6th on a 78.5 kilometre circuit near Trouville, which, starting and finishing at Lisieux, passes through Pont l'Eveque, Cormeilles, Lieurey and les Quatres-Routes, this having to be covered five times to give a total distance of 392½ kilometres. This part of the trial was to run on a petrol allowance basis, viz., 19 litres per 100 kilometres, equal to, roundly, fifteen miles to the gallon. In view of the reliability trial having

The Criterium de France.—M. Dubois at the wheel of the Argyll Car, the only British vehicle in the event.

including the passengers, or equivalent ballast. The contest started on August 2nd with a run from Paris to Clermont Ferrand (414 kilometres), the subsequent programme being: August 3rd, Clermont to Bordeaux, 337 kil.; on August 4th to Nantes, 373 kil.; and on August 5th to Trouville, 360 kil., the rules providing for a minimum average speed of 25 miles per hour. The first day's run went off without any serious accident or incident. The start from Paris took place at 5.30 a.m.; the cars were despatched at half-minute intervals, and all safely reached Clermont within the specified time. It was on the run from Clermont to Bordeaux on Saturday that two disasters occurred, as a result of which no less than seven persons lost their lives. In the first accident a Martini car driven by M. Segesmann dashed into a tree at Camps, near Libourne, owing, it is stated, to one of the tyres bursting. The driver, mechanic, and two of the passengers got off with slight injuries, but M. Luquin, a photographer on the staff of "La Vie au Grand Air," was killed. On the news reaching Bordeaux two local journalists named Amigues and Herbert set out for the scene of the accident on a 40-h.p. car driven by M. Rouiller, the Peugeot agent in that town, who was also accompanied by a friend named Fauveau. All went well for about seven miles, when at a spot called Yvrac M. Rouiller's car ran full tilt into one of the Martin-Lethimonnier

been stopped by the Government it was decided to allow the twenty-eight cars which had reached Bordeaux in accordance with the regulations to take part in the Coupe contest. The vehicles were sent off from Bordeaux to Trouville on Sunday in pairs and at ten minute intervals, strict injunctions being given to the drivers that any excessive speed would be followed by *contraventions*. The race for the Coupe de la Presse duly took place on Tuesday. We learn by telegraph that there were twenty-six starters and that the contest was won by M. Renaux, who, on a Peugeot car, covered the 245 miles in 4 hr. 33 min., equal to an average of about fifty-four miles per hour.

STILL another addition to technical literature appertaining to motor-car design and construction comes to hand from Dr. Max Janecke's Verlagsbuchhandlung, Hanover. It is entitled "Entwerfen und Berechnen von Kraftwagen," and is the work of Herr Ernst Valentin and Dr. Fritz Huth; it forms one of a series of treatises on motor-cars—this, the ninth, dealing with the various components of a petrol car chassis, other than the motor itself. The text is amplified by 136 drawings and illustrations, the subject being dealt with in the exhaustive manner usual in German technical works of the kind.

CONTINENTAL NOTES.

The Brescia Meeting.

The entry lists for the Brescia race meeting have now been closed. For the Coupe Florio on September 1st there are thirty-nine competitors, comprising three each Spa, Itala, Isotta-Fraschini, Bianchi, De Luca-Daimler, Rapid, Benz, Brixia-Zust, Sueddeutsche Fabrik, Wolsit, Junior, two Rochet-Schneider, two Darracq, an Eisenach and an Aries. The Coupe de Vitesse, on September 2nd, has brought in seventeen entries—three each Bayard-Clement, Brasier, Itala, Spa, Lorraine-Dietrich, a Darracq, and a Diatto-Clement.

The Pekin-Paris Run.

Prince Borghese arrived in Berlin on his Itala car at five o'clock on Monday afternoon on his journey from Pekin to Paris. The Prince, who was welcomed in Berlin by a deputation of the Imperial Automobile Club, was to be entertained at a banquet on Tuesday, the start for Paris being postponed on that account until Wednesday. The last news of the two De Dions is from

improved and modified. One of the most useful additions is an atlas comprising twenty-eight road maps of the various sections of France and Belgium, these being supplemented by one of the Grand Prix course and fourteen of the Auvergne district. The Guide is one of the most complete published; the towns and villages are arranged in alphabetical order, so that they are easily referred to, and under each is given a large amount of useful information, such as the leading hotels and garages, the places of interest in the neighbourhood, &c. Motorists contemplating a tour in France should procure a copy of the Guide Michelin, for which only a small charge is made to cover the cost of postage.

Miscellaneous Items.

The post-office authorities at Munich have just put into service six motor-cars for the collection and delivery of letters and parcels.—So far thirty-nine entries have been received for the Coupe Florio contest to be held on the Brescia Circuit

The Pekin-Paris Run.—Two of the cars leaving Irkutsk, Siberia.

Elabouga, in the Government of Viatka (East Russia), which place was reached on Monday. M. Godard, on the Spyker, is stated to be some distance behind.

Public Services in Russia.

The Russian Ministry of Ways and Communications in St. Petersburg is inviting proposals until September 1st next for the establishment and working of a public motor-car service between Novorossisk and Soukhoun.

Public Services in France.

Motor-omnibus services are about to be started between Clermont-Ferrand, Vichy and Royat, in the Auvergne, and between Albertville and Beaufort, Savoy.

Touring in France.

The 1907 edition of the Guide Michelin, issued by Messrs. Michelin and Co., of Clermont Ferrand, the well-known tyre manufacturers, has just made its appearance. A new shape has been adopted for the book, which has also been considerably

on September 1st.—Prince Leopold of Bavaria has recently acquired a 50-h.p. Züst car.—A 40 and a 100-h.p. De Dietrich, as well as an 80-h.p. Pipe, have already been entered for the race to be held by the Automobile Club of Roumania next month.—The Technical Committee of the French Automobile Club is offering a gold medal to the constructor of the car which in the Coupe de Vitesse at the Brescia meeting attains a speed of at least 62½ miles per hour and has the lowest petrol consumption.—An electric motor-bus service, in which the vehicles while running on the ordinary roads collect energy from an overhead cable, has just been started between the railway station and the centre of the town of Gmund, Austria.—The Sociedade Portuguesa de Automoviles, of Lisbon, have taken delivery of a Napier 40-h.p. six-cylinder touring car.—The Ligue Contre l'Alcoolisme, a temperance union of France, has contributed a sum of 2,000 francs to the prize fund for a competition of automobile motors using denatured alcohol as fuel.—The annual hill-climbing trial at Chateau-Thierry, France, has been fixed for September 29th.—A motor-cycle volunteer corps is being organised in Germany.

THE garage of Messrs. John Croall and Son, Ltd., of George Street, Edinburgh, is capable of accommodating 140 cars.

THE Scottish Automobile Club have a few copies of the report of the Reliability Trial remaining, which may be had post free from the Secretary of the Club, 163, West George Street, Glasgow, on receipt of P.O. for 2s.

THE Cab and Stage Carriages (London) Bill just introduced by the Home Secretary will, if passed, enable the taximeter to be used on horse-drawn vehicles at fares not to be less than 6d. a mile.

A SPECIAL branch of the Board of Trade is being constituted by that Department to deal with matters relating to London traffic so far as they come within the scope of that office. Colonel Sir Herbert Jekyll, K.C.M.G., will be in charge.

STEADY progress is being made with the automobile movement in South Africa, evidence of which is seen in the fact that the Star Engineering Co. has lately secured an order for no less than forty 12-h.p. Star cars for shipment to that part of the Empire.

At the annual judging competitions held at Harlow in connection with the Essex Hunt, Mr. J. Swire, the Master, said that of the thirty-one couples sent out to be "walked" only twenty-one couples were returned. Not a few of the couples, he added, had been done away with by the motor juggernaut.

A. A. PATROL No. 119, who was protecting the entrance to Basingstoke on the London side, had the good fortune to save a child from being run down by a motor-car one day last week. In justice to the motorist, it should be mentioned that the car was going very slowly, and no blame whatever was imputed to the driver.

THE garage of Mr. Henry L. Sawers, situated at 20-30, Upper Gray Street, Salisbury Place, Edinburgh, should be a convenience to motorists visiting that city. In addition to being agent for Winton cars, Mr. Sawers has a large stock of Rushmore lamps, Sawyer non-skid bands, and other accessories well known to practical motorists.

HIGHWAYS and byeways are numerous in Somersetshire, the main thoroughfares of which are being recommended (in the "Little Guide" to the county just published by Messrs. Methuen and Co.) both for breadth and surface. This new publication is one of the firm's well-known series, in which the main attractions of the county are well set forth in alphabetical order.

MOTORISTS who are alleged to have exceeded the legal limit in Philadelphia are not necessarily taken before the local bench in the first instance. They receive a notice from the town solicitor, requesting a call to settle the matter; it is only on failing to do so that they are taken to court, where, apparently, conviction is as certain as it is at the Haywards Heath Petty Sessions.

FROM the Pope Manufacturing Co., of Hartford, Conn., U.S.A., we have received a copy of a most artistically produced book, entitled "An Industrial Achievement," which gives an interesting account of the development of the Pope business during the past thirty years. Following this is a description of the several factories of the concern in different parts of the United States, the concluding pages showing the many trophies won by the different Pope cars.

A SIMPLE tool which is being placed before motorists by Messrs. Markt and Co. is the "Baby" Auto Torch for the repair of leaks where the soldering iron is used. Petrol is employed with this, and although it only occupies a space of about three inches, it will burn a couple of hours on one filling. Being absolutely automatic and capable of reaching any out of the way corners, the "Baby" Torch will add to the efficiency of the repair outfit of the automobile. Other specialties in horns, bells, electrical accessories, are referred to in the firm's new catalogue, which will be of service to those who are interested in the high-class grade of motor specialties Messrs. Markt and Co. have introduced to the British motorist.

HERE AND THERE.

THE LONDON AND PARISIAN MOTOR COMPANY have received an order from the Rt. Hon. Lord Lonsdale for a six-cylinder Hotchkiss car.

"THE CAR TO BUY" is the title of a new volume containing a list of motor vehicles, with full particulars as to prices, records, &c., alphabetically arranged and classified. It is published by the Motor Press.

To facilitate the exceptionally heavy postal traffic which Blackpool experiences during the holiday months, a system of carriage of the mails by motor has just been introduced. The mails for all places on the Fylde district coast, including Lytham, Ansdell, Fairhaven, St. Anne's, South Shore, and Blackpool, are now being transferred from the express trains at Preston to a motor vehicle which leaves at 1.30 a.m. In this way the mails reach Blackpool several hours earlier than has been possible by train.

MR. W. F. KELLY, of Messrs. Wayte Bros., Lemon Street, Dublin, has recently brought out a neat little fitment for attachment to the sparking plug, which combines both a wire terminal and a cut-out, so that with the engine running the firing in the cylinders can be tested without any fear of shock, or damage to the coil or magneto. Fig. 1 shows the arrangement in the ordinary position for giving a spark in the cylinder, and

Figs. 1 and 2.

Fig. 2 indicates the cut out in operation. As will be seen, the high-tension cable is attached to a hinged piece A held in place by a slot at C. Taking the cable, at a safe distance from the terminal end, between the fingers, and giving it a combined half-twist and slight pull, the part A is withdrawn from the slot C, and to test the spark the tongue B is brought to within a short distance of the "earthed" portion of the plug, while to cut out the latter the tongue is dropped into the lower slot D. The device may also be used as a cut-out switch alone by the insertion of a special insulated handle, which can be supplied and fitted at a small extra charge, and which proves convenient where circumstances, such as shortness of cable or the presence of chain connections to the plugs, render it inexpedient to make use of the combination of switch and terminal.

THE latest trade list of Messrs. W. Searle and Co., 33, Glasshouse Street, London, W., gives the revised prices of the O. S. Speedometer which won the first prize in the speedometer trials of the A.C.F. last year. The working parts of this apparatus are singularly few in number, and its patent magnetic system has the advantage of permanent magnetism. The O.S. system of transmission is positive and supple, and allows of taking into account the variations in height of different types and makes of tyres and correcting, when necessary, to within 1 per cent. The speed of the car is instantaneously and correctly indicated, whether in increasing or decreasing speed. Messrs. W. Searle and Co. give a guarantee for the O.S. speedometer, by which they agree to keep the device in perfect working order for a year, irrespective of distance run, and at their expense, unfair usage excepted.

AN automobile club has just been formed at Rio de Janeiro, Brazil.

MR. G. HOPE JACKSON, of the Engineering Works at Navan, is undertaking motor repairs.

REPAIR work to motor-cars is undertaken at the Perth Motor Works in the High Street of that town.

MISS DAISY HAMPSON, of Southport, has, we learn, just acquired a six-cylinder Itala car from Itala Automobiles, Ltd.

THE Daimler Company have recently opened a depot in San Sebastian at 91, Calle San Martin, for the benefit of their numerous customers in Spain.

BUILTH WELLS District Council has asked the Breconshire County Council to limit the speed of motor-cars to eight miles an hour while passing through the urban area. The "Western Mail" suggests that the chauffeur will, doubtless, walk alongside.

WE have lately been trying the Sirdar non-nipping inner tubes on some of our tyres, and find them possess all the advantages the Sirdar Rubber Company claim for them in the way of easy fitting. As will be seen from the accompanying sectional illustration, the tubes when deflated assume a curved instead of the usual flat shape. By placing the tube within the cover in the way depicted, and seeing that there are no creases in it, it will be found that the tube is about $1\frac{1}{2}$ in. from either edge of the cover, so that it is impossible for it to get nipped—a cause of many damaged tubes—when fitting the cover.

Not only so, but it is unnecessary to partially inflate the tube before fixing the cover, this effecting a saving of time in making tyre changes. It is also claimed that the tubes are self sealing, as when inflated they are compressed both laterally and longitudinally, with the result that when punctured the tube tends to close up instead of stretching open the hole and letting the air escape. Fortunately, we have not yet been called upon to test this particular advantage.

THE annual exhibition of drawings, &c., sent in for competition for prizes offered by the Coach Makers' Company revealed the widespread interest of the carriage builder in motor-cars. The first prize for the drawings of a two-seated motor-car suitable for a country doctor went to Mr. G. D. Thomson, 58, Skene Square, Aberdeen; the company's silver medal was given to Mr. A. R. H. Hora, 44, Grove Park, Denmark Hill, S.E., for drawings of a three-quarter landaulet motor-car body.

WE had an opportunity the other day, at the depot of Messrs. Donne and Willans, Ltd., of inspecting one of the latest models of the 16-h.p. Rochet-Schneider vehicles. This is a live axle car which has many points of interest, among which may be mentioned the special automatic carburettor, the "clean" appearance of the dashboard and the substantial design of the back axle. The chassis is well adapted to receive either a town carriage or touring body, and should fully sustain the reputation of the makers for high-class work.

WE learn that Ariel Motors, Ltd., are building three racing cars for the 1908 Grand Prix race of the A.C.F.

THE R.A.C. has decided that it will not observe any car for more than 15,000 miles during the present year.

DURING the progress of the recent motor-cycle run between London and Plymouth Messrs. Hayward and Slade were in attendance at the Black Swan Hotel, Winchester, and were able to render efficient assistance to a motor-cyclist whose machine had become disabled in the contest.

AT a meeting of the Metropolitan Asylums Board, on Saturday, a discussion took place on a recommendation of the Ambulance Committee to purchase a chassis for a light ambulance of the brougham type. Ultimately the matter was referred back.

EDINBURGH has now its Argyll depot, this being due to the enterprise of Argylls, Edinburgh, Ltd. It is located in Shandwick Place, and is under the management of Mr. J. F. Bradford. Mr. W. A. Smith has just formally declared the premises opened for business, among the visitors to the depot on that occasion being the Lord Provost of Edinburgh.

THE Automobile Club of Victoria (Australia) are thinking of asking all their members to carry "number plates" on their cars without waiting for the long-promised legislation. It is thought that this must have a beneficial effect upon the public generally, as well as the Legislature. Officers of the police force and Government and public officials are frequently being driven out in members' cars as object lessons as to the gross misuse of the roads by horse vehicle drivers.

MR. H. C. SMITH, of Mount Clare, Roehampton, made an arrangement with the Commissioners of His Majesty's Office of Works whereby the public are allowed to drive over Priory Lane and Clarence Lane (his private property) for the purpose of going to and from Richmond Park. As injury was being done to the surface of the roads and annoyance caused to Mr. Smith and his tenants owing to the excessive speed of motor-cars using the lanes, Mr. Smith has, with the concurrence of the Commissioners, put up a notice in the lanes that the speed of motor-cars and motor-cycles must not exceed ten miles an hour, and that any contravention of this regulation will involve legal proceedings against the offender.

A COMPULSORY winding-up order having been made against Straker and MacConnell (1906), Ltd., the statutory first meetings of the creditors and shareholders were held last week before Mr. H. E. Burgess, Official Receiver. The chairman reported that the insolvency of the company was attributed by its officials to the failure of the issue of the capital in April, 1906, whereby the necessary working capital was not obtained, the failure to obtain orders for cars at the Olympia Motor Exhibition in November, 1906, the heavy expenses connected with the carrying on of a branch business in Pall Mall, and the fact that the company was unable to obtain orders for cars there; also to the difficulty of obtaining delivery of cars from the manufacturers within the stipulated time.

OUR attention has been drawn to a new series of signs for garages and motor repair works introduced by the Chameleon Signs, Limited, 318, Dashwood House, New Broad Street, London, E.C. They have many points of commendation. Now that motor establishments are being kept open by night as well as by day the necessity for an illuminated sign has become generally recognised, and in the Chameleon device the proprietors of such establishments will find exactly what they require. This is suspended from the wall in the same way as the ordinary outside lamp, the face, however, being in the shape of a tyre while the wording is adapted to meet the local needs. Red and white are the two colours utilised in the new sign, and these are constantly changing by a simple and automatic arrangement not likely to get out of order or to add to the cost of the advertising appliance. As prominent as the illuminated clock often seen in our large towns, the new sign should have particular recommendation from the motor industry, especially on the part of those motor firms whose premises are at the commencement of the town, and who desire to arrest the attention of incoming motorists.

CORRESPONDENCE.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

THE USE OF OXYGEN IN RACES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice a letter in your issue of the 3rd headed "The Use of Oxygen in Races." This is incorrect. The position was that Mr. Jarrott stated that when Newton, on my six-cylinder Napier, ran a dead heat with him, that it was because oxygen was used. My answer to this is that my six-cylinder Napier with the same driver will meet Jarrott on his same car for the Byfleet Stakes under exactly the same conditions as the dead heat was run, but oxygen barred. Instead of Jarrott agreeing to this, so that I could prove to him he was mistaken in his statement, he wants to make a match under entirely new conditions, with different drivers, and apparently has very little faith in his statement that he can win, as he is not even prepared to risk the stakes which were divided for the Byfleet Stakes.

If he really does want to race against me personally under the Byfleet Plate conditions, I am quite willing to meet him, the stakes to be £1,000 a side. Mr. Jarrott knows full well that I do not go in for

A motor-car, unlike a horse, may be pressed to its very utmost for a considerable distance without any appreciable variation of speed; under normal conditions it cannot "spurt" to pass another car, as it is already doing its best, and it is in this very respect that motor racing lacks the interest possessed by horse-racing—on which, however, I fear my knowledge is very limited, and, in a different degree, in yacht-racing.

The use of oxygen, however, alters this to a large extent, and it seems to me that automobile racing, especially on a scientifically prepared track, would be infinitely more attractive if spectators were assured of close and hard fought finishes, such as the race between the Napier and the Lorraine-Dietrich at Brooklands on July 6th, instead of a race which soon after the start becomes simply a procession of fast-travelling cars. I do not know whether oxygen was used in the race referred to or not; I only cite it as an example of an interesting race.

The advantages given by oxygen are necessarily of a more or less temporary character, and I do not think that the use of such an adjunct in a race would by any means prevent the best cars from winning. I understand the B.A.R.C. propose to exclude the use of oxygen except in certain special races; I trust these special races will comprise the larger

The Criterium de France and the Coupe de la Presse.—The cars being weighed in.

racing now, but if he wants to race me it must be for something worth running for and that will cause him to remember it, whether he wins or loses it. I do not want to hear anything more from him through the papers. If he wants to have a clean and clear match he can have it, but when he does it will give cause to one of us to remember it.

In this matter I think all Mr. Jarrott's sportsmanship has been thrown to the wind to try to belittle Mr. Newton's driving, and yet he is afraid, apparently, to meet him under the conditions that he (Jarrott) says he can beat him under and risk the stakes which were divided. I think anyone can draw their own conclusions from this.—Yours truly,

S. F. EDGE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As both a motorist and a spectator I fail to see what the objection really is to the use of oxygen cylinders; the increased possibility of any accident through overheating appears to be very, very slight, and if the use of oxygen is allowed equally to all cars in a race, I do not see that any suggestion of unfairness can be made in regard to it. And there is this to be said for it: that by its use far more interesting racing may be presented, and what is, and will remain, the chief drawback to automobile racing, viz., the almost certain tendency for the cars to string out into a procession where nothing except a mishap will alter their relative position, appears to be in a very large degree eliminated.

portion of the programme. I may add I am neither connected with any trade firm nor any oxygen company.—Yours truly,

GILBERT N. TRAVERS.

THE SUPPLY OF PETROL.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Sir Marcus Samuel, addressing the shareholders of the "Shell" Company, is reported to have said: "Supplies of petrol are today so ample that . . . there is not the remotest danger of any failure of petrol supplies." He went on to say that he viewed with "amusement" the suggestion of the Motor Union there was a possibility of a shortage in the supply.

The users of motor-cars, however, cannot share the "amusement" of Sir Marcus Samuel when they know that between November, 1904, and December, 1906, the price of petrol to the retail agent was increased from 7d. to 1s. 1d. per gallon. The unfortunate consumer is, therefore, entitled to ask (and, perhaps, Sir Marcus will explain) why it is that in spite of the fact that "in Koetsi alone we have proved territory extending over a length of more than sixty miles, containing anti-clinals of oil throughout the entire area," the distributing companies have put up the price of petrol 85 per cent. in two years.

Sir Marcus, however, made a statement which goes far to prove the need for the warning which the Motor Union has given. Petrol spirit forms on the average about 3 per cent. of the crude petroleum, and Sir

Marcus states that "the price will necessarily depend upon whether we and other producers with whom we have to compete are obliged to produce crude oil for the sole purpose of making petrol, or whether, as at present, we can find remunerative markets for the other products which are left when the petrol is removed from the crude."

The price, therefore, at which petrol can be sold depends upon the market for the 95 per cent. of residuals. The Motor Union have been authoritatively informed that the market for these residuals, of which paraffin is the most important, is on the decline. Is Sir Marcus prepared to assert to the contrary?

If, as he appears to think, that it is within the range of possibility that one day he will be "compelled to produce crude oil for the sole purpose of making petrol," or, in other words, to waste 95 per cent. in order to obtain 5 per cent. of saleable product, will he deny that the shortage of petrol will be very real, and the price very high? Possibly a chemical process is known to Sir Marcus Samuel which will make it financially possible to increase largely the proportion of petrol obtainable from the crude; and having in the matter of this knowledge the advantage of the rest of the world, it may have justified him in speaking with such confidence.

May I venture to suggest to Sir Marcus that he has overlooked in his speech the recommendation of the committee to motorists as to the need for using petrol spirit of a greater specific gravity and for inventing and using a carburettor which will burn paraffin? If this is done the "Shell" Company will be able to dispose of the overstocks of residuals and sell petrol in consequence at a reduced rate, provided, of course, the financial combinations, composed mainly of foreign interests, controlling the petrol supplies of the United Kingdom, will not use their monopoly powers to maintain this spirit at an artificial value.—Yours truly,

W. REES JEFFREYS.

POOR COMPRESSION.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I see from the *M.C.J.* of the 29th ult. that a correspondent of yours, Mr. G. Collis, has had the same trouble with want of compression on a Wolseley that I had. May I say what I found and did, on the chance of its being of use? After great search I found the leakage was round the edge of the cups containing the inlet valves. The bridge-

shaped pipe rested on the inlet petrol pipe, so that neither of the two inlet valve cups could be screwed down firm. I gave a few file strokes to the under side of the pipe, and then with a camel's hair brush painted a little boiled linseed oil round the seat of each cup, screwed them down, and have had splendid compression ever since. I shall soak them with spirit of wine when I want to move them again.—Yours truly,

J.

CHARGING ACCUMULATORS FROM PRIMARY BATTERIES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have read with interest "Analyst's" criticism of my letter on primary battery charging, which appeared in the *M.C.J.* three or four weeks since. In spite of the writer's caustic comments I do not see my way clear to depart in the slightest from my original statements, and, with your kind permission, I will briefly give my reasons for not doing so. To begin with, I should like "Analyst" to know that what I said in the letter was not some new-fangled theory of my own, but the outcome of a long experience and study of accumulator charging from primary batteries, and anyone who experiments with Bunsen and bichromate cells will arrive at similar conclusions.

Although "Analyst" writes against the Bunsen cell, I cannot make out from his letter that he has a very close acquaintance with it or the chemistry of its working. For instance, he informs me that "the greater part of the nitric acid in a Bunsen cell is converted into ammonium nitrate." Now the chemical action that takes place in a Bunsen cell is as follows:—The hydrogen, liberated by the action of the sulphuric acid on the zinc, breaks up the nitric acid into water and nitrous acid, thus: $H_2 + HNO_3 = H_2O + HNO_2$. The nitrous acid, being an unstable body, again breaks up into water, nitric oxide, and nitrogen-peroxide, thus: $2 HNO_2 = H_2O + NO + NO_2$.

It is probable that there is a little ammonia nitrate formed, but nothing like to the extent that "Analyst" would have us believe, the main products of the action being water and nitrogen-peroxide gas—since nitric oxide combines with the oxygen of the air to form nitrogen-peroxide.

The writer also wishes to know how I prove that nitric acid is a more powerful oxidising agent than chromic acid, and seeks to show that I am wrong by quoting the chemical formula for both acids; from

which, no doubt, I am to infer that because chromic acid contains more oxygen than nitric acid it must be a better oxidising agent. Really, I think I am entitled to ask if "Analyst" knows anything about chemistry at all. The oxidising power of a body does not, as he seems to think, depend so much on the amount of oxygen it contains as upon its chemical stability. Thus, for instance, hydrogen-peroxide, H_2O_2 , contains less oxygen than either nitric acid or chromic acid, yet, being a body that very easily breaks up, it is a most powerful oxidising agent. Exactly the same may be said of nitric acid, for, although containing less oxygen than chromic acid, it is very much more unstable, and consequently a better oxidising agent. I also beg to differ from the writer when he says that the carbon surface of a cell is a more important point than the oxidising agent. A cell with a moderate carbon surface but good oxidising agent is worth much more than a cell with a large carbon surface but poor oxidising agent, although I quite agree that the larger the surface of the carbon the better.

In conclusion, I beg to state that ordinary commercial nitric acid lasts much longer than the chromic acid solution. One supply gives about forty hours' charge, and the fall in current is not half so rapid as with the bichromate cell. I have, therefore, no hesitation whatever in saying that, except for the unpleasant smell of the nitric acid, there is no primary cell on the market to surpass the Bunsen in small cost of upkeep and great efficiency of working.—Yours truly,

ELEKTRIK.

A NEW ERA FOR MOTORISTS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have noticed a tendency of late on the part of the police to adopt methods by which they have every reason for making themselves really beloved of motorists and the general public. A constable will now take up a position at a corner or bend in the road where he can command a good view of branch roads, and when a vehicle approaches will signal if the road is clear, or hold up his hand as a note of warning if special caution is to be taken. This is always done in an unofficial manner and in a generous spirit—the outcome of a desire to minimise danger.

Is this a new era by which the force is to become the friend of the motorist, instead of endeavouring to harass him? Let us hope this is the case, and that, instead of looking out for traps set to catch the unwary, the drivers may now count on being assisted in avoiding danger. Yours truly,

ERNEST E. ADAMS.

THE TURN OF THE TIDE IN MOTOR BODY DESIGN.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—The illustration in your last issue of the new car just supplied to H.R.H. Prince Louis of Battenberg marks a wise return to the rear-entrance tonneau. This is an example none too soon. Side entrances in the majority of cases mean side draughts, as well as unhandiness, if not danger, in turning, through too great length and distance between the wheels; there is, furthermore, no choice between forwards and sideways position for the passenger; the rear, with lamp, number, &c., is out of observation; long side baskets are impossible, while rear luggage induces side-slip. Moreover, after six months' use all side-entrance doors rattle. An experience of both side-entrances and the rear-entrance tonneau leads me unhesitatingly to give the preference to a roomy, comfortable form of the latter as most suited to a motor-car.—Yours truly,

COMMON SENSE.

IMITATION AGAIN.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—May I ask the assistance of all motorists, whether members of the Association or not, in connection with what appears to be a rather childish action on the part of our friends the police?

It consists of donning a yellow armlet, with the presumed object of passing as A.A. patrols. Two instances of this occurred recently on the Great North Road, but the bearing, behaviour, and I may say the boots of the masqueraders were so obviously dissimilar from those of our men that the deception was promptly discovered, and reported to me.

As is well known, each A.A. patrol carries a special badge bearing an identification number, and I shall take it as a favour if any motorist who may have reason to question the bona-fides of a patrol will kindly stop and demand the man's name and official number, and send particulars to the A.A., Princes Buildings, Coventry Street, W.—Yours truly

STENSON COOKE.

DOES A CAR RUN BETTER AT NIGHT THAN DURING THE DAY?

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have lately seen in the papers one or two queries as to why a motor-car, apparently or actually, runs better at night. I know that it is a case of fact and not of supposition, and I have always considered the reason to be that at night, owing to the lowering of the temperature of the atmosphere, the moisture which was present during the day as a vapour in the air condenses to its liquid form, and deposits as dew or mist, and therefore the mixture of petrol vapour and air which we draw

into the cylinder has a greater explosive value owing to the reduction in the quantity of water vapour present. Of course, with a car which tends to overheat, another factor has to be considered—i.e., that the lower temperature of the atmosphere will tend to keep cool the circulating water.—Yours truly,

A. DUCKHAM.

[The matter referred to by our correspondent touches on an interesting subject, on which we shall be glad to have the views of readers.]

SPEED TRIALS AND HILL CLIMBS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—We are afraid that the faith of the motoring public in those who make and sell cars must be receiving some severe shocks lately. The use of special gears for hill-climbing is now supplemented by the use of oxygen for spurring purposes in track racing. Presumably those who enter for these events are eager to secure advertisement therefrom, but it seems to us that the use of such artifices as the above gives results which are not correct statements of the relative merits of the contestants. This leads to still more misrepresentation when the successes of high-powered cars are used to advertise those of smaller power of the same make. There are too many other points about a car than speed, either on the level or uphill, that we think manufacturers who have made a special study of the problems involved in satisfying the modern demand for silence, ease of control, fuel consumption, &c., should encourage those competitions in which these features are matters of moment. At present there are few tests worthy of the name other than the Scottish Trials, and we believe that trials of similar character to the Dust Trials at Brooklands would merit and receive hearty support.—Your truly,

VAUXHALL MOTORS, LTD.

FRONT WHEEL BRAKES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Seeing how important to every motorist—and indeed to every road user—is thorough efficiency in motor-car brakes, and looking at the large proportion of accidents due to brake failure or inadequate braking power, it seems surprising that so little attention has so far been paid to front wheel braking. There was a time, perhaps, when this was regarded as a difficult problem, but the practicability of brakes on the steering wheels has long since been proved, and, even if only regarded in the light of an emergency brake, the weight is so trivial and the cost so small that there seems no real excuse for such a safeguard not forming part of the equipment of every car.

Probably 90 per cent. of the motor accidents that occur both to the motoring and non-motoring public might be avoided were a little extra brake power available at the moment, and seeing how readily this extra power may be obtained by means of front wheel brakes, the matter seems one worthy the serious consideration of every careful car owner and driver. I might also point out as a further recommendation that the judicious use of the front wheel brake is said to minimise, if it does not entirely eliminate, the risk of side-slip.—Yours truly,

FRANK O'CONNOR.

MOTORING IN THE ISLE OF WIGHT.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Knowing the difficulty of finding real automobile engineers and trustworthy repairers in the provinces of England, I would like to recommend to motorists visiting the Isle of Wight the repair department of the Isle of Wight Motor Syndicate, Ltd., at The Works, near St. John's Station, Ryde, where repairs of all kinds are attended to under the personal supervision of the works manager, who has working under him several excellent mechanics from London.

I hope I am supplying a crying want to visitors, and saving them from the evils of small repairers—I speak from personal experience. I have no interest whatever in the company mentioned beyond gratitude and extreme satisfaction at the work they have done for me.—Yours truly,

HOLLYMOUNT.

WHEELS FOR MOTOR-CARS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to the extract of Dr. Hele-Shaw's paper read by that gentleman before the Congress of Health, I am glad to see an authority in the motor world raising the question of wheels, for, however luxurious the pneumatic tyre may be, we must admit that it is no more suitable for a motor-car than slippers are to go navvying with, and therefore only possible for the wealthy. If the motor-car is to be of real, practicable, everyday use, we must reconsider the subject of wheels. Personally, I am surprised that the subject has received so little attention from our leading men. I have lately been using a car fitted with wheels which seem to me to be an improvement upon pneumatic or solid, for they possess the following advantages:—Unpuncturable, remarkably free from skidding and very slight dust-raiser, while being quite as easy to ride as pneumatic-shod wheels.

I may say that freedom from tyre-trouble greatly increases the pleasure of riding. I am afraid, however, that fashion, fostered by

capital and the great interests of the pneumatic tyre trade, will greatly hinder development in this direction. It is a most interesting question, and to the motor industry very important. Mr. S. F. Edge's and other records show what perfection the mechanical part has reached. The fuel question is receiving attention. Now if the subject of wheels and tyres can be opened up much good should result, for, as at present understood, they are a source of worry, unnecessary expense, danger from skidding, bursting, &c., and annoyance from dust.—Yours truly,

O. COOK.

SELF-STARTING DEVICES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have been told that there is a patent self-starter for starting motor-cars, but it has not yet been taken up by the public, as it has not been considered a necessary fitting for cars. In my case, however, if this starter is any good it would be a great boon, as I suffer from an affection of the heart, and I find most cars are too hard for me to start. I shall feel greatly obliged if you or any readers of the *M.C.J.* can give me any information concerning these starters.—Yours truly,

MONTACUTE.

A QUESTION OF AVERAGES.—“A.M.I.C.E.” writes:—“Our friend the tester has omitted to note that he is dealing with average speed per hour. He does two kilometres in 96 seconds. The first he does in 60 sec.; the second he does in 36 sec. The average is one kilometre in

The photograph reproduced above was taken at Badworth Hall on the occasion of a recent Primrose League gathering, and shows, reading from left to right, Sir Frederick Milner, Bart., His Grace the Duke of Norfolk and Captain Whittaker, the owner of the car—a Daimler, which was supplied through Mr. F. O. Clarke, of Retford.

48 or 75 k.p.h. as stated by his friend. He has failed to note that the two periods of time are not equal, so that he cannot split the difference (which is not getting the average speed in miles per hour) of two separate averages. Take it at one hour up and one-half down and see the results both ways.”

MR. S. NEWTON, 125, Brixton Hill, S.W., will be pleased to hear from anyone who found three inner tubes near Stonebridge Park, on the Harrow Road, on Saturday last.

MESSRS. W. E. CLARK AND COMPANY, Station Road, Doncaster, will be glad to hear from anyone who has found a lifting jack with aluminium body on the Worksop road near Tickhill.

A. J. H. 5 is the trader's mark the name of the owner of which is wanted by a correspondent at Ramsgate, who has been struck with the appearance of a car recently in the district and bearing that number. We shall be pleased to hear from the firm.

SUGGESTIONS TO INTENDED MOTORISTS.—Vauxhall Motors, Ltd., write:—“With reference to ‘Experientia’s’ letter in your last issue, it may be of interest to mention that every component of the Vauxhall car is plainly stamped with a part number, so that in ordering spares or replacements it is only necessary to quote the number. This completely specifies the part without reference to either the type of car or the number thereof. This system has been developed by us to avoid the confusion caused by clients’ descriptions, and to facilitate ordering by cable, and we believe that such a system is invaluable both to the manufacturers and users of motor-cars.”

BANK HOLIDAY AT BROOKLANDS.

THOSE responsible for the motor race meetings on the Brooklands Track at Weybridge have been favoured by the most cheerful climatic conditions, and Monday's weather was strictly according to the rules that have prevailed there up to the present. The innovation of the shilling enclosure brought a greater concourse of people than had previously been seen near the track, but at no time during the meeting did the appearance of the great expanse of open ground suggest the appearance of a crowd. A varied programme, the presence of several drivers of international repute, as well as of Englishmen who had won renown in recent Continental events, and an extra train service contributed to the success of the meeting. The officials are to be congratulated on the results of their effort to attract the Bank Holiday public. But towards the end of the day the proceedings lagged somewhat and unpunctuality became more pronounced, with the result that a large number of people left ere the last race was run. Estimates of the total attendance varied from 5,000 to 14,000, the true record probably being between the two figures.

An attempt to infuse popular interest into the proceedings was made in

THE INTERNATIONAL PLATE

of 500 sovs. for cars of a cylinder dimension under 135 and which were required to be driven by subjects of the country of origin of the vehicle, with that country's flag carried as the distinguishing mark of the car. The cars left the paddock carrying the Belgian, British, French and Italian flags—a feature that was evidently suited to the taste of those who occupied the shilling enclosure. The distance was about 8½ miles, and of the ten entrants nine faced the starter, the result being:—

S. F. Edge's 49.9-h.p. Napier (F. Newton) 1; Charles Jarrott's 52.9-h.p. Dietrich (Gabriel) 2; T. Thornycroft's 48.6-h.p. (T. Thornycroft) 3.

THE BELGIAN PLATE

of 350 sovs., for cars complying with the regulations of this year's Ardennes Circuit race, was the next event on the programme, and produced a good race between two Napiers for the first two places and between the Minerva team for third and fourth positions. In fact the real race was between this quartette. Glentworth, on the third Napier, never got going well, his engine missing with irritating regularity. Result:—

S. F. Edge's 60-h.p. Napier (H. C. Tryon), 1; S. F. Edge's 60-h.p. Napier (C. Edge), 2; D. Citroen's 52.1-h.p. Minerva (H. Porlier), 3. Also ran, Mr. J. T. C. Moore-Brabazon's 52.1-h.p. Minerva (J. T. C. Moore-Brabazon); A. Huntley-Walker's 48.6-h.p. Darracq (Marquis de M. St. Mars); D. Citroen's 52.1-h.p. Minerva (A. Janssens); S. F. Edge's 61.5-h.p. Napier (C. A. Glentworth).

A sprinting event followed, made conspicuous by the performance of the Sizaire entered by Mr. Charles Jarrott. This was the

OATLANDS SELLING PLATE

of 200 sovs., for cars of a cylinder dimension of 40 and 1,800 lbs. weight. 3.465 lbs. were allowed or added for every 0.1 difference of dimension. The distance was three-fifths of a mile along the finishing straight and the race resulted as follows:—

S. F. Edge's 38.4-h.p. Napier (J. F. Browning), 1; Charles Jarrott's 8.9-h.p. Sizaire (R. O. Clarke), 2; H. P. Barker's 10-h.p. Darracq (H. P. Barker), 3. Also ran, F. S. Bennett's 10-h.p. Cadillac (owner); J. W. Madeley's 10-h.p. Cadillac (owner); S. F. Edge's 25.6 Napier (J. Hennessy); J. J. C. Bradley's 20-h.p. Queen (N. Macklin).

The winning car was subsequently sold for 215 gs. to Col. Carleton-Smith.

Racing at Brooklands.—D. Resta leading on his Mercedes in the Prix de la France Race.

Also ran, D. Citroen's 52.1-h.p. Minerva (A. Janssens); D. Jameson's 51.1-h.p. Spa (A. Capris); D. Citroen's 52.1-h.p. Minerva (H. Porlier); E. Herington's 47.2-h.p. Ariel-Simplex (P. Lewis); Mrs. G. E. Taylor's 51.8-h.p. Gobron-Brillie (M. Leaspagnandelles); L. Soncin's 48.6-h.p. Dietrich (L. Soncin).

Newton made a poor start and finished the first lap behind Gabriel, Lewis, Thornycroft, Janssens, Porlier, and Capris in the order named. During the second lap, however, he went well forward, and Thornycroft and Janssens changed places. Gabriel still led until in the last round Newton sprinted into the first position. There was a good run for the third place between Thornycroft and Janssens.

THE WHITE STEAM CAR PLATE

of 150 sovs. for 1907 White steam cars, was over a distance of six miles, but the similarity of the cars proved somewhat confusing to the public in following the course of the event, which resulted in one of the closest races of the day. The order of the finish was:—

F. Coleman's car (G. Holloway), 1; Col. J. Roper Wright's car (W. Taylor), 2; F. Payne's car (H. Payne), 3. Also ran, Sir John Murray's car (F. Corke), Col. Wentworth Forbes's car (H. Turner), P. Northey's car (H. T. Cummings), Earl Russell's car (C. Saunders).

There was close running between the first two all the way, and the uniformity of performance was a feature of the event.

Only a small field turned out for

THE HEATH STAKES

of 350 sovs., for cars of a cylinder dimension under 200, over a course of 2½ miles, and the cars finished practically together. Their rush along the straight resulted as follows:—

J. E. Hutton's 75.9-h.p. Mercedes (J. E. Hutton), 1; A. Huntley-Walker's 71.6-h.p. Darracq (Demogeot), 2; S. F. Edge's 60-h.p. Napier (C. Edge), 3.

The great race of the day was the PRIX DE LA FRANCE of 800 sovs., over a distance of 15½ miles, for cars complying with the regulations of the Grand Prix of 1907. Unfortunately the start was considerably delayed, the labour of dealing out petrol for the allowance of 1.8 gallon for the event occupying considerable time. The quantities in the tank at the start and at the finish were measured and the difference between these gave the amount of fuel consumed. In the end the result was:—

F. R. Fry's 75.9-h.p. Mercedes (D. Resta), 1; J. E. Hutton's 75.9-h.p. Mercedes (J. E. Hutton), 2; S. F. Edge's 60-h.p. Napier (H. C. Tryon), 3. Also ran, F. Rendle's 75.9-h.p. Mercedes (A. G. Brown), S. F. Edge's 49.9-h.p. Napier (F. Newton); H. M. Gordon's 67.5-h.p. Motobloc (A. Debuissy); L. Soncin's 84.9-h.p. Dietrich (owner); S. F. Edge's 93.7-h.p. Napier (C. Edge); Prince P. d'Arenberg's 80.4-h.p. Dietrich (Gabriel); A. Huntley-Walker's 80.3-h.p. Darracq (Demogeot); Baron Turekheim's 80.4-h.p. Dietrich (Duray).

Hutton got clear away and led for the first lap, when Resta took the lead and continued to retain his advantage till the last round, when he was passed by the other Mercedes. On entering the straight, however, Hutton had the misfortune to break his water pipe and accelerator pedal, while a rear tyre was in shreds. He thus lost first place and finished second. Tryon, Demogeot, Newton, and Edge steadily improved their positions as compared with their running in the first lap. All the others had trouble with their engines except Debuissy. On the fifth lap Gabriel had advanced to the fourth place but fell back to seventh.

The last event of the day was the race for the WALTON STAKES of 200 sovs., for cars of a price not exceeding £850, 38½ lbs. being allowed for every £10 that the cost of the vehicle was below £850. This was over a course of 3½ miles and resulted as follows:—

J. T. C. Moore-Brabazon's £800 Minerva (J. T. C. Moore-Brabazon), 1; A. Huntley-Walker's £675 Darracq (owner), 2; D. Citroen's £800 Minerva (H. Porlier), 3.

CLUBS AND ASSOCIATIONS.

ROYAL A.C.

THE design for the new badge of the Royal A.C. has been submitted to the King, who has made alterations therein which were referred to the committee at their last meeting.

Mr. T. H. D. Berridge, M.P., and Mr. Philip Dawson have been added to the new premises committee.

The Earl of Shaftesbury and Col. Ivor Philipps, M.P., have been elected members.

ESSEX COUNTY.

THE Essex County A.C. held a gymkhana on Monday at Wickford in aid of the restoration of the Runwell Parish Church. The results of the various competitions were as follow:—

Obstacle race.—1st, Mr. Burnett Tabrum, J.P.; 2nd, Mr. F. Lindus Forge.

Starting and Stopping Race.—1st, Sir Charles B. Locock, Bart.; 2nd, Mr. F. Lindus Forge.

Ladies' Passenger Race.—1st, Sir Charles B. Locock, Bart.; 2nd, Mr. Watson.

Hat-trimming Race.—1st, Miss Mason; 2nd, Miss Miller.

Musical Chairs.—1st, Dr. Tench's passenger; 2nd, Dr. Cayley's passenger.

Week-end Race.—1st, Sir Charles B. Locock, Bart.; 2nd, Mr. F. Lindus Forge.

The prizes were presented by Lady Locock.

ESSEX.

MEMBERS who intend participating in the 200 miles' standard rides of the Essex Motor Club should now begin to prepare. The fixed route is:—Start at Woodford and journey via Epping, High Ongar, Chelmsford, Witham, Colchester, Ipswich, Saxmundham, Kessingland; check here and return by the same route. Members may go for these rides at any time by giving notice to the hon. secretary at least four days prior to the attempt. They must complete the 200 miles in twelve hours, arriving at the various checking places to schedule time. An entry fee of 2s. 6d. must accompany each application for trial. Checking sheets will be issued, and the rules must be conformed to. Further particulars will be sent on application to the hon. secretary, Mr. A. Geo. Reynolds, Woodford Green, Essex.

SOUTHEND AND DISTRICT.

ON Saturday last the Southend and District Motor Club began a Bank Holiday trip, meeting at the Royal Huts Hotel, Hindhead, on the Portsmouth road. On Sunday they continued the run across country to Winchelsea and Rye, and on Bank Holiday followed the coast road to Folkestone, Dover, Deal, Sandwich and Margate, from whence some of the party returned by boat and others continued the journey via Canterbury and Gravesend. An unofficial run in connection with the club was enjoyed by some other members to Clacton-on-Sea. The Southend Club has now a membership of sixty, and has arranged to participate in the annual hospital carnival at that seaside resort on the 14th inst.

WEST SURREY.

THE fourth annual gymkhana of the West Surrey A.C. was held on Saturday, at Prior's Field, Compton, kindly lent by Mr. and Mrs. L. Huxley.

The winners were as follow:—

Chalk Line Race.—1, Mr. J. F. Kimber (6-h.p. Rover); 2, Mr. E. Williams (14-h.p. Martini); 3, Dr. F. W. Bryden (6-h.p. Speedwell-De Dion).

Tortoise Race (120 yards).—1, Mr. R. W. Buttemer (14-h.p. Renault); 2, Mr. R. Crothers (9-h.p. Darracq).

Starting Race.—1, Mr. E. G. Williams; 2, Lieut. S. A. Gabb (15-h.p. Darracq).

Passenger Race.—1, Mr. E. G. Williams; 2, Mr. R. W. Buttemer.

Skilful Driving Competition (distance about 700 yds., through six obstacles).—1, Mr. E. G. Williams; 2, Mr. J. F. Kimber.

Archery Race.—1, Mr. E. G. Williams; 2, Mr. J. F. Kimber; 3, Col. Swaine (9-h.p. Cadillac).

Musical Chairs.—1, Mr. E. Fairtlough (12-h.p. Darracq); 2, Mr. R. Crothers.

MOTOR CYCLE UNION OF IRELAND.

THE second race meeting of the season under the auspices of the Dublin centre of the Motor Cycle Union of Ireland took place on Saturday afternoon at Portmarnock. Unfortunately the Silver Strand

was not in its usual condition owing to the fact that the storm on the previous day brought in a lot of loose sand. The two miles handicap was won by J. G. Drury, jun., on a 3½-h.p. Triumph, and the twenty miles handicap (Kavanagh cup) by R. Walshe, 2½-h.p. F.N.

AUSTRALIA.

THE Automobile Club of Victoria (Melbourne) held a one-gallon petrol trial on June 29th, starting from Windsor (three miles out) and running through Oakleigh to Fern Tree Gully and back. It was an ordinary give-and-take road, which included two or three decent hills, but the roads were in good condition in the main and quite dry. Twenty-six cars started, including one driven by Mrs. Tom Rand. The result—on "ton mileage"—was as follows:—1, Mr. W. C. Knight, 10-h.p. De Dion, 41.28 miles; 2, Mr. J. W. Proctor, 8-h.p. De Dion, 34.68 miles; 3, Mr. S. L. Staughton, 8-h.p. De Dion, 32.22 miles; 4, Mr. W. S. Ross, 8-h.p. Rover, 31.89 miles; 5, Mr. B. Edols, 12-16-h.p. Talbot, 31.40 miles; the sixth, seventh, eighth, and ninth places all being filled with 6 or 8-h.p. De Dions. Mr. Knight won the two-gallon event held last year, and also the Club's "open" hill-climb a few months back on the same car.

THE Transvaal A.C. now consists of 180 members.

THE Hull Auto Cycle Club had a run from that town to Scarborough on Monday last.

THE North Yorkshire A.C. is endeavouring to popularise its club room at the Station Hotel, York, among motorists.

THE 120-h.p. Mercedes driven by Mr. F. Guy Lewin, of Messrs. Friswell, Ltd., made the fastest time at the Aston hill-climb of the Hertfordshire A.C.

Mr. T. Cordery at the wheel of the 28-38-h.p. Ariel-Simplex he drove in the Scottish Reliability Trial, and which won the Gold Medal in Class 5.

ON the last Sunday in July several members and friends of the Blackheath A.C. were entertained by Professor Carlton J. Lambert, M.A., of the Royal Naval College, Greenwich, at his bungalow, Westham Hill.

THE COMMERCIAL VEHICLE TRIALS.

NO further entries have been received beyond the fifty-five already notified in the M.C.J. Messrs. Straker and Squire, Ltd., have cancelled their entry of a petrol-electric omnibus chassis and substituted a two-ton delivery van.

The vehicles will start from the first depot (Messrs. Thornycroft's Works, Chiswick), on Monday, September 9th.

St. Albans has been omitted from the route, and Biggleswade has been substituted, owing to the impossibility of obtaining suitable accommodation at the former place.

THE Sirdar Rubber Company, Ltd., have recently received two more repeat orders for Royal Sirdar tyres for His Majesty the King, and another repeat order for the War Office Ambulance at Aldershot.

FROM the Universal Motor Imports, of Charles Place, Drummond Street, London, N.W., we have received a copy of the catalogue of automobile components made by the Briscoe Manufacturing Company, of Detroit, U.S.A., for whom they are British agents. The list gives particulars of the Briscoe specialities in the way of radiators, engine-bonnets, mud guards, tanks, metal dashboards, steering wheels, &c. The radiators are made in a variety of patterns and of the honeycomb and tubular types. Particular attention is drawn to the "Staggered Gang Fin" radiator, in which the tubes are not set directly behind each other, but are staggered so as to give each one a clear front exposure and so increase the cooling efficiency.

CASES UNDER THE MOTOR CAR ACT.

EXCEEDING LEGAL LIMIT.

At Huntingdon on Saturday, F. H. Smith, of Park Street, London, was charged with furiously driving a motor-car at Little Stukeley. When stopped the defendant stated that the car belonged to the Military Attaché at the American Embassy. The defendant did not appear, but on his behalf a solicitor argued that, being a servant in the employ of a foreign representative, he was exempt from English laws. A letter of explanation was read, which stated that it was very embarrassing to have a servant charged with an offence against English law, and asking that the charge be withdrawn. The Bench, however, decided to go on with the case, and imposed a fine of £12 and costs.

At Mortlake, on the 31st ult., fines of £5 each were imposed on six motorists who had exceeded the ten mile limit in Richmond Park; several others were fined at the Milverton Police Court for going beyond the legal speed in the neighbourhood of Leamington; at Knaresborough two drivers were convicted.

Joseph Jackson, living at East Ham, was summoned at Stratford for driving a motor-cycle at a speed exceeding twenty miles an hour. The defendant on July 21st was timed over a measured furlong at Blake Hall Road, Wanstead. He covered the distance at the rate of twenty-five miles per hour, and when stopped he said "I did not think I was going so fast." The defendant was fined 10s. and 4s. costs. Henry Pollard, of Erith, was summoned for a similar offence; he was said to have covered the furlong at twenty-seven miles an hour. In a letter to the Bench he said he only paid £4 for the machine. A fine of 10s. and 4s. costs was imposed.

The Garstang Road trap has proved a costly affair for many motorists. At Lancaster on Saturday two were charged with exceeding the speed limit on this road and one on the Burton Road. John Lloyd,

The above amusing sketch is reproduced from a drawing sent us by Mr. A. House, of the Northern Automobile Company, Manningham Bradford.

of Liverpool, had to pay £2 10s. and costs for going at the reported rate of twenty-three miles an hour, and he had the cold comfort of being told that had he taken but one second more to traverse the trap he would not have been summoned.

DANGEROUS DRIVING.

Two motor-car drivers in the employ of the Daimler Motor Company were summoned on the 2nd inst., at Buntingford (Herts.), for driving cars at a speed which was dangerous to the public—offences alleged to have been committed while they were taking cars from Coventry to Harwich en route for Germany. At the conclusion of the evidence for the prosecution Mr. Staples Firth, who defended, submitted that there was no evidence of anyone having been endangered on the road, and the case was dismissed.

ROAD REPORTS.

SUNRISE HILL.—The Warwickshire County Council has decided to erect a danger signal at a distance of 200 yards from the top of Sunrise Hill and another about 75 yards from the sharp turn half way down the hill.

THE PRESTON ROAD.—The North-east Lancashire A.C. recently petitioned the Fylde Rural District Council to abolish the toll-gate on Freckleton Marshes, on the road to Blackpool, and declare the road a secondary one. The Highways Committee have recommended the Council to take over the road if the automobile club will arrange with the owners of the toll-bar for its abolition and the cost of fencing the road and other expenses.

BARNES.—The Highways and Bridges Committee of the Surrey County Council has recommended that body to make application to the Local Government Board for a ten mile speed at the Bridge Road, East Molesey, and at Barnes Terrace, High Street, and Church Road, Barnes. The Council has agreed to take this course.

BROMLEY, KENT.—The main road at Bromley is being repaired between the eleventh and twelfth milestones from London, and in the near future repairs will be executed between the ninth and tenth milestones in the High Street. The main road is now being coated through

out with tar by the Tar-spra Company; and Mr. Stanley Hawkins, the Borough Engineer, deserves the thanks of motorists, as well as of the local public, for his care of the roads.

NELSON.—There are no important works of repairing likely to be carried out in this Lancashire town during the next few weeks.

WORTHING.—During the holidays it was observed by many motorists that the main road between Worthing and Arundel had been torn up to quite an unusual degree. Locally this is attributed to the heavy motor traffic which took place in Goodwood week.

WARWICKSHIRE.—In Warwickshire the mileage of roads for which the County Surveyor is responsible is 457 and the cost of maintenance last year was £32,000, about £5,000 above the expenditure in 1904. That portion of the Coventry road which was treated with tarmac about fifteen months ago has so far stood very well, but, while it has proved to be entirely dustless, the County Surveyor, Mr. John Willmot, considers that its wearing qualities are still on trial.

HANDCROSS.—Application is being made for a ten mile per hour speed limit to be imposed on motor-cars at Handcross.

YARMOUTH.—No roads will be under repair in this borough during August. Dust is unknown in the streets of the town, the roads being watered by Mr. J. W. Cockrill, the Borough Surveyor, with sea-water.

STREATHAM.—The Rector of Streatham, having called attention to the danger arising from fast motor traffic along the narrow portion of Tooting Bee Road, Streatham, near St. Leonard's Church, the Wandsworth Borough Council has decided to erect warning boards at each end of the road in question, directing motorists and cyclists to drive slowly.

TAR SPRAYING.—The Local Government Board is said to be considering the question as to whether the expenses incurred in the tar spraying of main roads can legitimately be made a special expense for parochial authorities. On their decision will depend the carrying out of several experiments now in contemplation in the southern counties.

BLACKPOOL.—All the street works are now completed for the present season, and nothing is likely to be done to the roads in the borough of Blackpool for the next two months.

PUBLIC MOTOR SERVICES.

THE Great Western Railway Company have been asked to extend their motor-bus service between Newport and Merthyr.

THE Home Office is making enquiry into the cause of the recent motor-bus accident at Hackney. In reply to a question in the House of Commons Mr. Gladstone has stated that only seven mishaps to motor-buses have occurred in London during the past three months. He also paid a tribute to the desire of the motor-bus companies to adopt any devices likely to arrest skidding.

MR. R. C. MARLEY has drawn the attention of the Surrey County Council to the speed at which motor-buses are driven at Barnes, and asked the chairman of the Highways Committee if nothing could be done to regulate it. Mr. Pain, the chairman of the committee, said the clerk was in correspondence with the President of the Local Government Board on the subject, and it was hoped that the result would be satisfactory.

THE Great Western Railway road motor service between Redruth and Falmouth and Falmouth and Portreath has re-commenced.

DURING the twelve months ended June 30th, 3,137 instances of motor-omnibuses and cabs being dealt with for noise have been recorded at Scotland Yard. Two hundred and fifty-seven cases of smoky exhaust were also chronicled.

NEARLY 400 driving certificates have been issued by the R.A.C. to employees of the Central Motor Cab Company, Ltd., the proprietors of the red taxicabs now plying in London.

THE Motor-Bus and Traction Company of Ireland, Ltd., has been formed with a capital of £205,000 to establish motor-omnibus services and other forms of motor traction in Ireland, more particularly around Dublin, Belfast, and Cork. The directors will endeavour to link up certain routes on the railway and to act as feeders thereto. The company has entered into a contract for the delivery of ten motor-buses within a month. The directors are Lord Headley, Captain R. E. Palmer, Sir Thomas Myles, Mr. T. L. Plunkett and Mr. W. A. Wallis. Mr. R. G. Batchelor, 69, Victoria Street, S.W., is the engineer to the company, and Mr. P. J. Kevans, 31, Dame Street, Dublin, is the secretary.

ACCORDING to a driver who was summoned at the City of London Court for causing an obstruction by leaving his motor-bus for six hours in Bishopsgate Street Without, it is a rule of the London Road Car Company that when there is a breakdown the car is not to be moved until seen by one of the fitters; otherwise the conductor is fined.

EARLY next month Messrs. A. W. Gamage, Ltd., will close their Holborn establishment at 7 p.m. instead of 8 p.m. in the evenings, and on Saturday at 4 p.m. instead of 5 p.m. This decision has been arrived at as a result of the rapid transit in London, which is causing shopping to be done earlier in the day and earlier in the week.

WE have from time to time recorded some excellent performances by Palmer Cord tyres, demonstrating their reliability under very severe conditions. The latest is undeniably most creditable, the Palmers fitted to Mr. Clifford-Earp's Thames six-cylinder 60-h.p. car having covered over 2,000 miles, including the Scottish Reliability Trials and the South Harting Hill climb, without a single puncture.

MARSEILLES AND ITS PEOPLE.

THE Marseillais has been portrayed by many a French writer, and his virtues have been lauded and his faults exposed. Méry, a Marseillais himself, has traced an amusing character, while Edmond About and Taine were struck by the Marseillais' love of lucre and violent amusements. Alexandre Dumas has drawn more or less idyllic portraits of him. The topographical transformation of Marseilles in recent times has been great. It was first among the great cities of France to cut new streets and build sumptuous modern palaces, says Mr. Miltoun. The Rue de la République, if still lined in part with inferior houses, is nevertheless one of the fine thoroughfares of the world. Its laying out was a colossal task, cutting through the most solidly built and most ancient quarter of the city. Neither the aristocratic nor the bourgeois population have ever come to it for business or residence, but it serves the conduct of affairs in a way which the tortuous streets of the old régime would not have done. Many of the great avenues of the city are as grand in their way as the best and most aristocratic of those in Paris, and the world of commerce, of the Bourse, and of the liberal professions lives surrounded by as much sumptuousness and good taste as the same classes in the capital itself. In other words, "la société Marseillaise" is no less endowed with good taste and the love of luxurious appointments and surroundings than is the most Parisian of Parisian circles—a term which has come to mean much in the refinements of modern life. "Des plaisirs bruyants et grossiers" may have struck the Taines of a former day, but the twentieth-century student of men and affairs will not place the Marseillais and the things of his household very far down in the social scale, provided he is possessed of a mind which is trained to make just estimates. Le Prado is another of the fine streets of Marseilles. It is a majestic boulevard, the continuation of the Rue de Rome, beyond the Place Castellane. Practically it is a great tree-bordered avenue, which is lined with the gardens of handsome villas. It is as attractive as Unter den Linden or the Champs Elysées.

AUTOMOBILE ACCIDENTS.

IN attempting to pass a wagon on the road between Streasley and Moulford last week, a motor-car, in which Colonel Lambert was riding, came into violent collision with the vehicle and its passengers were seriously hurt.

THE coroner's jury has recorded a verdict of accidental death in the case of a little boy who was knocked down by a motor-cyclist on the south side of Clapham Common last week. Apparently the nursemaid in charge darted with deceased from behind a tramcar without noticing the motor-cyclist approaching.

WHILE a car from Elgin was proceeding along the road near Enzie United Free Church last week, it roused a calf from the side of the road. The car was deflected to the side of the road, where it crossed the ditch, and, coming in contact with a strainer post, the front axle was broken. The car finally came to rest in a corn field, after ejecting the chauffeur through the glass screen in front. The man was happily little the worse for the adventure, but the car was greatly damaged.

A MOTOR-CAR collision happened on the curve opposite Rossett Church recently, when a car belonging to Mr. Griffith Williams, Marlow, collided with a car the property of Mr. Gibbons Frost, Chester. Both cars were wrecked, and the occupants were thrown out, but, happily, escaped with a shaking and few bruises.

ON Saturday a motor-car, owned and driven by Mr. Robert Cripps, of Nottingham, collided near Melton Mowbray with a cyclist who, coming from the wrong side of the road, crossed in front. He was knocked down and so severely injured that he died during the night. The sudden application of the brakes caused the motor to swerve through the hedge, but Mr. Cripps and a companion escaped unhurt.

MR. R. WOODMAN, a motor-cyclist, of Peterborough, was admitted to the Spalding Hospital on Sunday night suffering from injuries sustained through a collision in the dark with a milk-cart.

MR. S. S. MOSSOP, solicitor, Holbeach, while motoring last week, collided with a cart which carried no lights. He was pitched out of the car and lay on the road a quarter of an hour unconscious. The driver of the vehicle, who is unknown, drove off. The motor-car was wrecked.

WHILE travelling through Southwold on Sunday on the way to Yarmouth, Mr. Arthur Roberts's motor-car collided with a brake. In the motor-car were Mr. Roberts, Miss Ruby Celeste, who appears with Mr. Roberts in his sketches, and the chauffeur. All three were thrown out, and the car was considerably damaged. Mr. Roberts escaped with a slight injury to one of his legs, but Miss Celeste sustained severe injuries to her head, which rendered her unconscious. The chauffeur received nothing worse than a severe shaking.

A 40-h.p. car returning from the Brooklands track on Monday overturned near Esher owing to a tyre bursting. The occupants—three gentlemen and a lady—were thrown out. Miss Dorothy Mitchell was severely injured internally, and was taken to hospital. The others were little hurt.

At the Westminster Coroner's Court on Tuesday, an inquest was held on the body of George Mason, who died in St. George's Hospital from injuries received in a collision between his cart and a motor-car. The evidence was very conflicting, but it appeared that on Saturday, while the deceased was driving along Cromwell Road, a motor-car, which was overtaking him, collided with the cart and he was thrown on his

head on the roadway. The jury returned a verdict of "Accidental death," and censured the chauffeur "for a great error of judgment," the coroner saying he quite agreed.

COMPANY NEWS.

COMPANY MEETINGS.

THE RENARD ROAD AND RAIL TRANSPORT CORPORATION, LTD.—The statutory meeting of this company has just been held, when Lord Ribblesdale, the chairman, made reference to the enquiries which have already been before the directors in connection with the development of the Renard road train system. In India and Egypt syndicates are in course of formation to demonstrate locally the merits of the train, and from Japan an order has been secured for the first demonstration train to be sent out there. A contract has also been secured for Chili, and Messrs. De Roubaix, of Antwerp, have, within the last few days, proved that a Renard train consisting of a motor and three trucks each carrying a load of four tons can be run under normal conditions at a total expense of under 2d. per ton per mile when fully employed. Negotiations are proceeding for the formation of demonstrating syndicates for Lancashire and Yorkshire, and the Board is placing a train at the disposal of an Irish syndicate at the Dublin Exhibition. Captain C. C. Longridge also spoke to the effect that the shareholders would take it as an indication of the Daimler Company's belief in the Renard train that they had entered into the preliminary syndicate by which this corporation was formed.

NEW COMPANIES REGISTERED.

STERN-SONNEBORN OIL COMPANY.—£25,000. To acquire (1) that part of the business of the Oelwerke Stern-Sonneborn Aktien Gesellschaft, of Hamburg, Cologne, and Paris, which is carried on in the United Kingdom and the colonies, dependencies, and Protectorates of the British

A leading feature of the Goodwood Race Meeting last week was the large number of motor-cars present each day. The photograph reproduced above shows only a few of the many vehicles in the open air garage.

Crown, under the sole agency of and in part in joint account with J. Wallach and L. C. Wallach (trading as Wallach Brothers), under the style of the Stern-Sonneborn Oil Company; and (2) the business of the Chemische Werke für Textil Industrie G.M.B.H., of Hamburg, carried on in the British Empire; and to carry on the business of manufacturers of and dealers in oils, greases, &c. No initial public issue. First directors: Messrs. L. Stern, J. Sonneborn, J. Wallach, and L. C. Wallach. Messrs. J. Wallach and L. C. Wallach are managing directors.

F.I.A.T. MOTOR-CAR COMPANY.—£203,000 (200,000 £1 cumulative preferred participating ordinary and 60,000 £1 deferred). To carry on the business of proprietors of motor-cabs, omnibuses, cars, carriages, vans, and other public or private conveyances of all kinds, carriers of passengers and goods, &c. First directors: Lord Grimthorpe (chairman), Sir W. J. Bell, D.L., Mr. T. Wilks, Mr. A. Du Cros, Capt. J. Orr-Ewing, Mr. D'Arcy R. Baker. The subscription list opened on Thursday, and closes to-day (Saturday). It is intended to put 400 Fiat motor taximeter cabs on the streets of London, commencing in November next, and on a conservative estimate of the takings the profit is estimated to secure a preferential dividend of 7 per cent. on the cumulative preferred participating ordinary shares five times over. The offices of the company are at 62, London Wall, E.C. The directorate is exceptionally strong, and the company has secured an advantage in contracting for the supply of Fiat chassis for its cabs. The cabs will be able to do long distance journeys for pleasure trips, and a considerable number of the vehicles will be fitted to carry luggage for the convenience of the public. With regard to the finance of the company, the preference shares are cumulative and the surplus profits are divided as to 60 per cent. to the cumulative preferred participating ordinary shares and 40 per cent. to the deferred shares.

FORTHCOMING EVENTS.

AUGUST.

- 10th (S.).—Entries for R.A.C. Commercial Vehicles Trials finally close at 12 noon.
 Annual Race Meeting of the Auto Cycle Club at Canning Town.
 The meet of the Lincolnshire A.C. to have been held at Brocklesby Park by invitation of Earl Yarborough, has been cancelled owing to the illness of his lordship.
 Non-stop run of the West Essex A.C.
 14th (W.).—Cardiff M.C. run to the Leys.
 17th (S.).—Brooklands A.R.C. Meet.
 Derby A.C.'s run to Chatsworth House.
 Harrogate A.C.'s hill climb.
 North London A.C. run to Great Berkhamstead.
 Northamptonshire A.C. gymkhana at Easton Neston.
 Newcastle and District Motor-Cycling Club's fuel consumption trial.
 Lincolnshire A.C. Hill Climb at Syston Park. Entries close on the 12th inst.
 19th to 24th.—Auto Cycle Club's six days' trial.
 21st (W.).—Meeting of the General Committee of the Motor Union.
 Lincolnshire M.C.C. at Stamford.
 24th (S.).—Hertford County A.C. at Lower Aston Hill for a members' driving test.
 North-East Lancashire A.C. gymkhana.
 Berkshire A.C. gymkhana.
 Yorkshire A.C.'s closed hill climb near Pateley Bridge.
 27th (T.).—Touring competition through Southern Germany.
 31st (S.).—Cardiff M.C.'s run to Chepstow.

SEPTEMBER.

- 1st (S.).—Florio Cup race of the Italian A.C. over the Brescia circuit.
 5th (T.).—Vehicles competing in the R.A.C. commercial vehicle trial must be within the gates of the depot.
 Arachon motor-boat meeting.
 7th (S.).—Auto Cycle Club's hill climb at Birdlip.
 Motor Cycling Club 200 miles reliability trial.
 9th (M.).—Industrial Vehicle Trials commence.
 14th (S.).—Motor Union Meet at Leicester.
 Brooklands A.R.C. meet.
 21st (W.).—Nottinghamshire A.C. hill climb.

OCTOBER.

- 5th.—Brooklands A.R.C. meeting.
 19th.—Gordon Bennett Aeronautical race at St. Louis, Missouri.
 20th.—Gaillon Hill Climb.

MARCH, 1908.

Cordingley's Motor-Car Exhibition at the Agricultural Hall, London.

LIGHTING-UP TIMES—LONDON.

Aug. 10th—8.34	...	12th—8.28	...	14th—8.25	...	16th—8.21
„ 11th—8.31	...	13th—8.27	...	15th—8.23	...	17th—8.19

In Glasgow the lighting-up time to-day (Sat.) is 9.10 p.m., and to ascertain the approximate times on succeeding days 26 min. should be added to the above figures; in Plymouth an addition of about 16 min. is necessary.

COMPENSATION CASE.

MR. B. H. MARTINEAU was sued, at Brompton County Court, by Mr. George Fowler, a leather merchant, of Bethnal Green, for £25 in respect of personal injuries and damage to a pony and trap, said to have been caused by the negligence of defendant's chauffeur, at Cavendish Square, W., in March. His honour awarded plaintiff £15 damages.

POLICE TRAPS.

AT Monk Fryston, near Selby, the police have instituted a quarter of a mile trap.

ON the Hadham Road, Bishop's Stortford, the police have lately been watching cars with a view to summoning their drivers.

A NEW trap has been established near Beverley Brook, in Richmond Park.

THERE is a measured distance in the Barrack Road, Christchurch, Hampshire, in which eleven motorists were recently caught. Their fines ranged from 1s. to £10.

A MEASURED furlong is now the scene of police trapping operations at Blake Hall Road, Wanstead, Essex.

THERE is a police trap between Totton and Southampton on the Lyndhurst road.

THE quarterly report of the Chief Constable of Cheshire shows a decrease of 226 apprehensions, which, it is openly suggested in the county, may result from the concentration of their attention to motorists during the last few months.

BUSINESS NEWS.

MESSRS. G. T. RICHES AND COMPANY, of Store Street, N.W., have sent us samples of the C. and A. (copper and asbestos) washers of which they are making a speciality. They are made in no less than about seventy-five sizes, ranging from 10 by 15 mm. to 90 by 100 mm., and will be found useful not only in connection with sparking plugs and valves, but also for making any water and air tight joints in connection with the piping on motor-cars.

IN the case of controls operated from the steering wheel opinions apparently differ considerably as to whether it is an advantage for the levers to revolve with the steering wheel or remain stationary when the steering wheel is moved. It is sometimes urged that when the levers move with the wheel the change in the positions might lead to confusion in the mind of the driver and cause mistakes to be made, but this would appear to be mainly theoretical or more would have been heard of the objectionable features of such a general system in practice. In the Bowden Controls, operated from the wheel, the motorist has a free choice and can have either system fitted at will.

THE ELECTRIC IGNITION COMPANY, LTD., have recently made some extensive alterations to their premises, including the building of an elaborate test shop, through which all materials and finished goods will in future have to pass. This further check on their products will enable them to guarantee all their manufactures for two years, instead of one year, as hitherto.

WE hear that notwithstanding the fact that Vauxhall Motors, Ltd., have recently largely augmented their resources at Luton for turning out the 12-16-h.p. Vauxhall cars, they have been compelled to put on a night shift to cope with the work.

WITH our present issue we publish interesting particulars relating to "Miraculum," the new puncture stop for which it is claimed that, when injected into the inner tubes of motor-car and bicycle tyres, it effectually seals punctures and at the same time acts as a preservative of the rubber. A company, the prospectus of which will shortly be issued, has been formed for the purpose of acquiring the patent rights of this compound for the United Kingdom. The capital is £25,000, of which 20,980 £1 ordinary shares will be issued for subscription at par. The Board is a very strong one, and a notable feature of the project is that the company have made arrangements for the handling and marketing of their product by the E. M. Bowden's Patents Syndicate, Ltd. Prospectuses and all further information may be obtained during the period that the list is open from the brokers, solicitors, bankers, auditors, and from the secretary of the company, Mr. Arthur E. Cowley, 48, Dover Street, London, W.

MISS TALBOT, a well-known figure in Wales, and practically owner of Port Talbot and the surrounding district, has ordered a 40-h.p. six-cylinder Napier.

THE recent Irish A.C. hill-climbing competition again proved the excellence of "Continental" non-skids. Three gold medals, the Humber cup and the Henshaw silver cup were carried off by cars fitted with this well-known make.

MR. W. KEMPTON CANNON, the well-known jockey, has just purchased from the Motor Supply Company, Ltd., of 111, Piccadilly, W., an 8-11-h.p. Panhard landaulet. He has also recently opened a motor garage in Newmarket.

A NOTICE BOARD is to be placed at the bottom of Rottingdean Hill, near Brighton, cautioning motorists to proceed slowly when passing the school in the vicinity.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

To insure insertion communications and contributions must be in the Editors' hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case; otherwise no liability will be accepted.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

THE Motor-Car Journal.

VOL. IX.]

LONDON, SATURDAY, AUGUST 17, 1907.

[No. 441.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

WITH considerable persistence the authorities of the Brooklands motor track are seeking to excite enthusiasm for the events that take place at Weybridge. We have just received a revised set of Supplementary Regulations, in which has been incorporated many of the suggestions made in the Press for the better government of the race meetings. Thus, for the next races, on the 14th prox., every vehicle will have to carry a metal disc, painted black, behind the driver's seat. This must be at least two feet in height and length, and, apparently, the possibility of confusion as to the identity of the cars on the course is to be eliminated by, as we suggested last week, "the numbers being newly painted before they enter the course." The committee have decided upon a system of handicapping based on allotting different distances to competing cars in handicap races; the cars will carry a uniform weight, and will be started simultaneously from the various starting points allotted by the handicapper. Colonel H. C. L. Holden will act as honorary official handicapper to the B.A.R.C. For 1908, 26-h.p., 40-h.p., 60-h.p., and 90-h.p. have been adopted as the classification for "standard size races," and four events on these lines will be contested at the next meeting, as well as a Mercedes sweepstakes and a five-mile handicap sweepstakes, which, by the way, will be the longest race of the day—thus pointing to the possibility of a succession of short and sharp sensations calculated to incite the enthusiasm of the public.

The Dust Trials.

THE Dust Committee of the R.A.C. has issued its report in connection with the trials which were recently held on the Brooklands track so far as Classes I. and II. are concerned. With regard to the experimental Class III. it is proposed to issue no report at present, as the results obtained in the use of the experimental devices entail lengthy investigations before they can be published in a useful form. It will be remembered that the tests took place under favourable circumstances, and fortunately the actinic conditions were suitable, so that the photographic records, of which 130 were taken, have yielded concordant and satisfactory means of estimating the comparative excellence of the cars. In Class I., for makers' vehicles of standard design, the first prize, a silver cup, presented by the R.A.C., has been awarded to Mr. Frederic Coleman for his 30-h.p. White steam car, and the second prize, the Club's silver medal, to Mr. E. Gascoine for a 12-16-h.p. Wilson-Pilcher car. The silver cup which formed the prize in the inter-club competition for amateurs' cars, Class II., has been awarded to the Irish A.C., which was represented by Mr. Dermot Mooney's 20-h.p. Stanley steam car. It is noted by the judges that in the inter-club competition for cars driven by amateurs, smaller dust clouds were made, as a rule, than in Class I., a fact that was not unexpected, as the clubs entering cars had in most cases selected the competing vehicles by previous eliminating tests. In connection with the general arrangements made at the trial we may mention that the course was covered with limestone dust carefully gauged to a thickness of half-an-inch by the

use of gauge rakes between each run. Previous to entering on the dust patch the cars had to pass over a dust patch of the same thickness, but narrower, so that the cars could be driven over it with the wheels running on the bare concrete clear of the dust. The object of this was to observe whether any of this centrally-laid dust would be disturbed by the air current passing under the cars independently of the disturbance caused by the wheels themselves, and it may be at once stated that in very few cases was any such disturbance noticed.

No Lights at the rear—in Scotland.

RECENTLY we recorded that the House of Lords had at the last moment agreed to the omission of Scotland from the provisions of the Lights on Vehicles Bill. Already instances have been brought to our notice showing that the necessity for the application of that measure to the northern part of Britain is as great as it is on this side of the Tweed. A motorist driving in the Paisley road at some little distance from Glasgow ran into a lorry, from which various boards were projecting, the collision resulting in injury to a couple of men. When the case came before the sheriff, the agent for the motorist pointed to the absence of rear lights on the slow-moving lorry as a contributory cause of the accident, which freed the accused to a certain extent from the charge of negligent driving. This, however, had no weight with the authorities and a conviction was recorded with a fine of £5. Often have we emphasized the fact that slow-moving traffic unilluminated at the rear constitutes a great danger to the safety of the public on the road. And yet this menace is to be perpetuated in Scotland.

The Godiva Procession.

APPROPRIATELY enough, in the city of Coventry motor-cars figured in the Lady Godiva procession, and, although it would have destroyed the accuracy of the legend to have mounted her ladyship on a car, the automobile was much *en evidence*. A motor-lorry carried the members of the Beeston-Humber Prize Silver Band, who led the way. The trades section of the procession was headed by a vertical milling machine made by Messrs. Alfred Herbert, Ltd. Included in this part of the spectacle was the motor-car presented to the Coventry and Warwickshire Hospital by the Daimler Motor Company, and for which the committee, having been prohibited from balloting, are now waiting offers for purchase. The appearance of the Renard road train was also further proof of the modernised procession with which the people of the City of Spires and Cars were delighted last week.

Traffic Competitors.

EVERY year the chairmen of the leading railway companies are heard deploring the decline in first-class traffic, especially on those lines which serve racecourses and similar places of pleasure. This year on the Ascot Cup day no fewer than 1,066 motor-cars were observed standing on the racecourse. This means that at least 3,000 people who would have gone to Ascot by the first-class trains availed themselves of what they regarded as a more pleasant way of reaching their destination. This constant advance of motor-car traffic is one of the problems that railway managers will have to seriously consider in the

near future, for it is not only apparent on such special occasions as that we have instanced that the motor-car is becoming ubiquitous, but in the ordinary way motor-cabs and motor-buses are now bringing ladies from the suburbs into the West End, and are seriously affecting the lines which serve that quarter of London. Even the motor-car firms that recently made money by hiring out cars find the competition of the "neat red cabs" a retarding influence in connection with their business.

A Legal Point.

THE dismissal of a case against a motorist at Guildford, reported in another column, and the case mentioned in our legal reports last week, are the most hopeful omens for motorists that have lately fluttered from the dismal dulness of the police courts. They suggest the care which should be bestowed on the diverse points which occur in particular cases. Despite the objection which the Bench took to Mr. White's question as to what the motorist would have done in the event of a certain contingency occurring, they dismissed the case, the counsel successfully contending that a hypothetical charge was brought of driving in a manner which might have been dan-

"Le Miserable" (See page 540).

gerous had there been anyone about, and it was his duty to rebut that attack by showing that had the hypothetical case occurred, the conduct of the driver would not have caused danger to the public. The point is an ingenious one, which our readers when summoned to the court should bring before their counsel.

The Circumstances of the Case.

ANOTHER useful point was that mentioned on page 526 of the last issue of the *M.C.J.*, when summonses against two motor-car drivers were dismissed at Buntingford after Mr. Staplee Firth's submission to the Bench that there was no evidence of anyone having been endangered on the road. The case is important, not only by reason of the particular verdict arrived at, but also because of the legal eminence of the chairman of the Bench, he being the Rt. Hon. Sir Robert Romer, P.C., a retired Justice of Appeal. Hitherto cases of alleged danger to the public have been overawed by the judgment of *Smith v. Boon* and *Mayhew v. Sutton*. But it should be remembered that when the Lord Chief Justice gave his famous dictum in the latter case the regulations issued by the Local

Government Board under the Act of 1896 were in force. We are now living under the Act of 1903, which calls into question "all the circumstances of the case." At Buntingford the prosecution were apparently relying on the Mayhew judgment, but for the defence Mr. Firth urged that there was no evidence of what might have been on the road—a point which appealed to the legal mind of the chairman. We can only wish that all magisterial benches were presided over by men capable of appreciating the legal point without prejudice.

Tarring the Roads.

DURING the last few months many of the smaller local authorities in the South of England have been considering ways and means of securing the tarring of their roads, with a view to the mitigation, if not the abolition, of the dust nuisance. Encouraging such a policy, the East Sussex County Council have recently made known the fact that they were willing to contribute half the cost of tar spraying in villages where the rural council was willing to find the other moiety. The result has been that many parish assemblies which had previously found it impossible to undertake such work have been setting the necessary machinery in motion for securing the assistance of the County Council. Unhappily, the hope that had been raised has now been considerably set back by a notice of the Local Government Board to the Lindfield Parish Council, declining to sanction the expense of such work as an illegal expenditure on the part of the parish. Those councillors who have already signed cheques in connection with the tarring of the roads in these rural districts are liable to be surcharged, and the decision of the L.G.B. cannot fail to stop many schemes that were in progress for rendering the roads of the county possible for the new traffic. It is held by the central authorities that the cost of such should be made a county matter instead of a purely local one. Whilst we must regret the immediate effect of such a ruling, it seems to suggest that a little argument should suffice to convince the Local Government Board that the cost of roads, instead of being a merely county matter, should be a national charge, and that when that time comes we may reasonably expect considerable changes in the road surface.

The Recognition of Drivers in the Scottish Trial.

IN view of the persistence with which we urged the recognition of the drivers in the Scottish A.C. Trial who made non-stop runs, we are glad to learn that the authorities have determined thus to acknowledge the skill and endurance with which they guided their vehicles to success. The Trials Committee have agreed to present a gold badge to each driver whose vehicle obtained a non-stop certificate, and doubtless this recognition will be esteemed by all who become possessed of such distinction. Those thus entitled to the gold badge of the Scottish A.C. are, in the order of the classes in which they competed, Messrs. M. I. Livings, J. Downie, Mrs. E. A. Riley, Messrs. W. G. Tuck, W. Scott, J. Reid, F. Eastmead, P. E. Harry, W. McLean, J. Hadley, W. T. Lord, C. Harman Wigan, W. S. Macharg, Captain F. V. Wentworth, W. Watson, A. F. Kemp, G. M. Young, Buchanan Shiel, and Captain Corbet.

"The Honour of the Force."

THERE is a trap on the Selby and Doncaster road at Egghboro'. It was worked the other day by Sergeant Higson, stationed at the south end of the quarter-mile, and accompanied by P.c. Burland. When a car, driven by Mr. J. H. Hall, a well-known Sheffield motorist, was crossing the line at the south end he set his watch, and at the north end received a signal from P.c. Wilson with a white flag. He then stopped his watch. P.c. Burland corroborated this account of the proceeding in the police-court, and volunteered the information that he "was in a crouching position, and the sergeant was kneeling behind a hedge." And these are honourable men, engaged in

upholding the dignity of the law and the honour of the force. Why do they not come out into the open? Another instance of the ridiculous position in which the police often place themselves was shown at Godalming on Monday, when the constable said he signalled when the car passed by opening his coat, and then turned to look at the position of the vehicle, the signalling occupying less than one second. At the request of the solicitor for the defence the constable gave a demonstration in court, and the magistrate timed the signal at two to three seconds.

Limiting Speed.

MR. HAROLD COX has suggested to the Home Secretary that devices should be applied to motor-buses with a view to preventing them travelling beyond a fixed maximum rate of speed. Mr. Gladstone replied that there was no such contrivance actually in use, but it was possible that mechanism which might effect the object proposed might be invented. In that event the Commissioner of Police would carefully consider the question of requiring such apparatus to be fitted to motor-omnibuses in the Metropolis. Should such actually take place our friends of the Highways Protection League would doubtless agitate for the application of the speed-restrainer to ordinary automobiles—and the condition of the motorist would be curious indeed. The point is scarcely worth considering—save from the point of view of urging consideration for other users of the road as the best way of placating the public and the authorities, so that the next state of the motorist may not be worse than the present.

Worcester.

WORCESTER, a pleasant historical city in the centre of one of the most delightful of our English counties, is visited by many motorists during the course of the year, and they will find much to interest them in the official guide just issued under the authority of the Corporation by Messrs. Littlebury and Co. Not far from the city are many equally delightful resorts; Evesham, the field of battle, Tewkesbury and Edgehill, also the scenes of conflict. The region reeks with the names of personages of renown—Milton, Baxter, Wesley, Wolsey and Shakespeare, while inside the city boundaries is the cathedral and many timber framed structures testifying to the ancient lineage of the place. A map of the district shows many streams purling through the valleys of this delightful Garden. Almost within an hour's run by motor-car—having regard to the restrictions of the legal limit—Birmingham and Dudley may be reached, to bring the visitor within reach of industry; but in the other direction, and at no greater distance, are Tenbury, Hereford, and Ross, while nearer still Evesham, Bromyard, and Malvern give an alternation of pastoral beauty to delight the driver, and of hilly eminences to test the car. Altogether Worcester is a good centre for the roving motorist who has got over the passion for speed and wishes to indulge his delight in the scenery of the Midlands.

Petrol Precautions.

LAST week we were able to indicate the care and promptitude with which the London County Council is seeking, in conjunction with the borough authorities, to deal with the discharge of petrol into the sewers. The danger has become a serious one, and several instances of risk to life as well as actual damage to property could be given in support of the serious warning already addressed to our readers. Those responsible for control of motor-bus and motor-cab garages should take heed that no waste of petrol is allowed in the yards, for not only is such a practice expensive to their companies, but it is also dangerous to the public. In order to obviate the risks run in such places, as well as trade and other garages where large quantities of petrol are about, a simple form of interceptor is being suggested in connection with the drainage system. This is a three-chamber device, the drainage going into the first

chamber with a flush and the spirit rising and vaporising above the water. Thence the drainage flows into the second compartment, any petrol that may have escaped from the first chamber being here intercepted. Should, however, the matter not be clear from this foreign element a third chamber is provided, through which it passes ere entering the sewer. Oils, &c., are taken to the top of the water in the process, and the periodical inspection of this interceptor will do something to secure the safety of London's drainage system. We are glad to know that the responsible authorities have taken the subject in hand and it becomes an alarming problem. It behoves the motor industry to accord their support to such simple precautions as are now suggested.

Motor-car Imports and Exports.

JULY proved a very active month as regards importation of foreign motor-cars and parts into the United Kingdom. The number of complete vehicles which reached this country last month was 409, their value being given as £191,967. Parts were responsible for an additional £253,817, which gives a total of £445,786, as against £416,814 in the corresponding

A magnificent view of Loch Lomond may be had from Stonymill Road, which is only a short distance from the Argyll Works at Alexandria, N.B. The road strikes to the left uphill for about a mile, with an average gradient of 1 in 7, and is one of those beautiful little frequented by-ways that delight the hearts of tourists. It leads on to Helensburgh amid fine scenery of moor and glen. The above illustration shows an Argyll car negotiating the hill during a test run.

month of last year. For the first seven months of the current year the figures are:—Number of cars imported, 3,210; value of same, £1,364,526; imports of motor parts, £1,570,162; total, £2,934,688. For the similar period of 1906 they were:—3,799 cars of a value of £1,561,883; parts, £1,165,012; total, £2,726,895. Turning to the exports of British motor-cars and parts, these continue to show a steady expansion. The number of vehicles shipped during the seven months ending with July last was 1,062, of a value of £400,479; to this have to be added parts estimated at £292,063, which gives a combined total of £692,542, as contrasted with only £400,479 in the corresponding period of 1906.

A 20-h.p. MOTOR WAGON built in the spring of the year by Messrs. Durham Churchill and Co. has been running for three months under contract with the Bradford Dyers' Association, making daily journeys of from fifty to sixty miles on five days of the week.

THE COUPE DE LA PRESSE.

AS briefly mentioned in the last issue of the *M.C.J.*, the race known as the Coupe de la Presse was held on the 6th inst. on a 78.5 kilometre circuit near Trouville, five rounds having to be made to give a total distance of 392½ kilometres. The event was confined to those cars which had successfully passed through the Criterium de France reliability trial, and was on a petrol allowance basis, a quantity of spirit equal to 19 litres per gallon per 100 kilo., or 15 miles to the gallon, being served out to the competitors. Twenty-eight cars qualified for the race, and of these the following twenty-six started, being despatched at two minute intervals in the order given:—

Car.	Driver.	Car.	Driver.
Gladiator...	Molon.	De Dion-Bouton	De Marceay
Motobloc-Elastes	Barriaux.	Gladiator...	Vonlatum.
Brillie ...	Hérissé.	Westinghouse ...	Burekhard.
Gillet-Foret ...	Nemo.	Mercedes...	Gasteaux.
Cornilleau-Ste-Beuve	Cornilleau.	De Dion-Bouton	Vrignon.
Cottin-Desgouttes	Lature.	Aries ...	Vallée.
Rebour ...	Rivière.	Cottin-Desgouttes	Francès.

the fourth round still saw Sorel easily leading, he being five minutes in front of Renaux. Perret (Peugeot) had trouble through a broken spring, which delayed him considerably, the third place being taken by Vimont (Westinghouse). Petiet (Aries) was the only one to retire in this lap, leaving twenty cars in the running for the last circuit. Sorel, who was looked upon as the winner, unfortunately ran out of petrol ten kilometres from the finishing post, and, with Renaux going well, the latter proved an easy winner, he being four minutes ahead of Vimont (Westinghouse), who was second, Zélélé, a negro driver, being third on a De Dion. The following table gives the times of the eighteen competitors who finished:—

Order.	Driver.	Car.	Time.		Petrol Consumption.
			H.	M.	
1.	Renaux	Peugeot	4	32	69.2
2.	Vimont	Westinghouse	4	36	68.6
3.	Zélélé	De Dion	4	44	70.5
4.	Vrignon	De Dion	4	48	72.7

The Coupe de la Presse.—M. Renaux on the winning Peugeot Car passing through Cornilles.

Westinghouse ...	Vimont.	Cornilleau-Ste-Beuve	Morin.
De Dion-Ponton	Zélélé.	Lorraine-Dietrich	Sorel.
Aries ...	Petiet.	Cottin-Desgouttes	Cottin.
Vinot-Deguingand	D'Hespe.	Charron ...	Debray.
Peugeot ...	Perret.	Peugeot ...	Renaux.
M.G.R. ...	Rault.	Gobron ...	Dureste.

The first lap proved the fastest of the day, Sorel (De Dietrich) being round in 52 min. 42 sec., followed closely by Renaux (Peugeot) and Vrignon (De Dion). Three cars retired, viz., Rault (M.G.R.), Morin (Cornilleau-Ste-Beuve), and Gasteaux (Mercedes), the latter leaving the road at one of the bad turns and dashing into a field. Sorel still led at the end of the second round, Renaux being four minutes behind, and De Marceay (De Dion) third. The only one who fell out was d'Hespe, on the Vinet-Deguingand. The order at the end of the third circuit was unchanged as regards the first two places, but Perret (Peugeot) had run into the third position. Twenty-one competitors finished the lap, the missing one being Francès (Cottin-Desgouttes), who broke one of his wheels at Lieuray. The end of

5.	Cottin	Cottin-Desgouttes	4	53	62.3
6.	Burekhard	Westinghouse	4	53	69.3
7.	Molon	Gladiator	4	57	—
8.	Hérissé	Brillie	4	59	—
9.	Lature	Cottin-Desgouttes	5	4	—
10.	Dureste	Gobron	5	6	—
11.	Vonlatum	Gladiator	5	6	—
12.	Vallée	Aries	5	17	—
13.	De Marceay	De Dion	5	23	—
14.	Barriaux	Elastes	5	27	—
15.	Perret	Peugeot	5	52	—
16.	Rivière	Rebour	6	26	—
17.	Debray	Charron	6	36	—
18.	Nemo	Gillet-Foret	7	35	—

The winning Peugeot, which was fitted with Continental tyres on Vinet detachable rims, is rated at 28-h.p., the dimensions of the four-cylinder engine being 130 mm. bore by 120 mm. stroke. Renaux's running was extremely regular, as will be seen from his lap times, which were respectively 54 m. 57 sec., 54 m. 13 sec., 53 m. 57 sec., 54 m. 20 sec., and 55 m. 21 sec. His average speed worked out at fifty-four miles per hour

THE PEKIN-PARIS RUN.

THE ARRIVAL OF PRINCE BORGHESE IN PARIS.

THE last stage of the long journey which rendered the attempted trip by motor-car from Pekin to Paris *un fait accompli* was made by Prince Borghese on Saturday last, when he safely arrived in the French capital on his 40-h.p. Itala, amidst the cheers of the populace, who turned out in crowds to give him a royal welcome. The Prince left Pekin on June 10th, so that the journey occupied exactly two months. His route lay, for the most part, through uninhabited regions, across vast deserts, where the heat was overpowering, and over hundreds of miles of boggy and roadless country.

The following incidents of the run as far as St. Petersburg are taken from the "Daily Telegraph," which with notable enterprise secured as its correspondent Signor Luigi Barzini, who accompanied the Prince. On the third day the Itala car was buried over the axles in a morass, and held up by immense roots of trees, which had to be cut away with axes, whilst two days after it had to be drawn through about eighteen miles of deep sand by coolies and mules. At Pong-Kiong the "Daily Telegraph's" special representative's telegram on June 18th describing the journey was the first message despatched from that office, the only one within a radius of 100 miles, for six years. Near Urga the car stuck in a morass and fell on to its side. With the aid of Mongolians using beams as levers, and oxen, the car was pulled backwards out of the swamp. On the next day the vehicle again sank in thick mud to the axles, and gradually sank lower until rescued by Mongolian shepherds after the carriage work had been removed to lighten the car. It was a 'four hours' task, and the party encamped for the night on the Daturdaba Mountain. On June 24th the delicate parts of the car were removed to enable it to be dragged across the river Iro by oxen, and on the 25th a sandstorm was encountered, the car being nearly overturned. Between Misovsk and Irkutsk, in Siberia, the vehicle was taken for a winged locomotive by the villagers. On July 30th a bridge broke down, and the car and occupants were precipitated into a torrent, the passengers having a narrow escape. Three hours were occupied by Siberians in salving the car, which on the next day narrowly escaped collision with a railway train. On July 8th, failing other means of transport, a sunken boat was salvaged from the river Kemchuk, and used to carry the car across. It was engulfed in a bog on July 10th, the united efforts of more than thirty men and five horses being required to extricate the vehicle. The next day the river Tom was crossed by means of a boat impelled by four horses trotting in a circle on the deck and communicating their motion to the paddle-wheels. Just before reaching Omsk, on July 13th, the brake seized; the wood of the carriage-work caught fire, and axes had to be used before the flames were extinguished. Near Perm, on July 20th, the spokes of the left back wheel became loose, and were soaked in a bath all night, but on the next day the wheel collapsed, and was repaired by a native "telega" maker. The first well-made road since leaving Pekin was encountered near Kazan on July 22nd. Thirty versts from Moscow the car was met by a Cossack guard of honour, the Prince being accorded a great reception on entering the city, an occurrence which was repeated on his arrival at St. Petersburg.

In our last issue we published an exclusive account, by Captain Windham, of the arrival of the Prince in St. Petersburg. Leaving that city on the 2nd inst. the night was passed near

Dvinsk, and on the following day Kovno, 510 miles from St. Petersburg, was reached. The German frontier was crossed at Wirballen on the 4th inst., and, passing through Konigsberg, Elbing, and Marienburg, a halt was called at Stargard. The Prince's entry into Berlin was to have been a grand function on Tuesday, the 6th inst.; but he arrived at four o'clock on the previous afternoon, nearly twenty-four hours before the time fixed. He was met at Landsberg by four automobiles carrying representatives of the reception committee, the German Imperial Automobile Club, and the Italian colony, and, after some discussion, it was decided to continue the journey, the party pulling off at the Hotel Bristol, where a large concourse of people had collected. Tuesday was an off-day so far as travelling was concerned, but a busy one in other respects, among the principal items being a welcoming banquet at the German Automobile Club, and another given by the Italian colony in Berlin. Leaving the German capital early on the morning of the 7th inst., and escorted by a number of cars which had journeyed from Paris to meet the travellers, the way was made to Bielefeld (about 280 miles), a stop for lunch at the invitation of the local automobile club being made at Hanover.

Another stage was completed on Thursday, when Germany was left behind and Belgium entered, the stopping place being Liege. Paris could easily have been reached on Friday, the 9th inst., but, in order not to disarrange the plans which had been made for the Prince's reception, the night was passed at Meaux, only twenty-eight miles from the capital.

On Saturday last several hundred automobilists and cyclists went out to meet the Prince between Paris and Meaux in order to accompany him on his triumphal entry into Paris. In view of the relatively short distance Meaux was not left until about 2:30 p.m. At Joinville, on the outskirts of Paris, the bridge was blocked by motor-cars, bicycles, carriages and pedestrians on either side, and an immense shout went up as the car driven by Prince Borghese appeared in sight. Thence the drive through Paris, up

the Cours de Vincennes, and along the boulevards to the offices of the "Matin," the organiser of the run, was a long, uninterrupted crescendo of enthusiasm. The Prince Borghese frequently had to stop, his progress being barred by the great press of people. The crowd was densest along the grand boulevards, and, in spite of detachments of mounted troops sent to clear the way, the procession, headed by a huge motor-char-a-banc conveying a band, had considerable difficulty in reaching its destination. In the salons of the "Matin" the Prince made a modest little speech, in which he protested that he was not the hero his admirers would have him to be. He and his companions had accomplished their ride simply by patience and perseverance and by attacking each day's difficulties and obstacles without thinking of what the morrow would bring forth. It was by concentrating all their energy on each stage that they had been able to accomplish the journey from Pekin to Paris. Finally, Ettore Guizzardi, the Prince's mechanician throughout the trip, climbed into the historic car, and, backing it a few feet, drove it up an inclined plank on to a platform in front of the "Matin" offices, where it was on view for three days. In the evening the Prince was entertained at a banquet given in his honour by the Itala Company at the French Automobile Club. M. Henri Fournier, the Parisian agent for the Itala cars, read a long speech complimenting Prince Borghese on the achievement of his task, and drawing attention to the splendid merits of a

Prince Borghese

car which has accomplished a journey unequalled in the world's history. After the "Matin" toasts, of which there were two, Count Martignoni expressed the congratulations of Italian automobilists, and M. Verona spoke in the name of the Italian Press. The Prince in replying said he had no speech to make, only thanks to return. Thanks to the "Matin" for the conception and promotion of the run. Thanks to the Itala firm for the splendid machine that had carried him through so successfully. Thanks to France and its great automobile industry, which by its labours in earlier days had rendered it possible for mechanical locomotion to reap such a triumph. Later a grand fete was held in the Tuileries Gardens, with cinematograph and firework displays.

The appended table shows briefly his progress across the two continents:—

In the course of an interview at Meaux the Prince stated that the run through China was fairly good in places, but bad in others. The greatest trial was the Gobi Desert. He never at any time, however, had any difficulty in finding his way, for he always kept close to the telegraph wires. The car is exactly as it left Pekin sixty days ago, excepting that one of the rear wheels, the two back springs, and a front one have been replaced. At no time throughout the journey were the travellers ever in serious want of food. "On the whole," he added, "I am tired after all the banquets and luncheons, and I am glad the race is over. I could, of course, have arrived in Paris at least a week ago, had I not been detained by many kind-hearted people who wished to honor us on our way through their districts. I am not, however, the least bit physically tired, though I have had sixty days in an automobile, with only an average of five hours sleep a day. I

remain in Paris for a few days; then I go to Milan, and finish my journey at Turin on August 22nd."

THE Victoria Carriage Works, Ltd., have lately supplied a 24-30-h.p. Leon Bollee car with special landaulet body to Capt. Cottrell-Dormer, of Oxford.

FROM Messrs. Hans Renold, Ltd., Progress Works, Manchester, we have received a copy of a new booklet they have just issued relating to their patent silent chain and sprockets for high-speed driving. This form of chain is now being largely used on motor-buses and industrial vehicles, and the work before us deals very fully not only with its principle of action, but also with the care and attention which it requires. It is made in various types, the latest pattern having a patent bearing, which gives a considerably increased wearing surface and consequent additional durability to the chain. The final pages are devoted to some illustrations showing different applications of the silent chain, the book generally being one of the most complete of the kind that we have received.

A MOTORIST'S CAUSERIE.

IF some of those anti-motorists who are continually writing to the daily papers with regard to the dust nuisance could only be taken for an automobile tour of the southern counties, they would, I fancy, be astonished at the large amount of work that is being quietly done in the way of road tarring with the view of alleviating the trouble. On several recent runs through Surrey and Sussex to the coast—Brighton, Eastbourne, Bognor, and elsewhere—I have passed many empty tar barrels on the roadside, silent evidence of the change that is being made, and the fact that those responsible for the maintenance of the roads are fully alive to the necessity of the times.

I AM glad to see the subject of cars running better at night than during the day has been revived. Although not altogether prepared to agree with the theory advanced by Mr. Duckham, I am fully in accord with him that engines do run better in the evening than in the day. Only the other week, when we had what was, for this wet summer, an unusually sunny day, my car was running anything but well in the afternoon, the engine being in a mood of fits and starts, and I tried various remedies, but all to no purpose, and eventually decided to push along

man, had wished his son to follow in his footsteps and do his military service, his duties in the performance of which had brought him amongst the men engaged in guarding the Grand Prix course.

THE Continental Tyre Co. have, I notice, lately raised the question whether it is advisable to fit only one non-skid on the rear wheel of a car. Many people assert that one non-skid fitted on either of the back wheels is quite sufficient to prevent skidding, whilst others whose opinion is equally authoritative consider that two non-skids are essential. The matter, however, must be regarded from a practical standpoint, and let me, therefore, take the following instance. An 18-h.p. touring car was fitted with a non-skid tyre on one of the back wheels and a plain tread tyre on the other, and it was observed that the wheel fitted with the non-skid was subjected to a greater strain, doing, in fact, all the pulling of the car, whilst the other wheel with the plain tread barely, and sometimes even did not, touch the ground. In hilly districts this was even more discernible, especially on slippery roads, the car sometimes making practically no headway owing to the strain being all on one side. The effect of the combination was to quickly reduce the tread of the plain tread tyre to shreds, consequent upon the plain tyre not having the

The Pekin-Paris Run.—The arrival of M. Godard on the Spyker Car at Tomsk, Siberia.

home as best I could. To my surprise, as the evening wore on the motor forgot all its troubles and "pulled" as well as it has ever done. In my own mind I attributed this to the very reverse of Mr. Duckham's reason, viz., to the moist condition of the air—a view which is to some extent substantiated by the experiments which have been made in the way of introducing water into the explosion chamber. There is no doubt that this is one of the many "unsolved problems" of motoring, but some day the true explanation will be found.

MR. MORGAN DONNE, of Messrs. Donne and Willans, Ltd., the Rochet-Schneider agents, told me the other day of a curious experience he had over in Dieppe, on the occasion of the Grand Prix Race. After spending some time at the grand stand he made his way towards the fork in order to see for himself how the racers took the nasty turn. Taking up his position near some French soldiers, he was astonished to hear one of them address him in good English, "Aren't you Mr. Donne?" Explanations followed, and it turned out that the soldier in question was born in London and had been a traveller in the motor accessory trade in the metropolis. His father, a French-

same grip upon the road as the non-skid. If the rear wheels of cars are fitted with tyres of which the co-efficient adhesiveness varies, it seems to me only natural that the wheel which is less adhesive will revolve more easily as the motive power is increased to drive the car forward. This is, however, not with advantage to the tyre, but at the cost of the materials of which it is manufactured, viz., the rubber and the canvas. With the combination of one non-skid and one plain tread tyre it is not only the latter which suffers, but also the former, which is subjected to twice the amount of the ordinary strain. The natural inference to be drawn is, I think, that both rear wheels should be fitted with non-skids, but, if there are motorists who think otherwise, I am open to conviction.

WITH reference to the subject of motoring in the Isle of Wight, a correspondent, who signs himself "Satisfied," writes me that he has motored in the Isle of Wight ever since 1899 and used many kinds of cars. "My repairs have always been done in thorough business-like way by Mr. A. Clarke, of George Street, Ryde, whose excellent skill has induced the Automobile Club and Motor Union to appoint him as their official repairer." ARCANUM.

THE LOCKE CHANGE-SPEED GEAR.

WE illustrate herewith the details of an improved change-speed gear which has lately been devised by Mr. D'Arcy Locke, of the Wick Motor Depot, Christchurch, Hants. The gear has been specially designed for motor-bus work, or on other cars in which a frequent change of speed is necessary. As will be seen, it is of the type in which the pinions are always in mesh. The extension of the engine crankshaft, or the main clutchshaft, carries fixed to it two pinions, A and C, meshing with pinions B and D, carried on short countershafts. These latter, as also the main shaft, terminate in dog clutches—at about the centre of the gear-box—by which they can be connected at will to other short countershafts or the main tail shaft respectively; these countershafts also carry fixed to them

Sectional Plan and Detail Views of Locke Change-speed Gear.

the pinions E and G, running in mesh with the pinion F on the tail shaft. Thus, by letting in the required clutch, the first speed is obtained through the pinions A and B, and thence through G to F on the tail shaft. Similarly the second speed is through the pinions C and D and thence through E to F, whilst the third speed is direct, the two side clutches being disengaged and the central one brought into engagement. The clutches are held out by the actuating bar seen at the foot of the illustration, and are forced into mesh by the spiral springs shown, the operating bar being actuated by a single lever. The reverse motion is obtained by sliding the pinion G back into mesh with an intermediary spur wheel. The drawings show shafts fitted with plain bearings. These can, however, if necessary, be replaced by ball bearings, while the Hele-Shaw disc clutches can be substituted for those of the dog type. Mr. Locke claims that not only is the gear noiseless, but, the pinions being always in mesh, it is practically everlasting. As the drawings show, the

arrangement is very compact, and, the shafts being short and well supported, it is strong and rigid, rendering it well adapted for hard work.

ACROSS AFRICA BY MOTOR-CAR.

MUCH interest is being shown in Germany in an attempt to cross Africa by motor-car which is being made by Lieut. Graetz, who left Dar-es-Salaam, German East Africa, on Saturday last, accompanied by Herr von Roeder and a mechanic named Neuberger. Graetz purposes to make his way to Tabona, the biggest native town in the Protectorate, using, of course, the caravan road. From Tabo he will strike off to Bismarcksborg, at the southern corner of Lake Tanganyika, one of the toughest bits of German territory. This behind him, the officer will reach British territory, Karonga on the Nyassa, across which his car will be towed on a barge. Thence the route runs over mountainous ground to Fort Jameson and farther on to Mwomboshi, where it intersects the Cape-to-Cairo railway line, and from this point the road to Bulawayo offers no striking difficulties. The next town of any importance in his programme is Palapye, to the north-east of the Kalahari Desert, which he

purposes crossing along the road, about 750 miles, mapped out by Professor Passarge. We give an illustration of Herr Graetz's 45-h.p. car as equipped for its long journey. It was built by the Sueddeutsche Automobilfabrik of Gaggenau, and is fitted with wheels of larger diameter than usual and also a radiator of increased capacity. The outfit includes a full supply of spare parts and a telephone apparatus so arranged that it can be connected up to any telegraph line *en route*, and two U-shaped rails to enable the car to cross any soft places or streams that may be encountered. About 90 gallons of spirit are carried, and arrangements have been made for additional supplies at some of the stations to be passed through. Herr Graetz expects the journey will occupy about six weeks.

MR. RANDEL has recently opened a new motor garage in Colombo, where he has also established a motor repair department in charge of Mr. T. Young. The garage is 100 feet in length by 65 feet in breadth and is equipped with all necessary machinery for the repair of cars, as well as with the H.F. appliances for vulcanising tyres. It will be of service to the growing number of motorists in Ceylon.

THE judging for the July competition promoted by Argylls Motors, Ltd., took place at 17, Newman Street, W., on Friday, the 9th inst., when a large batch of claims from private owners of Argyll cars was thoroughly sifted. The handsome silver rose bowl, valued at 50 guineas, the prize for the July competition, was awarded to Mr. J. H. Crowther, of Huddersfield, who had driven one of the new types of 14-16-h.p. Argylls from Glasgow to Huddersfield in splendid time, and, in spite of the many stiff gradients he had to negotiate, without changing gear once during the whole journey.

THE Mayor of Johannesburg has a motor-car provided by the municipality, which allows him £500 a year for its maintenance.

A MANSION at Redhill has been entered by burglars, who with the aid of a motor-car managed to get away with about £1,000 worth of silver and silver plate.

THE ferry bridge over the Arun at Littlehampton is to be superseded by a new steel girder bridge. This will be opened early next year, and will do much to facilitate traffic along the south coast, notably between Brighton and Bognor.

THE police in the South Wales district are waging war on the lads who throw stones, &c., at motorists, and at Penarth the other day seven boys were fined 10s. each or seven days' imprisonment for thus endangering the lives of users of the public highway.

A CENSUS of the traffic through Staines on a recent Race meeting day was taken by the surveyor to the local urban District Council, and showed that of 8,909 vehicles passing through the main street of the town, no fewer than 1,366 were motor-cars.

ON the Itala car with which Prince Borghese journeyed from Pekin to Paris D.W.M. ball bearings were fitted, and none required renewing during the journey—a tribute to the efficiency of these bearings, with which the name of Messrs. Ludw. Loewe and Co., Ltd., is identified.

WE learn that Mr. W. T. Lord is resigning his position as the manager of Messrs. Straker Squire's establishment in Shaftesbury Avenue, W.C., to rejoin Messrs. Argyll Motors, Ltd., under which firm he will hold a responsible position. Mr. Lord will be settled at the Argyll Works, Alexandria, N.B.

THE strikes that have taken place in Belfast have incidentally favoured the introduction of motor-cars and wagons for the conveyance of goods, where previously horse drawn traffic prevailed. During the past few days the cross channel steamers arriving at Belfast carried an unusually large number of vehicles for service in that city.

THE H.F. system of vulcanising is becoming a recognised part of the equipment of Scottish motor repair establishments, the necessary plant having been installed at Cupar by Messrs. E. Walton and Son, at Montrose by Messrs. A. Milne and Son, at Brechin by Messrs. A. Simpson and Son, and at St. Andrews by Messrs. A. Duncan and Son.

JUDGING by the illustrations, Mr. J. C. Dare's new novel, "Champion, the Story of a Motor-Car," belongs to the sensational class. According to the publishers, Messrs. Cassell and Co., Ltd., it "palpitates with the energy of the car, while the treacherous love of one woman, and the crowning truthful love of another, lend sentiment to the throbbing interest of a telling tale."

THE first prosecution under the new bye-laws of the Thames Conservancy Board has just taken place, the owner of a motor-boat having been fined seven shillings and costs for opening a can of petrol on a motor-launch while waiting with other boats in Molesey Lock.

THE acquisition by Messrs. A. W. Gamage, Ltd., of Holborn, of the business of Messrs. Benetfink and Co., in Cheapside, E.C., is an event of interest in the commercial circles of the City. This amalgamation of one of the oldest trading firms in Cheapside with the modern emporium further West gives Messrs. Gamage a unique position. Their motor accessory department has grown to considerable dimensions, and the smaller branch which Messrs. Benetfink have established in Cheapside will, of course, be extended and brought up to date, to the convenience of the many motorists in the district about the Guildhall. In making this announcement to the Press the other day, Mr. A. W. Gamage referred with pardonable pride to the development of his firm, which has paid such close attention to the requirements of the man who motors.

MESSRS. FRANCIS BROS., of Barnet, are the official repairers to the R.A.C. in that locality.

DURING the first half of the present year the nominal capital of the motor, cycle, 'bus and car companies registered in

England was £4,591,191; Scotch and Irish registrations of the same group totalled £53,500.

THE "Ever-ready Soap" is being introduced to the motor industry by Messrs. Henry Lewis and Co., 274, New Cross Road, Deptford, London, S.E. This is recommended to remove grease and dirt, and, being applicable with or without water, should prove of great service to motorists in removing objectionable matter from the hands when such could not otherwise be possible. It is put up in neat tins and has the advantage of economy in price as well as efficiency in application.

WE illustrate herewith the useful 10-12-h.p. car specially designed for the use of commercial travellers which has recently been put on the market by Messrs. Brown Bros., Ltd. As will be seen, the body has been devised so that the traveller and his driver shall be protected even in bad weather, the front seats being not only provided with a canopy, but with front glass screen and side doors. The rear portion takes the form of a large chest, in which a wide range of samples can be carried.

The "Brown" 10-12-h.p. Travellers' Car.

The chassis is of the Brown 10-12-h.p. two-cylinder standard type. The change-speed gear is adapted to give three speeds and a reverse, with direct drive on the top through a cardan shaft and bevel gear to a substantially-constructed live axle. Altogether the vehicle is one which should meet the requirements of a large number of "commercial," and enable them to cover their ground in much less time than is possible by the usual horse-drawn broughams, or to considerably increase their range of action within the usual business hours.

FOR these motorists who visit Ireland by the Fishguard and Rosslare route of the Great Western Railway co. Wexford is, practically, the starting point of their Irish tour. The town is prosperous, according to the idea of prosperity that prevails in the Emerald Isle, and the Corporation is enterprising enough to publish a capital guide to the place. On the Quay, Messrs. Thompson Bros. have a garage and repair shop for motor-cars—ranking among the largest in the country. They are well acquainted with all types of cars and keep a large staff of mechanics for dealing with any vehicles going that way. In addition to the repair of motor-cars, Messrs. Thompson Bros. have large stocks of spare parts, tyres and petrol, and their advice may be usefully sought by English motorists travelling in that part of Ireland.

MR. E. W. GLASSCOCK has extended his motor garage in South Street, Bishop's Stortford.

At Thorne, near Doncaster, Mr. G. W. Simpson has a motor repair establishment, and also stocks petrol and accessories.

MOTOR-CAB weddings are becoming popular in many districts, and ten motor-cabs were employed by a bridal party in a London suburb the other day.

It is claimed by the Motor House that their "Garantire" tyre is the only fully guaranteed tyre upon the market, their bond, a copy of which is given with every cover sent out,

stipulating a minimum life of 4,000 miles. The accompanying illustration shows the registered design of the tread of the "Garantire" tyres.

ALTHOUGH the President of the United States has never been quite won over to the automobile, his young sons are fast learning how to manipulate a motor-car.

THE last news of the Pekin-Paris competitors—M. Godard on a Spyker, and MM. Cormier and Collignon on De Dions, is from Nijni Novgorod, Russia, which place was reached on the 12th inst.

MR. CUTHBERT MORRELL, J.P., of York, has placed his motor-car at the disposal of some local ministers who are touring the villages around the city in the interest of the Wesleyan Foreign Missions.

THE Humber Company have completed at their Coventry works the first of a new model of motor-cabs. The vehicle is fitted with a 10-12-h.p. four-cylinder engine ingeniously arranged below the driver's footboard.

THE motor works of the Elsworth Motors, Ltd., in Bradford, have come into the market owing to the death of Mr. Elsworth, who went down in the "Berlin." At the auction last week the reserve price was not reached.

THE painting of his motor-car number on a piece of card-board tied to the car with a string has not saved a Derby motorist from being fined 10s. and costs at the Kington (Hereford) police court for using a motor-car with "the identification mark at the rear of the same not easily distinguishable."

THE new tariff proposals submitted to the Australian Parliament provide for a tax on foreign motor-cycles of ten guineas or 30 per cent. and of £10 or 25 per cent. on those of British origin. In each case whichever sum is the larger will be required. For motor lorries, wagons, carts, and parts the respective rates are 35 per cent and 25 per cent.

A REPAIR shop for motor-cars as well as a conveniently located garage has been established by the Dublin and Glasgow Motor and Engineering Company, 27, Lotts, off Middle Abbey Street, Dublin. Messrs. W. A. Porteous and M. Weidner are the proprietors of the establishment. Both are well able to assist motorists touring in that part of Ireland.

MOTOR-CARS were greatly in evidence at the Ludlow Agricultural Show. Among the many there with parties were Sir C. Rouse Boughton, Bart., Sir Wm. Curtis, Bart., Mr. Hugh Heber Percy and Mr. Whitaker, of Bromcroft Castle. It would seem that agriculturists at their annual show are doomed—if it can be so put—to have as many motor-cars about them as horses.

MOTORING is making rapid progress in the Argentine Republic. A correspondent in Buenos Ayres writes that the automobile exhibition which is shortly to be held in that city is already an assured success. Arrangements are also in hand for holding a road race in November next from Buenos Ayres to Tigre and back for the El Pais Cup. There is also some talk of building a motor track in the Palermo Park.

IN the Victoria Road, Scarborough, Messrs. Castlehouse Bros. have opened a well-equipped motor garage with accommodation for about a score of cars.

A MOTOR ambulance car is proposed for Swansea, and at several local works subscriptions are being collected for its purchase. The chief constable of the town is interesting himself in the matter.

THE Motor Club of Victoria (B.C.) has issued a circular giving the rules of the road in British Columbia for the benefit of visiting motorists. The most important point of difference between these rules and those usually observed in America is that one keeps to the left side of the road instead of the right and in overtaking and passing vehicles going in the same direction one passes on the right.

At the meeting of McNamara and Co., Ltd., on Tuesday, Sir J. Pound, who presided, said the Postmaster-General had expressed satisfaction at the manner in which the company had carried His Majesty's mails. Their experience with motor vehicles had been varied but valuable. They had, during the past few months of the present financial year, managed to work their motor-vans more satisfactorily, both as to work done and with regard to maintenance charges. Motors for commercial purposes were yet in the experimental stage, but the facilities they offered for quick transit were likely to be further made use of.

PRINCE SCIPIO BORGHESE, the hero of the Pekin-Paris run, is the second son of Prince Paul Borghese, a keen sportsman, and is only thirty-six years of age; he is a scion of one of the oldest Roman families. Various honours have been conferred upon them by successive Popes, and they have given Cardinals to the Church. It was Cardinal Camillo Borghese who ascended the Papal Throne in 1605 as Paul V. Cardinal Scipio Borghese built the Villa Borghese, just outside Rome, which a few years ago was acquired by public subscription and presented to the City of Rome. Prince Mark Antony Borghese, who married Pauline Bonaparte, the sister of Napoleon I., sold to his brother-in-law the Borghese art collection for 13,000,000 francs, receiving in part payment the principality of Piedmont. At the fall of the Napoleonic kinglets the Prince lost his throne and received back a portion of his ancient sculptures.

AN ingenious combination water and oil circulating pump is being made by M. J. de Boisse, of Billancourt (Seine); it is driven by one set of gearing in the usual way either by pinions

or chain, and while it is claimed to be impossible for any leakage of water into the oil or *vice versa* to take place, the heat of the circulation water keeps the oil in a liquid state, however cold may be the atmosphere.

THE six-cylinder Hotchkiss has now completed the semi-final week of its undertaking, and has added another non-stop run of 937 miles to the already large non-stop total of 9,273 miles. The car has travelled, including the 6,250 miles in France, 20,523 miles.

CONTINENTAL NOTES.

An Anti-Automobile Society in France.

France has at last got its counterpart to the Highways Protection League, La Société Protectrice Contre l'Excès de l'Automobilisme, having just been formed by the efforts of M. Ambroise Colin. The chief object of the new body will be to secure reforms in the laws concerning accidents due to the reckless driving of motor-cars, so that those responsible will be held more fully accountable. The figures which have been compiled to indicate the necessity of such reform show that while in 1899 there were only 1,534 accidents in France attributable to automobiles, the number increased to 1,860 in 1902, 2,328 in 1903, 3,969 in 1905, and to 4,725 in 1906.

Motor-Car Sales a Bulgarian Monopoly.

It is reported that the Bulgarian Government has decided to make the sale of motor-cars in the country a monopoly, and that offers are shortly to be invited for the undertaking.

ments are also in hand for the starting of a public service between Rothenburg and Leukeshausen.

Public Services in France.

Public motor-car services are being established between Aix-les-Bains and Chambéry and between Grenoble and La Grande Chartreuse. The vehicles which are being employed are of the Mors 28-40-h.p. type, fitted with 12-seated bodies.

Miscellaneous Items.

Arrangements are in hand for the formation of a Motor Volunteer Corps in Spain.—The Automobile Club of Padua, Italy, is organising a motor meeting for September 8th, when a series of one and ten kilometres speed trials will be held.—A service of motor-cabs is being introduced into the town of Würzburg, Germany.—The King of Saxony has just ordered a new 45-h.p. Mercedes car.—A French company has recently formed a company at Stockholm for the introduction of

The Coupe de la Presse.—The cars, after being filled up with the measured quantity of petrol, were hauled to the starting point by horses.

The 1908 French Motor Racing Season.

It is reported that the Competitions Committee of the A.C.F. is busily engaged in arranging the dates for the principal motor-car races to be held in France next year. It is stated unofficially that the Grand Prix will again take place at the beginning of July on the same circuit as that employed this year. The Coupe de la Presse has also proved so successful that the event will most probably be repeated under the same rules and regulations, about a month after the Grand Prix.

A Miniature Four-cylinder Car.

The N.S.U. Company, of Neckarsulm, Germany, which has hitherto confined its attention to motor-cycles, has just brought out a miniature four-cylinder car, the engine being rated at 6-10-h.p.

Public Services in Germany.

A company has been formed in Geestemünde to establish a service of motor-buses between that town and Stotel. Arrange-

taximeter motor-cabs in the Swedish capital. It is stated that sixty vehicles will shortly be placed in service.—Thirty-two motor lorries have already been offered by manufacturers to the French war authorities for use in connection with the forthcoming military manoeuvres in South-West France.—The date of the international motor-car race in Roumania has been fixed for September 27th.—The Saxon Ministry of War has placed an order for a 50-h.p. Nacke car with limousine body for the use of the Commander-in-Chief.—The touring competition for the Rochet-Schneider cup, which was to have been held on the 19th inst. under the auspices of the Automobile Club de l'Auvergne, will not take place, the French Government, as a result of the accidents in the Criterium de France, having refused permission for the event.—The next motor-car exhibition in Brussels is to be held from December 21st to January 2nd next.—The "Auto," of Paris, proposes to hold a reliability trial for single and double-cylinder cars at the end of October next.

Correspondence.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

THE CONTROL OF THE ROADS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—It is probably within your knowledge that some differences of opinion exist between the Motor Union and the Automobile Association in connection with the adoption by the former body of a badge so like our own that our scouts often find it difficult to distinguish between them.

The Automobile Association was formed with the primary object of employing road agents for the purpose of assisting motorists, while the work of the Motor Union has been confined chiefly to legislative matters, and with the latter (until the adoption of a badge), and with the other well-recognised functions of the M.U., the A.A. has always been careful not to interfere.

The sphere of work of these two important institutions being so widely dissimilar, my committee keenly regretted the misunderstandings which had arisen, and feeling that a continuance of them would be inimical to the interest of both bodies and to motorists generally, set themselves to try to remedy the present regrettable state of affairs. To this end, meetings between leading members of both executives took place quite recently in the Motor Club. Judge of our amazement, therefore, on finding that while these negotiations are still proceeding, the Motor Union is deliberately setting about the organisation of a

warn drivers of dangerous places, and to advise motorists when driving through villages and towns where special caution is necessary.

The Union have been moved to take this step in consequence of the many complaints that have been received from small towns and villages on the main roads as to the inconvenience and annoyance caused by the passage through them of many hundreds of cars. The annoyance so caused has given rise to demands for the imposition of speed limits of five and ten miles an hour.

The Committee of the Union do not believe that the multiplication of speed limits would meet the difficulty, and have therefore resolved to take the above step in the belief that it will be more likely to bear practical results by restraining speed through villages and towns and checking the small minority of reckless and inconsiderate drivers who are doing so much harm to the movement.

Before bringing the scheme into operation the Union communicated with chief constables throughout the country, with the result that the co-operation of the police authorities has been generally secured.

The Union agents will be distinguished by a cap, a belt, and armlet. They will be stationed on the Hastings, Brighton, Portsmouth, Bath, Oxford, Cambridge, and Leicester roads, the Great North Road, and others.

The majority of the Motor Union road agents have been appointed on the recommendation of the chief constable or local superintendent, and consist mainly of retired police-sergeants and constables, and it is the intention of the Union in these appointments to give preference to this class of men and army pensioners in connection with their road scheme.—Yours truly,

C. D. ROSE,
Chairman, the Motor Union.
W. REES JEFFREYS,
Secretary, the Motor Union.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As a founder member of the Automobile Club, and one who keenly had its interests at heart up to a few years ago, I, after the rupture, certainly did not have the same confidence, and lost a certain amount of interest in its policy; but when the Motor Union was formed, the possibility of such a body appealed not only to the writer, but to a large number of other motorists. The squabble between the Automobile Club and the Motor Union did not add lustre to the former body, and the very clever secretary of the Motor Union deserved his success in gaining for his members what was indubitably the proper solution of the dispute. Much was expected from the Motor Union by motorists, but what has been done? Practically nothing. Partial assistance has been afforded in a few law cases, and there has been a fair amount of success in preventing a few roads from being closed or falling within the ten mile limit. In regard, however, to these ten mile limit areas, in most instances motorists themselves would have been liable to have been fined for going at anywhere near that speed, for such a pace in many instances would be well nigh impossible.

Then arose the Automobile Association, springing from the ranks of motorists themselves, it being felt that the formation of such a body was the only means by which cars would be enabled to be driven in comfort and safety on the road. Its success was instantaneous, and all classes of owners readily joined its ranks, until, I understand, there are 5,000 members at the present time. The committee are all drivers and owners, and embrace all shades of opinion—but they are unanimous in their love of the car—and work harmoniously towards making it possible for motorists to ride in comparative comfort on the road.

What have the Motor Union done in this direction? Nothing. But, notwithstanding the fact that nearly all the members of the Automobile Association are members of the Motor Union, the latter at this late hour, apparently frightened at the success of the younger and more energetic and representative body, tardily have not only closely copied the Automobile Association badge (a most paltry and unsportsmanlike action), but are now seeking, by communication with the police, to place upon the road in stationary positions a certain lot of old fossils dressed as if preparing for a circus, to act as—what? One was stationed at the end of the tram line between Kingston and Thames Ditton (Winlow Bridge) on Saturday last, and very unhappy he looked, his hands folded behind, except when his back was to the road, and ne'er a sign did he give, although a large number of cars were passing. The Automobile Association scouts were on bicycles, and were well in evidence where they should be, patrolling the roads. The only badges seen on cars were Automobile Association badges, and very few were seen without this symbol. Not one Motor Union badge was noted, and for honour's sake I trust few will be seen.

As a humble member of the Automobile Association, a consistent road user, and one holding the belief that he has saved the amount of his membership many times over, I cannot conclude without wishing every success to the Automobile Association, and trust that its membership will go on increasing, and that its power will be extended until it ultimately becomes the ruling body for Automobillism.—Yours truly,

AB INITIO.

Mrs. Brooke, of Westgate-on-Sea, at the wheel of her 15-h.p. Coventry Humber, which she has driven for considerably over 15,000 miles without any mechanical trouble.

system of road scouts on roads which are already patrolled by A.A. scouts, thereby duplicating the work and unnecessarily draining the funds of the Motor Union, and are sending to automobile clubs throughout the country a long circular inviting their assistance in so doing, and concluding with the insidious enquiry:—

“Do you think it would be an additional inducement to motorists to join your club, if, by so doing, they could obtain the services of a disciplined force of road protectors?”

Envious of the great position the Automobile Association has earned for itself, apparently jealous of its phenomenal popularity, and despite the fact that the action in copying our badge was almost universally condemned, the Motor Union is endeavouring to appropriate the principal feature of our organisation, and is making one more attempt to hinder and confuse the work we are doing.

In putting the facts before you, Sir, I think you will agree that the Automobile Association has a very genuine grievance, and that we are right in continuing to resent in every possible way this unfriendly and unsportsmanlike cribbing of our ideas and policy.—Yours truly,

W. J. BOSWORTH, COL.,
Chairman Automobile Association.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As a matter of some public importance, it may interest your readers to learn that the Motor Union of Great Britain and Ireland have resolved to place a number of trustworthy road agents upon the roads to

MR. EDGE'S CHALLENGE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have read with considerable amusement Mr. S. F. Edge's challenge. After having carefully prepared six cars, he challenges the world in the sum of £1,000, or he suggests that some firm should go to the expense of spending £6,000 to possibly capture £1,000, and further that every firm who wish to compete must make special cars to fulfil the necessary obligations of their being of equal cubical contents to his own.

Mr. Edge's £1,000 are very safe. Possibly the safety was the reason of the challenge.

Surely there is no need for such a challenge. Mr. Edge has had his answer at the last Brooklands meeting. According to the account he won the International Plate. In this case the car was slightly smaller than one or two others entered in that race. I congratulate him on that victory. In the Prix de la France I see a 93.7 Napier was beaten by two 75.9 Mercedes. I can hardly congratulate him on that, but, taking the two races together, they are quits. In the Heath Stakes I see a 60-h.p. car of his make was beaten by two other cars of larger engine power. He has nothing to be ashamed of in that. In the Belgium Plate I see his 60-h.p. cars beat cars of a far lesser horse power. He has nothing to be proud of in that. I also note in the same race five cars of various makes finished in front of his own of a far greater horse-power than they. In the Oaklands Plate I see he won, having the honour of having beaten with a 38.4-h.p. car other makes of cars, including one of 9.10-h.p. He has nothing to be proud of in such a victory, especially as in the same race four of these small cars actually finished in front of his own 25.6-h.p. Napier.

What more does Mr. Edge want? It surely suggests to him that he is only one of a crowd, and that there are other motor-car manu-

"JUSTICE" AT MARYLEBONE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I wish to bring to your notice the injustice meted out at the Marylebone Police Court. On August 1st I was summoned for exceeding the legal limit on a motor-cycle in Regent's Park on July 14th. The evidence of the parkkeeper was listened to, mine was ignored, and in considerably under five minutes from the time the case was called it was finished, and I was fined £5 and costs. There was no real investigation of the case such as would have occurred in a French or any other court.

The facts were: I was travelling at sixteen miles an hour, which I admit is above the regulation speed, but at the time I thought the same speed was allowed in the park as in the suburbs of your city, and the speed, considering there were no people about, was in no way excessive.

As I have held an English driving licence for five years and have never previously been in an English police court, and never had an accident either on a car or motor-cycle, I consider the fine out of all proportion to the offence. Perhaps the magistrate thought I had not paid enough to the revenues and made it extra heavy, as other motor-cycles and car owners were fined 5s. and £2 the same day.

I had not the £5 in cash in my pocket at the time, and requested the presiding magistrate, Mr. Plowden, to allow me to go home for the money, but as I only rent rooms (my own furniture) this was refused me, and when I asked an officer of the court to go with me my request was ignored.

As a foreigner I consider the English law must be had indeed to treat a man as a felon for offences of this nature, and I shall certainly communicate the case to the French press. I had two witnesses with me who were prepared to substantiate my statements, but I had to admit

A View at Font L'Eveque, on the Coupe de la Presse Circuit.

facturers. In the same issue I see a letter signed by Mr. Sidney Smith calling me to account because a Weigel car was fitted with oxygen cylinders at some Brooklands meeting. I have made enquiries, and find that this car was the property of a private gentleman, who, presumably, can do as he likes. It was not entered either by me or my firm, nor was it our property, over which we had any control. I should have been ashamed of a victory won by the utilisation of a "fake." It is regrettable that Mr. Sidney Smith fails to mention in his letter that he is an employee of Messrs. Napier, and I fail to understand why an employee issues challenges in the face of the fact that I issued one direct to his firm some little time back, which was refused in a somewhat ungentlemanly style, and which has resulted in a law action.

I have no desire to enter into controversies or receive challenges, or challenge the subordinates of any firm. I am only prepared to deal with the principals. I shall be most happy to pit a 40-h.p. standard Weigel against a 40-h.p. standard Napier, the conditions to be that they are standard chassis; they to have the right to pick any chassis out of my shop, and I to have the right to pick any chassis out of their shop; the test to include greatest speed on the flat and greatest speed uphill; the same gear in both instances to be used. Mine is not a vainglorious challenge issued upon lines which cannot possibly be accepted by any firm, or made to appear as if Weigel Motors, Limited, were the only firm really prepared to prove it, backed up by a large sum of money. Mine is a purely sporting challenge issued with the object of bringing gentlemen who are in the habit of issuing challenges of all descriptions broadcast to a definite conclusion. If they do not so accept it, let me use the term which is employed continually throughout letters which are written on their behalf over a variety of different signatures, viz., "Let them for ever be silent."—Yours truly,

D. M. WEIGEL.

I was travelling more than ten miles an hour, which the magistrate seemed to think finished the case.

Trusting you will find space in your journal for this letter, and hoping it may save others from like treatment.—Yours truly,

L. SONCIN.

THE RACE BETWEEN EDGE AND JARROTT.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have, as an enthusiastic motorist, taken the greatest interest in the possibility of seeing a match arranged between these two gentlemen, but having read Mr. Edge's last letter I am sorry to see that he is not very anxious to meet Mr. Jarrott. To seriously suggest that he will not race for less than £1,000, he surely puts himself on the basis of a professional jockey or racing chauffeur instead of the sporty motorist we have been led to believe him. I hold no brief for Mr. Jarrott, but we all know him for what he is, viz., a clean, straightforward English sportsman, and I cannot see any need for personalities.

We do, however, want to see this match, and I have a suggestion to make. In order to remove all trade questions let there be three heats. The first heat to be run on two Napiers, choice of machine to be by ballot at the start. The second heat to be run on two Dietrichs with similar conditions and the third and deciding heat on two cars to be provided by the Committee of the B.A.R.C., the name of which is not known until the start of the race. The winner to receive a cup and the loser a souvenir medal, which I feel sure the Club will be willing to offer. This would overcome all difficulties, remove all question of the race being run as an advertisement for one make of car or the other, and yet we should all see what I think we all desire to see, viz., a race between the

two English crack drivers, and I am certain the public would flock in their thousands to Brooklands to see the contest. Cannot a meeting be arranged on the lines I have mentioned?—Yours truly,

CHARLES PINNOCK.

IS FRANCE LOSING THE LEAD?

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Judging from the results of the important races that have this year been held on the Continent, 1907 seems to have proved a very disastrous year to the French motor-car industry. To a certain extent the huge French export trade in automobiles has been built up upon racing successes, and it is even claimed that two of the large firms which have been conspicuously successful in races in late years export almost their entire production, their cars having a rather poor reputation for quality in France, and, therefore, not selling well there. Thus these big international races, it would seem, create a market abroad for cars that are not wanted at home. But as this trade has been favourably affected by French racing successes, so it must be adversely affected by failures. International races originated in France, and for some years French cars won all the honours. In 1902, however, the Gordon Bennett Cup was won by an English car, and the following year it was secured by a German one. Fortunately for France the apparently invincible combination of a Thery and Brasier car the next year won back the coveted cup and successfully defended it the following year. The international cup race then ceased to be run, but in the several important races which took its place France once more proved victorious. This year all the important races so far have been won by other than French contestants, although in one of these races the French had an overwhelming majority of entries, and in all the others they were well represented. The severe drubbing the French received in the Grand Prix race is not exactly to be deplored. Their uninterrupted successes during the past three years engendered a severe affliction of self-veneration and conceit, while the French automobile press assumed a tone of extreme self-importance and would not permit of mentioning the industry of any other country in the same breath with that of France.—Yours truly,

T. R. CAMERON.

TESTING CARS IN THE MIDLANDS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I am glad to see that a suggestion has been made that a motor track upon more modest lines than Brooklands be constructed in the Midlands. Such a track would undoubtedly prove a boon to motor manufacturers desiring to test or experiment with cars, which tests have now to be done on the open road. Run on sound commercial lines, such a scheme would have every chance of success, provided the motor-car manufacturers in the Midlands supported it.

The testing of cars on public thoroughfares is one phase of the speed question which is seldom commented upon, probably because it is noticeable only in those towns where a considerable number of cars are manufactured. Wherever there is a large output, such as is at present the case in Coventry, cars in course of test are met with continually in all parts of both the business and residential districts. A car that is being tested is no more objectionable than any other if it is operated with the same apparent care, but the fact is that testers frequently drive very much faster than the law allows, and faster than ordinary motorists drive. Car testers as a class are exceedingly skilful drivers, and their worst fault is over-confidence in their powers. In several instances they have proved themselves brave and generous enough to take the consequences of their recklessness, and have driven their cars into ditches rather than injure pedestrians. It is not the danger to be apprehended from this fast driving, therefore, that is its worst feature, but its effect upon the goodwill of the general public. When a pedestrian escapes a car which is exceeding the limit, with only a few inches to spare, he does not usually spend the next few minutes in admiring the skill of the driver. On the contrary, he wonders how he was lucky enough to escape being killed, and what can be done to stop the nuisance.

The suggestion of a track for car testing purposes is an opportune one, for from an economic standpoint it is very desirable to have the testers under the eye of the factory authorities, for it prevents abuse of cars and at the same time assures that they are thoroughly tested.—Yours truly,

W. DAWSON.

STEAM CARS IN SPEED TRIALS AND HILL-CLIMBING COMPETITIONS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I see from a recent issue of the *M.C.J.* that the reason given for the White steam car breaking down in the match against Mr. C. Sangster's petrol vehicle on the Brooklands Track on the 20th ult. is that "the safety valve on the steam pipe from the generator to the engine—which had been screwed down to enable a higher pressure than normal to be employed—blew out." The secret of the success of steam cars in races and hill-climbing competitions is thus made known—the safety valve is screwed down to enable a higher pressure than normal to be employed! There has lately been an outcry against the use of oxygen on petrol cars in such events, this additional aid to "spurts" being con-

sidered as a form of "doping" if not "faking." The question now arises whether the safety valve incident does not come within the same category. Certain it is that the car was not being run under normal conditions.—Yours truly,

VAPEUR.

A WAIL FROM LIVERPOOL.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—For several months I have been searching the advertisement columns of the motor journals for a second-hand motor-car in or close to Liverpool. During this time only one Liverpoolite has speculated in an advertisement. Nearly every town in Great Britain has advertised motors, London, of course, taking absolutely the peak of eminence.

What appears so extraordinary to me is that a town like Liverpool has nothing to offer, whereas Manchester, Birmingham, and all other towns worth mentioning advertise cars—even such obscure hamlets as Sloo-cum-Podger can offer a car now and again.

There are hundreds of cars in Liverpool travelling around, also some pre-historic vehicles that give one a nightmare. Am I to understand that all the good cars belong to motorists passing through the town, and the pre-historic cars are all Liverpool has to offer, and so really ashamed to advertise such obsolete freaks on wheels?—Yours truly,

J. J. WILSON.

WHEELS FOR MOTOR-CARS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Seeing Mr. O. Cook's letter in your journal respecting wheels for motor-cars, I presume it is meant not only the wheels but the tyres, which he says are such an improvement upon pneumatics or solids, being unpuncturable and as easy riding as pneumatics. From 1899 to 1903 I drove an Orient Express with solid tyres, and when I had done with it the tyres were nearly as good as when I first had the vehicle. I now drive a 9-11-h.p. Peugeot, an excellent car, the tyres being the only trouble, both the driving tyres last week, after about six months' use, giving out. Would Mr. Cook kindly give me the name of the car and tyre, as this must be the article I have been looking for?—Yours truly,

E. PLUMBRIDGE.

SELF-STARTING DEVICES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—In reply to your correspondent "Montacute," I write to say that I am the patentee of an automatic starting device which works quite well in the experimental form in which it is at present. The main difficulty in connection with it is that it seems impracticable to place it in the market as a fitment for any car, because each different one would require special details in the design to fit it, and this would make the cost almost prohibitive. Most probably the starter will become a feature of some special car, and prove, I hope, to the advantage of both its makers and the public. If your correspondent would forward through your office details as to his car, I would have pleasure in giving him further information, and also the probable cost of a simpler form of starter which can be made for a much less sum, which, although not automatic, will prevent all severe strain in starting.—Yours truly,

H. S.

BRAKES ON TRAILERS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice on page 442 of the *M.C.J.* the remarks on brakes on trailers. If I am not out of place, may I tell you that I have patented an automatic brake for all types of drawn vehicles? The arrangement is good and cheap and does not require any attendant or attention whatever, and acts in exact proportion to the load or descent. The device can be seen in use at the Reckleford Iron Works, Yeovil, on a large haulage van drawn by a traction engine.—Yours truly,

R. DIBSDALL.

THE Maidenhead Motor and Engineering Company will be pleased to hear from anyone who may have picked up a Stepney spare wheel on the road between Redbourne and Bracknell.

THE Weigel cars and their Detachable Rim Troubles in the Grand Prix Race.—Messrs. Rudge-Whitworth, Ltd., Coventry, have sent us a long letter in reply to the one from Dr. Doolittle which appeared in the *M.C.J.* of the 3rd inst. They state:—"We observe that Dr. Doolittle attributes the involuntary shedding of his detachable rim on the Weigel cars in the Grand Prix to inaccurate fitting, which he alleges is due to some operation, of which he only heard afterwards, which we did to some wheels which were not used in the race. The facts are (1) Dr. Doolittle himself advised this process; (2) the process does not and did not enlarge the circumference of the wheels; (3) after this process was completed a steel band was shrunk on to all the front wheels by the Stevenson Wheel Company, and an accurate diameter was formed on them by turning on a lathe. Obviously, therefore, the effect, if any, of our process was absolutely eliminated in the front wheels, and yet during the race Laxon's car shed three front rims and Harrison's car eventually pulled up with both front rims coming off together."

CLUBS AND ASSOCIATIONS.

BROOKLANDS.

THE next race meeting at Brooklands has been fixed for Saturday, September 14th. At a recent meeting of the club committee four standard classes of engines were adopted. Races will be arranged for these classes at all future meetings, and this announcement will give manufacturers a working basis for the designs of next season's racers. The classes are restricted by the D²n dimension with weight maximums as follows:—

	D ² n dimension.		Cyl. bore.		Weight.
Class I.	... 64 ...		about 4 inches (101 mm.)	...	2,000 lbs.
Class II.	... 100 ...		about 5 inches (126 mm.)	...	2,500 lbs.
Class III.	... 150·1 ...		about 6½ inches (155 mm.)	...	2,700 lbs.
Class IV.	... 225·1 ...		about 7½ inches (190 mm.)	...	3,000 lbs.

Class III. will comprise all racing engines built under the limitations agreed upon for racers at the recent International Automobile Conference at Ostend.

place will probably be at Brecon. Mr. S. L. Gregor has resigned the secretaryship of the Welsh A.C., and Mr. J. Shimell Andrews has been appointed to the position *pro tem.*, but will be permanently placed at the next meeting. There will be no further runs this year.

CARDIFF MOTOR CLUB.

THIS Club will have an open hill climbing competition for motor-cars and cycles (under the competition rules of the R.A.C. and A.C.C.) on Wednesday, September 11th, on the hill leading from Caerphilly towards Cardiff. The hill is 1,194 yards in length, total height 337·03 feet, has an average gradient of 1 in 8·6, and the steepest portion is 1 in 6·2. The events will be divided into five classes, to include cars with cylinders the diameter of which squared and multiplied by number of cylinders is not more than 151.

Entries close on the 27th inst. Further particulars, entry forms, regulations, formulæ, &c., can be obtained from the hon. secretaries, Queen's Hotel, Cardiff.

AUTO-CYCLE CLUB.

ON Monday next the A.C.C. six days' trial will commence, the first day's run being from Hatfield to Coventry, 193 miles; on Tuesday from

Touring in France.—A Mors Car at Mont St. Michel.

WELSH.

At a meeting of the Welsh Automobile Club, held at the Tenby Hotel, Swansea, the recent hill climb and reliability run was discussed. In the latter there were twenty competitors, most of whom applied for non-stop certificates. The committee fully discussed the claims of each, and at the end of their deliberations it was found that sixteen out of the twenty starters had been successful. They were as follows:—Captain Hughes Morgan (the donor of the cup and actual winner of the hill climb and reliability run), Messrs. Hubert S. Thomas (second in the hill climb, but who, through Captain Hughes Morgan's withdrawal, came first and won the trophy), E. Lewis, B. W. Valentin, H. G. Davies, A. A. Jones, E. Williams, Wm. Thomas, M. Whittington, W. T. Farr, George Ace, John S. Brown, C. F. Sutton, S. Williamson, F. E. Jacobs, and Mrs. James Harries.

Those who were not granted non-stop certificates were:—Messrs. Edward Mills, T. P. Rose Richards, and George Ace (10–12-h.p. Argyll.) The former had a blade of the cooling fan broken. Mr. Ace's car was twenty-four minutes late in arriving at the Llandovery control owing to a burst tyre; Mr. H. F. Taylor's car went into a ditch, and Mr. Richards was stopped through a choked petrol pipe, whilst at the control the car was started a little before time. Mr. Jacob did not actually finish without stopping, he having to stop his car when nearing Swansea to avoid running into a gipsy. The committee, however, took this totally unexpected occurrence into consideration.

The trophies will be presented to the winners, with the certificates, at a dinner to be held in October. An attempt is being made for the South Wales, Herefordshire, and Welsh Automobile Clubs to meet shortly. Nothing has as yet been definitely arranged, but the meeting-

Coventry to Llangollen, 161 miles; Wednesday to Aberystwyth, 166 miles; Thursday to Cardiff, 142 miles; Friday to Gloucester, 170 miles; Saturday to London, 168 miles. There are twenty-eight entries in the motor-cycle class and five in that for passenger motor-cycles. Circuitous routes will be taken.

AUSTRALIA.

THE Automobile Club of Australia (Sydney), held their first half-gallon petrol consumption test on the 6th ult., the road being from Kensington (just outside Sydney) to La Perouse and back. Twenty-two cars faced the starter. The cars were divided into four classes:—A, six-cylinder; B, four-cylinder; C, two-cylinder; and D, one-cylinder. The longest run was twenty-three and a half miles, by Mr. H. S. Cusack's 8-h.p. Rover. The results (based on a formula) were as follows:—Class A, Mr. J. M. Arnott's six-cylinder 40-h.p. Minerva, 10 miles. Class B, Mr. L. W. Page's 12–14-h.p. four-cylinder Innes, 15½ miles. Class C, Mr. J. Phizackerley's 10-h.p. two-cylinder Talbot, 15½ miles. Class D, Mr. H. S. Cusack's 8-h.p. single-cylinder Rover, 23½ miles.

ONTARIO MOTOR LEAGUE.

At the last meeting of the committee of the Ontario Motor League it was decided to affiliate with the Royal Automobile Club of Great Britain. Official headquarters have been established in the Stair Building, Toronto, where the secretary will be permanently located.

The League has adopted a comprehensive good roads policy, which, if approved by the Government, will mean the expenditure of a large

sum on road improvement throughout Ontario, the plan simply being to petition the Government to grant one-half instead of one-third of the cost, as at present, under the Good Roads Act.

The League has also found time to engage in other activities and has supplied twenty-five cars for a charitable mission, by giving some seventy odd of the patients of the Home for Incurables a pleasant day's outing.

THE COMMERCIAL VEHICLE TRIALS.

THE Royal A.C. has received an entry from Messrs. Mann and Overton, Ltd., for a 10-12-h.p. Unic van in Class A.

It has been decided that the Club shall undertake to supply the fuel for the competing vehicles. Each competitor has now to say what fuel he wants and the Club will provide it for him (at his expense) in any quantity he orders. Competitors may supply their own fuel, but it will have to be sent to one of the stations on the trials and be delivered to one of the officials before being handed over to the competitor.

To meet the requirements of the law, those vehicles which draw trailers must carry a man on the trailer to apply the brakes. Competitors may carry any load they like so long as it is not below the minimum weight for their class and is not so heavy as to take them up in the next class.

The vehicles will be on exhibition in the following towns:—Bristol, Birmingham, Liverpool, Manchester, Leeds, Sheffield, Nottingham, and Bedford, those at Sheffield and Bedford being held under canvas.

In these depots, except at those where exhibitions are held and at Leicester, the vehicles will be arranged in the market-places under

The 45-h.p. six-cylinder Siddleley recently supplied by the Wolseley Company to Lord Howard de Walden. The chassis is fitted with a limousine body with extension canopy and screen, the painting being dark blue and upholstery to match. The wheels are fitted with Continental tyres.

taraulins, as covered storage accommodation of a sufficiently extensive character cannot be obtained.

On Saturday the following additional entries were received, these closing the list, which now comprises sixty-two entrants:—

Class D, Durham, Churchill and Co., a 26-seated "Churchill" char-a-banc.

Class E, Ryknield Motor Company, Ltd., a 3-ton Ryknield van; T. C. Aveling and Company, Ltd., a 3-ton paraffin wagon.

Class F, Ryknield Motor Company, Ltd., a 5-ton Ryknield lorry; Fiat Motors, Ltd., a 5-ton brewer's covered lorry and a 5-ton lorry with removable sides and back.

WHERE SHALL THE MECHANICAN SIT?

WRITING in our French contemporary, "La Vie Automobile," M. Edouard Ponté takes up the question of the increasing popularity of covered-in cars and the tendency there is among motorists to give up driving themselves, attributing this largely to the unsolved problem of the most suitable position on the car for the mechanic. The following free translation of his article may prove of interest to some of our readers.

It is a well-known fact at the present moment that an automobile owner does not drive his own vehicle; he nearly always leaves it to his mechanic. In town this is quite comprehensible, perhaps nearly always necessary. When in the country or when touring it would seem that it might be otherwise. Thus, however, for many, motoring is ceasing to be a sport but is becoming a mere matter of convenience. Why is this and what are the reasons of the change?

The dust on the roads, the general inclemency of the weather, and the fear of the wind have helped to multiply covered cars during the

last few years. The limousine and landaulet are reigning masters; the Cape hood does not suffice for the open car, everybody wants to be as comfortable in a car as in a sleeping compartment. The tyres only seem to bewail this state of things. The closed car and its protective windows are in the majority. Do we not further desire a vehicle to do both services—handy for town and comfortable for madame's visits and monsieur's business, and also to be available for the road, for we do not desert it in spite of the summer heat, the dusty roads or the showers?

Who is to drive a landaulet or a limousine? surely the mechanic. Otherwise, when at the wheel of one of these travelling houses, you are curiously like the servant of your wife, who is in the interior, or of your friends, who are separated from you by the window; they do not seem to recognise you, and give their instructions through the speaking tube! The closed-in car demands that your mechanic should drive when in town, and in the country separates you from the rest of your friends. That is why motorists are giving up driving themselves.

If, on the contrary, you are in possession of an open car, the classic double or triple phaeton with a good Cape hood, which you like to drive yourself for the pleasure of winding about the roads or to feel the powerful vitality of the motor between your hands, how many difficulties do you not meet? It is necessary that you should have a mechanic, if your income allows it, for the vehicle for touring purposes needs oiling, cleaning, and thousands of other little things that you would not care to do, and in this manner you will be able to be many days on the road without being tired. But the mechanic, where do you place him in the car while you drive all day? What a question to ask, one would say. The mechanic sits in the front to your left, of course. That is quite proper, but you do not generally travel alone; you have a wife, some friends, or relations, who are accompanying you, and who are seated behind in the phaeton. You cannot speak to them, or, if so, only a short time during the journey.

One would, I am sure, like to speak to someone during the day's run; the steering of the car does not take up all the time so as to prevent one from exchanging a few words with one's nearest companion. One can speak to the mechanic, it is true; but, if you have other persons with you, it is only natural that you would prefer their company. But you cannot do this, for if you place your wife or one of your friends on the seat next to you, what would become of the useful mechanic? If you put him behind to sit in the company of your friends, they would, perhaps, resent this; besides, the mechanic would be put in an awkward position, and it is quite unusual for this to be done. This is another reason why motorists are giving up driving.

The question is, when the owner drives his car, where is he to place the mechanic? In the old mail coaches, drawn by horses, it was very easy to solve the problem, the servants were inside and the master on top. But who in the world wants to revive old customs? In the case of a motor-car the matter is undoubtedly a difficult one. Let us study the case. One can, it is true, seat the mechanic on the front floor board with his feet on the step. This used to be frequently done, a cushion being given him to make the boards less hard. To seat the mechanic on the footboard is, however, a custom which has been done away with for a long time in France, although it is still followed in Germany. The Dowager Queen of Italy has found an excellent solution to the question. A gentleman of the Royal suite drives her high power triple phaeton, and a seat is installed for the mechanic above the step to the left, and of nearly the same height as the front seat. The idea is perfect for a large, imposing Royal car, which comprises seven comfortable seats, and has 140 mm. tyres and a powerful 60-h.p. engine. Private vehicles—I am only thinking of the good 25-h.p. touring car—do not come up to such a standard, and the question I wish to put is, where shall we locate the mechanic? Will someone suggest a solution?

MOTOR CYCLING RECORDS.

ON Saturday, on the Canning Town Track, the Auto Cycle Club held its annual race meeting for the *Motor Car Journal* cup and other trophies. In the One Mile Time Trials C. R. Collier (Matchless motor-cycle with J.A.P. engine) established a new flying start record for 76 by 76 machines, doing 62 sec. in place of his own 63 sec. C. E. Bennett (Mansfield cycle with Buchet engine) was second in 63 sec., and H. V. Colver (Matchless) third in 67 2-5 sec.

The Five Mile Handicap for the *Motor Car Journal* Challenge Cup was run in two heats, the result of the final being G. Aldington (Kerry), 60 sec. start, 1; C. E. Bennett (Mansfield), scratch, 2; A. A. Chase (Chase), scratch, 3. Aldington won by nearly a lap in 6 min. 57 3-5 sec.

In the One Hour Scratch race, 76 by 76, the result was H. V. Colver (Matchless), 51 miles 146 yards, 1; C. E. Bennett (Mansfield), 43 miles 1,318 yards, 2; M. Geiger (N.S.U.), 43 miles 140 yards, 3. T. A. Carter (Matchless), and G. H. Gerhard (Brooklands), retired soon after the start. Bennett rode well for twenty-three miles, when he was delayed by a burst front tyre. He made fresh records as follows:—One mile (standing start), 1 min. 18 1-5 sec.; five miles, 5 min. 41 sec.; ten miles, 11 min. 24 2-5 sec.; fifteen miles, 17 min. 12 1-5 sec.; twenty miles, 22 min. 58 sec. After Bennett's tyre punctured Colver took up the running, and set up new figures for thirty miles with 35 min. 32 2-5 sec., and thirty-five miles with 41 min. 23 4-5 sec.

An interesting event would have been the match between the brothers, C. R. and H. A. Collier, on the one side and J. Marshall and

F. Hulbert on the other. The distance was five miles; the former couple rode their Matchless machines and the latter their Triumph machines, which were used in the Tourists' Trophy race. The event, however, was brought to an abrupt abandonment in the tenth lap. Hulbert and H. A. Collier had been making a splendid race for first place, and, in passing the former, Collier touched his opponent's machine. Hulbert and his bicycle were sent bowling over and over, the rider then grazing his face along the track. Fortunately no bones were broken, and he suffered only cuts and bruises to his hands and face—a remarkable escape considering that they were travelling at over fifty miles an hour.

The Five Miles Open Handicap, 76 by 76, resulted:—C. E. Bennett (Mansfield), 15 sec. start, 1; C. R. Collier (Matchless), scratch, 2; H. V. Colver (Matchless), 5 sec. 3. Time, 5 min. 40 2-5 sec. Bennett won by a lap from Collier, and beat the record which he had just made in the hour race. Only a wheel divided second and third.

COMPANY NEWS.

NEW COMPANIES REGISTERED.

MOTOR SUNDRIES.—£1,000. Agreement with Mr. H. J. Tonks. First directors: Messrs. E. A. Gedge, W. A. Turquand, H. J. Tonks, and E. Funk. Norfolk House, Laurence Pountney Hill, London, E.C.

ROGERS' HUB WHEEL SYNDICATE.—£250. Motor and accessory manufacturers and dealers. Central Chambers, Commercial Road, Portsmouth.

MIRACULUM.—£25,000. Agreement with Mr. W. Bowden. Puncture-composition manufacturers. First directors: Messrs. H. Cooney, E. J. O'Reilly, J. R. Nisbet, and G. T. Langridge. 48, Dover Street, W.

CAR SUPPLY COMPANY.—£3,000. Mr. H. Wolfenden, jun., is governing director for life, subject to holding £1,000 shares. 34, Knightsbridge, S.W.

EDINBURGH GARAGE AND MOTOR AUCTIONS.—Registered with a capital of £5,000. No initial public issue.

SOCIETE ANONYME DES ACCUMULATEURS A.C.S. (SYSTEME DE SEDNEFF).—£140,000. To adopt an agreement with Cesar Trouin and Sigismond de Szepczynski, and to carry on the business of manufacturers of electric accumulators, electrical plant and accessories thereto, engineers, &c. 790-792, Salisbury House, E.C.

LONDON TAXI CABS.—£10,000. To carry on the business of motor-cab and vehicle proprietors, &c. The directors may increase the capital to not more than £500,000, in 495,000 preferred ordinary shares of £1 each and 100,000 deferred shares of 1s. each.

MERCEDES MIXTE.—£125,000. To enter into two contracts (1) with Mr. R. G. E. Wemyss, and (2) with Mr. S. Sellon, and to carry on the business of dealers in (but not manufacturers of) motor-cars, carriages, cabs, omnibuses, vans, and other public or private conveyances, and fittings for all kinds of motor vehicles, garage proprietors, &c.

BRITISH AUTOMOBILE IMPROVEMENTS.—£10,000. Agreements (1) with Mr. S. Alley, and (2) with La Société des Appareils Electriques Ignis. No initial public issue.

TUBULAR WHEELS.—£20,000. To adopt an agreement with Mr. V. H. Minton and Mr. A. O. Wright, and to carry on the business of manufacturers of and dealers in wheels for motor and other vehicles, &c. No initial public issue. Registered without articles. 25, Ludgate Hill, Birmingham.

AUTOMOBILE ACCIDENTS.

A WOMAN was knocked down by a motor-car at Box, on the great Bath Road. She was dragged some distance, and died an hour later.

A LAD named Charles Taylor, who has been in the boys' camp at Merstham, Surrey, slipped from the tail board of a van at Merstham, the other afternoon, and a motor-car ran over him, causing almost instantaneous death.

A SERIOUS motor collision occurred at Preston on Saturday, several having miraculous escapes. A tramcar temporarily obscured the view of Charles Richardson, who while driving a motor-car failed to observe a cyclist named Nightingale crossing the road until nearly upon him. The motorist swerved his car on the footpath, striking James Wignall, who was hurled into a wall. Nightingale struck the side of the car and his bicycle was wrecked.

A FATAL motor-car accident occurred in Cross Street, Manchester, on Saturday. A man named Connor stepped off the pavement to cross the street and, hesitating, was run down by a passing motor-car. He was taken to the infirmary in the car, where his skull was found to be fractured, and he died within half an hour of admission.

As General Booth and his touring party were passing through Neath in four motor-cars on Saturday, the leading car knocked down a four-year-old boy named Parsons. The lad was picked up and carried to a surgery close by, but was found not to have been severely injured, having, in fact, only received a slight scalp wound. General Booth, who was much concerned at the occurrence, expressed his deep regret.

At Hammersmith Mr. Drew has held an inquiry concerning the death of Gerald Reed, age 19, who died in the West London Hospital, as the result of injuries sustained through coming into collision, while cycling, with a motor-car. The evidence of several independent witnesses

was to the effect that about ten o'clock on Bank holiday morning a motor-car was being driven from Kensington towards Hammersmith Broadway, and outside the West London Hospital it pulled into the centre of the road to pass an omnibus going in the same direction. The deceased was cycling in the opposite direction, at the rate of twelve or fourteen miles an hour, with his head well down over his handle bars. As soon as the driver of the car saw him he sounded his hooter, and the deceased looked up and turned to his off-side, evidently intending to pass between the two motor vehicles. Then he seemed to lose his head, and turning to his near side ran into the front of the car, which knocked him off his machine and ran over him. The jury, in returning a verdict of "Accidental death," expressed the opinion that the accident occurred through the deceased losing his head, and they exonerated the driver from all blame.

ON Monday night a motor-car was proceeding from Brighton to London when, in allowing a passage to another car, near Kingswood, it collided with a direction post, and, turning a somersault, fell into a deep gravel-pit. The car was wrecked, and the chauffeur, Ernest Priddington, was pinned underneath. Though badly bruised he had no bones broken. The occupants of the car were somewhat seriously hurt, and were taken to London by another car which was passing.

ON Monday morning a boy was run over and killed by a Great Eastern motor-bus in Bethnal Green Road, E. The lad was running behind a van, clinging to the tailboard, and when near Wilmot Street a man shouted to him to get off. He left the van, and ran to the near side without looking where he was going. He was caught by the bus, and the near side front wheel passed over his chest, causing instantaneous death.

MR. H. THOMAS, of Twickenham, was cycling along the Richmond road on Monday when he collided with a motor water-cart belonging

One of the Daimler cars which took part in the Godiva Procession in Coventry.

to the local district council. The vehicle passed over his chest, killing him instantly.

AN inquest has been held at Birmingham on Frederick Brooks, who was killed while cycling in the neighbourhood of the Bromsgrove Lickys on Wednesday of last week. It was alleged that Brooks was knocked off his machine by a motor-car at Rednal, and that the driver of the car went ahead. On hearing the result of the accident the owner of the car, Mr. A. J. Astbury, communicated with the police. Mr. Astbury, who was driving, Mr. and Mrs. Charles, who were in the car, and the chauffeur, all swore that the cyclist was in an unsteady condition, and fell after the car had passed. The jury returned a verdict of "Accidental death," but the foreman stated that the jury thought the driver ought to have stopped to see what had happened.

ON Sunday an accident occurred on the Aberfoyle road, near Balfour, N.B., in which a motor-car, swerving to avoid a cyclist, came to grief. All its five occupants, Mrs. Vereker (daughter of Sir Charles Cayzer, Bart.), and her family were thrown out, one being seriously injured.

A MOTOR and char-a-banc accident occurred at the four cross-roads near Bickington village, about four miles from Newton Abbot, on Tuesday. The Torquay char-a-banc, heavily laden with passengers, was crossing the highway leading from Exeter to Plymouth, going to Haytor, when a motor-car, proceeding in the direction of Plymouth, dashed into the body of the char-a-banc, lifting it off its bearings and hurling it into the road. The occupants of the char-a-banc sustained a severe shaking.

GETTING out of control on Tuesday a motor-wagon ran away down Highgate Hill and collided with a van, which arrested its progress. Joseph Jackson, the driver of the van, was injured.

AT an inquest at St. Pancras on Tuesday concerning the death of a volunteer who was run over by a motor-bus, the jury returned a verdict of "Accidental death," adding that in their opinion the company owning the bus should give substantial compensation,

CASES UNDER THE MOTOR CAR ACT.

EXCEEDING LEGAL LIMIT.

At the South-West London Police Court, Edward Green, J.P., residing at Ashfield, Dringhouses, Yorkshire, has been summoned for driving a motor-car at an excessive rate of speed over a measured furlong in Priory Lane, Putney, which he was alleged to have covered at a speed of 22½ miles an hour. A penalty of £3 and costs was imposed.

For motoring up Kingston Hill at the alleged speed of twenty-seven miles an hour, on the 6th ult., Mr. Warwick J. Wright has been fined £3 and costs.

Charles Chester, of Cricklewood, who was fined £3 at Guildford on Saturday for driving a motor-car at the rate of thirty-six miles an hour, strongly protested that it was impossible for his cab to do more than twenty miles an hour. Prior to being trapped by the police the cab had broken down on four separate occasions, and just before entering Godalming the cab broke down altogether, and he could not get it to budge an inch. He telephoned to London for a fitter, who arrived at about midnight with another cab, into which he transferred his fares. They resumed the journey to town, but five miles on, in Guildford High Street, the relief cab refused to move. He had to remain in the street the rest of the night with the cab, and it was nine o'clock the next morning before a third vehicle arrived.

NO LIGHT.

At Bromsgrove, George Wagstaff, Hewell Road, Barnt Green, was charged with driving a motor-car without having a lighted lamp attached. P.C. Phaysey proved that not one of the lamps was alight. Mr. Morgan, the owner of the car, said defendant was driving him home to Barnt Green from Birmingham, and, on the way, a cart which was on the wrong side of the road ran into them. The horse put its head through the glass screen of the motor, and the lamps were damaged. They tried to make one serviceable lamp out of two injured ones, but the lamp kept going out, and they stopped six times in half-a-mile. He (Mr. Morgan) got out at Selly Oak and returned home by train, the driver going on by road. It was late at night, and the man could not leave the vehicle in the road, because that would have been an obstruction. The case was dismissed on payment of costs.

DANGEROUS DRIVING.

At the Haywards Heath Petty Sessions, on Monday, Mr. D. M. Weigel was summoned for driving a motor-car on the highway at Handcross at a speed (fifty-six miles an hour) dangerous to the public, on June 9th. There was a second summons against defendant for refusing to stop the car at the request of a police-constable in uniform. P.S. Waghorn testified to being in charge of the timing apparatus, which showed that the car covered the measured furlong in 7¼ sec. He gave P.C. Edgeler a signal to stop it. In cross-examination he said that altogether six men were engaged in connection with the timing operations, but witness did not think that anybody except P.C. Edgeler saw the number of the car. The information given to him by P.C. Edgeler on June 9th appeared in his book several pages after the record of particulars from Mr. Weigel on July 5th. The defendant gave evidence to the effect that he drove a racing car A 4 K K to Brighton on the day in question. They had engineered a meeting of twenty cars of their make for a trip to Brighton. Two Weigel racing cars were with the party. Descending Reigate Hill the clutch of witness's car fired, "setting fire to the car and myself." Witness hurriedly alighted and got the fire extinguished. At Reigate he ascertained that the clutch would not transmit more than eight or nine horse-power, and slipped. He could only use the first speed from Reigate to Brighton. He could not exceed fifteen miles an hour except down hills, when he let it go. After a hearing of six hours the case was adjourned to the 16th inst.

DRIVER SENT FOR TRIAL.

Robert Evrard, 21, a French chauffeur, was committed for trial on Saturday, at Marlborough Street, on a charge of manslaughter. A car which he was driving in Oxford Street, London, W., on Tuesday, ran into two children, killing one, May Smith.

On Tuesday an inquest on the child was held by the Marylebone coroner, when the jury found that she was killed by being run over by a motor-car in Oxford Street, and that the driver of the car drove at too fast a pace at the time, and neglected to sound his horn, and was therefore deserving of severe censure.

WHY GOGGLES?

At Kingston, Captain Randolph Wemyes has been summoned for driving a motor-car to the danger of the public at Esher on July 28th, and for failing to produce his licence. He was fined £10 for driving dangerously and £1 for failing to produce his licence. Edward Oliver Arter, a chauffeur, of 21, Old Bond Street, W., was similarly summoned. The Bench thought there was a doubt in the case, and dismissed the summonses, the chairman remarking that it was a pity that goggles were used by motorists, as it made the task of identification much more difficult.

HEAVY HAULS.

Several motorists were fined at Morpeth on the 7th for furious driving, and many others for the same offence at Slough; on Saturday half a dozen others were fined £3 3s. and costs each at Carlisle; four others were fined an aggregate of £5 and costs at Reigate. On Monday ten defendants were summoned at Christchurch for exceeding the speed

limit on the main road leading from London to Bournemouth. Fines of £1 and costs were inflicted and none escaped. On the same day a number of motorists were summoned at Southampton and fines amounting to £46 in addition to costs were inflicted. Fourteen cases against motorists were heard at Godalming, in six of which the fines aggregated £22 and costs. Convictions were recorded in every instance. At Warwick, on Monday, fines amounting to £8 5s. were inflicted on four motorists caught in traps on the Banbury and Myton roads respectively. On Tuesday, fines of £5 were imposed in each of six cases heard at Lewes, and at Wokingham five motorists were fined to an aggregate amount of £41. At the Lambeth Police Court four defendants suffered loss to the extent of nearly £5.

POLICE WATCH V. SPEEDOMETER.

Two motor-car cases from Sheffield have been heard at Snaith. In the first Mr. J. H. Hall, 51, Crescent Road, Sharrow, was summoned for exceeding twenty miles per hour at Eggboro' on July 17th. Mr. Wing, of Sheffield, appeared for the defendant, and after the police evidence said his client would directly contradict the statement of the officers. The officers admitted that defendant knew of "the trap," and knowing that he would have been foolish to travel at the rate of twenty-six miles an hour. He had been a motorist for years and had travelled 40,000 miles on the road, never having been in trouble with the authorities. Mr. Wing said it was impossible for the police officer to give the signal as suggested, and said it would not be safe to convict on the evidence.

The testimony of Mr. Hall and his witness having been heard, the magistrates decided to hear the second case, and George Knibbs, driver for Mr. Walter John Walsh, of Sheffield, was charged with exceeding the limit. For the defence Mr. Wing said defendant had a speedometer on his car, and was going at eighteen miles an hour. The speedometer was actually perfect, and defendant called attention to it, and offered to take the officers back, and run the car with the watch, but they declined. Some people thought it was un-English to adopt these traps, but when the police did adopt them they should not refuse to have their methods tested.

The Chairman said they had decided to convict, and the defendants would be fined £4 each, to include the costs.

Mr. Wing gave notice of appeal in Mr. Hall's case, and the recognisance was fixed at £50.

DISMISSALS.

At Edisbury sessions, on Monday, Albert Stock, of Whalley Range, Manchester, was charged with driving a motor-car at a dangerous speed. A police officer and three private witnesses declared that the defendant drove along Chester Road at forty miles an hour. The defendant averred that he had driven every member of royalty, including Princess Christian, who had presented him with a diamond and ruby pin in recognition of his careful driving. He denied the excessive speed. The case was dismissed.

Before the Guildford County Bench on Saturday, Geoffrey Taylor, of Bayswater, was summoned for driving to the common danger on the Portsmouth road at Thursley. Mr. Moresby White, who appeared for the defence, asked the defendant whether, if a lady had suddenly crossed the road on her way to church, the chauffeur would have slowed up at once. Defendant replied, "Certainly." The Bench took exception to this question, but Mr. White contended that a hypothetical charge was brought against them of driving in a manner which might have been dangerous had there been anyone about. As the Lord Chief Justice had pointed out, it was the duty of the defence to rebut that charge by showing that had the hypothetical case occurred their conduct would not have caused danger to the public. The Bench dismissed the case.

EXCEEDING PARK LIMITS.

At Bow Street Police Court, on Monday, Lord Aberdare was fined 40s. and 2s. costs for exceeding the ten miles an hour limit in St. James's Park. At the same court Frank Markham, chauffeur to Earl Cawdor, was summoned for a similar offence. Mr. Staples Firth defended, and although Mr. Marsham said he quite accepted the evidence of the defendant and Lord Cawdor, he was satisfied that the furlong was correctly measured, and that the defendant was exceeding the maximum speed, although he would not say by how much. He therefore imposed a fine of 40s. and 2s. costs.

ARMY MOTOR RESERVE.

THE inspection of the first Division, Aldershot Army Corps, which General Sir John French has just completed, began with a Staff Tour. The Army Motor Reserve furnished a detachment of thirteen officers, under the command of Captain A. C. Duckworth. Prior to the commencement of the tour, Lieutenant-Colonel Mark Mayhew, commanding the Army Motor Reserve, inspected the detachment at Surbiton.

Second Lieutenant the Hon. R. Kitson drove the Right Hon. R. B. Haldane, K.C., M.P., during the recent cavalry manoeuvres in Scotland.

The Aldershot Army Corps manoeuvres are to be preceded by a most important Staff Tour, probably in Suffolk, and the Army Motor Reserve will be required to provide about forty cars for this service. During the actual manoeuvres many of the officers and their cars will be retained for duty.

PUBLIC MOTOR SERVICES.

NOTWITHSTANDING the decision of the local Council not to grant licences to motor char-a-bancs to ply for hire, visitors may, by journeying to Deganwy or Llandudno Junction, yet enjoy the motor tours through Wales arranged by the Llandudno Motor and Garage Company, Ltd. The tours include Bettwsycoed, Snowdon Loop, Llanrwst, &c., and also a new one to Llandudno visitors, i.e., through Colwyn Bay, Abergelle, Denbigh, Ruthin to Corwen and home *via* Cerrigydruidion, Pentrevoelas and Bettwsycoed.

THE Folkestone Motor Company, Ltd., have put a new motor vehicle with accommodation for nineteen passengers in service between Folkestone and Hythe. The body was built by Messrs. Maltby, of Sandgate.

THE Watch Committee of the Brighton Corporation have favoured applications by the Sussex Motor Road Car Company with respect to the service of motor-buses between Worthing and Brighton, and a motor-coach service between Worthing and Seaford.

SIR EDWARD HENRY, the Chief Commissioner of the Metropolitan Police, has made an inquiry into the recent motor-omnibus accident at Hackney. It appears that the omnibus in question was of a somewhat lighter pattern than the majority of those in use in London. At the time of the accident the roadway was in a very greasy condition, and, though the information shows that the driver was proceeding carefully, the omnibus skidded badly about thirty yards from the point at which it came to grief. It then skidded again, striking the kerb with force, and overturned. Having regard to the immunity of omnibuses from accidents of this nature, Sir Edward says he does not consider that additional regulations are at present required to guard against similar disasters.

THE motor-omnibuses of the Star Company which ran between Oxford Street, London, W., and Peckham have been temporarily withdrawn from public service with a view to a complete overhaul.

THE London cab-drivers have been holding meetings of protest against what they allege as an undue preference given to motor-cabs by the Home Secretary. Their main ground of protest seems to be the reduction of the shilling fare to sixpence.

A MOTOR-BUS service will be established at Cambridge next week.

A NEW service of motor-omnibuses, run by the All British Chassis Company, Ltd., and which are to bear the letters "A.B.C.," commenced running in London on Monday between Oxford Circus and Liverpool Street, *via* Holborn.

ROAD REPORTS.

HERTFORD.—The main roads about the borough of Hertford are reported to be in good condition, and no repairs are likely to be required for some little time.

LICHFIELD.—Several roads in the Lichfield district have lately been under repair, notably the Rugeley and King's Bromley road and between Lichfield and Handsacre.

WARE.—The Local Government Board has decided to sanction a speed limit of ten miles an hour in certain streets in Ware, including Baldock Street, the High Street, Bridge Foot, Amwell End, and portions of Watton Road, Star Street, and Viaduct Road.

SLOUGH.—The Bucks County Surveyor has made the following report with reference to the Bath Road, near Slough, and the Highways Committee of the Bucks County Council have directed that copies of it shall be sent to the Motor Union and the Automobile Club:—"I regret to again have to report further injury to the Bath Road by steel-studded wheels of fast driven motors. A thick coating of Clea Hill granite, rolled last winter along Ditton Park, has been cut away down to the gravel foundation, leaving dangerous holes, which had to be filled with granite rammed in to liquid tar."

SOMERSET.—The last surviving toll-house on the highways of Somerset is about to disappear, arrangements having been made whereby the road from Bleadon to Uphill, near Weston-super-Mare, will be thrown open and improved.

BARNET.—Application to the Local Government Board, through the County Council, is now being made by the Barnet Urban District Council for the ten mile motor-car limit in High Street, Wood Street, Union Street, New Road, Alston Road, and the Avenue, Barnet.

LLANDUDNO.—The Llandudno District Council has obtained the sanction of the Local Government Board to levy tolls on visitors using the Marine Drive and the Promenade round Great Orme's Head for three years from the 6th inst.

KNARESBOROUGH.—Mrs. Boyd Carpenter has complained to the Knareborough Rural District Council that the carriage work of her motor-car had been damaged by liquid tar off the roads while driving between Killinghall and Ripley, and holding the Council liable for damages.

POLICE TRAPS.

A POLICE trap has been established in Priory Lane, Putney.

A TRAP is being worked at Pillerton Priors, Warwickshire, about five miles outside Stratford-on-Avon, on the way to Banbury road, and about two miles from Sun Rising Hill.

LYMINGTON is likely to have its police trap in the near future.

WHAT is locally termed a "police control" in the village of Horley has been responsible for the appearance of nine motorists at the Hexham Petty Sessions.

THE village of Killinghall, near Harrogate, is the centre of police trapping work in that district.

ON the hill leading down into Holford, on the Minehead road, is a police trap. It is about half a mile from the village and on the Bridgewater side.

A TRAP is being frequently worked at the bottom of Williton Hill, on the road between Minehead and Taunton.

TELEPHONIC communication between the various police headquarters in Essex is now frequently employed in connection with cases of rapid driving by motorists.

AT Lexden, near Colchester, the police have a measured furlong which Colonel Howard, the chairman of the Colchester bench, regards as an insufficient distance for a proper test of the speed of a passing car.

SEVERAL police traps are reported from Cumberland, and hardly an important village in the county is safe from the motorist's point of view.

AROUND Warwick police activity has become marked, and motorists should be careful when driving through Kineton, Kenilworth and the neighbouring towns.

A POLICE trap is in operation in the village of Kingstown, three miles to the north of Carlisle, and on the main road to Glasgow.

AT Moortown, Leeds, the police have a measured distance—full of danger to motorists.

The Schoolmaster: Now, by boy, tell me what "en panne" means.

Boy: Please, sir, I don't know. I have only been out on a — car.

[Reproduced from a sketch by Gir, issued by the Clement-Bayard Co.]

EGGBORO', on the Selby and Doncaster road, is the scene of a police trap in frequent operation.

THE Warwickshire police have established a series of traps for motorists for a distance of about twelve miles between Nuneaton and Wilnecote, on the Watling Street Road, and in five days there have been nearly a dozen victims from various parts of the country.

THE STORAGE OF PETROL.

A BREACH of a petroleum licence was brought to the knowledge of Mr. Plowden at the Marylebone Police Court on Monday. The New Motor and General Rubber Company, Ltd., of 374, Euston Road, N.W., were summoned by the L.C.C. for keeping petrol at their works without a licence, they having become unlicensed through violating the conditions of the licence granted them on December 14th last.

In March last, at the special request of the company, a clause was added to the licence permitting them to keep a pint of pure petroleum spirit in the ground floor work-room. When, however, the Council's inspector (Mr. Butler) went there on July 22nd he discovered twenty-four gallons of the spirit in a wooden barrel and ten gallons in another vessel. A wooden barrel, it was pointed out, was no protection against fire, and had a fire occurred the results might have been very serious.

The defence was that the spirit had not been there long, and the intention was to send it away.

Mr. Plowden, from the Bench, remarked that every moment was a moment of danger, and imposed a fine of £10, with 23s. costs.

FORTHCOMING EVENTS.

AUGUST.

- 17th (S.).—Derby A.C.'s run to Chatsworth House.
 Harrogate A.C.'s hill climb.
 North London A.C. run to Great Berkhamstead.
 Northamptonshire A.C. gymkhana at Easton Neston.
 Newcastle and District Motor-Cycling Club's fuel consumption trial.
 Lincolnshire A.C. Hill Climb at Syston Park. Entries close on the 12th inst.
 East Surrey A.C. run to Esher.
 Walthamstow M.C. run to Welwyn.
 Birmingham Motor-Cycling Club hill climb at Rednal.
 18th (Sun.).—Newcastle M.C. run to Barnard Castle.
 Western District M.C. run to Beaconsfield.
 19th to 24th.—Auto Cycle Club's six days' trial.
 21st (W.).—Meeting of the General Committee of the Motor Union.
 Lincolnshire M.C.C. at Stamford.
 24th (S.).—Hertford County A.C. at Lower Aston Hill for a members' driving test.
 North-East Lancashire A.C. gymkhana.
 Berkshire A.C. gymkhana.
 Yorkshire A.C.'s closed hill climb near Pateley Bridge.
 East Surrey A.C. run to Littlehampton.
 Somerset A.C. gymkhana at Weston.
 Sussex County A.C. hill climb.
 West Essex A.C. run to Orsett.
 25th (Sun.).—West Essex A.C. run to Southend.
 Birmingham Motor-Cycling Club run to Shelsley Walsh.
 31st (S.).—Cardiff M.C.'s run to Chepstow.
 Coventry M.C.'s reliability trial.
 Lincolnshire Motor-Cycling Club meet at Skegness.

SEPTEMBER.

- 1st (S.).—Florio Cup race of the Italian A.C. over the Brescia circuit.
 Southern M.C. picnic.
 5th (T.).—Vehicles competing in the R.A.C. commercial vehicle trial must be within the gates of the depot.
 Arachon motor-boat meeting.
 7th (S.).—Auto Cycle Club's hill climb at Birdlip.
 Motor Cycling Club 200 miles reliability trial.
 9th (M.).—Industrial Vehicle Trials commence.
 14th (S.).—Motor Union Meet at Leicester.
 Brooklands A.R.C. meet.
 21st (W.).—Nottinghamshire A.C. hill climb.

OCTOBER.

- 19th—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

- 21st-23rd.—Cordingley's Motor-Car Show at the Agricultural Hall, London.

LIGHTING-UP TIMES—LONDON.

Aug. 17th—8.19	...	19th—8.15	...	21st—8.11	...	23rd—8.7
„ 18th—8.16	...	20th—8.14	...	22nd—8.9	...	24th—8.5

In Glasgow the lighting-up time to-day (Sat.) is 8.45 p.m., and to ascertain the approximate times on succeeding days 26 min. should be added to the above figures; in Plymouth an addition of about 16 min. is necessary.

BUSINESS NEWS.

MESSRS. POWELL AND CO. have large premises at 98, High Street, Marylebone, W., for the sale of second-hand cars, motor accessories, &c. They are also equipped for carrying out any necessary repairs and make a speciality of keeping a number of cars on hire.

MESSRS. DOBBIE, MCINNES, LTD., of 45, Bothwell Street, Glasgow, are introducing a new patent combined speed indicator and mileage recorder for motor-cars. It is known as the Britannia.

MR. S. BLACKER-DOUGLAS, of Lowestoft, has written to Mors (England) Ltd., stating that he has had his 19-h.p. Mors car since 1903, and during that time he has been through almost every town in France. He has never been held up on the road, and although he must have travelled quite 40,000 miles on the vehicle it still goes as well as ever.

MR. ROBERT NEWTON's motor engineering works, in Wood Street, Manchester, are well equipped for the repair of motor-cars generally. The proprietor also undertakes the teaching and driving and advising clients as to the purchase of motor-cars. His office is at 46, Bridge Street, Manchester.

THE Sirdar Rubber Company, Ltd., have written in connection with a claim made by a foreign manufacturer of tyres, that their firm was the first to reduce the cost of tyres to the users. They add, "In fairness to ourselves, we shall be glad if you will point out that we were the first to do this, and did it months ago, because we came to the decision that we would not spend money on tyres for trials, races, &c., or in assisting those who were taking part in them, which is a very heavy tax on any tyre maker, but that we would put all such money saved into the quality of our rubber, and at the same time be able to reduce the cost to the users. We might mention, too, that we also treat the

trade very liberally, as we can afford to for the above-mentioned reasons. We give the trade the full benefit of our largest wholesale terms without binding them to contracts, being satisfied to rely upon the quality of our tyres to get their repeat orders; and although we can, as advertised at the moment, allow the users 15 per cent. cash discount off our current list prices, we make such arrangements that the trade will not suffer if they push the sale of these British-made tyres." We may add that, owing to the rapid increase in their output, the Sirdar Company are seriously thinking of further reducing their prices, because of the decrease in cost of production.

THE Burlington Carriage Company, Ltd., the British agents for the Delaunay-Belleville cars, are making extensive alterations to their premises at 315-317, Oxford Street, London, W., to accommodate their increasing trade.

MESSRS. CLEMENT-TALBOT have a notice from Mr. G. S. Munro, Superintendent of Juries and Awards of the New Zealand Exhibition (International), that a gold medal has been awarded to them for their exhibit of Clement-Talbot cars.

NEWS has just been received that a gold medal of the New Zealand International Exhibition, which has been running for six months and excited the widest interest in the colony, has been awarded to Humber, Ltd., for the exhibit of Beeston and Coventry Humber cars.

THE BRITISH LEATHER CLOTH MANUFACTURING COMPANY, LTD., of Hyde, have sent us samples of their special leather cloth known as "Rexine," which is being largely used by motor-car and motor-body builders for upholstering purposes in place of leather. The material is claimed to be more than a substitute for leather, inasmuch as it possesses all the qualities of the latter, yet it is only one fourth the price. As to its wearing qualities the makers state that it will stand the hardest wear and tear, that it is scratch proof, will not crack, peel, stretch or sag. Long exposure to sun and wet has no deteriorating effect upon it, while a matter of considerable importance is that it cuts up to much better advantage than leather, there being no waste. The samples of Rexine sent us comprise specimens of both the ordinary leather grain material and those with an embossed pattern, and are in a variety of colours.

MR. STRELITZ, of Perth, Western Australia, is making an extended tour on the Continent on his 30-h.p. Daimler car, and has already covered 5,000 miles without a single involuntary stop.

MR. RICHARD C. THOMAS has been appointed London manager to the International Insurance Company, Ltd., of 2, Haymarket, S.W., which makes a speciality of motor-car and motor-cycle insurance. Mr. Thomas's previous experience in insurance business was with the Ocean Accident Insurance Corporation as their chief inspector at their Law Courts branch, having been with them six years.

MR. C. J. GLIDDEN has just completed his forty thousandth mile with the aid of Castle accumulators and Castle synchronised coil.

PITLOCHRY is a favourite centre for Scottish tourists, and those who motor through that delightful district will be glad to know that the Pitlochry Garage and engineering works of Mr. W. Blues, in Main Street, Pitlochry, has been opened with full facilities for the repair as well as the accommodation of cars.

AN explosion has occurred in a shed upon the premises of Mr. B. Hancock, in Halesowen Road, Old Hill. By some means a quantity of petrol was accidentally upset, and the fumes came into contact with a lighted lamp, with the result that an explosion occurred and the shed was destroyed, in spite of the efforts of the local fire brigade. Two motor-cars were badly damaged.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

To insure insertion communications and contributions must be in the Editors' hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case; otherwise no liability will be accepted.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

THE Motor-Car Journal.

VOL. IX.]

LONDON, SATURDAY, AUGUST 24, 1907.

[No. 442.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

“THE INDUSTRIAL MOTOR REVIEW.”

“THE INDUSTRIAL MOTOR REVIEW,” which, established in February, 1903, can claim to be the oldest journal in the world exclusively devoted to the interests of the commercial and industrial motor vehicle, has been acquired by Messrs. Cordingley & Co., and is now published from the office of *The Motor Car Journal*, 27-33, Charing Cross Road, W.C.

It will continue to be issued as a Monthly Review, devoted to the development of the Industrial Motor Vehicle, and affording a means of inter-communication between users and makers of commercial vehicles of every description. Under the new proprietary, those features which have proved acceptable in the past will be continued and extended, while innovations to increase its influence with all interested in the motor movement will be introduced.

“The Industrial Motor Review” is published at 6d.; post free 8d., on the 15th of the month. Annual subscription, 8s. post free.

COMMENTS.

THE motor promises a revival of the prosperity of the road—not only because of the distribution of tourists about the country, but from the commercial aspect as well. The handling of merchandise and the conveyance of produce by motor-van and wagon is also being developed, and should become a regular feature of business life.

While passenger services are being fostered in many districts, express motor transport is being encouraged over long distances. But it is not only on *terra firma* that the motor will ensure a return to prosperity; a revival of canal activity may in some degree be brought about by means of the motor-boat. On Saturday last about fifty canal managers and directors and Black Country manufacturers made a trial trip on a motor-barge. The run took place over the old Birmingham and Worcester Canal from Breedon's Cross, near King's Norton, to Tardebigge, near Blackwell, the journey taking about three hours, and including a run through a tunnel $1\frac{1}{2}$ miles in length. The barge has a 15-h.p. motor, the fuel used being paraffin, and the machinery occupying very little space and in no way interfering with the cargo capacity. It was fully demonstrated that a boat of this type can run at a maximum speed of about six miles an hour, and an average, including delay at locks, of four miles an hour, which compares favourably with the two miles an hour of horse-drawn barges.

Makers' Clubs.

CLUB life in the United States is not confined to the towns and cities; some of the manufacturers of cars have been organising associations of users of their vehicles. These makers' clubs have held runs, dined together and discussed in solemn conclave. The promotion of such sociability is said to have good results and to have done much to encourage those responsible for the production of the various types of cars. In the early days of the movement some of the French manu-

facturers organised runs of owners on their particular vehicles, and much useful pioneer work was done in that way. On this side doubtless the feeling generally is that the automobile industry has outgrown such methods.

Railway Companies and the Roads.

In the early days of motor traffic in connection with the conveyance of passengers, the Great Western Railway Company experienced considerable difficulty with the local authorities throughout Cornwall, whose neglect to maintain the surface of the roads in good condition made it impossible for the railway company to run a satisfactory and remunerative service. In a great measure the difficulties have since been overcome, district councils and kindred bodies recognising that the use of the roads in such a connection meant prosperity to many of their districts. The experience of the G.W.R. has, however, proved a lesson to other companies, and we understand that the directors of the Great North of Scotland Railway Company have decided not to accede to the wishes of several parishes in Aberdeenshire to establish public services of motor vehicles unless the local highway authorities are prepared to assist by keeping the roads in order and guaranteeing them against claims from alleged extraordinary traffic. It is to be hoped that the Scottish authorities will recognise the necessity of conceding to the wishes of the railway company as a means of local development.

Wind-resistance Experiments.

ELSEWHERE in the present issue we publish the results of some interesting experiments lately carried out by Mr. S. F. Edge, with regard to the effect of large covered bodies on the speed of automobiles. The trials resulted in demonstrating that whilst a speed equal to seventy-nine miles per hour was attained on the Brooklands track when the wind resistance was not more than that presented by the radiator, dashboard, and driver, it was reduced to less than forty-eight miles when the wind resistance area was increased to thirty square feet. Mr. Edge hopes at an early date to carry out similar experiments as regards the effect of weight on speed and petrol consumption. We might suggest that it would be interesting to continue the wind-resistance tests by comparative trials of the chassis illustrated on page 552, and the same or similar vehicles fitted with different types of bodies, ranging from the side-entrance double phaeton to the larger seven-seated limousine.

An Indian Trial.

FOLLOWING Christmas, on December 26th, 27th, and 28th, the South Indian Motor Union will hold a Reliability Trial of 343 miles, divided into three daily runs, and including a hill-climb on the Chittoor Ghaut. There will be three classes, based on price, viz., below £200, not exceeding £350, and above £350. Each car will be allotted 1,000 marks at starting, from which a mark will be deducted for every minute a car is stopped or pushed or assisted in its passage, except when in control or delayed in starting. An interesting regulation, necessary where the climate is so different to our own, is that “no petrol is to be filled into any tank or vessel after sunset or before sunrise, unless such replenishing is carried out 100 yards

from any other car." Entries close on November 30th, and should be made to Mr. G. V. Scovell, care of Post Office, Bangalore. Madras will be the central point of the trial, and the establishment of Messrs. Oakes and Co., Ltd., the official garage.

Motoring in Ireland.

THE value of association in connection with automobilism has often been demonstrated in Great Britain, and the Irish Automobile Club is to be congratulated on the practical work it is doing for the motorists of the Emerald Isle as well as

for those from this country touring in that part of the United Kingdom. For some time past the Club has sent petrol to the North Wall for the convenience of motorists arriving at Dublin from England, as up to the present it has not been obtainable there. On the representation of the Club the London and North Western Railway Company, which has always shown considerable enterprise where motorists are concerned, have erected a special shed for the storage of petrol at the point of landing, and arrangements have been made whereby motorists can obtain it at North Wall. This should be a great convenience to British motorists landing at Dublin.

Mrs. E. H. Turnbull on her 24-h.p. De Dietrich Car.

Against the Coroners.

SEVERAL correspondents have lately attempted in the public Press to raise a "hue and cry" against those coroners who, after investigating all the circumstances attending the unfortunate deaths of persons who have lost their lives in motor-car accidents, have accepted the verdict of the jury exonerating the driver of the automobile from blame. "The leniency of many of our coroners towards motorists does more than anything to encourage the road hog," says Mr. Horace Bleackley, who urges that the Lord Chancellor should be informed of those coroners who thus express themselves. Others have written deploring the fact that the decision as to whether or not the fatality should be regarded as a case of manslaughter rests with these officials instead of the police magistrates at petty courts. Those who take this view entirely overlook the fact that coroners are guided by a jury who certainly are not all motorists, and who are as capable of looking at things with an impartial attitude of mind as any magistrates upon the bench. So far as we have been able to observe, the coroners have had singularly few cases involving the automobile before them, when the number of vehicles in use is considered; and this attempt to prejudice those who are disposed to take a

consistent view of their duties deserves the reprobation of all who have not yet lost the sense of British justice.

The Medical Examination of Drivers.

THE medical aspect of automobilism is of importance as well as of interest, and the examination of Mr. S. F. Edge after his record run revealed that, in the case of a man whose normal condition may be described as "fit," even such an exercise had no deleterious effect. But all drivers have not the stamina of the man who could drive four and twenty hours and regard it as a mere incident of the week's work. In our correspondence columns Dr. E. Danvers-Atkinson raises a point of supreme value, and one upon which the individual experience of our readers is invited. The man who drives a motor-car should have a good nerve and sound constitution. Ordinarily, perhaps, these points need not be laboured; but it is frequently the unexpected that happens, and then the man of weak heart or of dissipated nerves goes to the wall—and his car with him. Dr. Danvers-Atkinson has specialised in the examination of men for motor-cab work, and his experience, as mentioned in his letter, suggests several reasons for the exclusion of unsound men—from this particular point of view—from the driving seats of automobiles.

Medals for Drivers.

WITH a view to encourage continuity of service, good conduct, and general steadiness on the part of professional drivers, the R.A.C. has decided to award medals to those drivers holding the Driving and Mechanical Proficiency Certificates who qualify for them, on the following basis:—A bronze medal will be awarded to the driver holding both the Driving and Mechanical Proficiency Certificates, who shall serve in one situation, either in workshop or private service, for a period of three years. The bronze medal will also be awarded to the driver holding the Driving Certificate only, who shall remain in the same service for a period of four years. A silver medal will be given to the driver holding both the Driving and Mechanical Proficiency Certificates who shall serve as already described for a period of four years. The silver medal will also be awarded to the driver holding the Driving Certificate only after he has remained in the same service for a period of five years. A gold medal will be awarded to the driver holding both the Driving and Mechanical Proficiency Certificates who shall serve in one situation for a period of five years. In every instance the time of qualifying service will count from the date of issue of the certificate.

The Location of Police Traps.

A MOTORIST was summoned by the police at the South West London Court for driving a motor-car beyond the legal limit in the Portsmouth Road, Putney. The defendant's counsel took objection to the summons because it failed to disclose full information regarding the offence complained of. He pointed out that Portsmouth Road was mentioned, but there was no indication of the exact locality where the speed was alleged to have been exceeded. In reply, the chief clerk admitted that the wording was somewhat vague, but Mr. de Gray declared that it would be against public policy to explain where the police trap was actually situated. There may be something in his contention from the official point of view; but, on the other hand, the absence of this information absolutely prevents any opportunity being afforded for checking the accuracy or otherwise of the statements made by the police. As the case stood the constable went into the box and asserted that the motorist had been timed over a measured furlong, but did not give its location beyond the general fact that it was in the Portsmouth Road. Mr. de Gray's ruling in the matter certainly seems at variance with all preconceived notions as to the necessity of exactitude in police-court evidence, and possibly

some of the motoring organisations may be able to suggest a question to one of their friends in the House of Commons. Unless the police are compelled to give full evidence, the chances of fair play are restricted to very narrow limits.

On the Towpath.

RUMOUR is again busy with the Thames towpaths, and unfortunately is proving true in many of the reports now being circulated with regard to the exclusion of motor-cars therefrom. It is generally thought that the L.G.B. will grant an order prohibiting automobiles on the towpath from the Middlesex side of Kingston Bridge to Hampton Court. The prospect of relief for the users of the river and the river bank at Hampton Court has stirred some Surrey-siders into action. The towpath within the jurisdiction of the Urban District Council of Molesey, from Hampton Bridge past Molesey Lock to Sunbury, well over two miles, is, in the opinion of many residents, totally unsuited

for any purpose other than as fuel for the engine of a light locomotive. Provided that where due precaution is taken to prevent petroleum spirit from escaping into a sewer or drain and provision made for disposing safely of any surplus petroleum spirit, and where no fire or naked light is present, quantities not exceeding one gill may be used for the cleaning of a light locomotive at a safe distance from any building, place of storage of inflammable goods, or much frequented highway, or for the repair of tyres, under suitable precautions.

Tar Spreading.

LATE in May last some tests in the spreading of tar by means of machines were carried out under the direction of the Roads Improvement Association on certain roads in Middlesex and Berkshire. Since then the portions of the highway thus treated have been kept under constant observation with a view to gauging the durability as well as the immediate efficacy

The Towpath along the River Thames between Kingston and Hampton Court, which is to be closed to motor-cars.

for a motor road. The authorities have tested local opinion, and they are now about to approach the Local Government Board to extend to them their powers of closing the highway to motor traffic. It is said the path in places is less than 8 ft. wide, and in addition to its narrowness, there is a slope towards the river, which renders it a dangerous road.

The Storage of Petrol.

ON the 15th inst. new Regulations regarding the storage and conveyance of petrol came into operation by direction of the Home Secretary. No more than sixty gallons are to be kept in any one storehouse, and where two or more such places are in the same occupation, and are situated within twenty feet of one another, they are to be deemed one and the same storehouse. In the storehouse or in any place where a light locomotive is kept or is present, petroleum spirit must not be used for the purpose of cleaning or lighting, or as a solvent or

of the work. It will be remembered that, at the same time, a competition was held for the best preparation of tar for road purposes, a 100 guineas trophy being offered by the Ballymenagh Woollen Factory Company. This has now been awarded to Messrs. R. S. Clare and Co., Ltd., for their patent Tar Compo. A gold medal of the Association will also be given to that firm. The competition for the best tar spreading machine has resulted in the award of the first prize of 100 guineas and gold medal to Mr. Thomas Aitken for his patent tar sprayer illustrated in our issue of June 1st, and of the second prize and silver medal to Messrs. Tarspra Ltd., for their Tarspra motor-van.

FROM the Shrewsbury Arms Hotel, at Rugeley, comes an illustrated guide to the "Cannock Chase District," which will be of service to motorists passing through the town, giving, as it does, the principal roads with a useful mileage table. The Shrewsbury Arms Hotel has an excellent motor garage.

SOME WIND-RESISTANCE EXPERIMENTS.

SOME interesting trials in regard to the wind resistance of rapidly moving motor-cars were carried out on the Brooklands track on Friday, last week, by Mr. S. F. Edge, with the assistance of two R.A.C. official timekeepers, Messrs. F. T. Bidlake and A. G. Reynolds. The vehicle which was used, a 38.4-h.p. (R.A.C. rating) six-cylinder Napier, driven by Mr. Tryon, had been fitted with a wind screen, 6 ft. wide by 5 ft. high, built up of laths each 6 ft. long and 2 in. wide, so that each lath represented one square foot. Sixteen runs were made, commencing with the total area exposed to the wind, and after each run two square feet, *i.e.*, two laths, were removed, and the result of these runs came out as follows:—

Area of wind resisting screen.	Time over flying quarter of a mile.	Speed in miles per hour.
1st run, 30 square ft.	18½ sec.	47.85 m.p.h.
2nd „ 28 „	18 „	50.0 „
3rd „ 26 „	17 „	52.9 „
4th „ 24 „	16 „	56.15 „
5th „ 22 „	16½ „	54.0 „

Back View of the Wind-resisting Board fitted to the Napier Car.

6th „ 20 „	16½ „	55.5 „
7th „ 18 „	15½ „	57.0 „
8th „ 16 „	15½ „	57.6 „
9th „ 14 „	15 „	60 „
10th „ 12 „	14½ „	62.5 „
11th „ 10 „	14 „	64.2 „
12th „ 8 „	13½ „	66.15 „
13th „ 6 „	12½ „	70.25 „
14th „ 4 „	12 „	75 „
15th „ 2 „	12½ „	73.8 „
16th „ Normal	11½ „	79.0 „
17th „ 15 sq. ft. arranged as gridiron.	15½ „	57 „
18th „ 24 sq. ft. in two blocks with 6 sq. ft. interval between them.	17½ „	51.1 „

As will be seen, besides the sixteen runs two others were made, the results of which are very interesting. First, a run with each alternate lath removed, leaving a total wind resistance area of the screen of 15 square feet. The time, however, for this run was 15.45 sec., giving a speed of 57 m.p.h., showing very clearly that, although there was actually only 15 square feet of resistance on the screen, owing to the arrangement and apparent extra skin and corner friction, &c., the resistance was the same as if it had 18 square feet of continuous surface,

indicating that a large number of small protuberances on a motor-car are detrimental to its free running. The next test was to have a total area exposed of 24 sq. ft., but arranged in two portions, the top one consisting of 13 sq. ft. solid, then a gap of 6 sq. ft., and then the remaining 11 sq. ft. solid. The total solid area exposed was thus 24 sq. ft., but the actual effect on the car was as if about 27 sq. ft. were exposed.

It will be noted in going through the accompanying table that the slowest speed recorded with maximum wind resistance was 47.85 miles per hour, whereas the highest was 79, a variation of over 31 miles per hour merely by the addition of wind resistance and practically no additional weight. Owners of large touring cars with wind shields, limousines, etc., will realise from this the enormous extra work they are demanding from their engines, and incidentally from their driving tyres, when they travel fast against a strong head wind. This extra work, of course, is only obtained by the consumption of considerably more petrol, and so the varying petrol results that users sometimes get must be very carefully considered, as well as the direction of the wind when petrol consumption tests are being made; in fact, the only useful ones are when an "out and home" course are chosen. We may add that the front area of the car and driver outside the wind screen area was about 11½ to 12 sq. feet.

WILD FLIGHTS IN BORNEO.

PIONEERS of the motor movement look back with feelings not distant from amusement on the antics of animals in the early days in this country. But, apparently, never did motor-car startle sedate British quadrupeds as it does the animals and people of South Borneo. Thither, a little while ago, went Mr. C. F. Wearne, a motor expert, of Singapore. He found a delightful road for motoring, but the progress of the car along this road was the signal for a wild stampede of the inhabitants of every kampong that was passed; and the farther it penetrated inland the more fearful an object the motor-car appeared to be for the people. Whole villages fled off to the jungle wilds rather than face the awful monster. They seemed to regard the innocent motor-car as the very Devil himself. Mr. Wearne made several trips up and down from Bandjermassin to the terminus of the road, but each successive trip seemed to breed as much terror in the hearts of the jungle folk as did its initial appearance among them. On one occasion the occupants of the car came upon a small group of fisherfolk on the river bank almost without warning. With wild screeches one and all of them dropped their piscatorial tackle and fled, disappearing as swiftly as so many rabbits in a warren. Another time an old man and an old woman were sitting by the roadside, when, before they knew it, the car had run up almost abreast of them. The poor old couple must, indeed, have imagined that some fiend was after them, for, with terrified shrieks and arms outflung, they rushed straight for the riverbank, threw themselves into a canoe, and paddled off for dear life. On yet another trip the motor-car overtook on the road a herd of bullocks driven by a squad of natives. Hearing the warning "toot" of the horn, the drivers looked behind, and when they saw what must have appeared to them a new form of the Devil, they darted through among the animals and shot, wildly yelling, ahead. They could not go off at the sides of the road, for on each flank was a deep bog, so they fled on till the morass was passed. Meanwhile the bullocks themselves seemed to be infected with the terror which had seized upon their drivers, for the whole herd stampeded until they also found roadside openings, where, safe from the pursuing monster, they could rest their heaving flanks.

A MOTOR-CAR service between Dawson City and other points in the Klondike region may be inaugurated before another year has passed, owing to the enterprise of Captain J. B. Hubrick, of Dawson City, who has purchased a 40-h.p. Pope-Toledo car with which to start the enterprise.

THE ADVANTAGES OF DUPLICATE IGNITION.

WHEN we consider the fact, which surely everyone will admit, that the ignition systems at present in use can be made reliable, the question naturally arises, Why have duplicate ignitions? Do the advantages outweigh the disadvantages? Well, it is not a case of six-of-one and half-a-dozen of the other, because a great advantage is there, and it stands out very prominently, in the shape of providing a means, should the system being used fail, of reaching home safely, when otherwise it might have been one of those, now happily rare, cases of being stranded in some out-of-the-way district. With regard to the possibility of the system being reliable, as stated, and yet failing, we have only to remember that it is not perfect—some types are far from being so—and that we are all liable to fail at times. Having this in mind, one is inclined to say that, although a duplicate ignition may not be necessary, yet it is a great advantage. As a matter of fact, there is no doubt that with a good accumulator and coil system of ignition, which receives all the care and attention it should from the hands of a competent person, an extra and fully-charged accumulator and a few necessary spares being carried, the motorist can feel almost as free from the anxiety of being stranded through a breakdown in the ignition system as though provided with a stand-by, the purpose for which it so often serves.

In considering the disadvantages of a dual ignition, we have to remember the complicated wiring that some types necessitate, and the fact that two ignitions demand more attention than one—as, of course, to have a duplicate ignition and not have it prepared for work is practically equal to having a fire extinguisher that has never been “charged” fitted to a car. There is yet another disadvantage of the double ignition, because the man of moderate means wants the selling price of the car reduced, and to have two ignitions generally adds substantially in the other direction.

“Example is better than precept,” therefore let us relate a true incident by way of illustrating a case where a duplicate ignition system was being wasted. It will convince some motorists—those who have any doubt about it—that it is possible to be stranded even with two ignitions, and also serve to show the type of man very often employed as chauffeur, solely on account of cheapness, as there are, despite all that is written to the contrary, plenty of skilled and trained mechanics, with long driving experiences, ready to start for a respectable wage. The incident referred to took place during the visit of the Colonial Premiers to the City. After they had just passed a certain point of the route, a motor-car came round the corner, and, for what seemed some unaccountable reason, stopped dead in the middle of the road. The furious attempts to make it start brought no more fruitful results than heightening the colour of the driver's face, and the passengers, consisting of a lady and gentleman, got out and proceeded on their journey in a horse-drawn cab. A motor engineer among the spectators along the route, and who had been watching the interesting event, asked the driver what was the matter, and if

he could be of any assistance. “Oh,” said the driver, “it's the carburettor, I've had a lot of bother with it, I'll have to send for a repairer to come and take it down.” He then went on with his work, which consisted of pouring about a quarter of a gallon of petrol into each cylinder. This individual reluctantly parted with some further information, which was to the effect that the car—a Panhard by the way—was on hire. The engineer then said, “It strikes me it is not the carburettor that is at fault at all, but the magneto. Wash the platinum points with a little of that petrol. Have you not an accumulator as well?” After mumbling something, which contained a refusal to wash the platinum points, the driver said, “Yes, I have an accumulator, but I never use it. Besides, it is not connected up.” “Never mind that,” said the engineer, “you jump up, and let me have a go at it.” It was the work of a few moments for him to connect one terminal of the accumulator to the make-and-break and the other to the earth terminal of the magneto coil, afterwards removing the carbon brush of the Eisemann magneto. The engine started up after a few turns, owing

to the driver flooding with petrol, and ran splendidly. Of course, if anything had been wrong with the coil or distributor this would not have been possible, and it shows the advisability, when a supposed dual ignition is fitted, of their being so arranged that they do not rely too much on each other; or, if the complicated wiring necessary with a separate coil would rather be done without, it is always possible to carry a spare coil in case of emergency, and so diminish the risk of ever being stranded in outlandish places through ignition faults.

However, the driver in our little story, after imagining that he would be stopped for a few hours, while a repairer came and perhaps took down a carburettor that there was nothing wrong with, was, in less than half-an-hour, able to be on his way again.

J. MORSE SCOTT.

Some of the members of the Army Motor Reserve at the Red Lion Hotel, Banbury.

in less than half-an-hour, able to be on his way again.

THE Great Eastern Railway Company's guide to the Continent, edited by Mr. Percy Lindley, is to hand, with many excellent illustrations and several good maps, which will be of service to those of our readers touring in North Holland, Belgium, Germany and the Tyrol.

PETROL motor designers and all engaged in the development of the internal combustion engine will be interested in the new work just published by Messrs. Longmans, Green and Co. It is entitled “Balancing of Engines, Steam, Gas, and Petrol,” and is from the pen of Mr. Archibald Sharp, B.S.C., who, as is well known, has long devoted special attention to the question. The work is intended for the use of students, draughtsmen, and designers, to whom it is offered as an elementary text-book. The subject is, of course, of a highly technical nature, but graphical methods are principally used, so that there should be no difficulty in following the line of discussion taken up by the author.

B

SOME USEFUL NOTES.

TYRES should be examined at frequent intervals for cuts. These should be cleaned from any sand or dirt which may have entered, the gash washed out with petrol, and rubber cement inserted. The gash should then be wound with tyre tape until the car is again taken out. If it is a severe one, the cut should be vulcanised at the earliest possible moment.

WHEN a car is to remain idle for several weeks, it is advisable not only to raise the wheels off the ground by means of jacks, but also to partially deflate the tyres, and remove all the strain from the inner walls of the outer covers. If this is done, it will greatly add to the life of the tyres, as they are then bearing only the pressure of the air with which they are inflated, whereas when supporting the weight of the car this is exerting a continual unnecessary strain on the walls of the cover. By

A MOTORIST should at least be able to diagnose the troubles of his car even if he does not make the repairs. A good many do not care to do the dirty work, but intelligent oversight of those who do this work is essential if the annual cost of upkeep is to be kept at its lowest limit.

CORRECT adjustment of the coil tremblers is out of the question after the platinum points become pitted. If badly eaten away, as is apt to be the case after long service, the only remedy is a complete renewal, but if the trouble be still in its earliest stages, trueing up with a very light file will usually suffice. Starting with the points in good condition, it will be found that trouble from this source can be avoided to a very great extent by reversing the direction of the primary current at stated intervals. This arises from the fact that the electrolytic action is always in the direction of current flow, the positive electrode or terminal being disintegrated by the passage

Figs. 1 and 2.—Elevation and Plan of 30-h.p. Beeston-Humber Car (See page 555).

adopting this course it is estimated that the life of the tyres will be increased by at least half the time the car stands idle.

Few motorists realise the many complications that arise if the interior of a cylinder, particularly the combustion chamber and piston head, are not kept free from carbon deposits. The intense heat developed by the rapid explosions burns up the cylinder oil, which forms as a hard deposit in the explosion chamber. The effect of this is to cause the motor to knock and often to fire from self-ignition. When this condition exists the cylinders should be well flushed out with paraffin, which thus frees the piston rings and allows them to spring tightly against the cylinder, producing a gas-tight joint, besides softening the carbon deposits so that the cylinder may be easily scraped out. If every automobilist would take the trouble to flush his motor with paraffin at least once a week, he would do more to keep his engine in perfect condition than perhaps in any other way.

of the current and a perceptible amount of the fused metal in a very finely divided state being deposited on the other terminal. It will, therefore, be evident that a reversal of the current flow will reverse this action, and to a large extent prevent the trouble that otherwise will arise from it sooner or later.

No part of an engine requires better care than the ignition system with which it is fitted. Cleanliness is one of the most important factors necessary to continuous satisfactory operation. Especially is this true in relation to the contact-maker and sparking plugs. Rust should be prevented at all times, and no foreign matter allowed to collect either on the contact-maker or on the coil or coils where the tremblers are located. If the single coil and distributor system is used cleanliness is still more important, and moisture must be prevented, if possible, from settling on the high-tension distributor parts; the secondary current will frequently short-circuit under such conditions.

THE 30-H.P. BEESTON-HUMBER CAR.

AMONG the most popular of the British-built cars at present on the market are the Humber vehicles, which are being turned out in large quantities, both at the Beeston and Coventry works of Messrs. Humber, Ltd. Three models are being made—10-12-h.p., 15-h.p., and 30-h.p.—all fitted with four-cylinder engines. The leading features of each

Fig. 3.—Transverse Section through Engine.

of these have already been given in the *M.C.J.*, but the more complete description of the larger model which we are now able to publish will, no doubt, prove of interest, especially in view of the success of a somewhat similar car in this year's Heavy Touring Car Race. The engine comprises four separate cylinders, 110 mm. bore by 130 mm. stroke, with the mechanically-operated valves arranged on opposite sides. The carburettor, which is gravity fed and located on the right hand of the motor, is of the

Fig. 4.—Sectional Elevation of Four-cylinder Engine and Clutch.

usual float-feed type, fitted with both automatic and hand-controlled extra air inlets. The ignition is by high-tension magneto, with accumulators and synchronised coil fitted as a reserve. The contact-maker and high-tension distributor is located on the upper end of a vertical spindle driven by bevel gear off one of the half-time shafts; it passes up through the floor-board near the dash, so that it is in full view of the driver. The water circulation is maintained by

a gear-driven rotary pump and honeycomb radiator; the latter, which is of a distinctive shape, is provided with an air-inducing fan driven by a belt direct off the crank shaft.

The pump is supported on the engine base chamber, and is so arranged that it can be readily dismantled. The ignition and throttle levers are conveniently placed horizontally across the steering wheel; a foot accelerator working in conjunction with the hand lever, but independently of it, is also provided. The control of the speed of the engine is not by a throttle valve in the usual way, but by a variable lift to the inlet valves, this being obtained by means of a sliding cam shaft, to which

Fig. 5.—Sectional View of Gear-box.

the hand and foot levers are connected. The lubrication of the motor is effected by a small rotary pump located, as will be seen from Fig. 4, at the rear of the engine, and driven by bevel gear off the exhaust cam shaft, thus ensuring uniform and automatic lubrication of the five main bearings and the big ends of the connecting rods. A foot pump is fitted on the dashboard for forcing oil into the crank case to replenish wastage, while there is also a continual drip feed from the lubricator on the dash to the crank case, which latter is provided with a central partition, so that a full supply of oil is furnished to each cylinder. The petrol tank, which is located under the driver's seat, has a

Fig. 6.—Part Sectional Plan of Cardan Shaft and Live Axle.

capacity of 10 gallons; a tap is provided inside the frame near the change-speed lever quadrant, by means of which the supply can be readily cut off when the car is left.

Passing to the transmission, this is through a large diameter leather-faced cone clutch and jointed shaft to the gear-box, which, like the engine, is supported on a subsidiary frame. A sectional plan view of the change-speed gear is given in Fig. 5; it is designed to give four speeds forward and a reverse, with direct drive on top speed. The gear, which is controlled by a single lever working in a gate, is arranged so that the changes from one speed to another can be made without meshing the

intermediate gear wheels. For example, a change can be made from the top to the lowest speed without interfering with either the second or third speed pinions. Both shafts run on ball bearings, the main shaft being fitted with an auxiliary ball bearing to prevent torsion. From the gear-box the power is transmitted through a cardan shaft and bevel gear to the rear live axle. The universal joints are made with hardened steel centres and pins of large diameter. They are enclosed in aluminium casings, thus preventing all dust and grit getting to the joints, which are lubricated by means of a special flexible pipe and grease cap from an accessible position on the cardan shaft. The differential case on the back axle is split horizontally for the convenience of inspecting the bevel gear. The road wheels run on ball bearings of large diameter, and there are ball-thrust bearings to take the side-thrust on the road wheels, which are mounted on the axle sleeve, which prevents any side strains on the live shafts or differential. The driving and bevel pinion shafts are also mounted on ball bearings, and ball-thrust bearings are fitted on either side of the bevel wheel and behind the pinion, thus ensuring perfectly smooth and silent running. A double torque rod extends from the differential casing to a cross member of the frame, where it is carried in a spring box.

Ample brake power is provided, a pedal actuating one working on a wide drum at the rear of the gear-box, and a hand lever compensated internal-expanding metal-to-metal brake working in drums connected with the hubs of the rear road

NEXT YEAR'S TRIALS.

THE special report which has been prepared by the Trials and Competitions Committee of the Scottish Automobile Club with regard to the proposed 2,000 miles Reliability Trial of the R.A.C. has been presented to a special meeting of the General Committee of the Scottish Club, by which it has been adopted. The report was prepared after many consultations with members of the motor trade north of the Tweed, as well as the Technical and Industrial Committees of the Scottish Automobile Club, and may be taken to comprehend the view of motorists generally, so far as Scotland is concerned. It is pointed out that such a lengthy trial would be an undue tax, both as regards time and expense. Moreover, it could not be satisfactorily conducted under the existing conditions, by which the vehicles are untouched, except for replenishing and lubricating, from start to finish. Having regard to these considerations and to the very strong feeling of Scottish agents, the Club is firmly against any concurrence with the proposal in its present form. As an alternative which has the advantage of not clashing in any way with the policy of the R.A.C., it is suggested that the Scottish Trials as carried out this year might be made the first part of a larger trial. In such an event separate entries would be required for the Scottish Trial, and its records would be made available to the R.A.C. to be embodied in this longer trial, as regards these vehicles whose

Fig. 7.—General View of 30-h.p. Beeston-Humber Side-Entrance Double Phaeton.

wheels. The steering gear is of the worm and segment type, all the joints on the steering levers being adjustable. The steering arms are carried on ball bearings, and also have ball-thrust bearings to carry the weight, thus ensuring easy steering. The front axle has been redesigned, one of "H" section steel being now employed. As will be seen from Figs. 1 and 2, in which the various parts of the chassis are clearly named, the frame of the vehicle is constructed of pressed steel narrowed at the front to increase the lock of the steering wheels. Special attention has been devoted to the suspension of the car, the usual longitudinal springs being supplemented by a transverse one at the rear. The road wheels are all of equal size, 880 mm. diameter, and shod with 120 mm. Dunlop heavy tyres. The vehicle has a wheel base of 9 ft. 3 in., enabling a roomy body of either the closed or open variety to be fitted to the chassis. Fig. 7 depicts the standard side-entrance double phaeton. The car is not only speedy on the level, but is an excellent hill climber, while its silent running qualities have earned for it an enviable reputation in motoring circles.

RECENT purchasers of Argyll cars include Lord Wenlock and Major Ponsonby.

MISS TAYLOR, of Chipchase Castle, Wark-on-Tyne, has recently returned from a long tour on her 28-h.p. Mors. During the trip she covered several thousand miles, half of which was run on some of the worst roads in Ireland.

makers desire to compete therein. This arrangement would maintain the prestige of the Scottish Trial as a separate event, and at the same time enable the Club in London to carry out its proposal for the longer test.

With regard to the system of marking proposed to be adopted in the 2,000 mile Trial, and which we outlined in our issue of the 10th inst., the Trials and Competition Committee deprecate the allocation of marks over the whole test on the basis of any performance at Brooklands, and also the suggestion that accessibility should be made a special point in the Trial. They appear to be satisfied that, as regards the test in their own area, the essential conditions and arrangements of the successful trial in June last must form the basis of any future ones. While they are adverse to a Trial of such an extended length as that which now forms the subject of discussion, it is not impossible that the Scottish event in 1908 may comprise a longer distance than before, and under conditions of even greater severity than the last. In fact, those who have followed the course of this Trial since its inauguration will note how the organising committee has gained experience on each occasion, and has thus been able to secure more thorough tests year by year.

THE British Consul in Bolivia says that a service of motor-vehicles for the conveyance of goods could be established between Oruro and Cochabamba, and allowed to run for a term not exceeding ten years without competition.

A MOTORIST'S CAUSERIE.

THE coming of the bicycle did much to spread a knowledge of the use of small tools among people who formerly hardly knew the difference between a gimlet and a screwdriver. The motor movement is, however, increasing the mechanical knowledge of a large section of the public so rapidly that it looks as if we shall soon be in a fair way of becoming a nation of engineers. All this is prefatory to announcing my mastery of a job I had not previously been called upon to perform, that of removing an exhaust valve stem, the head of which, after nearly three years' running, had broken off. Needless to say it had taken some little time to discover the cause of the engine stopping, especially as the noise it made when the starting handle was turned was one to which I was entirely unaccustomed. That by the way, however; when the broken exhaust valve was found, the thing which puzzled me was how to remove the broken stem, seeing that none of the many devices on the market intended to facilitate the task found a place in my tool box. *Nil desperandum!* and, after much cogitation, a heavy piece of timber was obtained, by means of which, with the aid of a youth hanging on to the end of the same, we managed to lift the spring sufficiently to remove the cotter pin. The trouble was not at an end, however, for, after three years' battering by the tappet, the end of the valve stem had burred over slightly, so preventing it from passing through the spring retaining cup. But with a little patience the task was successfully got through, and I felt very proud of the performance when, with the new valve in position, the engine started off merrily at the first turn of the handle.

MUCH has been written with regard to the care and attention that must be given to ignition accumulators if they are to be kept *au point*, but I am afraid that, like many others, I have paid little regard to these useful warnings. The result is that the usual penalty has had to be paid, for two of my accumulators have lately gone wrong, and they have to go to the makers to be put right, at a not insignificant cost. In future I mean to follow the instructions with regard to the charging of the accumulators at regular intervals much more attentively than hitherto. *Experientia docet.*

IN the course of a recent conversation with Mr. E. Watson, of the Argyll Company, he informed me that one of the parts which requires lubrication, and which is often missed on Argyll cars, is the universal joint between the clutch and the gear-box. This joint has only a very small movement, and on this account many drivers consider it not deserving of attention. This is a great mistake, however, and the sweet running of the car, to some extent at least, depends on this part receiving a few drops of oil at frequent intervals. On the least sign of noise from the joint lubrication should be applied.

I DARESAY that many motorists besides myself have found from experience that the engine pulls much better after it has "warmed up." There is undoubtedly such a thing as running a motor too cool. Sufficiently large radiating surface and a pump of such great activity might conceivably be provided as to maintain the water in the cylinder jackets at all times at so low a temperature as to entail an unreasonable loss of heat through the cylinder, with a consequent diminution in the power developed. The radiator and pump should be so proportioned that the actual temperature of the water in the jackets may be as high as is consistent with the continual maintenance of the inside walls of the cylinders at a temperature just short of that at which there is danger of interference with lubrication—particularly the carbonisation of oil upon the pistons—or of raising any portion of the gas space to a temperature which might cause premature firing of the charge. Apparently the desideratum is that the water in the jackets should never quite reach the boiling point, even when the motor is doing its hardest work.

ARCANUM.

VULCANISING TYRES.

THE vulcanising of tyres has become quite a commonplace among motorists—thanks largely to the educational propaganda undertaken by Messrs. Harvey Frost and Co. during the last few years. Not only have the firm been quick to adapt their appliances to the growing needs of motorists, but by providing facilities for training chauffeurs and others in their use they have secured a steady stream of men well able to put them to the best service. In the Charing Cross Road—under the offices of the M.C.J.—they are giving advice and instruction daily and freely to all interested in the subject of tyres, their maintenance and repair. The H.F. specialities have attained universal repute, and the main principles underlying their work are generally known. The latest introduction is the H.F. garage vulcanising equipment, illustrated in the accompanying sketch, which shows the vulcanisers repairing the inside and outside of the cover at the same time.

The essential value of the equipment when acquired in this complete form is that both exterior and interior repairs can be executed simultaneously if required, and also that the lining and fabric of the tyre can be repaired as occasion demands, thus preserving the cover on both sides. Each appliance is self-con-

tained, and can be independently operated, consequently supplied separately when desired.

This combination will be very serviceable to private car owners. The two appliances are fitted on a stand provided with adjustable clamps for bringing them to any desired angle. The H. F. car vulcaniser, which constitutes part of the equipment, can be used quite independently if desired, and the whole arrangement is designed for convenience in handling as well as for carrying on the car so that it can be readily brought into use in the event of an emergency repair being needed. The "Harvey Frost" process of motor tyre repairing is generally known, but we may mention that it enables new rubber to be introduced to the tyre cover where the original material is missing or impaired, and also the canvas and fabric to be repaired, so that the complete renovation of the tyre throughout is rendered very easy of accomplishment. Practical demonstrations of the value of vulcanising can be seen at Messrs. Harvey Frost and Co.'s headquarters at 39, Great Eastern Street, London, E.C.

OWING to the development of the automobile and the consequent ousting of the horse in many districts of France, there has been a shortage of manure in some of the provinces, with the result that mushrooms are reported to have increased in price.

CONTINENTAL NOTES.

The 1908 A.C.F. Grand Prix Race.

The Automobile Club of France has officially announced that the Grand Prix race will again be run between June 20th and July 5th next year. The regulations will be those adopted at the International Conference at Ostend, viz., a maximum cylinder bore of 155 millimetres and a minimum weight of 1,100 kilos, such weight being without passengers, petrol, water, or spare parts, but with lubricating oil.

Road Trials in France.

The refusal of the French Government to allow the Rochet-Schneider Cup reliability trial to be held, as the result of the excessive speed and serious accidents in the Criterium de France, is attracting more than passing notice in motoring circles across the Channel. In the course of an interview with M. Hennequin, of the Ministry of the Interior, published in "Les Sports," this gentleman is reported to have stated that no definite decision had been arrived at concerning the authorisation of future contests in France, but it was considered inopportune to allow a competition having almost the same regulations as one that had

On July 25th he covered 247 miles, on the next day 204 miles, and on July 27th 254 miles. Tomsk was reached on July 28th, and after a stay of two hours he continued, travelling the whole night and the whole day and night of July 29th, arriving in Omsk on July 30th at eight o'clock in the morning, thus covering 846 miles in fifty-three hours. Continuing in the same manner, with only four or five hours' stops at night to snatch a short sleep, he arrived in Nijni Novgorod on August 9th, to the astonishment of the French drivers, who had arrived on the previous day. From Omsk the three cars travelled together.

A Congress on Industrial Alcohol.

During the course of the next Paris Salon, the second annual Congress on Industrial Applications of Alcohol will be held, under the auspices of the Automobile Club de France. The meeting will be divided into two sections, the first of which will be devoted to the technical side, and will consider such questions as the manufacture, denaturation and carburation of alcohol; its suitability for use in motors, for lighting and heating and other industrial purposes. The second section will devote

Scholz on the N.A.G. car he drove in the recent Kaiser Prize Race.

caused several deaths. In future such events must take place on a closed and guarded circuit, and on roads the surfaces of which have been treated with a dust-preventing substance.

To Revive the Gordon Bennett Race.

Baron Pierre de Crawhez, the President of the Sporting Committee of the Belgian Automobile Club, has written to Mr. Gordon Bennett asking him if he will offer a new Gordon Bennett Cup, in connection with the annual Circuit des Ardennes race. The Baron, in making his application, remarks that since the Cup contest has been shelved races have lost much of their old interest and international character, and adds that if Mr. Gordon Bennett will accede to the request, he will submit a series of regulations and conditions for the competition which will meet with the approval of all countries, including France.

The Pekin-Paris Run.

The latest news of the Spyker and two De Dion cars is from Warsaw, Poland, which place was reached on Tuesday last. As far as Irkutsk M. Godard, on the Spyker, travelled in company with the two French cars; but near this town his magneto was damaged and nearly a week's delay ensued in Irkutsk to have a new one made. Wishing to make up for lost time, Godard pushed his car to the utmost

its attention to the economic questions of supply and demand, the popularising of its use, its distribution, legislation, and taxation, and the utilisation of denaturised alcohol in the Army and Navy.

Miscellaneous Items.

It is reported that the Renault Company will build a 50-h.p. six-cylinder car next season.—A public motor-car service has just been inaugurated between Castelnau and Lannemezan, France.—A company has just been formed in Elberfeld, Germany, to run a service of motor-cabs in the town.—The Austrian military authorities have lately placed orders with home builders for a number of petrol motor lorries.—M. Van Dam recently drove a 9-h.p. Sizaire-Naudin car from Paris to The Hague, Holland, a distance of 370 miles, in a day.—A motor-bus service is being established between St. Cloud and Chatou, near Paris.—Twenty-seven entries have already been received for the voiturette and light car trials, which are to be held in France in October next.

A FRENCH physician, Dr. A. Mouneyrat, makes the statement that a five days' automobile trip in the country has the same beneficial effects on the human system as life in the open air for fifteen or twenty days.

MR. W. IRVING has opened motor showrooms in English Street, Dumfries, and at the rear of these has a garage and well-equipped repair shop.

A FINE of ten shillings has been inflicted on the driver of a horse drawn vehicle who did not retain proper control of the animals at Walton-on-Thames. Had he been a motorist what would have been the amount of the fine?

THE Local Government Board have now officially assigned the letters "L.B." as the new index mark for cars registered within the area of the administrative county of London.

MESSRS. CLAYTON BEADLE AND STEVENS, analytical and consulting chemists, of 15, Boro', London Bridge, S.E., send us a reprint of a paper entitled "The Examination of Rubber Tyres," they recently contributed to the "Chemical News."

A NEW motor depot has been established at 5, Royal Arcade, Manningham Lane, Bradford, by Mr. C. H. Mitchell, of Huddersfield. A large stock of accessories is being kept and plant put down to enable all classes of repairs to be carried out.

THE team chosen to represent the Aero Club of the United Kingdom in the Gordon Bennett competition at the Jamestown Exhibition this autumn is as follows:—The Hon. C. S. Rolls, Mr. T. C. Moore-Brabazon, Viscount Royston, and Mr. Griffith Brewer.

BETWEEN 4.15 and 6.30 p.m. on a recent Wednesday 67 motor-cars, 13 motor-cycles, 128 cycles, 23 pedestrians, and 13 horse-drawn vehicles passed through Thursley—an item of news intimated to the Guildford County Bench by a policeman in charge of a trap there.

THE exports of motor cars and parts from the United States during June last reached a total of £146,411, as compared with only £107,853 in the corresponding month of 1906. The United Kingdom was responsible for the largest amount, £62,126, Canada being second on the list with £30,984.

THE Daimler Company have received an order from the West Riding County Council, through Mr. A. Farnell, of Bradford, for two Daimler cars, one being of the landaulet type with a wheel base of 9 ft. 6 in., and the other of the Canley open pattern with a wheel base of 10 ft. 6 in. They are both of 30-h.p., and will be painted and upholstered in the county's colours.

PRINCE BORGHESE, the hero of the Pekin-Paris run, met with quite an ovation when he arrived on his Itala car at Milan on Friday last week. The day's functions included a reception by the Italian Touring Club, which presented specially-designed gold medals to the Prince, Signor Barzini, and the chauffeur, Ettore Guizzardi; and a banquet in the evening by the Italian Automobile Club. Turin, where the Itala factory is situated, was reached on Saturday, and here again the travellers' were enthusiastically feted.

BOTH the Prince of Wales and the Princess were subject to delay on Monday, owing to mishaps to their motor-cars while travelling in different parts of the country. The Prince was motoring from Bolton Abbey *en route* for Abbeystead, near Lancaster, when one of the rear tyres was badly punctured, near Clitheroe. The Princess of Wales left Marlborough House for Frogmore by motor-car in the afternoon. When in the neighbourhood of Staines the car broke down, and as the mechanic was unable to effect an immediate repair the Princess engaged a cab, and continued the journey to Frogmore.

ON the occasion of the seventeenth annual cyclists' parade at St. Michael's Church, Folkestone, on Sunday, the vicar (the Rev. E. Husband) severely condemned the modern practice of motoring at excessive speed, which he described as one of the curses of the Twentieth Century. It had now become, he said, a terror to pedestrians and cyclists to pass along their favourite roads, through the fear of being killed by the motors which dashed past them at railway speed. Just as railway trains had their separate tracks, so he suggested that "those manslaughtering motors" should be banished from the highways by Act of Parliament, and be compelled to use separate roads, the cost to be borne by the motorists themselves.

STIRLING has a splendid motor garage at Causewayhead, where the Grampian Engineering and Motor Company, Ltd., have large repair works.

FIAT cars are meeting with increasing popularity in India.

THE Maharajah of Gwalior has just taken delivery of a new state landau, while a six-cylinder 60-h.p. car has been ordered by H.H. the Maharajah of Pudukatoh.

THE first of a periodical series of motor-car auctions at Wolverhampton has been conducted by Messrs. Wilcock and Cartwright at Messrs. Charles Clark and Co.'s garage, Chapel Ash, Wolverhampton.

IT is a bad plan to argue with a taximeter-cabby. While doing so the other day a gentleman "saw the meter jump another twopence." Fortunately the claim was not allowed when brought before Mr. Plowden at a Metropolitan police court.

CONGRATULATIONS to Mr. Staplee Firth upon his marriage on Tuesday last to the daughter of the late Isaac Gregory, of Richmond (Yorks). We wish bride and bridegroom all happiness. The latter is well known to motorists and magistrates—being regarded in a different light by each set of men.

The 35-h.p. Daimler Car lately supplied to Sir John O. S. Thursby. The coach work, painted dark blue with white lines picked out with black, is of the Rugby type, and is fitted with a Cape cart hood and wind screen.

THE Duke of Portland has ordered a second car from the Daimler Company. It is of 28-h.p., Rugby type, with a wheel base of 8 ft. 6 in.

AT Dorchester, Messrs. Tilley and Sons have a well-fitted garage, a feature of which is the accommodation for investigating cars. In place of the ordinary pits facilities are given for this being done in a good light and under convenient conditions.

AT four o'clock on Tuesday last the six-cylinder Hotchkiss car terminated its trial of 21,250 miles, the longest trial on record, being 6,250 miles distance further than has been attempted by any other car. The trial commenced in France, where 6,250 miles was accomplished, the vehicle visiting all the important towns, and finishing the trial to schedule time at the French Automobile Club in Paris. Afterwards the vehicle was sent over to England by road, and on April 29th it started again on a further trial of 15,000 miles under the official observation of the Royal Automobile Club. Of this distance, 10,474 miles was accomplished without a single involuntary stop. During the course of the trial the car was entered in the Irish Reliability Trials and was awarded a silver medal. The car is now in the hands of the Technical Committee of the R.A.C. undergoing their expert examination, for which purpose it has been entirely dismantled.

LORD BURTON left England last week for a motor tour in Germany.

A MOTOR-CAR has been seen on the towpath opposite Halliford towing a sailing boat at the rate of about six miles an hour.

We illustrate herewith in Fig. 1 the new Thomson-Bennett contact breaker which has recently been put on the market by Messrs. Thomson-Bennett, Ltd., of the Arden Works, Heneage Street, Birmingham. As will be seen, it is of the internal wipe type with revolving roller, the latter being specially arranged to prevent the contact pieces, which are let into the insulated ring,

Fig 1.

from being burnt away at the edges, which causes uneven running of the roller and consequent irregular firing. In the new device the roller, instead of being fitted in the usual manner, is fixed at one end of an arm, the other end of which is in the form of a slipper piece to act as a trailer. This arm is in turn pivoted at the centre to a revolving arm fitted into the cam. A metal earth ring is fitted parallel to the insulated ring; it is so arranged that the revolving roller presses on the insulated ring, while the slipper piece trails behind it and presses against the earth ring, the roller being, of course, not in line with the

Fig. 2.

trailing slipper. It is claimed that by this construction, however much the contact pieces may burn, or the insulated ring become worn in course of time, it is impossible for uneven running and consequent mis-firing to take place, owing to the steadying effect of the trailing slipper on the roller, which prevents the latter from leaving the ring and jumping the contact pieces. Other distinctive features are a continuous earth, connection being made direct through the roller and the slipper to the earth ring; the contacts let into the insulated ring are not formed by screwing a pin into the metal, but are made entirely in one piece.

Fig. 2 depicts the ignition switch of the same company. The feature of the apparatus is that there are no loose parts to fall to pieces, the whole of the moving portion being arranged to be lifted out *en bloc* when the cover is removed, as shown in the illustration, while the contacts are positive and unaffected by vibration. The switches are made in a variety of patterns—single, two-way, and dual, the latter being for use on cars provided with both accumulator and magneto ignition. Messrs. Thomson-Bennett are also devoting attention to the manufacture and repair of ignition coils.

MR. EUSTACE H. WATSON, managing director of Argylls (London), Ltd., has been appointed managing director of the parent company, Argyll Motors, Ltd., and Mr. T. Byrom, who has been Mr. Watson's lieutenant since the inception of the London company, has been appointed manager of the London depot. Whilst Mr. Watson's new appointment will necessitate his residence in Scotland, he will continue to superintend the London business.

MUNICIPAL corporations are becoming quite commercial in their methods of seeking revenue both for themselves and their ratepayers. The issue of guide books and attractive souvenirs is now recognised as part of the legitimate work of the town authorities, and even such an industrial place as Wolverhampton has its official handbook. This has almost a romantic title, "The Heart of the Midlands," and extends its interests to what Elihu Burritt termed "the green borderland of the Black Country."

FROM Messrs. Sampson Low, Marston and Co., Ltd., comes a copy of the "Ought-to-go," which the publishers intimate will be "quite useless to motorists," which, while literally true, suggests its humorous aspect. Interspersed with letterpress that more or less closely follows the style of several well-known motorists, are a series of advertisement pages parodying the public announcements of many of the leading firms in the trade. Now that the evenings are growing longer the little volume will do something to dispel the gloom associated with the smoke rooms of many hotels at holiday resorts.

THE issue of the fifth edition of Meceedy's Road Book of Ireland will be welcomed by motorists. The new edition has been greatly enlarged, and the excellent sketch maps have been entirely re-drawn. The present volume deals with the South of Ireland. A further improvement is the incorporation in it of a sketch map giving references to all the routes in the book. With the aid of the sketch map the finding of any desired route becomes a matter of the greatest ease. Each route is numbered on the map, and the numbers refer to the printed description of the route that appears in the body of the book. Under each town is given the names of the hotels and the local repairers of motor-cars, and in addition is shown places where motor spirit can be obtained, accumulators charged, tyres vulcanised, &c.

A NEW catalogue has been issued in connection with the Cowey speed indicators, which can be seen at 1, Albemarle Street, Piccadilly, W. In this device the principle adopted may be briefly described as being composed of three fundamental parts, viz., a heavy balance wheel, a spring, and a propelling device. The spring is connected up to the balance wheel by means of a small chain in such a manner that it tends continuously to draw the balance wheel in one direction, while the propelling device gives a series of intermittent impulses to the wheel which tends to draw it in the opposite direction. The faster the vehicle travels the more numerous will be the impulses given to the balance wheel by the propelling device, and the spring, having more work to do in overcoming the effect of these impulses, will be deflected and allow the balance wheel to be angularly displaced to a greater or less extent. The balance wheel in its turn operates the indicating pointer and moves it into a position which represents the speed at which the vehicle is travelling. It is claimed that this system secures that the Cowey Indicator performs its duties effectively under the worst conditions of vibration, and is equally steady on good or bad surfaces. As a reliable instrument the Cowey indicator has won high praise from users.

Correspondence.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

THE MEDICAL EXAMINATION OF MOTOR DRIVERS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—If you will allow this letter the publicity of your columns, it will, I venture to think, be to public advantage in judging the attitude we should adopt regarding the proposal of the London County Council to have its tram drivers medically examined.

My plea for asking for space is my personal experience derived in similar work for motor-cab companies, in which every man has to undergo medical examination for fitness before he is allowed charge of a cab. In the course of testing large numbers of men for this work, I have come upon instances, not only of heart disease, but of applicants suffering from the earlier stages of such a grave malady, for example, as general paralysis, or bearing signs, slight as a rule, of real physical degeneracy and unfitness. As such early indications would not be apparent to a layman, it is obvious what an additional safeguard the public derives from having such persons excluded from driving a motor vehicle.

Sudden death from heart disease is by no means the only danger we must be protected from, and the possibilities to life and limb should a driver be the unfortunate sufferer from early brain or nerve disorder may be easily surmised. With the increased pace and congestion of

tives of the above firms take place, to discuss the whole matter, with a view of working in harmony. As I have already stated, three Weigel cars can be relied upon, and if any of the firms mentioned above care to communicate with me, with the idea of holding a meeting, I should be extremely obliged. I see no reason why Italy, France and Germany should be permitted to have the benefit of the blue ribbon of the motoring world entirely to themselves.—Yours truly,

D. M. WEIGEL.

SHOULD LADIES DRIVE MOTOR-CARS?

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—If the fact of one or two drivers being involved in accidents deduces general unfitness to drive, why confine that deduction to the feminine sex; why not include the masculine? There are many women unfitted to drive, there are also many men unfitted to drive and liable to lose their heads in a tight place, but why judge all women by the actions of a few, and each man on his own merits? Hardly fair, is it?

Last year thirteen English drivers entered for the Herkomer Trophy, twelve men and one lady. The latter was second in the English team, and eleventh out of the very large number of competitors (I have not the exact figures) of all nationalities who entered. This year three English

The Syston Park Hill Climb.—Sir Hickman Bacon, Bart., the President of the Lincolnshire Automobile Club, starting on his Welsley Car.

traffic in the streets, the problems presented to a driver are more sudden and complicated. Disease or unfitness must not have place in him to paralyse his mind or paralyse his hand at a crucial moment.

Judging from my experience of the immensely enhanced safety the public is provided with by the action of the companies I refer to, there is left no room for doubt that public opinion should back the London County Council in its endeavour to insist upon having the tram drivers medically examined in every case.—Yours truly,

E. DANVERS-ATKINSON.

THE 1908 A.C.F. GRAND PRIX RACE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have received an official letter from the Automobile Club of France containing the rules for the Grand Prix of 1908. The accusation launched at the French authorities so often, and which I have myself commented on, in not giving sufficient time for foreign competitors to manufacture special cars is this year swept away, and there is no excuse, therefore, for any British firm, and, for the matter of that, the manufacturers of any other nation, not "toeing the line" in next year's race.

There are one or two firms in this country who, for the general benefit of the British industry, should see their way clear to enter. Amongst others, I would suggest the Daimler, the Austin, the Rolls-Royce, Napier, and the Argyll companies, and I should be pleased if the gentlemen at the head of these firms would give their views upon the value of the race as a means of presenting British productions to the world at large. I would suggest that a meeting of the representa-

drivers entered—two men, one woman; the latter did best of the three. In the Scottish Trials this year over 100 men entered and only one woman, yet this lady succeeded in gaining one of the nine gold medals awarded.

I think it absurd to generalise from a few cases; but, if it is to be done, it is just as fair to quote the three ladies above mentioned as any others. If I may be allowed a further personal observation, I would say that the really good men drivers are not, as a rule, the ones who object to women driving. I have driven for four years, and have always found the men who really drive much better than I do the most encouraging and helpful; as to some of the others, I will only say they would probably be found among the opponents of women drivers.—Yours truly,

V. 33.

EXHAUST EXPANSION CHAMBERS FOR SINGLE CYLINDER CARS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I and doubtless many others would be greatly obliged if you, or some of your many readers, would favour us with some practical and useful information how to fit an expansion chamber between the exhaust pipe and silencer of single-cylinder light cars of 6 or 8-h.p. I can get no definite ideas on the subject, and this article does not seem to be on the market. How should they be constructed? Are they plain cylindrical boxes, or have they any baffling arrangements, and what might be their approximate size? Also, where might one procure such a thing? The fitting of such an arrangement seems to be scientifically sound, and ought to meet the requirements of motorists who possess good but noisy light cars which are so sensitive to back pressure that they

cannot do with many of the elaborate silencers advertised. These all claim to have no back pressure. I have tried one—by no means a cheap one either—and, although it silenced the car, it took almost 50 per cent. of the engine power away, and had to be discarded. Hoping to elicit some reliable information on the subject through your kindness.—Yours truly,

M.D.

[Expansion chambers are very excellent arrangements, and are now being fitted to a great number of cars. They may be constructed in various ways; sometimes they are made of sheet metal, riveted or lap seamed so as to form a tube; or they may be a casting, or made out of drawn tube. Any metal worker could easily make one. For a motor of the size specified a convenient size would be about 3 in. diameter and 14 in. in length. There should not be any baffle plates in it. Of course, suitable flanges must be fastened to either end to join up to the exhaust pipe; or nuts and unions may alternatively be employed. As to the remarks about silencers and back pressure, all of course cause same, although some are much greater offenders than others. Those scientifically designed in proportion to the size of the motor should not absorb more than 5 per cent. of the power of the engine at the outside. When "M.D." has the expansion chamber fitted, he may be able to relieve some of the back pressure in his silencer by freeing the baffles in the same, as the preliminary expansion and cooling of the gases in the expansion chamber will help the silencing considerably.]

An Incident of the Belfast Strike.—An escort of Cameron Highlanders guarding an Argyll lorry laden with goods at the quay, for Messrs. J. B. Ferguson, Ltd., the Argyll Agents.

A SUGGESTED PETITION.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—On page 546 of the *M.C.J.* is a list of motor cases for exceeding the limit, &c., whilst the daily papers give prominence to a case where a prominent motorist is heavily fined, his licence suspended for two years, and, to crown all, he is sent to prison for a month. It is pleasant to note that an appeal was at once lodged.

Through all these cases it is easy to see that the police get the best of any argument. They themselves know this, as the magistrates support the police at all costs, the evidence of the accused and his witnesses in some cases being entirely ignored. It is generally supposed that when there is a doubt the accused is to have the benefit of it, but how often does a motorist get the benefit of anything? Of course one says, if he has a strong case he will appeal, but what are his chances then? Not much. He can expect little justice, and if he wins his case he will probably find that the police court and Quarter Sessions court expenses, &c., will amount to over £20. This is when he wins—when he proves he has not committed an offence. But if he loses his appeal, then his expenses will quite possibly total up to £60, and this is a nice nest egg to drop for a man who knows himself innocent, but is considered guilty by a few magistrates merely on the evidence of one or more police officers. How many motorists to-day know that it is a matter of impossibility to obtain justice in the police courts, where motorists are summoned for trivial offences, in many cases where absolutely no harm has been done to anyone, and convicted and fined sums out of all proportion to the crime. How long are we to stand this kind of thing? Surely it is time we motorists turned, or did something to remove some of the injustices we have to put up with. We have the Motor Union, the Royal Automobile Club, the Automobile Association, &c., all very powerful bodies. Surely they unitedly could do something towards our welfare. Why not get up a monster petition? It would be signed by not only

motorists but by hundreds of thousands of the public who have been made acquainted with the folly of the twenty mile limit, &c. If a petition were prepared for the abolition of the limit I am sure every motorist would undertake to get 100 signatures to it, and such a monster would have a certain weight with the Government. They would be compelled to take note of it.—Yours truly,

JNO. H. HALL.

DOES A CAR RUN BETTER AT NIGHT THAN DURING THE DAY?

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—The question of speed in the dark as compared with that in the daylight is indeed a debatable point. As Mr. Duckham says, a factor—and a most important one, the lower temperature of the atmosphere—has to be considered, and this, I venture to think, together with that ever-existing worry, "mixture," was "Arcanum's" trouble.

I have for years observed that, whether one be walking, horse-driving, or motoring, the pace always seems greater in the dark than in the daylight. This, I venture to suggest, is to be explained to some extent by the fact that in the daytime one can see the pace as well as feel it, but in the darkness one can only feel it. To substantiate this theory, I have noticed that when one comes to a town or village well-lighted, the pace, which is really the same as it had been in the dark, seems perceptibly slower.—Yours truly,

H. FRANCIS-WILLIAMS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to the paragraph which appeared in your last issue on this subject, may I say that I have tried introducing an excess of moisture with the air by mechanical means, and have always found that the car runs badly, and, as described in your article, in "fits and starts." As soon as this auxiliary supply of moisture was cut off the engine resumed its even running. I think the instance which you give in your note really substantiates my contention, because there is no doubt that during a sunny day, especially in a wet season, there is an unusually large amount of water existing as a gas in the air, and in the ordinary course of events this moisture would be deposited as soon as the atmosphere became cooler.—Yours truly,

A. DUCKHAM.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to Mr. A. Duckham's letter in a recent issue of the *M.C.J.*, he does indeed open up an interesting subject, but in my opinion he has not dispensed with it. He points out that the admitted better running of a car at night is due to the moisture in the atmosphere being condensed and the air being cooler. But the atmosphere, however clear it may appear, always contains a quantity of aqueous vapour, an impalpable transparent gas. In 100 parts of air there are only 45 parts of aqueous vapour. Surely this is too minute to make all that difference to the gas being drawn into the cylinders? The remaining 99.55 parts are the other constituents, oxygen, nitrogen, and carbonic acid gas. After sunset the different objects on the earth's surface radiate the heat they have absorbed during the day, and proceed as the evening advances until at length they acquire a lower temperature than the air above them; condensation ensues as the air gets chilled below the point at which it can hold its vapour in suspension, and a deposition of moisture takes place. The vapour, of course, originates by evaporation during the heat of the day. Now I contend that there must be other influences at work. Take, for instance, the land breeze which blows out to sea, and is as easily distinguished as is the sea breeze on land. After sunset the land loses its heat by radiation more rapidly than the sea, the cold air therefore makes its way out to sea, displacing the warmer air there. Thus I endeavour to show that the maximum aqueous vapour condensed is only 45 per cent., but I believe that the trees and verdure, while absorbing this moisture, give off their oxygen and the earth carbonic acid gas, while the air is lighter and cooler, as suited to the motorist's requirements.—Yours truly,

HERBERT J. CHAPMAN.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have frequently noticed that my car ran better in the evening. I attributed it to being dark and my own imagination, as I have been told by motorists that one is apt to think that they are travelling quicker in the dark than they really are.—Yours truly,

MODERN JEHU 434.

BENZOL AS FUEL.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I am a motorist of five years' standing, and drive a 7-h.p. Star car seven days a week, wet or fine. I have used benzol about eight weeks, and find I get more power, no sooting, and less consumption than with petrol. No alterations of any description were required to the car, the tank simply being filled with benzol and the engine starting at once. I pay 9d. per gallon for benzol and get it from the Whitwood Chemical Works, Normanton, Yorkshire. I have no interest

in its sale, but, apart from its lower price, I am convinced I get better results with it than with petrol.—Yours truly,

G. H. PEARCE.

LOSS OF POWER.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Can you or any reader tell me how to put an 8-h.p. motor right which shows loss of power? I have fitted a new piston and rings, ground in the valves, and apparently the compression is perfect. The magneto gives a good spark so far as I can see, and the carburettor seems all right. Is the loss of power connected with the carburettor or the magneto?—Yours truly,

R. JOHNSON.

[Our correspondent's trouble is probably due to the ignition being timed too late. If this were so, the engine would appear to be running all right whilst stationary, but would slow down immediately the load was put on. Failing this, the exhaust valve might be carefully examined to see that it is timed to lift at the proper time. This, if not correct, would also cause loss of power.]

A PUMP QUERY.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should be glad if you or some reader of the *M.C.J.* would give me some advice as to the best material to use for repacking the stuffing-boxes of water circulating pumps. I use hemp or "spun yarn" with grease having a high melting point, but sometimes it does not seem to last as long as it ought.—Yours truly,

BRIXTONIAN.

[The trouble that many people experience in packing pump glands does not arise so much through the choice of material selected, as because they do not apply it in the right manner. Take, for instance, flax, which is commonly used soaked in Russian tallow. This should not be wound as tightly as possible round the pump spindle, as it is liable to bind so tightly as to turn with it, and so get torn to pieces. The best thing to do is to make a "grummet." This is a washer of the packing material, which may be of flax, hemp, spun yarn, or thin asbestos string, and is made as follows:—A ring of, say, a fine strand of asbestos string is first wound into a coil that is a very easy fit on the spindle to be packed, and around this is wound (in the fashion that a pneumatic tyre cover is wound with canvas strip to protect it), one or more layers of flax, until the required thickness is obtained to enable the "grummet" to be pushed on comfortably. A mixture of tallow and graphite should be melted into it before applying to the spindle. Packings thus made cannot seize on the spindle, but, when tightened home by the stuffing gland, will hold water well, and wear a long time.]

VAPOUR LOCK IN PETROL FEED PIPE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Some time ago I increased the capacity of my petrol tank, and so brought its bottom level below that of the jet in the carburettor and consequently I had to fit a pressure feed. In carrying out these alterations, it was also necessary to alter the position of the petrol feed pipe, and I brought this in a somewhat sharp curve over and close to the exhaust pipe. I immediately found that when the engine was allowed to run slowly, the carburettor gradually emptied, and would not refill, although I had considerable pressure on the tank; but, on the other hand, if I kept the engine constantly racing, I experienced no such difficulty.

It took me some little time to ascertain the cause of this trouble, which finally turned out to be that when the petrol was running quite slowly through the feed pipe a vapour lock formed in the top of the bend over the exhaust pipe, whereas if the engine raced, the more rapid flow of petrol kept it sufficiently cool to prevent this vaporisation. The trouble was immediately got over by taking the feed pipe in a gradual slope below instead of over the exhaust. As I heard from Sir Boverton Redwood the other day of a motorist suffering with this what seemed to me inexplicable trouble, I thought the explanation might be of interest to some of your readers.—Yours truly,

A. DUCKHAM.

IGNITION TROUBLE EXPLAINED.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have lately had an experience that may interest some of the readers of the *M.C.J.* I was driving my four-cylinder car in a storm, and after driving about five miles two of the cylinders commenced to misfire. A brief examination showed all the tremblers working, the sparking plugs clean, the contact maker in good order, and the carburettor in the same condition. After running a few miles on two cylinders the engine stopped entirely, and with all the tremblers still working, disconnecting the terminals from the plugs and holding them near the plug ends, or close to the cylinder heads, would not show anything but a suggestion of a spark, though at times I would receive a shock when handling the high tension wires close to the top of cylinders.

At this time, it being dark and still raining, I left the car at a garage. The next morning I went over the wiring and found that two cylinders were in order, but noted that the plugs of those that were not firing, when laid on the top of the cylinders, each gave a faint spark simultaneously. This being an indication of a short circuit between them, I took one of the units out of the coil and found it wet at the bottom, showing that the rain had penetrated the coil box in some way, causing the two coils to short-circuit by reason of the water forming a contact between them.—Yours truly,

R. J. COOPER.

DIFFICULTY IN STARTING.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—My experience in regard to the difficulty of starting up a hot engine is similar to that narrated by "Thomas" in the issue of July 6th last. I am inclined to think that richness of the mixture is the cause of the trouble, since tickling the carburettor seems to have no effect. There are three ways of overcoming the difficulty, the first two being of use in the case of an involuntary stop, and the third proving efficacious when the stop is voluntary. The first is to lose no time in giving the starting handle a turn as soon as the car stops, leaving the carburettor alone. If this fails the carburettor may be tickled, and if the engine fails, as it probably will, to start, wait a minute or two and try again. This time the motor will start without any difficulty as a rule. The third method is that adopted for starting on the switch, namely, to open up the throttle at the moment of switching off. This ensures a full charge of the proper mixture in one of the cylinders.—Yours truly,

C. W. E. P.

Prince Borghese at the wheel of the Itala Car he successfully drove from Peking to Paris.

THE QUESTION OF TRANSMISSION.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—At present it is the custom to decry the use of chains on motor-cars; analysis of the results of the Scottish Reliability Trials is, therefore, very interesting, showing, as it does, that while this year 10 per cent. of the cars starting broke down through gear defects in transmission, in no case did trouble arise from chains. In the trials for 1905, 1906 and 1907, there were altogether twenty-one complete breakdowns in transmission gear, but not one through chains. In the same three trials, chain troubles only caused delays amounting to 29 min., twenty-eight of which were in 1905 and none in 1907; defective gears caused 6 hours 40 min. delay. The analysis does not state how many of the gear troubles arose with gear-driven live-axle cars, but it is safe to assume that some at least are included.

Chain driving has other important advantages besides reliability, which make it specially suitable for motor-car work. I deal only, however, with chain reliability, as this is often questioned, and these severe trials show so conclusively that chains are less liable to failure than gearing.—Yours truly,

CHARLES G. RENOLD.

DR. ATTLEE, of 65, Grosvenor Street, W., picked up a fawn-coloured motor dust-coat, on the road between Helston and the Lizard, on the 15th inst. He left it at the Helston Police Station.

MR. D. M. WEIGEL asks to be permitted, through the medium of our columns, "to thank those hundreds of people, unknown to me and unacquainted with me, who have been good enough to both write and wire their sympathy with me for the sentence I have received at the hands of the Haywards Heath Bench. I, having lodged an appeal, am unable to comment further, but I deeply feel the kindness of utter strangers from all over the world, and the expressions of their sympathy."

CLUBS AND ASSOCIATIONS.

LINCOLNSHIRE A.C.

THE Syston Park Hill Climb, promoted by the Lincolnshire A.C. was favoured with fine weather on Saturday. Sir John Thorold, Bart., had granted the club the use of his park, and the stiff hill along the private road made a capital spot for the trials. The total distance of the hill was about 1,240 yards, with a gradient of 1 in 9.6 at its steepest part. The competition was divided into three classes all for cars of the touring type. The handicapping formula was that adopted by the R.A.C., and Lieut. Chippendale, R.E., as representing that body, attended to check the times, and work out the order of merit. In addition to prizes offered in each event by the club, the President's cup was also competed for. This went to the best amateur performance on the handicap, and will be held by the winning member for one year. Appended are the results:—

CLASS A.—For cars not exceeding 12-h.p.

Name of competitor.	Make of car.	H.-p. as per R.A.C. Rating.	Time Min. sec.	Relative efficiency
*G. E. Sanders ...	De Dion ...	4.5 ...	3 34 3.5 ...	67.8
Sir Hickman Bacon ...	Wolseley ...	8.1 ...	3 38 ...	48
C. Vincent Smith ...	Rover ...	8.1 ...	3 31 4.5 ...	47.3
W. F. Miller ...	Peugeot ...	8.9 ...	4 25 1.5 ...	40.8
G. Garnett ...	M.M.C. ...	6.2 ...	4 51 1.5 ...	40

* Winner of first club prize. Second prize not awarded, there being less than six starters.

Name of competitor.	Make of car.	H.-p. as per R.A.C. Rating.	Time Min. sec.	Relative efficiency
J. A. Cole ...	Humber ...	35.7 ...	1 40 2.5 ...	43
C. Hardy ...	Daimler ...	55.8 ...	1 14 1.5 ...	41.1
C. W. Pennell ...	Siddeley ...	34.4 ...	1 58 ...	40.9
Sir Hickman Bacon...	Wolseley ...	32 ...	1 38 ...	36.6

* Winner of first club prize. † Winner of second club prize.

Mr. Massingberd-Mundy was not eligible and competed only for the special prizes.

The admirable manner in which the arrangements were made for the gathering was freely commented upon. The hon. secretary (Dr. Godfrey Lowe) bore the lion's share of the work, the other officials being:— Starter, Mr. A. R. Pennell; timekeepers, Messrs. T. E. Foster and G. W. Robinson, N.C.U.; clerks of the course, Sir Hickman Bacon, Major Cole, Messrs. C. Hardy, A. A. Padley, C. W. Pennell, and Lieut. Chippendale, R.E.; marshal, Capt. Chas. Parker, J.P.; assistant marshals, Capt. Newsum, Dr. W. J. Gilpin, Dr. Miller, and Dr. Mason.

LINCOLNSHIRE M.C.C.

A SUCCESSFUL hill-climb for motor-cycles was held at Casthorpe Hill, Barrowby, near Grantham, on Thursday of last week, and some excellent performances were made. G. P. Sentence, 12-h.p. Enfield, won the small power class, and Alan L. Shaw, 34-h.p. Minerva, that

The Syston Park Hill Climb.—Mr. H. J. Walder starting on the Germain Car on which he won the Second Prize in Class B.

CLASS B.—For cars not exceeding 24 h.p.

aA. L. Black ...	Clement-Talbot ...	17.95 ...	7 10 4.5 ...	71.6
*R. G. Hogarth ...	Clement-Talbot ...	17.95 ...	1 36 1.5 ...	67.6
F. W. Jecock ...	Clement-Talbot ...	15.6 ...	2 34 2.5 ...	57
+H. J. Walder ...	Germain ...	21 ...	1 45 ...	51.2
C. J. Tracey ...	Argyll ...	22.3 ...	2 5 1.5 ...	44

F. W. Mason ...	Rover ...	22.3 ...	2 19 4.5 ...	29

* Winner of first club prize. † Winner of second club prize.

a Winner of President's cup and special prize open to all members of the club for the best performance in the handicap.

CLASS C. For cars exceeding 24-h.p.

O. F. Massingberd-Mundy...	...	31.2 ...	1 26 3.5 ...	57.8
*F. Richardson ...	Daimler ...	41.9 ...	1 23 1.5 ...	47.3
+H. E. Newsum ...	Daimler ...	55.8 ...	1 6 4.5 ...	46.6

for machines over 76 by 76 mm. Shaw put up a splendid performance, doing 36 sec. for the 700 yards, a speed of thirty-eight miles an hour, beating the twin-cylinder machine. J. A. Mettham, hon. secretary of the Grantham centre, 44-h.p. Minerva, won in the twin-class, with R. M. Wright, 6-h.p. N.S.U., second. Shaw won the prize for best performance on the handicap.

THE MOTOR UNION.

A NUMBER of mis-statements have been put into circulation with reference to the Motor Union Road Scheme, so that it would appear desirable to give some further particulars respecting the objects of the Union in instituting it, and we have been requested by that body to give publicity to the following:—

It has been asserted that the scheme is an imitation of the efforts of an organisation which has placed a number of scouts upon the open roads to warn motorists of police timing arrangements. The opposite is the truth. No Motor Union agents have been placed upon the open road. They have been appointed to act in towns and villages after consultation with the local authorities and the police.

Two of the principal objects of the Motor Union are to protect the considerate driver and to secure the abolition by Parliament of the speed

limit. The Union has carried out a very successful campaign in this direction. It has succeeded in convincing a Royal Commission to recommend, in the interests of the public, the abolition of the general speed limit; it has prevented the multiplication of speed limits of five and ten miles an hour throughout the country; it has secured the reasonable administration of the restrictive clauses of the Motor Car Act in nine out of every ten districts. The success of its work has been imperilled by the inconsiderate action of a small minority of drivers who travel through towns and villages in a manner which appears to the public to be dangerous. As a result applications for ten miles speed limits are being made by nearly every minor local authority in Surrey, and are under consideration by many local authorities in Kent, Sussex, Herts., Essex, and elsewhere. The same condition of affairs is also prejudicing Parliament and the public against acting upon the report of the Royal Commission.

In order, therefore, to prevent the Union's arduous labours of the past four or five years being brought to naught, it has decided to place responsible agents in those districts from which complaints of inconsiderate driving are most frequent, and where reduced speed limits have been proposed. This is the origin of the Motor Union road system. It has been further suggested that before taking this action it should have approached the Automobile Association, a body which had placed scouts upon the road, and should have invited it to undertake this work on behalf of the Union. This course has in fact been taken. A proposal was placed before the Association which would have added many thousands a year to its revenue, in order to enable it to place men in those towns, villages and dangerous places where they are most required. Fortunately, the field of labour is so large that there is room for both organisations. There are upwards of 100,000 miles of open roads in England and Wales. There are also some 10,000 towns and villages. The duty the Motor Union owes to the 19,000 motorists and the 100 affiliated clubs who look to it to protect their interests and secure for them just laws, demands that in certain towns and villages, and at danger spots, men shall be placed to perform the duties indicated above, and also to act as the servants of the membership.

AUTOMOBILE ASSOCIATION.

AMONGST the 400 members who were elected at the last committee meeting of the Automobile Association are to be noticed the names of the Right Hon. Whitelaw Reid, the Right Hon. R. B. Haldane, M.P., the Earl of Kenmare, the Duke of Rutland, Marquis de la Granja de San Saturnino, Viscount Masserene, Lord Edward Spencer Churchill, Lord Michelham, Lord Wandsworth, Countess of Essex, Sir Bache Cunard, Bart., Sir Howard Vincent, M.P., Sir Henry Yorke, K.C.B., the Lady Armstrong, and Major-Gen. Sir W. Knox, K.C.B.

CONFERENCE OF MOTOR-CYCLISTS.

ACTING on the initiative of the Lincolnshire Motor-Cycle Club, a conference of motor-cycling clubs is to be held at Lincoln on Saturday, September 21st, to which every club in the United Kingdom is to be invited to send two delegates, preferably the chairman and hon. secretary. Notice of proposals for discussion are invited. Mr. Robert Todd will preside, and Mr. F. Straight, secretary of the A.C.C., will be secretary of the conference. A meeting of the Council of the Auto-Cycle Club will also be held, and in the evening a public dinner. Mr. G. J. Wilkinson, hon. secretary of the Lincolnshire M.C.C., is carrying out the local arrangements.

EAST LANCASHIRE M.C.C.

A STANDING committee for the rest of the present season has been appointed by the East Lancashire M.C.C., consisting of Messrs. E. Hall, J. H. Scott and W. Crabtree, in addition to Mr. F. H. Wilkinson, the chairman, Mr. T. Robinson, the hon. secretary, and his assistant, Mr. D. Strong. A committee has also been appointed to deal with the proposed gymkhana. This consists of Mr. J. W. Higson (Preston), Mr. J. W. Critchley (Preston), Mr. H. H. Edmondson (Preston), Mr. A. Welden (Preston), Mr. H. Garstang (Blackburn), Mr. Bullen (Blackburn), and Mr. D. Duckworth (Blackburn).

NORTHAMPTONSHIRE.

By the kind invitation of Mr. C. W. Bartholomew, one of the promoters of the club, the members of the Northamptonshire Automobile Club have visited Blakeley Hall. There were twelve cars, each containing about four passengers, the members present including Dr. Simpson (Towcester), Dr. Hope (Byfield), Mr. C. L. Wilson, Mr. Alfred Webb, Mr. C. Wicksteed, Mr. J. H. Nichols, and Mr. Arnold Wicksteed (Kettering), Mr. J. C. Hipwell and Mr. Herbert Mobbs (Olney), Dr. Henshaw, Mr. W. Parker Gray (Northampton), Mr. Henry Hawkins (Everdon Hall), and the hon. secretary, Mr. Sidney F. Harris.

WEST ESSEX.

THE West Essex Automobile Club held a reliability trial recently for a cup. There were twelve competitors. The distance to be covered was from Seven Kings Hotel, Ilford, to the forty-eighth milestone on the London and Colchester road and back. The conditions did not allow the competitors to replenish their stock of petrol, nor to stop unless absolutely compelled to do so by traffic exigencies. The

result was as follows:—1, A. Newman (3½-h.p. Vindec Special) and W. E. Gunnett (3-h.p. Triumph) a tie, both being within five seconds of schedule time; 3, V. Baldwin (3½-h.p. Brown), fifteen seconds over schedule time.

HERTS.

IN connection with the members' hill climb on September 7th, a massive silver challenge cup will be competed for. It has been presented by Mr. James Jay. There will, no doubt, be a fine entry on this occasion, as already a large number of members have intimated their intention of competing for the handsome cup.

HULL AND DISTRICT A.C.

MR. GEORGE H. STRONG, Prudential Buildings, King Edward Street, Hull, has been elected hon. secretary to the Hull and District A.C. in place of Mr. B. Hancock, resigned.

MOTOR-CYCLE UNION OF IRELAND.

ON Saturday afternoon the members of the Dublin centre of the Motor-Cycle Union of Ireland held a hill-climbing contest in Co. Wicklow, on the road leading from Glencree to Sally Gap. The hill selected was a very severe test, but it was an ideal locale for such a competition, as the road runs through a wild and absolutely deserted district. The result will be decided on Professor Callender's formula. The fastest times are appended:—S. Findlater, 8-h.p. Morehampton, 3 min. 20.45 sec., 1; J. G. Drury, 3½-h.p. Triumph, 3 min. 56.25 sec., 2; N. E. Drury, 5-h.p. Vindec Special, 4 min. 13.35 sec., 3; C. B. Franklin, 2½-h.p. J.A.P., 4 min. 27.35 sec., 4.

COLONEL AND MRS. CORNWALLIS WEST have been "at home" at Newlands, their New Forest seat, to the members of the New Forest Automobile Club and the Hants Motor Union. Addressing his visitors, the Colonel deprecated the absence of notice boards in Hampshire.

LYTHAM MOTOR GYMKHANA.

A MOTOR gymkhana was organised by Mr. A. Vincent Robinson, in conjunction with a military tournament, on Friday, the 9th inst., in Lytham Hall Park.

Mr. A. Cayley, of Blackburn, on his Coventry Humber Car.

The officials were as follows:—Judge, Mr. Francis W. Thompson (Heaton); starter, Mr. A. F. Saul (Lytham); clerk of the course, Mr. Harry Williams (Lytham); stewards, Messrs. D. Dugdale, J. Pearson, A. Lees, J. Cooper, C. E. S. Jones, E. Butcher, S. Matthews, J. Thompson, Dr. Douglas Staley, J. Kidney; timekeepers, Messrs. W. Swann, J. Ainscough, R. Coupe, T. Bancroft, and F. Mayor; hon. secretary, Mr. A. Vincent Robinson, Lytham.

For a first year meeting the gathering may be described as a success. The weather was fine, there was a good gate, a large number of entries, and a wide range of cars from 6 to 40-h.p.

In the result the prize-winners were:—

- Potato Race.—1, Mr. J. E. Simpson (Lytham), 6-h.p. Rover; 2, Mr. A. Cayley (Blackburn), Humber.
- Balloon Race.—1, Mr. A. E. Crowdy (Manchester), 18-h.p. Siddeley; 2, Mr. H. W. Cranham (Manchester), 18-h.p. Horbick.
- Obstacle Race.—1, Mr. A. Cayley (Blackburn), Coventry-Humber; 2, Mr. C. C. Paterson (Liverpool), 15-h.p. Ford.
- Motor-Cycle Tortoise Race.—1, Mr. E. Musham (Lytham), 3-h.p. Aster; 2, Mr. J. Hamer (St. Annes), 3½-h.p. Minerva.
- Musical Chairs.—1, Dr. Eason (Lytham), 6-h.p. Rover, with Miss Yates as passenger.

RECENT purchasers of Napier 60-h.p. six-cylinder cars included the Duke of Bedford and Sir Wm. Avery.

CASES UNDER THE MOTOR CAR ACT.

A QUESTION OF NAME AND ADDRESS.

At Hampstead, Captain J. A. Innes, of Roffey Park, Horsham, appeared in answer to two summonses charging him with failing to give warning of the approach of his motor-car, and also with failing to give his name and address after an accident. It appeared that defendant was driving his motor-car, in which he was accompanied by several friends, at Shootup Hill, Cricklewood, when a gentleman alighted from an omnibus a few feet in front, but on the opposite side of the road, and then crossed in front of the car. The defendant tried to avoid him, but the gentleman was knocked down and somewhat seriously hurt. The defendant pulled up a short distance away, and Captain Hargreaves, one of his party, went back to see the injured man and gave the number of the car, but not the name and address of the owner. Mr. W. Taylor-Parkes, contended that as Captain Innes was not personally asked for his name and address he could not be convicted for not giving it. The Bench, after consideration, upheld the point thus raised, and dismissed both summonses.

"SHORT CUTS."

In fining a motor-car driver £5 and £3 3s. costs at Marlborough Street Police Court, for driving dangerously in Hyde Park and knocking down a cyclist, Mr. Denman said it was a pernicious habit of some drivers to take the shortest cut in going round a corner, and nothing was more conducive to accidents.

EXCEEDING LEGAL LIMIT.

Arthur Pickwell, of Lincoln, was summoned before the Huntingdon Bench, on Saturday, for driving a motor-car to the danger of the public at Alconbury. Defendant stated that his employer and his wife, who had only been married a few hours previously, were the occupants of the car, and were on their honeymoon. The speed through the village where the trap was laid was given at over 25 miles an hour. A fine of £5 and 11s. 6d. costs was imposed.

DANGEROUS DRIVING.

At Bath on Saturday, Mr. Stanley Bond, of Wimbledon, was fined £5 for driving to the danger of the public on the Great Bath road between Box and Bath. Three cyclists riding towards Bath were met by the defendant, who, it was said, "went past like a flash." The first rider threw himself off his machine, the second rode into a heap of stones and damaged his lamp, and the third said he was knocked off by the car and hurt his nose, head, and foot. The defendant and his sisters said his pace was moderate, and that there was plenty of room for the cyclists. The third rider swerved into the car, and to avoid him the car was turned into the bank. Defendant said he stopped two and a half minutes, and went on when his sister saw that all the cyclists were standing up and were not injured.

THE CASE OF MR. D. M. WEIGEL.

On the 16th inst. the hearing was resumed at the Haywards Heath Police Court of the summonses against Mr. D. M. Weigel for driving a motor-car at a speed (fifty-six miles per hour) which was dangerous to the public at Handcross on June 9th, and for refusing to stop at the request of a constable in uniform on that occasion. The magistrates present were Colonel Campion, C.B. (in the chair), Mr. T. Bannister, Mr. A. J. Bridge, Mr. G. C. Hawes, and Mr. H. Faure Walker. Particulars of the evidence previously given appeared in the *M.C.J.* of Saturday last. Messrs. A. V. Ebbelwhite and H. J. Swindley having given evidence as to the impossibility of reading the number of a car under the circumstances alleged by the prosecution.

Mr. J. P. Vettes, for the defence, urged that it was preposterous to ask any tribunal to believe that P.C. Edgeler saw the number on defendant's car, "A 4 K K," under the circumstances alleged by him, and that he communicated it directly afterwards to P.S. Waghorn. He submitted that it was a case of reckless speculation on the part of the police, and that there was not a tittle of reliable evidence to justify a conviction. There was an abundance of evidence by the defence contradicting the police story.

The Bench having consulted in private for twenty minutes, the Chairman intimated that there would be a conviction. Colonel Campion added that the magistrates were satisfied that P.C. Edgeler's evidence was correct; that he did see the number and that he reported it to P.S. Waghorn; and that was corroborated by Superintendent Brooman's statement that the number was reported—the whole case seemed to hang on that—on June 10th.

A previous conviction by the Huntingdon justices against defendant for driving a motor-car to the danger of the public in June, 1905, was proved by P.C. Isaac Hook.

In announcing the decision, the Chairman observed that this was a flagrant case of extremely dangerous driving, which might even have caused serious accident. As there was a previous conviction for driving to the danger of the public, the Bench could not deal with the first summons less than by passing sentence of a month's imprisonment, and also by suspending defendant's licence for the unexpired term and disqualifying him from holding a licence for two years. For refusing to stop defendant would be fined £10 and costs £10, the latter amount being probably half the costs of the whole action.

Recognizances were entered into, counsel for the defence intimating that an appeal was contemplated.

HEAVY HAULS.

On the 14th inst. fines amounting to over £80 were inflicted on drivers of motor-cars at Barnet for exceeding the speed limit; twenty-nine motorists going to and returning from the Goodwood races were summoned before the Worthing bench for exceeding the legal limit; fines aggregating £99 16s. were inflicted at the Halesham Petty Sessions; and on the same day seven drivers were fined £38 and costs for similar offences at Chiddingfold.

FRIDAY, the 15th inst., was motor day at the Midhurst Petty Sessions when fourteen motorists were fined £20 and costs. Fines aggregating £50 were imposed on thirteen motorists at Southampton; at Kingston eleven motorists were fined sums ranging from £1 to £5.

SEVENTEEN motorists were haled before the county magistrates at Canterbury during the first three days of this week for driving to the danger of the public at Bridge, Sturry, and Upatreet parishes. Two of the cases have been adjourned, and the penalties imposed in the others amounted to a total of £70.

THE AUTO-CYCLE CLUB'S SIX DAYS' TRIAL.

THE six days' reliability competition of the Auto-cycle Club commenced on Monday, the day's run being from Hatfield to Coventry, a distance of 170½ miles. Two late entries were accepted, but there were two non-starters—viz., W. G. Brooks, 5-h.p. Rex, and W. Bidler, 6-h.p. Leader, so that the number of starters remained at thirty-six. Of these, thirty-one were in the motor-bicycle class and five in the tri-car section, among the latter being a lady driver, Mrs. Hilda B. Hewlett, who was Miss Muriel Hind's passenger in the Land's End to John o' Groat's trial last year. The weather kept fine until some miles past Ely, when rain fell in torrents, and made the roads very hard going. The gradients so far had been easy, but near Weys Milne a severe hill was encountered, and proved trying to lower-powered machines. Afterwards the roads improved, the hills not presenting much difficulty, and the surface being in good condition. B. M. Brice was early in trouble, and experienced delay soon after leaving Hatfield. W. Smith and J. Lingenfelder had to stop on the hill near Weys Milne, and F. Applebee, jun., was held up for ten minutes with water on the magneto, just before Downham Market, the midway halting-place. All the competitors reached Coventry in good time except F. W. Applebee and C. A. Potts.

The second day's run was from Coventry to Llangollen, the distance being 163½ miles. M. Randle and C. Potts did not start. F. W. Applebee got away with the rest, although he did not arrive until eleven o'clock on Monday night, having had to dismantle his engine by the roadside. The conditions at the start were trying. It was raining heavily, and the roads were very greasy. Troubles soon began, Mrs. Hilda B. Hewlett breaking a chain and damaging the gear. J. F. Evans had sparking plug trouble before reaching Matlock, and a little later broke a chain. Several stiff ascents had to be made. F. Applebee, jun., was delayed several times with his magneto, and also by the belt, and S. W. Carter had trouble with his lubricating oil. At 9.30 p.m. the majority of the riders reached Llangollen, the leaders arriving in good time, but it was considered unlikely that some of those in the rear would reach the day's destination that night, as they have been reported over four hours late at the midway halting place.

The cycles represented in the trial are the 5-h.p. Brown, 5-h.p. Vindec Special (six), 5-h.p. Rex (two), 3½-h.p. Rex (two), 6-h.p. N.S.U. (two), 5-h.p. N.S.U., 3½-h.p. N.S.U. (two), 5-h.p. Bat (two), 9-h.p. Bat, 3½-h.p. Triumph (six), 3½-h.p. Hazel, 1½-h.p. Motosacoche, 3½-h.p. Phelon-Moore (two), 4-h.p. Indian, 3½-h.p. Minerva. In the tri-car class are 10-h.p. Lagonda (three), 6-h.p. Rex Lilette and 6-h.p. Addison.

COMPANY NEWS.

NEW COMPANIES REGISTERED.

HAHNITE (1907).—£80,000. To acquire a certain invention for an improved oleaginous mixture for sprinkling on roads and the like, to develop and to turn to account the same, and to adopt an agreement with Captain A. C. Way, D.S.O. Hahnite, Limited, have consented to this registration. 3 and 4, Great Winchester Street, E.C.

H. M. HOBSON.—£40,000. To acquire the business of H. M. Hobson, Limited, of 29, Vauxhall Bridge Road, S.W., to adopt agreements (1) with H. M. Hobson, Limited, and S. W. Hughes, the liquidator thereof, and (2) between H. M. Hobson, E. A. H. de Poorter, G. Cheeseman, T. P. Searight, and P. Ebert, and to carry on the business of manufacturers of and dealers in motor-cars and omnibuses. No initial public issue.

L'ESTRANGE AND HAY.—£10,000. To take over the business of a consulting engineer, electrician, dealer in and repairer of and instructor in the use and management of motors of all kinds, and proprietor of motor garage carried on by Mr. A. H. C. L'Estrange at 7, Arundel Street, Strand, W.C., 21, Bride Lane, E.C., and the mews at 142, Dorset Road, Clapham Road, S.W. No initial public issue. First directors: A. H. C. L'Estrange and Lieutenant the Hon. S. M. A. J. Hay. The Clock House, Arundel Street, Strand, W.C.

ARIEL MOTOR COMPANY, LTD.—The Ariel Motor Company, Ltd., is being voluntarily wound up simply to comply with the Companies Act. The company was absorbed by Ariel Motors (1906) Ltd., upon the reconstruction of the business last year.

AUTOMOBILE ACCIDENTS.

AN accident has occurred in the Edgware Road, W., owing to the wet and greasy state of the road surface. A motor-car was proceeding towards the City when it turned completely round owing to a sideslip, and collided with an electric standard by the roadside. "The body of the car was wrecked," says the imaginative reporter, "fortunately leaving the front seats and their occupants intact."

A TERRIBLE accident was narrowly averted on Saturday on the De La Warr motor track at Bexhill-on-Sea. Two gentlemen in a motor-car had reached the end of the track at the top of Galley Hill, and had backed to make the downward journey, when suddenly the motor burst into flame. With great presence of mind the motorists jumped out just before the car was precipitated over the cliff on to the beach 50 ft. below. The occupants escaped unhurt, but the car was entirely destroyed by the flames, nothing but the metal work remaining. The car belonged to Mr. John Leen, of West Kensington.

ANOTHER motor-car accident has occurred on the Montrose road. The chauffeur to a Cardiff gentleman had left Arbroath to meet his employer, whom he expected to find returning to Arbroath in another car. He missed his road at the top of Barngreen and proceeded on the Brechin road instead of the Montrose road. Discovering his mistake, the chauffeur went along Tarry road to the Montrose road. When turning into the Montrose road the steering gear failed to act, and instead of taking the turn the car crossed the road at a considerable pace, mounted the bank, crossed the ditch, and crashed into the bank and stone dyke on the other side. The driver was bruised about the legs, but suffered most from shock, and although he was able to walk into Arbroath he was subsequently removed to the infirmary, where he remained a few days. The damaged car was removed to the repair works of Mr. Moore, Keptie Street, Arbroath.

IN Tadcaster, on Saturday, a collision occurred between a motor-car belonging to Dr. Macaulay, of Halifax, and a bicycle ridden by Mr. George Popplewell, of Appleton Roebuck. The car was proceeding in the direction of York, and the cyclist, who was going the opposite way, in trying to avoid some dogs which were fighting in the street, rode in front of the car. The car, in order to prevent a collision, was turned on to the kerb, and the cyclist turned as well, with the result that the two collided and Mr. Popplewell fell on to the front of the car. He received cuts on the hand, and was severely shaken, and the bicycle was completely smashed. The car was also damaged. Dr. Macaulay attended to Mr. Popplewell's injuries, and conveyed him to his home in the car.

EARL DE LA WARR met with a slight accident while motoring down Chantry Lane, Bexhill, on Saturday night, his car colliding with a cart proceeding in the same direction which allowed insufficient room for the car to pass. The occupants of the motor-car sustained minor injuries, and were medically attended, but Lord de la Warr was not hurt. One wheel of his car was broken off by contact with the kerb-stone.

A FATAL accident occurred at Twickenham the other morning. Mr. Henry Thomas was cycling to his business at Richmond, proceeding along the Richmond road, when by some means he came to the ground. The Twickenham Urban District Council's motor water van, weighing 11 tons when full of water, happened to be passing in the near vicinity, and before Mr. Thomas had any chance of escaping into safety the rear hind wheel passed over his body and instantly crushed him to death.

A FIREMAN in the employ of the L.C.C., stationed at Euston Road, is in the Great Northern Central Hospital, suffering from severe internal injuries as the result of a fall from a motor fire engine. The engine was being tested on the steep roads of Highgate. When near the junction of Archway Road and Southwood Lane the wheels skidded on the lines of the electric tramway, and White was thrown from his seat.

LORD HUGH GROSVENOR was thrown out of a motor-car on Sunday while going to Reading railway station with other officers of the 1st Life Guards. The car skidded and turned over, and Lord Hugh was pinned to the ground. His right hand was badly lacerated through coming into contact with the broken window. He lost a good deal of blood, and, though he is progressing favourably, will not be able to take any further part in the manoeuvres.

ROAD REPORTS.

DARLINGTON.—In giving judgment against the Darlington Corporation for damages in a case following a collision between a tramcar and a waggon, Judge Templer, at the Darlington County Court, has described the place where the accident occurred as a "regular death trap." Trees line one side of the road, leaving only three inches to spare should an ordinary vehicle and a tramcar pass at this point. "Motor-cars," said the Judge, "go as hard as they can on both sides of the road and tram-cars in the middle. What are other vehicles to do, to say nothing of the poor cyclist?" It was perfectly ridiculous, he added, for the Corporation to allow trees to be there. Possibly they may now remove them.

GODALMING.—A part of the High Street of Godalming, which is on the main Portsmouth road, will be closed to vehicular traffic on and from Sunday, August 25th, during the laying of some experimental lengths of new paving. Through traffic to the South will pass via Queen Street, Croft Road and Holloway Hill, and that for the North via Church

Street, Borough Road and Chalk Road. Mr. J. Herbert Norris, the Borough Surveyor of Godalming, hopes to finish the work in the early days of September.

DITCHLING.—At the north end of Ditchling Common is a gate across the road which is generally closed, and is, at nights, without lights, to prevent cattle straying from the common.

WINCHESTER.—Motor warning boards have been discussed at the quarterly meeting of the County Council. Complaint is being made that the county is much behind others in the matter of caution boards. A special committee is to go into the matter and report.

IRELAND.—The annual report of the Local Government Board for Ireland, just presented to Parliament, deals with the results of the employment of direct labour in the construction and maintenance of roads in Ireland. It would appear that the system of maintaining these roads by direct labour has apparently given general satisfaction in the counties where schemes have been adopted. In Cork the length of roads to be worked by direct labour has been increased from 300 to over 1,000 miles. Similarly in Tipperary 741 miles are to be dealt with. In Clare the County Council are dealing with 569 miles of roads.

EASTBOURNE.—It has been officially notified that under the Motor Car Act, 1903, the L.G.B. has made a regulation restricting the speed of motors to five miles an hour along a portion of the road at Frog Firle, between Eastbourne and Seaford. The regulation comes into force to-day (Saturday).

EAST GRINSTEAD.—Satisfaction is being expressed at East Grinstead at the action of the local Council in having the main roads in the town

Mr. S. T. Robinson at the wheel of the 16-h.p. Talbot Car with which he won the 200-guinea Dunlop Cup for the best performance of all the cars in the open section of the recent Irish Reliability Trials.

tar-washed. Portions of the side streets immediately joining the main roads are now being tar-washed, as it was found that dust was blown from these places on to the principal thoroughfares.

PRESTWICH.—Steps are being taken to widen Bury Old Road, Prestwich. Negotiations are in progress with Lord Wilton's representatives in regard to the proposed improvement scheme affecting Simster Lane.

IFIELD.—The Ifield Council are calling the attention of the R.A.C. to the speed of certain motorists in the habit of passing through the village.

DEVON.—The Barnstaple Rural District Council are recommending the Devon County Council to ask for the Countisbury Hill to be closed to motor traffic. This hill, in the Lynton and Lynmouth district, is well known to motorists, and many of the inhabitants of those places are hoping that the request will not be granted.

SUPPLEMENTING what we published last week with regard to the Argyll Trophy competition being won by Mr. J. H. Crowther, of Huddersfield, we now give the names of some who were honourably mentioned by the judges, including Mr. H. S. Thomas, of Llanelly; Miss Janet MacLachlan, who has driven a 26-30-h.p. Argyll 26,000 miles; Messrs. C. M. Iver, A. Fennings, A. Duncan, C. Luxmore, J. H. Harrison, E. A. Miller, S. B. Almay, F. C. Hudson and Dr. C. J. Marsh, of Yeovil, who used a 12-14-h.p. Argyll 4,000 miles during July for professional purposes and had no single involuntary stop.

FORTHCOMING EVENTS.

AUGUST.

- 24th (S.).—Hertford County A.C. at Lower Aston Hill for a members' driving test.
 North-East Lancashire A.C. gymkhana.
 Berkshire A.C. gymkhana.
 Yorkshire A.C.'s closed hill climb near Pateley Bridge.
 East Surrey A.C. run to Littlehampton.
 Somerset A.C. gymkhana at Weston.
 Sussex County A.C. hill climb.
 West Essex A.C. run to Orsett.
- 25th (Sun.).—West Essex A.C. run to Southend.
 Birmingham Motor-Cycling Club run to Shelsley Walsh.
- 31st (S.).—Cardiff M.C.'s run to Chepstow.
 Coventry M.C.'s reliability trial.
 Lincolnshire Motor-Cycling Club meet at Skegness.
 East Surrey A.C. run to Chobham.

SEPTEMBER.

- 1st (Sun.).—Florio Cup race of the Italian A.C. over the Brescia circuit.
 Southern M.C. picnic.
- 5th (T.).—Vehicles competing in the R.A.C. commercial vehicle trial must be within the gates of the depot of Messrs. J. I. Thornycroft at Chiswick by 12 noon.
 Arachon motor-boat meeting.
- 6th-7th.—Commercial vehicle trial—examination of vehicles.
- 7th (S.).—Auto Cycle Club's hill climb at Birdlip.
 Motor Cycling Club 200 miles reliability trial.
 Bristol and Gloucester A.C. meet at Lyppiat Park, Stroud.
- 9th (M.).—Industrial Vehicle Trials—first day's run.
- 14th (S.).—Motor Union Meet at Leicester.
 Brooklands A.R.C. meet.
- 15th.—"The Industrial Motor Review" for September will contain a pictorial and descriptive report of the Commercial Vehicle Trials of the R.A.C.
- 21st (W.).—Nottinghamshire A.C. hill climb.

OCTOBER.

- 19th.—Gordon Bennett Aeronautical race at St. Louis, Missouri.

MARCH, 1908.

- 21st-23th.—Cordingley's Motor-Car Show at the Agricultural Hall, London.

LIGHTING-UP TIMES—LONDON.

Aug. 24th—8.5	1st—26th—8.0	28th—7.56	30th—7.50
25th—8.2	27th—7.58	29th—7.54	31st—7.49

In Glasgow the lighting-up time to-day (Sat.) is 8.31 p.m., and to ascertain the approximate times on succeeding days 26 min. should be added to the above figures; in Plymouth an addition of about 16 min. is necessary.

CRIPPLED CHILDREN'S OUTINGS.

FORTY-FOUR of the children attending the Chaucer Street school for mentally and physically defective children, at Oldham, had a happy motor-car drive on Wednesday of last week. From Chaucer Street to the Yorkshire moors and back again was the limit of the outing. Motor-cars were used to convey the party, and Messrs. D. Orme, P. S. Stott, J. P., T. R. Marsden, S. Dronsfield, T. Rothwell, J. P., Dr. Robertson, F. Smith, Mellor, Mellodew, Platt Hall, and F. Whitehead had promised their vehicles.

The crippled children of Darwen were favoured with a motor-car trip to Lytham on the same day by members of the North-East Lancashire Automobile Club. Unfortunately the weather was very wet, and consequently the pleasure of the outing was somewhat interfered with.

PUBLIC MOTOR SERVICES.

BOTH the Stretford and Urmston District Councils have granted temporary licences to Mr. W. Stanway, of Old Trafford, to run a motor-bus within their respective areas during the next month.

MOTOR-OMNIBUS companies are conducting a series of experiments with a view to ascertaining the most profitable routes in London. A short time ago the Vanguard Company found a new service in the one they opened from Loughborough to Shepherd's Bush, via Brixton and Clapham. Twenty vehicles have now been put on the road between Tufnell Park and Brixton, running via Regent's Park, Westminster Bridge, and Kennington.

THREE OFFENCES—AND THREE FINES.

At the Matlock Petty Sessions, Henry Butler, of London Road, Derby, had to pay 18s. for leaving his motor-car on the highway at Matlock Bath for twenty-five minutes on the 7th inst.—Inspector Robinson, R.S.P.C.A., summoned Lawrence Hodgkinson, a Matlock cabdriver, for cruelty to a horse at Matlock on August Bank Holiday. Fined 10s. 6d.—Arthur Crutchley, a Matlock cabdriver, was fined 5s. and 7s.

costs for being drunk in charge of a horse and landau at Matlock Bath on Bank Holiday. Compared with the punishment inflicted on the motorist the more cruel and the more drunken the offender the less the fine.

POLICE TRAPS.

CLAPHAM ROAD, London, is now the scene of a police trap, frequently in operation.

ON race days in the South of England police "controls" are now established on all the main highways, and many of the lesser important thoroughfares leading to such courses.

AT Uppingham, on the road from Kettering to Oakham, is a steep descent on which motorists are frequently being timed.

SEVERAL traps are reported from the Kentish district, and are frequently in operation, notably at Herne Bay, Canterbury, and Margate.

AT Dirlerton, Haddingtonshire, the police have a measured distance within one of the ten mile speed limit areas.

THE trap at Fenstanton is again in active operation, and a batch of half a dozen victims has just been led to the St. Ives Petty Sessions.

IN Wellington Place, Nuneaton, the police now delight in trapping. ON the Esher Road, Thames Ditton, the police are watching and timing motorists.

BRIGHTON ROAD, COULSDON, is now a recognised danger spot to motorists.

IN the Lea Bridge Road, Leyton, the police have apparatus for timing motor-buses, motor-cars, &c.

THERE is a police trap at Woodford (Essex), starting from the Catholic Church and finishing 100 yards past Green's Motor Works—a distance of 220 yards, all down hill.

BUSINESS NEWS.

WE understand that the Right. Hon. Lord Castlemaine, of Hoydun Castle, Athlone, has just taken delivery of a 24-h.p. Deasy car.

THE Maudslay Motor Company, Ltd., have written to the Coventry Chain Company, Ltd., stating the Coventry chains used on the 20-30-h.p. Maudslay car which made a non-stop run in the Scottish Reliability trials gave the utmost satisfaction, the chains being only adjusted once during the trials.

THE Sirdar Rubber Company, Ltd., have received an order to convert the wheels of the demonstration car of the Royal Navy at Devonport to Royal Sirdar tyres.

MR. J. A. A. PICKARD, of Sorton, Manchester, writes:—"Having now been close upon 3,000 miles on a Humber 10-12-h.p. doctor's car I can only say that it is an ideal two-seater. One day I ran from Manchester to Oxford via Worcester and back, 300 miles, with never a hitch, and on Saturday last I ran to London and back in the day entirely successfully. The distance was 380½ miles; up journey eight and half hours, return ten hours. I left at dawn and was back at 11 p.m. and stopped nearly two hours in London."

THE controversy as to whether ladies can successfully drive motor-cars has been conclusively proved by the splendid performance put up by Mrs. Ed. A. Riley in the Scottish reliability trial. In spite of the fact that she was pitted against the pick of the trade and professional drivers, she drove her 20-h.p. Belsize, shod with Continental tyres, throughout the trials, winning the gold medal in Class III. against all competitors.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

To insure insertion communications and contributions must be in the Editors' hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case; otherwise no liability will be accepted.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

THE Motor-Car Journal.

VOL. IX.]

LONDON, SATURDAY, AUGUST 31, 1907.

[No. 443.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

“THE INDUSTRIAL MOTOR REVIEW.”

“THE INDUSTRIAL MOTOR REVIEW,” which, established in February, 1903, can claim to be the oldest journal in the world exclusively devoted to the interests of the commercial and industrial motor vehicle, has been acquired by Messrs. Cordingley & Co., and is now published from the office of *The Motor Car Journal*, 27-33, Charing Cross Road, W.C.

It will continue to be issued as a Monthly Review, devoted to

the development of the Industrial Motor Vehicle, and affording a means of inter-communication between users and makers of commercial vehicles of every description. Under the new proprietary, those features which have proved acceptable in the past will be continued and extended, while innovations to increase its influence with all interested in the motor movement will be introduced.

“The Industrial Motor Review” is published at 6d.; post free 8d., on the 15th of the month. Annual subscription, 8s. post free.

COMMENTS.

POLICE methods vary in various places. In Surrey and Sussex the guardians of the law and the inciters of disorder among motorists love to trap the unwary user of the road by short distance “controls,” preferably down hill; in Hertfordshire and some other places the longer trap is in vogue; in places where common sense prevails the police have long ago abandoned such devices, and trust to ordinary means for the detection of illegalities. We commend the example of Capt. J. G. Mayne, the Chief Constable of

East Suffolk, to the police authorities elsewhere as worthy of imitation in preference to the system of laying devices and watching behind hedges. He sends us a copy of a notice for which he desires publicity among motorists. “Complaints have been received of the excessive speed—having regard to the circumstances of the locality—at which motor-cars are driven on that section of the Ipswich-Felixstowe road which passes through the parishes of Trimley and Walton, and the reasonableness of such complaints having been tested by police observation, drivers of motor-cars are consequently cautioned and their attention drawn to the Motor Car Act, 1903, Section 1, which deals with reckless driving.” We gladly publish this official intimation, confident that motorists will appreciate the spirit in which Captain Mayne has approached the matter. Probably there are other chief constables who will recognise that such a notice may prove far more effective in lessening the number of cases of too speedy travel than would the orthodox Surrey or Sussex plan of allowing the law to be broken—and then pouncing, like a Waghorn, Jarrett, or Marks, upon their luckless victims.

Resignation from the Motor Union.

SIR ARCHIBALD MACDONALD., Bart., feels so strongly upon the subject of the appropriation of the Automobile Association's scouting system that he has felt it necessary to sever his connection with the Motor Union, and incidentally with the Royal Automobile Club. On August 14th he wrote to Mr. Julian Orde, the secretary of the latter body, asking whether it was possible to resign the one without the other; and on August 16th Mr. Orde replied that, under the existing agreement with the Motor Union, there was no possibility of such a thing. Thereupon Sir Archibald Macdonald wrote immediately resigning his membership of both bodies as a protest,—as will be seen from our correspondence columns.

The Commercial Vehicle Trials.

A GLANCE over the itinerary of the Commercial Vehicle Trials, which, commencing on the 9th prox., will continue for a month, indicates how well this has been planned to impress the leading industrial centres with the merits of the commercial vehicle. From Reading they will journey through an agricultural country to Bristol, and then, by way of Birmingham, will go through the Potteries on to Manchester, Liverpool, and the chief centres of Yorkshire, returning by way of Nottingham, Leicester, and Northampton to town. One of the great difficulties of the organisers has been to secure suitable storage places, and for this purpose a variety of buildings has been requisitioned. The market places will be utilised at Mansfield, Manchester, Stafford, Newcastle-under-Lyme, Chippenham, and Hungerford; tram depots at Gloucester, Leeds, Nottingham, and Leicester; fair grounds at Bedford, Northampton, Sheffield, and Huddersfield; while the hay market will be utilised at Liverpool and, “most unkindest cut of all,” the horse market at Worcester. The number of vehicles on the road will be between fifty and sixty.

The Traders' Marks.

THOSE engaged in the commercial side of automobilism must be careful with regard to the use of the traders' mark, and should also take care that the record of cars bearing such an index is carefully kept. The L.G.B. regulation on this point is Article XII., to the effect that “on every occasion on which the general identification mark is used on a motor-car the manufacturer or dealer shall keep a record of the distinguishing number placed on or annexed to the identification plates on that occasion, and of the name and address of the person driving the motor-car on that occasion.” We have italicised two words that are frequently neglected and which have been held to be of great importance by both police and magistrates. Therefore the trade should insist that every entry of a name should also include the address. Recently at Bolton a London firm has been summoned for neglect of this and also for running a motor vehicle on more than one “trial” trip fully loaded. The authorities, apparently, are exercising vigilance; motor traders must be equally on the alert.

Cross-Channel Motor Traffic.

THAT motoring has developed the international spirit has often been urged by its advocates, and evidence can be found in the returns of cross-channel traffic between English and French ports. Last season's figures show that a total of 1,460 cars were landed at the four English harbours from France, while 1,195 were received from this country at the same number of French ports, which would also indicate that rather more

motorists come from France to England than go across the Channel from this country. The exact figures were as follow:— From Dover to Calais 17, *vice versa* 35; Folkestone to Boulogne 517, *vice versa* 701; Newhaven to Dieppe 171, *vice versa* 322; Southampton to Havre 490, *vice versa* 402. This exchange of visits is only just beginning; it will mean much for both countries ere another decade has gone.

"Safe" and "Unsafe" Courses.

THE Duke of Rutland, who is president of the Buxton Horse Show Society, and also an owner of motor-cars, made some interesting remarks at Buxton on Saturday. He stated that "one of the funniest things he had heard was that an old member of the Jockey Club had been engaged to start motors in a race from the gate." Then he went on in a more serious vein, and urged that in the legislation which will have to be revised ere long some commonsense notions will have to prevail enabling people to go faster in places which are safe, and compelling them to go at a limited speed in districts where fast driving was unsafe. This differentiation between safe and

A.A. Enterprise.

In view of the trouble experienced at night by motorists and other users of the road, the Automobile Association have improved upon the useful scheme initiated by them last year, of mounting name plates in conspicuous places at the entrance to villages. The latest enterprise is the placing of lamps which will be kept alight throughout the night under the supervision of their agents in various places. Many villages having no light whatever after, say, 11 o'clock, this introduction will be of service to every user of the road and particularly to A.A. members, as it serves the double purpose of guide and indicates the whereabouts of A.A. agents.

unsafe courses is a plea which will be respected by every motorist who has given real thought to the subject. We have never contended for unreasonable freedom in passing through villages and places where the population is likely to be found on the roadway; but unfortunately the opponents of the motor movement have not been equally generous in their view as to the rights of motorists on these great stretches of the highway where there are neither turnings nor houses, from which people are likely to come on the roads as motorists are passing by.

Two, Four, or More.

A CURIOUS anomaly with regard to the new taximeter cabs now plying their way in London is that whilst they are only licensed to carry two persons they have sitting accommodation for four passengers inside and one outside. These vehicles have been accepted by the authorities and duly licensed by them, and yet when the driver of such a cab secured

fares to occupy all the seats he was summoned at the City of London Summons Court for carrying an excess of passengers. When the case was heard the solicitor for the defence pointed out that there was a plate on the vehicle on which it was stated that for each extra person above two a charge of 6d. was made. Such permission was accorded by the Scotland Yard authorities, and ultimately it seemed to be agreed in court that the practice of the police was to take no notice of four persons being in a taximeter cab, but only to proceed against the owner when they found another seated alongside the driver. The point is an interesting one as another illustration of the pliability of rules and regulations, and also of the absurdity of the present system of licensing motor-cabs. Surely it would be just as easy to license these for four persons, and so save drivers the worry or risk of summons whenever they conformed to the unwritten law as allowed by Scotland Yard itself.

The Observation Car.

THE enterprise of the Great Western Railway Company in running a motor char-à-banc through London for the delight of provincial people anxious to see the sights of the Metropolis, deserves financial success as well as mere popularity. It indicates, too, that railway companies, instead of deploring the inroads of other forms of traffic into their revenue returns, should settle the matter for themselves by retaining their passengers in their own vehicles. Excursionists from the West of England to Paddington are shown around London in a Motor char-à-banc, from which they never escape to swell the volume of other people's business. Tram, tube, bus, and cab are all defeated of their prey, the G.W.R. retaining the interest of their passengers by the adoption of a system of inclusive fares for rail and road.

Motoring in the Parks.

ALTHOUGH cases of exceeding the Regulation limit in the Royal Parks have most frequently occurred in connection with Richmond and Hyde Parks, the same regulations are enforced in all the open spaces under the jurisdiction of the Commissioners of Works. Briefly summarised, they insist that the driver of a car shall stop when required by a park keeper or police constable, and that it shall not be driven at more than ten miles an hour or to the inconvenience of any person using the park. Plying for hire is prohibited as well as the use in the parks of automobiles for the purpose of instruction. These rules are in operation in St. James's Park, the Green Park, Hampton Court and Richmond Parks, and Kensington Gardens, as well as Holyrood Park, Edinburgh. With regard to special regulations, cars are prohibited on certain roads within those open spaces, and generally we would enjoin upon motorists the advisability of acting strictly within the letter of the law in all such places. For fines are no lighter, even where the danger is slightest.

The Mechanism of the Motor Car.

THE fact that the work on "Motor Car Mechanism and Management" by Mr. W. Poynter Adams has already got into a second edition testifies to the general interest with which the petrol motor is regarded. The new edition of this useful book, published by Messrs. C. Griffin and Co., Ltd., contains an additional chapter on the management of cars and also an appendix, giving diagrams of important parts of the motor which will help to familiarise the reader with the general principles of construction. There is also an excellent glossary of terms used in connection with the automobile. The various chapters on the engine, accessories, electrical ignition, multiple-cylinder engines, chassis, &c., are written with an avoidance of extreme technicalities that will be useful to the motorist in his early days. Some general conclusions with regard to conduct on the road in passing vehicles and avoiding obstacles are also included, and if these could be instilled into the minds of all who

handle cars the possibility of accidents would be minimised to a considerable extent.

Motor Ambulances.

It is satisfactory to learn that the motor ambulance service, the inauguration of which by the City of London Corporation we chronicled three months ago, has been entirely successful. During that period 258 calls were answered, these being limited to two-thirds of the area of the City of London. In five cases out of six the time occupied from the arrival of a constable at the scene of an accident, when the motor ambulance was employed, was exactly half that when the ordinary hand vehicle was used. From the reliability point of view, too, the ambulance has distinguished itself in never having broken down or been in an accident itself—in fact, the record up to date is such as to justify the extension of the experiment,

than 100 miles 200 motor-cars were passed, "we only met some two or three motorists who were inconsiderate in the matter of dust, and two who were evidently unfit to be trusted with a car." Alas! those two may cause whole columns of vituperative correspondence in the general Press.

A Dubious Point.

A CURIOUS point has arisen in Had-dingtonshire. The driver of a motor-car has been summoned for driving at a speed of seventeen miles an hour in Dunbar, where there is a ten miles an hour restriction on the speed of motor-cars. It appears that about one-eighth of the measured distance was within the boundary of the borough, where the speed limit does not prevail, so that although the motorist was exceeding the speed allowed over a portion of the trap, he was well under the authorised legal limit at the other end. We do not

Motoring in Sumatra.—An Up-Country Garage.

[De Auto.]

especially in suburbs and places where comparative freedom from traffic would give the motor ambulance a greater opportunity for distinguishing itself. That it should have saved time in the crowded area of the City of London is indeed justification of its adoption, and should be an encouragement to Sheffield, which has just adopted an Argyll motor ambulance.

The Good Conduct of Horses.

It is reassuring to motorists to find their experiences with regard to equine behaviour on the roads confirmed by an investigator of our contemporary the "Field." He has lately been driving horses on the main roads of Surrey and Sussex for four days, and has come to the conclusion that, despite the presence of motor-cars thereon, drivers of horses have not much to fear now. He was on each of the three principal highways from London to Brighton, and although in a journey of more

remember the point having been raised before, and the Sheriff was evidently impressed by the contention on the part of the defendants' solicitor, who urged that under the circumstances no conviction could reasonably take place. In the end judgment was postponed, his lordship agreeing that the point required careful consideration. In giving his decision his lordship declared that the trap was entirely within the speed limit—so that the opportunity for solving an interesting conundrum comes to nought.

ACCORDING to the United States Consul General in Colombia, there are only six automobiles there, and he has gravely reported to his Government that "on account of the altitude of Bogota, 8,500 ft. above sea level, at least 25 per cent. of the power of the machines is lost owing to diminished atmospheric pressure"—a suggestion that indicates the value of many consular reports.

B

THE LONG DISTANCE TRIAL OF THE HOTCHKISS SIX-CYLINDER CAR.

AS was briefly recorded in the last issue of the *M.C.J.*, the Hotchkiss six-cylinder car concluded on Tuesday last week its 15,116½ mile trial under the observation of the Royal Automobile Club, of which no less than 10,590½ miles were covered without an involuntary stop. The record is the more noteworthy inasmuch as the identical car had previously made a 6,250 mile tour of France, the total run in the two countries thus amounting to over 21,250 miles, being the longest trial on record. Immediately on the conclusion of the test the vehicle was completely dismantled, to enable the Technical Committee of the R.A.C. to minutely examine and report on the condition of the various components, and to officially seal the same. We have also had an opportunity, at the depot of the London and Parisian Motor Company, Ltd., the British agents, of inspecting the parts, and can only say that the way they have come through the long and arduous test is a striking testimony to the high-class material employed in the construction of the Hotchkiss cars. One of the features of the motor is that the crank shaft runs on ball bearings, which, like the big end and gudgeon pin bearings, show only the slightest sign of wear, and are good for many thousands of miles, while the valves bear no signs of pitting, notwithstanding that they

The Technical Committee of the R.A.C. inspecting the parts of the Hotchkiss six-cylinder car which has recently completed a trial, under the observation of the Royal Automobile Club, of 15,116½ miles, out of which 10,590½ miles were done without an involuntary stop.

have not been ground in for 15,000 miles. The clutch is of the leather cone type, and, judging by the condition of the leather, it is safe to say that the day when this well-tried pattern will be superseded is not yet. The teeth of the pinions in the change-speed gear-box are in excellent condition; those of the sliding wheels show a slight burr on the edges, but not such as to need renewal, while the dog clutches for the top speed direct drive have stood up to their work in a wonderful way. We were specially interested in the behaviour of the bevel gear drive to the rear live axle, the Hotchkiss Company having from the first adhered to this form of transmission, an adherence which, judging from the results obtained, is well founded. Taking the car throughout, the only parts which would appear to have worn to such an extent as to need renewal are the composite brass and fibre wheels which operate the inlet and exhaust valve cam shafts. Apart from these, the way the components of the chassis have withstood the long trial, which, it may be pointed out, is equal to about three years' ordinary running, is a striking tribute to the designers and constructors of the Hotchkiss cars.

SPEED PROGRESS.

IN connection with Nazzaro's remarkable performance in the recent A.C.F. Grand Prix race it is interesting to note the wonderful increase that has taken place in the leading speed contests on the road. As will be seen from the subjoined table, the average rate just attained is almost double that recorded in 1900.

Event.	Driver and car.	Average speed. m.p.h.
1900. Gordon Bennett ...	Charron, on Panhard ...	38.6
1901. Gordon Bennett ...	Girardot, on Panhard ...	37.2
1902. Gordon Bennett ...	Edge, on Napier ...	34.3
1903. Gordon Bennett ...	Jenatzy, on Mercedes ...	55.7
1904. Gordon Bennett ...	Thery, on Brasier ...	60.0
1905. Gordon Bennett ...	Thery, on Brasier ...	49.0
1906. Circuit de Brescia ...	Raggio, on Itala ...	65.7
1906. A.C.F. Grand Prix ...	Szisz, on Renault ...	63.2
1906. Circuit des Ardennes ...	Duray, on De Dietrich ...	66.1
1907. A.C.F. Grand Prix ...	Nazzaro, on Fiat ...	70.7

A NOVEL HILL CLIMB.

THE Automobile Club de Spa is organising a somewhat novel hill-climbing competition for September 15th. The event is to be held on the Malchamps Hill, near Spa, Belgium; the ascent, which measures 5 kilometres, has to be made four times without the engine stopping, the vehicles making their way back after passing the timekeepers by a roundabout route to the starting point. The competition is open to all types of petrol cars, those fitted with two-seated bodies having to carry 150 kilogs. of ballast; the entries will be ranged in the order of the power of the engines in accordance with the following formula, the largest being first and the smallest last:—

$$D^2 L^3 N,$$

when D is the cylinder diameter, L the piston stroke, and N the number of cylinders. The total time for the four ascents will be recorded against each competitor's name, and it is on the results obtained that the separation of the vehicles into categories will be based. Thus, the first class will be established by the car which makes the best time of the day, and in it will be placed those vehicles of an equal or greater cylinder capacity in accordance with the formula. Other categories will be formed in the same way. To illustrate the method which is being adopted, let it be imagined that twenty entries are received and are arranged in the order of the cylinder capacity. Further, supposing that the best time was made by the sixth car, this would be the winner of Class 1, in which the preceding five vehicles would fall. Category 2 will be formed by taking the car showing the best time out of the remaining fourteen. If this were the tenth in the complete list, cars No. 7, 8, 9, and 10 would fall into the second section, the same plan being adopted for the remaining vehicles. Medals will be presented to the two fastest cars in each category. The awards as to regularity will also be made on a somewhat novel plan. In this section only the winners of the different sections in the speed classification will be taken into account. The average time for the hill climb will be found by dividing the gross time for the different ascents by four. The difference between the average and the actual times recorded will then be worked out, the prize—the Pilette cup, which has to be won twice in succession to become the winner's own property—going to the vehicle which shows the smallest fluctuation.

THE British Fire Prevention Committee, though primarily concerned with tests in connection with modern methods of building construction, has been recently undertaking a series of tests with various appliances, intended to prevent outbreaks of fire, or to extinguish them at the earliest possible moment. Under this series of trials they have just issued Report No. 122, dealing with petrol tanks fitted with safety devices, a perusal of which can be recommended to motor-car agents and others who are interested in the safe storage of petroleum spirit.

Under Cader Idris and Snowdon to Chester.

BY JOHN LL. WARDEN PAGE.

IN a former paper I gave some account of the road through Mid-Wales to Aberystwyth.* In the present I propose to conduct the reader out of the Principality by one of the three principal routes that traverse the whole breadth of the country. The shortest—and it is fairly good—is by way of Dolgelley, Bala, and Llangollen. The next—and some of it is pretty bad—runs from Dolgelley to Festiniog and Bettws-y-Coed on the Holyhead road. The third is through the town under Cader Idris and hence to Beddgelert, Carnarvon, and Conway, and so home, as old Pepys would have said, *via* St. Asaph and Chester. For variety this is the best. It is also the longest. But this need not concern us. Time was made for slaves—and people that do not motor.

Whichever route be taken the car must be no toy, for there are stiffish hills in North Wales, and though, with one or two

from the woods, not to speak of the mountains which soar above them.

Perched high on a spur stands the village of Corris, overlooked by the tall Celtic cross erected to the memory of good Dr. Hughes, who organised the Welsh Hospital in the South African War. It stands by the roadside marking a sharp turn, so is a useful mark, especially to those descending. Corris is famous for its slate quarries, and the road is fringed on both sides with enormous quantities of refuse. The mass of discarded slate to the left looks particularly dangerous, as if at any moment it might topple over on to the head of the wayfarer. And now the road becomes steeper, and slowly we climb to Upper Corris, a grim, grey village high among the hills. A little beyond we reach the top of this long ascent, and with brakes well on commence the steep descent to Minfordd, a

Photo by

Tallyllyn and the back of Cader Idris.

[Gyde, Aberystwyth.]

exceptions, there is nothing that need be labelled "dangerous," yet gradients of one in ten are not uncommon. We experience this at the very start, the direct road to Machynlleth climbing a hill with a slope of one in nine before we have left Aberystwyth. Three-quarters of a mile further on there is another little "pinch" of one in ten, and so on. Luckily, by adding a matter of two miles or so to the distance, and taking the road through Llanbadarn, we can avoid these trifles. The run along the valley of the Ystwyth is pretty, and Llanbadarn has an ancient church which is worth a visit. Then there is an ascent into the good, but at times steep, road to Machynlleth. During the latter part of the run the scenery is very fine; for below us to the left spreads the Dyfi estuary, backed by wooded foothills, with the great ranges stretching up to Cader Idris towering behind.

Machynlleth, round which name no Englishman can get his tongue, is a prettily situated town with tree-shaded streets and a decent hotel, the Wynnstay. But there is nothing sufficiently interesting about it to demand a halt; so we betake ourselves to the road for Dolgelley. This follows the lovely glen of the Dulas to Corris. It is practically all uphill, but the gradient is of the easiest, rising but four hundred and fifty feet in five miles and a half. The surface, too, is good, and there is plenty of shade

farmhouse at the head of Tallyllyn, a lake lying dark beneath the precipices of Cader Idris. The views of lake and mountain as we descend are splendid, but the man at the wheel has little chance of enjoying the same. For again we have reached a drop of one in ten and the road is narrow and, of course, winding as well. However, the surface on the whole is passable.
